↓ In more recent history, similar horrors became typical when traditional coercive relations of exploitation were drawn into the capitalist world market. Here a second difference between the old relations and capitalism comes into play: the old relations are based on direct coercion, while capitalism is based on free sale of labor-power.

But as soon as peoples, whose production still moves within the lower forms of slave-labor, *corvée*-labor, etc., are drawn into the whirlpool of an international market dominated by the capitalist mode of production, the sale of their products for export becoming their principal interest, then the civilized

einen engern oder weitem Kreis von Bedürfnissen beschränkt ist, aber kein schrankenloses Bedürfnis nach Mehrarbeit aus dem Charakter der Produktion selbst entspringt.

Entsetzlich zeigt sich daher im Altertum die Überarbeit, wo es gilt, den Tauschwert in seiner selbständigen Geldgestalt zu gewinnen, in der Produktion von Gold und Silber. Gewaltsames zu Tod arbeiten ist hier die offizielle Form der Überarbeit. Man lese nur den Diodorus Siculus.⁴³

⁴³ „Man kann diese Unglücklichen“ (in den Goldbergwerken zwischen Ägypten, Äthiopien und Arabien), „die nicht einmal ihren Körper reinlich halten noch ihre Blöße decken können, nicht ansehen, ohne ihr jammervolles Schicksal zu beklagen. Denn da findet keine Nachsicht und keine Schonung statt für Kranke, für Gebrechliche, für Greise, für die weibliche Schwachheit. Alle müssen, durch Schläge gezwungen, fortarbeiten, bis der Tod ihren Qualen und ihrer Not ein Ende macht.“ (Diod. Sic. „Historische Bibliothek“, Buch 3, c. 13, [p. 260].)

Doch sind dies Ausnahmen in der alten Welt.

Sobald aber Völker, deren Produktion sich noch in den niedrigsten Formen der Sklavenarbeit, Fronarbeit usw. bewegt, hineingezogen werden in einen durch die kapitalistische Produktionsweise beherrschten Weltmarkt, der den Verkauf ihrer Produkte ins Ausland zum vorwiegenden Interesse ent-

horrors of overwork are grafted on the barbaric horrors of slavery, serfdom, etc.

↓ Slavery in the USA is an important example of this:

Hence the negro labor in the Southern States of the American Union preserved something of a patriarchal character, so long as production was chiefly directed to immediate local consumption. But in proportion, as the export of cotton became of vital interest to these states, the over-working of the negro and sometimes the using up of his life in 7 years of labor became a factor in a calculated and calculating system. It was no longer a question of obtaining from him a certain quantity of useful products. It was now a question of production of surplus-value itself.

↓ Slavery is not the only example.

So was it also with the *corvée*, e.g., in the Danubian Principalities (now Romania).

Question 712 *What are the main differences distinguishing capitalism from earlier forms of exploitation?*

Question 713 *How did pre-capitalistic forms of exploitation change when they came into contact with capitalism (slave-labor, *corvée*-labor)?*

The remainder of this section is a detailed comparison between the *corvée* system and capitalism.

First Marx explains why such a comparison is interesting: (1) In both situations the state steps in in order to regulate exploitation.

345:1 The comparison of the greed for surplus-labor in the Danubian Principalities with the same greed in English factories has a special interest, because surplus-labor in the *corvée* has an independent and empirically ascertainable form.

wickelt, wird den barbarischen Greueln der Sklaverei, Leibeigenschaft usw. der zivilisierte Greuel der Überarbeit aufgepfropft.

Daher bewahrte die Negerarbeit in den südlichen Staaten der amerikanischen Union einen gemäßigt patriarchalischen Charakter, solange die Produktion hauptsächlich auf den unmittelbaren Selbstbedarf gerichtet war. In dem Grade aber, wie der Baumwoll-export zum Lebensinteresse jener Staaten, ward die Überarbeitung des Negers, hier und da die Konsumtion seines Lebens in sieben Arbeitsjahren, Faktor eines berechneten und berechnenden Systems. Es galt nicht mehr, eine gewisse Masse nützlicher Produkte aus ihm herauszuschlagen. Es galt nun der Produktion des Mehrwerts selbst.

Ähnlich mit der Fronarbeit, z.B. in den Donaufürstentümern.

250:1/o Die Vergleichung des Heißhunger nach Mehrarbeit in den Donaufürstentümern mit demselben Heißhunger in englischen Fabriken bietet ein besonderes Interesse, weil die Mehrarbeit in der Fronarbeit eine selbständige, sinnlich wahrnehmbare Form besitzt.

(2) In *corvée*, surplus-labor is clearly identifiable, while in capitalism it is not.

345:2/o Suppose the working-day consists of 6 hours of necessary labor, and 6 hours of surplus-labor.

↓ In capitalism, it is undecided when exactly the surplus-labor occurs: Then the free laborer gives the capitalist every week 6×6 or 36 hours of surplus-labor. It is the same as if he worked 3 days in the week for himself, and 3 days in the week gratis for the capitalist. But this is not visible. Surplus-labor and necessary labor glide one into the other. I can, therefore, express the same relationship by saying, e.g., that the laborer in every minute works 30 seconds for himself, and 30 for the capitalist, etc.

↓ But in corée, necessary labor and surplus-labor are separated clearly. It is otherwise with the corvée. The necessary labor which the Wallachian peasant performs for his own maintenance is distinctly marked off from his surplus-labor on behalf of the Boyard. The one he does on his own field, the other on the seignorial estate. Both parts of the labor-time exist, therefore, independently, side by side one with the other. In the corvée the surplus-labor is clearly marked off from the necessary labor.

↓ This formal difference does not affect the quantitative relation between necessary and surplus labor:

Question 715 Marx says that in capitalism, necessary labor and surplus-labor “glide” into each other; one might also give the translation that they are “intermixed” or “blurred” (verschwimmen ineinander). What does this mean?

This difference in the form of appearance, however, can obviously make no difference with regard to the quantitative relation of surplus-labor to necessary labor. Three days’ surplus-labor in the week remain three days that yield no equivalent to the laborer himself, whether it be called corvée or wage-labor.

251:1 Gesetzt, der Arbeitstag zähle 6 Stunden notwendiger Arbeit und 6 Stunden Mehrarbeit.

the surplus-labor occurs:

So liefert der freie Arbeiter dem Kapitalisten wöchentlich 6×6 oder 36 Stunden Mehrarbeit. Es ist dasselbe, als arbeite er 3 Tage in der Woche für sich und 3 Tage in der Woche umsonst für den Kapitalisten. Aber dies ist nicht sichtbar. Mehrarbeit und notwendige Arbeit verschwimmen ineinander. Ich kann daher dasselbe Verhältnis z.B. auch so ausdrücken, daß der Arbeiter in jeder Minute 30 Sekunden für sich und 30 Sekunden für den Kapitalisten arbeitet usw.

Anders mit der Fronarbeit. Die notwendige Arbeit, die z.B. der walachische Bauer zu seiner Selbsterhaltung verrichtet, ist räumlich getrennt von seiner Mehrarbeit für den Bojaren. Die eine verrichtet er auf seinem eignen Felde, die andre auf dem herrschaftlichen Gut. Beide Teile der Arbeitszeit existieren daher selbständig nebeneinander. In der Form der Fronarbeit ist die Mehrarbeit genau abgeschieden von der notwendigen Arbeit.

An dem quantitativen Verhältnis von Mehrarbeit und notwendiger Arbeit ändert diese verschiedene Erscheinungsform offenbar nichts. Drei Tage Mehrarbeit in der Woche bleiben drei Tage Arbeit, die kein Äquivalent für den Arbeiter selbst bildet, ob sie Fronarbeit heiße oder Lohnarbeit.

↓ However this formal difference, that in capitalism surplus labor is intermixed with necessary labor, while in feudalism they are clearly separated, leads to a difference in the form of the “chase after surplus labor.”

But in the capitalist the greed for surplus-labor appears in the straining after an unlimited extension of the working-day, in the Boyard more simply in a direct hunting after days of corvée.⁴⁴

⁴⁴ That which follows refers to the situation in the Romanian provinces before the change effected since the Crimean war.

(3) Another reason why a comparison with Corvée will give us a better understanding of capitalism is that Corvée is based on open coercion, while the coercion in capitalism goes through the “dull compulsion of economic laws.” This is such an obvious point that Marx does not specifically say it.

↓ After this justification why Corvée labor should be discussed, this discussion itself begins.

346:1/o In the Danubian Principalities the corvée was accompanied by rents in kind and other appurtenances of serfdom, but corvée constituted the most important tribute paid to the ruling class. Whenever this was the case, the corvée rarely arose from serfdom; serfdom much more frequently on the other hand took origin from the corvée.^{44a}

In Romania, for instance, the sequence was: labor for the common land was turned into labor for the thieves of the common land, and bondage developed afterwards.

Footnote 44a by Engels shows that Romania was not the only place where serfdom has been re-introduced. Similar developments can also be found elsewhere:

^{44a} {This holds likewise for Germany, and especially for Prussia east of the Elbe. In the 15th century the German peasant was nearly everywhere a man, who, whilst subject to certain rents paid in produce and labor was otherwise at least practically free. The German colonists in Brandenburg, Pomerania, Silesia, and Eastern Prussia, were even legally acknowledged as free men. The victory of the nobility in the peasants’ war put an end to that. Not only were the conquered South German peas-

Bei dem Kapitalisten jedoch erscheint der Heißhunger nach Mehrarbeit im Drang zu maßloser Verlängerung des Arbeitstags, bei dem Bojaren einfacher in unmittelbarer Jagd auf Frontage.⁴⁴

⁴⁴ Das Nachfolgende bezieht sich auf die Zustände der rumänischen Provinzen, wie sie sich vor der Umwälzung seit dem Krimkrieg gestaltet hatten.

251:2–253:1 Die Fronarbeit war in den Donaufürstentümern verknüpft mit Naturalrenten und sonstigem Zubehör von Leibeigenschaft, bildete aber den entscheidenden Tribut an die herrschende Klasse. Wo dies der Fall, entsprang die Fronarbeit selten aus der Leibeigenschaft, Leibeigenschaft vielmehr meist umgekehrt aus der Fronarbeit.^{44a}

^{44a} {Note zur 3. Aufl.—Dies gilt ebenfalls für Deutschland und speziell für das ostelbische Preußen. Im 15. Jahrhundert war der deutsche Bauer fast überall ein gewissen Leistungen in Produkt und Arbeit unterworfen, aber sonst wenigstens faktisch freier Mann. Die deutschen Kolonisten in Brandenburg, Pommern, Schlesien und Ostpreußen waren sogar rechtlich als Freie anerkannt. Der Sieg des Adels im Bauernkrieg machte dem ein Ende. Nicht nur die besiegten süddeutschen Bauern wurden wieder

ants again enslaved. From the middle of the 16th century the peasants of Eastern Prussia, Brandenburg, Pomerania, and Silesia, and soon after the free peasants of Schleswig-Holstein were degraded to the condition of serfs. (Maurer, *Fronhöfe* iv. vol.,—Meitzen, “Der Boden des preussischen Staats”—Hanssen, “Leibeigenschaft in Schleswig-Holstein.”)—F. E.}}

↓ Specific history of *corvée* (forced labor) in Romania:

This is what took place in the Romanian provinces. Their original mode of production was based on community of the soil, but not in the Slavonic or even Indian form. Part of the land was cultivated in severally as freehold by the members of the community, another part—*ager publicus*—was cultivated by them in common. The products of this common labor served partly as a reserve fund against bad harvests and other accidents, partly as a public store for providing the costs of war, religion, and other common expenses. In course of time military and clerical dignitaries usurped, along with the common land, the labor spent upon it. The labor of the free peasants on their common land was transformed into *corvée* for the thieves of the common land. This *corvée* soon developed into a servile relationship existing in point of fact, not in point of law, until Russia, the liberator of the world, made it legal under presence of abolishing serfdom. The code of the *corvée*, which the Russian General Kisseleff proclaimed in 1831, was of course dictated by the Boyards themselves. Thus Russia conquered with one blow the magnates of the Danubian provinces, and the applause of liberal cretins throughout Europe.

↑ Although *corvée* was connected with other appurtenances of serfdom, in Romania it did not arise from serfdom, but from the usurpation of the common lands in a Germanic mode

leibeigen. Schon seit Mitte des 16. Jahrhunderts werden die ostpreussischen, brandenburgischen, pommerschen und schlesischen, und bald darauf auch die schleswig-holsteinischen freien Bauern zu Leibeigenen erniedrigt. (Maurer, *Fronhöfe*“, IV. Bd.—Meitzen, “Der Boden des Pr. Staats“.—Hanssen, “Leibeigenschaft in Schleswig-Holstein.“)—F. E.}}

So in den rumänischen Provinzen. Ihre ursprüngliche Produktionsweise war auf Gemeineigentum gegründet, aber nicht auf Gemeineigentum in slawischer oder gar indischer Form. Ein Teil der Ländereien wurde als freies Privateigentum von den Mitgliedern der Gemeinde selbständig bewirtschaftet, ein anderer Teil—der *ager publicus*—gemeinsam von ihnen bestellt. Die Produkte dieser gemeinsamen Arbeit dienten teils als Reservefonds für Mißernten und andre Zufälle, teils als Staatsschatz zur Deckung für die Kosten von Krieg, Religion und andre Gemeindeausgaben. Im Laufe der Zeit usurpierten kriegerische und kirchliche Würdenträger mit dem Gemeineigentum die Leistungen für dasselbe. Die Arbeit der freien Bauern auf ihrem Gemeindeland verwandelte sich in Fronarbeit für die Diebe des Gemeindelandes. Damit entwickelten sich zugleich Leibeigenschafts-Verhältnisse, jedoch nur tatsächlich, nicht gesetzlich, bis das weltbefreiende Rußland unter dem Vorwand, die Leibeigenschaft abzuschaffen, sie zum Gesetz erhob. Der Kodex der Fronarbeit, den der russische General Kisselew 1831 proklamierte, war natürlich von den Bojaren selbst diktiert. Rußland eroberte so mit einem Schlag die Magnaten der Donaufürstentümer und den Beifallsklatsch der liberalen Kretins von ganz Europa.

of production. However, under the influence of capitalism it *led to serfdom*, legalized by the *reglement organique*.

↓ Now a detailed description of these laws, which Marx is going to compare with the English Factory Acts.

347:1/o According to the “*Règlement organique*,” as this code of the *corvée* is called, every Wallachian peasant owes to the so-called landlord, besides a mass of detailed payments in kind: (1), 12 days of general labor; (2), one day of field labor; (3), one day of wood carrying. In all, 14 days in the year. With deep insight into Political Economy, however, the working-day is not taken in its ordinary sense, but as the working-day necessary to the production of an average daily product; and that average daily product is determined in so crafty a way that no Cyclops would be done with it in 24 hours.

252:1 Nach dem „*Règlement organique*“, so heißt jener Kodex der Fronarbeit, schuldet jeder walachische Bauer, außer einer Masse detaillierter Naturalabgaben, dem sog. Grundeigentümer 1. zwölf Arbeitstage überhaupt, 2. einen Tag Feldarbeit und 3. einen Tag Holzfuhre. Summa summarum 14 Tage im Jahre. Mit tiefer Einsicht in die politische Ökonomie wird jedoch der Arbeitstag nicht in seinem ordinären Sinn genommen, sondern der zur Herstellung eines täglichen Durchschnittsprodukts notwendige Arbeitstag, aber das tägliche Durchschnittsprodukt ist pffiffigerweise so bestimmt, daß kein Zyklone in 24 Stunden damit fertig würde.

Question 719 Why does the *Règlement organique* reveal “deep insight into Political Economy”? And in which respect is it cunning?

↓ The nominally 12 days of *corvée* labor were actually 56 days:

In dry words, the *Règlement* itself declares with true Russian irony that by 12 working-days one must understand the product of the manual labor of 36 days, by 1 day of field labor 3 days, and by 1 day of wood carrying in like manner three times as much. In all, 42 *corvée* days. To this had to be added the so-called *jobagie*, service due to the lord for extraordinary occasions. In proportion to the size of its population, every village has to furnish annually a definite contingent to the *jobagie*. This additional *corvée* is estimated at 14 days for each Wallachian peasant. Thus the prescribed *corvée* amounts to 56 working-days yearly. But the agricultural year in Wallachia numbers in consequence of the severe climate only 210 days,

In den dünnen Worten echt russischer Ironie erklärt daher das „*Règlement*“ selbst, unter 12 Arbeitstagen sei das Produkt einer Handarbeit von 36 Tagen zu verstehn, unter einem Tag Feldarbeit drei Tage, und unter einem Tag Holzfuhre ebenfalls das Dreifache. Summa: 42 Frontage. Es kommt aber hinzu die sog. *Jobagie*, Dienstleistungen, die dem Grundherrschaft für außerordentliche Produktionsbedürfnisse gebühren. Im Verhältnis zur Größe seiner Bevölkerung hat jedes Dorf jährlich ein bestimmtes Kontingent zur *Jobagie* zu stellen. Diese zusätzliche Fronarbeit wird für jeden walachischen Bauer auf 14 Tage geschätzt. So beträgt die vorgeschriebene Fronarbeit 56 Arbeitstage jährlich. Das Ackerbaujahr zählt aber in der

of which 40 for Sundays and holidays, 30 on an average for bad weather, together 70 days, do not count. 140 working-days remain.

↓ The rate of surplus labor to necessary labor is still not very great, therefore there are additional loopholes which allow the labor to be made longer:

The ratio of the *corvée* to the necessary labor 56/84, or 66 2/3 per cent, gives a much smaller rate of surplus-value than that which regulates the labor of the English agricultural or factory laborer. This is, however, only the legally prescribed *corvée*. And in a spirit yet more “liberal” than the English Factory Acts, the “*Règlement organique*” has known how to facilitate its own evasion. After it has made 56 days out of 12, the nominal day’s work of each of the 56 *corvée* days is again so arranged that a portion of it must fall on the ensuing day. In one day, e.g., must be weeded an extent of land, which, for this work, especially in maize plantations, needs twice as much time. The legal day’s work for some kinds of agricultural labor is interpretable in such a way that the day begins in May and ends in October. In Moldavia conditions are still harder.

“The 12 *corvée* days of the ‘*Règlement organique*’ cried a Boyard drunk with victory, amount to 365 days in the year.”⁴⁵

⁴⁵ Further details are to be found in E. Regnault’s *Histoire politique et sociale des principautés danubiennes*, Paris, 1855 [pp. 304 ff.].

Walachei wegen des schlechten Klimas nur 210 Tage, wovon 40 für Sonn- und Feiertage, 30 durchschnittlich für Unwetter, zusammen 70 Tage ausfallen. Bleiben 140 Arbeitstage.

Das Verhältnis der Fronarbeit zur notwendigen Arbeit, 56/84 oder 66 2/3 Prozent, drückt eine viel kleinere Rate des Mehrwerts aus als die, welche die Arbeit des englischen Agrikultur- oder Fabrikarbeiters reguliert. Dies ist jedoch nur die gesetzlich vorgeschriebene Fronarbeit. Und in noch „liberalerem“ Geist als die englische Fabrikgesetzgebung hat das „*Règlement organique*“ seine eigne Umgehung zu erleichtern gewußt. Nachdem es aus 12 Tagen 54 gemacht, wird das nominelle Tagwerk jedes der 54 Frontage wieder so bestimmt, daß eine Zubeße auf die folgenden Tage fallen muß. In einem Tag z.B. soll eine Landstrecke ausgejätet werden, die zu dieser Operation, namentlich auf den Maispflanzungen, doppelt soviel Zeit erheischt. Das gesetzliche Tagwerk für einzelne Agrikulturarbeiten ist so auslegbar, daß der Tag im Monat Mai anfängt und im Monat Oktober aufhört. Für die Moldau sind die Bestimmungen noch härter.

„Die zwölf Frontage des *Règlement organique*,“ rief ein siegtrunkner Bojar, „belaufen sich auf 365 Tage im Jahr!“⁴⁵

⁴⁵ Weitere Details findet man in É. Regnault, „*Histoire politique et sociale des Principautés Danubiennes*“, Paris 1855, [p. 304 sqq.].

Question 720 *How did the *Règlement Organique* facilitate its own circumvention? Compare the evasions of the *Règlement Organique* with those of the factory acts.*

After his description of the state legislation legalizing and extending bonded labor in the Danubian provinces, Marx makes a comparison with the recent legislation in England, the

“Factory Acts” of 1850, limiting the working-day to 10 hours (see 349:1).

348:1 While the *Règlement organique* of the Danubian Principalities was a positive expression of the appetite for surplus labor, which every paragraph legalized, the English Factory Acts are negative expressions of the same appetite.

253:2 War das *Règlement organique* der Donaufürstentümer ein positiver Ausdruck des Heißhungers nach Mehrarbeit, den jeder Paragraph legalisiert, so sind die englischen Factory-Acts negative Ausdrücke desselben Heißhungers.

Question 722 *How were the “*Règlement organique*” in the Danubian Provinces and the “Factory Acts” in England, which were passed only 30 years apart in time from each other, both expressions of the greed for surplus-labor? Why did Marx call one a “positive” and one a “negative” expression?*

↑ At first glance, the Factory Acts seem to be the opposite of the *Règlement Organique*: they limit the work days instead of extending them. But Marx calls them an expression of the same drive, even if this expression has the opposite sign.

These laws curb capital’s drive to suck as much as it can get out of labor-power, curbs it by forcibly limiting the working-day on the authority of the state, a state which is ruled by capitalist and landlord.

Diese Gesetze zügeln den Drang des Kapitals nach maßloser Aussaugung der Arbeitskraft durch gewaltsame Beschränkung des Arbeitstags von Staats wegen, und zwar von seiten eines Staats, den Kapitalist und Landlord beherrschen.

Why would a state controlled by the capitalists and landowners limit the exploitation of labor-power? ↓ Marx gives two kinds of reasons. On the one hand, the strength of the labor movement. On the other hand, the legislation was *necessary for society* (although it was against the interest of the capitalist class). The comparison with guano shows that the blind drive for profits needs corrective action also in other ways.

Apart from the daily more threatening advance of the working-class movement, the limiting of factory labor was dictated by the same necessity as forced the manuring of English fields with guano. The same blind desire for profit that in the one case exhausted the soil had in the other case seized hold of the vital force of the nation at its roots.

Von einer täglich bedrohlicher anschwellenden Arbeiterbewegung abgesehen, war die Beschränkung der Fabrikarbeit diktiert durch dieselbe Notwendigkeit, welche den Guano auf die englischen Felder ausgoß. Dieselbe blinde Raubgier, die in dem einen Fall die Erde erschöpft, hatte in dem andren die Lebenskraft der Nation an der Wurzel ergriffen.

↑ Marx gives here two very different reasons for the Factory Acts: pressure of the working class, and necessity to preserve the vital force of the nation, which is also addressed in 533:1. The deeper reason, the principle, as Marx says later in 408:2/o, is the general interest of society not to have the productivity of its workers undermined. This general and necessary social principle is enforced by the struggles of the working class for a limitation of the

working-day. “Without the working man’s continuous pressure from without that (legislative) interference would have never taken place” (*Value, Price and Profit*, p. [mecw20]146:2. Here the working class struggles not only for its own class interest, but for the general social interest, which the ruling class, by itself, is unable to pursue.

The capitalists like to claim that they act in the interest of society as a whole, while the working class only has its own particular interest in mind which is an obstacle to general social progress. This claim becomes less and less justified. The capitalists don’t even act in the long-term interest of their own class any more. Instead, the proletariat begins to be the class whose class interest coincides with the general interest of society. “Apart from higher motives, ... their own most important interests dictate to the classes that are for the nonce the ruling ones, the removal of all legally removable hindrances to the free development of the working class” (91:3/o).

The state found itself in the contradictory situation of giving in to the demands of the working class in order to heed the long-term interests of capital. The state’s failure to enforce its own legislation shows how contradictory this role is.

The last sentence of this paragraph and footnote 46 give evidence that there was indeed physiological encroachment, not only “moral” encroachment:

Periodical epidemics speak as clearly on this point as the diminishing military standard of height in France and Germany.⁴⁶

⁴⁶ “In general and within certain limits, evidence of the prosperity of organic beings is provided by their exceeding the medium size of their kind. As for man, his bodily height diminishes if his due growth is interfered with, either by physical or by social conditions. In all European countries in which the conscription holds, since its introduction, the medium height of adult men, and generally their fitness for military service, has diminished. Before the revolution (1789), the minimum for the infantry in France was 165 centimetres; in 1818 (law of March 10th), 157; by the law of March 21, 1832, 156 c.m.; on the average in France more than half are rejected on account of deficient height or bodily weakness. The military standard in Saxony was in 1780, 178 c.m. It is now 155. In Prussia it is 157. According to the statement of Dr. Meyer in the Bavarian Gazette, May 9th, 1862, the result of an average of 9 years is, that in Prussia out of 1,000 conscripts 716 were unfit for military service, 317 because of deficiency in height, and 399 because of bodily defects... Berlin in 1858 could not pro-

Periodische Epidemien sprachen hier ebenso deutlich als das abnehmende Soldatenmaß in Deutschland und Frankreich.⁴⁶

⁴⁶ „Im allgemeinen spricht innerhalb gewisser Grenzen für das Gedeihen organischer Wesen das Überschreiten des Mittelmaßes ihrer Art. Für den Menschen verkleinert sich sein Körpermaß, wenn sein Gedeihen beeinträchtigt ist, sei es durch physische oder soziale Verhältnisse. In allen europäischen Ländern, wo Konkskription besteht, hat seit Einführung derselben das mittlere Körpermaß der erwachsenen Männer und im ganzen ihre Tauglichkeit zum Kriegsdienst abgenommen. Vor der Revolution (1789) war das Minimum für den Infanteristen in Frankreich 165 Zentimeter; 1818 (Gesetz vom 10. März) 157, nach dem Gesetz vom 21. März 1832, 156 Zentimeter; durchschnittlich in Frankreich wegen mangelnder Größe und Gebrechen über die Hälfte ausgemustert. Das Militärmaß war in Sachsen 1780: 178 Zentimeter, jetzt 155. In Preußen ist es 157. Nach Angabe in der ‚Bayrischen Zeitung‘ vom 9. Mai 1862 von Dr. Meyer stellt sich nach einem 9jährigen Durchschnitt heraus, daß in Preußen von 1000 Konkskribierten 716 untauglich zum Militärdienst: 317 we-

vide its contingent of recruits, it was 156 men short.’ J. von Liebig: “Die Chemie in ihrer Anwendung auf Agrikultur und Physiologie. 1862,” 7th Ed., vol. 1, pp. 117, 118.

gen Mindermaß und 399 wegen Gebrechen ... Berlin konnte 1858 sein Kontingent an Ersatz-Mannschaft nicht stellen, es fehlten 156 Mann.“ (J. v. Liebig, „Die Chemie in ihrer Anwendung auf Agrikultur und Physiologie,“ 1862. 7. Aufl. Band I, p. 117, 118.)

Question 724 *Would the capitalists have ended up introducing the factory acts themselves if the workers had not fought for them?*

↓ Brief summary of the Factory Acts in force when Marx was writing:

349:1 The Factory Act of 1850 now in force (1867) allows for the average working-day 10 hours, i.e., for the first 5 days 12 hours from 6 a.m. to 6 p.m., from which however 1/2 an hour for breakfast and an hour for dinner are subtracted by law, thus leaving 10 1/2 working-hours, and for Saturday 8 hours, from 6 a.m. to 2 p.m., of which 1/2 an hour is subtracted for breakfast. 60 working-hours are left, 10 1/2 for each of the first 5 days, 7 1/2 for the last.⁴⁷ Certain guardians of these laws are appointed, Factory Inspectors, directly under the Home Secretary, whose reports are published half-yearly, by order of Parliament. They give regular and official statistics of the capitalists’ greed for surplus-labor.

⁴⁷ The history of the Factory Act of 1850 will be found in the course of this chapter.

The events and developments leading up to these Factory Acts will be discussed later. Right now Marx says, in several different ways, that these Acts were a negative expression of the greed for surplus-labor.

(1) Even after the Acts, are the working hours are still very long, plus the legal norms are exceeded by many firms. The reports of the factory inspectors (instituted by these Acts) became the official documentation of capitalist greed.

349:2–350:1 Let us listen, for a moment, to the Factory Inspectors.⁴⁸

254:1 Der jetzt (1867) geltende Factory-Act von 1850 erlaubt für den durchschnittlichen Wochentag 10 Stunden, nämlich für die ersten 5 Wochentage 12 Stunden, von 6 Uhr morgens bis 6 Uhr abends, wovon aber 1/2 Stunde für Frühstück und eine Stunde für Mittagessen gesetzlich abgehn, also 10 1/2 Arbeitsstunden bleiben, und 8 Stunden für den Samstag, von 6 Uhr morgens bis 2 Uhr nachmittags, wovon 1/2 Stunde für Frühstück abgeht. Bleiben 60 Arbeitsstunden, 10 1/2 für die ersten fünf Wochentage, 7 1/2 für den letzten Wochentag.⁴⁷ Es sind eigne Wächter des Gesetzes bestellt, die dem Ministerium des Innern direkt untergeordneten Fabrikinspektoren, deren Berichte halbjährlich von Parlaments wegen veröffentlicht werden. Sie liefern also eine fortlaufende und offizielle Statistik über den Kapitalistenheißhunger nach Mehrarbeit.

⁴⁷ Die Geschichte des Fabrikakts von 1850 folgt im Verlauf dieses Kapitels.

254:2 Hören wir einen Augenblick die Fabrikinspektoren.⁴⁸

“The fraudulent mill-owner begins work a quarter of an hour (sometimes more, sometimes less) before 6 a.m., and leaves off a quarter of an hour (sometimes more, sometimes less) after 6 p.m. He takes 5 minutes from the beginning and from the end of the half hour nominally allowed for breakfast, and 10 minutes at the beginning and end of the hour nominally allowed for dinner. He works for a quarter of an hour (sometimes more, sometimes less) after 2 p.m. on Saturday. Thus his gain is—

Before 6 a.m.	15 minutes	Vor 6 Uhr morgens	15 Minuten
After 6 p.m.	15 minutes	Nach 6 Uhr nachmittags	15 Minuten
At breakfast time	10 minutes	Für Frühstückszeit	10 Minuten
At dinner time	20 minutes	Beim Mittagessen	20 Minuten
	60 minutes		60 Minuten
<i>Sum in 5 days:</i>	300 minutes	<i>Summa in 5 Tagen:</i>	300 Minuten
On Saturdays		An Samstagen	
Before 6 a.m.	15 minutes	Vor 6 Uhr morgens	15 Minuten
At breakfast time	10 minutes	Für Frühstück	10 Minuten
Nach 2 p.m.	15 minutes	Nach 2 Uhr nachmittags	15 Minuten
<i>Total weekly:</i>	340 minutes	<i>Wöchentlicher Gesamtgewinn:</i>	340 Minuten

Or 5 hours and 40 minutes weekly, which multiplied by 50 working weeks in the year (allowing two for holidays and occasional stoppages) is equal to 27 working-days.”⁴⁹

“Five minutes a day’s increased work, multiplied by weeks, are equal to two and a half days of produce in the year.”⁵⁰ “An additional hour a day gained by small instalments before 6 a.m., after 6 p.m., and at the beginning and end of the times nominally fixed for meals, is nearly equivalent to working 13 months in the year.”⁵¹

⁴⁸ I only touch here and there on the period from the beginning of modern industry in England to 1845. For this period I refer the reader to “Die Lage der arbeitenden Klasse in England,” by Friedrich Engels, Leipzig, 1845. How pro-

„Der betrügerische Fabrikant beginnt die Arbeit eine Viertelstunde, manchmal früher, manchmal später, vor 6 Uhr morgens und schließt sie eine Viertelstunde, manchmal früher, manchmal später, nach 6 Uhr nachmittags. Er nimmt 5 Minuten weg vom Anfang und Ende der nominell für das Frühstück anberaumten halben Stunde, und knappt 10 Minuten ab zu Anfang und Ende der für Mittagessen anberaumten Stunde. Samstag arbeitet er eine Viertelstunde, manchmal mehr, manchmal weniger, nach 2 Uhr nachmittags. So beträgt sein Gewinn:

Oder 5 Stunden 40 Minuten wöchentlich, was mit 50 Arbeitswochen multipliziert, nach Abzug von 2 Wochen für Feiertage oder gelegentliche Unterbrechungen, 27 Arbeitstage gibt.“⁴⁹

„Wird der Arbeitstag täglich 5 Minuten über die Normaldauer verlängert, so gibt das 2 1/2 Produktionstage im Jahr.“⁵⁰ „Eine zusätzliche Stunde täglich, dadurch gewonnen, daß bald hier ein Stückchen Zeit erhascht wird, bald dort ein andres Stückchen, macht aus den 12 Monaten des Jahres 13.“⁵¹

⁴⁸ Auf die Periode vom Beginn der großen Industrie in England bis 1845 gehe ich nur hier und da ein und verweise den Leser darüber auf „Die Lage der arbeitenden Klasse in England“ von Friedrich Engels, Leipzig 1845. Wie tief Engels

foundly Engels understood the nature of the capitalist mode of production is shown by the Factory Reports, Reports on Mines, etc., that have appeared since 1845, and how accurately he painted the circumstances in detail is seen on the most superficial comparison of his work with the official reports of the Children’s Employment Commission, published 18 to 20 years later (1863–1867). These deal especially with the branches of industry in which the Factory Acts had not, up to 1862, been introduced, in fact are not yet introduced. Here, then, little or no alteration had been enforced, by authority, in the conditions painted by Engels.

In this favorable review of Engels in footnote 48, Marx distinguishes between the depth of Engels’s understanding, corroborated by the factory reports (which contain interviews of the capitalists themselves), and the accuracy of his detailed knowledge, corroborated by the reports of the Children’s Employment Commission (which was focusing on what actually was done to the children in the factories).

The rest of footnote 48 is directed at Marx’s German readers.

^{48 ctd} I borrow my examples chiefly from the free-trade period after 1848, that age of paradise, of which the commercial travellers for the great firm of free-trade, blatant as ignorant, tell such fabulous tales to the Germans.—By the way, England figures here in the foreground because she is the classic representative of capitalist production, and she alone has a continuous set of official statistics of the things we are considering.

↑ Marx did not mean to put down England. Other countries did similar things, but they did not document it.

⁴⁹ “Suggestions, etc. by Mr. L. Homer, Inspector of Factories,” in Factories Regulation Acts. Ordered by the House of Commons to be printed, 9th August, 1859, pp. 4, 5.

⁵⁰ Reports of the Inspector of Factories for the half year. October, 1856, p. 35.

⁵¹ Reports, etc., 30th April, 1858, p. 9.

(2) Crises, during which production is interrupted, do not affect the drive to lengthen the working-day:

350:2–351:1 Crises during which production is interrupted and the factories work

den Geist der kapitalistischen Produktionsweise begriff, zeigen die Factory Reports, Reports on Mines usw., die seit 1845 erschienen sind, und wie bewunderungswürdig er die Zustände im Detail malte, zeigt der oberflächlichste Vergleich seiner Schrift mit den 18 bis 20 Jahre später veröffentlichten offiziellen Reports der Children’s Employment Commission (1863–1867). Diese handeln nämlich von Industriezweigen, worin die Fabrikgesetzgebung bis 1862 noch nicht eingeführt war, zum Teil noch nicht eingeführt ist. Hier wurde also den von Engels geschilderten Zuständen mehr oder minder große Änderung nicht von außen aufgehterrscht.

^{48 ctd} Meine Beispiele entlehne ich hauptsächlich der Freihandelsperiode nach 1848, jener paradisiischen Zeit, wovon ebenso großmäulige als wissenschaftlich verwaorloste Freihandels-hausierburschen den Deutschen so fabelhaft viel vorfauchen.—Übrigens figurirt England hier nur im Vordergrund, weil es die kapitalistische Produktion klassisch repräsentiert und allein eine offiziell fortlaufende Statistik der behandelten Gegenstände besitzt.

⁴⁹ „Suggestions etc. by Mr. L. Horner, Inspector of Factories“, im „Factories Regulation Act. Ordered by the House of Commons to be printed 9. Aug. 1859“, p. 4, 5.

⁵⁰ „Reports of the Insp. of Fact. for the half year, Oct. 1856“, p. 35.

⁵¹ „Report etc. 30th April 1858“, p. 9.

255:4 Krisen, worin die Produktion unterbrochen und nur „kurze Zeit“, nur während

“short time,” i.e., for only a part of the week, naturally do not affect the tendency to extend the working-day.

↑ This is a contradiction. Business conditions force the capitalists to work shorter hours, but their drive is to extend the hours as much as possible. ↓ It is revealing how they deal with this contradiction: Even if the employees are working short hours, they are still expected to work during breaks and before and after their paid time.

The less business there is, the more profit has to be made on the business done. The less time spent in work, the more of that time has to be turned into surplus labor-time. Thus the Factory Inspector's report on the period of the crisis from 1857 to 1858:

“It may seem inconsistent that there should be any overworking at a time when trade is so bad; but that very badness leads to the transgression by unscrupulous men, they get the extra profit of it ... In the last half year, says Leonard Homer, 122 mills in my district have been given up; 143 were found standing,” yet, over-work is continued beyond the legal hours.⁵² “For a great part of the time,” says Mr. Howell, “owing to the depression of trade, many factories were altogether closed, and a still greater number were working short time. I continue, however, to receive about the usual number of complaints that half, or three-quarters of an hour in the day, are snatched from the workers by encroaching upon the times professedly allowed for rest and refreshment.”⁵³

⁵² Reports, etc., l.c., p. 10.

⁵³ Reports etc., l.c., p. 25.

351:2–352:2 The same phenomenon was reproduced on a smaller scale during the frightful cotton-crises from 1861 to 1865.⁵⁴

“It is sometimes advanced by way of excuse, when persons are found at work in a factory, either at a meal hour, or at some illegal time,

einiger Tage in der Woche, gearbeitet wird, ändern natürlich nichts an dem Trieb nach Verlängerung des Arbeitstags.

Je weniger Geschäfte gemacht werden, desto größer soll der Gewinn auf das gemachte Geschäft sein. Je weniger Zeit gearbeitet werden kann, desto mehr Surplusarbeitszeit soll gearbeitet werden. So berichten die Fabrikinspektoren über die Periode der Krise von 1857 bis 1858:

„Man mag es für eine Inkonsequenz halten, daß irgendwelche Überarbeit zu einer Zeit stattfindet, wo der Handel so schlecht geht, aber sein schlechter Zustand spornt rücksichtslose Leute zu Überschreitungen; sie sichern sich so einen Extraprofit ...“ „Zur selben Zeit“, sagt Leonard Horner, „wo 122 Fabriken in meinem Distrikt ganz aufgegeben sind, 143 stillstehn und alle andren kurze Zeit arbeiten, wird die Überarbeit über die gesetzlich bestimmte Zeit fortgesetzt.“⁵² „Obgleich“, sagt Herr Howell, „in den meisten Fabriken des schlechten Geschäftsstands wegen nur halbe Zeit gearbeitet wird, erhalte ich nach wie vor dieselbe Anzahl von Klagen, daß eine halbe Stunde oder 3/4 Stunden täglich den Arbeitern weggeschnappt (snatched) werden durch Eingriffe in die ihnen gesetzlich gesicherten Fristen für Mahlzeit und Erholung.“⁵³

⁵² „Reports etc.“, l.c. p. 10.

⁵³ „Reports etc.“, l.c. p. 25.

256:1 Dasselbe Phänomen wiederholt sich auf kleinerer Stufenleiter während der furchtbaren Baumwollkrise von 1861 bis 1865.⁵⁴

„Es wird zuweilen vorgeschützt, wenn wir Arbeiter während der Speisestunden oder sonst zu ungesetzlicher Zeit am Werk ertappen, daß

that they will not leave the mill at the appointed hour, and that compulsion is necessary to force them to cease work [cleaning their machinery, etc.], especially on Saturday afternoons. But, if the hands remain in a factory after the machinery has ceased to revolve ... they would not have been so employed if sufficient time had been set apart specially for cleaning, etc., either before 6 a.m. [*sic!*] or before 2 p.m. on Saturday afternoons.”⁵⁵

“The profit to be gained by it (over-working in violation of the Act) appears to be, to many, a greater temptation than they can resist; they calculate upon the chance of not being found out; and when they see the small amount of penalty and costs, which those who have been convicted have had to pay, they find that if they should be detected there will still be a considerable balance of gain ...”⁵⁶ In cases where the additional time is gained by a multiplication of small thefts in the course of the day, there are insuperable difficulties to the inspectors making out a case.”⁵⁷

These “small thefts” of capital from the laborer's meal and recreation time, the factory inspectors also designate as “petty pilferings of minutes,”⁵⁸ “snatching a few minutes,”⁵⁹ or, as the laborers technically called them, “nibbling and cribbling at meal-times.”⁶⁰

⁵⁴ Reports etc., for the half year ending 30th April, 1861. See Appendix No. 2; Reports, etc., 31st October, 1862, pp. 7, 52, 53. The violations of the Acts became more numerous during the last half year 1863. Cf. Reports, etc., ending 31st October, 1863, p. 7.

⁵⁵ Reports, etc., October 31st, 1860, p. 23. With what fanaticism, according to the evidence of manufacturers given in courts of law, their hands set themselves against every interruption in factory labor, the following curious circum-

sie die Fabrik durchaus nicht verlassen wollen und daß es des Zwangs bedarf, um ihre Arbeit“ (Reinigen der Maschinen usw.) „zu unterbrechen, namentlich Samstag nachmittags. Aber wenn die ‚Hände‘ nach Stillsetzung der Maschinerie in der Fabrik bleiben, geschieht es nur, weil ihnen zwischen 6 Uhr morgens und 6 Uhr abends, in den gesetzlich bestimmten Arbeitsstunden, keine Frist zur Verrichtung solcher Geschäfte gestattet worden ist.“⁵⁵

„Der durch Überarbeit über die gesetzliche Zeit zu machende Extraprofit scheint für viele Fabrikanten eine zu große Versuchung, um ihr widerstehn zu können. Sie rechnen auf die Chance, nicht aufgefunden zu werden, und berechnen, daß selbst im Fall der Entdeckung die Geringfügigkeit der Geldstrafen und Gerichtskosten ihnen immer noch eine Gewinnbilanz sichert.“⁵⁶ Wo die zusätzliche Zeit durch Multiplikation kleiner Diebstähle (a multiplication of small thefts) im Laufe des Tages gewonnen wird, stehn den Inspektoren fast unüberwindliche Schwierigkeiten der Beweisführung im Weg.“⁵⁷

Diese „kleinen Diebstähle“ des Kapitals an der Mahlzeit und Erholungszeit der Arbeiter bezeichnen die Fabrikinspektoren auch als „petty pilferings of minutes“, Mauseereien von Minuten,⁵⁸ „snatching a few minutes“, Wegschnappen von Minuten,⁵⁹ oder wie die Arbeiter es technisch heißen, „nibbling and cribbling at meal times“.⁶⁰

⁵⁴ „Reports etc. for the half year ending 30th April 1861.“ Sieh Appendix Nr. 2; „Reports etc. 31st Octob. 1862“, p. 7, 52, 53. Die Überschreitungen werden wieder zahlreicher mit dem letzten Halbjahr 1863. Vgl. Reports etc. ending 31st Oct. 1863“, p. 7.

⁵⁵ „Reports etc. 31st Oct. 1864, p. 23.“ Mit welchem Fanatismus, nach gerichtlichen Aussagen der Fabrikanten, ihre Fabrikhände sich jeder Unterbrechung der Fabrikarbeit widersetzen, zeige folgendes Kuriosum: Anfang Juni 1836 gin-

stance shows. In the beginning of June, 1836, information reached the magistrates of Dewsbury (Yorkshire) that the owners of 8 large mills in the neighbourhood of Batley had violated the Factory Acts. Some of these gentlemen were accused of having kept at work 5 boys between 12 and 15 years of age, from 6 a.m. on Friday to 4 p.m. on the following Saturday, not allowing them any respite except for meals and one hour for sleep at midnight. And these children had to do this ceaseless labor of 30 hours in the “shoddyhole,” as the hole is called, in which the woollen rags are pulled in pieces, and where a dense atmosphere of dust, shreds, etc., forces even the adult workman to cover his mouth continually with handkerchiefs for the protection of his lungs! The accused gentlemen affirm in lieu of taking an oath—as quakers they were too scrupulously religious to take an oath—that they had, in their great compassion for the unhappy children, allowed them four hours for sleep, but the obstinate children absolutely would not go to bed. The quaker gentlemen were fined £20. Dryden anticipated these gentry:

⁵⁵ *ctd* “Fox full fraught in seeming sanctity,
That feared an oath, but like the devil would lie,
That look’d like Lent, and had the holy leer,
And durst not sin! before he said his prayer!”

