### Outline

- Natural Selection
- Adaptation and maladaption

Cultural evolution

# Darwin

# Wallace

▲□▶ ▲圖▶ ▲国▶ ▲国▶ 三国 - の々ぐ

#### Natural selection

Three elements required:

#### Natural selection

Three elements required:

variation in the trait

Three elements required:

- variation in the trait
- inheritance (traits passed on to offspring)

(ロ)、(型)、(E)、(E)、 E) の(の)

Three elements required:

- variation in the trait
- inheritance (traits passed on to offspring)
- selection (some variants better able to survive and/or reproduce)

(ロ)、(型)、(E)、(E)、 E) の(の)

Three elements required:

- variation in the trait
- inheritance (traits passed on to offspring)
- selection (some variants better able to survive and/or reproduce)

Natural selection results from differential reproductive success

# Darwin's Finches of the Galapagos Islands

Peter and Rosemary Grant re-studied one of "Darwin's Finches" on the island of Daphne Major.

#### Effects of the drought on Daphne Island Seeds

During the drought, the seeds the birds ate became larger and harder

🖹 ୬ବ୍ଜ

# Effects of the drought on beak size of Geospiza fortis

Birds with deeper beaks were better able to process big tough seeds

Finches with deeper beakas produced offspring with deeper beaks

#### Beak size before and after selection

Selection pressure from the drought affected survivorship, produced evolutionary change to larger beaks

€ • • • • • •

#### Later changes: Invasion of the large finch G. magnirostris

G. magnirostris out-competed G. fortis for large seeds; only small-beaked G. fortis survived survived

### Evolution of complex characters: Eyes

э

(日)

from Futuyma, Evolutionary Biology

### The modern synthesis

Darwin didn't know how heredity worked; how is variation maintained?

◆□ ▶ < 圖 ▶ < 圖 ▶ < 圖 ▶ < 圖 • 의 Q @</p>

# The modern synthesis

- Darwin didn't know how heredity worked; how is variation maintained?
- Mendel showed that inheritance is particulate
- integration of natural selection with genetics led to the "modern synthesis"

### Outline

- Natural Selection
- Adaptation and maladaption

cultural evolution

Problems may not be evidence of bad design:

> pain, unethical behavior, etc. can be fitness-enhancing

- it may be adaptive, but not for you (manipulation)
- trade-offs between competing aims

Are we optimally designed? Historical constraints

Selection is a tinkerer, not an engineer

Makes small adjustments, keeps those that help

- Does not see the big picture
- Does not plan for the future

# Male urogenital system

- during evolution, testes moved from abdomen to scrotum
- went down wrong side of ureter.

### Frequency dependent selection

No single best strategy: depends on what others are doing

- left-handedness? (fitness costs, why not eliminated?)
  - postulated fighting advantage against right-handed opponents

- "interactive" sports: 20–30% left-handed
- other sports: about average for the population (10%)

#### Sociopathy?

Traits adapted for another time or place

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Evolutionary novelties

- diet
- social
- economic and political
- technological

#### DRD4: Adaptation or Maladaptation?

- impulsivity, novelty-seeking, difficulty concentrating, prone to addictive behaviors
- Associated with the "long alleles" of DRD4 (dopamine-receptor D4)
- more prevalent in populations that have travelled farther from their homeland

・ロト ・ 理 ト ・ ヨ ト ・ ヨ ト ・ ヨ

#### DRD4: Adaptation or Maladaptation?

Why has it not been selected out of the population?

- more common in migratory populations generally
- Ariaal nomaic pastoralists with the long form better fed
- Ariaal settled farmers with the long form more poorly fed

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

### Outline

- Natural Selection
- Adaptation and maladaption

cultural evolution

Is there an analogous process of cultural evolution?

Remember the three requirements for natural selection:

- variation in the trait
- inheritance (traits passed on to offspring)
- selection (some variants better able to survive and/or reproduce)

・ロト・日本・モート モー うへぐ

# Dual inheritance theory

- how can natural selection can produce the process of cultural evolution?
- how do different modes of cultural inheritance affect rate and outcome of cultural evolution?

# Are cultural traits fitness-enhancing?

Social learning is *biased* in favor of traits that

- are copied from successful people
- are practiced by many people rather than few ("peer pressure")

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

make sense (content biases)

# Conclusion

Natural selection

- results from differential survival and reproductive success.
- It leads to traits that are fitness-enhancing, not necessarily pleasant or moral.

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

# Conclusion

Natural selection

- results from differential survival and reproductive success.
- It leads to traits that are fitness-enhancing, not necessarily pleasant or moral.

Evolution produces maladaptation as well as adaptation through

- manipulation
- trade-offs
- historical constraints
- frequency-dependent selection
- adaptations that are out of date or for another environment

# Conclusion

Natural selection

- results from differential survival and reproductive success.
- It leads to traits that are fitness-enhancing, not necessarily pleasant or moral.