⁵⁶ Rep., 31st Oct., 1856, p. 34.

⁵⁷ l.c., p. 35.

⁵⁸ l.c., p. 48.

⁵⁹ l.c., p. 48.

⁶⁰ l.c., p. 48.

↓ Although Marx says that in general, capitalist exploitation is “hidden,” in this situation capitalism reveals itself as being based on the expropriation of labor.

352:3 It is evident that in this atmosphere the formation of surplus-value by surplus-labor is no secret. “‘If you allow me’, said a highly respectable master to me, ‘to work

gen den Magistrates von Dewsbury (Yorkshire) Denunziationen zu, wonach die Eigner von 8 großen Fabriken in der Nähe von Batley den Fabrikakt verletzt hätten. Ein Teil dieser Herren war angeklagt, 5 Knaben zwischen 12 und 15 Jahren von 6 Uhr morgens des Freitags bis 4 Uhr nachmittags des folgenden Samstags abgearbeitet zu haben, ohne irgendeine Erholung zu gestatten, außer für Mahlzeiten und eine Stunde Schlaf um Mitternacht. Und diese Kinder hatten die rastlose, 30stündige Arbeit zu verrichten in dem „shoddyhole“, wie die Höhle heißt, worin Wollenlumpen aufgerissen werden und wo ein Luftmeer von Staub, Abfällen usw. selbst den erwachsenen Arbeiter zwingt, den Mund beständig mit Schnupftüchern zu verbinden, zum Schutz seiner Lunge! Die Herren Angeklagten versicherten an Eides Statt—als Quäker waren sie zu skrupulös religiöse Männer, einen Eid zu leisten—, sie hätten in ihrer großen Barmherzigkeit den elenden Kindern 4 Stunden Schlaf erlaubt, aber die Starrköpfe von Kindern wollten durchaus nicht zu Bett gehn! Die Herrn Quäker wurden zu 20 Pfd.St. Geldbuße verurteilt. Dryden ahnte diese Quäker:

⁵⁵ *ctd* „Ein Fuchs voller Scheinheiligkeit,
der wie der Teufel lügt, doch fürchtet sich vor’m Eid,
der wie ein Büsser ausschaut, doch seitwärts gier’ge Blicke wirft,
doch nicht zu sünd’gen wagt, bevor er sein Gebet gesagt!“

⁵⁶ „Rep. etc. 31st Oct. 1856“, p. 34.

⁵⁷ l.c., p. 35.

⁵⁸ l.c., p. 48.

⁵⁹ l.c.

⁶⁰ l.c.

257:2 Man sieht, in dieser Atmosphäre ist die Bildung des Mehrwerts durch die Mehrarbeit kein Geheimnis. „Wenn Sie mir erlauben“, sagte mir ein sehr respektabler Fa-

only ten minutes in the day over-time, you put one thousand a year in my pocket.’”⁶¹ “Moments are the elements of profit.”⁶²

⁶¹ l.c., p. 48.

⁶² Report of the Insp. etc., 30th April 1860, p. 56.

352:4/o Nothing is from this point of view more characteristic than the designation of the workers who work full time as “full-timers,” and the children under 13 who are only allowed to work 6 hours as “half-timers.” The worker is here nothing more than personified labor-time. All individual distinctions are merged in those of “full-timers” and “half-timers.”⁶³

⁶³ This is the official expression both in the factories and in the reports.

brikherr, täglich nur 10 Minuten Überzeit arbeiten zu lassen, stecken Sie jährlich 1000 Pfd.St. in meine Tasche.’”⁶¹ „Zeitatomie sind die Elemente des Gewinns.“⁶²

⁶¹ l.c., p. 48.

⁶² „Moments are the elements of profit.“ („Rep. of the Insp. etc. 30th April 1860 p. 56.)

257:4 Nichts ist in dieser Hinsicht charakteristischer als die Bezeichnung der Arbeiter, die volle Zeit arbeiten, durch „full times“ und die der Kinder unter 13 Jahren, die nur 6 Stunden arbeiten dürfen, als „half times“⁶³. Der Arbeiter ist hier nichts mehr als personifizierte Arbeitszeit. Alle individuellen Unterschiede lösen sich auf in die von „Vollzeitleiter“ und „Halbzeitleiter“.

⁶³ Der Ausdruck hat offizielles Bürgerrecht, wie in der Fabrik, so in den Fabrikberichten.

10.3. Branches of English Industry With No Legal Bounds to Exploitation

The factory acts discussed so far were the “negative expression” 348:1 of capital’s were-wolf hunger for surplus-value. The present section discusses situations in which this hunger freely expressed itself because it had not yet received such a negative reaction. Marx concentrates on the time after 1845, see footnote 48 to paragraph 349:2–350:1, where the working-day was regulated in some but not in other industries. He shows that the same thirst for surplus-labor that is apparent in the regulated industries, can also be found in the unregulated ones. This proves that this thirst is not a reaction to regulation, and makes it clear to the reader that regulation is necessary everywhere, see 411:2/o. Besides excessive length of the working-day, also other transgressions are registered: child labor, unsafe or unhealthy working conditions, product adulteration.

353:1 We have hitherto considered the tendency to the extension of the working-day, the were-wolf’s hunger for surplus-labor, in a department where boundless excesses, not surpassed, says an English bourgeois economist, by the cruelties of the Spaniards to the American red-skins,⁶⁴

258:1 Den Trieb nach Verlängerung des Arbeitstags, den Werwölfshunger für Mehrarbeit, beobachteten wir bisher auf einem Gebiet, wo maßlose Ausschreitungen, nicht übergipfelt, so sagt ein bürgerlicher englischer Ökonom, von den Grausamkeiten der Spanier gegen die Rothäute

caused capital at last to be bound by the chains of legal regulations.

⁶⁴ “The cupidity of mill-owners whose cruelties in the pursuit of gain have hardly been exceeded by those perpetrated by the Spaniards on the conquest of America in the pursuit of gold.” John Wade, [Wad35, p. 114]. The theoretical part of this book, a kind of hand-book of Political Economy, is, considering the time of its publication, original in some parts, *e.g.*, on commercial crises. The historical part is, to a great extent, a shameless plagiarism of Sir F. M. Eden’s “The State of the Poor,” London, 1797.

It is the boundless excesses of the werewolf’s hunger for surplus labor, not this hunger itself, that triggered the legal regulation. Now Marx looks at industries which were exempt from these laws, in which these excesses continued unabated. Marx brings examples from the production of laces in 353:2/o, pottery in 354:1, matches in 356:1, wallpaper in 356:2, bread in 358:1, and at the end, in 363:1, various other consumer products where excessive hours prevailed.

Now, let us cast a glance at certain branches of production in which the exploitation of labor is either free from fetters to this day, or was so yesterday.

Laces: Discussion in a county magistrate about child labor in laces, 18 hours and more per day, amounts to slavery and manslaughter. Personal outrage of officials and priest, capitalists protest against the discussion.

353:2/o “Mr. Broughton Charlton, county magistrate, declared, as chairman of a meeting held at the Assembly Rooms, Nottingham, on the 14th January, 1860, that there was an amount of privation and suffering among that portion of the population connected with the lace trade, unknown in other parts of the kingdom, indeed, in the civilised world ... Children of nine or ten years are dragged from their squalid beds at two, three, or four o’clock in the morning and compelled to work for a bare subsistence until ten, eleven, or twelve at night, their limbs wearing away, their frames dwindling, their faces whitening, and their humanity absolutely sinking into a stone-like torpor, utterly horrible to contemplate ... We are not surprised that Mr. Mallett, or any

Amerikas,⁶⁴ das Kapital endlich an die Kette gesetzlicher Regulation gelegt haben.

⁶⁴ „Die Habgier der Fabrikbesitzer, deren Grausamkeiten bei der Jagd nach Gewinn kaum von denjenigen übertroffen wurden, die die Spanier bei der Eroberung Amerikas, bei der Jagd nach dem Golde verübten.“ John Wade [Wad35, p. 114] Der theoretische Teil dieses Buchs, eine Art Grundriß der politischen Ökonomie, enthält für seine Zeit einiges Originelle, z.B. über Handelskrisen. Der historische Teil leidet an schamlosem Plagiarismus aus Sir M. Edens, „The State of the Poor“, London 1797.

Werfen wir jetzt den Blick auf einige Produktionszweige, wo die Aussaugung der Arbeitskraft entweder noch heute fesselfrei ist oder es gestern noch war.

258:2/o „Herr Broughton, ein County Magistrate, erklärte als Präsident eines Meetings, abgehalten in der Stadthalle von Nottingham, am 14. Januar 1860, daß in dem mit der Spitzenfabrikation beschäftigten Teile der städtischen Bevölkerung ein der übrigen zivilisierten Welt unbekannter Grad von Leid und Entbehrung vorherrscht ... Um 2, 3, 4 Uhr des Morgens werden Kinder von 9 bis 10 Jahren ihren schmutzigen Betten entrissen und gezwungen, für die nackte Subsistenz bis 10, 11, 12 Uhr nachts zu arbeiten, während ihre Glieder wegschwinden, ihre Gestalt zusammenschrumpft, ihre Gesichtszüge abstumpfen und ihr menschliches Wesen ganz und gar in einem steinähnlichen Torpor erstant, dessen bloßer Anblick schauerhaft ist. Wir sind

other manufacturer, should stand forward and protest against discussion ... The system, as the Rev. Montagu Valpy describes it, is one of unmitigated slavery, socially, physically, morally, and spiritually ... What can be thought of a town which holds a public meeting to petition that the period of labor for men shall be diminished to eighteen hours a day? ... We declaim against the Virginian and Carolinian cotton-planters. Is their black-market, their lash, and their barter of human flesh more detestable than this slow sacrifice of humanity which takes place in order that veils and collars may be fabricated for the benefit of capitalists?”⁶⁵

⁶⁵ *Daily Telegraph*, 17th January, 1860.

Potteries: One and the same pottery was subject to 3 parliamentary investigations within 22 years. Quotes from these about the child labor there (leaving aside the conditions for adults). Long and irregular hours, whole nights of overtime without extra pay. Bad health of population is very obvious.

354:1 The potteries of Staffordshire have, during the last 22 years, been the subject of three parliamentary inquiries. The result is embodied in Mr. Scriven’s Report of 1841 to the “Children’s Employment Commissioners,” in the report of Dr. Greenhow of 1860 published by order of the medical officer of the Privy Council (Public Health, 3rd Report, 112–113), lastly, in the report of Mr. Longe of 1862 in the “First Report of the Children’s Employment Commission, of the 13th June, 1863.” For my purpose it is enough to take, from the reports of 1860 and 1863, some depositions of the exploited children themselves. From the children we may form an opinion as to the adults, especially the girls and women, and that in

nicht überrascht, daß Herr Mallett und andere Fabrikanten auftraten, um Protest gegen jede Diskussion einzulegen ... Das System, wie der Rev. Montagu Valpy es beschrieb, ist ein System unbeschränkter Sklaverei. Sklaverei in sozialer, physischer, moralischer und intellektueller Beziehung ... Was soll man denken von einer Stadt, die ein öffentliches Meeting abhält, um zu petitionieren, daß die Arbeitszeit für Männer täglich auf 18 Stunden beschränkt werden solle! ... Wir deklamieren gegen die virginischen und karolinischen Pflanzer. Ist jedoch ihr Negermarkt, mit allen Schrecken der Peitsche und dem Schacher in Menschenfleisch, abscheulicher als diese langsame Menschenabschlachtung, die vor sich geht, damit Schleier und Kragen zum Vorteil von Kapitalisten fabriziert werden?”⁶⁵

⁶⁵ London „Daily Telegraph“ vom 17. Januar 1860.

259:1 Die Töpferei (Pottery) von Staffordshire hat während der letzten 22 Jahre den Gegenstand dreier parlamentarischen Untersuchungen gebildet. Die Resultate sind niedergelegt im Bericht des Herrn Scriven von 1841 an die „Children’s Employment Commissioners“, im Bericht des Dr. Greenhow von 1860, veröffentlicht auf Befehl des ärztlichen Beamten des Privy Council („Public Health, 3rd Report“, 1, 102–113), endlich im Bericht des Herrn Longe von 1863, in „First Report of the Children’s Employment Commission“ vom 13. Juni 1863. Für meine Aufgabe genügt es, den Berichten von 1860 und 1863 einige Zeugenaussagen der exploitierten Kinder selbst zu entlehnen. Von den Kindern mag man

a branch of industry by the side of which cotton-spinning appears an agreeable and healthful occupation.⁶⁶

⁶⁶ Cf. F. Engels "Lage, etc." pp. 249–51.

Testimony of children working in the potteries:

354:2 William Wood, 9 years old, was 7 years and 10 months when he began to work. He "ran moulds" (carried ready-moulded articles into the drying-room, afterwards bringing back the empty mould) from the beginning. He came to work every day in the week at 6 a.m., and left off about 9 p.m.

"I work till 9 o'clock at night six days in the week. I have done so seven or eight weeks."

Fifteen hours of labor for a child 7 years old! J. Murray, 12 years of age, says:

"I turn jigger, and run moulds. I come at 6. Sometimes I come at 4. I worked all night last night, till 6 o'clock this morning. I have not been in bed since the night before last. There were eight or nine other boys working last night. All but one have come this morning. I get 3 shillings and sixpence. I do not get any more for working at night. I worked two nights last week."

Fernyhough, a boy of ten:

"I have not always an hour (for dinner). I have only half an hour sometimes; on Thursday, Friday, and Saturday."⁶⁷

⁶⁷ Children's Employment Commission. First report., etc., 1863. Evidence. pp. 16, 19, 18.

Testimony about the general state of health of the population:

354:3/o Dr. Greenhow states that the average duration of life in the pottery districts of

auf die Erwachsenen schließen, namentlich Mädchen und Frauen, und zwar in einem Industriezweig, woneben Baumwollspinnerei u. dgl. als ein sehr angenehmes und gesundes Geschäft erscheint.⁶⁶

⁶⁶ Vgl. Engels, „Lage etc.“, p. [mecw]

259:2–5 Wilhelm Wood, neunjährig, "war 7 Jahre 10 Monate alt, als er zu arbeiten begann". Er „ran moulds“ (trug die fertig geformte Ware in die Trockenstube, um nachher die leere Form zurückzubringen) von Anfang an. Er kommt jeden Tag in der Woche um 6 Uhr morgens und hört auf ungefähr 9 Uhr abends.

„Ich arbeite bis 9 Uhr abends jeden Tag in der Woche. So z.B. während der letzten 7–8 Wochen.“

Also fünfzehnstündige Arbeit für ein siebenjähriges Kind! J. Murray, ein zwölfjähriger Knabe, sagt aus:

„I run moulds and turn jigger (drehe das Rad). Ich komme um 6 Uhr, manchmal um 4 Uhr morgens. Ich habe während der ganzen letzten Nacht bis diesen Morgen 6 Uhr gearbeitet. Ich war nicht im Bett seit der letzten Nacht. Außer mir arbeiteten 8 oder 9 andre Knaben die letzte Nacht durch. Alle außer einem sind diesen Morgen wieder gekommen. Ich bekomme wöchentlich 3 sh. 6 d.“ (1 Taler 5 Groschen). Ich bekomme nicht mehr, wenn ich die ganze Nacht durcharbeite. Ich habe in der letzten Woche zwei Nächte durchgearbeitet.“

Fernyhough, ein zehnjähriger Knabe:

„Ich habe nicht immer eine ganze Stunde für das Mittagessen; oft nur eine halbe Stunde; jeden Donnerstag, Freitag und Samstag.“⁶⁷

⁶⁷ „Children's Employment Commission, First Report etc. 1863“, Appendix, p. 16, 19, 18.

260:1–5 Dr. Greenhow erklärt die Lebenszeit in den Töpferdistrikten von Stokeupon

Stoke-on-Trent and Wolstanton is extraordinarily short. Although in the district of Stoke, only 36.6% and in Wolstanton only 30.4% of the adult male population above 20 are employed in the potteries, among the men of that age in the first district more than half, in the second, nearly 2/5 of the whole deaths are the result of pulmonary diseases among the potters. Dr. Boothroyd, a medical practitioner at Hanley, says:

"Each successive generation of potters is more dwarfed and less robust than the preceding one."

In like manner another doctor, Mr. M'Bean:

"Since he began to practice among the potters 25 years ago, he had observed a marked degeneration especially shown in diminution of stature and breadth."

These statements are taken from the report of Dr. Greenhow in 1860.⁶⁸

⁶⁸ Public Health, 3rd report, etc., pp. 102, 104, 105.

355:1 From the report of the Commissioners in 1863 the following: Dr. J. T. Arledge, senior physician of the North Staffordshire Infirmary, says:

"The potters as a class, both men and women, represent a degenerated population, both physically and morally. They are, as a rule, stunted in growth, ill-shaped, and frequently ill-formed in the chest; they become prematurely old, and are certainly short-lived; they are phlegmatic and bloodless, and exhibit their debility of constitution by obstinate attacks of dyspepsia, and disorders of the liver and kidneys, and by rheumatism. But of all diseases they are especially prone to chest-disease, to pneumonia, phthisis, bronchitis, and asthma. One form would appear peculiar to them, and is known as potter's asthma, or potter's consumption. Scrofula attacking the glands, or bones, or other parts of the body, is a disease

Trent und Wolstanton für außerordentlich kurz. Obgleich im Distrikt Stoke nur 36,6% und in Wolstanton nur 30,4% der männlichen Bevölkerung über 20 Jahre in den Töpfereien beschäftigt sind, fällt unter Männern dieser Kategorie im ersten Distrikt mehr als die Hälfte, im zweiten ungefähr 2/5 der Todesfälle infolge von Brustkrankheiten auf die Töpfer. Dr. Boothroyd, praktischer Arzt zu Hanley, sagt aus:

„Jede sukzessive Generation der Töpfer ist zwerghafter und schwächer als die vorhergehende.“

Ebenso ein anderer Arzt, Herr McBean:

„Seit ich vor 25 Jahren meine Praxis unter den Töpfern begann, hat sich die auffallende Entartung dieser Klasse fortschreitend in Abnahme von Gestalt und Gewicht gezeigt.“

Diese Aussagen sind dem Bericht des Dr. Greenhow von 1860 entnommen.⁶⁸

⁶⁸ „Public Health, 3rd Report etc.“, p. 103, 105.

260:6–7 Aus dem Bericht der Kommissäre von 1863 folgendes: Dr. J. T. Arledge, Oberarzt des North Staffordshire Krankenhauses, sagt:

„Als eine Klasse repräsentieren die Töpfer, Männer und Frauen . . ., eine entartete Bevölkerung, physisch und moralisch. Sie sind in der Regel verzerrt, schlecht gebaut, und oft an der Brust verwachsen. Sie altern vorzeitig und sind kurzlebig; phlegmatisch und blutlos, verraten sie die Schwäche ihrer Konstitution durch hartnäckige Anfälle von Dyspepsie, Leber und Nierenstörungen und Rheumatismus. Vor allem aber sind sie Brustkrankheiten unterworfen, der Pneumonie, Phthisis, Bronchitis und dem Asthma. Eine Form des letzteren ist ihnen eigentümlich und bekannt unter dem Namen des Töpfer-Asthma oder der Töpfer-Schwindsucht. Skrophulose, die Mandeln, Knochen oder andre Körperteile an-

of two-thirds or more of the potters ... That the 'degenerescence' of the population of this district is not even greater than it is, is due to the constant recruiting from the adjacent country, and intermarriages with more healthy races."^{68a}

^{68a} Child. Empl. Comm. I. Report, p. 24.

355:2/o Mr. Charles Parsons, late house surgeon of the same institution, writes in a letter to Commissioner Longe, amongst other things:

↓ This testimony speaks not only of the avarice of the employers but also the parents:

"I can only speak from personal observation and not from statistical data, but I do not hesitate to assert that my indignation has been aroused again and again at the sight of poor children whose health has been sacrificed to gratify the avarice of either parents or employers."

He enumerates the causes of the diseases of the potters, and sums them up in the phrase, "long hours." The report of the Commission trusts that

"a manufacture which has assumed so prominent a place in the whole world, will not long be subject to the remark that its great success is accompanied with the physical deterioration, widespread bodily suffering, and early death of the workpeople ... by whose labor and skill such great results have been achieved."⁶⁹

⁶⁹ Children's Employment Commission, p. 22, and xi.

And all that holds of the potteries in England is true of those in Scotland.⁷⁰

⁷⁰ l.c., p. xlvii.

Matches: Because of phosphorus extremely unhealthy conditions, long and irregular hours, meals for the most part taken in the phosphorus infested workrooms, lockjaw disease peculiar to matchmakers, half of the workers children under thirteen.

356:1 The manufacture of lucifer matches dates from 1833, from the discovery of the

greift, ist eine Krankheit von mehr als zwei Dritteln der Töpfer. Daß die Entartung (degenerescence) der Bevölkerung dieses Distrikts nicht noch viel größer ist, verdankt sie ausschließlich der Rekrutierung aus den umliegenden Landdistrikten und den Zwischenheiraten mit gesunden Racen."

260:8–261:3 Herr Charles Parsons, vor kurzem noch House Surgeon derselben Krankenanstalt, schreibt in einem Briefe an den Kommissär Longe u.a.:

„Ich kann nur aus persönlicher Beobachtung,

nicht statistisch sprechen, aber ich stehe nicht an zu versichern, daß meine Empörung wieder und wieder aufkochte bei dem Anblick dieser armen Kinder, deren Gesundheit geopfert wurde, um der Habgier ihrer Eltern und Arbeitgeber zu frönen."

Er zählt die Ursachen der Töpferkrankheiten auf und schließt sie kulminierend ab mit "long hours" („langen Arbeitsstunden"). Der Kommissionsbericht hofft, daß

„eine Manufaktur von so hervorragender Stellung in den Augen der Welt nicht lange mehr den Makel tragen wird, daß ihr großer Erfolg begleitet ist von physischer Entartung, vielverzweigten körperlichen Leiden und frühem Tode der Arbeiterbevölkerung, durch deren Arbeit und Geschick so große Resultate erzielt worden sind."⁶⁹

⁶⁹ „Children's Empl. Comm. 1863" p. 24, 22 u. XI.

Was von den Töpfereien in England, gilt von denen in Schottland.⁷⁰

⁷⁰ l.c. p. XLVII.

261:4 Die Manufaktur von Zündhölzern datiert von 1833, von der Erfindung, den

method of applying phosphorus to the match itself. Since 1845 this manufacture has rapidly developed in England, and has extended especially amongst the thickly populated parts of London as well as in Manchester, Birmingham, Liverpool, Bristol, Norwich, Newcastle and Glasgow. With it has spread the form of lockjaw, which a Vienna physician in 1845 discovered to be a disease peculiar to lucifer-matchmakers. Half the workers are children under thirteen, and young persons under eighteen.

Now some indirect reference to the custom by the working class to deliver their children as workers into the factories: Only the most miserable part of the working class delivers its children for the potteries.

The manufacture is on account of its unhealthiness and unpleasantness in such bad odour that only the most miserable part of the laboring class, half-starved widows and so forth, deliver up their children to it, "the ragged, half-starved, neglected, and untaught children."⁷¹ Of the witnesses that Commissioner White examined (1863), 270 were under 18, 50 under 10, 10 only 8, and 5 only 6 years old. A range of the working-day from 12 to 14 or 15 hours, night-labor, irregular meal-times, meals for the most part taken in the very workrooms that are pestilent with phosphorus. Dante would have found the worst horrors of his Inferno surpassed in this manufacture.

⁷¹ l.c., p. liv.

Paper hangings (wallpaper): Machinery operated by children, has to run continuously without meal breaks (apparently as a pretext it was claimed that paper and ink would be wasted). Season mainly in winter, therefore extremely long hours with overtime pay in winter, but overtime also in summer. Workers have to quit sick because of overwork.

356:2 In the manufacture of paper-hangings the coarser sorts are printed by machine; the finer by hand (block-printing). The most active business months are from the beginning of October to the end of April.

Phosphor auf die Zündrute selbst anzubringen. Seit 1845 hat sie sich rasch in England entwickelt und von den dicht bevölkerten Teilen Londons namentlich auch nach Manchester, Birmingham, Liverpool, Bristol, Norwich, Newcastle, Glasgow verbreitet, mit ihr die Mundsperr, die ein Wiener Arzt schon 1845 als eigentümliche Krankheit der Zündholzmacher entdeckte. Die Hälfte der Arbeiter sind Kinder unter 13 und junge Personen unter 18 Jahren.

Die Manufaktur ist wegen ihrer Ungesundheit und Widerwärtigkeit so verrufen, daß nur der verkommenste Teil der Arbeiterklasse, halbverhungerte Witwen usw., Kinder für sie hergibt, "zerlumpte, halb verhungerte, ganz verwahrloste und unerzogene Kinder."⁷¹ Von den Zeugen, die Kommissär White (1863) verhörte, waren 270 unter 18 Jahren, 40 unter 10 Jahren, 10 nur 8 und 5 nur 6 Jahre alt. Wechsel des Arbeitstags von 12 auf 14 und 15 Stunden, Nacharbeit, unregelmäßige Mahlzeiten, meist in den Arbeitsräumen selbst, die vom Phosphor verpestet sind. Dante wird in dieser Manufaktur seine grausamsten Höllenphantasien übertroffen finden.

⁷¹ l.c. p. LIV.

261:5 In der Tapetenfabrik werden die gröberen Sorten mit Maschinen, die feineren mit der Hand (block printing) gedruckt. Die lebhaftesten Geschäftsmonate fallen zwischen Anfang Oktober und Ende

During this time the work goes on fast and furious without intermission from 6 a.m. to 10 p.m. or further into the night.

356:3/op J. Leach deposes:

“Last winter six out of nineteen girls were away from ill-health at one time from over-work. I have to bawl at them to keep them awake.” W. Duffy: “I have seen when the children could none of them keep their eyes open for the work; indeed, none of us could.” J. Lightbourne: “Am 13 We worked last winter till 9 (evening), and the winter before till 10. I used to cry with sore feet every night last winter.” G. Apsden: “That boy of mine when he was 7 years old I used to carry him on my back to and fro through the snow, and he used to have 16 hours a day ... I have often knelt down to feed him as he stood by the machine, for he could not leave it or stop.” Smith, the managing partner of a Manchester factory: “We (he means his “hands” who work for “us”) work on with no stoppage for meals, so that day’s work of 10 1/2 hours is finished by 4.30 p.m., and all after that is over-time.”⁷² (Does this Mr. Smith take no meals himself during 10 1/2 hours?) “We (this same Smith) seldom leave off working before 6 p.m. (he means leave off the consumption of “our” labor-power machines), so that we (iterum Crispinus) are really working over-time the whole year round. For all these, children and adults alike (152 children and young persons and 140 adults), the average work for the last 18 months has been at the very least 7 days, 5 hours, or 78 1/2 hours a week. For the six weeks ending May 2nd this year (1862), the average was higher—8 days or 84 hours a week.”

April. Während dieser Periode dauert diese Arbeit häufig und fast ohne Unterbrechung von 6 Uhr vormittags bis 10 Uhr abends und tiefer in die Nacht.

261:6–262:0 J. Leach sagt aus:

“Letzten Winter“ (1862) „blieben von 19 Mädchen 6 weg infolge durch Überarbeitung zugezogener Krankheiten. Um sie wach zu halten, muß ich sie anschreien.“ W. Duffy: „Die Kinder konnten oft vor Müdigkeit die Augen nicht aufhalten, in der Tat, wir selbst können es oft kaum.“ J. Lightbourne: „Ich bin 13 Jahre alt ... Wir arbeiteten letzten Winter bis 9 Uhr abends und den Winter vorher bis 10 Uhr. Ich pflegte letzten Winter fast jeden Abend vom Schmerz wunder Füße zu schreien.“ G. Apsden: “Diesen meinen Jungen pflegte ich, als er 7 Jahre alt war, auf meinem Rücken hin und her über den Schnee zu tragen, und er pflegte 16 Stunden zu arbeiten; ... Ich habe oft niedergekniet, um ihn zu füttern, während er an der Maschine stand, denn er durfte sie nicht verlassen oder stillsetzen.“ Smith, der geschäftsführende Associé einer Manchester Fabrik: „Wir“ (er meint seine „Hände“, die für „uns“) „arbeiten ohne Unterbrechung für Mahlzeiten, so daß die Tagesarbeit von 10 1/2 Stunden um 4 1/2 Uhr nachmittags fertig ist, und alles spätere ist Überzeit.”⁷² (Ob dieser Herr Smith wohl keine Mahlzeit während 10 1/2 Stunden zu sich nimmt?) „Wir“ (derselbe Smith) „hören selten auf vor 6 Uhr abends“ (er meint mit der Konsumtion „unsrer“ Arbeitskraftmaschinen), „so daß wir“ (iterum Crispinus) „in der Tat das ganze Jahr durch Überzeit arbeiten ... Die Kinder und Erwachsenen (152 Kinder und junge Personen unter 18 Jahren und 140 Erwachsene) „haben gleichmäßig während der letzten 18 Monate im Durchschnitt allermindestens 7 Tage und 5 Stunden in der Woche gearbeitet oder 78 1/2 Stunden wöchentlich. Für die 6 Wochen, endend am 2. Mai dieses Jahres“ (1863), „war der Durchschnitt höher—8 Tage oder 84 Stunden“

⁷² This is not to be taken in the same sense as our surplus-labor-time. These gentlemen consider 10 1/2 hours of labor as the normal working-day, which includes of course the normal surplus-labor. After this begins “over-time” which is paid a little better.

Then a remark about overtime in general, which will be developed more systematically in 686:2/oo

^{72 ctd} It will be seen later that the labor expended during the so-called normal day is paid below its value, so that the over-time is simply a capitalist trick in order to extort more surplus-labor, which it would still be, even if the labor-power expended during the normal working-day were properly paid.

357:0p–1p Still this same Mr. Smith, who is so extremely devoted to the *pluralis majestatis*, adds with a smile, “Machine-work is not great.” So the employers in the block-printing say: “Hand labor is more healthy than machine work.” On the whole, manufacturers declare with indignation against the proposal “to stop the machines at least during meal-times.”

A clause, says Mr. Otley, manager of a wall-paper factory in the Borough, “which allowed work between, say 6 a.m. and 9 p.m. would suit us (!) very well, but the factory hours, 6 a.m. to 6 p.m., are not suitable. Our machine is always stopped for dinner. (What generosity!) There is no waste of paper and colour to speak of. But,” he adds sympathetically, “I can understand the loss of time not being liked.”

357:1p/o The report of the Commission opines with naïveté that the fear of some “leading firms” of losing time, *i.e.*, the time for appropriating the labor of others, and

den in der Woche!“

⁷² Dies ist nicht in unsrem Sinn der Surplus-arbeitszeit zu nehmen. Diese Herrn betrachten die 10 1/2-stündige Arbeit als Normalarbeitstag, der also auch die normale Mehrarbeit einschließt. Dann beginnt „die Überzeit“, die etwas besser bezahlt wird.

^{72 ctd} Man wird bei einer spätern Gelegenheit sehn, daß die Verwendung der Arbeitskraft während des sogenannten Normaltages unter dem Werte bezahlt wird, so daß die „Überzeit“ ein bloßer Kapitalistenpfiß ist, um mehr „Mehrarbeit“ auszupressen, was es übrigens selbst dann bleibt, wenn die während des „Normaltages“ verwandte Arbeitskraft wirklich voll bezahlt wird.

262:1–2 Doch fügt derselbe Herr Smith, der dem *pluralis majestatis* so sehr ergeben ist, schmunzelnd hinzu: „Maschinenarbeit ist leicht.“ Und so sagen die Anwender des block printing: „Handarbeit ist gesünder als Maschinenarbeit.“ Im ganzen erklären sich die Herrn Fabrikanten mit Entrüstung gegen den Vorschlag, „die Maschinen wenigstens während der Mahlzeiten stillzusetzen“.

„Ein Gesetz“, sagt Herr Ottley, der Manager einer Tapetenfabrik im Borough (in London) ... das Arbeitsstunden von 6 Uhr morgens bis 9 Uhr abends erlaubte, würde uns (!) sehr wohl zusagen, aber die Stunden des Factory Act von 6 Uhr morgens bis 6 Uhr abends passen uns (!) nicht ... Unsre Maschine wird während des Mittagessens“ (welche Großmut) „stillgesetzt. Das Stillsetzen verursacht keinen nennenswerten Verlust an Papier und Farbe.“ „Aber“, fügt er sympathisch hinzu, „ich kann verstehn daß der damit verbundene Verlust nicht geliebt wird.“

262:3/o Der Kommissionsbericht meint naiv, die Furcht einiger „leitenden Firmen“, Zeit, d.h. Aneignungszeit fremder Arbeit, und dadurch „Profit zu verlieren“, sei kein

thence losing profit is not a sufficient reason for allowing children under 13, and young persons under 18, working 12 to 16 hours per day, to lose their dinner, nor for giving it to them as coal and water are supplied to the steam-engine, soap to wool, oil to the wheel—as merely auxiliary material to the instruments of labor, during the process of production itself.⁷³

⁷³ I.c., Evidence, pp. 123, 124, 125, 140, and 54.

Baking was still a very antiquated branch of production, even at the time *Capital* was written.

358:1 No branch of industry in England (we do not take into account the making of bread by machinery recently introduced) has preserved up to the present day a method of production so archaic, so—as we see from the poets of the Roman Empire—pre-Christian, as baking. But capital, as was said earlier, is at first indifferent as to the technical character of the labor-process; at first it takes it just as it finds it.

↑ The advent of capitalism by itself does not cause a change in the mode of production. Of course, after capitalism has been established, other mechanisms set in which eventually lead to a revolutionizing of this branch of production. This is why Marx writes here “at first.”

↓ State inspections were triggered not by overwork but by the adulterations of bread. Bread adulteration was already discussed in footnote 51 to paragraph 277:2 of chapter Six.

358:2 The incredible adulteration of bread, especially in London, was first revealed by the House of Commons Committee “on the adulteration of articles of food” (1855–56), and Dr. Hassall’s work, “Adulterations detected.”⁷⁴ The consequence of these revelations was the Act of August 6th, 1860, “for preventing the adulteration of articles of food and drink,” an ineffective law, since it of course observes the tenderest consideration for every Free-trader who aims by the

„hinreichender Grund“, um Kinder unter 13 und junge Personen unter 18 Jahren während 12–16 Stunden ihr Mittagmahl „verlieren zu lassen“ oder es ihnen zuzusetzen, wie man der Dampfmaschine Kohle und Wasser, der Wolle Seife, dem Rad Öl usw. zusetzt—während des Produktionsprozesses selbst, als bloßen Hilfsstoff des Arbeitsmittels.⁷³

⁷³ I.c., Appendix, p. 123, 124, 125, 140 u. LXIV.

263:1 Kein Industriezweig in England—(wir sehn von dem erst neuerdings sich Bahn brechenden Maschinenbrot ab)—hat so altertümliche, ja, wie man aus den Dichtern der römischen Kaiserzeit ersehn kann, vorchristliche Produktionsweise bis heute beibehalten als die Bäckerei. Aber das Kapital, wie früher bemerkt, ist zunächst gleichgültig gegen den technischen Charakter des Arbeitsprozesses, dessen es sich bemächtigt. Es nimmt ihn zunächst, wie es ihn vorfindet.

263:2/o Die unglaubliche Brotverfälschung, namentlich in London, wurde zuerst enthüllt durch das Komitee des Unterhauses „über die Verfälschung von Nahrungsmitteln“ (1855–1856) und Dr. Hassalls Schrift „Adulterations detected“.⁷⁴ Die Folge dieser Enthüllungen war das Gesetz vom 6. August 1860: „for preventing the adulteration of articles of food and drink“, ein wirkungsloses Gesetz, da es natürlich die höchste Delikatesse gegen jeden freetrader beobachtet,

buying or selling of adulterated commodities “to turn an honest penny.”⁷⁵

⁷⁴ Alum finely powdered, or mixed with salt, is a normal article of commerce bearing the significant name of “bakers’ stuff.”

↓ A brief more general digression about how free trade affects use-values begins with footnote 75.

⁷⁵ Soot is a well-known and very energetic form of carbon, and forms a manure that capitalist chimney-sweeps sell to English farmers. Now in 1862 the British juryman had in a lawsuit to decide whether soot, with which, unknown to the buyer, 90% of dust and sand are mixed, is genuine soot in the commercial sense or adulterated soot in the legal sense. The “amis du commerce” decided it to be genuine commercial soot, and nonsuited the plaintiff farmer, who had in addition to pay the costs of the suit.

The Committee itself formulated more or less naïvely its conviction that Free-trade meant essentially trade with adulterated, or as the English ingeniously put it, “sophisticated” goods. In fact this kind of sophistry knows better than Protagoras how to make white black, and black white, and better than the Eleatics how to demonstrate *ad oculos* that everything real is merely an appearance.⁷⁶

Question 726 *Are adulterated products essential to free trade?*

⁷⁶ The French chemist, Chevallier, in his treatise on the “sophistications” of commodities, enumerates for many of the 600 or more articles which he passes in review, 10, 20, 30 different methods of adulteration. He adds that he does not know all the methods and does not mention all that he knows. He gives 6 kinds of adulteration of sugar, 9 of olive oil, 10 of butter, 12 of salt, 19 of milk, 20 of bread, 23 of brandy, 24 of

der sich vornimmt, durch Kauf und Verkauf gefälschter Waren „to turn an honest penny“.⁷⁵

⁷⁴ Alaun, fein gerieben oder mit Salz gemischt, ist ein normaler Handelsartikel, der den bezeichnenden Namen „Baker’s stuff“ führt.

⁷⁵ Ruß ist bekanntlich eine sehr energische Form des Kohlenstoffs und bildet ein Düngemittel, das kapitalistische Schornsteinfeger an englische Pächter verkaufen. Es hatte nun 1862 der britische „Juryman“ in einem Prozeß zu entscheiden, ob Ruß, welchem ohne Wissen des Käufers 90% Staub und Sand beigemischt sind, „wirklicher“ Ruß im „kommerziellen“ Sinn oder „gefälschter“ Ruß im „gesetzlichen“ Sinn sei. Die „amis du commerce“ entschieden, es sei „wirklicher“ kommerzieller Ruß, und wiesen den klagenden Pächter ab, der noch obendrein die Prozeßkosten zu zahlen hatte.

Das Komitee selbst formulierte mehr oder minder naïv seine Überzeugung, daß Freihandel wesentlich den Handel mit gefälschten, oder wie der Engländer es witzig nennt, „sophistizierten Stoffen“ bedeute. In der Tat, diese Art „Sophistik“ versteht es besser als Protagoras, schwarz aus weiß und weiß aus schwarz zu machen, und besser als die Eleaten, den bloßen Schein alles Realen *ad oculos* zu demonstrieren.⁷⁶

⁷⁶ Der französische Chemiker Chevallier, in einer Abhandlung über die „sophistications“ der Waren, zählt unter 600 und einigen Artikeln, die er Revue passieren läßt, für viele derselben 10, 20, 30 verschiedene Methoden der Fälschung auf. Er fügt hinzu, er kenne nicht alle Methoden und erwähne nicht alle, die er kenne. Für den Zucker gibt er 6 Fälschungsarten, 9 für das Olivenöl, 10 für die Butter, 12 für das Salz, 19 für die Milch,

meal, 28 of chocolate, 30 of wine, 32 of coffee, etc. Even God Almighty does not escape this fate. See Rouard de Card, "On the Falsifications of the Hlaterials of the Sacrament." ("De la falsification des substances sacramentelles," Paris, 1856.)

Question 727 *Is everything real only an appearance?*

359:1 At all events the Committee had directed the attention of the public to its "daily bread," and therefore to the baking trade. At the same time in public meetings and in petitions to Parliament rose the cry of the London journeymen bakers against their overwork, etc. The cry was so urgent that Mr. H. S. Tremeneheere, also a member of the Commission of 1863 several times mentioned, was appointed Royal Commissioner of Inquiry. His report,⁷⁷ together with the evidence given, roused not the heart of the public but its stomach.

The public was upset not so much about overwork but by the adulteration of their food.

⁷⁷ "Report, etc., relative to the grievances complained of by the journeymen bakers, etc., London, 1862," and "Second Report, etc., London, 1863."

Englishmen, always well up in the Bible, knew well enough that man, unless by elective grace a capitalist, or landlord, or sinecurist, is commanded to eat his bread in the sweat of his brow, but they did not know that he had to eat daily in his bread a certain quantity of human perspiration mixed with the discharge of abscesses, cobwebs, dead black-beetles, and putrid German yeast, without counting alum, sand, and other agreeable mineral ingredients.

↑ The bible prepares the public for overwork but not for bread adulteration.

Question 728 *Why was the public more upset about the adulteration of bread than about the overwork in the bakeries?*

20 für das Brot, 23 für den Brantwein, 24 für Mehl, 28 für Schokolade, 30 für Wein, 32 für Kaffee etc. Selbst der liebe Herrgott entgeht diesem Schicksal nicht. Sieh Rouard de Card, „De la falsification des substances sacramentelles“, Paris 1856.

264:1 Jedenfalls hatte das Komitee die Augen des Publikums auf sein „tägliches Brot“ und damit auf die Bäckerei gelenkt. Gleichzeitig erscholl in öffentlichen Meetings und Petitionen an das Parlament der Schrei der Londoner Bäckergelesen über Überarbeitung usw. Der Schrei wurde so dringend, daß Herr H. S. Tremeneheere, auch Mitglied der mehrerwähnten Kommission von 1863, zum königlichen Untersuchungskommissär bestellt wurde. Sein Bericht,⁷⁷ samt Zeugenaussagen, regte das Publikum auf, nicht sein Herz, sondern seinen Magen.

⁷⁷ „Report etc. relating to the Grievances complained of by the Journeymen Bakers etc.“, London 1862, und „Second Report etc.“, London 1863.

Der bibelfeste Engländer wußte zwar, daß der Mensch, wenn nicht durch Gnadenwahl Kapitalist oder Landlord oder Sinekurist, dazu berufen ist, sein Brot im Schweiß seines Angesichts zu essen, aber er wußte nicht, daß er in seinem Brote täglich ein gewisses Quantum Menschenschweiß essen muß, getränkt mit Eiterbeulenausleerung, Spinnweb, Schaben-Leichnamen und fauler deutscher Hefe, abgesehn von Alaun, Sandstein und sonstigen angenehmen mineralischen Ingredienzien.

Without any regard to his holiness, Free-trade, the free baking-trade was therefore placed under the supervision of the State inspectors (Close of the Parliamentary session of 1863), and by the same Act of Parliament, work from 9 in the evening to 5 in the morning was forbidden for journeymen bakers under 18. The last clause speaks volumes about the over-work in this seemingly old-fashioned and homely line of business.

359:2/oo "The work of a London journeyman baker begins, as a rule, at about eleven at night. At that hour he 'makes the dough,'—a laborious process, which lasts from half an hour to three quarters of an hour, according to the size of the batch or the labor bestowed upon it. He then lies down upon the kneading-board, which is also the covering of the trough in which the dough is 'made'; and with a sack under him, and another rolled up as a pillow, he sleeps for about a couple of hours. He is then engaged in a rapid and continuous labor for about five hours—throwing out the dough, 'scaling it off,' moulding it, putting it into the oven, preparing and baking rolls and fancy bread, taking the batch bread out of the oven, and up into the shop, etc., etc. The temperature of a bakehouse ranges from about 75 to upwards of 90 degrees, and in the smaller bakehouses approximates usually to the higher rather than to the lower degree of heat. When the business of making the bread, rolls, etc., is over, that of its distribution begins, and a considerable proportion of the journeymen in the trade, after working hard in the manner described during the night, are upon their legs for many hours during the day, carrying baskets, or wheeling hand-carts, and sometimes again in the bakehouse, leaving off work at various hours between 1 and 6 p.m. according to the season of the year, or the amount and nature of their master's business; while others are again engaged in the bakehouse in

Ohne alle Rücksicht auf seine Heiligkeit, den „Freetrade“, wurde daher die anhero „freie“ Bäckerei der Aufsicht von Staatsinspektoren unterworfen (Ende der Parlamentssession 1863) und durch denselben Parlamentsakt die Arbeitszeit von 9 Uhr abends bis 5 Uhr morgens für Bäckergelesen unter 18 Jahren verboten. Die letzte Klausel spricht Bände über die Überarbeitung in diesem uns so altväterisch anheimelnden Geschäftszweig.

264:2/o „Die Arbeit eines Londoner Bäckergelesen beginnt in der Regel um 11 Uhr nachts. Zu dieser Stunde macht er den Teig, ein sehr mühsamer Prozeß, der 1/2 bis 3/4 Stunden währt, je nach der Größe des Gebäcks und seiner Feinheit. Er legt sich dann nieder auf das Knetbrett, das zugleich als Deckel des Trogs dient, worin der Teig gemacht wird, und schläft ein paar Stunden mit einem Mehlsack unter dem Kopf und einem andren Mehlsack auf dem Leib. Dann beginnt eine rasche und ununterbrochne Arbeit von 5 Stunden, Werfen, Wägen, Formen, in den Ofen schieben, aus dem Ofen holen usw. des Teiges. Die Temperatur eines Backhauses beträgt von 75 bis 90 Grad und in den kleinen Backhäusern eher mehr als weniger. Wenn das Geschäft, Brot, Wecken usw. zu machen, vollbracht ist, beginnt die Verteilung des Brots; und ein beträchtlicher Teil der Tagelöhner, nachdem er die beschriebne harte Nachtarbeit vollbracht, trägt während des Tags das Brot in Körben, oder schiebt es in Karren von Haus zu Haus und operiert dazwischen auch manchmal im Backhaus. Je nach der Jahreszeit und dem Umfang des Geschäfts endet die Arbeit zwischen 1 und 6 Uhr nachmittags, während ein andrer Teil der Gesellen bis spät nachmittags im Backhaus beschäftigt ist.“⁷⁸

'bringing out' more batches until late in the afternoon.⁷⁸

⁷⁸ l.c., First Report, etc., p. vi.

"During what is called 'the London season', the operatives belonging to the 'full-priced' bakers at the West End of the town, generally begin work at 11 p.m., and are engaged in making the bread, with one or two short (sometimes very short) intervals of rest, up to 8 o'clock the next morning. They are then engaged all day long, up to 4, 5, 6, and as late as 7 o'clock in the evening carrying out bread, or sometimes in the afternoon in the bakehouse again, assisting in the biscuit-baking. They may have, after they have done their work, sometimes five or six, sometimes only four or five hours' sleep before they begin again. On Fridays they always begin sooner, some about ten o'clock, and continue in some cases, at work, either in making or delivering the bread up to 8 p.m. on Saturday night, but more generally up to 4 or 5 o'clock, Sunday morning. On Sundays the men must attend twice or three times during the day for an hour or two to make preparations for the next day's bread ... The men employed by the underselling masters (who sell their bread under the 'full price,' and who, as already pointed out, comprise three-fourths of the London bakers) have not only to work on the average longer hours, but their work is almost entirely confined to the bakehouse. The underselling masters generally sell their bread ... in the shop. If they send it out, which is not common, except as supplying chandlers' shops, they usually employ other hands for that purpose. It is not their practice to deliver bread from house to house. Towards the end of the week ... the men begin on Thursday night at 10 o'clock, and continue on with only slight intermission until late on Saturday evening."⁷⁹

⁷⁹ l.c., p. lxxi.

Competitors recognize that undersellers base their business on exploitation, even though they don't see that their own business is based on exploitation too.

⁷⁸ l.c. „First Report etc.“ p. VI/VII.

„Während der Londoner Saison beginnen die Gesellen der Bäcker zu ‚vollen‘ Brotpreisen im Westend regelmäßig um 11 Uhr nachts und sind mit dem Brotbacken, unterbrochen durch einen oder zwei oft sehr kurze Zwischenräume, bis 8 Uhr des nächsten Morgens beschäftigt. Sie werden dann bis 4, 5, 6, ja 7 Uhr zur Brotherumtragerei vernutzt oder manchmal mit Biskuitbacken im Backhaus. Nach vollbrachtem Werk genießen sie einen Schlaf von 6, oft nur von 5 und 4 Stunden. Freitags beginnt die Arbeit stets früher, sage abends 10 Uhr, und dauert ohne Unterlaß, sei es in der Zubereitung, sei es in der Kolportierung des Brots, bis den folgenden Samstag abend 8 Uhr, aber meist bis 4 oder 5 Uhr in Sonntag nacht hinein. Auch in den vornehmen Bäckereien, die das Brot zum ‚vollen Preise‘ verkaufen, muß wieder 4 bis 5 Stunden am Sonntag vorbereitende Arbeit für den nächsten Tag verrichtet werden ... Die Bäckergesellen der ‚underselling masters‘ (die das Brot unter dem vollen Preise verkaufen), „und diese betragen, wie früher bemerkt, über 3/4 der Londoner Bäcker, haben noch längere Arbeitsstunden, aber ihre Arbeit ist fast ganz auf das Backhaus beschränkt, da ihre Meister, die Lieferung an kleine Kramladen ausgenommen, nur in der eignen Boutique verkaufen. Gegen Ende der Woche ... d.h. am Donnerstag, beginnt hier die Arbeit um 10 Uhr in der Nacht und dauert mit nur geringer Unterbrechung bis tief in Sonntag nacht hinein.“⁷⁹

⁷⁹ l.c., p. LXXI.

361:1 Even the bourgeois intellect understands the position of the “underselling” masters. “The unpaid labor of the men was made the source whereby the competition was carried on.”⁸⁰ And the “full-priced” baker denounces his underselling competitors to the Commission of Inquiry as thieves of foreign labor and adulterators.

“They only exist now by first defrauding the public, and next getting 18 hours’ work out of their men for 12 hours’ wages.”⁸¹

⁸⁰ George Read, “The History of Baking,” London, 1848, p. 16.

⁸¹ *Report (First) etc. Evidence.* Testimony of the “full-priced” baker Cheeseman, p. 108.

361:2 The adulteration of bread and the formation of a class of bakers that sells the bread below the full price, date from the beginning of the 18th century, from the time when the corporate character of the trade was lost, and the capitalist in the form of the miller or flour-factor, rises behind the nominal master baker⁸². Thus was laid the foundation of capitalistic production in this trade, of the unlimited extension of the working-day and of night-labor, although the latter only since 1824 gained a serious footing, even in London.⁸³

⁸² George Read, l.c. At the end of the 17th and the beginning of the 18th centuries the factors (agents) that crowded into every possible trade were still denounced as “public nuisances.” Thus the Grand Jury at the quarter session of the Justices of the Peace for the County of Somerset, addressed a presentment to the Lower House which, among other things, states, “that these factors of Blackwell Hall are a Public Nuisance and Prejudice to the Clothing Trade, and ought to be put down as a Nuisance.” “The Case of our English Wool., etc.,” London, 1685, pp. 6, 7.

265:1–2 Von den „underselling masters“ begreift selbst der bürgerliche Standpunkt: „die unbezahlte Arbeit der Gesellen (the unpaid labor of the men) bildet die Grundlage ihrer Konkurrenz.“⁸⁰ Und der „full priced baker“ denunziert seine „underselling“ Konkurrenten der Untersuchungskommission als Diebe fremder Arbeit und Fälscher.

„Sie reussieren nur durch den Betrug des Publikums und dadurch, daß sie 18 Stunden aus ihren Gesellen für einen Lohn von 12 Stunden herauschlagen.“⁸¹

⁸⁰ George Read, „The History of Baking“, London 1848, p. 16.

⁸¹ „Report (First) etc. Evidence.“ Aussage des „full priced baker“ Cheesman, p. 108.

266:1 Die Brotfälschung und die Bildung einer Bäckerklasse, die das Brot unter dem vollen Preis verkauft, entwickelten sich in England seit Anfang des 18. Jahrhunderts, sobald der Zunftcharakter des Gewerbs fiel und der Kapitalist in der Gestalt von Müller oder Mehlfaktor hinter den nominalen Bäckermeister trat.⁸² Damit war die Grundlage zur kapitalistischen Produktion, zur maßlosen Verlängerung des Arbeitstages und Nacharbeit gelegt, obgleich letztere selbst in London erst 1824 ernsthaft Fuß faßte.⁸³

⁸² George Read, l.c. Ende des 17. und anfangs des 18. Jahrhunderts wurden die in alle möglichen Gewerbe sich eindringenden Factors (Agenten) noch offiziell als „Public Nuisances“ denunziert. So erließ z.B. die Grand Jury bei der vierteljährigen Friedensrichtersitzung in der Grafschaft Somerset, ein „presentment“ an das Unterhaus, worin es u.a. heißt: „daß diese Agenten von Blackwell Hall ein öffentlicher Unfug sind und dem Tuchgewerbe Abbruch tun und als Schädlinge unterdrückt werden sollten“. („The Case of our English Wool etc.“, London 1685, p. 6, 7.)

⁸³ First Report, etc., p. viii.

361:3 After what has just been said, it will be understood that the Report of the Commission classes journeymen bakers among the short-lived laborers, who, having by good luck escaped the normal decimation of the children of the working-class, rarely reach the age of 42. Nevertheless, the baking trade is always overwhelmed with applicants. The sources of the supply of these labor-powers to London are Scotland, the western agricultural districts of England, and Germany.

362:1 In the years 1858–60, the journeymen bakers in Ireland organised at their own expense great meetings to agitate against night and Sunday work. The public—e.g., at the Dublin meeting in May, 1860—took their part with Irish warmth. As a result of this movement, day-labor alone was successfully established in Wexford, Kilkenny, Clonmel, Waterford, etc.

“In Limerick, where the grievances of the journeymen are demonstrated to be excessive, the movement has been defeated by the opposition of the master bakers, the miller bakers being the greatest opponents. The example of Limerick led to a retrogression in Ennis and Tipperary. In Cork, where the strongest possible demonstration of feeling took place, the masters, by exercising their power of turning the men out of employment, have defeated the movement. In Dublin, the master bakers have offered the most determined opposition to the movement, and by discountenancing as much as possible the journeymen promoting it, have succeeded in leading the men into acquiescence in Sunday work and night-work, contrary to the convictions of the men.”⁸⁴

⁸⁴ Report of Committee on the Baking Trade in Ireland for 1861.⁸³ „First Report etc.“, p. VIII.

266:2 Man wird nach dem Vorhergehenden verstehn, daß der Kommissionsbericht die Bäckergesellen zu den kurzlebigen Arbeitern zählt, die, nachdem sie der unter allen Teilen der Arbeiterklasse normalen Kinderdezimation glücklich entwischt sind, selten das 42. Lebensjahr erreichen. Nichtsdestoweniger ist das Bäckergerwerbe stets mit Kandidaten überfüllt. Die Zufuhrquellen dieser „Arbeitskräfte“ für London sind Schottland, die westlichen Agrikulturdistrikte Englands und—Deutschland.

266:3–4 In den Jahren 1858–1860 organisierten die Bäckergesellen in Irland auf ihre eignen Kosten große Meetings zur Agitation gegen die Nacht- und Sonntagsarbeit. Das Publikum, z.B. auf dem Maimeeting zu Dublin, 1860, ergriff mit irischer Wärme Partei für sie. Ausschließliche Tagarbeit wurde durch diese Bewegung in der Tat erfolgreich durchgesetzt zu Wexford, Kilkenny, Clonmel, Waterford usw.

„Zu Limerick, wo die Qualen der Lohnge-sellen bekanntermaßen alles Maß überstiegen, scheiterte diese Bewegung an der Opposition der Bäckermeister, namentlich der Bäcker-Müller. Das Beispiel Limericks führte zum Rückschritt in Ennis und Tipperary. Zu Cork, wo der öffentliche Unwille sich in der lebhaftesten Form kundgab, vereitelten die Meister die Bewegung durch den Gebrauch ihrer Macht, die Gesellen an die Luft zu setzen. Zu Dublin leisteten die Meister den entschiedensten Widerstand und zwangen durch Verfolgung der Gesellen, die an der Spitze der Agitation standen, den Rest zum Nachgeben, zur Fügung in die Nacht- und Sonntagsarbeit.“⁸⁴

⁸⁴ „Report of Committee on the Baking Trade in Ireland for 1861.“

↓ Tough words but no actions, although they could easily have acted:

362:2 The Committee of the English Government, which Government, in Ireland, is armed to the teeth, and generally knows how to show it, remonstrates in mild, though funereal, tones with the implacable master bakers of Dublin, Limerick, Cork, etc.: “The Committee believe that the hours of labor are limited by natural laws, which cannot be violated with impunity. That for master bakers to induce their workmen, by the fear of losing employment, to violate their religious convictions and their better feelings, to disobey the laws of the land, and to disregard public opinion (this all refers to Sunday labor), is calculated to provoke ill-feeling between workmen and masters, ... and affords an example dangerous to religion, morality, and social order ... The Committee believe that any constant work beyond 12 hours a-day encroaches on the domestic and private life of the working-man, and so leads to disastrous moral results, interfering with each man’s home, and the discharge of his family duties as a son, a brother, a husband, a father. That work beyond 12 hours has a tendency to undermine the health of the workingman, and so leads to premature old age and death, to the great injury of families of working-men, thus deprived of the care and support of the head of the family when most required.”⁸⁵

⁸⁵ l.c.

Agricultural laborers in Scotland (rough climate, Sunday work). *Railway operators* in England. Long hours lead to accidents, but juries do not seem to recognize the underlying reasons! The second time that Marx is critical of pro-capitalist public opinion.

363:1 So far, we have dealt with Ireland. On the other side of the channel, in Scotland, the agricultural laborer, the ploughman, protests against his 13–14 hours’ work

267:1–2 Die Kommission der in Irland bis an die Zähne gewaffneten englischen Regierung remonstriert leichenbitterlich gegen die unerbittlichen Bäckermeister von Dublin, Limerick, Cork usw.: „Das Komitee glaubt, daß die Arbeitsstunden durch Naturgesetze beschränkt sind, die nicht ungestraft verletzt werden. Indem die Meister durch die Drohung, sie fortzujagen, ihre Arbeiter zur Verletzung ihrer religiösen Überzeugung, zum Ungehorsam gegen das Landesgesetz und die Verachtung der öffentlichen Meinung zwingen“ (dies letztre bezieht sich alles auf die Sonntagsarbeit), „setzen sie böses Blut zwischen Kapital und Arbeit und geben ein Beispiel, gefährlich für Religion, Moralität und öffentliche Ordnung ... Das Komitee glaubt, daß die Verlängerung des Arbeitstags über 12 Stunden ein usurpatorischer Eingriff in das häusliche und Privatleben des Arbeiters ist und zu unheilvollen moralischen Resultaten führt, durch Einmischung in die Häuslichkeit eines Mannes und die Erfüllung seiner Familienpflichten als Sohn, Bruder, Gatte und Vater. Arbeit über 12 Stunden hat die Tendenz, die Gesundheit des Arbeiters zu untergraben, führt zu vorzeitiger Alterung und frühem Tod und daher zum Unglück der Arbeiterfamilien, die der Vorsorge und der Stütze des Familienhaupts grade im notwendigsten Augenblick beraubt werden“ („are deprived“).⁸⁵

⁸⁵ l.c.

267:3/o Wir waren eben in Irland. Auf der andren Seite des Kanals, in Schottland, denunziert der Ackerbauarbeiter, der Mann des Pfluges, seine 13- bis 14stündige Arbeit,

in the most inclement climate, with 4 hours' additional work on Sunday (in this land of Sabbatarians!),⁸⁶ whilst, at the same time, three railway men are standing before a London coroner's jury—a guard, an engine-driver, a signalman. A tremendous railway accident has hurried hundreds of passengers into another world. The negligence of the employee is the cause of the misfortune. They declare with one voice before the jury that ten or twelve years before, their labor only lasted eight hours a day. During the last five or six years it had been screwed up to 14, 18, and 20 hours, and under a specially severe pressure of holiday-makers, at times of excursion trains, it often lasted for 40 or 50 hours without a break. They were ordinary men, not Cyclops. At a certain point their labor-power failed. Torpor seized them. Their brain ceased to think, their eyes to see. The thoroughly "respectable" British jurymen answered by a verdict that sent them to the next assizes on a charge of manslaughter, and, in a gentle "rider" to their verdict, expressed the pious hope that the capitalistic magnates of the railways would, in future, be more extravagant in the purchase of a sufficient quantity of labor-power, and more "abstemious", more "self-denying", more "thrifty," in the draining of paid labor-power.⁸⁷

⁸⁶ Public meeting of agricultural laborers at Lasswade, near Edinburgh, January 5th, 1866. (See *Workman's Advocate*, January 13th, 1866.) The formation since the close of 1865 of a Trades' Union among the agricultural laborers at first in Scotland is a historic event. In one of the most oppressed agricultural districts of England, Buckinghamshire, the laborers, in March,

im rauhsten Klima, mit vierstündiger Zusatzarbeit für den Sonntag (in diesem Lande der Sabbat-Heiligen!),⁸⁶ während vor einer Londoner Grand Jury gleichzeitig drei Eisenbahnarbeiter stehn, ein Personenkondukteur, ein Lokomotivführer und ein Signalgeber. Ein großes Eisenbahnunglück hat Hunderte von Passagieren in die andre Welt expediert. Die Nachlässigkeit der Eisenbahnarbeiter ist die Ursache des Unglücks. Sie erklären vor den Geschwornen einstimmig, vor 10 bis 12 Jahren habe ihre Arbeit nur 8 Stunden täglich gedauert. Während der letzten 5–6 Jahre habe man sie auf 14, 18 und 20 Stunden aufgeschraubt und bei besonders lebhaftem Zudrang der Reiselustigen, wie in den Perioden der Exkursionszüge, währe sie oft ununterbrochen 40–50 Stunden. Sie seien gewöhnliche Menschen und keine Zyklopen. Auf einem gegebenen Punkt versage ihre Arbeitskraft. Torpor ergreife sie. Ihr Hirn höre auf zu denken und ihr Auge zu sehn. Der ganz und gar „respectable British Jurymen“ antwortet durch ein Verdikt, das sie wegen „manslaughter“ (Totschlag) vor die Assisen schickt und in einem milden Anhang den frommen Wunsch äußert, die Herren Kapitalmagnaten der Eisenbahn möchten doch in Zukunft verschwenderischer im Ankauf der nötigen Anzahl von Arbeitskräften“ und „enthaltamer“ oder „entsagender“ oder „sparsamer“ in der Aussaugung der bezahlten Arbeitskraft sein.⁸⁷

⁸⁶ Öffentliches Meeting der Agrikulturarbeiter in Lasswade, bei Glasgow, vom 5. Jan. 1866. (Sieh „*Workman's Advocate*“ vom 13. Jan. 1866.) Die Bildung, seit Ende 1865, einer Trade's Union unter den Agrikulturarbeitern, zunächst in Schottland, ist ein historisches Ereignis. In einem der unterdrücktesten Agrikulturdistrikte Englands, in Buckinghamshire, mach-

1867, made a great strike for the raising of their weekly wage from 9–10 shillings to 12 shillings. (It will be seen from the preceding passage that the movement of the English agricultural proletariat, entirely crushed since the suppression of its violent manifestations after 1830, and especially since the introduction of the new Poor Laws, begins again in the sixties, until it becomes finally epoch-making in 1872. I return to this in the 2nd volume, as well as to the Blue books that have appeared since 1867 on the position of the English land laborers. Addendum to the 3rd ed.)

⁸⁷ *Reynolds' Newspaper*, January, 1866.—Every week this same paper has, under the sensational headings, "Fearful and fatal accidents," "Appalling tragedies," etc., a whole list of fresh railway catastrophes. On these an employe on the North Staffordshire line comments: "Every-one knows the consequences that may occur if the driver and fireman of a locomotive engine are not continually on the look-out. How can that be expected from a man who has been at such work for 29 or 30 hours, exposed to the weather, and without rest. The following is an example which is of very frequent occurrence:—One fireman commenced work on the Monday morning at a very early hour. When he had finished what is called a day's work, he had been on duty 14 hours 50 minutes. Before he had time to get his tea, he was again called on for duty. . . The next time he finished he had been on duty 14 hours 25 minutes, making a total of 29 hours 15 minutes without intermission. The rest of the week's work was made up as follows: — Wednesday, 15 hours; Thursday, 15 hours 35 minutes; Friday, 14 1/2 hours; Saturday, 14 hours 10 minutes, making a total for the week of 88 hours 40 minutes. Now, sir, fancy his astonishment on being paid 6 1/4 days for the whole. Thinking it was a mistake, he applied to the time-keeper, . . and inquired what they considered a day's work, and was told 13 hours for a goods man (*i.e.*, 78 hours). . . He then asked for what he had made over and above the 78 hours per week, but was

ten die Lohnarbeiter März 1867 einen großen Strike zur Erhöhung des Wochenlohns von 9–10 sh. auf 12 sh.—(Man sieht aus Vorstehendem, daß die Bewegung des englischen Ackerbauproletariats, seit Unterdrückung seiner gewalt-samen Demonstrationen nach 1830 und namentlich seit Einführung des neuen Armengesetzes ganz und gar gebrochen, in den sechziger Jahren wieder beginnt, bis sie endlich 1872 epochemachend wird. Ich komme hierauf im II. Band zurück, ebenso auf die seit 1867 erschienenen Blaubücher über die Lage des englischen Landarbeiters. Zusatz zur 3. Aufl.)

⁸⁷ „*Reynolds' Paper*“, [21.] Jan. 1866. Woche für Woche bringt dasselbe Wochenblatt gleich darauf, unter den „sensational headings“: „Fearful and fatal accidents“, „Appalling tragedies“ usw., eine ganze Liste neuer Eisenbahnkatastrophen. Darauf antwortet ein Arbeiter von der North Staordlinie: „Jedermann kennt die Folgen, wenn die Aufmerksamkeit von Lokomotivenführer und Heizer einen Augenblick erlahmt. Und wie ist es anders möglich bei maßloser Verlängerung der Arbeit, im rauhsten Wetter, ohne Pause und Erholung? Nehmt als ein Beispiel, wie es täglich vorkommt, folgenden Fall. Letzten Montag begann ein Heizer sehr früh morgens sein Tagewerk. Er endete es nach 14 Stunden 50 Minuten. Bevor er auch nur die Zeit hatte, seinen Tee zu nehmen, rief man ihn von neuem an die Arbeit. Er hatte also 29 Stunden 15 Minuten ununterbrochen durchzuschauzen. Der Rest seines Wochenwerks aufgemacht wie folgt: Mittwoch 15 Stunden; Donnerstag 15 Stunden 35 Minuten; Freitag 14 1/2 Stunden; Sonnabend 14 Stunden 10 Minuten; zusammen für die Woche 88 Stunden 30 Minuten. Und nun denkt euch sein Erstaunen, als er nur Zahlung für 6 Arbeitstage erhielt. Der Mann war ein Neuling und fragte, was man unter einem Tagewerk verstehe. Antwort: 13 Stunden, also 78 Stunden per Woche. Aber wie mit der Zahlung für die überschüssigen 10 Stunden 30 Minuten? Nach langem Hader erhielt er eine Vergütung von 10 d.“ (noch nicht 10 Silbergroschen). (l.c., Nr. vom 4. Februar 1866.)

refused. However, he was at last told they would give him another quarter, *i.e.*, 10 d.” L.c., 4th February 1866.

Question 729 *Why did the public not acknowledge that the overwork was the cause of the train accidents?*

Two more very diverse examples showing that “before capital all men are alike”: *Milliner* (Putzmacherin) long hours, overtime before the balls, overfull ateliers. *Blacksmith*: Hard labor and long hours surpassing human capacity.

364:1 From the motley crowd of laborers of all callings, ages, sexes, that press on us more busily than the souls of the slain on Ulysses, on whom—without referring to the Blue books under their arms—we see at a glance the mark of over-work, let us take two more figures whose striking contrast proves that before capital all men are alike—a milliner and a blacksmith.

364:2/o In the last week of June, 1863, all the London daily papers published a paragraph with the “sensational” heading, “Death from simple over-work.” It dealt with the death of the milliner, Mary Anne Walkley, 20 years of age, employed in a highly-respectable dressmaking establishment, exploited by a lady with the pleasant name of Elise. The old, often-told story,⁸⁸ was once more recounted. This girl worked, on an average, 16 1/2 hours, during the season often 30 hours, without a break, whilst her failing labor-power was revived by occasional supplies of sherry, port, or coffee. It was just now the height of the season. It was necessary to conjure up in the twinkling of an eye the gorgeous dresses for the noble ladies bidden to the ball in honour of the newly-imported Princess of Wales. Mary Anne Walkley had worked without intermission for 26 1/2 hours, with 60 other

268:1/o Aus dem buntscheckigen Haufen der Arbeiter von allen Professionen, Altern, Geschlechtern, die eifriger auf uns andrängen als die Seelen der Erschlagenen auf den Odysseus und denen man, ohne die Blaubücher unter ihren Armen, auf den ersten Blick die Überarbeit ansieht, greifen wir noch zwei Figuren heraus, deren frappanter Kontrast beweist, daß vor dem Kapital alle Menschen gleich sind—eine Putzmacherin und einen Grobschmied.

269:1–270:3 In den letzten Wochen vom Juni 1863 brachten alle Londoner Tagesblätter einen Paragraph mit dem „sensational“ Aushängeschild: „Death from simple Overwork“ (Tod von einfacher Überarbeit). Es handelte sich um den Tod der Putzmacherin Mary Anne Walkley, zwanzigjährig, beschäftigt in einer sehr respektablen Hofputzmanufaktur, exploitiert von einer Dame mit dem gemütlichen Namen Elise. Die alte oft erzählte Geschichte ward nun neu entdeckt,⁸⁸ daß diese Mädchen durchschnittlich 16 1/2 Stunden, während der Saison aber oft 30 Stunden ununterbrochen arbeiten, indem ihre versagende „Arbeitskraft“ durch gelegentliche Zufuhr von Sherry, Portwein oder Kaffee flüssig erhalten wird. Und es war grade die Höhe der Saison. Es galt, die Prachtkleider edler Ladies für den Huldigungsball bei der frisch importierten Prinzessin von Wales im Um-

girls, 30 in one room, that only afforded 3 of the cubic feet of air required for them. At night, they slept in pairs in one of the stifling holes into which the bedroom was divided by partitions of board.⁸⁹ And this was one of the best millinery establishments in London. Mary Anne Walkley fell ill on the Friday, died on Sunday, without, to the astonishment of Madame Elise, having previously completed the work in hand. The doctor, Mr. Keys, called too late to the death-bed, duly bore witness before the coroner’s jury that

“Mary Anne Walkley had died from long hours of work in an over-crowded work-room, and a too small and badly ventilated bedroom.”

In order to give the doctor a lesson in how to live well, the coroner’s jury thereupon brought in a verdict that

“the deceased had died of apoplexy, but there was reason to fear that her death had been accelerated by over-work in an over-crowded workroom, etc.”

⁸⁸ Cf F. Engels, l.c., pp. 253, 254.

⁸⁹ Dr. Letheby, Consulting Physician of the Board of Health, declared: “The minimum of air for each adult ought to be in a sleeping room 300, and in a dwelling room 500 cubic feet.” Dr. Richardson, Senior Physician to one of the London Hospitals: “With needlewomen of all kinds, including milliners, dressmakers, and ordinary sempstresses, there are three miseries—over-work, deficient air, and either deficient food or deficient digestion ... Needlework, in the main, ... is infinitely better adapted to women than to men. But the mischiefs of the trade, in the metropolis especially, are that it is monopolised by some twenty-six capitalists, who, un-

sehn fertigzuzaubern. Mary Anne Walkley hatte 26 1/2 Stunden ohne Unterlaß gearbeitet zusammen mit 60 andren Mädchen, je 30 in einem Zimmer, das kaum 1/3 der nötigen Kubikzolle Luft gewährte, während sie nachts zwei zu zwei ein Bett teilten in einem der Sticklöcher, worin ein Schlafzimmer durch verschiedene Bretterwände abgepfercht ist.⁸⁹ Und dies war eine der besseren Putzmachereien Londons. Mary Anne Walkley erkrankte am Freitag und starb am Sonntag, ohne, zum Erstaunen von Frau Elise, auch nur vorher das letzte Putzstück fertigzumachen. Der zu spät ans Sterbebett gerufne Arzt, Herr Keys, bezeugte vor der „Coroner’s Jury“ in dürren Worten:

„Mary Anne Walkley sei gestorben an langen Arbeitsstunden in einem überfüllten Arbeitszimmer und überengem, schlechtventiliertem Schlafgemach.“

Um dem Arzt eine Lektion in guter Lebensart zu geben, erklärte dagegen die „Coroner’s Jury“:

„Die Hingeschiedne sei gestorben an der Apoplexie, aber es sei Grund, zu fürchten, daß ihr Tod durch Überarbeit in einer überfüllten Werkstatt usw. beschleunigt worden sei.

⁸⁸ Vgl. F. Engels, l.c. p. 253, 254.

⁸⁹ Dr. Letheby, beim Board of Health funktionierender Arzt, erklärt damals: „Das Minimum für die Erwachsenen sollte in einem Schlafzimmer 300 Kubikfuß und in einem Wohnzimmer 500 Kubikfuß Luft sein.“ Dr. Richardson, Oberarzt eines Londoner Hospitals: „Näherinnen aller Art, Putzmacherinnen, Kleidermacherinnen und gewöhnliche Näherinnen leiden an dreifachem Elend—Überarbeit, Luftmangel und Mangel an Nahrung oder Mangel an Verdauung. Im ganzen paßt diese Art Arbeit unter allen Umständen besser für Weiber als für Männer. Aber es ist das Unheil des Geschäfts, daß es, namentlich in der Hauptstadt, von einigen 26 Kapitalisten

der the advantages that spring from capital, can bring in capital to force economy out of labor. This power tells throughout the whole class. If a dressmaker can get a little circle of customers, such is the competition that, in her home, she must work to the death to hold together, and this same over-work she must of necessity inflict on any who may assist her. If she fail, or do not try independently, she must join an establishment, where her labor is oot less, but where her money is safe. Placed thus, she becomes a mere slave, tossed about with the variations of society. Now at home, in one room, starving, or near to it, then engaged 15, 16, aye, even 18 hours out of the 24, in an air that is scarcely tolerable, and on food which, even if it be good, cannot be digested in the absence of pure air. On these victims, consumption, which is purely a disease of bad air, feeds." Dr. Richardson: "Work and Over-work," in "Social Science Review," 18th July, 1863.

365:1 "Our white slaves," cried the *Morning Star*, the organ of the Free-traders, Cobden and Bright, "our white slaves, who are toiled into the grave, for the most part silently pine and die."⁹⁰

⁹⁰ *Morning Star*, 23rd June, 1863.—*The Times* made use of the circumstance to defend the American slave-owners against Bright, etc. "Very many of us think," says a leader of July 2nd, 1863, "that, while we work our own young women to death, using the scourge of starvation, instead of the crack of the whip, as the instrument of compulsion, we have scarcely a right to hound on fire and slaughter against families who were born slave-owners, and who, at least, feed their slaves well, and work them lightly." In the

monopolisiert wird, die durch Machtmittel, welche dem Kapital entspringen (that spring from capital), Ökonomie aus der Arbeit herauszwingen (force economy out of labor; er meint, Auslagen ökonomisieren durch Verschwendung der Arbeitskraft). Ihre Macht wird im Bereich dieser ganzen Klasse von Arbeiterinnen gefühlt. Kann eine Kleidermacherin einen kleinen Kreis von Kunden gewinnen, so zwingt die Konkurrenz sie, sich zu Hause totzuarbeiten, um ihn zu erhalten, und mit derselben Überarbeit muß sie notwendig ihre Gehilfinnen heimsuchen. Mißlingt ihr Geschäft oder kann sie sich nicht selbständig etablieren, so wendet sie sich an ein Etablissement, wo die Arbeit nicht geringer, aber die Zahlung sicher ist. So gestellt, wird sie eine reine Sklavin, hin und her geschleudert von jeder Flutung der Gesellschaft; bald zu Hause in einem kleinen Zimmer verhungern, oder nahe so; dann wieder von 24 Stunden 15, 16 ja 18 Stunden beschäftigt in kaum erträglicher Luft und mit einer Nahrung, die, selbst wenn gut, wegen Abwesenheit reiner Luft nicht verdaut werden kann. Von diesen Opfern lebt die Schwindsucht, welche nichts als eine Luftkrankheit ist." (Dr. Richardson, „Work and Overwork“ in „Social Science Review“, 18. Juli 1863.)

270:4 Unsre „weißen Sklaven“, rief der „Morning Star“, das Organ der Freihandels-herrn Cobden und Bright, „unsere weißen Sklaven werden in das Grab hineingearbeitet und verderben und sterben ohne Sang und Klang“.⁹⁰

⁹⁰ „Morning Star“, 23. Juni 1863. Die „Times“ benutzte den Vorfall zur Verteidigung der amerikanischen Sklavenhalter gegen Bright usw. „Sehr viele von uns“, sagt sie, „meinen, daß, solange wir unsre eignen jungen Frauenzimmer zu Tode arbeiten mit der Geißel des Hungers statt dem Knall der Peitsche, wir kaum das Recht haben, Feuer und Schwert auf Familien zu hetzen, die als Sklavenhalter geboren waren und ihre Sklaven mindestens gut nähren und mäßig arbeiten lassen.“ („Times“, 2. Juli 1863.) In derselben

same manner, the *Standard*, a Tory organ, fell foul of the Rev. Newman Hall: "He excommunicated the slave-owners, but prays with the fine folk who, without remorse, make the omnibus drivers and conductors of London, etc., work 16 hours a-day for the wages of a dog." Finally, spake the oracle, Thomas Carlyle, of whom I wrote, in 1850, "Zum Teufel ist der Genius, der Kultus ist geblieben." In a short parable, he reduces the one great event of contemporary history, the American Civil War, to this level, that the Peter of the North wants to break the head of the Paul of the South with all his might, because the Peter of the North hires his labor by the day, and the Paul of the South hires his by the life. ("Macmillan's Magazine." *Ilias Americana* in nuce. August, 1863.) Thus, the bubble of Tory sympathy for the urban workers—by no means for the rural—has burst at last. The sum of all is—slavery!

366:1/o "It is not in dressmakers' rooms that working to death is the order of the day, but in a thousand other places; in every place I had almost said, where 'a thriving business' has to be done . . . We will take the blacksmith as a type. If the poets were true, there is no man so hearty, so merry, as the blacksmith; he rises early and strikes his sparks before the sun; he eats and drinks and sleeps as no other man. Working in moderation, he is, in fact, in one of the best of human positions, physically speaking. But we follow him into the city or town, and we see the stress of work on that strong man, and what then is his position in the death-rate of his country. In Marylebone, blacksmiths die at the rate of 31 per thousand per annum, or 11 above the mean of the male adults of the country in its entirety. The occupation, instinctive almost as a portion of human art, unobjectionable as a branch of human industry, is made by mere excess of work, the destroyer of the man. He can strike so many blows per day, walk so many steps, breathe so many breaths, produce so much work, and live

Weise kanzelte der „Standard“, ein Toryblatt, den Rev. Newman Hall ab: „Er exkommuniziere die Sklavenhalter, bete aber mit den braven Leuten, die Kutscher und Omnibusführer von London usw. nur 16 Stunden täglich für einen Hundelohn arbeiten ließen.“ Endlich sprach das Orakel, Herr Thomas Carlyle, von dem ich schon 1850 drucken ließ: „Zum Teufel ist der Genius, der Kultus ist geblieben.“ In einer kurzen Parabel reduziert er das einzig großartige Ereignis der Zeitgeschichte, den Amerikanischen Bürgerkrieg, darauf, daß der Peter vom Norden dem Paul vom Süden mit aller Gewalt den Hirnschädel einschlagen will, weil der Peter vom Norden seinen Arbeiter „täglich“ und der Paul vom Süden ihn für „Lebzeit mietet“. „Macmillan's Magazine“. *Ilias Americana* in nuce. Augustheft 1863.) So ist endlich die Schaumblase der Torysympathie für den städtischen—beileibe nicht den ländlichen!—Lohnarbeiter geplatzt. Der Kern heißt—Sklaverei!

271:1 „Zu Tod arbeiten ist die Tagesordnung, nicht nur in der Werkstätte der Putzmacherinnen, sondern in tausend Plätzen, ja an jedem Platz, wo das Geschäft im Zug ist . . . Laßt uns den Grobschmied als Beispiel nehmen. Wenn man den Dichtern glauben darf, gibt es keinen so lebenskräftigen, lustigen Mann als den Grobschmied. Er erhebt sich früh und schlägt Funken vor der Sonne; er ißt und trinkt und schläft wie kein anderer Mensch. Rein physisch betrachtet, befindet er sich, bei mäßiger Arbeit, in der Tat in einer der besten menschlichen Stellungen. Aber wir folgen ihm in die Stadt und sehn die Arbeitslast, die auf den starken Mann gewälzt wird, und welchen Rang nimmt er ein in den Sterblichkeitslisten unsres Landes? In Marylebone“ (einem der größten Stadtviertel Londons) „sterben Grobschmiede in dem Verhältnis von 31 per 1000 jährlich, oder 11 über der Durchschnittsterblichkeit erwachsener Männer in England. Die Beschäftigung, eine fast instinktive Kunst der Menschheit, an und für sich tadellos, wird durch bloße Übertreibung der

an average, say of fifty years; he is made to strike so many more blows, to walk so many more steps, to breathe so many more breaths per day, and to increase altogether a fourth of his life. He meets the effort; the result is, that producing for a limited time a fourth more work, he dies at 37 for 50.”⁹¹

⁹¹ Dr. Richardson, l.c., pp. 476 ff.

Arbeit der Zerstörer des Mannes. Er kann so viel Hammerschläge täglich schlagen, so viel Schritte gehn, so viel Atemzüge holen, so viel Werk verrichten, und durchschnittlich sage 50 Jahre leben. Man zwingt ihn, so viel mehr Schläge zu schlagen, so viel mehr Schritte zu gehn, so viel öfter des Tags zu atmen, und alles zusammen seine Lebensausgabe täglich um ein Viertel zu vermehren. Er macht den Versuch, und das Resultat ist, daß er für eine beschränkte Periode ein Viertel mehr Werk verrichtet und im 37. Jahre statt im 50. stirbt.“⁹¹

⁹¹ Dr. Richardson, l.c.

10.4. Day and Night Work. Relais System

The prolongation of the working-day is an inherent drive of capital even if there is no constant capital. However it gains special urgency when there is a considerable amount of constant capital: then the constant capital must be used day and night.

367:1/o Constant capital, the means of production, considered from the standpoint of the creation of surplus-value, only exist to absorb labor, and with every drop of labor a proportional quantity of surplus-labor. While they fail to do this, their mere existence causes a relative loss to the capitalist, for they represent during the time they lie fallow, a useless advance of capital. And this loss becomes positive and absolute as soon as the intermission of their employment necessitates additional outlay at the recommencement of work. The prolongation of the working-day beyond the limits of the natural day, into the night, only acts as a palliative. It quenches only in a slight degree the vampire thirst for the living blood of labor.

These two reasons (constant capital cannot stand idle, and utmost prolongation of the working-day) are powerful enough that night shifts are introduced:

To appropriate labor during all the 24 hours of the day is, therefore, the inherent ten-

271:2/o Das konstante Kapital, die Produktionsmittel, sind, vom Standpunkt des Verwertungsprozesses betrachtet, nur da, um Arbeit und mit jedem Tropfen Arbeit ein proportionelles Quantum Mehrarbeit einzusaugen. Soweit sie das nicht tun, bildet ihre bloße Existenz einen negativen Verlust für den Kapitalisten, denn sie repräsentieren während der Zeit, wo sie brachliegen, nutzlosen Kapitalvorschuß, und dieser Verlust wird positiv, sobald die Unterbrechung zusätzliche Auslagen nötig macht für den Wiederbeginn des Werks. Die Verlängerung des Arbeitstags über die Grenzen des natürlichen Tags in die Nacht hinein wirkt nur als Palliativ, stillt nur annähernd den Vampyrdurst nach lebendigem Arbeitsblut.

Arbeit während aller 24 Stunden des Tags anzueignen ist daher der immanente Trieb

dency of capitalist production. But as it is physically impossible to exploit the same individual labor-power constantly during the night as well as the day, to overcome this physical hindrance, an alternation becomes necessary between the workpeople whose powers are exhausted by day, and those who are used up by night. This alternation may be effected in various ways; e.g., it may be so arranged that part of the workers are one week employed on day-work, the next week on night-work. It is well known that this relay system, this alternation of two sets of workers, held full sway in the full-blooded youth-time of the English cotton manufacture, and that at the present time it still flourishes, among others, in the cotton spinning of the Moscow district. This 24 hours' process of production exists to-day as a system in many of the branches of industry of Great Britain that are still "free," in the blast-furnaces, forges, plate-rolling mills, and other metallurgical establishments in England, Wales, and Scotland. The working time here includes, besides the 24 hours of the 6 working-days, a great part also of the 24 hours of Sunday. The workers consist of men and women, adults and children of both sexes. The ages of the children and young persons run through all intermediate grades, from 8 (in some cases from 6) to 18.⁹² In some branches of industry, the girls and women work through the night together with the males.⁹³

⁹² Children's Employment Commission. Third Report. London, 1864, pp. iv., v., vi.

⁹³ "Both in Staffordshire and in South Wales young girls and women are employed on the pit banks and on the coke heaps, not only by day but also by night. This practice has been often noticed in Reports presented to Parliament, as being

der kapitalistischen Produktion. Da dies aber physisch unmöglich, würden dieselben Arbeitskräfte Tag und Nacht fortwährend ausgesaugt, so bedarf es, zur Überwindung des physischen Hindernisses, der Abwechslung zwischen den bei Tag und Nacht verspeisten Arbeitskräften, eine Abwechslung, die verschiedene Methoden zuläßt, z.B. so geordnet sein kann, daß ein Teil des Arbeiterpersonals eine Woche Tagdienst, Nachtdienst die andre Woche versieht usw. Man weiß, daß dies Ablösungssystem, diese Wechselwirtschaft, in der vollblütigen Jugendperiode der englischen Baumwollindustrie usw. vorherrschte und u.a. gegenwärtig in den Baumwollspinnereien des Gouvernements Moskau blüht. Als System existiert dieser 24stündige Produktionsprozeß heute noch in vielen bis jetzt „freien“ Industriezweigen Großbritanniens, u.a. in den Hochöfen, Schmieden, Walzwerken und andren Metallmanufakturen von England, Wales und Schottland. Der Arbeitsprozeß umfaßt hier außer den 24 Stunden der 6 Werkeltage größtenteils auch die 24 Stunden des Sonntags. Die Arbeiter bestehen aus Männern und Weibern, Erwachsenen und Kindern beiderlei Geschlechts. Das Alter der Kinder und jungen Personen durchläuft alle Zwischenstufen vom 8. (in einigen Fällen vom 6.) bis zum 18. Jahr.⁹² In einigen Branchen arbeiten auch die Mädchen und Weiber des Nachts zusammen mit dem männlichen Personal.⁹³

⁹² „Children's Employment Commission. Third Report“, Lond. 1864, p. IV, V, VI.

⁹³ „In Staffordshire wie auch in Süd-Wales werden junge Mädchen und Frauen in Kohlengruben und auf Kokshalden beschäftigt, nicht nur bei Tag, sondern auch bei Nacht. In den dem Parlament erstatteten Berichten wurde dies oft

attended with great and notorious evils. These females employed with the men, hardly distinguished from them in their dress, and begrimed with dirt and smoke, are exposed to the deterioration of character, arising from the loss of self-respect, which can hardly fail to follow from their unfeminine occupation." (l.c., 194, p. xxvi. Cf. Fourth Report (1865), 61, p. xiii.) It is the same in glass-works.

Shift work not only detrimental to the health of the workers, but it also allows the capitalists to cheat on the restrictions of the working-day by forcing workers to work double shifts if the worker of the next shift does not come in.

368:1/o Placing on one side the generally injurious influence of night-labor,⁹⁴ the duration of the process of production, unbroken during the 24 hours, offers very welcome opportunities of exceeding the limits of the normal working-day.

↓ The general detrimental effects of night work are discussed in the footnote.

⁹⁴ A steel manufacturer who employs children in night-labor remarked: "It seems but natural that boys who work at night cannot sleep and get proper rest by day, but will be running about." (l.c., Fourth Report, 63, p. xiii.) On the importance of sunlight for the maintenance and growth of the body, a physician writes: "Light also acts upon the tissues of the body directly in hardening them and supporting their elasticity. The muscles of animals, when they are deprived of a proper amount of light, become soft and inelastic, the nervous power loses its tone from defective stimulation, and the elaboration of all growth seems to be perverted ... In the case of children, constant access to plenty of light during the day, and to the direct rays of the sun for a part of it, is most essential to health. Light assists in the elaboration of good plastic blood, and hardens the fibre after it has been laid down. It also acts as a stimulus upon the organs of sense, and by this means brings about more activity in the various cerebral functions." Dr. W. Strange, Senior Physician of the

erwähnt als eine Praxis, die mit großen und offenkundigen Übeln verbunden sei. Diese mit den Männern zusammenarbeitenden und sich von ihnen in der Kleidung kaum unterscheidenden, mit Schmutz und Rauch beschmierten Frauen sind der charakterlichen Entartung ausgesetzt, weil sie ihre Selbstachtung verlieren, was die fast unvermeidliche Folge ihrer unweiblichen Beschäftigung ist." (l.c. 194, p. XXVI. Vgl. „Fourth Report“ (1865) 61, p. XIII.) Ebenso in Glasfabriken.

272:1/o Von den allgemeinen schädlichen Wirkungen der Nachtarbeit abgesehen,⁹⁴ bietet die ununterbrochene, vierundzwanzigstündige Dauer des Produktionsprozesses höchst willkommene Gelegenheit, die Grenze des nominellen Arbeitstags zu überschreiten.

⁹⁴ „Es scheint natürlich“, bemerkte ein Stahlfabrikant, der Kinder zur Nachtarbeit verwendet, „daß die Jungen, die nachts arbeiten, bei Tag nicht schlafen und keine ordentliche Ruhe finden können, sondern rastlos am nächsten Tag herumlaufen.“ (l.c., „Fourth Rep.“, 63, p. XIII.) Über die Wichtigkeit des Sonnenlichts zur Erhaltung und Entwicklung des Körpers bemerkt ein Arzt u.a.: „Licht wirkt auch direkt auf die Gewebe des Leibes, denen es Härte und Elastizität gibt. Die Muskeln von Tieren, denen man das normale Quantum Licht vorenthält, werden schwammig und unelastisch, die Nervenkraft verliert ihren Ton durch Mangel an Stimulierung, und die Ausarbeitung von allem, was im Wachstum begriffen ist, wird verkümmert ... Im Fall von Kindern ist beständiger Zutritt von reichlichem Tageslicht und der direkten Sonnenstrahlen während eines Teils des Tags durchaus wesentlich für die Gesundheit. Licht hilft die Speisen zu gutem plastischen Blut verarbeiten und härtet die Fiber, nachdem sie gebildet ist. Es wirkt ebenso

Worcester General Hospital, from whose work on "Health" (1864) this passage is taken, writes in a letter to Mr. White, one of the commissioners: "I have had opportunities formerly, when in Lancashire, of observing the effects of nightwork upon children, and I have no hesitation in saying, contrary to what some employers were fond of asserting, those children who were subjected to it soon suffered in their health." (l.c., 284., p. 55.) That such a question should furnish the material of serious controversy, shows plainly how capitalist production acts on the brain-functions of capitalists and their retainers.

↑ It should be self-understood that day-and-night work is bad for your health—this is presumably why Marx put this discussion into a footnote.

↓ But shift work also makes it easy for the capitalists to circumvent the regulations regarding work hours:

E.g., in the branches of industry already mentioned, which are of an exceedingly fatiguing nature; the official working-day means for each worker usually 12 hours by night or day. But the over-work beyond this amount is in many cases, to use the words of the English official report, "truly fearful."⁹⁵

⁹⁵ l.c., 57, p. xii.

369:1 "It is impossible," the report continues, "for any mind to realise the amount of work described in the following passages as being performed by boys of from 9 to 12 years of age ... without coming irresistibly to the conclusion that such abuses of the power of parents and of employers can no longer be allowed to exist."⁹⁶

⁹⁶ l.c., Fourth Report (1865). 58. p. xii.

↑ Here again a critique of the parents as well as the employers, similar to 355:2/o.

369:2 "The practice of boys working at all

als Reizmittel auf die Sehorgane und ruft hierdurch größere Tätigkeit in verschiedenen Hirnfunktionen hervor.“ Herr W. Strange, Oberarzt des Worcester „General Hospital“, aus dessen Schrift über „Gesundheit“ (1864) diese Stelle entlehnt ist, schreibt in einem Brief an einen der Untersuchungskommissäre, Herrn White: „Ich habe früher in Lancashire Gelegenheit gehabt, die Wirkungen der Nachtarbeit auf Fabrikinder zu beobachten, und im Widerspruch zu der beliebten Versicherung einiger Arbeitgeber erkläre ich mit Entschiedenheit, daß die Gesundheit der Kinder bald davon litt.“ „Children's Employment Commission. Fourth Report“, 284, p. 55.) Daß solche Dinge überhaupt den Gegenstand ernsthafter Kontroversen bilden, zeigt am besten, wie die kapitalistische Produktion auf die „Gehirnfunktionen“ der Kapitalisten und ihrer retainers wirkt.

Z.B. in den vorhin erwähnten, sehr anstrengenden Industriezweigen beträgt der offizielle Arbeitstag für jeden Arbeiter meist 12 Stunden, Nachtstunden oder Tagstunden. Aber die Überarbeit über diese Grenze hinaus ist in vielen Fällen, um die Worte des englischen offiziellen Berichts zu brauchen, „wirklich schauerhaft“ („truly fearful“).⁹⁵

⁹⁵ l.c. 57, p. XII.

273:1 „Kein menschliches Gemüt“, heißt es, „kann die Arbeitsmasse, die nach den Zeugnisaussagen durch Knaben von 9 bis 12 Jahren verrichtet wird, überdenken, ohne unwiderstehlich zum Schluß zu kommen, daß dieser Machtmißbrauch der Eltern und Arbeitgeber nicht länger erlaubt werden darf.“⁹⁶

⁹⁶ l.c. („4th Rep.“, 1865), 58, p. XII.

273:2 „Die Methode, Knaben überhaupt ab-

by day and night turns either in the usual course of things, or at pressing times, seems inevitably to open the door to their not unfrequently working unduly long hours. These hours are, indeed, in some cases, not only cruelly but even incredibly long for children. Amongst a number of boys it will, of course, not unfrequently happen that one or more are from some cause absent. When this happens, their place is made up by one or more boys, who work in the other turn. That this is a well understood system is plain ... from the answer of the manager of some large rolling-mills, who, when I asked him how the place of the boys absent from their turn was made up, 'I daresay, sir, you know that as well as I do,' and admitted the fact."⁹⁷

⁹⁷ l.c.

369:3/o "At a rolling-mill where the proper hours were from 6 a.m. to 5 1/2 p.m., a boy worked about four nights every week till 8 1/2 p.m. at least ... and this for six months. Another, at 9 years old, sometimes made three 12-hour shifts running, and, when 10, has made two days and two nights running." A third, "now 10 ... worked from 6 a.m. till 12 p.m. three nights, and till 9 p.m. the other nights." "Another, now 13, ... worked from 6 p.m. till 12 noon next day, for a week together, and sometimes for three shifts together, e.g., from Monday morning till Tuesday night." "Another, now 12, has worked in an iron foundry at Stavely from 6 a.m. till 12 p.m. for a fortnight on end; could not do it any more." "George Allinsworth, age 9, came here as cellar-boy last Friday; next morning we had to begin at 3, so I stopped here all night. Live five miles off. Slept on the floor of the furnace, over head, with an apron under me, and a bit of a jacket over me. The two other days I have been here at 6 a.m. Aye! it is hot in here. Before I came here I was nearly a year at the same work at some works in the country.

wechselnd Tag und Nacht arbeiten zu lassen, führt, sowohl während des Geschäftsdranges als während des gewöhnlichen Verlaufs der Dinge, zu schmälicher Verlängerung des Arbeitstags. Diese Verlängerung ist in vielen Fällen nicht nur grausam, sondern gradezu unglaublich. Es kann nicht fehlen, daß aus einer oder der andren Ursache ein Ablösungsknabe hier und da wegbleibt. Einer oder mehrere der anwesenden Knaben, die ihren Arbeitstag bereits vollbracht, müssen dann den Ausfall gutmachen. Dies System ist so allgemein bekannt, daß der Manager eines Walzwerks auf meine Frage, wie die Stelle der abwesenden Ersatzknaben ausgefüllt würde, antwortete: Ich weiß wohl, daß Sie das ebenso gut wissen als ich, und er nahm keinen Anstand, die Tatsache zu gestehn."⁹⁷

⁹⁷ l.c.

273:3/o „In einem Walzwerke, wo der nominelle Arbeitstag von 6 Uhr morgens bis 5 1/2 Uhr abends dauerte, arbeitete ein Junge 4 Nächte jede Woche bis mindestens 8 1/2 Uhr abends des nächsten Tags ... und dies während 6 Monaten.“ „Ein anderer arbeitete im Alter von 9 Jahren manchmal drei zwölfstündige Arbeitsschichten nacheinander und im Alter von 10 Jahren zwei Tage und zwei Nächte nacheinander.“ „Ein dritter, jetzt 10 Jahre, arbeitete von morgens 6 Uhr bis 12 Uhr in die Nacht drei Nächte durch und bis 9 Uhr abends während der andren Nächte.“ „Ein vierter, jetzt 13 Jahre, arbeitete von 6 Uhr nachmittags bis den andren Tag 12 Uhr mittags während einer ganzen Woche, und manchmal drei Schichten nacheinander, z.B. von Montag morgen bis Dienstag nacht.“ „Ein fünfter, jetzt 12 Jahre, arbeitete in einer Eisengießerei zu Stavely von 6 Uhr morgens bis 12 Uhr nachts während 14 Tagen, ist unfähig, es länger zu tun.“ George Allinsworth, neunjährig: „Ich kam hierhin letzten Freitag. Nächsten Tag hatten wir um 3 Uhr morgens anzufangen. Ich blieb daher die ganze Nacht hier. Wohne 5

Began there, too, at 3 on Saturday morning—always did, but was very gain [near] home, and could sleep at home. Other days I began at 6 in the morning, and gi'en over at 6 or 7 in the evening," etc."⁹⁸

↓ Footnote 98: if the children must work this long, it is no wonder they have very little school knowledge:

⁹⁸ l.c., p. xiii. Naturally, the degree of culture of these "labor-powers" cannot be any higher than that manifested in the following dialogues with one of the commissioners: Jeremiah Haynes, age 12—"Four times four is 8; 4 fours are 16. A king is him that has all the money and gold. We have a king (told it is a Queen), they call her the Princess Alexandra. Told that she married the Queen's son. The Queen's son is the Princess Alexandra. A Princess is a man." William Turner, age 12—"Don't live in England. Think it is a country, but didn't know before." John Morris, age 14—"Have heard say that God made the world, and that all the people was drowned but one, heard say that one was a little bird." William Smith, age 15—"God made man, man made woman." Edward Taylor, age 15—"Do not know of London." Henry Matthewman, age 17—"Had been to chapel, but missed a good many times lately. One name that they preached about was Jesus Christ, but I cannot say any others, and I cannot tell anything about him. He was not killed, but died like other people. He was not the same as other people in some ways, because he was religious in some ways and others isn't." (l.c., p. xv.) "The devil is a good person. I don't know where he lives." "Christ was a wicked man." "This girl spelt God as dog, and did not know the name of the queen." ("Ch. Employment Comm. V. Report, 1866" p. 55, n.

Meilen von hier. Schlieft auf der Flur mit einem Schurzfell unter mir und einer kleinen Jacke über mir. Die zwei andren Tage war ich hier um 6 Uhr morgens. Ja! dies ist ein heißer Platz! Bevor ich herkam, arbeitete ich ebenfalls während eines ganzen Jahres in einem Hochofen. Es war ein sehr großes Werk auf dem Lande. Begann auch samstags morgens um 3 Uhr, aber ich konnte wenigstens nach Hause schlafen gehn, weil es nah war. An andren Tagen fing ich 6 Uhr morgens an und endete 6 oder 7 Uhr abends" usw."⁹⁸

⁹⁸ l.c. p. XIII. Die Bildungsstufe dieser „Arbeitskräfte“ muß natürlich so sein, wie sie in folgenden Dialogen mit einem der Untersuchungskommissäre erscheint! Jeremiah Haynes, 12 Jahre alt: „... Viermal vier ist acht, aber vier Vierer (4 fours) sind 16 ... Ein König ist ihm, der alles Geld und Gold hat. (A king is him that has all the money and gold.) Wir haben einen König, man sagt, er ist eine Königin, sie nennen sie Prinzessin Alexandra. Man sagt, sie heiratete der Königin Sohn. Eine Prinzessin ist ein Mann.“ Wm. Turner, zwölfjährig: „Lebe nicht in England. Denke, es gibt solch ein Land, wußte nichts davon zuvor.“ John Morris, vierzehnjährig: „Habe sagen hören, daß Gott die Welt gemacht und daß alles Volk ersoff, außer einem; habe gehört, daß der eine ein kleiner Vogel war.“ William Smith, fünfzehnjährig: „Gott machte den Mann; der Mann machte das Weib.“ Edward Taylor, fünfzehnjährig: „Weiß nichts von London.“ Henry Matthewman, siebzehnjährig: „Geh' manchmal in die Kirche ... Ein Name, worüber sie predigen, war ein gewisser Jesus Christ, aber ich kann keine andren Namen nennen, und ich kann auch nichts über ihn sagen. Er wurde nicht gemordet, sondern starb wie andre Leute. Er war nicht so wie andre Leute in gewisser Art, weil er religiös war in gewisser Art, und andre ist es nicht. (He was not the same as other people in some ways, because he was religious in some ways,

278.)

and others isn't.)" (l.c. 74, p. XV.) „Der Teufel ist eine gute Person. Ich weiß nicht, wo er lebt. Christus war ein schlechter Kerl.“ („The devil is a good person. I don't know where he lives. Christ was a wicked man.") „Dies Mädchen (10 Jahre) buchstabiert God Dog und kannte den Namen der Königin nicht.“ „Ch. Empl. Comm. V. Rep.“, 1866, p. 55, n. 278.)

↓ The rest of the footnote discusses shift work in the paper mills:

^{98 ctd} The same system obtains in the glass and paper works as in the metallurgical, already cited. In the paper factories, where the paper is made by machinery, night-work is the rule for all processes, except rag-sorting. In some cases night-work, by relays, is carried on incessantly throug the whole week, usually from Sunday night until midnight of the following Saturday. Those who are on day-work work 5 days of 12, and 1 day of 18 hours; those on night-work 5 nights of 12, and 1 of 6 hours in each week. In other cases each set works 24 hours consecutively on alternate days, one set working 6 hours on Monday, and 18 on Saturday to make up the 24 hours. In other cases an intermediate system prevails, by which all employed on the paper-making machinery work 15 or 16 hours every day in the week. This system, says Commissioner Lord, "seems to combine all the evils of both the 12 hours' and the 24 hours' relays." Children under 13, young persons under 18, and women, work under this night system. Sometimes under the 12 hours' system they are obliged, on account of the non-appearance of those that oupt to relieve them, to work a double turn of 24 hours. The evidence proves that boys and girls very often work overtime, which, not unfrequently, extends to 24 or even 36 hours of uninterrupted toil. In the continuous and unvarying process of glazing are found girls of 12 who work the whole month 14 hours a day, "without any regular relief or cessation beyond 2 or, at most, 3 breaks of half an hour each for meals." In some mills, where regular night-work has been entirely given up, over-work goes on to a terrible extent, "and that often in the dirtiest, and in the hottest, and in the most monotonous of the

^{98 ctd} Dasselbe System, das in den erwähnten Metallmanufakturen, herrscht in den Glas- und Papierfabriken. In den Papierfabriken, wo das Papier mit Maschinen gemacht wird, ist Nachtarbeit die Regel für alle Prozesse außer dem der Lumpensortierung. In einigen Fällen wird die Nachtarbeit, vermittelt Ablösungen, unaufhörlich die ganz Woche durch fortgesetzt, gewöhnlich von Sonntag nacht bis 12 Uhr nachts des folgenden Samstags. Die Mannschaft, die sich an der Tagesreihe befindet, arbeitet 5 Tage von 12 und einen von 18 Stunden, und die der Nachtreihe 5 Nächte von 12 Stunden und eine von 6 Stunden, in jeder Woche. In andren Fällen arbeitet jede Reihe 24 Stunden, die eine nach der andren, an Wechseltagen. Eine Reihe arbeitet 6 Stunden am Montag und 18 am Samstag, um 24 Stunden vollzumachen. In andren Fällen ist ein Zwischensystem eingeführt, worin alle an der Papiermacher-Maschinerie Angestellten jeden Tag in der Woche 15–16 Stunden arbeiten. Dies System, sagt Untersuchungskommissär Lord, scheint alle Übel der Zwölfstunden- und Vierundzwanzigstunden-Ablösung zu vereinigen. Kinder unter 13 Jahren, junge Personen unter 18 Jahren und Weiber arbeiten unter diesem Nachtsystem. Manchmal, in dem Zwölfstundensystem, mußten sie, wegen Ausbleibens der Ablöser, die doppelte Reihe von 24 Stunden arbeiten. Zeugenaussagen beweisen, daß Knaben und Mädchen sehr oft Überzeit arbeiten, die sich nicht selten zu 24, ja 36 Stunden ununterbrochener Arbeit ausdehnt. In dem „kontinuierlichen und unveränderlichen“ Prozeß der Glasierräume findet man Mädchen von 12 Jahren, die den ganzen Monat durch täglich 14 Stunden arbeiten, „ohne

various processes." ("Ch. Employment Comm. Report IV., 1865," p. xxxviii, and xxxix.)

irgendeine regelmäßige Erholung oder Unterbrechung außer zwei, höchstens drei halbstündigen Ausfällen für Mahlzeiten“. In einigen Fabriken, wo man die reguläre Nachtarbeit ganz aufgegeben, wird entsetzlich viel Überzeit gearbeitet und „dies häufig in den schmutzigsten, heißesten und monotonsten Prozessen“. „Children's Employment Commission. Report IV“, 1865, p. XXXVIII and XXXIX.)

Until end of section: Comments of the capitalists themselves about day and night work. Of course, they do not admit the excesses and speak about it only in its normal form, but these interviews show what crimes against these children they are capable of just because of a small increase in profits.

Question 730 Describe the role of children in the struggle for the working-day.

370:1/o Let us now hear how capital itself regards this 24 hours' system. The extreme forms of the system, its abuse in the "cruel and incredible" extension of the working-day are naturally passed over in silence. Capital only speaks of the system in its "normal" form.

371:1 Messrs. Naylor & Vickers, steel manufacturers, who employ between 600 and 700 persons, among whom only 10 per cent are under 18, and of those, only 20 boys under 18 work in night sets, thus express themselves:

↑ Marx begins with the testimony of manufacturers who employ a smaller proportion of children than some of the other testimonies to follow. ↓ Their testimony is self-contradictory at every step.

"The boys do not suffer from the heat. The temperature is probably from 86° to 90° ...

275:1 Laßt uns nun hören, wie das Kapital selbst dies Vierundzwanzigstundensystem auffaßt. Die Übertreibungen des Systems, seinen Mißbrauch zur „grausamen und unglaublichen“ Verlängerung des Arbeitstags, übergeht es natürlich mit Stillschweigen. Es spricht nur von dem System in seiner „normalen“ Form.

275:2–276:0 Die Herren Naylor und Vickers, Stahlfabrikanten, die zwischen 600 und 700 Personen anwenden, und darunter nur 10% unter 18 Jahren, und hiervon wieder nur 20 Knaben zum Nachtpersonal, äußern sich wie folgt:

„Die Knaben leiden durchaus nicht von der Hitze. Die Temperatur ist wahrscheinlich 86° bis 90° ...

↑ They know that the temperature is 86° or more (presumably Fahrenheit), but they say that the kids do not suffer from the heat. ↓ They try to detract from the around-the-clock shifts in the forges by saying that everything else is day-work.

At the forges and in the rollingmills the hands work night and day, in relays, but all the other parts of the work are day-work, i.e., from 6 a.m. to 6 p.m. In the forge the

In den Schmiede- und Walzwerken arbeiten die Hände Tag und Nacht ablösungsweise, aber dahingegen ist auch alles andre Werk Tagwerk, von 6 Uhr morgens bis 6

hours are from 12 to 12. Some of the hands always work in the night, without any alternation of day and night work... We do not find any difference in the health of those who work regularly by night and those who work by day, and probably people can sleep better if they have the same period of rest than if it is changed... About 20 of the boys under the age of 18 work in the night sets... We could not well do without lads under 18 working by night. The objection would be the increase in the cost of production... Skilled hands and the heads in every department are difficult to get, but of lads we could get any number...

↑ If those boys want to work for them, why should they have any scruples? ↓ They just said that they could not do without the children for cost reasons, but now they turn around and say: since they only have such a small proportion of children in this situation (20 out of 600 employees), the matter of night work is not of much interest to them:

But from the small proportion of boys that we employ, the subject (*i.e.*, of restrictions on night-work) is of little importance or interest to us.”⁹⁹

⁹⁹ Fourth Report, etc., 1865, 79, p. xvi.

↑ It is little comfort to the 20 children on night shift that 580 other employees of the same company are not in this situation. ↓ However the absolute numbers are much bigger in a different company:

371:2/op Mr. J. Ellis, one of the firm of Messrs. John Brown & Co., steel and iron works, employing about 3,000 men and boys, part of whose operations, namely, iron and heavier steel work, goes on night and day by relays, states “that in the heavier steel work one or two boys are employed to a score or two men.” Their concern employs upwards of 500 boys under 18, of whom about 1/3 or 170 are under the age of 13. With reference to the proposed alteration of

Uhr abends. In der Schmiede wird von 12 Uhr bis 12 Uhr gearbeitet. Einige Hände arbeiten fortwährend des Nachts ohne Wechsel zwischen Tag- und Nachtzeit... Wir finden nicht, daß Tag- oder Nachtarbeit irgendeinen Unterschied in der Gesundheit“ (der Herren Naylor und Vickers?) „macht, und wahrscheinlich schlafen Leute besser, wenn sie dieselbe Ruheperiode genießen, als wenn sie wechselt... Ungefähr zwanzig Knaben unter 18 Jahren arbeiten mit der Nachtmannschaft... Wir könnten’s nicht recht tun (not well do), ohne die Nachtarbeit von Jungen unter 18 Jahren. Unser Einwurf ist—die Vermehrung der Produktionskosten. Geschickte Hände und Häupter von Departements sind schwer zu haben, aber Jungens kriegt man, soviel man will...

Natürlich, in Anbetracht der geringen Proportion von Jungen, die wir verwenden, wären Beschränkungen der Nachtarbeit von wenig Wichtigkeit oder Interesse für uns.“⁹⁹

⁹⁹ „Fourth Report etc.“, 1865, 79, p. XVI.

276:1–2 Herr J. Ellis, von der Firma der Herren John Brown et Co., Stahl- und Eisenwerke, die 3000 Männer und Jungen anwenden, und zwar für [einen] Teil der schweren Stahl- und Eisenarbeit „Tag und Nacht, in Ablösungen“, erklärt, daß in den schweren Stahlwerken ein oder zwei Jungen auf zwei Männer kommen. Ihr Geschäft zählt 500 Jungen unter 18 Jahren und davon ungefähr 1/3, oder 170, unter 13 Jahren. Mit Bezug auf die vorgeschlagene Gesetzände-

the law, Mr. Ellis says:

“I do not think it would be very objectionable to require that no person under the age of 18 should work more than 12 hours in the 24. But we do not think that any line could be drawn over the age of 12, at which boys could be dispensed with for night-work. But we would sooner be prevented from employing boys under the age of 13, or even so high as 14, at all, than not be allowed to employ boys that we do have at night. Those boys who work in the day sets must take their turn in the night sets also, because the men could not work in the night sets only; it would ruin their health... We think, however, that night-work in alternate weeks is no harm.

372:0p (Messrs. Naylor & Vickers, on the other hand, in conformity with the interest of their business, considered that periodically changed night-labor might possibly do more harm than continual night-labor.)

We find the men who do it, as well as the others who do other work only by day... Our objections to not allowing boys under 18 to work at night, would be on account of the increase of expense, but this is the only reason. (What cynical naïveté!) We think that the increase would be more than the trade, with due regard to its being successfully carried out, could fairly bear. (What mealy-mouthed phraseology!) labor is scarce here, and might fall short if there were such a regulation.”

(*i.e.*, Ellis Brown & Co. might fall into the fatal perplexity of being obliged to pay

rung meint Herr Ellis:

„Ich glaube nicht, daß es sehr tadelhaft (*very objectionable*) wäre, keine Person unter 18 Jahren über 12 Stunden aus den 24 arbeiten zu lassen. Aber ich glaube nicht, daß man irgendeine Linie ziehen kann für die Entbehrlichkeit von Jungen über 12 Jahren für die Nachtarbeit. Wir würden sogar eher ein Gesetz annehmen, überhaupt keine Jungen unter 13 Jahren oder selbst unter 15 Jahren zu verwenden, als ein Verbot, die Jungen, die wir einmal haben, während der Nacht zu brauchen. Die Jungen, die in der Tagesreihe, müssen wechselweise auch in der Nachtreihe arbeiten, weil die Männer nicht unaufhörlich Nachtarbeit verrichten können; es würde ihre Gesundheit ruinieren. Wir glauben jedoch, daß Nachtarbeit, wenn die Woche dafür wechselt, keinen Schaden tut.“

276:3–5 (Die Herren Naylor und Vickers glaubten, übereinstimmend mit dem Besten ihres Geschäfts, umgekehrt, daß statt der fortwährenden grade die periodisch wechselnde Nachtarbeit möglicherweise Schaden anrichtet.)

„Wir finden die Leute, die die alternierende Nachtarbeit verrichten, grade so gesund als die, die nur am Tage arbeiten... Unsre Einwürfe gegen die Nichtanwendung von Jungen unter 18 Jahren zur Nachtarbeit würden gemacht werden von wegen Vermehrung der Auslage, aber dies ist auch der einzige Grund.“ (Wie zynisch naïv!) „Wir glauben, daß diese Vermehrung größer wäre, als das Geschäft (*the trade*) mit schuldiger Rücksicht auf seine erfolgreiche Ausführung billigerweise tragen könnte. (*As the trade with due regard to etc. could fairly bear!*)“ (Welche breimäulige Phraseologie!) „Arbeit ist hier rar und könnte unzureichend werden unter einer solchen Regulation.“

(*d.h.*, Ellis, Brown et Co. könnten in die fatale Verlegenheit kommen, den Wert der Ar-

labor-power its full value.)¹⁰⁰

¹⁰⁰ l.c., 80. p. xvi.

372:1 The "Cyclops Steel and Iron Works," of Messrs. Cammell & Co., are concocted on the same large scale as those of the above-mentioned John Brown & Co. The managing director had handed in his evidence to the Government Commissioner, Mr. White, in writing. Later he found it convenient to suppress the MS. when it had been returned to him for revision. Mr. White, however, has a good memory. He remembered quite clearly that for the Messrs. Cyclops the forbidding of the night-labor of children and young persons "would be impossible, it would be tantamount to stopping their works," and yet their business employs little more than 6% of boys under 18, and less than 1% under 13.¹⁰¹

¹⁰¹ l.c., 82. p. xvii.

372:2–374:0p On the same subject Mr. E. F. Sanderson, of the firm of Sanderson, Bros., & Co., steel rolling-mills and forges, Attercliffe, says:

"Great difficulty would be caused by preventing boys under 18 from working at night. The chief would be the increase of cost from employing men instead of boys. I cannot say what this would be, but probably it would not be enough to enable the manufacturers to raise the price of steel, and consequently it would fall on them, as of course the men (what queer-headed folk!) would refuse to pay it."

Mr. Sanderson does not know how much he pays the children, but

"perhaps the younger boys get from 4s. to 5s. a week ... The boys' work is of a kind for which the strength of the boys is generally

beitskraft voll zahlen zu müssen).¹⁰⁰

¹⁰⁰ l.c. 80, p. XVI, XVII.

276:6/o Die „Cyklops Stahl- und Eisenwerke“ der Herren Cammell et Co. werden auf derselben großen Stufenleiter ausgeführt wie die des besagten John Brown et Co. Der geschäftsführende Direktor hatte dem Regierungskommissär White seine Zeugenaussage schriftlich eingehändigt, fand es aber später passend, das zur Revision ihm wieder zurückgestellte Manuskript zu unterschlagen. Jedoch Herr White hat ein nachhaltiges Gedächtnis. Er erinnert sich ganz genau, daß für diese Herrn Zyklopen das Verbot der Nachtarbeit von Kindern und jungen Personen „ein Ding der Unmöglichkeit; es wäre dasselbe, als setzte man ihre Werke still“, und dennoch zählt ihr Geschäft wenig mehr als 6% Jungen unter 18 und nur 1% unter 13 Jahren!¹⁰¹

¹⁰¹ l.c. 82, p. XVII.

277:1–278:1 Über denselben Gegenstand erklärt Herr E. F. Sanderson, von der Firma Sanderson, Bros. et Co., Stahl-, Walz- und Schmiedewerke, in Attercliffe:

„Große Schwierigkeiten würden entspringen aus dem Verbot, Jungen unter 18 Jahren des Nachts arbeiten zu lassen, die Hauptschwierigkeit aus der Vermehrung der Kosten, welche ein Ersatz der Knabenarbeit durch Männerarbeit notwendig nach sich zöge. Wieviel das betragen würde, kann ich nicht sagen, aber wahrscheinlich wäre es nicht so viel, daß der Fabrikant den Stahlpreis erhöhen könnte, und folglich viele der Verlust auf ihn, da die Männer“ (welch querköpfig Volk!) „[sich] natürlich weigern würden, ihn zu tragen.“

Herr Sanderson weiß nicht, wieviel er den Kindern zahlt, aber

„vielleicht beträgt es 4 bis 5 sh. per Kopf die Woche ... Die Knabenarbeit ist von einer Art, wofür im allgemeinen“ („generally“,

(‘generally,’ of course not always) quite sufficient, and consequently there would be no gain in the greater strength of the men to counterbalance the loss, or it would be only in the few cases in which the metal is heavy. The men would not like so well not to have boys under them, as men would be less obedient. Besides, boys must begin young to learn the trade. Leaving day-work alone open to boys would not answer this purpose.”

And why not? Why could not boys learn their handicraft in the day-time? Your reason?

“Owing to the men working-days and nights in alternate weeks, the men would be separated half the time from their boys, and would lose half the profit which they make from them. The training which they give to an apprentice is considered as part of the return for the boys’ labor, and thus enables the man to get it at a cheaper rate. Each man would want half of this profit.”

In other words, Messrs. Sanderson would have to pay part of the wages of the adult men out of their own pockets instead of by the night-work of the boys. Messrs. Sanderson’s profit would thus fall to some extent, and this is the good Sandersonian reason why boys cannot learn their handicraft in the day.¹⁰² In addition to this, it would throw night-labor on those who worked instead of the boys, which they would not be able to stand. The difficulties in fact would be so great that they would very likely lead to the giving up of night-work altogether, and “as far as the work itself is concerned,” says E. F. Sanderson, “this would suit as well, but—“ But Messrs. Sanderson have something else to make besides steel. Steel-making

natürlich nicht immer „im Besondern“) „die Kraft der Jungen grade ausreicht, und folglich würde kein Gewinn aus der größten Kraft der Männer fließen, um den Verlust zu kompensieren, oder doch nur in den wenigen Fällen, wo das Metall sehr schwer ist. Die Männer würden es auch minder lieben, keine Knaben unter sich zu haben, da Männer minder gehorsam sind. Außerdem müssen die Jungen jung anfangen, um das Geschäft zu lernen. Die Beschränkung der Jungen auf bloße Tagarbeit würde diesen Zweck nicht erfüllen.“

Und warum nicht? Warum können Jungen ihr Handwerk nicht bei Tag lernen? Deinen Grund?

„Weil dadurch die Männer, die in Wechselwochen bald den Tag, bald die Nacht arbeiten, von den Jungen ihrer Reihe während derselben Zeit getrennt, halb den Profit verlieren würden, den sie aus ihnen herauschlagen. Die Anleitung, die sie den Jungen geben, wird nämlich als Teil des Arbeitslohnes dieser Jungen berechnet und befähigt die Männer daher, die Jungenarbeit wohlfeiler zu bekommen. Jeder Mann würde seinen halben Profit verlieren.“

In andren Worten, die Herren Sanderson müßten einen Teil des Arbeitslohnes der erwachsenen Männer aus eigener Tasche statt mit der Nachtarbeit der Jungen zahlen. Der Profit der Herren Sanderson würde bei dieser Gelegenheit etwas fallen, und dies ist der Sandersonsche gute Grund, warum Jungen ihr Handwerk nicht bei Tag lernen können.¹⁰² Außerdem würde dies reguläre Nachtarbeit auf die Männer werfen, die nun von den Jungen abgelöst werden, und sie würden das nicht aushalten. Kurz und gut, die Schwierigkeiten wären so groß, daß sie wahrscheinlich zur gänzlichen Unterdrückung der Nachtarbeit führen würden. „Was die Produktion von Stahl selbst angeht“, sagt E. F. Sanderson, „würde es nicht

is simply a pretext for surplus-value making. The smelting furnaces, rolling-mills, etc., the buildings, machinery, iron, coal, etc., have something more to do than transform themselves into steel. They are there to absorb surplus-labor, and naturally absorb more in 24 hours than in 12. In fact they give, by grace of God and law, the Sandersons a cheque on the working time of a certain number of hands for all the 24 hours of the day, and they lose their character as capital, are therefore a pure loss for the Sandersons, as soon as their function of absorbing labor is interrupted.

“But then there would be the loss from so much expensive machinery, lying idle half the time, and to get through the amount of work which we are able to do on the present system, we should have to double our premises and plant, which would double the outlay.”

↓ Footnote brings interesting Hegel quote about good reasons:

¹⁰² “In our reflecting and reasoning age a man is not worth much who cannot give a good reason for everything, no matter how bad or how crazy. Everything in the world that has been done wrong has been done wrong for the very best of reasons.” (Hegel, I.c., p. 249)

374:0p But why should these Sandersons pretend to a privilege not enjoyed by the other capitalists who only work during the day, and whose buildings, machinery, raw material, therefore lie “idle” during the night? E. F. Sanderson answers in the name of all the Sandersons:

“It is true that there is this loss from machinery lying idle in those manufactories in which work only goes on by day. But the use of fur-

den geringsten Unterschied machen, aber!“ Aber die Herren Sanderson haben mehr zu tun, als Stahl zu machen. Die Stahlmacherei ist bloßer Vorwand der Plusmacherei. Die Schmelzöfen, Walzwerke usw., die Baulichkeiten, die Maschinerie, das Eisen, die Kohle usw. haben mehr zu tun, als sich in Stahl zu verwandeln. Sie sind da, um Mehrarbeit einzusaugen, und saugen natürlich mehr in 24 Stunden als in 12. Sie geben in der Tat von Gottes und Rechts wegen den Sandersons eine Anweisung auf die Arbeitszeit einer gewissen Anzahl von Händen für volle 24 Stunden des Tags und verlieren ihren Kapitalcharakter, sind daher für die Sandersons reiner Verlust, sobald ihre Funktion der Arbeitseinsaugung unterbrochen wird.

„Aber dann wäre da der Verlust an so viel kostspieliger Maschinerie, welche die halbe Zeit brachläge, und für eine solche Produktenmasse, wie wir fähig sind, sie bei dem gegenwärtigen System zu leisten, müßten wir Räumlichkeiten und Maschinenwerke verdoppeln, was die Auslage verdoppeln würde.“

¹⁰² „In unsrer reflexionsreichen und rasonierenden Zeit muß es einer noch nicht weit gebracht haben, der nicht für alles, auch das Schlechteste und Verkehrteste, einen guten Grund anzugeben weiß. Alles, was in der Welt verdorben worden ist, das ist aus guten Gründen verdorben worden.“ (Hegel, I.c. p. 249.)

278:2–3 Aber warum beanspruchen gerade diese Sandersons ein Privilegium vor den andren Kapitalisten, die nur bei Tag arbeiten lassen dürfen und deren Baulichkeiten, Maschinerie, Rohmaterial daher bei Nacht „brach“ liegen?

„Es ist wahr“, antwortet E. F. Sanderson im Namen aller Sandersons, „es ist wahr, daß dieser Verlust von brachliegender Maschi-

naces would involve a further loss in our case. If they were kept up there would be a waste of fuel (instead of, as now, a waste of the living substance of the workers), and if they were not, there would be loss of time in laying the fires and getting the heat up (whilst the loss of sleeping time, even to children of 8 is a gain of working time for the Sanderson tribe), and the furnaces themselves would suffer from the changes of temperature” (whilst those same furnaces suffer nothing from the day and night change of labor).¹⁰³

¹⁰³ I.c., 85, p. xvii. To similar tender scruples of the glass manufacturers that regular meal-times for the children are impossible because as a consequence a certain quantity of heat, radiated by the furnaces, would be “a pure loss” or “wasted,” Commissioner White makes answer. His answer is unlike that of Ure, Senior, etc., and their puny German plagiarists à la Roscher who are touched by the “abstinence,” “self-denial,” “saving,” of the capitalists in the expenditure of their gold, and by their Timur-Tamerlanish prodigality of human life! “A certain amount of heat beyond what is usual at present might also be going to waste, if meal-times were secured in these cases, but it seems likely not equal in money-value to the waste of animal power now going on in glass-houses throughout the kingdom from growing boys not having enough quiet time to eat their meals at ease, with a little rest afterwards for digestion.” (I.c., p. xiv.) And this in the year of progress 1865! Without considering the expenditure of strength in lifting and carrying, such a child, in the sheds where bottle and flint glass are made, walks during the performance of his work 15–20 miles in every 6 hours! And the work often lasts 14 or 15 hours! In many of these glass works, as in the Moscow spinning mills, the system of 6 hours’ relays is in force. “During the

nerie alle Manufakturen trifft, worin nur bei Tag gearbeitet wird. Aber der Gebrauch der Schmelzöfen würde in unsrem Fall einen Extraverlust verursachen. Hält man sie im Gang, so wird Brennmaterial verwüstet“ (statt daß jetzt das Lebensmaterial der Arbeiter verwüstet wird), „und hält man sie nicht im Gang, so setzt das Zeitverlust im Wiederanlegen des Feuers und zur Gewinnung des nötigen Hitzegrads“ (während der Verlust, selbst Achtjähriger, an Schlafzeit Gewinn von Arbeitszeit für die Sandersonsippe), „und die Öfen selbst würden vom Temperaturwechsel leiden“ (während doch dieselbigen Öfen nichts leiden vom Tag- und Nachtwechsel der Arbeit.)¹⁰³

¹⁰³ „Children’s Employment Commission. Fourth Report“, 1865, 85, p. XVII. Auf ähnliches zartes Bedenken des Herrn Glasfabrikanten, daß „regelmäßige Mahlzeiten“ der Kinder unmöglich sind, weil dadurch ein bestimmtes Quantum Hitze, das die Öfen ausstrahlen, „reiner Verlust“ wäre oder „verwüstet“ würde, antwortet Untersuchungskommissär White, durchaus nicht gleich Ure, Senior etc. und ihren schmalen deutschen Nachkläffern, wie Roscher etc., gerührt von der „Enthaltsamkeit“, „Entsagung“ und „Sparsamkeit“ der Kapitalisten in Verausgabung ihres Geldes und ihrer Timur-Tamerlanschen „Verschwendung“ von Menschenleben: „Ein gewisses Quantum Hitze mag über das jetzige Maß hinaus verwüstet werden infolge von Sicherung regulärer Mahlzeiten, aber selbst in Geldwert ist es nichts, verglichen mit der Verwüstung von Lebenskraft (the waste of animal power), die jetzt dem Königreich daraus erwächst, daß in den Glashütten beschäftigte und im Wachstum begriffene Kinder nicht einmal die Muße finden, ihre Speisen bequem einzunehmen und zu verdauen.“ (I.c. p. XLV.) Und das im „Fortschrittsjahr“ 1865! Abgesehen von der Kraftausgabe im Heben und Tragen, marschiert ein solches Kind in den Hütten, die Flaschen und Flintglas machen, während der kontinuierlichen Verrichtung

working part of the week six hours is the utmost unbroken period ever attained at any one time for rest, and out of this has to come the time spent in coming and going to and from work, washing, dressing, and meals, leaving a very short period indeed for rest, and none for fresh air and play, unless at the expense of the sleep necessary for young boys, especially at such hot and fatiguing work ... Even the short sleep is obviously liable to be broken by a boy having to wake himself if it is night, or by the noise, if it is day." Mr. White gives cases where a boy worked 36 consecutive hours; others where boys of 12 drudged on until 2 in the morning, and then slept in the works till 5 a.m. (3 hours!) only to resume their work. "The amount of work," say Tremenhare and Tufnell, who drafted the general report, "done by boys, youths, girls, and women, in the course of their daily or nightly spell of labor, is certainly extraordinary." (l.c., xliii. and xlv.) Meanwhile, late by night, self-denying Mr. Glass-Capital, primed with port-wine, reels out of his club homeward droning out idiotically. "Britons never, never shall be slaves!"

This footnote addresses the waste of human labor against economy of constant capital (already mentioned in footnote 89 to paragraph 364:2/o).

Question 731 Why is the economizing of constant capital so much more important for capital than the waste of human labor?

seiner Arbeit, 15 bis 20 (englische) Meilen in 6 Stunden! Und die Arbeit dauert oft 14 bis 15 Stunden! In vielen dieser Glashütten herrscht, wie in den Spinnereien von Moskau, das System sechsstündiger Ablösungen. „Während der Arbeitszeit der Woche sind sechs Stunden die äußerste ununterbrochene Rastperiode, und davon geht ab die Zeit, zur und von der Fabrik zu gehn, Waschen, Kleiden, Speisen, was alles Zeit kostet. So bleibt in der Tat nur die kürzeste Ruhezeit. Keine Zeit für Spiel und frische Luft, außer auf Kosten des Schlafs, so unentbehrlich für Kinder, die in solch heißer Atmosphäre solch anstrengendes Werk verrichten ... Selbst der kurze Schlaf ist dadurch unterbrochen, daß das Kind sich selbst wecken muß bei Nacht oder bei Tag vom Außenlärm geweckt wird. „Herr White gibt Fälle, wo ein Junge 36 Stunden nacheinander arbeitete; andre, wo Knaben von 12 Jahren bis 2 Uhr nachts schanzten und dann in der Hütte schlafen bis 5 Uhr morgens (3 Stunden!), um das Tagwerk von neuem zu beginnen! „Die Masse Arbeit“, sagen die Redakteure des allgemeinen Berichts, Tremenhare und Tufnell, „die Knaben, Mädchen und Weiber im Lauf ihres täglichen oder nächtlichen Arbeitsbanns (spell of labor) verrichten, ist fabelhaft.“ (l.c. p. XLIII und XLIV.) Unterdes wankt vielleicht eines Abends späte das „entsagungsvolle“ Glaskapital, portweininduslig, aus dem Klub nach Haus, idiotisch vor sich hersummend: „Britons never, never shall be slaves!“

10.5. The Struggle around the Normal Working-Day. Compulsory Laws for the Extension of the Working-Day from the Middle of the 14th to the End of the 17th Century

The remainder of chapter Ten, starting with section 10.5, discusses the struggle around the length of the normal working-day. When Marx wrote *Capital*, the working class had just won an important victory in these struggles.

Originally, these struggles were initiated by the capitalists, not by the working class. The working class movement arose out of self-defense after centuries of sustained attacks by the capitalists. For 450 years, the English laborers had to put up with a steady prolongation of the working-day imposed on them by law.

10.5.a. [What is a working-day?]

Before discussing the struggles themselves, i.e. the historical *processes* through which the length of the working-day was fixed (344:1), Marx develops the mechanisms which determine this length, and their interconnection. (1) Marx starts with an entirely unregulated work day in which the capitalist extends the working hours until he runs into the worker's physiological bounds I. (2) In this process, capital also oversteps other bounds. Not only the "moral" bounds of the working-day, which used to be quite effective in the past, but also the physiological bounds II. (3) The disregard of the physiological bounds II implies that even capital's own long-run economic interest would be served by a shortening of the working-day. (4) However there is no competitive mechanism enforcing this. Why not? Because of rural overpopulation.

After this, as proof that these mechanisms are actually at work, Marx brings empirical evidence showing that at the time when the Factory Acts were passed, labor-power was indeed over-used to the point that it no longer possessed its normal strength.

375/o What is a working-day? What is the length of time during which capital may consume the labor-power whose daily value it has paid for? How far may the working-day be extended beyond the amount of labor-time necessary for the reproduction of labor-power itself?

279/oo „Was ist ein Arbeitstag?“ Wie groß ist die Zeit, während deren das Kapital die Arbeitskraft, deren Tageswert es zahlt, konsumieren darf? Wie weit kann der Arbeitstag verlängert werden über die zur Reproduktion der Arbeitskraft selbst notwendige Arbeitszeit?

↑ The importance of this question, as well as the economic indeterminacy of the length of the working-day, were already emphasized in 341:3/o. The formulation here makes clear that only the surplus part is variable.

↓ The capitalists's point of view:

It has been seen that to these questions capital replies: the working-day contains the full 24 hours, with only the few hours of repose subtracted without which labor-power absolutely refuses its service again.

↑ This is the maximum possible length in the absence of any regulation of the length of the working-day: the capitalist will simply use the labor-power until the worker is physically unable to continue to work. This was indeed the case in England during the Industrial Revolution. ↓ Marx criticizes this point of view in two ways:

(1) By insisting that everything the worker does must be related to work and not to any other purpose—which does not mean that he or she has to *work* 24 hours a day, the worker also has to recover from work and prepare for work, etc.—capital oversteps the *moral* bounds of the working-day. Marx continues to present the point of view of the capitalist, but now in a polemical, critical style:

First of all it is self-evident that the laborer is for 24 hours a day nothing else than labor-power, that therefore all his disposable time is by nature and law labor-time, to be devoted to the self-expansion of capital. Time for education, for intellectual development, for the fulfilling of social functions and for social intercourse, for the free-play of his bodily and mental activity, even the rest time of Sunday (and that in a country of Sabbatarians!)¹⁰⁴—moonshine!

Auf diese Fragen, man hat es gesehn, antwortet das Kapital: Der Arbeitstag zählt täglich volle 24 Stunden nach Abzug der wenigen Ruhestunden, ohne welche die Arbeitskraft ihren erneuerten Dienst absolut versagt.

Es versteht sich zunächst von selbst, daß der Arbeiter seinen ganzen Lebenstag durch nichts ist außer Arbeitskraft, daß daher alle seine disponible Zeit von Natur und Rechts wegen Arbeitszeit ist, also der Selbstverwertung des Kapitals angehört. Zeit zu menschlicher Bildung, zu geistiger Entwicklung, zur Erfüllung sozialer Funktionen, zu geselligem Verkehr, zum freien Spiel der physischen und geistigen Lebenskräfte, selbst die Feierzeit des Sonntags—und wäre es im Lande der Sabbatheiligen¹⁰⁴—reiner Firlefanz!

Question 732 *Is it true today that the laborer is for 24 hours a day nothing else than labor-power?*

Footnote 104 illustrates the contradictory and hypocritical character of religious boundaries.

¹⁰⁴ In England even now occasionally in rural districts a laborer is condemned to imprisonment for desecrating the Sabbath, by working in his front garden. The same laborer is punished for breach of contract if he remains away from his metal, paper, or glass works on the Sunday, even if it be from a religious whim. The orthodox Parliament will hear nothing of Sabbath-breaking if

¹⁰⁴ In England z.B. wird immer noch hier und da auf dem Lande ein Arbeiter zu Gefängnisstrafe verurteilt wegen Entheiligung des Sabbats durch Arbeit auf dem Gärtchen vor seinem Hause. Derselbe Arbeiter wird wegen Kontraktbruches bestraft, bleibt er des Sonntags, sei es selbst aus religiösen Mucken, vom Metall-, Papier oder Glaswerk weg. Das orthodoxe Parlament hat

it occurs in the process of expanding capital. A memorial (August 1863), in which the London day-laborers in fish and poultry shops asked for the abolition of Sunday labor, states that their work lasts for the first 6 days of the week on an average 15 hours a-day, and on Sunday 8–10 hours. From this same memorial we learn also that the delicate gourmands among the aristocratic hypocrits of Exeter Hall especially encourage this “Sunday labor.” These “holy ones,” so zealous “in attending to their bodily pleasures” show their Christianity by the humility with which they bear the overwork, the privations, and the hunger of others. Here, “gluttony is more pernicious to the stomach of others (the laborers).”

Question 733 *Are religious boundaries which prohibit Sunday work good or bad for the workers?*

↓ (2) Capital also oversteps the *physiological* bounds II of the working-day.

But in its blind unrestrainable compulsion, its were-wolf hunger for surplus-labor, capital oversteps not only the moral, but even the merely physical maximum bounds of the working-day. It usurps the time for growth, development, and healthy maintenance of the body. It steals the time required for the consumption of fresh air and sunlight. It higgles over a meal-time, incorporating it where possible with the process of production itself, so that food is given to the laborer as to a mere means of production, as coal is supplied to the boiler, grease and oil to the machinery. It reduces the sound sleep needed for the restoration, reparation, refreshment of the bodily powers to just so many hours of torpor as the revival of an organism, absolutely exhausted, renders essential.

↓ The capitalist point of view about the length of the working day, against which Marx is

kein Ohr für Sabbatentheiligung, wenn sie im „Verwertungsprozeß“ des Kapitals vorgeht. In einer Denkschrift (August 1863), worin die Londoner Tagelöhner in Fisch und Geflügelläden Abschaffung der Sonntagsarbeit verlangen, heißt es, ihre Arbeit daure während der ersten 6 Wochentage durchschnittlich 15 Stunden täglich und am Sonntag 8 bis 10 Stunden. Man entnimmt zugleich aus dieser Denkschrift, daß namentlich die kitzlige Gourmandise der aristokratischen Mucker von Exeter Hall diese „Sonntagsarbeit“ ermutigt. Diese „Heiligen“, so eifrig „in cute curanda“, bewähren ihr Christentum durch die Ergebung, womit sie die Überarbeit, die Entbehnungen und den Hunger dritter Personen ertragen. Obsequium ventris istis (den Arbeitern) perniciosus est.

Aber in seinem maßlos blinden Trieb, seinem Werwolfs-Heißhunger nach Mehrarbeit, überrennt das Kapital nicht nur die moralischen, sondern auch die rein physischen Maximalschranken des Arbeitstags. Es usurpiert die Zeit für Wachstum, Entwicklung und gesunde Erhaltung des Körpers. Es raubt die Zeit, erheischt zum Verzehr von freier Luft und Sonnenlicht. Es knickert ab an der Mahlzeit und einverleibt sie womöglich dem Produktionsprozeß selbst, so daß dem Arbeiter als bloßem Produktionsmittel Speisen zugesetzt werden wie dem Dampfkessel Kohle und der Maschinerie Talg oder Öl. Den gesunden Schlaf zur Sammlung, Erneuerung und Erfrischung der Lebenskraft reduziert es auf so viel Stunden Erstarrung, als die Wiederbelebung eines absolut erschöpften Organismus unentbehrlich macht.

polemizing here, is itself defined by some kind of physiological boundary. This is why this commentary distinguishes between physiological boundary I and physiological boundary II. The difference between the two, according to Marx, is a reversal between what bounds and what is bounded:

It is not the normal maintenance of the labor-power which determines here the limits of the working-day; it is the greatest possible daily expenditure of labor-power, no matter how diseased, compulsory, and painful it may be, which determines the limits of the laborers' period of repose.

↑ This gives an interesting characterization of the difference between physiological boundaries I and II: that which bounds and that which is bounded is reversed. Instead of being allowed to rest until their body is fully recovered (boundary II), the workers must work until they are no longer able to work, after which they are just given enough rest time until their ability to work returns (boundary I). The capitalist finds out how long he can use the labor-power every day before it absolutely refuses its service because of the exhaustion of the laborer; and only the rest of the day, which is no longer of use for the capitalist, is left to the worker to sleep, etc. This sleep may then be enough to enable the worker to work again long hours before he is exhausted on the next day, but it is not enough to regain full health and strength. ↓ The point of view of the capitalist, if unopposed, leads therefore to action that is destructive of the worker himself:

Capital cares nothing for the length of life of labor-power. All that concerns it is simply and solely the maximum of labor-power, that can be rendered fluent in one working-day. It attains this end by decreasing the length of the laborer's life, as a greedy farmer snatches increased produce from the soil by robbing it of its fertility.

↓ The analogy with the greedy farmer raises the question: won't this overextension of the working-day, the destruction of the labor-power which sustains capital, eventually contradict capital's own interests?

376:1/o Capitalist production, which is essentially the production of surplus-value, the absorption of surplus-labor, produces thus, with the extension of the working-day, not only the stunting of human labor-power by robbing it of its normal moral and physical conditions of development and func-

Statt daß die normale Erhaltung der Arbeitskraft hier die Schranke des Arbeitstags, bestimmt umgekehrt die größte täglich mögliche Verausgabung der Arbeitskraft, wie krankhaft gewaltsam und peinlich auch immer, die Schranke für die Rastzeit des Arbeiters.

Das Kapital fragt nicht nach der Lebensdauer der Arbeitskraft. Was es interessiert, ist einzig und allein das Maximum von Arbeitskraft, das in einem Arbeitstag flüssig gemacht werden kann. Es erreicht dies Ziel durch Verkürzung der Dauer der Arbeitskraft, wie ein habgieriger Landwirt gesteigerten Bodenertrag durch Beraubung der Bodenfruchtbarkeit erreicht.

281:1 Die kapitalistische Produktion, die wesentlich Produktion von Mehrwert, Einsaugung von Mehrarbeit ist, produziert also mit der Verlängerung des Arbeitstags nicht nur die Verkümmern der menschlichen Arbeitskraft, welche ihrer normalen moralischen und physischen Entwicklungs- und

tion. It produces also the premature exhaustion and destruction of this labor-power itself.¹⁰⁵ It extends the laborer's time of production during a given period by shortening his overall life-time.

Note the choice of words: Capitalism produces not only the stunting of the "human labor-power" (which is not allowed to develop itself morally, etc., as a human), but also the exhaustion and destruction of the "labor-power *itself*" (not only of its human characteristics but of its mere physiological existence).

¹⁰⁵ "We have given in our previous reports the statements of several experienced manufacturers to the effect that over-hours ... certainly tend prematurely to exhaust the working power of the men." (l.c., 64. p. xiii.)

Next, Marx brings a second argument, which has nothing to do with the concern for the worker, but is solely based on the self-interest of capital: it is against the interest of capital to ignore the physiological boundaries II:

377:1 But the value of the labor-power includes the value of the commodities necessary for the reproduction of the worker, or for the keeping up of the working-class. If then the unnatural extension of the working-day, that capital necessarily strives after in its unmeasured passion for self-expansion, shortens the length of life of the individual laborer, and therefore the duration of his labor-power, the forces used up have to be replaced at a more rapid rate and the sum of the expenses for the reproduction of labor-power will be greater; just as in a machine the part of its value to be reproduced every day is greater the more rapidly the machine is worn out.

The comparison with a machine is not sufficient to make the point which comes next, since the capitalist does not lose as long as the higher wages are proportional to the higher amount of labor received. In *Value, Price and Profit*, [mecw20]141:1, Marx makes the further point:

"But this distinguishes the working man from the machine. Machinery does not wear out exactly in the same ratio in which it is used. Man, on the contrary, decays in a greater ratio than would be visible from the mere numerical addition

Betätigungsbedingungen beraubt wird. Sie produziert die vorzeitige Erschöpfung und Abtötung der Arbeitskraft selbst.¹⁰⁵ Sie verlängert die Produktionszeit des Arbeiters während eines gegebenen Termins durch Verkürzung seiner Lebenszeit.

¹⁰⁵ „In unseren früheren Berichten haben wir die Feststellungen verschiedner erfahrener Fabrikanten wiedergegeben, die besagen, daß Überstunden ... sicher die Gefahr in sich bergen, die Arbeitskraft des Menschen vorzeitig zu erschöpfen.“ (l.c. 64, p. XIII.)

281:2 Der Wert der Arbeitskraft schließt aber den Wert der Waren ein, welche zur Reproduktion des Arbeiters oder zur Fortpflanzung der Arbeiterklasse erheischt sind. Wenn also die naturwidrige Verlängerung des Arbeitstags, die das Kapital in seinem maßlosen Trieb nach Selbstverwertung notwendig anstrebt, die Lebensperiode der einzelnen Arbeiter und damit die Dauer ihrer Arbeitskraft verkürzt, wird rascherer Ersatz der verschlissenen nötig, also das Eingehen größerer Verschleißkosten in die Reproduktion der Arbeitskraft, ganz wie der täglich zu reproduzierende Wertteil einer Maschine um so größer ist, je rascher sie verschleißt.

of work.”

In *Capital*, Marx says something similar in chapter Seventeen, 664:1. It is because of this disproportionality that the overuse of labor-power decreases the rate of surplus-value.

It would seem therefore that the interest of capital itself points in the direction of a normal working-day.

Das Kapital scheint daher durch sein eignes Interesse auf einen Normalarbeitstag hingewiesen.

Question 734 Explain how an excessive lengthening of the work day decreases the rate of surplus-value.

Does this mean that capital will indeed shorten the work day? The answer is no, because the workers killed off prematurely are replaced from the rural overpopulation. In order to develop this part of the argument, Marx uses slavery as an example:

377:2 The slave-owner buys his laborer as he buys his horse. If he loses his slave, he loses capital that can only be restored by new outlay in the slave-market.

281:3–282:0 Der Sklavenhalter kauft seinen Arbeiter, wie er sein Pferd kauft. Mit dem Sklaven verliert er ein Kapital, das durch neue Auslage auf dem Sklavenmarkt ersetzt werden muß.

↑ Does this mean that the economic self-interest of the slave master protects the slave? But

Aber

“the rice-grounds of Georgia, or the swamps of the Mississippi may be fatally injurious to the human constitution; but the waste of human life which the cultivation of these districts necessitates, is not so great that it cannot be repaired from the teeming preserves of Virginia and Kentucky.

„die Reisfelder von Georgien und die Sümpfe des Mississippi mögen fatalistisch zerstörend auf die menschliche Konstitution wirken; dennoch ist diese Verwüstung von menschlichem Leben nicht so groß, daß sie nicht gutgemacht werden könnte aus den strotzenden Gehegen von Virginien und Kentucky.

↓ Under these conditions, considerations of economy do not help the slave but, on the contrary, are murderous:

Considerations of economy, moreover, which, under a natural system, afford some security for humane treatment by identifying the master's interest with the slave's preservation, when once trading in slaves is practiced, become reasons for racking to the uttermost the toil of the slave; for, when his place can at once be supplied from foreign preserves, the duration of his life becomes a matter of less moment than its productiveness while it lasts. It is accordingly a maxim of slave management, in slave-importing countries, that the most effective economy is that which takes out of the human chattel in the shortest space

Ökonomische Rücksichten, die eine Art Sicherheit für die menschliche Behandlung des Sklaven bieten könnten, sofern sie das Interesse des Herrn mit der Erhaltung des Sklaven identifizieren, verwandeln sich, nach Einführung des Sklavenhandels, umgekehrt in Gründe der extremsten Zugrunderichtung des Sklaven, denn sobald sein Platz einmal durch Zufuhr aus fremden Negergehegen ausgefüllt werden kann, wird die Dauer seines Lebens minder wichtig als dessen Produktivität, solange es dauert. Es ist daher eine Maxime der Sklavenwirtschaft in Ländern der Sklaveneinfuhr, daß die wirksamste Ökonomie darin be-

of time the utmost amount of exertion it is capable of putting forth.

This quote also gives some empirical data:

It is in tropical culture, where annual profits often equal the whole capital of plantations, that negro life is most recklessly sacrificed. It is the agriculture of the West Indies, which has been for centuries prolific of fabulous wealth, that has engulfed millions of the African race. It is in Cuba, at this day, whose revenues are reckoned by millions, and whose planters are princes, that we see in the servile class, the coarsest fare, the most exhausting and unremitting toil, and even the absolute destruction of a portion of its numbers every year.”¹⁰⁶

¹⁰⁶ Cairnes, “The Slave Power,” pp. 110, 111.

↓ Very similar mechanisms are at work in capitalism:

378:1 Under a different name the story is being told about you. For slave-trade read labor-market, for Kentucky and Virginia, Ireland and the agricultural districts of England, Scotland, and Wales, for Africa, Germany. We heard how over-work thinned the ranks of the bakers in London. Nevertheless, the London labor-market is always over-stocked with German and other candidates for death in the bakeries. Pottery, as we saw, is one of the shortest-lived industries. Is there any want therefore of potters? Josiah Wedgwood, the inventor of modern pottery, himself originally a common workman, said in 1785 before the House of Commons that the whole trade employed from 15,000 to 20,000 people.¹⁰⁷ In the year 1861 the population alone of the town centres of this industry in Great Britain numbered 101,302.

“The cotton trade has existed for ninety years

steht, die größtmögliche Masse Leistung in möglichst kurzer Zeit dem Menschenvieh (human chattel) auszupressen.

Grade in tropischer Kultur, wo die jährlichen Profite oft dem Gesamtkapital der Pflanzungen gleich sind, wird das Negerleben am rücksichtslosesten geopfert. Es ist die Agrikultur Westindiens, seit Jahrhunderten die Wiege fabelhaften Reichtums, die Millionen der afrikanischen Race verschlungen hat. Es ist heutzutage in Kuba, dessen Revenuen nach Millionen zählen, und dessen Pflanze Fürsten sind, wo wir bei der Sklavenklasse außer der größten Nahrung, der erschöpfendsten und unablässigsten Plackerei einen großen Teil durch die langsame Tortur von Überarbeit und Mangel an Schlaf und Erholung jährlich direkt zerstört sehn.”¹⁰⁶

¹⁰⁶ Cairnes, l.c. p. 110, 111.

282:1 Mutato nomine de te fabula narratur! Lies statt Sklavenhandel Arbeitsmarkt, statt Kentucky und Virginien Irland und die Agrikulturdistrikte von England, Schottland und Wales, statt Afrika Deutschland! Wir hörten, wie die Überarbeit mit den Bäckern in London aufräumt, und dennoch ist der Londoner Arbeitsmarkt stets überfüllt mit deutschen und andren Todeskandidaten für die Bäckerei. Die Töpferei, wie wir sahen, ist einer der kurzlebigsten Industriezweige. Fehlt es deswegen an Töpfern? Josiah Wedgwood, der Erfinder der modernen Töpferei, von Haus selbst ein gewöhnlicher Arbeiter, erklärte 1785 vor dem Hause der Gemeinen, daß die ganze Manufaktur 15000 bis 20000 Personen beschäftige.¹⁰⁷ Im Jahr 1861 betrug die Bevölkerung allein der städtischen Sitze dieser Industrie in Großbritannien 101302.

„Die Baumwollindustrie zählt 90 Jahre ... In

... It has existed for three generations of the English race, and I believe I may safely say that during that period it has destroyed nine generations of factory operatives.”¹⁰⁸

¹⁰⁷ John Ward: “The Borough of Stoke-upon-Trent,” London, 1843, p. 42.

¹⁰⁸ Ferrand’s Speech in the House of Commons, 27th April, 1863.

Question 735 *What is wrong with the argument that the economic self-interest of the capitalists themselves will see to it that they treat their workers well?*

378:2p No doubt in certain epochs of feverish activity the labor-market shows significant gaps. In 1834, e.g. But then the manufacturers proposed to the Poor Law Commissioners that they should send the “surplus-population” of the agricultural districts to the north, with the explanation “that the manufacturers would absorb and use it up.”¹⁰⁹

¹⁰⁹ Those were the very words used by the cotton manufacturers.” l.c.

378:2p/o “Agents were appointed with the consent of the Poor Law Commissioners ... An office was set up in Manchester, to which lists were sent of those workpeople in the agricultural districts wanting employment, and their names were registered in books. The manufacturers attended at these offices, and selected such persons as they chose; when they had selected such persons as their ‘wants required’, they gave instructions to have them forwarded to Manchester, and they were sent, ticketed like bales of goods, by canals, or with carriers, others tramping on the road, and many of them were found on the way lost and half-starved. This system had grown up unto a regular trade. This House will hardly believe it, but I tell them, that this traffic in human flesh was as well kept up, they were in ef-

drei Generationen der englischen Race hat sie neun Generationen von Baumwollarbeitern verspeist.”¹⁰⁸

¹⁰⁷ John Ward, „History of the Borough of Stoke-upon-Trent etc.“, London 1843, p. 42.

¹⁰⁸ Ferrands Rede im „House of Commons“ vom 27. April 1863.

282:3 Allerdings, in einzelnen Epochen fieberhaften Aufschwungs zeigte der Arbeitsmarkt bedenkliche Lücken. So z.B. 1834. Aber die Herren Fabrikanten schlugen nun den Poor Law Commissioners vor, die „Übervölkerung“ der Ackerbaudistrikte nach dem Norden zu schicken, mit der Erklärung, daß „die Fabrikanten sie absorbieren und konsumieren würden“. Dies waren ihre eigensten Worte.¹⁰⁹

¹⁰⁹ „That the manufacturers would absorb it and use it up. Those were the very words used by the cotton manufacturers.“ (l.c.)

283:1 „Agenten wurden zu Manchester bestellt mit Einwilligung der Poor Law Commissioners. Agrikulturarbeiterlisten wurden ausgefertigt und diesen Agenten übermacht. Die Fabrikanten liefen in die Büros, und nachdem sie, was ihnen paßte, ausgewählt, wurden die Familien vom Süden Englands verschickt. Diese Menschenpakete wurden geliefert mit Etiketten gleich so viel Güterballen, auf Kanal und Lastwagen—einige stolchten zu Fuß nach, und viele irrten verloren und halb verhungert in den Manufakturdistrikten umher. Dies entwickelte sich zu einem wahren Handelszweig. Das Haus der Gemeinen wird es kaum glauben. Dieser regelmäßige Handel, dieser Schacher in Menschenfleisch dauerte fort, und diese Leute wurden gekauft und verkauft von den Manchester Agenten an die

fect as regularly sold to these [Manchester] manufacturers as slaves are sold to the cotton-grower in the United States ... In 1860, ‘the cotton trade was at its zenith.’ ... The manufacturers again found that they were short of hands ... They applied to the ‘flesh agents’, as they are called. Those agents sent to the southern downs of England, to the pastures of Dorsetshire, to the glades of Devonshire, to the people tending kine in Wiltshire, but they sought in vain. The surplus-population was ‘absorbed.’”

379:1 The *Bury Guardian* said, on the completion of the French treaty, that “10,000 additional hands could be absorbed by Lancashire, and that 30,000 or 40,000 will be needed.” After the “flesh agents and sub-agents” had in vain sought through the agricultural districts,

“a deputation came up to London, and waited on the right hon. gentleman [Mr. Villiers, President of the Poor Law Board] with a view of obtaining poor children from certain union houses for the mills of Lancashire.”¹¹⁰

¹¹⁰ l.c. Mr. Villiers, despite the best of intentions on his part, was “legally” obliged to refuse the requests of the manufacturers. These gentlemen, however, attained their end through the obliging nature of the local poor law boards. Mr. A. Redgrave, Inspector of Factories, asserts that this time the system under which orphans and pauper children were treated “legally” as apprentices “was not accompanied with the old abuses” (on these “abuses” see Engels, l.c.), although in one case there certainly was “abuse of this system in respect to a number of girls and young women brought from the agricultural districts of Scotland into Lancashire and Cheshire.” Under this system the manufacturer entered into a contract with the workhouse authorities for a certain period. He fed, clothed and lodged the children, and gave them a small allowance of money. A

Manchester Fabrikanten, ganz so regelmäßig wie Neger an die Baumwollpflanzler der südlichen Staaten ... Das Jahr 1860 bezeichnet das Zenit der Baumwollindustrie ... Es fehlte wieder an Händen. Die Fabrikanten wandten sich wieder an die Fleischagenten ... und diese durchstöberten die Dünen von Dorset, die Hügel von Devon und die Ebenen von Wilts, aber die Übervölkerung war bereits verspeist.“

283:2 Der „Bury Guardian“ jammerte, daß 10000 zusätzliche Hände nach Abschluß des englisch-französischen Handelsvertrags absorbiert werden könnten und bald an 30000 oder 40000 mehr nötig sein würden. Nachdem die Agenten und Sub-agenten des Fleischhandels die Agrikulturdistrikte 1860 ziemlich resultatlos durchgefegt,

„wandte sich eine Fabrikantendeputation an Herrn Villiers, Präsidenten des Poor Law Board, mit dem Gesuch, die Zufuhr der Armen- und Waisenkinder aus den Workhouses wieder zu erlauben“¹¹⁰

¹¹⁰ l.c. Villiers, trotz bestem Willen, war „gesetzlich“ in der Lage, das Fabrikantenanliegen abschlagen zu müssen. Die Herren erreichten jedoch ihre Zwecke durch die Willfährigkeit der lokalen Armenverwaltungen. Herr A. Redgrave, Fabrikinspektor, versichert, daß diesmal das System, wonach die Waisen und Paupers Kinder „gesetzlich“ als apprentices (Lehrlinge) gelten, „nicht begleitet war von den alten Mißständen—(über diese „Mißstände“ vgl. Engels, l.c.)—, obgleich allerdings in einem Fall „Mißbrauch mit dem System getrieben worden ist, in bezug auf Mädchen und junge Weiber, die von den Agrikulturdistrikten Schottlands nach Lancashire und Cheshire gebracht wurden“. In diesem „System“ schließt der Fabrikant einen Kontrakt mit den Behörden der Armenhäuser für bestimmte Perioden. Er nährt, kleidet und lo-

remark of Mr. Redgrave to be quoted directly seems strange, especially if we consider that even among the years of prosperity of the English cotton trade, the year 1860 stands unparalleled, and that, besides, wages were exceptionally high. For this extraordinary demand for work had to contend with the depopulation of Ireland, with unexampled emigration from the English and Scotch agricultural districts to Australia and America, with an actual diminution of the population in some of the English agricultural districts, in consequence partly of an actual breakdown of the vital force of the laborers, partly of the already effected dispersion of the disposable population through the dealers in human flesh. Despite all this Mr. Redgrave says: "This kind of labor, however, would only be sought after when none other could be procured, for it is a high-priced labor. The ordinary wages of a boy of 13 would be about 4s. per week, but to lodge, to clothe, to feed, and to provide medical attendance and proper superintendence for 50 or 100 of these boys, and to set aside some remuneration for them, could not be accomplished for 4s. a-head per week." (Report of the Inspector of Factories for 30th April, 1860, p. 27.) Mr. Redgrave forgets to tell us how the laborer himself can do all this for his children out of their 4s. a-week wages, when the manufacturer cannot do it for the 50 or 100 children lodged, boarded, superintended all together. To guard against false conclusions from the text, I ought here to remark that the English cotton industry, since it was placed under the Factory Act of 1850 with its regulations of labor-time, etc., must be regarded as the model industry of England. The English cotton operative is in every respect better off than his Continental companion in misery. "The Prussian factory operative labors at least ten hours per week more than his English competitor, and if employed at his own loom in his own house, his labor is not restricted to even those additional hours. ("Rep. of Insp. of Fact.," 31st October, 1855, p. 103.) Redgrave, the Factory Inspector mentioned above, after the Industrial Exhibition

giert die Kinder und gibt ihnen einen kleinen Zuschuß in Geld. Sonderbar klingt folgende Bemerkung des Herrn Redgrave, namentlich wenn man bedenkt, daß selbst unter den Prosperitätsjahren der englischen Baumwollindustrie das Jahr 1860 einzig dasteht und die Arbeitslöhne außerdem hoch standen, weil die außerordentliche Arbeitsnachfrage auf Entvölkerung in Irland stieß, auf beispiellose Auswanderung aus englischen und schottischen Agrikulturdistrikten nach Australien und Amerika, auf positive Abnahme der Bevölkerung in einigen englischen Agrikulturdistrikten infolge teils glücklich erzielten Bruchs der Lebenskraft, teils des früheren Abschöpfens der disponiblen Bevölkerung durch die Händler in Menschenfleisch. Und trotz alledem sagt Herr Redgrave: „Diese Art Arbeit“ (der Armenhauskinder) „wird jedoch nur gesucht, wenn keine andere gefunden werden kann, denn es ist teure Arbeit (high-priced labor). Der gewöhnliche Arbeitslohn für einen Jungen von 13 Jahren ist ungefähr 4 sh. wöchentlich; aber 50 oder 100 solcher Jungen logieren, kleiden, nähren, mit ärztlicher Hilfsleistung und passender Oberaufsicht versehen und ihnen obendrein eine kleine Zubuße in Geld geben, ist untunbar für 4 sh. per Kopf wöchentlich.“ („Rep. of the Insp. of Factories for 30th April 1860“, p. 27.) Herr Redgrave vergißt zu sagen, wie der Arbeiter selbst dies alles seinen Jungen für ihre 4 sh. Arbeitslohn leisten kann, wenn es der Fabrikant nicht kann für 50 oder 100 Jungen, die gemeinsam logiert, beköstigt und beaufsichtigt werden. Zur Abwehr falscher Schlußfolgerungen aus dem Text muß ich hier noch bemerken, daß die englische Baumwollindustrie, seit ihrer Unterwerfung unter den Factory Act von 1850 mit seiner Regelung der Arbeitszeit usw., als die englische Musterindustrie betrachtet werden muß. Der englische Baumwollarbeiter steht in jeder Hinsicht höher als sein kontinentaler Schicksalsgenosse. „Der preußische Fabrikarbeiter arbeitet mindestens 10 Stunden mehr per Woche als sein englischer Rival, und wenn er an seinem eignen Webstuhl zu Hause beschäftigt wird, fällt selbst die-

in 1851, travelled on the Continent, especially in France and Germany, for the purpose of inquiring into the conditions of the factories. Of the Prussian operative he says: "He receives a remuneration sufficient to procure the simple fare, and to supply the slender comforts to which he has been accustomed ... He lives upon his coarse fare, and works hard, wherein his position is subordinate to that of the English operative." ("Rep. of Insp. of Fact." 31st Oct., 1855, p. 85.)

se Schranke seiner zusätzlichen Arbeitsstunden weg. („Rep. of Insp. of Fact. 31st Oct. 1855“, p. 103.) Der obenerwähnte Fabrikinspektor Redgrave reiste nach der Industrieausstellung von 1851 auf dem Kontinent, speziell in Frankreich und Preußen, um die dortigen Fabrikzustände zu untersuchen. Er sagt von dem preußischen Fabrikarbeiter: „Er erhält einen Lohn, ausreichend zur Verschaffung einfacher Kost und des wenigen Komforts, woran er gewöhnt und womit er zufrieden ist ... Er lebt schlechter und arbeitet härter als sein englischer Rivale.“ („Rep. of Insp. of Fact. 31st Oct. 1853“, p. 85.)

Although a part of the population is killed off by overwork, the labor market is generally still full. Only "in certain epochs of feverish activity the labor-market shows significant gaps" 378:2p. Where does this supply of labor come from?

- Immigration
- Rapid reproduction of the weak generations
- "Surplus-population" from the agricultural districts, trade in workers from the rural North to Manchester etc.
- Child labor (workhouses of orphans, 379:1).

The *general* reasons why there is always surplus-labor in capitalism are not discussed here, they will be developed in chapter Twenty-Five.

Very important general conclusions about the workings of capitalism can be drawn from this. Marx first points out two empirical facts, and then says that because of the first of these two facts capital disregards the second. Here is the first fact:

380:1–381:0 What experience shows to the capitalist generally is a constant excess of population, i.e., an excess in relation to the momentary requirements of surplus-labor-absorbing capital, although this excess is made up of generations of human beings stunted, short-lived, swiftly replacing each other, plucked, so to say, before maturity.¹¹¹

284:00 Was die Erfahrung dem Kapitalisten im allgemeinen zeigt, ist eine beständige Übervölkerung, d.h. Übervölkerung im Verhältnis zum augenblicklichen Verwertungsbedürfnis des Kapitals, obgleich sie aus verkümmerten, schnell hinlebenden, sich rasch verdrängenden, sozusagen unreif gepflückten Menschengenerationen ihren Strom bildet.¹¹¹

¹¹¹ The over-worked "die off with strange rapidity; but the places of those who perish are instantly filled, and a frequent change of persons makes no alteration in the scene." ("England and

¹¹¹ „Die Überarbeiteten sterben mit befremdlicher Raschheit; aber die Plätze derer, die untergehn, sind sofort wieder ausgefüllt, und ein häufiger Wechsel der Personen bringt keine Änderung

America,” London, 1833, vol. I, p. 55. By E. G. Wakefield.)

On the market there is a surplus-population in relation to the needs of capital to create surplus-value. It is again not discussed whether this surplus-population is an accident or why it is there. Now the second fact:

And, indeed, experience shows to the intelligent observer with what swiftness and grip the capitalist mode of production, dating, historically speaking, only from yesterday, has seized the vital power of the people by the very root—shows how the degeneration of the industrial population is only retarded by the constant absorption of primitive and physically uncorrupted elements from the country—shows how even the country laborers, in spite of fresh air and the principle of natural selection, that works so powerfully amongst them, and only permits the survival of the strongest, are already beginning to die off.¹¹²

¹¹² See “Public Health. Sixth Report of the Medical Officer of the Privy Council, 1863.” Published in London 1864. This report deals especially with the agricultural laborers. “Sutherland . . . is commonly represented as a highly improved county . . . but . . . recent inquiry has discovered that even there, in districts once famous for fine men and gallant soldiers, the inhabitants have degenerated into a meagre and stunted race. In the healthiest situations, on hill sides fronting the sea, the faces of their famished children are as pale as they could be in the foul atmosphere of a London alley.” (W. Th. Thornton. “Overpopulation and its Remedy.” l.c., pp. 74, 75.) They resemble in fact the 30,000 “gallant Highlanders” whom Glasgow herds together with prostitutes and thieves in its wynds and closes.

Any “intelligent” (“verständige,” Hegel’s Verstand i.e., analytical reason, not Vernunft!) observer can see the degeneration of the industrial population. Capital, however, theoretically denies it:

auf der Bühne hervor.“ „England and America“, London 1833, t. I, p. 55. (Verfasser E. G. Wakefield.)

Allerdings zeigt die Erfahrung dem verständigen Beobachter auf der andren Seite, wie rasch und tief die kapitalistische Produktion, die, geschichtlich gesprochen, kaum von gestern datiert, die Volkskraft an der Lebenswurzel ergriffen hat, wie die Degeneration der industriellen Bevölkerung nur durch beständige Absorption naturwüchsiger Lebenselemente vom Lande verlangsamt wird und wie selbst die ländlichen Arbeiter, trotz freier Luft und des unter ihnen so allmächtig waltenden principle of natural selection, das nur die kräftigsten Individuen aufkommen läßt, schon abzuleben beginnen.¹¹²

¹¹² Siehe Public Health. Sixth Report of the Medical Officer of the Privy Council. 1863. Veröffentlicht London 1864. Dieser Report handelt namentlich von den Agrikulturarbeitern. „Man hat die Grafschaft Sutherland als eine sehr verbesserte Grafschaft dargestellt, aber eine neuerliche Untersuchung hat entdeckt, daß hier in Distrikten, einst so berühmt wegen schöner Männer und tapfrer Soldaten, die Einwohner degeneriert sind zu einer magren und verkümmerten Race. In den gesundensten Lagen, auf Hügelabhär im Angesicht des Meeres, sind die Gesichter ihrer Kinder so dünn und blaß, wie sie nur in der faulen Atmosphäre einer Londoner Winkelgasse sein können.“ (Thornton, l.c. p. 74, 75.) Sie gleichen in der Tat den 30000 „gallant Highlanders“, die Glasgow in seinen wynds und closes mit Prostituierten und Dieben zusammenbettet.

Capital, that has such “good reasons” for denying the sufferings of the legions of workers that surround it, . . .

Hegel says that any halfways intelligent person can come up with “good reasons” to excuse anything (citation in footnote 102 to paragraph 372:2–374:0p above). But the phrase “good reasons” also refers to capital’s profit motive. Capital is not moved by these sufferings because due to the surplus-labor they are not translated into higher wages and lower profits. . . . is in practice moved as much and as little by the sight of the coming degradation and final depopulation of the human race, as by the probable fall of the earth into the sun.

Question 736 *Why is nobody in his right mind determined in his actions by the eventual fall of the earth into the sun?*

In every stock-jobbing swindle everyone knows that some time or other the crash must come, but everyone hopes that it may fall on the head of his neighbor, after he himself has caught the shower of gold and placed it in secure hands. *After me the deluge* is the watchword of every capitalist and of every capitalist nation.

Capital’s only standard is profitability. This is why it must be forced *by law* to heed the bounds of the working-day:

Capital therefore takes no account of the health and the length of life of the worker, unless society forces it to do so.¹¹³

Note that it is “society,” not “the working-class,” or “the state” which forces capital! Society, however, is an empty abstraction if one does not look at its two main classes. It is therefore not society acting in unison, but it is the struggle of the working class against the capitalists which imposes on the capitalist class the self-discipline needed for their long-term interests.

¹¹³ ‘But though the health of a population is so important a fact of the national capital, we are afraid it must be said that the class of employers of labor have not been the most forward to guard and cherish this treasure . . . The consideration of the health of the operatives was forced upon

Das Kapital, das so „gute Gründe“ hat, die Leiden der es umgebenden Arbeitergeneration zu leugnen, . . .

. . . wird in seiner praktischen Bewegung durch die Aussicht auf zukünftige Verfaulung der Menschheit und schließlich doch unaufhaltsame Entvölkerung so wenig und so viel bestimmt als durch den möglichen Fall der Erde in die Sonne.

In jeder Aktienschwindelei weiß jeder, daß das Unwetter einmal einschlagen muß, aber jeder hofft, daß es das Haupt seines Nächsten trifft, nachdem er selbst den Goldregen aufgefangan und in Sicherheit gebracht hat. *Après moi le déluge!* ist der Wahlruf jedes Kapitalisten und jeder Kapitalistennation.

Das Kapital ist daher rücksichtslos gegen Gesundheit und Lebensdauer des Arbeiters, wo es nicht durch die Gesellschaft zur Rücksicht gezwungen wird.¹¹³

¹¹³ „Obgleich die Gesundheit der Bevölkerung ein so wichtiges Element des nationalen Kapitals ist, fürchten wir, gestehn zu müssen, daß die Kapitalisten durchaus nicht bei der Hand sind, diesen Schatz zu erhalten und wert zu achten . . . Die Rücksicht auf die Gesundheit der Arbei-

the mill owners' (*The Times*, 5 November 1861). 'The men of the West Riding became the clothiers of mankind ... the health of the workpeople was sacrificed, and the race in a few generations must have degenerated. But a reaction set in. Lord Shaftesbury's Bill limited the hours of children's labor, etc.' (Twenty-Second Annual Report of the Registrar-General, for October 1861).

To the outcry about physical and mental degradation, the premature death, the torture of overwork, it answers: Ought these to trouble us since they increase our profits?

Note that the profits are increased although we got before the result that if the full value of the labor-power would have been paid, the rate of surplus-value would have fallen. Either economy of constant capital or payment below the value of labor-power (surplus-population) or both.

But looking at things as a whole, all this does not, indeed, depend on the good or ill will of the individual capitalist. Free competition enforces the inherent laws of capitalist production as external coercive necessities confronting the individual capitalist.¹¹⁴

Footnote 114 throws light on the workings of competition: it can go against the will of the capitalists, can force them to do things which they do not want to do.

¹¹⁴ We, therefore, find, e.g., that in the beginning of 1863, 26 firms owning extensive potteries in Staffordshire, including Josiah Wedgwood and Sons, petition in a memorial for "some legislative enactment." "Competition with other capitalists" permits them no "voluntary" limitation of working time for children, etc. "Much as we deplore the evils before mentioned, it would not be possible to prevent them by any scheme of agreement between the manufacturers ... Taking all these points into consideration, we have come to the conviction that some legislative enactment is wanted." ("Children's Employment Comm." Rep. I, 1863, p. 322.)

^{114 ctd} Most recently a much more striking ex-

ter wurde den Fabrikanten aufgezwungen." („Times“, 5. Novbr. 1861.) „Die Männer des West Riding wurden die Tuchmacher der Menschheit ... die Gesundheit des Arbeitervolks wurde geopfert, und in ein paar Generationen wäre die Race degeneriert, aber eine Reaktion trat ein. Die Stunden der Kinderarbeit wurden beschränkt usw.“ („Twenty-second annual Report of the Registrar General“, 1861.)

Der Klage über physische und geistige Verkümmrung, vorzeitigen Tod, Tortur der Überarbeit, antwortet es: Sollte diese Qual uns quälen, da sie unsre Lust (den Profit) vermehrt?

Im großen und ganzen hängt dies aber auch nicht vom guten oder bösen Willen des einzelnen Kapitalisten ab. Die freie Konkurrenz macht die immanenten Gesetze der kapitalistischen Produktion dem einzelnen Kapitalisten gegenüber als äußerliches Zwangsgesetz geltend.¹¹⁴

¹¹⁴ Wir finden daher z.B., daß Anfang 1863 26 Firmen, welche ausgedehnte Töpfereien in Staffordshire besitzen, darunter auch J. Wedgwood und Söhne, in einer Dankschrift „um gewaltsame Einmischung des Staats“ petitionieren. Die „Konkurrenz mit andren Kapitalisten“ erlaube ihnen keine „freiwillige“ Beschränkung der Arbeitszeit der Kinder usw. „Sosehr wir daher die oben erwähnten Übel beklagen, würde es unmöglich sein, sie durch irgendeine Art Übereinkunft unter den Fabrikanten zu verhindern ... In Anbetracht aller dieser Punkte, sind wir zur Überzeugung gelangt, daß ein Zwangsgesetz nötig ist.“ („Children's Emp. Comm., Rep. I“, 1863, p. 322.)

^{114 ctd} Zusatz zu Note 114. Ein viel frap-

ample offers. The rise in the price of cotton during a period of feverish activity, had induced the manufacturers in Blackburn to shorten, by mutual consent, the working time in their mills during a certain fixed period. This period terminated about the end of November, 1871. Meanwhile, the wealthier manufacturers, who combined spinning with weaving, used the diminution of production resulting from this agreement, to extend their own business and thus to make great profits at the expense of the small employers. The latter thereupon turned in their extremity to the operatives, urged them earnestly to agitate for the 9 hours' system, and promised contributions in money to this end.

pantres Beispiel bot die jüngste Vergangenheit. Die Höhe der Baumwollpreise, in einer Epoche fieberhaften Geschäfts, hatte die Besitzer von Baumwollwebereien in Blackburn veranlaßt, durch gemeinschaftliche Übereinkunft die Arbeitszeit in ihren Fabriken während eines bestimmten Termins abzukürzen. Dieser Termin lief ab ungefähr Ende November (1871). Unterdes benutzten die reichen Fabrikanten, welche Spinnerei mit Weberei verbinden, den durch jene Übereinkunft veranlaßten Ausfall der Produktion dazu, ihr eignes Geschäft auszudehnen und so auf Kosten der kleinen Meister große Profite zu machen. Letztre wandten sich nun in ihrer Not—an die Fabrikarbeiter, riefen sie auf, die Neunstundenagitation ernsthaft zu betreiben, und versprachen Geldbeiträge zu diesem Behuf!

Question 739 *Why were some capitalists themselves in favor of shortening the work day?*

The remainder of section 5 and the remainder of chapter Ten are not yet ready for publication.

10.5.b. [Legislation Extending the working-day]

Two phases in the struggle between capitalist and laborer for the determination of the working-day: first extension, later shortening.

382:1/o The establishment of a normal working-day is the result of centuries of struggle between capitalist and laborer. The history of this struggle shows two opposite tendencies. Compare, e.g., the English factory legislation of our time with the English labor Statutes from the 14th century to well into the middle of the 18th.¹¹⁵ Whilst the modern Factory Acts compulsorily shortened the working-day, the earlier statutes tried to lengthen it by compulsion.

¹¹⁵ The labor Statutes, the like of which were enacted at the same time in France, the Netherlands, and elsewhere, were first formally repealed in England in 1813, long after the changes

286:1/o Die Festsetzung eines normalen Arbeitstags ist das Resultat eines vielhundertjährigen Kampfes zwischen Kapitalist und Arbeiter. Doch zeigt die Geschichte dieses Kampfes zwei entgegengesetzte Strömungen. Man vergleiche z.B. die englische Fabrikgesetzgebung unsrer Zeit mit den englischen Arbeitsstatuten vom 14. bis tief in die Mitte des 18. Jahrhunderts.¹¹⁵ Während das moderne Fabrikgesetz den Arbeitstag gewaltsam abkürzt, suchen ihn jene Statute gewaltsam zu verlängern.

¹¹⁵ Diese Arbeiterstatute, die man gleichzeitig auch in Frankreich, den Niederlanden usw. findet, wurden in England erst 1813 formell aufgehoben, nachdem sie längst von den Produktions-

in relations of production had rendered them obsolete.

verhältnissen beseitigt waren.

Instead of "relations of production" Moore-Aveling has "methods of production."

The early legal extension is modest compared to the extension during the Industrial Revolution based on market forces.

Of course the demands of capital in embryo—when, in the process of becoming, it secures the right of absorbing a sufficient amount of surplus-labor not yet by the mere force of economic relations, but also by the help of the State—appear very modest when compared with the concessions that, growling and reluctantly, it has to make in its adult condition. It takes centuries before the "free" laborer, thanks to the development of capitalist production, agrees, *i.e.*, is compelled by social conditions, to sell the whole of his active life, his very capacity for work, for the price of the necessities of life, his birth-right for a mess of pottage.

The upper limit of the extension for adults roughly equal to the lower limit of shortening for children at the time *Capital* was written (this will once more be taken up in 388:1/o).

Hence it is natural that the lengthening of the working-day, which capital, from the middle of the 14th to the end of the 17th century, tries to impose by State-measures on adult laborers, approximately coincides with the shortening of the working-day which, in the second half of the 19th century, has here and there been effected by the State to prevent the coining of children's blood into capital. That which to-day, *e.g.*, in the State of Massachusetts, until recently the freest State of the North-American Republic, has been proclaimed as the statutory limit of the labor of children under 12, was

Allerdings erscheinen die Ansprüche des Kapitals im Embryozustand, wo es erst wird, also noch nicht durch bloße Gewalt der ökonomischen Verhältnisse, sondern auch durch Hilfe der Staatsmacht sein Ein-saugungsrecht eines genügenden Quantum Mehrarbeit sichert, ganz und gar bescheiden, vergleicht man sie mit den Konzessionen, die es in seinem Mannesalter knurrend und widerstrebend machen muß. Es kostet Jahrhunderte, bis der „freie“ Arbeiter infolge entwickelter kapitalistischer Produktionsweise sich freiwillig dazu versteht, d.h. gesellschaftlich gezwungen ist, für den Preis seiner gewohnheitsmäßigen Lebensmittel seine ganze aktive Lebenszeit, ja seine Arbeitsfähigkeit selbst, seine Erstgeburt für ein Gericht Linsen zu verkaufen.

Es ist daher natürlich, daß die Verlängerung des Arbeitstags, die das Kapital von Mitte des 14. bis Ende des 17. Jahrhunderts staats-gewaltig den volljährigen Arbeitern aufzu-dringen sucht, ungefähr mit der Schranke der Arbeitszeit zusammenfällt, die in der zweiten Hälfte des 19. Jahrhunderts der Ver-wandlung von Kinderblut in Kapital hier und da von Staats wegen gezogen wird. Was heute, z.B. im Staate Massachusetts, bis jüngst dem freisten Staate der nordameri-kanischen Republik, als Staatsschranke der Arbeit von Kindern unter 12 Jahren prokla-miert ist, war in England noch Mitte des 17.

in England, even in the middle of the 17th century, the normal working-day of able-bodied artisans, robust laborers, and athletic blacksmiths.¹¹⁶

Question 740 Why did the state first pass laws to extend the working-day, and then to shorten it?

¹¹⁶ "No child under 12 years of age shall be employed in any manufacturing establishment more than 10 hours in one day." General Statutes of Massachusetts, 63, ch. 12. (The various Statutes were passed between 1836 and 1858.) "Labor performed during a period of 10 hours on any day in all cotton, woollen, silk, paper, glass, and flax factories, or in manufactories of iron and brass, shall be considered a legal day's labor. And be it enacted, that hereafter no minor engaged in any factory shall be holden or required to work more than 10 hours in any day, or 60 hours in any week; and that hereafter no minor shall be admitted as a worker under the age of 10 years in any factory within this State." State of New Jersey. An Act to limit the hours of labor, etc., § 1 and 2. (Law of 18th March, 1851.) "No minor who has attained the age of 12 years, and is under the age of 15 years, shall be employed in any manufacturing establishment more than 11 hours in any one day, nor before 5 o'clock in the morning, nor after 7.30 in the evening." ("Revised Statutes of the State of Rhode Island," etc., ch. 139, § 23, 1st July, 1857.)

In the extension phase, capital was not yet strong enough to compel the laborer to work by anonymous market relations, but needed support by the power of the state.

383:1/op The first "Statute of Laborers" (23 Edward III., 1349) found its immediate pretext (not its cause, for legislation of this kind lasts centuries after the pretext for it has disappeared) in the great plague that decimated the people, so that, as a Tory writer says, "The difficulty of getting men to work on reasonable terms, (*i.e.*, at a price

Jahrhunderts der normale Arbeitstag voll-blütiger Handwerker, robuster Ackerknechte und riesenhafter Grobschmiede.¹¹⁶

¹¹⁶ „Kein Kind unter 12 Jahren darf in einem Fabrikbetrieb länger als 10 Stunden täglich beschäftigt werden.“ („General Statutes of Massachusetts“, ch. 60, §3. Die Ordonnanzen wurden erlassen 1836 bis 1858.) „Arbeit, die in einem Zeitraum von 10 Stunden täglich in allen Baumwoll-, Woll-, Seiden-, Papier-, Glas, und Flachsfabriken oder in eisen- und anderen metallverarbeitenden Betrieben ausgeführt wird, soll als Tagewerk im Sinne des Gesetzes angesehen werden. Es sei ferner gesetzlich festgelegt, daß künftig kein Minderjähriger, der in irgendeiner Fabrik beschäftigt wird, angehalten oder aufgefordert werden darf, mehr als 10 Stunden täglich oder 60 Stunden wöchentlich zu arbeiten; weiter, daß in Zukunft kein Minderjähriger unter 10 Jahren als Arbeiter in einer Fabrik innerhalb des Gebietes dieses Staates beschäftigt werden darf.“ („State of New Jersey. An act to limit the hours of labor etc.“, § 1 und 2. Gesetz vom 18. März 1851.) „Kein Minderjähriger zwischen 12 und 15 Jahren darf in irgendeinem Fabrikbetrieb mehr als täglich 11 Stunden oder vor 5 Uhr morgens oder nach 7 1/2 Uhr abends beschäftigt werden.“ („Revised Statutes of the State of Rhode Island etc.“, ch. 139, § 23, 1st July 1857.)

287:1–289:0 Das erste „Statute of Laborers“ (23 Eduard III. 1349) fand seinen unmittelbaren Vorwand (nicht seine Ursache, denn die Gesetzgebung dieser Art dauert Jahrhunderte fort ohne den Vorwand) in der großen Pest, welche die Bevölkerung dezimierte, so daß, wie ein Tory-Schriftsteller sagt, „die Schwierigkeit, Arbeiter zu raso-

that left their employers a reasonable quantity of surplus-labor) grew to such a height as to be quite intolerable.”¹¹⁷ Reasonable wages were, therefore, fixed by law as well as the limits of the working-day. The latter point, the only one that here interests us, is repeated in the Statute of 1496 (Henry VII.). The working-day for all artificers and field laborers from March to September ought, according to this statute (which, however, could not be enforced), to last from 5 in the morning to between 7 and 8 in the evening. But the meal-times consist of 1 hour for breakfast, 1 1/2 hours for dinner, and 1/2 an hour for “noon-meate,” i.e., exactly twice as much as under the factory acts now in force.¹¹⁸ In winter, work was to last from 5 in the morning until dark, with the same intervals. A statute of Elizabeth of 1562 leaves the length of the working-day for all laborers “hired for daily or weekly wage” untouched, but aims at limiting the intervals to 2 1/2 hours in the summer, or to 2 in the winter. Dinner is only to last 1 hour, and the “afternoon-sleep of half an hour” is only allowed between the middle of May and the middle of August. For every hour of absence 1d. is to be subtracted from the wage. In practice, however, the conditions were much more favourable to the laborers than in the statute-book. William Petty, the father of Political Economy, and to some extent the founder of Statistics, says in a work that he published in the last third of the 17th century:

“Laboring-men (then meaning field-laborers) work 10 hours per diem, and make 20 meals per week, viz., 3 a day for working-days,

nablen Preisen“ (d.h. zu Preisen, die ihren Anwendern ein rationables Quantum Mehrarbeit ließen) „an die Arbeit zu setzen, in der Tat unerträglich wurde“.¹¹⁷ Raisonable Arbeitslöhne wurden daher zwangsgesetzlich diktiert, ebenso wie die Grenze des Arbeitstags. Der letzte Punkt, der uns hier allein interessiert, ist wiederholt in dem Statut von 1496 (unter Henry VII.). Der Arbeitstag für alle Handwerker (artificers) und Ackerbauarbeiter vom März bis September sollte damals, was jedoch nie durchgesetzt wurde, dauern von 5 Uhr morgens bis zwischen 7 und 8 Uhr abends, aber die Stunden für Mahlzeiten betragen 1 Stunde für Frühstück, 1 1/2 Stunden für Mittagessen und 1/2 Stunde für Vieruhrbrot, also gerade doppelt soviel als nach dem jetzt gültigen Fabrikakt.¹¹⁸ Im Winter sollte gearbeitet werden von 5 Uhr morgens bis zum Dunkeln, mit denselben Unterbrechungen. Ein Statut der Elisabeth von 1562 für alle Arbeiter „gedungen für Lohn per Tag oder Woche“, läßt die Länge des Arbeitstags unberührt, sucht aber die Zwischenräume zu beschränken auf 2 1/2 Stunden für den Sommer und 2 für den Winter. Das Mittagessen soll nur eine Stunde dauern und „der Nachmittagsschlaf von 1/2 Stunde“ nur zwischen Mitte Mai und Mitte August erlaubt sein. Für jede Stunde Abwesenheit soll 1 d. (etwa 8 Pfennige) vom Lohn abgehn. In der Praxis jedoch war das Verhältnis den Arbeitern viel günstiger als im Statutenbuch. Der Vater der politischen Ökonomie und gewissermaßen der Erfinder der Statistik, William Petty, sagt in einer Schrift, die er im letzten Drittel des 17. Jahrhunderts veröffentlichte:

„Arbeiter“ (laboring men, eigentlich damals Ackerbauarbeiter) „arbeiten 10 Stunden täglich und nehmen wöchentlich 20 Mahlzeiten ein,

and 2 on Sundays; whereby it is plain, that if they could fast on Friday nights, and dine in one hour and an half, whereas they take two, from eleven to one; thereby thus working 1/20 more, and spending 1/20 less, the above-mentioned (tax) might be raised.”¹¹⁹

¹¹⁷ “Sophisms of Free Trade.” 7th Ed. London, 1850, p. 205, 9th Ed., p. 253. This same Tory, moreover, admits that “Acts of Parliament regulating wages, but against the laborer and in favour of the master, lasted for the long period of 464 years. Population grew. These laws were then found, and really became, unnecessary and burdensome.” (l.c., p. 206.)

¹¹⁸ In reference to this statute, J. Wade with truth remarks: “From the statement above (i.e., with regard to the statute) it appears that in 1496 the diet was considered equivalent to one-third of the income of an artificer and one-half the income of a laborer, which indicates a greater degree of independence among the working-classes than prevails at present; for the board, both of laborers and artificers, would now be reckoned at a much higher proportion of their wages.” [Wad35, p. 24, 25, and 577]. The opinion that this difference is due to the difference in the price relations between food and clothing then and now is refuted by the most cursory glance at “Chronicon Preciosum, etc.” by Bishop Fleetwood, 1st Ed., London, 1707; 2nd Ed., London, 1745.

¹¹⁹ [Pet91, p. 10].

384:0p Was not Dr. Andrew Ure right in crying down the 12 hours’ bill of 1833 as a retrogression to the times of the dark ages? It is true these regulations contained in the statute mentioned by Petty, apply also to apprentices. But the condition of child-labor, even at the end of the 17th century, is seen from the following complaint:

nämlich an Arbeitstagen täglich drei und an Sonntagen zwei; woraus man klärllich sieht, daß, wenn sie an Freitagabenden fasten wollten und in anderthalb Stunden zu Mittag speisen wollten, während sie jetzt zu dieser Mahlzeit zwei Stunden brauchen, von 11 bis 1 Uhr morgens, wenn sie also 1/20 mehr arbeiteten und 1/20 weniger verzehrten, das Zehntel der oben erwähnten Steuer aufbringbar wäre.¹¹⁹

¹¹⁷ [J. B. Byles,] „Sophisms of Free Trade“, 7th edit., Lond. 1850, p. 205. Derselbe Tory gibt übrigens zu: „Parlamentsakte, die die Arbeitslöhne gegen die Arbeiter zugunsten der Arbeitsanwender regulierten, währten für die lange Periode von 464 Jahren. Die Bevölkerung wuchs. Diese Gesetze wurden nun überflüssig und lästig.“ (l.c. p. 206.)

¹¹⁸ J. Wade bemerkt mit Recht in bezug auf dies Statut: „Aus dem Statut von 1496 geht hervor, daß die Nahrung als Äquivalent für 1/2 des Einkommens eines Handwerkers und 1/3 des Einkommens eines Agrikulturarbeiters galt, und dies zeigt eine größere Stufe von Unabhängigkeit unter den Arbeitern an, als jetzt vorherrscht, wo die Nahrung der Arbeiter in Agrikultur und Manufaktur ein viel höheres Verhältnis zu ihren Löhnen bildet.“ [Wad35, p. 24, 25 und 577] Die Meinung, als sei diese Differenz etwa der Differenz im Preisverhältnis zwischen Nahrungsmitteln und Kleidungsstücken, jetzt und damals, geschuldet, widerlegt der oberflächlichste Blick auf „Chronicon Preciosum etc.“ By Bishop Fleetwood, 1st edit., London 1707, 2nd edit., London 1745.

¹¹⁹ W. Petty, [Pet91, p. 10]

289:1 Hatte Dr. Andrew Ure nicht recht, die Zwölfstundenbill von 1833 als Rückgang in die Zeiten der Finsternis zu verschreien? Allerdings gelten die in den Statuten und von Petty erwähnten Bestimmungen auch für „apprentices“ (Lehrlinge). Wie es aber noch Ende des 17. Jahrhunderts mit der Kinderarbeit stand, ersieht man aus folgen-

der Klage:

“’Tis not their practice (in Germany) as with us in this kingdom, to bind an apprentice for seven years; three or four is their common standard: and the reason is, because they are educated from their cradle to something of employment, which renders them the more apt and docile, and consequently the more capable of attaining to a ripeness and quicker proficiency in business. Whereas our youth, here in England, being bred to nothing before they come to be apprentices, make a very slow progress and require much longer time wherein to reach the perfection of accomplished artists.”¹²⁰

„Unsere Jugend, hier in England, treibt gar nichts bis zu der Zeit, wo sie Lehrlinge werden, und dann brauchen sie natürlich lange Zeit—sieben Jahre—, um sich zu vollkommenen Handwerkern zu bilden.“ Deutschland wird dagegen gerühmt, weil dort die Kinder von der Wiege auf wenigstens zu „ein bißchen Beschäftigung erzogen werden“.¹²⁰

¹²⁰ “A Discourse on the necessity of encouraging Mechanick Industry,” London, 1690, p. 13. Macaulay, who has falsified English history in the interests of the Whigs and the bourgeoisie, declares as follows: “The practice of setting children prematurely to work . . . prevailed in the 17th century to an extent which, when compared with the extent of the manufacturing system, seems almost incredible. At Norwich, the chief seat of the clothing trade, a little creature of six years old was thought fit for labor. Several writers of that time, and among them some who were considered as eminently benevolent, mention with exultation the fact that in that single city, boys and girls of very tender age create wealth exceeding what was necessary for their own subsistence by twelve thousand pounds a year. The more carefully we examine the history of the past, the more reason shall we find to dissent from those who imagine that our age has been fruitful of new social evils. . . . That which is new is the intelligence and the humanity which remedies them.” (“History of England,” vol. 1., p. 417.) Macaulay might have reported further that “extremely well disposed” *amis du commerce* in the 17th century, narrate with “exultation” how in a poorhouse in Holland a child of four was employed, and that this example of “*vertu mise en pratique*” passes muster in all the humanitarian works, à

¹²⁰ „A Discourse on the Necessity of Encouraging Mechanick Industry“, London 1690, p. 13. Macaulay, der die englische Geschichte im Whig- und Bourgeoisinteresse zurechtgefälscht hat, deklamiert, wie folgt: „Die Praxis, Kinder vorzeitig an die Arbeit zu setzen, herrschte im 17. Jahrhundert in einem für den damaligen Zustand der Industrie fast unglaublichen Grad vor. Zu Norwich, dem Hauptsitz der Wollindustrie, wurde ein Kind von 6 Jahren für arbeitsfähig gehalten. Verschiedne Schriftsteller jener Zeit und darunter manche, die als außerordentlich wohlgesinnt betrachtet wurden, erwähnen mit ‚Exultation‘ (Entzücken) die Tatsache, daß in dieser Stadt allein Knaben und Mädchen einen Reichtum schaffen, der über ihren eignen Unterhalt hinaus 12000 Pfd.St. in einem Jahr betrug. Je genauer wir die Geschichte der Vergangenheit untersuchen, desto mehr Grund finden wir, die Ansicht derer zu verwerfen, die unser Zeitalter für fruchtbar an neuen sozialen Übeln halten. Das, was neu ist, ist die Intelligenz, die die Übel entdeckt, und die Humanität, die sie heilt.“ („History of England“, v. I, p. 417.) Macaulay hätte weiter berichten können, daß, außerordentlich wohlgesinnte“ *amis du commerce* im 17. Jahrhundert mit „Exultation“ erzählen, wie in einem Armenhaus in Holland ein Kind von 4 Jahren beschäftigt wurde, und daß dies Bei-

la Macaulay, to the time of Adam Smith. It is true that with the substitution of manufacture for handicrafts, traces of the exploitation of children begin to appear. This exploitation existed always to a certain extent among peasants, and was the more developed, the heavier the yoke pressing on the husbandman. The tendency of capital is there unmistakably; but the facts themselves are still as isolated as the phenomena of two-headed children. Hence they were noted “with exultation” as especially worthy of remark and as wonders by the far-seeing “*amis du commerce*,” and recommended as, modds for their own time and for posterity. This same Scotch sycophant and fine talker, Macaulay, says: “We hear to-day only of retrogression and see only progress.” What eyes, and especially what ears!

spiel der „*vertu mise en pratique*“ in allen Schriften von Humanitären à la Macaulay Muster passiert bis zur Zeit A. Smiths. Es ist richtig, daß mit dem Aufkommen der Manufaktur, im Unterschied zum Handwerk, sich Spuren der Kinderexploitation zeigen, die von jeher bis zu einem gewissen Grad bei den Bauern existiert und um so entwickelter, je härter das Joch, das auf dem Landmann lastet. Die Tendenz des Kapitals ist unverkennbar, aber die Tatsachen selbst stehn noch so vereinzelt wie die Erscheinung zweiköpfiger Kinder. Sie wurden daher mit „Exultation“, als besonders merkwürdig und bewundernswert, von ahnungsvollen „*amis du commerce*“ für Mit- und Nachwelt aufgezeichnet und zur Nachahmung empfohlen. Derselbe schottische Sykophant und Schönredner Macaulay sagt: „Man höre heute nur von Rückschritt und sehe nur Fortschritt.“ Was für Augen und namentlich was für Ohren!

History of the legislation prolonging the working-day. These laws often decrease the wages at the same time! Marx disregards this here, but I think it is important to know about this connection: also the prolongation of the working-day under machinery is one without increasing the wages, or even with decreasing them! It is only a prolongation of the surplus-labor, not one of the necessary labor. Note that in reality the days were generally shorter than the laws prescribed. Regulations not only for adults but also for apprentices and children.

By the way, the beginning of ::23287:1–289:0:383:1:272:1@: is discussed in [Coh80, p. 279:2–4] as an example of functional explanation. Gives cross reference to footnote 144 to paragraph 526:3/o in chapter Fifteen: “Die Engländer, die gern die erste empirische Erscheinungsform einer Sache als ihren Grund betrachten, . . .” Cohen also refers here to [mecw8]327:1 (25. Februar 1849), which is interesting regarding legislation.

::23290–292:385–383:0:274–277:0: Despite this legislation, capital did not succeed in taking away from the workers all the free time they had (except from the agrarian workers), i.e., in overriding the traditional *moral* barriers of the working-day. Note that again for the real movement the price is the starting point: the capitalists pay the laborers wages which allow them to live 7 days, but they did not get a full week’s labor-power in return. Pro’s and Con’s of these moral barriers from the point of view of the laborers and the capitalists (Is the point of view of the laborers a part of the “political economy of the working class” about which Marx spoke in a political debate of the International Workmen’s association (According to Naphtali, Wirtschaftsdemokratie, 1928, Reprint FFM 1960, quoted in SoPo 6/7, 48). The one writing for the capitalists proposes an “ideal workhouse” to force the unemployed paupers to work all day long.

385/o Still, during the greater part of the

290:1 Noch während des größten Teils

18th century, up to the epoch of Modern Industry and machinism, capital in England had not succeeded in seizing for itself, by the payment of the weekly value of labor-power, the whole week of the laborer, with the exception, however, of the agricultural laborers. The fact that they could live for a whole week on the wage of four days, did not appear to the laborers a sufficient reason that they should work the other two days for the capitalist. One party of English economists, in the interest of capital, denounces this obstinacy in the most violent manner, another party defends the laborers. Let us listen, *e.g.*, to the contest between Postlethwayt, whose Dictionary of Trade then had the same reputation as the kindred works of MacCulloch and MacGregor to-day, and the author (already quoted) of the "Essay on Trade and Commerce."¹²¹

¹²¹ Among the accusers of the workpeople, the most angry is the anonymous author quoted in the text of "An Essay on Trade and Commerce, containing Observations on Taxes, etc.," London, 1770. He had already dealt with this subject in his earlier work: "Considerations on Taxes," London, 1765. On the same side follows Polonius Arthur Young, the unutterable statistical prattler. Among the defenders of the working-classes the foremost are: Jacob Vanderlint, in: "Money Answers all Things," London, 1734, the Rev. Nathaniel Forster, D. D., in "An Enquiry into the Causes of the Present High Price of Provisions," London, 1767; Dr. Price, and especially Postlethwayt, as well in the supplement to his "Universal Dictionary of Trade and Commerce," as in his "Great Britain's Commercial Interest explained and improved," 2nd Edition, 1755. The facts themselves are confirmed by many other writers of the time, among others by Josiah Tucker.

des 18. Jahrhunderts, bis zur Epoche der großen Industrie, war es dem Kapital in England nicht gelungen, durch Zahlung des wöchentlichen Werts der Arbeitskraft sich der ganzen Woche des Arbeiters, Ausnahme bilden jedoch die Agriculturarbeiter, zu bemächtigen. Der Umstand, daß sie eine ganze Woche mit dem Lohn von 4 Tagen leben konnten, schien den Arbeitern kein hinreichender Grund, auch die andren zwei Tage für den Kapitalisten zu arbeiten. Eine Seite der englischen Ökonomen denunzierte im Dienst des Kapitals diesen Eigensinn aufs wütendste, eine andre Seite verteidigte die Arbeiter. Hören wir z.B. die Polemik zwischen Postlethwayt, dessen Handels-Diktionär damals denselben Ruf genoß wie heutzutage ähnliche Schriften von MacCulloch und MacGregor, und dem früher zitierten Verfasser des „Essay on Trade and Commerce“¹²¹.

¹²¹ Unter den Anklägern der Arbeiter ist der grimmigste der im Text erwähnte anonyme Verfasser von: „An Essay on Trade and Commerce: containing Observations on Taxation etc.“, London 1770. Schon früher in seiner Schrift „Consideration on Taxes“, London 1765. Auch Polonius Arthur Young, der unsägliche statistische Schwätzer, folgt in derselben Linie. Unter den Verteidigern der Arbeiter stehn oben an: Jacob Vanderlint in „Money answers all things“, London 1734, Rev. Nathaniel Forster, D. D. in „An Enquiry into the Causes of the Present [High] Price of Provisions“, London 1767, Dr. Price, und namentlich auch Postlethwayt, sowohl in einem Supplement zu seinem „Universal Dictionary of Trade and Commerce“ als in „Great Britain's Commercial Interest explained and improved“, 2nd edit., Lond. 1759. Die Tatsachen selbst findet man bei vielen andren gleichzeitigen Schriftstellern konstatiert, u.a. bei Josiah Tucker.

386:1/op Postlethwayt says among other things:

"We cannot put an end to those few observations, without noticing that trite remark in the mouth of too many; that if the industrious poor can obtain enough to maintain themselves in five days, they will not work the whole six. Whence they infer the necessity of even the necessities of life being made dear by taxes, or any other means, to compel the working artisan and manufacturer to labor the whole six days in the week, without ceasing. I must beg leave to differ in sentiment from those great politicians, who contend for the perpetual slavery of the working people of this kingdom; they forget the vulgar adage, all work and no play. Have not the English boasted of the ingenuity and dexterity of her working artists and manufacturers which have heretofore given credit and reputation to British wares in general? What has this been owing to? To nothing more probably than the relaxation of the working people in their own way. Were they obliged to toil the year round, the whole six days in the week, in a repetition of the same work, might it not blunt their ingenuity, and render them stupid instead of alert and dexterous; and might not our workmen lose their reputation instead of maintaining it by such eternal slavery? ... And what sort of workmanship could we expect from such hard-driven animals? ... Many of them will execute as much work in four days as a Frenchman will in five or six. But if Englishmen are to be eternal drudges, 'tis to be feared they will degenerate below the Frenchmen. As our people are famed for bravery in war, do we not say that it is owing to good English roast beef and pudding in their bellies, as well as their constitutional spirit of liberty? And why may not the superior ingenuity and dexterity of, our artists and manufacturers, be owing to that freedom and liberty to direct themselves in their own way, and I hope we shall never have them deprived of such privileges and that

290:2–291:0 Postlethwayt sagt u.a.:

„Ich kann diese wenigen Bemerkungen nicht abschließen, ohne Notiz zu nehmen von der trivialen Redensart in dem Munde zu vieler, daß, wenn der Arbeiter (industrious poor) in 5 Tagen genug erhalten kann, um zu leben, er nicht volle 6 Tage arbeiten will. Daher schließen sie auf die Notwendigkeit, selbst die notwendigen Lebensmittel durch Steuern oder irgendwelche andre Mittel zu verteuern, um den Handwerker und Manufakturarbeiter zu un-ausgesetzter sechstägiger Arbeit in der Woche zu zwingen. Ich muß um die Erlaubnis bitten, andrer Meinung zu sein als diese großen Politiker, welche für die beständige Sklaverei der Arbeiterbevölkerung dieses Königreichs (the perpetual slavery of the working people) die Lanze einlegen; sie vergessen das Sprichwort „all work and no play“ (nur Arbeit und kein Spiel) macht dumm. Brüsten sich die Engländer nicht mit der Genialität und Gewandtheit ihrer Handwerker und Manufakturarbeiter, die bisher den britischen Waren allgemeinen Kredit und Ruf verschafft haben? Welchem Umstand war dies geschuldet? Wahrscheinlich keinem andren als der Art und Weise, wie unser Arbeitsvolk, eigenlaunig, sich zu zerstreuen weiß. Wären sie gezwungen, das ganze Jahr durchzuarbeiten, alle sechs Tage in der Woche, in steter Wiederholung desselben Werkes, würde das nicht ihre Genialität abstumpfen und sie dumm-träg statt munter und gewandt machen; und würden unsre Arbeiter infolge solcher ewigen Sklaverei ihren Ruf nicht verlieren statt erhalten? ... Welche Art Kunstgeschick könnten wir erwarten von solch hart geplackten Tieren (hard driven animals)? ... Viele von ihnen verrichten soviel Arbeit in 4 Tagen als ein Franzose in 5 oder 6. Aber wenn Engländer ewige Schanzarbeiter sein sollen, so steht zu fürchten, daß sie noch unter die Franzosen entarten (degenerate) werden. Wenn unser Volk wegen seiner Tapferkeit im Krieg berühmt ist,

good living from whence their ingenuity no less than their courage may proceed.’

¹²² Postlethwayt, l.c., “First Preliminary Discourse,” p. 14.

387:0p/op Thereupon the author of the “Essay on Trade and Commerce” replies:

“If the making of every seventh day an holiday is supposed to be of divine institution, as it implies the appropriating the other six days to labor” (he means capital as we shall soon see) “surely it will not be thought cruel to enforce it ... That mankind in general, are naturally inclined to ease and indolence, we fatally experience to be true, from the conduct of our manufacturing populace, who do not labor, upon an average, above four days in a week, unless provisions happen to be very dear ... Put all the necessities of the poor under one denomination; for instance, call them all wheat, or suppose that ... the bushel of wheat shall cost five shillings and that he (a manufacturer) earns a shilling by his labor, he then would be obliged to work five days only in a week. If the bushel of wheat should cost but four shillings, he would be obliged to work but four days; but as wages in this kingdom are much higher in proportion to the price of necessities ... the manufacturer, who labors four days, has a surplus of money to live idle with the rest of the week ... I hope I have said enough to make it appear that the moderate labor of six days in a week is no slavery. Our laboring people do this, and to all appearance are the happy

sagen wir nicht, daß dies einerseits dem guten englischen Roastbeef und Pudding in seinem Leibe, andererseits nicht minder unsrem konstitutionellen Geiste der Freiheit geschuldet ist? Und warum sollte die größere Genialität, Energie und Gewandtheit unsrer Handwerker und Manufakturarbeiter nicht der Freiheit geschuldet sein, womit sie sich in ihrer eignen Art und Weise zerstreuen? Ich hoffe, sie werden nie wieder diese Privilegien verlieren, noch das gute Leben, woraus ihre Arbeitstüchtigkeit und ihr Mut gleichmäßig herkommen!”¹²²

¹²² Postlethwayt, l.c., „First Preliminary Discourse“, p. 14.

291:1–292:0 Darauf antwortet der Verfasser des „Essay on Trade and Commerce“:

„Wenn es für eine göttliche Einrichtung gilt, den siebenten Tag der Woche zu feiern, so schließt dies ein, daß die andren Wochentage der Arbeit“ (er meint dem Kapital, wie man gleich sehen wird) „angehören, und es kann nicht grausam gescholten werden, dies Gebot Gottes zu erzwingen ... Daß die Menschheit im allgemeinen von Natur zur Bequemlichkeit und Trägheit neigt, davon machen wir die fatale Erfahrung im Betragen unsres Manufakturpöbels, der durchschnittlich nicht über 4 Tage die Woche arbeitet, außer im Fall einer Teuerung der Lebensmittel ... Gesetz, ein Bushel Weizen repräsentiere alle Lebensmittel des Arbeiters, koste 5 sh., und der Arbeiter verdiene einen Schilling täglich durch seine Arbeit. Dann braucht er bloß 5 Tage in der Woche zu arbeiten; nur 4, wenn der Bushel 4 sh. beträgt ... Da aber der Arbeitslohn in diesem Königreich viel höher steht, verglichen mit dem Preise der Lebensmittel, so besitzt der Manufakturarbeiter, der 4 Tage arbeitet, einen Geldüberschuß, womit er während des Rests der Woche müßig lebt ... Ich hoffe, ich habe genug gesagt, um klarzumachen, daß mäßige Arbeit während 6 Tagen in der Woche keine Sklaverei ist. Uns-

est of all our laboring poor,¹²³ but the Dutch do this in manufactures, and appear to be a very happy people. The French do so, when holidays do not intervene.¹²⁴ But our populace have adopted a notion, that as Englishmen they enjoy a birthright privilege of being more free and independent than in any country in Europe. Now this idea, as far as it may affect the bravery of our troops, may be of some use; but the less the manufacturing poor have of it, certainly the better for themselves and for the State. The laboring people should never think themselves independent of their superiors ... It is extremely dangerous to encourage mobs in a commercial state like ours, where, perhaps, seven parts out of eight of the whole, are people with little or no property. The cure will not be perfect, till our manufacturing poor are contented to labor six days for the same sum which they now earn in four days.”¹²⁵

¹²³ “An Essay,” etc. He himself relates on p. 96 wherein the “happiness” of the English agricultural laborer already in 1770 consisted. “Their powers are always upon the stretch, they cannot live cheaper than they do, nor work harder.”

¹²⁴ Protestantism, by changing almost all the traditional holidays into workdays, plays an important part in the genesis of capital.

This footnote discussed and mis-interpreted in [Coh80, p. 279:1]. Perhaps make a question out of it.

¹²⁵ “An Essay,” etc., pp. 15, 41, 96, 97, 55, 57.

re Agrikulturarbeiter tun dies und, allem Anscheine nach, sind sie die Glücklichen unter den Arbeitern (laboring poor),¹²³ aber die Holländer tun es in den Manufakturen und scheinen ein sehr glückliches Volk. Die Franzosen tun es, soweit nicht die vielen Feiertage dazwischenkommen¹²⁴ ... Aber unser Pöbel hat sich die fixe Idee in den Kopf gesetzt, daß ihm als Engländer durch das Recht der Geburt das Privilegium zukommt, freier und unabhängiger zu sein als“ (das Arbeitervolk) „in irgendeinem andren Lande von Europa. Nun, diese Idee, soweit sie auf die Tapferkeit unsrer Soldaten einwirkt, mag von einigem Nutzen sein; aber je weniger die Manufakturarbeiter davon haben, desto besser für sie selbst und den Staat. Arbeiter sollten sich nie für unabhängig von ihren Vorgesetzten (independent of their superiors) halten ... Es ist außerordentlich gefährlich, mobs in einem kommerziellen Staat, wie dem unsrigen, zu encourage, wo vielleicht 7 Teile von den 8 der Gesamtbevölkerung Leute mit wenig oder keinem Eigentum sind¹²⁵ ... Die Kur wird nicht vollständig sein, bis unsre industriellen Armen sich bescheiden, 6 Tage für dieselbe Summe zu arbeiten, die sie nun in 4 Tagen verdienen.“¹²⁶

¹²³ „An Essay etc.“ Er selbst erzählt p. 96, worin schon 1770 „das Glück“ der englischen Agrikulturarbeiter bestand. „Ihre Arbeitskräfte (their working powers) sind stets auf das äußerste angespannt (on the stretch); sie können nicht schlechter leben, als sie tun (they cannot live cheaper than they do), noch härter arbeiten (nor work harder).“

¹²⁴ Der Protestantismus spielt schon durch seine Verwandlung fast aller traditionellen Feiertage in Werkstage eine wichtige Rolle in der Genesis des Kapitals.

¹²⁵ „An Essay etc.“, p. 41, 15, 96, 97, 55, 56, 57.

¹²⁶ l.c., p. 69. Jacob Vanderlint, as early as 1734, declared that the secret of the out-cry of the capitalists as to the laziness of the working people was simply that they claimed for the same wages 6 days' labor instead of 4.

388:0p To this end, and for "extirpat- ing idleness debauchery and excess," promoting a spirit of industry, "lowering the price of labor in our manufactories, and easing the lands of the heavy burden of poor's rates," our "faithful Eckart" of capital proposes this approved device: to shut up such laborers as become dependent on public support, in a word, paupers, in "an *ideal workhouse*." Such ideal workhouse must be made a "House of Terror," and not an asylum for the poor, "where they are to be plentifully fed, warmly and decently clothed, and where they do but little work."¹²⁷ In this "House of Terror," this "ideal workhouse, the poor shall work 14 hours in a day, allowing proper time for meals, in such manner that there shall remain 12 hours of neat-labor."¹²⁸

¹²⁷ l.c., p. 242.

¹²⁸ l.c. "The French," he says, "laugh at our enthusiastic ideas of liberty." l.c., p. 78.

The next two paragraphs constitute the transition to the following section. This workhouse will be realized in a much more terrible form than dreamed up by this bourgeois writer—in the *factory*.

388:1/o Twelve working-hours daily in the Ideal Workhouse, in the "House of Terror" of 1770! 63 years later, in 1833,

¹²⁶ l.c. p. 69. Jacob Vanderlint erklärte schon 1734, das Geheimnis der Kapitalistenklage über die Faulenzerei des Arbeitervolks sei einfach, daß sie für denselben Lohn 6 statt 4 Arbeitstage beanspruchten.

292:1 Zu diesem Zwecke, wie zur „Ausrottung der Faulenzerei, Ausschweifung und romantischen Freiheitsduselei“, ditto „zur Minderung der Armentaxe, Förderung des Geistes der Industrie und Herabdrückung des Arbeitspreises in den Manufakturen“, schlägt unser treuer Eckart des Kapitals das probate Mittel vor, solche Arbeiter, die der öffentlichen Wohltätigkeit anheimfallen, in einem Wort, Paupers, einzusperren in ein „ideales Arbeitshaus“ (an ideal Workhouse). „Ein solches Haus muß zu einem Hause des Schreckens (House of Terror) gemacht werden.“¹²⁷ In diesem „Hause des Schreckens“, diesem „Ideal von einem Workhouse“, soll gearbeitet werden „14 Stunden täglich mit Einbegriff jedoch der passenden Mahlzeiten, so daß volle 12 Arbeitsstunden übrigbleiben“¹²⁸

¹²⁷ „An Essay etc.“, p. 242, 243: „Such ideal workhouse must be made a „House of Terror“, und nicht zu einem Asyl für die Armen, wo sie reichlich zu essen bekommen, warm und anständig gekleidet werden sollen und sie nur wenig arbeiten.“

¹²⁸ „In this ideal workhouse the poor shall work 14 hours in a day, allowing proper time for meals, in such manner that there shall remain 12 hours of neat labor.“ (l.c. [p. 260.]) „Die Franzosen“, sagt er, „lachen über unsre enthusiastischen Ideen von Freiheit.“ (l.c. p. 78.)

293:1 Zwölf Arbeitsstunden täglich im „Ideal-Workhouse“, im Hause des Schreckens von 1770! Dreiundsechzig Jahre später,

when the English Parliament reduced the working-day for children of 13 to 18, in four branches of industry to 12 full hours, the judgment day of English Industry had dawned! In 1852, when Louis Bonaparte sought to secure his position with the bourgeoisie by tampering with the legal working-day, the French working people cried out with one voice "the law that limits the working-day to 12 hours is the one good that has remained to us of the legislation of the Republic!"¹²⁹ At Zurich the work of children over 10 is limited to 12 hours; in Aargau in 1862, the work of children between 13 and 16 was reduced from 12 1/2 to 12 hours; in Austria in 1860, for children between 14 and 16, the same reduction was made.¹³⁰ "What a progress," since 1770! Macaulay would shout "with exultation"!

¹²⁹ "They especially objected to work beyond the 12 hours per day, because the law which fixed those hours, is the only good which remains to them of the legislation of the Republic." ("Rep. of Insp. of Fact.", 31 st October, 1856, p. 80.) The French Twelve Hours' Bill of September 5th, 1850, a bourgeois edition of the decree of the Provisional Government of March 2nd, 1848, holds in all workshops without exceptions. Before this law the working-day in France was without definite limit. It lasted in the factories 14, 15, or more hours. See "Des classes ouvrières en France, pendant l'annee 1848. Par M. Blanqui." M. Blanqui the economist, not the Revolutionist, had been entrusted by the Government with an inquiry into the condition of the working-class.

¹³⁰ Belgium is the model bourgeois state in regard to the regulation of the working-day. Lord Howard of Welden, English Plenipotentiary at Brussels, reports to the Foreign Office May 12th, 1862: "M. Rogier, the minister, informed me that

1833, als das englische Parlament in vier Fabrikzweigen den Arbeitstag für Kinder von 13 bis 18 Jahren auf 12 volle Arbeitsstunden herabsetzte, schien der Jüngste Tag der englischen Industrie angebrochen! 1852, als L. Bonaparte bürgerlich Fuß zu fassen suchte durch Rütteln am gesetzlichen Arbeitstag, schrie das französische Arbeitervolk aus einem Munde: „Das Gesetz, das den Arbeitstag auf 12 Stunden verkürzt, ist das einzige Gut, das uns von der Gesetzgebung der Republik blieb!“¹²⁹ In Zürich ist die Arbeit von Kindern über 10 Jahren auf 12 Stunden beschränkt; im Aargau wurde 1862 die Arbeit von Kindern zwischen 13 und 16 Jahren von 12 1/2 Stunden reduziert, in Österreich 1860 für Kinder zwischen 14 und 16 Jahren ditto auf 12 Stunden.¹³⁰ Welch ein „Fortschritt seit 1770“, würde Macaulay „mit Exultation“ aufjauchzen!

¹²⁹ „Sie widersetzten sich besonders deshalb einer Arbeit von mehr als den 12 Stunden täglich, weil das Gesetz, das diese Stundenzahl festsetzte, das einzige Gut ist, was ihnen von der Gesetzgebung der Republik übrigbleibt.“ „Rep. of Insp. of Fact. 31st Octob. 1855“, p. 80.) Das französische Zwölfstundengesetz vom 5. September 1850, eine verbürgerlichte Ausgabe des Dekrets der provisorischen Regierung vom 2. März 1848, erstreckt sich auf alle Ateliers ohne Unterschied. Vor diesem Gesetz war der Arbeitstag in Frankreich unbeschränkt. Er währte in den Fabriken 14, 15 und mehr Stunden. Siehe „Des classes ouvrières en France, pendant l'année 1848. Par M. Blanqui“. Herr Blanqui, der Ökonom, nicht der Revolutionär, war von Regierung wegen mit der Enquete über die Arbeiterzustände betraut.

¹³⁰ Belgien bewährt sich auch mit Bezug auf die Regulation des Arbeitstags als bürgerlicher Musterstaat. Lord Howard de Walden, englischer Bevollmächtigter in Brüssel, berichtet dem Foreign Office d.d. 12. Mai 1862: „Der Mini-

children's labor is limited neither by a general law nor by any local regulations; that the Government, during the last three years, intended in every session to propose a bill on the subject, but always found an insuperable obstacle in the jealous opposition to any legislation in contradiction with the principle of perfect freedom of labor."

389:1 The "House of Terror" for paupers of which the capitalistic soul of 1770 only dreamed, was realised a few years later in the shape of a gigantic "Workhouse" for the industrial worker himself. It is called the Factory. And the ideal this time fades before the reality.

ster Rogier erklärte mir, daß weder ein allgemeines Gesetz noch Lokalregulationen die Kinderarbeit irgendwie beschränken; daß die Regierung sich während der letzten 3 Jahre in jeder Sitzung mit dem Gedanken trug, den Kammern ein Gesetz über den Gegenstand vorzulegen, daß sie aber stets ein unüberwindliches Hindernis fand an der eifersüchtigen Angst gegen irgendwelche Gesetzgebung im Widerspruch mit dem Prinzip vollkommener Freiheit der Arbeit!"

293:2 Das „Haus des Schreckens“ für Paupers, wovon die Kapitalseele 1770 noch träumte, erhob sich wenige Jahre später als riesiges „Arbeitshaus“ für die Manufakturarbeiter selbst. Es hieß Fabrik. Und diesmal erblaßte das Ideal vor der Wirklichkeit.

10.6. The Struggle around the Normal Working-Day. Compulsory Limitation by Law of the Working Time. The English Factory Acts, 1833–1864

10.6.a. [Industrial Revolution Overturns all Limits of the working-day]

In the centuries before 1766, capital caused a gradual extension of the working day (1) up to the normal maximal bounds (i.e., the labor-time of those workers who had worked less than the norm was made equal to the norm), and (2) to the limits of the natural day of 12 hours during which there is enough daylight. This was a slow process. But since the birth of large-scale industry 1766–1800 a sudden spurt occurred in which all bounds were overturned.

389:2/o After capital had taken centuries in extending the working-day to its normal maximum limit, and then beyond this to the limit of the natural day of 12 hours,¹³¹ there followed on the birth of machinism and modern industry in the last third of the 18th century, a violent encroachment like that of an avalanche in its intensity and extent.

294:1 Nachdem das Kapital Jahrhunderte gebraucht, um den Arbeitstag bis zu seinen normalen Maximalgrenzen und dann über diese hinaus, bis zu den Grenzen des natürlichen Tags von 12 Stunden zu verlängern,¹³¹ erfolgte nun, seit der Geburt der großen Industrie im letzten Drittel des 18. Jahrhunderts, eine lawinenartig gewaltsame und maßlose Überstürzung. Jede Schranke von Sitte und Natur, Alter und Geschlecht,

¹³¹ It is certainly much to be regretted that any class of persons should toil 12 hours a day, which, including the time for their meals and for going to and returning from their work, amounts, in fact, to 14 of the 24 hours . . . Without entering into the question of health, no one will hesitate, I think, to admit that, *in a moral point of view*, so entire an absorption of the time of the working-classes, without intermission, from the early age of 13, and in trades not subject to restriction, much younger, must be extremely prejudicial, and is an evil greatly to be deplored . . . For the sake, therefore, of public morals. of bringing up an orderly population, and of giving the great body of the people a reasonable enjoyment of life, it is much to be desired that in all trades some portion of every working-day should be reserved for rest and leisure." (Leonard Homer in "Reports of Insp. of Fact. for 31st Dec., 1841.")

All bounds of morals and nature, age and gender, day and night, were broken down. Even the ideas of day and night, of rustic simplicity in the old statutes, became so confused that an English judge, as late as 1860, needed a quite Talmudic sagacity to explain "judicially" what was day and what was night.¹³² Capital celebrated its orgies.

¹³² See "Judgment of Mr. J. H. Otway, Belfast. Hilary Sessions, County Antrim, 1860."

The working class which, between 1766 and 1800, had been "stunned by the noise and turmoil of the new mode of production," begins its resistance around 1800. But for the next 30 years it has only nominal success.

390:1 As soon as the working-class, stunned at first by the noise and turmoil of the new system of production, recovered, in some measure, its senses, its resistance began, and first in the native land of machinism, in England. For 30 years, however, the concessions conquered by the workpeople were purely nominal. Parliament passed

Tag und Nacht, wurde zertrümmert.

¹³¹ „Es ist sicher sehr bedauerlich, daß irgendeine Klasse von Personen 12 Stunden täglich sich abplacken muß. Rechnet man die Mahlzeiten zu und die Zeit, um zu und von der Werkstatt zu gehen, so beträgt dies in der Tat 14 von den 24 Tagesstunden . . . Abgesehen von der Gesundheit, wird niemand, ich hoffe, anstehn zuzugeben, daß vom moralischen Gesichtspunkt eine so gänzliche Absorption der Zeit der arbeitenden Klassen, ohne Unterlaß, beim frühen Alter von 13 Jahren, und in den „freien“ Industriezweigen selbst von viel früherem Alter an, außerordentlich schädlich und ein furchtbares Übel ist . . . Im Interesse der öffentlichen Moral, für die Aufziehung einer tüchtigen Bevölkerung, und um der großen Masse des Volks einen vernünftigen Lebensgenuß zu verschaffen, muß darauf gedrungen werden, daß in allen Geschäftszweigen ein Teil jedes Arbeitstags reserviert werde für Erholung und Muße.“ (Leonard Horner in „Reports of Insp. of Fact. 31st Dec. 1841“.)

Selbst die Begriffe von Tag und Nacht, bäuerlich einfach in den alten Statuten, verschwammen so sehr, daß ein englischer Richter noch 1860 wahrhaft talmudistischen Scharfsinn aufbieten mußte, um „urteilskräftig“ zu erklären, was Tag und Nacht sei.¹³² Das Kapital feierte seine Orgien.

¹³² Sieh „Judgment of Mr. J. H. Otway, Belfast, Hilary Sessions, County Antrim 1860“.

294:2–295:1 Sobald die vom Produktionslärm übertölpelte Arbeiterklasse wieder einigermaßen zur Besinnung kam, begann ihr Widerstand, zunächst im Geburtsland der großen Industrie, in England. Während drei Dezennien jedoch blieben die von ihr ertrotzten Konzessionen rein nominell. Das Parlament erließ 5 Arbeits-Akte von 1802

5 labor Laws between 1802 and 1833, but was shrewd enough not to vote a penny for their carrying out, for the requisite officials, etc.¹³³ They remained a dead letter.

¹³⁴ Report of Insp. of Fact. 30th April, 1860, p. 50.

↑ The state passes laws which are not enforced. This contradictory activity shows that the state does *not* act here as an agent of the bourgeoisie: it is forced by the proletariat to pass these laws, but due to the power of the capitalists it sabotages them at the same time, by not providing money to enforce them.

“The fact is, that prior to the Act of 1833, young persons and children were worked all night, all day, or both *ad libitum*.”¹³⁴

↓ In France, the laws were not only not enforced, but they are also distinguished by their number: only one law was passed regarding the working-day in a society which likes to regulate everything:

¹³³ It is very characteristic of the regime of Louis Philippe, the bourgeois king, that the one Factory Act passed during his reign, that of March 22nd 1841, was never put in force. And this law only dealt with child-labor. It fixed 8 hours a day for children between 8 and 12, 12 hours for children between 12 and 16, etc., with many exceptions which allow night-work even for children 8 years old. The supervision and enforcement of this law are, in a country where every mouse is under police administration, left to the good-will of the *amis du commerce*. Only since 1853, in one single department—the Département du Nord—has a paid government inspector been appointed. Not less characteristic of the development of French society, generally, is the fact, that Louis Philippe’s law stood solitary among the all-embracing mass of French laws, till the Revolution of 1848.

bis 1833, war aber so schlau, keinen Pfennig für ihre zwangsmäßige Ausführung, das nötige Beamtenpersonal usw. zu votieren.¹³³ Sie blieben ein toter Buchstabe.

¹³⁴ „Rep. of Insp. of Fact. 30th April 1860“, p. 50.

„Die Tatsache ist, daß vor dem Akt von 1833 Kinder und junge Personen abgearbeitet wurden (were worked) die ganze Nacht, den ganzen Tag, oder beide *ad libitum*.“¹³⁴

¹³³ Sehr charakteristisch ist es für das Regime Louis-Philippes, des roi bourgeois, daß das einzige unter ihm erlassenen Fabrikgesetz vom 22. März 1841 niemals durchgeführt worden ist. Und dies Gesetz betrifft nur Kinderarbeit. Es setzt 8 Stunden für Kinder zwischen 8 und 12, zwölf Stunden für Kinder zwischen 12 und 16 Jahren usw. fest, mit vielen Ausnahmen, welche die Nachtarbeit selbst für Achtjährige erlauben. Überwachung und Erzwingung des Gesetzes blieben in einem Lande, wo jede Maus polizeilich administriert wird, dem guten Willen der „amis du commerce“ überlassen. Erst seit 1853 gibt es in einem einzigen Département, dem Département du Nord, einen bezahlten Regierungsinspektor. Nicht minder charakteristisch für die Entwicklung der französischen Gesellschaft überhaupt ist es, daß Louis-Philippes Gesetz bis zur Revolution von 1848 einzig dastand in der alles umspinnenden französischen Gesetzfabrik!

10.6.b. [The Factory Act of 1833]

After 30 years of pretenses and stalling, the factory legislation begins in earnest in 1833:

390:2 A normal working-day for modern industry only dates from the Factory Act of 1833, which included cotton, wool, flax, and silk factories. Nothing is more characteristic of the spirit of capital than the history of the English Factory Acts from 1833 to 1864.

390:3/o The Act of 1833 declares the ordinary factory working-day to be from half-past five in the morning to half-past eight in the evening and within these limits, a period of 15 hours, it is lawful to employ young persons (*i.e.*, persons between 13 and 18 years of age), at any time of the day, provided no one individual young person should work more than 12 hours in any one day, except in certain cases especially provided for. The 6th section of the Act provided: “That there shall be allowed in the course of every day not less than one and a half hours for meals to every such person restricted as hereinbefore provided.” The employment of children under 9, with exceptions mentioned later was forbidden; the work of children between 9 and 13 was limited to 8 hours a day, night-work, *i.e.*, according to this Act, work between 8:30 p.m. and 5:30 a.m., was forbidden for all persons between 9 and 18.

↑ Note that the working time for adult workers was not regulated! Since children and adults have to work together, the regulation of child labor contradicts the commitment to leave adult labor unregulated.

391:1–2p The law-makers were so far from wishing to trench on the freedom of capital to exploit adult labor-power, or, as they called it, “the freedom of labor,” that they created a special system in order to

295:2 Erst seit dem Fabrikakt von 1833—umfassend Baumwoll-, Wolle-, Flachs- und Seidenfabriken—datiert für die moderne Industrie ein Normalarbeitstag. Nichts charakterisiert den Geist des Kapitals besser als die Geschichte der englischen Fabrikgesetzgebung von 1833 bis 1864!

295:3 Das Gesetz von 1833 erklärt, der gewöhnliche Fabrikarbeitstag solle beginnen um halb 6 Uhr morgens und enden halb 9 Uhr abends, und innerhalb dieser Schranken, einer Periode von 15 Stunden, solle es gesetzlich sein, junge Personen (d.h. Personen zwischen 13 und 18 Jahren) zu irgendeiner Zeit des Tags anzuwenden, immer vorausgesetzt, daß ein und dieselbe junge Person nicht mehr als 12 Stunden innerhalb eines Tags arbeite, mit Ausnahme gewisser speziell vorgesehener Fälle. Die 6. Sektion des Akts bestimmt, „daß im Laufe jedes Tags jeder solchen Person von beschränkter Arbeitszeit mindestens 1 1/2 Stunden für Mahlzeiten eingeräumt werden sollen“. Die Anwendung von Kindern unter 9 Jahren, mit später zu erwähnender Ausnahme, ward verboten, die Arbeit der Kinder von 9 bis 13 Jahren auf 8 Stunden täglich beschränkt. Nachtarbeit, d.h. nach diesem Gesetz, Arbeit zwischen halb 9 Uhr abends und halb 6 Uhr morgens, ward verboten für alle Personen zwischen 9 und 18 Jahren.

295:4–296:0 Die Gesetzgeber waren so weit entfernt, die Freiheit des Kapitals in Aussaugung der erwachsenen Arbeitskraft oder, wie sie es nannten, „die Freiheit der Arbeit“ antasten zu wollen, daß sie ein eig-

Question 741 *If the state passes laws protecting the working class which it does not enforce, what does this tell us about the nature of the state?*

prevent the Factory Acts from having such an outrageous consequence.

↓ The relay system is an attempt to bridge this contradiction:

“The great evil of the factory system as at present conducted,” says the first report of the Central Board of the Commission of June 28th 1833, “has appeared to us to be that it entails the necessity of continuing the labor of children to the utmost length of that of the adults. The only remedy for this evil, short of the limitation of the labor of adults which would, in our opinion, create an evil greater than that which is sought to be remedied, appears to be the plan of working double sets of children.”

391:2p Under the name of System of Relays, such a “plan” was therefore carried out, that, e.g., from 5.30 a.m. until 1.30 in the afternoon, one set of children between 9 and 13, and from 1.30 p.m. to 8.30 in the evening another set were “put to,” etc.

391:3/o In order to reward the manufacturers for having, in the most barefaced way, ignored all the Acts as to children’s labor passed during the last twenty-two years, the pill was yet further gilded for them. Parliament decreed that after March 1st, 1834, no child under 11, after March 1st 1835, no child under 12, and after March 1st, 1836, no child under 13 was to work more than eight hours in a factory. This “liberalism,” so full of consideration for “capital,” was the more noteworthy as Dr. Farre, Sir A. Carlisle, Sir B. Brodie, Sir C. Bell, Mr. Guthrie, etc., in a word, the most distinguished physicians and surgeons in London, had declared in their evidence before

nes System ausheckten, um solcher haarsträubenden Konsequenz des Fabrikakts vorzubeugen.

„Das große Übel des Fabriksystems, wie es gegenwärtig eingerichtet ist“, heißt es im ersten Bericht des Zentralrats der Kommission vom 25. Juni 1833, „besteht darin, daß es die Notwendigkeit schafft, die Kinderarbeit zur äußersten Länge des Arbeitstags der Erwachsenen auszudehnen. Das einzige Heilmittel für dies Übel, ohne Beschränkung der Arbeit der Erwachsenen, woraus ein Übel entspringen würde, größer als das, dem vorgebeugt werden soll, scheint der Plan, doppelte Reihen von Kindern zu verwenden.“

296:1 Unter dem Namen Relaisystem („System of Relays“; Relay heißt im Englischen wie im Französischen: das Wechseln der Postpferde auf verschiedenen Stationen) wurde daher dieser „Plan“ ausgeführt, so daß z.B. von halb 6 Uhr morgens bis halb 2 Uhr nachmittags eine Reihe von Kindern zwischen 9 und 13 Jahren, von halb 2 Uhr nachmittags bis halb 9 Uhr abends eine andere Reihe vorgespannt wird usw.

296:2–3 Zur Belohnung dafür, daß die Herren Fabrikanten alle während der letzten 22 Jahre erlassenen Gesetze über Kinderarbeit aufs frechste ignoriert hatten, ward ihnen jetzt aber auch die Pille vergoldet. Das Parlament bestimmte, daß nach dem 1. März 1834 kein Kind unter 11 Jahren, nach dem 1. März 1835 kein Kind unter 12 Jahren und nach dem 1. März 1836 kein Kind unter 13 Jahren über 8 Stunden in einer Fabrik arbeiten solle! Dieser für das „Kapital“ so schonungsvolle „Liberalismus“ war um so anerkennenswerter, als Dr. Farre, Sir A. Carlisle, Sir B. Brodie, Sir C. Bell, Mr. Guthrie usw., kurz die bedeutendsten physicians und surgeons Londons in ihren Zeugenaussagen

the House of Commons, that there was danger in delay. Dr. Farre expressed himself still more bluntly: “Legislation is necessary for the prevention of death, in any form in which it can be prematurely inflicted, and certainly this (i.e., the factory method) must be viewed as a most cruel mode of inflicting it.”

135

392:1 That same “reformed” Parliament, which in its delicate consideration for the manufacturers, condemned children under 13, for years to come, to 72 hours of work per week in the Factory Hell, on the other hand, in the Emancipation Act, which also administered freedom drop by drop, forbade the planters, from the outset, to work any negro slave more than 45 hours a week.

10.6.c. [Efforts to Prevent and Circumvent the 1833 Law]

↓ Marx looks at the development in historical perspective. The 1833 law met lots of resistance: between 1833 and 1836 an unsuccessful last-ditch effort of capital to prevent full implementation of the law, and then it was successfully circumvented and gutted by a new “system of relays.”

392:2 But in no wise conciliated, capital now began a noisy agitation that went on for several years.

↓ Alleged content of the agitation is the question: who is a child?

It turned chiefly on the age of those who, under the name of children, were limited to 8 hours’ work, and were subject to a certain amount of compulsory education. According to capitalistic anthropology, the age of childhood ended at 10, or at the outside, at 11.

↓ But the intensity of the discussion was governed by the time schedule when the Factory

vor dem Unterhaus erklärt hatten, daß periculum in mora! Dr. Farre drückte sich noch etwas gröber dahin aus: „Gesetzgebung ist gleich notwendig für die Vorbeugung des Tods in allen Formen, worin er vorzeitig angetan werden kann, und sicher dieser“ (der Fabrikmodus) „muß als eine der grausamsten Methoden, ihn anzutun, betrachtet werden.“¹³⁵

¹³⁵ „Legislation is equally necessary for the prevention of death, in any form in which it can be prematurely inflicted, and certainly this must be viewed as a most cruel mode of inflicting it.“

296:4 Dasselbe „reformierte“ Parlament, das aus Zartsinn für die Herrn Fabrikanten Kinder unter 13 Jahren noch jahrelang in die Hölle 72stündiger Fabrikarbeit per Woche festbannte, verbot dagegen in dem Emanzipationsakt, der auch die Freiheit tropfenweise eingab, von vornherein den Pflanzern, irgendeinen Negersklaven länger als 45 Stunden per Woche abzuarbeiten!

296:5/o Aber keineswegs gesühnt, eröffnete das Kapital jetzt eine mehrjährige und geräuschvolle Agitation.

Sie drehte sich hauptsächlich um das Alter der Kategorien, die unter dem Namen Kinder auf 8stündige Arbeit beschränkt und einem gewissen Schulzwang unterworfen worden waren. Nach der kapitalistischen Anthropologie hörte das Kindesalter im 10. oder, wenn es hoch ging, im 11. Jahre auf.

Acts would take full force:

The more nearly the time approached for the coming into full force of the Factory Act, the fatal year 1836, the more wildly raged the mob of manufacturers. They managed, in fact, to intimidate the government to such an extent that in 1835 it proposed to lower the limit of the age of childhood from 13 to 12.

↓ But the strength of the working class prevented the legislators from caving in:

In the meantime the pressure from without grew more threatening. Courage failed the House of Commons. It refused to throw children of 13 under the Juggernaut Car of capital for more than 8 hours a day, and the Act of 1833 came into full operation. It remained unaltered until June, 1844.

↓ But even with the law in operation the excesses continued—because the “new relais system” made it impossible to enforce these laws.

392:3/o In the ten years during which it regulated factory work, first in part, and then entirely, the official reports of the factory inspectors teem with complaints as to the impossibility of putting the Act into force.

↓ Here are the details why it was impossible to enforce these laws:

As the law of 1833 left it optional with the lords of capital during the 15 hours, from 5.30 a.m. to 8.30 p.m., to make every “young person,” and “every child” begin, break off, resume, or end his 12 or 8 hours at any moment they liked, and also permitted them to assign to different persons, different times for meals, these gentlemen soon discovered a new “system of relays,” by which the labor-horses were not changed at fixed stations, but were constantly re-harnessed at changing stations.

↓ This loophole made the whole factory act mute.

Je näher der Termin der vollen Ausführung des Fabrikakts, das verhängnisvolle Jahr 1836 rückte, um so wilder raste der Fabrikantenmob. Es gelang ihm in der Tat, die Regierung so weit einzuschüchtern, daß sie 1835 den Termin des Kindesalters von 13 auf 12 Jahre herabzusetzen vorschlug.

Indes wuchs die pressure from without drohend an. Der Mut versagte dem Unterhause. Es verweigerte, Dreizehnjährige länger als 8 Stunden täglich unter das Juggernaut-Rad des Kapitals zu werfen, und der Akt von 1833 trat in volle Wirkung. Er blieb unverändert bis Juni 1844.

297:1/o Während des Dezenenniums, worin er erst teilweise, dann ganz die Fabrikarbeit regulierte, strotzen die offiziellen Berichte der Fabrikinspektoren von Klagen über die Unmöglichkeit seiner Ausführung.

Da das Gesetz von 1833 es nämlich den Herrn vom Kapital freistellte, in der fünfzehnstündigen Periode von halb 6 Uhr morgens bis halb 9 Uhr abends jede „junge Person“ und jedes „Kind“ zu irgend beliebiger Zeit die zwölf-, respektive die achtestündige Arbeit beginnen, unterbrechen, enden zu lassen, und ebenso den verschiedenen Personen verschiedene Stunden der Mahlzeiten anzuweisen, fanden die Herrn bald ein neues „Relaissystem“ aus, wonach die Arbeitspferde nicht an bestimmten Stationen gewechselt, sondern an wechselnden Stationen stets wieder von neuem vorgespannt werden.

We do not pause longer on the beauty of this system, as we shall have to return to it later. But this much is clear at the first glance: that this system annulled the whole Factory Act, not only in the spirit, but in the letter. How could factory inspectors, with this complex bookkeeping in respect to each individual child or young person, enforce the legally determined work-time and the granting of the legal mealtimes? In a great many of the factories, the old brutalities soon blossomed out again unpunished. In an interview with the Home Secretary (1844), the factory inspectors demonstrated the impossibility of any control under the newly invented relay system.¹³⁶

¹³⁶ “Rep. of Insp. of Fact.,” 31st October, 1849, p. 6.

↑ The relais system will be discussed in greater detail in 403:1/o.

10.6.d. [The Additional Factory Act from 1844]

↓ Marx gives four points explaining why the next effort, the additional Factory Act of 1844, was more successful:

In the meantime, however, circumstances had greatly changed.

↓ (1) Votes of the Factory laborers depended on 10-hours bill.

The factory hands, especially since 1838, had made the Ten Hours’ Bill their economic, as they had made the Charter their political, election-cry.

↓ (2) Part of the factory owners themselves turned to Parliament against the breach of laws by their competitors.

Some of the manufacturers, even, who had managed their factories in conformity with the Act of 1833, overwhelmed Parliament with memorials on the immoral competition of their false brethren whom greater impudence, or more fortunate local circumstances, enabled to break the law.

Wir verweilen nicht weiter bei der Schönheit dieses Systems, da wir später darauf zurückkommen müssen. So viel ist aber auf den ersten Blick klar, daß es den ganzen Fabrikakt nicht nur seinem Geist, sondern auch seinem Buchstaben nach aufhob. Wie sollten die Fabrikinspektoren bei dieser komplizierten Buchführung über jedes einzelne Kind und jede junge Person die gesetzlich bestimmte Arbeitszeit und die Gewährung der gesetzlichen Mahlzeiten erzwingen? In einem großen Teil der Fabriken blühte der alte brutale Unfug bald wieder ungestraft auf. In einer Zusammenkunft mit dem Minister des Innern (1844) bewiesen die Fabrikinspektoren die Unmöglichkeit jeder Kontrolle unter dem neuausgeheckten Relaissystem.¹³⁶

¹³⁶ „Rep. of Insp. of Fact. 31st October 1849“, p. 6.

Unterdes hatten sich aber die Umstände sehr geändert.

Die Fabrikarbeiter, namentlich seit 1838, hatten die Zehnstundenbill zu ihrem ökonomischen, wie die Charter zu ihrem politischen Wahlaufzug gemacht.

Ein Teil der Fabrikanten selbst, der den Fabrikbetrieb dem Akt von 1833 gemäß geregelt hatte, überwarf das Parlament mit Denkschriften über die unsittliche „Konkurrenz“ der „falschen Brüder“, denen größere Frechheit oder glücklichere Lokalumstände den Gesetzesbruch erlaubten.

(3) Political leaders of the capitalist class needed the workers as allies against the landowners in their agitation for the repeal of the corn (tariff) laws (landowners favor corn tariffs which guarantee high returns from agriculture).

Moreover, however much the individual manufacturer might give the rein to his old lust for gain, the spokesmen and political leaders of the manufacturing class ordered a change of front and of speech towards the workpeople. They had entered upon the contest for the repeal of the Corn Laws, and needed the workers to help them to victory. They promised therefore, not only a double-sized loaf of bread, but the enactment of the Ten Hours' Bill in the Free-trade millennium.¹³⁷ Thus they still less dared to oppose a measure intended only to make the law of 1833 a reality.

↓ (4) The land owners unsuccessfully tried to prevent such a coalition by preaching against the “nefarious practices” of the capitalists.

Threatened in their holiest interest, the rent of land, the Tories thundered with philanthropic indignation against the “nefarious practices”¹³⁸ of their foes.

¹³⁷ “Rept. of Insp. of Fact.,” 31st October, 1848, p. 98.

¹³⁸ Leonard Homer uses the expression “nefarious practices” in his official reports. (“Report of Insp. of Fact.,” 31st October, 1859, p. 7.)

↓ The additional Factory Act from 1844 plugged the loopholes with the “spurious relay system,” further shortened work time for children and, importantly, for the first time included adults—not adult men but adult women.

393:1/op This was the origin of the additional Factory Act of June 7th, 1844. It came into effect on September 10th, 1844.

↓ (1) It includes also women, who were placed on the same footing as young persons. This is an important inroad, since previously, the regulation of the working-days of adult persons had been considered an infringement into their “freedom of contracts.”

It places under protection a new category of workers, viz., the women over 18. They

Zudem, wie sehr immerhin der einzelne Fabrikant der alten Raubgier den Zügel frei schießen lassen mochte, die Wortführer und politischen Leiter der Fabrikantenklasse geboten eine veränderte Haltung und veränderte Sprache gegenüber den Arbeitern. Sie hatten den Feldzug zur Abschaffung der Korngesetze eröffnet und bedurften der Hilfe der Arbeiter zum Siege! Sie versprachen daher nicht nur Verdopplung des Laibes Brot, sondern Annahme der Zehnstundenbill unter dem tausendjährigen Reich des Free Trade.¹³⁷ Sie durften also um so weniger eine Maßregel bekämpfen, die nur den Akt von 1833 zur Wahrheit machen sollte.

In ihrem heiligsten Interesse, der Grundrente, bedroht, donnerten endlich die Tories entrüstet philanthropisch über die „infamen Praktiken“¹³⁸ ihrer Feinde.

¹³⁷ „Rep. of Insp. of Fact. 31st October 1848“, p. 98.

¹³⁸ Übrigens braucht Leonard Horner den Ausdruck „nefarious practices“ offiziell. „Reports of Insp. of Fact. 31st October 1859“, p. 7.)

298:1–2 So kam der zusätzliche Fabrikakt vom 7. Juni 1844 zustande. Er trat am 10. September 1844 in Wirkung.

Er gruppiert eine neue Kategorie von Arbeitern unter die Beschützten, nämlich die

were placed in every respect on the same footing as the young persons, their work-time limited to twelve hours, their night-labor forbidden, etc. For the first time, legislation saw itself compelled to control directly and officially the labor of adults. In the Factory Report of 1844–1845, it is said with irony:

“No instances have come to my knowledge of adult women having expressed any regret at their *rights* being thus far interfered with.”¹³⁹

¹³⁹ “Rept.,” etc., 30th Sept., 1844, p. 15.

(2) Children’s labor was shortened to 6 1/2 or 7 hours. However here one regressive provision (mentioned by Marx in 395:1): minimum age for children reduced from 9 to 8 “in order to get an additional supply of factory children.”

In order to get rid of the abuses of the “spurious relay system” it was practically prohibited to spread the working-day out for children and young persons.

394:0p The working time of children under 13 was reduced to 6 1/2, and in certain circumstances to 7 hours a day.¹⁴⁰

¹⁴⁰ The Act allows children to be employed for 10 hours if they do not work day after day, but only on alternate days. In the main, this clause remained inoperative.

394:1 To get rid of the abuses of the “spurious relay system,” the law established besides others the following important regulations:

“That the hours of work of children and young persons shall be reckoned from the time when any child or young person shall begin to work in the morning.”

So that if *A*, e.g., begins work at 8 in the morning, and *B* at 10, *B*’s work-day must nevertheless end at the same hour as *A*’s. “The time shall be regulated by a public clock,” for example, the nearest railway clock, by which the factory clock is to be

Frauenzimmer über 18 Jahre. Sie wurden in jeder Rücksicht den jungen Personen gleichgesetzt, ihre Arbeitszeit auf 12 Stunden beschränkt, Nacharbeit ihnen untersagt usw. Zum erstenmal sah sich die Gesetzgebung also gezwungen, auch die Arbeit Volljähriger direkt und offiziell zu kontrollieren. In dem Fabrikbericht von 1844/1845 heißt es ironisch:

„Es ist kein einziger Fall zu unsrer Kenntnis gekommen, wo erwachsne Weiber sich über diesen Eingriff in ihre Rechte beschwert hätten.“¹³⁹

¹³⁹ „Rep. etc. for 30th Sept. 1844“, p. 15.

298:3 Die Arbeit von Kindern unter 13 Jahren wurde auf 6 1/2 und, unter gewissen Bedingungen, 7 Stunden täglich reduziert.¹⁴⁰

¹⁴⁰ Der Akt erlaubt, Kinder 10 Stunden anzuwenden, wenn sie nicht Tag nach Tag, sondern nur einen Tag über den andren arbeiten. Im ganzen blieb diese Klausel wirkungslos.

298:4–299:2 Um die Mißbräuche des falschen „Relaisystems“ zu beseitigen, traf das Gesetz u.a. folgende wichtige Detailbestimmungen:

„Der Arbeitstag für Kinder und junge Personen ist von der Zeit an zu zählen, wo irgendein Kind oder eine junge Person des Morgens in der Fabrik zu arbeiten anfängt.“

So daß, wenn *A* z.B. um 8 Uhr morgens die Arbeit beginnt und *B* um 10 Uhr, der Arbeitstag dennoch für *B* zur selben Stunde enden muß wie für *A*. Der Anfang des Arbeitstags soll angezeigt werden durch eine öffentliche Uhr, z.B. die nächste Eisen-

set. The occupier is to hang up a “legible” printed notice stating the hours for the beginning and ending of work and the times allowed for the several meals.

↓ But shift work is still possible:

Children beginning work before 12 noon may not be again employed after 1 p.m. The afternoon shift must therefore consist of other children than those employed in the morning.

↓ Very detailed regulations concerning the meal times, but the manufacturers still tried to get around them, see 398:3p.

Of the hour and a half for meal-times, “one hour thereof at the least shall be given before three of the clock in the afternoon ... and at the same period of the day. No child or young person shall be employed more than five hours before 1 p.m. without an interval for meal-time of at least 30 minutes. No child or young person [or female] shall be employed or allowed to remain in any room in which any manufacturing process is then [*i.e.*, at mealtimes] carried on,” etc.

Interesting theoretical comment: Parliamentary laws not invented or derived from some abstract set of human rights, but the content of these laws gradually emerged from the nature of the mode of production (Marx calls them “natural laws of the modern mode of production”). Their formulation and official recognition is the effect of a long class struggle.

394:2/o It has been seen that these minutiae, which, with military uniformity, regulate by stroke of the clock the times, limits, pauses of the work were not at all the products of Parliamentary fancy. They developed gradually out of circumstances as natural laws of the modern mode of production. Their formulation, official recognition, and proclamation by the State, were the result of a long struggle of classes.

↓ An apparently unintended consequence (since it was no longer possible to have young persons and children around for 15 hours) was also the working-day for adult workers was,

bahnuhr, wonach die Fabrikglocke zu richten. Der Fabrikant hat eine großgedruckte Notiz in der Fabrik aufzuhängen, worin Anfang, Ende, Pausen des Arbeitstags angegeben sind.

Kinder, die ihre Arbeit des Vormittags vor 12 Uhr beginnen, dürfen nicht wieder nach 1 Uhr mittags verwandt werden. Die Nachmittagsreihe muß also aus andren Kindern bestehn als die Vormittagsreihe.

meal times, but the manufacturers still tried to

Die 1 1/2 Stunden für Mahlzeit müssen allen beschützten Arbeitern zu denselben Tagesperioden eingeräumt werden, eine Stunde wenigstens vor 3 Uhr nachmittags. Kinder oder junge Personen dürfen nicht länger als 5 Stunden vor 1 Uhr mittags verwandt werden, ohne eine mindestens halbstündige Pause für Mahlzeit. Kinder, junge Personen oder Frauenzimmer dürfen während keiner Mahlzeit in einer Fabrikstube bleiben, worin irgendein Arbeitsprozeß vorgeht usw.

299:3 Man hat gesehn: Diese minutiösen Bestimmungen, welche die Periode, Grenzen, Pausen der Arbeit so militärisch uniform nach dem Glockenschlag regeln, waren keineswegs Produkte parlamentari-scher Hirnweberei. Sie entwickelten sich allmählich aus den Verhältnissen heraus, als Naturgesetze der modernen Produktionsweise. Ihre Formulierung, offizielle Anerkennung und staatliche Proklamation waren Ergebnis langwieriger Klassenkämpfe.

for all practical matters, shortened to 12 hours.

One of their first consequences was that in practice the working-day of the adult males in factories became subject to the same limitations, since in most processes of production the co-operation of the children, young persons, and women is indispensable. On the whole, therefore, during the period from 1844 to 1847, the 12 hours' working-day became general and uniform in all branches of industry under the Factory Act.

↓ At the end, Marx mentions the one regressive provision of the Act:

395:1 The manufacturers, however, did not allow this “progress” without a compensating “retrogression.” At their instigation the House of Commons reduced the minimum age for exploitable children from 9 to 8, in order to assure that additional supply of factory children which is due to capitalists, according to divine and human law.¹⁴¹

¹⁴¹ “As a reduction in their hours of work would cause a larger number (of children) to be employed, it was thought that the additional supply of children from 8 to 9 years of age would meet the increased demand” (l.c., p. 13).

Under this law, the working day for children was limited to 7 hours, and that for adults to 12 hours. But the basis was laid to reach the proclaimed goal of the period, the 10-hour working day.

10.6.e. [Failed Attempts to Prevent the 1848 Ten-Hour Law]

↓ In 1846/47, several movements came together making possible a great leap forward in factory legislation.

395:2 The years 1846–47 are epoch-making in the economic history of England.

↓ Corn laws repealed

The Repeal of the Corn Laws, and of the duties on cotton and other raw material; Free-

Eine ihrer nächsten Folgen war, daß die Praxis auch den Arbeitstag der erwachsenen männlichen Fabrikarbeiter denselben Schranken unterwarf, da in den meisten Produktionsprozessen die Kooperation der Kinder, jungen Personen und Frauenzimmer unentbehrlich. Im großen und ganzen galt daher während der Periode von 1844–1847 der zwölfstündige Arbeitstag allgemein und uniform in allen der Fabrikgesetzgebung unterworfenen Industriezweigen.

299:4 Die Fabrikanten erlaubten diesen „Fortschritt“ jedoch nicht ohne einen kompensierenden „Rückschritt“. Auf ihren Antrieb reduzierte das Unterhaus das Minimalalter der zu verarbeitenden Kinder von 9 Jahren auf 8, zur Sicherung der dem Kapital von Gott und Rechts wegen geschuldeten „additionellen Fabrikkindenzufuhr“¹⁴¹.

¹⁴¹ „Da eine Herabsetzung ihrer Arbeitszeit zur Einstellung einer großen Anzahl“ (von Kindern) „führen würde, dachte man, daß die zusätzliche Zufuhr von Kindern im Alter von 8 und 9 Jahren die vermehrte Nachfrage decken würde.“ (l.c. p. 13.)

300:1 Die Jahre 1846/1847 machen Epoche in der ökonomischen Geschichte Englands.

Widerruf der Korngesetze, die Einfuhrzölle auf Baumwolle und andre Rohmaterialien

trade proclaimed as the guiding star of legislation; in a word, the arrival of the millennium.

↓ Climax of Chartist movement.

On the other hand, in the same years, the Chartist movement and the 10 hours' agitation reached their highest point.

↓ Tories angry at the manufacturers because of the repeal of the Corn Laws, allied with the Chartists.

They found allies in the Tories panting for revenge.

↓ Why did the Free-traders not keep their word?

Despite the fanatical opposition of the army of perjured Free-traders, with Bright and Cobden at their head, the Ten Hours' Bill, struggled for so long, went through Parliament.

↑ Therefore the law of 1847 was enacted. ↓ It shortens the working-day of young persons and female laborers to 11 hours in 1847 and 10 hours in 1848.

395:3 The new Factory Act of June 8th, 1847, enacted that on July 1st, 1847, there should be a preliminary shortening of the working-day for "young persons" (from 13 to 18), and all females to 11 hours, but that on May 1st, 1848, there should be a definite limitation of the working-day to 10 hours. In other respects, the Act only amended and completed the Acts of 1833 and 1844.

This progress was so fast that capital strongly resisted. Capital's resistance has two prongs. The present subsection discusses what Marx calls the "preliminary" campaign, in which capital tried to prevent the full enactment of the 10-hour bill in 1848, and the next subsection discusses their attempts to repeal the Act after its enactment.

395:4/o Capital now entered upon a preliminary campaign in order to hinder the Act from coming into full force on May 1st, 1848. And the workers themselves, allegedly wisened up by experience, were to help in the destruction of their own work.

How were they able to enlist the workers to fight against their interests?

↓ (1) Favorable exterior circumstances: crisis of 1846/47:

The moment was cleverly chosen.

abgeschafft, der Freihandel zum Leitstern der Gesetzgebung erklärt! Kurz, das tausendjährige Reich brach an.

Andererseits erreichten in denselben Jahren Chartistenbewegung und Zehnstundenagitation ihren Höhepunkt.

Sie fanden Bundesgenossen in den rache-schnaubenden Tories.

Trotz des fanatischen Widerstands des wort-brüchigen Freihandelsheers mit Bright und Cobden an der Spitze ging die so lang erstrebte Zehnstundenbill durch das Parlament.

300:2 Der neue Fabrikakt vom 8. Juni 1847 setzte fest, daß am 1. Juli 1847 eine vorläufige Verkürzung des Arbeitstags der „jungen Personen“ (von 13 bis 18 Jahren) und aller Arbeiterinnen auf 11 Stunden, am 1. Mai 1848 aber die definitive Beschränkung auf 10 Stunden eintreten solle. Im übrigen war der Akt nur ein amendierenden Zusatz der Gesetze von 1833 und 1844.

300:3–4 Das Kapital unternahm einen vorläufigen Feldzug, um die volle Ausführung des Akts am 1. Mai 1848 zu verhindern. Und zwar sollten die Arbeiter selbst, angeblich durch die Erfahrung gewitzigt, ihr eignes Werk wieder zerstören helfen.

Der Augenblick war geschickt gewählt.

"It must be remembered, too, that there has been more than two years of great suffering (in consequence of the terrible crisis of 1846–47) among the factory operatives, from many mills having worked short time, and many being altogether closed. A considerable number of the operatives must therefore be in very narrow circumstances many, it is to be feared, in debt; so that it might fairly have been presumed that at the present time they would prefer working the longer time, in order to make up for past losses, perhaps to pay off debts, or get their furniture out of pawn, or replace that sold, or to get a new supply of clothes for themselves and their families."¹⁴²

¹⁴² "Rep. of Insp. of Fact.," 31st Oct., 1848, p. 16.

(2) Cut in wages after repeal of the Corn Laws:

396:1/o The manufacturers tried to aggravate the natural effect of these circumstances by a general reduction of wages by 10%. This was done so to say, to celebrate the inauguration of the new Free-trade era. Then followed a further reduction of 8 1/3% as soon as the working-day was shortened to 11, and a reduction of double that amount as soon as it was finally shortened to 10 hours. Wherever, therefore, circumstances allowed it, a reduction of wages of at least 25% took place.¹⁴³

¹⁴³ "I found that men who had been getting 10s. a week, had had 1 s. taken off for a reduction in the rate of 10 per cent, and 1 s. 6 d. off the remaining 9s. for the reduction in time, together 2s. 6d., and notwithstanding this, many of them said they would rather work 10 hours." l.c.

↓ Capitalists tried to use these favorable circumstances to enlist the workers in their propaganda against the Ten Hour Bill. But they didn't succeed:

Under such favourably prepared conditions the agitation among the factory workers for the repeal of the Act of 1847 was begun.

„Man muß sich erinnern, daß infolge der furchtbaren Krise von 1846/1847 großes Leid unter den Fabrikarbeitern vorherrschte, da viele Fabriken nur für kurze Zeit gearbeitet, andere ganz stillgestanden hatten. Eine beträchtliche Anzahl der Arbeiter befand sich daher in drückendster Lage, viele in Schulden. Man konnte daher mit ziemlicher Gewißheit annehmen, daß sie die längere Arbeitszeit vorziehen würden, um die vergangnen Verluste gutzumachen, vielleicht Schulden abzufahren oder ihre Möbel aus dem Pfandhaus zu holen oder verkaufte Habseligkeiten zu ersetzen oder neue Kleidungsstücke sich selbst und ihren Familien zu verschaffen.“¹⁴²

¹⁴² „Rep. of Insp. of Fact. 31st Oct. 1848“, p. 16.

300:5/o Die Herrn Fabrikanten suchten die natürliche Wirkung dieser Umstände zu steigern durch eine allgemeine Lohnherabsetzung von 10%. Dies geschah sozusagen zur Einweihungsfeier der neuen Freihandelsära. Dann folgte weitere Herabsetzung um 8 1/3%, sobald der Arbeitstag auf 11, und um das Doppelte, sobald er definitiv auf 10 Stunden verkürzt wurde. Wo es daher irgendwie die Verhältnisse zuließen, fand eine Lohnherabsetzung von wenigstens 25% statt.¹⁴³

¹⁴³ „Ich fand, daß man Leuten, die 10 sh. wöchentlich erhalten hatten, 1 sh. abzog auf Rechnung der allgemeinen Lohnherabsetzung von 10% und weitere 1 sh. 6 d. für die Zeitverkürzung, zusammen 2 sh. 6 d., und trotz alledem hielt die Mehrzahl fest an der Zehnstundenbill.“ (l.c.)

Unter so günstig vorbereiteten Chancen begann man die Agitation unter den Arbeitern für Widerruf des Akts von 1847. Kein

Neither lies, bribery, nor threats were spared in this attempt. But all was in vain.

↓ Petitions: petitioners testified that they were forced.

Concerning the half-dozen petitions in which workpeople were made to complain of “their oppression by the Act,” the petitioners themselves declared under oral examination, that their signatures had been extorted from them. “They felt themselves oppressed, but not exactly by the Factory Act.”¹⁴⁴

¹⁴⁴ “‘Though I signed it [the petition], I said at the time I was putting my hand to a wrong thing.’ ‘Then why did you put your hand to it?’ ‘Because I should have been turned off if I had refused.’ Whence it would appear that this petitioner felt himself ‘oppressed,’ but not exactly by the Factory Act.” l.c., p. 102.

↓ Press campaign to denounce the factory inspectors:

But if the manufacturers did not succeed in making the workpeople speak as they wished, they themselves shrieked all the louder in press and Parliament in the name of the workpeople. They denounced the Factory Inspectors as a kind of revolutionary commissioners like those of the French National Convention ruthlessly sacrificing the unhappy factory workers to their humanitarian crotchet. This manoeuvre also failed. Factory Inspector Leonard Homer conducted in his own person, and through his sub-inspectors, many examinations of witnesses in the factories of Lancashire. About 70% of the workpeople examined declared in favour of 10 hours, a much smaller percentage in favour of 11, and an altogether insignificant minority for the old 12 hours.¹⁴⁵

¹⁴⁵ p. 17, l.c. In Mr. Homer’s district 10,270 adult male laborers were thus examined in 181

Mittel des Betrugs, der Verführung und der Drohung wurde dabei verschmäht, aber alles umsonst.

Mit Bezug auf das halbe Dutzend Petitionen, worin die Arbeiter klagten mußten über „ihre Unterdrückung durch den Akt“, erklärten die Bittsteller selbst, bei mündlichem Verhör, ihre Unterschriften seien abgenötigt worden. „Sie seien unterdrückt, aber von jemand anders als dem Fabrikakt.“¹⁴⁴

¹⁴⁴ „Als ich die Petition unterzeichnete, erklärte ich zugleich, ich tue damit etwas Schlechtes.—Warum habt ihr sie denn unterzeichnet?—Weil man mich im Weigerungsfalle auf das Pflaster geworfen hätte.—Der Bittsteller fühlte sich in der Tat „unterdrückt“, aber nicht grade durch den Fabrikakt.“ (l.c. p. 102.)

Wenn es aber den Fabrikanten nicht gelang, die Arbeiter in ihrem Sinn sprechen zu machen, schrien sie selbst nur um so lauter in Presse und Parlament im Namen der Arbeiter. Sie denunzierten die Fabrikinspektoren als eine Art Konventskommissäre, die ihrer Weltverbesserungsrille den unglücklichen Arbeiter unbarmherzig aufopferten. Auch dies Manöver schlug fehl. Fabrikinspektor Leonard Horner stellte in eigner Person und durch seine Unterinspektoren zahlreiche Zeugenverhöre in den Fabriken Lancashires an. Ungefähr 70% der verhörten Arbeiter erklärten sich für 10 Stunden, eine viel geringere Prozentzahl für 11 und eine ganz unbedeutende Minorität für die alten 12 Stunden.¹⁴⁵

¹⁴⁵ l.c. p. 17. In Herrn Horners Distrikt wurden so 10 270 erwachsne männliche Arbeiter in

factories. Their evidence is to be found in the appendix to the Factory Reports for the half-year ending October 1848. These examinations furnish valuable material in other connexions also.

↓ They forced the workers to work longer and then expected them to say it was voluntary:

397:1 Another “friendly” dodge was to make the adult males work 12 to 15 hours, and then to blazon abroad this fact as the best proof of what the proletariat desired in its heart of hearts. But the “ruthless” Factory Inspector Leonard Homer was again to the fore. The majority of the “over-times” declared:

“They would much prefer working ten hours for less wages, but that they had no choice; that so many were out of employment (so many spinners getting very low wages by having to work as piecers, being unable to do better), that if they refused to work the longer time, others would immediately get their places, so that it was a question with them of agreeing to work the longer time, or of being thrown out of employment altogether.”¹⁴⁶

¹⁴⁶ l.c. See the evidence collected by Leonard Homer himself, Nos. 69, 70, 71, 72, 92, 93, and that collected by Sub-Inspector A., Nos. 51, 52, 58, 59, 62, 70, of the Appendix. One manufacturer, too, tells the plain truth. See No. 14, and No. 265, l.c.

181 Fabriken verhört. Man findet ihre Aussagen im Appendix des Fabrikreports für das Halbjahr endend Oktober 1848. Diese Zeugenverhöre bieten auch in andrer Beziehung schätzbares Material.

301:1–2 Ein andres „gütliches“ Manöver war, die erwachsenen männlichen Arbeiter 12 bis 15 Stunden arbeiten zu lassen und dann diese Tatsache für den besten Ausdruck der proletarischen Herzenswünsche zu erklären. Aber der „unbarmherzige“ Fabrikinspektor Leonard Horner war wieder an Ort und Stelle. Die meisten „Überstunden“ sagten aus,

„sie würden es bei weitem vorziehen, 10 Stunden für geringeren Arbeitslohn zu arbeiten, aber sie hätten keine Wahl; so viele von ihnen seien arbeitslos, so viele Spinner gezwungen, als bloße piecers zu arbeiten, daß, wenn sie die längere Arbeitszeit verweigerten, andre sofort ihre Stellen einnehmen würden, so daß die Frage so für sie stehe: entweder die längere Zeit arbeiten oder auf dem Pflaster liegen.“¹⁴⁶

¹⁴⁶ l.c. Siehe die von Leonard Horner selbst gesammelten Aussagen Nr. 69, 70, 71, 72, 92, 93 und die von Subinspektor A. gesammelten Nr. 51, 52, 58, 59, 62, 70 des „Appendix“. Ein Fabrikant schenkte selbst klaren Wein ein. Siehe Nr. 14 nach Nr. 265 l.c.

10.6.f. [Victorious Revolt of Capital against 10 Hours Bill]

397:2/o The preliminary campaign of capital thus came to grief, and the Ten Hours’ Act came into force May 1st, 1848. But the further development of the exterior circumstances created the conditions for a backlash:

(1) Fiasco of Chartist Party.

But meanwhile the fiasco of the Chartist party whose leaders were imprisoned, and

302:1 Der vorläufige Feldzug des Kapitals war mißglückt, und das Zehnstundengesetz trat am 1. Mai 1848 in Kraft.

Unterdes hatte jedoch das Fiasko der Chartistenpartei, deren Führer eingekerkert und

whose organisation was dismembered, had shaken the confidence of the English working-class in its own strength.

↓ (2) Defeat of June insurrection in Paris.

Soon after this the June insurrection in Paris and its bloody suppression united, in England as on the Continent, all fractions of the ruling classes, landlords and capitalists, stock-exchange wolves and shop-keepers, Protectionists and Freetraders, government and opposition, priests and freethinkers, young whores and old nuns, under the common cry for the salvation of Property, Religion, the Family and Society.

↓ (3) General anti-working-class sentiments:

The working-class was everywhere proclaimed, placed under a ban, under a virtual law of suspects.

↓ These circumstances allowed a victorious open revolt of the capitalists against the 10 hours bill and the other legislative regulation of the working-day.

The manufacturers had no need any longer to restrain themselves. They broke out in open revolt not only against the Ten Hours' Act, but against the whole of the legislation that since 1833 had aimed at restricting in some measure the "free" exploitation of labor-power. It was a pro-slavery rebellion in miniature, carried on for over two years with a cynical recklessness, a terrorist energy all the cheaper because the rebel capitalist risked nothing except the skin of his "hands."

↓ Achilles heel of the existing legislation is that (1) male adults are not regulated, and (2) the legal day during which the work had to be performed was still 15 hours.

398:1 To understand that which follows we must remember that the Factory Acts of 1833, 1844, and 1847 were all three in force so far as the one did not amend the other: that not one of these limited the working-

deren Organisation zersprengt, bereits das Selbstvertrauen der englischen Arbeiterklasse erschüttert.

Bald darauf vereinigte die Pariser Juni-Insurrektion und ihre blutige Erstickung, wie im kontinentalen Europa so in England, alle Fraktionen der herrschenden Klassen, Grundeigentümer und Kapitalisten, Börsenwölfe und Krämer, Protektionisten und Freihändler, Regierung und Opposition, Pfaffen und Freigeister, junge Huren und alte Nonnen, unter dem gemeinschaftlichen Ruf zur Rettung des Eigentums, der Religion, der Familie, der Gesellschaft!

Die Arbeiterklasse wurde überall verfeimt, in den Bann getan, unter das „loi des suspects“ gestellt.

open revolt of the capitalists against the 10 hours bill and the other legislative regulation of the working-day.

Der Herrn Fabrikanten brauchten sich also nicht zu genieren. Sie brachen in offene Revolte aus nicht nur wider das Zehnstundengesetz, sondern wider die ganze Gesetzgebung, welche seit 1833 die „freie“ Aus-saugung der Arbeitskraft einigermaßen zu zügeln suchte. Es war eine Proslavery Rebellion in Miniatur, während mehr als zwei Jahren durchgeführt mit zynischer Rücksichtslosigkeit, mit terroristischer Energie, beide um so wohlfeiler, als der rebellische Kapitalist nichts riskierte außer der Haut Arbeiter.

(1) male adults are not regulated, and (2) the legal day during which the work had to be performed was still 15 hours.

302:2 Zum Verständnis des Nachfolgenden muß man sich erinnern, daß die Fabrikakte von 1833, 1844 und 1847 alle drei in Rechtskraft, soweit der eine nicht den andern amendiert; daß keiner derselben den

day of the male worker over 18, and that since 1833 the 15 hours from 5.30 a.m. to 8.30 p.m. had remained the legal "day," within the limits of which at first the 12, and later the 10 hours' labor of young persons and women had to be performed under the prescribed conditions.

Question 742 *Why were male workers not protected by the laws?*

(1) In order to take advantage of this, factory owners discharge many women and children and re-institute night labor for men.

398:2 The manufacturers began by here and there discharging a part of, in many cases half of the young persons and women employed by them, and then, for the adult males, restoring the almost obsolete night-work. The Ten Hours' Act, they cried, leaves no other alternative.¹⁴⁷

¹⁴⁷ Reports, etc., for 31st October, 1848, pp. 133, 134.

(2) Meal times were now given outside the 10-hour day:

398:3p Their second step dealt with the legal pauses for meals. Let us hear the Factory Inspectors.

"Since the restriction of the hours of work to ten, the factory occupiers maintain, although they have not yet practically gone the whole length, that supposing the hours of work to be from 9 a.m. to 7 p.m. they fulfil the provisions of the statutes by allowing an hour before 9 a.m. and half an hour after 7 p.m. [for meals]. In some cases they now allow an hour, or half an hour for dinner, insisting at the same time, that they are not bound to allow any part of the hour and a half in the course of the factory working-day."¹⁴⁸

Arbeitstag des männlichen Arbeiters über 18 Jahre beschränkt und daß seit 1833 die fünfzehnstündige Periode von halb 6 Uhr morgens bis halb 9 Uhr abends der gesetzliche „Tag“ blieb, innerhalb dessen erst die zwölf- später die zehnstündige Arbeit der jungen Personen und Frauenzimmer unter den vorgeschriebenen Bedingungen zu verrichten war.

302:3 Die Fabrikanten begannen hie und da mit Entlassung eines Teils, manchmal der Hälfte, der von ihnen beschäftigten jungen Personen und Arbeiterinnen und stellten dagegen die fast verschollene Nachtarbeit unter den Erwachsenen wieder her. Das Zehnstundengesetz, riefen sie, lasse ihnen keine andere Alternative!¹⁴⁷

¹⁴⁷ „Reports etc. for 31st October 1848“, p. 133, 134.

10-hour day:

302:4–303:0 Der zweite Schritt bezog sich auf die gesetzlichen Pausen für Mahlzeiten. Hören wir die Fabrikinspektoren.

„Seit der Beschränkung der Arbeitsstunden auf 10 behaupten die Fabrikanten, obgleich sie praktisch ihre Ansicht noch nicht bis zur letzten Konsequenz durchführen, daß, wenn z.B. von 9 Uhr morgens bis 7 Uhr abends gearbeitet wird, sie den gesetzlichen Vorschriften genug tun, indem sie eine Stunde für Mahlzeit vor 9 Uhr morgens und eine halbe Stunde nach 7 Uhr abends, also 1 1/2 Stunden für Mahlzeiten geben. In einigen Fällen erlauben sie jetzt eine halbe oder ganze Stunde für Mittagessen, bestehn aber zugleich darauf, sie seien durchaus nicht verpflichtet, irgendeinen Teil der 1 1/2 Stunden im Lauf des zehnstündigen Arbeitstags einzuräumen.“¹⁴⁸

¹⁴⁸ Reports, etc., for 30th April, 1848, p. 47.

398:3p/o The manufacturers maintained therefore that the scrupulously strict provisions of the Act of 1844 with regard to meal-times only gave the operatives permission to eat and drink before coming into, and after leaving the factory—i.e., at home. And why should not the workpeople eat their dinner before 9 in the morning? The crown lawyers, however, decided that the prescribed meal-times

“must be in the interval during the working-hours, and that it will not be lawful to work for 10 hours continuously, from 9 a.m. to 7 p.m., without any interval.”¹⁴⁹

¹⁴⁹ Reports, etc., for 31st October, 1848, p. 130.

(3) The real revolt begins with the stretching-out of the work times for the children:

399:1 After these pleasant demonstrations, Capital preluded its revolt by a step which agreed with the letter of the law of 1844, and was therefore legal.

399:2 The Act of 1844 certainly prohibited the employment after 1 p.m. of such children, from 8 to 13, as had been employed before noon. But it did not regulate in any way the 6 1/2 hours' work of the children whose work-time began at 12 midday or later. Children of 8 might, if they began work at noon, be employed from 12 to 1, 1 hour; from 2 to 4 in the afternoon, 2 hours; from 5 to 8.30 in the evening, 3 1/2 hours; in all, the legal 6 1/2 hours. Or better still. In order to make their work coincide with that of the adult male laborers up to 8.30 p.m., the manufacturers only had to give them no work till 2 in the afternoon, they could then keep them in the factory without intermis-

¹⁴⁸ „Reports etc. for 30th April 1848“, p. 47.

303:1–2 Die Herrn Fabrikanten behaupteten also, die peinlich genauen Bestimmungen des Akts von 1844 über Mahlzeiten gäben den Arbeitern nur die Erlaubnis, vor ihrem Eintritt in die Fabrik und nach ihrem Austritt aus der Fabrik, also bei sich zu Hause, zu essen und zu trinken! Und warum sollten die Arbeiter auch nicht vor 9 Uhr morgens ihr Mittagessen einnehmen? Die Kronjuristen entschieden jedoch, daß die vorgeschriebenen Mahlzeiten

„in Pausen während des wirklichen Arbeitstags gegeben werden müssen und daß es ungesetzlich, 10 Stunden nacheinander von 9 Uhr morgens bis 7 Uhr abends ohne Unterbrechung arbeiten zu lassen“.¹⁴⁹

¹⁴⁹ „Reports etc. for 31st Oct. 1848“, p. 130.

303:3 Nach diesen gemüthlichen Demonstrationen leitete das Kapital seine Revolte ein durch einen Schritt, der dem Buchstaben des Gesetzes von 1844 entsprach, also legal war.

303:4–304:0 Das Gesetz von 1844 verbot allerdings, Kinder von 8 bis 13 Jahren, die vor 12 Uhr vormittags beschäftigt würden, wieder nach 1 Uhr mittags zu beschäftigen. Aber es regelte in keiner Weise die 6 1/2stündige Arbeit der Kinder, deren Arbeitszeit um 12 Uhr vormittags oder später begann! Achtjährige Kinder konnten daher, wenn sie die Arbeit um 12 Uhr vormittags begannen, von 12 bis 1 Uhr verwandt werden, 1 Stunde; von 2 Uhr bis 4 Uhr nachmittags, 2 Stunden, und von 5 Uhr bis halb 9 Uhr abends, 3 1/2 Stunden; alles in allem die gesetzlichen 6 1/2 Stunden! Oder noch besser. Um ihre Verwendung der Arbeit erwachsener männlicher Arbeiter bis halb 9

sion till 8.30 in the evening.

“And it is now expressly admitted that the practice exists in England from the desire of mill-owners to have their machinery at work for more than 10 hours a-day, to keep the children at work with male adults after all the young persons and women have left, and until 8.30 p.m. if the factory-owners choose.”¹⁵⁰

¹⁵⁰ Reports, etc., l.c., p. 142.

399:2 Workmen and factory inspectors protested on hygienic and moral grounds, but Capital answered:

“My deeds upon my head! I crave the law, The penalty and forfeit of my bond.”

399:3/o In fact, according to statistics laid before the House of Commons on July 26th, 1850, in spite of all protests, on July 15th, 1850, 3,742 children were subjected to this “practice” in 257 factories.¹⁵¹

¹⁵¹ Reports etc., for 31st October, 1850, pp. 5, 6.

(4) Another trick: children's breaks in the afternoons were not regulated.

Still, this was not enough. The lynx eye of Capital discovered that the Act of 1844 did not allow 5 hours' work before mid-day without a pause of at least 30 minutes for refreshment, but prescribed nothing of the kind for work after mid-day. Therefore, it claimed and obtained the enjoyment not only of making children of 8 drudge without intermission from 2 to 8.30 p.m., but also of making them hunger during that time.

“Ay, his heart.

Uhr abends anzupassen, brauchten ihnen die Fabrikanten kein Werk zu geben vor 2 Uhr nachmittags und konnten sie dann ununterbrochen in der Fabrik halten bis halb 9 Uhr abends!

„Und es wird jetzt ausdrücklich zugestanden, daß neuerdings infolge der Fabrikantengier, ihre Maschinerie länger als 10 Stunden laufen zu lassen, sich die Praxis in England eingeschlichen hat, acht- bis dreizehnjährige Kinder beiderlei Geschlechts nach Entfernung aller jungen Personen und Weiber aus der Fabrik allein mit den erwachsenen Männern bis halb 9 Uhr abends arbeiten zu lassen.“¹⁵⁰

¹⁵⁰ „Reports etc.“, l.c. p. 142.

304:1–2 Arbeiter und Fabrikinspektoren protestierten aus hygienischen und moralischen Gründen. Aber das Kapital antwortete:

„Meine Taten auf mein Haupt! Mein Recht verlang' ich!
Die Buße und Verpfändung meines Scheins!“

304:3–4 In der Tat waren nach statistischer Vorlage an das Unterhaus vom 26. Juli 1850, trotz aller Proteste, am 15. Juli 1850 3732 Kinder in 257 Fabriken dieser „Praxis“ unterworfen.¹⁵¹

¹⁵¹ „Reports etc. for 31st Oct. 1850“, p. 5, 6.

Noch nicht genug! Das Luchsauge des Kapitals entdeckte, daß der Akt von 1844 fünfstündige Arbeit des Vormittags nicht ohne Pause von wenigstens 30 Minuten für Erfrischung erlaubt, aber nichts der Art für die Nachmittagsarbeit vorschreibt. Es verlangte und ertrotzte daher den Genuß, achtjährige Arbeiterkinder unausgesetzt von 2 bis halb 9 Uhr abends nicht nur schanzten, sondern auch hungern zu lassen!

„Ja, die Brust,

So says the bond.”

⇓ Footnote 152 has an important remark:

¹⁵² The nature of capital remains the same in its developed as in its undeveloped form. In the code which the influence of the slave-owners, shortly before the outbreak of the American Civil War, imposed on the territory of New Mexico, it is said that the laborer, in as much as the capitalist has bought his labor-power, “is his (the capitalist’s) money.” The same view was current among the Roman patricians. The money they had advanced to the plebeian debtor had been transformed via the means of subsistence into the flesh and blood of the debtor. This “flesh and blood” were, therefore, “their money.” Hence, the Shylock-law of the Ten Tables. Linguet’s hypothesis that the patrician creditors from time to time prepared, beyond the Tiber, banquets of debtors’ flesh, may remain as undecided as that of Daumer on the Christian Eucharist.

(5) From following the Laws to the letter to open efforts to abolish the Laws:

400:1/o This Shylock-clinging to the letter of the law of 1844, so far as it regulated children’s labor, was but to lead up to an open revolt against the same law, so far as it regulated the labor of “young persons and women.” It will be remembered that the abolition of the “false relay system” was the chief aim and object of that law. The masters began their revolt with the simple declaration that the sections of the Act of 1844 which prohibited the *ad libitum* use of young persons and women in such short fractions of the day of 15 hours as the employer chose, were

“comparatively harmless” so long as the work-time was fixed at 12 hours. But under the Ten Hours’ Act they were a “grievous

So sagt der Schein.”¹⁵²

¹⁵² Die Natur des Kapitals bleibt dieselbe, in seinen unentwickelten, wie in seinen entwickelten Formen. In dem Gesetzbuch, das der Einfluß der Sklavenhalter kurz vor Ausbruch des Amerikanischen Bürgerkriegs dem Territorium von New-Mexico aufherrsichte, heißt es: der Arbeiter, soweit der Kapitalist seine Arbeitskraft gekauft hat, „ist sein (des Kapitalisten) Geld“. („The laborer is his (the capitalist’s) money.“) Dieselbe Anschauung war gangbar bei den römischen Patriziern. Das Geld, das sie dem plebejischen Schuldner vorgeschossen, hatte sich vermittelst seiner Lebensmittel in Fleisch und Blut des Schuldners verwandelt. Dies „Fleisch und Blut“ war daher „ihr Geld“. Daher das Shylock-sche Gesetz der 10 Tafeln! Linguets Hypothese, daß die patrizischen Gläubiger von Zeit zu Zeit jenseits der Tiber Festschmäuse in gekochtem Schuldnerfleisch veranstalteten, bleibe ebenso dahingestellt wie Daumers Hypothese über das christliche Abendmahl.

304:5–305:1 Die Shylocksche Festklammern am Buchstaben des Gesetzes von 1844, soweit es die Kinderarbeit regelt, sollte jedoch nur die offene Revolte gegen dasselbe Gesetz vermitteln, soweit es die Arbeit von „jungen Personen und Frauenzimmern“ regelt. Man erinnert sich, daß die Abschaffung des „falschen Relaisystems“ Hauptzweck und Hauptinhalt jenes Gesetzes bildet. Die Fabrikanten eröffneten ihre Revolte mit der einfachen Erklärung, die Sektionen des Akts von 1844, welche beliebigen Nießbrauch der jungen Personen und Frauenzimmer in beliebigen kürzeren Abschnitten des fünfzehnstündigen Fabriktags verbieten, seien

„vergleichungsweise harmlose (comparatively harmless) geblieben, solange die Arbeitszeit auf 12 Stunden eingeschränkt war. Unter dem

hardship.”¹⁵³

¹⁵³ Reports, etc., for 31st Oct., 1848, p. 133. They informed the inspectors in the coolest manner that they should place themselves above the letter of the law, and re-introduce the old system on their own account.¹⁵⁴ They were acting in the interests of the ill-advised operatives themselves,

“in order to be able to pay them higher wages.” “This was the only possible plan by which to maintain, under the Ten Hours’ Act, the industrial supremacy of Great Britain.”¹⁵⁵ “Perhaps it may be a little difficult to detect irregularities under the relay system; but what of that? Is the great manufacturing interest of this country to be treated as a secondary matter in order to save some little trouble to Inspectors and Sub-Inspectors of Factories?”¹⁵⁶

¹⁵⁴ Thus, among others, Philanthropist Ashworth to Leonard Horner, in a disgusting Quaker letter. (Reports, etc., April, 1849, p. 4.)

¹⁵⁵ Reports etc. for 31st Oct. 1848, p. 138.

¹⁵⁶ I.c., p. 140.

(6) Storm of petitions by the factory-owners against suits of the Factory Inspectors.

401:1 All these shifts naturally were of no avail. The Factory Inspectors appealed to the Law Courts. But soon such a cloud of dust in the way of petitions from the masters overwhelmed the Home Secretary, Sir George Grey, that in a circular of August 5th, 1848, he recommends the inspectors not

“to lay informations against mill-owners for a breach of the letter of the Act, or for employment of young persons by relays in cases in which there is no reason to believe that such young persons have been actually employed for a longer period than that sanctioned by law.”

Zehnstundengesetz seien sie eine unerträgliche Unbill (hardschip)“.¹⁵³

¹⁵³ „Report etc. for 31st Oct. 1848“, p. 133.

305:2–3 Sie zeigten daher den Inspektoren in der kühnsten Weise an, daß sie sich über den Buchstaben des Gesetzes hinwegsetzen und das alte System auf eigene Faust wieder einführen würden.¹⁵⁴ Es geschehe im Interesse der übelberatnen Arbeiter selbst,

„um ihnen höhere Löhne zahlen zu können“. „Es sei der einzig mögliche Plan, um unter dem Zehnstundengesetz die industrielle Suprematie Großbritanniens zu erhalten.“¹⁵⁵ „Es möge schwer sein, Unregelmäßigkeiten unter dem Relaisystem zu entdecken, aber was heiße das? (what of that?) Soll das große Fabrikinteresse dieses Landes als ein sekundäres Ding behandelt werden, um den Fabrikinspektoren und Subinspektoren ein bißchen mehr Mühe (some little trouble) zu sparen?“¹⁵⁶

¹⁵⁴ So unter andren Philanthrop Ashworth in einem quäkerhaft widrigen Brief an Leonard Horner. „Rep. Apr. 1849“, p. 4.)

¹⁵⁵ „Reports etc. for 31st Oct. 1848“, p. 138.

¹⁵⁶ I.c., p. 140.

305:2 Alle diese Flausen halfen natürlich nichts. Die Fabrikinspektoren schritten gerichtlich ein. Bald aber überschüttete eine solche Staubwolke von Fabrikantenpetitionen den Minister des Innern, Sir George Grey, daß er in einem Zirkular vom 5. August 1848 die Inspektoren anwies,

„im allgemeinen nicht einzuschreiten wegen Verletzung des Buchstabens des Akts, so oft das Relaisystem nicht erwiesenermaßen mißbraucht werde, um junge Personen und Frauenzimmer über 10 Stunden arbeiten zu lassen“.

↓ At least in Scotland, these petitions were successful:

Hereupon, Factory Inspector J. Stuart allowed the so-called relay system during the 15 hours of the factory day throughout Scotland, where it soon flourished again as of old. The English Factory Inspectors, on the other hand, declared that the Home Secretary had no power dictatorially to suspend the law, and continued their legal proceedings against the pro-slavery rebellion.

(7) The courts were a farce, blurring the distinction between legal and illegal:

401:2/o But what was the good of summoning the capitalists when the Courts in this case the country magistrates—Cobbett's "Great Unpaid"—acquitted them? In these tribunals, the masters sat in judgment on themselves An example. One Eskrigge, cotton-spinner, of the firm of Kershaw, Leese, & Co., had laid before the Factory Inspector of his district the scheme of a relay system intended for his mill. Receiving a refusal, he at first kept quiet. A few months later, an individual named Robinson, also a cotton-spinner, and if not his Man Friday, at all events related to Eskrigge, appeared before the borough magistrates of Stockport on a charge of introducing the identical plan of relays invented by Eskrigge. Four Justices sat, among them three cottonspinners, at their head this same inevitable Eskrigge. Eskrigge acquitted Robinson, and now was of opinion that what was right for Robinson was fair for Eskrigge. Supported by his own legal decision, he introduced the system at once into his own factory.¹⁵⁸ Of course, the composition of this tribunal was in itself a violation of the law.¹⁵⁹

305:3 Hierauf erlaubte Fabrikinspektor J. Stuart das sogenannte Ablösungssystem während der fünfzehnstündigen Periode des Fabriktags in ganz Schottland, wo es bald wieder in alter Weise aufblühte. Die englischen Fabrikinspektoren dagegen erklärten, der Minister besitze keine diktatorische Gewalt zur Suspension der Gesetze, und fuhren mit gerichtlicher Prozedur wider die Proslavery-Rebellen fort.

306:1–2 Wozu jedoch alle Ladung vors Gericht, sobald die Gerichte, die county magistrates¹⁵⁷, freisprachen? In diesen Gerichten saßen die Herrn Farikanten über sich selbst zu Gericht. Ein Beispiel. Ein gewisser Eskrigge, Baumwollspinner von der Firma Kershaw, Leese et Co., hatte dem Fabrikinspektor seines Distrikts das Schema eines für seine Fabrik bestimmten Relaisystems vorgelegt. Abschlägig beschieden, verhielt er sich zunächst passiv. Wenige Monate später stand ein Individuum namens Robinson, ebenfalls Baumwollspinner, und wenn nicht der Freitag, so jedenfalls der Verwandte des Eskrigge, vor den Borough Justices zu Stockport, wegen Einführung des identischen, von Eskrigge ausgeheckten Relaisplans. Es saßen 4 Richter, darunter 3 Baumwollspinner, an ihrer Spitze derselbe unvermeidliche Eskrigge. Eskrigge sprach den Robinson frei und erklärte nun, was dem Robinson recht, sei dem Eskrigge billig. Auf seine eigne rechtskräftige Entscheidung gestützt, führte er sofort das System in seiner eignen Fabrik ein.¹⁵⁸ Alldings war schon die Zusammensetzung dieser Gerichte eine offene Verletzung des Gesetzes.¹⁵⁹

These judicial farces, exclaims Inspector Howell, "urgently call for a remedy—either that the law should be so altered as to be made to conform to these decisions, or that it should be administered by a less fallible tribunal, whose decisions would conform to the law ... when these cases are brought forward. I long for a stipendiary magistrate."¹⁶⁰

¹⁵⁷ Diese 'county magistrates', the 'great unpaid', as William Cobbett described them, are unpaid judges chosen from the most eminent people in each county. They constitute in fact the patrimonial jurisdiction of the ruling classes.

¹⁵⁸ Reports, etc., for 30th April, 1849, pp. 21, 22. Cf like examples *ibid.*, pp. 4, 5.

¹⁵⁹ By I. and II. Will. IV., ch. 24, s. 10, known as Sir John Wobhouse's Factory Act, it was forbidden to any owner of a cotton-spinning or weaving mill, or the father, son, or brother of such owner, to act as Justice of the Peace in any inquiries that concerned the Factory Act.

¹⁶⁰ *l.c.*

(8) Therefore even Leonard Horner says that due to the relay system the Factory Acts are unenforcable:

402:1p The crown lawyers declared the masters' interpretation of the Act of 1848 absurd. But the Saviours of Society would not allow themselves to be turned from their purpose. Leonard Homer reports,

"Having endeavoured to enforce the Act ... by ten prosecutions in seven magisterial divisions, and having been supported by the magistrates in one case only ... I considered it useless to prosecute more for this evasion of the law. That part of the Act of 1848 which was framed for securing uniformity in the hours of work, ... is thus no longer in force in my district (Lancashire). Neither have the sub-inspectors or myself any means of satisfying ourselves, when we inspect a mill working by shifts, that the young persons and women are

„Diese Art gerichtlicher Farcen“, ruft Inspektor Howell aus, „schreien nach einem Heilmittel ... entweder paßt das Gesetz diesen Urtheilssprüchen an, oder laßt es verwalten durch ein minder fehlbares Tribunal, das seine Entscheidungen dem Gesetz anpaßt ... in allen solchen Fällen. Wie sehnt man sich nach einem bezahlten Richter!“¹⁶⁰

¹⁵⁷ Diese „county magistrates“, die „great unpaid“, wie W. Cobbett sie nennt, sind eine Art unbezahlter Friedensrichter, aus den Honoratioren der Grafschaften gebildet. Sie bilden in der Tat die Patrimonialgerichte der herrschenden Klassen.

¹⁵⁸ „Reports etc. for 30th April 1849“, p. 21, 22. Vgl. ähnliche Beispiele, *ibid.*, p. 4, 5.

¹⁵⁹ Durch 1 und 2 W[illia]m IV., c. 29, s. 10, bekannt als Sir John Hobhouse's Factory Act, wird verboten, daß irgendein Besitzer einer Baumwollspinnerei oder Weberei oder Vater, Sohn und Bruder eines solchen Besitzers in Fragen, die den Factory Act betreffen, als Friedensrichter funktionieren.

¹⁶⁰ „Reports etc. for 30th April 1849“ [p. 22].

306:2–307:0 Die Kronjuristen erklärten die Fabrikanten-Interpretation des Aktes von 1848 für abgeschmackt, aber die Gesellschaftsretter ließen sich nicht beirren.

„Nachdem ich“, berichtet Leonard Horner, „durch 10 Verfolgungen in 7 verschiedenen Gerichtsbezirken versucht habe, das Gesetz zu erzwingen und nur in einem Fall von den Magistraten unterstützt wurde, ... halte ich weitere Verfolgung wegen Umgehung des Gesetzes für nutzlos. Der Teil des Akts, der verfaßt wurde, um Uniformität in den Arbeitsstunden zu schaffen, ... existiert nicht mehr in Lancashire. Auch besitze ich mit meinen Unteragenten durchaus kein Mittel, uns zu versichern, daß Fabriken, wo sog. Relaisystem herrscht,

not working more than 10 hours a-day ... In a return of the 30th April, ... of millowners working by shifts, the number amounts to 114, and has been for some time rapidly increasing. In general, the time of working the mill is extended to 13 1/2 hours' from 6 a.m. to 7 1/2 p.m., ... in some instances it amounts to 15 hours, from 5 1/2 a.m. to 8 1/2 p.m."¹⁶¹

¹⁶¹ Reports, etc., for 30th April, 1849, p. 5.

402:1p/o Already, in December, 1848, Leonard Horner had a list of 65 manufacturers and 29 overlookers who unanimously declared that no system of supervision could, under this relay system, prevent enormous over-work.¹⁶² Now, the same children and young persons were shifted from the spinning-room to the weaving-room, now, during 15 hours, from one factory to another.¹⁶³ How was it possible to control a system which,

“under the guise of relays, is some one of the many plans for shuffling ‘the hands’ about in endless variety, and shifting the hours of work and of rest for different individuals throughout the day, so that you may never have one complete set of hands working together in the same room at the same time.”¹⁶⁴

¹⁶² Reports, etc., for 31st October, 1849, p. 6.

¹⁶³ Reports, etc., for 30th April, 1849, p. 21.

¹⁶⁴ Reports, etc., for 31st October, 1848, p. 95.

(9) More detailed look at the relay system:

403:1/o But altogether independently of actual over-work, this so-called relay system was an offspring of capitalistic fantasy, such as Fourier, in his humorous sketches of “Courses Seances,” has never surpassed, except that the “attraction of labor” was changed into the attraction of capital. Look, for example, at those schemes of the mas-

junge Personen und Frauenzimmer nicht über 10 Stunden beschäftigen ... Ende April 1849 arbeiteten schon 114 Fabriken in meinem Distrikt nach dieser Methode, und ihre Anzahl nimmt in der letzten Zeit reißend zu. Im allgemeinen arbeiten sie jetzt 13 1/2 Stunden, von 6 Uhr morgens bis halb 8 Uhr abends; in einigen Fällen 15 Stunden von halb 6 Uhr morgens bis halb 9 Uhr abends.“¹⁶¹

¹⁶¹ „Reports etc. for 30th April 1849“, p. 5.

307:1–2 Schon Dezember 1848 besaß Leonard Horner eine Liste von 65 Fabrikanten und 29 Fabrikaufsehern, die einstimmig erklärten, kein System der Oberaufsicht könne unter diesem Relaisystem die intensivste Überarbeit verhindern.¹⁶² Bald wurden dieselben Kinder und jungen Personen aus der Spinnstube in die Webestube usw., bald, während 15 Stunden, aus einer Fabrik in die andre geschoben (shifted).¹⁶³ Wie ein System kontrollieren,

„welches das Wort Ablösung mißbraucht, um die Hände in endloser Mannigfaltigkeit wie Karten durcheinanderzumischen und die Stunden der Arbeit und der Rast für die verschiedenen Individuen täglich so zu verschieben, daß ein und dasselbe vollständige Assortiment von Händen niemals an demselben Platze zur selben Zeit zusammenwirkt“!¹⁶⁴

¹⁶² „Rep. etc. for 31st Oct. 1849“, p. 6.

¹⁶³ „Rep. etc. for 30th April 1849“, p. 21.

¹⁶⁴ „Rep. etc. 31st Oct. 1848“, p. 95.

307:3/o Aber ganz abgesehen von wirklicher Überarbeitung, war dies sog. Relaisystem eine Ausgeburt der Kapitalphantasie, wie sie Fourier in seinen humoristischen Skizzen der „coursées séances“ nie übertroffen hat, nur daß die Attraktion der Arbeit verwandelt war in die Attraktion des Kapitals. Man sehe sich jene Fabrikantensche-

ters which the “respectable” press praised as models of “what a reasonable degree of care and method can accomplish.” The *personnel* of the workpeople was sometimes divided into from 12 to 14 categories, which themselves constantly changed and recharged their constituent parts. During the 15 hours of the factory day, capital dragged in the laborer now for 30 minutes, now for an hour, and then pushed him out again, to drag him into the factory and to thrust him out afresh, hounding him hither and thither, in scattered shreds of time, without ever losing hold of him until the full 10 hours’ work was done.

↓ Comparison with stage.

As on the stage, the same persons had to appear in turns in the different scenes of the different acts. But as an actor during the whole course of the play belongs to the stage, so the operatives, during 15 hours, belonged to the factory, without reckoning the time for going and coming.

↓ What did the workers do in the (unpaid) long breaks during the day?

Thus the hours of rest were turned into hours of enforced idleness, which drove the youths to the pot-house, and the girls to the brothel. At every new trick that the capitalist, from day to day, hit upon for keeping his machinery going 12 or 15 hours without increasing the number of his hands, the worker had to swallow his meals now in this fragment of time, now in that.

↓ Manufacturers steal from the laborers, contradicting the propaganda against the corn laws.

At the time of the 10 hours’ agitation, the

mas an, welche die gute Presse pries als Muster von dem, „was ein vernünftiger Grad von Sorgfalt und Methode ausrichten kann“ (what a reasonable degree of care and method can accomplish“). Das Arbeiterpersonal wurde manchmal in 12 bis 15 Kategorien verteilt, die selbst wieder ihre Bestandteile beständig wechselten. Während der fünfzehnstündigen Periode des Fabriktags zog das Kapital den Arbeiter jetzt für 30 Minuten, jetzt für eine Stunde an und stieß ihn dann wieder ab, um ihn von neuem in die Fabrik zu ziehen und aus der Fabrik zu stoßen, ihn hin und her hetzend in zerstreuten Zeitfetzen, ohne je den Halt auf ihn zu verlieren, bis die zehnstündige Arbeit vollgemacht.

Wie auf der Bühne hatten dieselben Personen abwechselnd in den verschiedenen Szenen der verschiedenen Akte aufzutreten. Aber wie ein Schauspieler während der ganzen Dauer des Dramas der Bühne gehört, so gehörten die Arbeiter jetzt während 15 Stunden der Fabrik, nicht eingerechnet die Zeit, um von und zu ihr zu gehn.

Die Stunden der Rast verwandelten sich so in Stunden erzwungenen Müßiggangs, welche den jungen Arbeiter in die Kneipe und die junge Arbeiterin in das Bordell trieben. Bei jedem neuen Einfall, den der Kapitalist täglich ausheckte, um seine Maschinerie ohne Vermehrung des Arbeiterpersonals 12 oder 15 Stunden im Gang zu halten, hatte der Arbeiter bald in diesem Stück Zeitabfall, bald in jenem seine Mahlzeit einzuschlucken.

Zur Zeit der Zehnstundenagitation schri-

masters cried out that the working mob petitioned in the hope of obtaining 12 hours' wages for 10 hours' work. Now they reversed the medal. They paid 10 hours' wages for 12 or 15 hours' lordship over labor-power.¹⁶⁵ This was the gist of the matter, this the masters' interpretation of the 10 hours' law! These were the same unctuous Free-traders, perspiring with the love of humanity, who for full 10 years, during the Anti-Corn Law agitation, had preached to the operatives, by a reckoning of pounds, shillings, and pence, that with free importation of corn, and with the means possessed by English industry, 10 hours' labor would be quite enough to enrich the capitalists.¹⁶⁶

¹⁶⁵ See Reports, etc., for 30th April, 1849, p. 6, and the detailed explanation of the "shifting system," by Factory Inspectors Howell and Saunders, in "Reports, etc., for 31st October, 1848." See also the petition to the Queen from the clergy of Ashton and vicinity, in the spring of 1849, against the shift system."

¹⁶⁶ Cf. for example, 'The Factory Question and the Ten Hours' Bill', By R. H. Greg, 1837.

↓ Victory: court declares Factory Act meaningless:

404:1/o This revolt of capital, after two years was at last crowned with victory by a decision of one of the four highest Courts of Justice in England, the Court of Exchequer, which in a case brought before it on February 8th, 1850, decided that the manufacturers were certainly acting against the sense of the Act of 1844, but that this Act itself contained certain words that rendered it meaningless. "By this decision, the Ten Hours' Act was abolished."¹⁶⁷ A crowd of masters, who until then had been afraid of using the relay system for young persons and women, now took it up heart and soul.¹⁶⁸

en die Fabrikanten, das Arbeiterpack petitioniere, in der Erwartung, zwölfstündigen Arbeitslohn für zehnstündige Arbeit zu erhalten. Sie hatten jetzt die Medaille umgekehrt. Sie zahlten zehnstündigen Arbeitslohn für zwölf- und fünfzehnständige Verfügung über die Arbeitskräfte!¹⁶⁵ Dies war des Pudels Kern, dies die Fabrikantenausgabe des Zehnstundengesetzes! Es waren dieselben salbungsvollen, Menschenliebe triefenden Freihändler, die den Arbeitern 10 volle Jahre, während der Anti-Corn-Law-Agitation, auf Heller und Pfennig vorgerechnet, daß bei freier Korneinfuhr eine zehnstündige Arbeit, mit den Mitteln der englischen Industrie, vollständig genüge, um die Kapitalisten zu bereichern.¹⁶⁶

¹⁶⁵ Siehe „Reports etc. for 30th April 1849“, p. 6, und die weitläufige Auseinandersetzung des „shifting system“ durch die Fabrikinspektoren Howell und Saunders in „Reports etc. for 31st Oct. 1848“. Siehe auch die Petition der Geistlichkeit von Ashton und Nachbarschaft, Frühling 1849, an die Königin, gegen das „shift system“.

¹⁶⁶ Vgl. z.B. „The Factory Question and the Ten Hours Bill“, von R. H. Greg, 1837.

308:1 Die zweijährige Kapitalrevolte wurde endlich gekrönt durch den Urteilsspruch eines der vier höchsten Gerichtshöfe von England, des Court of Exchequer, der in einem vor ihn gebrachten Fall am 8. Februar 1850 entschied, daß die Fabrikanten zwar wider den Sinn des Akts von 1844 handelten, dieser Akt selbst aber gewisse Worte enthalte, die ihn sinnlos machten. „Mit dieser Entscheidung war das Zehnstundengesetz abgeschafft.“¹⁶⁷ Eine Masse Fabrikanten, die bisher noch das Relaisystem für junge Personen und Arbeiterinnen gescheut, griffen nun mit beiden Händen zu.¹⁶⁸

¹⁶⁷ F. Engels: 'The English Ten Hours' Bill.' (In the "Neue Rheinische Zeitung. Politisch-ökonomische Revue." Edited by K. Marx. April number, 1850, p. 13.) The same "high" Court of Justice discovered, during the American Civil War, a verbal ambiguity which exactly reversed the meaning of the law against the arming of pirate ships.

¹⁶⁸ Rep., etc., for 30th April, 1850.

10.6.g. [Growing Resistance of the Proletariat]

↓ This victory turned working class resistance from passive to active:

405:1 But on this apparently decisive victory of capital, followed at once a revulsion. The workpeople had hitherto offered a passive, although inflexible and unremitting resistance. They now protested in Lancashire and Yorkshire in threatening meetings. The pretended Ten Hours' Act was thus simple humbug, parliamentary cheating, had never existed! The Factory Inspectors urgently warned the Government that the antagonism of classes had arrived at an incredible tension.

↓ Even some capitalists dissatisfied. Small capitalists do not have enough workers for the relay system.

Some of the masters themselves murmured:

"On account of the contradictory decisions of the magistrates, a condition of things altogether abnormal and anarchical obtains. One law holds in Yorkshire, another in Lancashire, one law in one parish of Lancashire, another in its immediate neighbourhood. The manufacturer in large towns could evade the law, the manufacturer in country districts could not find the people necessary for the relay system, still less for the shifting of hands from one factory to another," etc.

And equal exploitation of labor-power by all capitalists is the first human right of capital.

¹⁶⁷ F. Engels, „Die englische Zehnstundenbill“ (in der von mir herausgegebenen „Neuen Rh. Zeitung. Politisch-ökonomische Revue“, Aprilheft 1850, [mecw]). Derselbe „hohe“ Gerichtshof entdeckte ebenfalls während des amerikanischen Bürgerkriegs eine Wortschraube, die das Gesetz gegen Ausrüstung von Piratenschiffen ins direkte Gegenteil verkehrt.

¹⁶⁸ „Rep. etc. for 30th April 1850.“

309:1–3 Mit diesem scheinbar definitiven Sieg des Kapitals trat aber sofort ein Umschlag ein. Die Arbeiter hatten bisher passiven, obgleich unbeugsamen und täglich erneuten Widerstand geleistet. Sie protestierten jetzt in laut drohenden Meetings in Lancashire und Yorkshire. Das angebliche Zehnstundengesetz sei also bloßer Humbug, parlamentarische Prellerei, und habe nie existiert! Die Fabrikinspektoren warnen dringend die Regierung, der Klassenantagonismus sei zu einer unglaublichen Höhe gespannt.

Ein Teil der Fabrikanten selbst murzte:

„Durch die widersprechenden Entscheidungen der Magistrate herrsche ein ganz abnormer und anarchischer Zustand. Ein andres Gesetz gelte in Yorkschire, ein andres in Lancashire, ein andres Gesetz in einer Pfarrei von Lancashire, ein andres in ihrer unmittelbaren Nachbarschaft. Der Fabrikant in großen Städten könne das Gesetz umgehen, der in Landflecken finde nicht das nötige Personal für das Relaisystem und noch minder zur Verschiebung der Arbeiter aus einer Fabrik in die andre usw.“

Und gleiche Exploitation der Arbeitskraft ist das erste Menschenrecht des Kapitals.

↑ “Human right” is a pun. It does not mean the right of capital as a human being, but the rights to exploit the human proletarians claimed by capital.

Question 743 *What did Marx mean by the statement: “equal exploitation of labor-power by all capitalists is the first human right of capital?”*

↓ Compromise in the additional Factory Act of 1850; working time for young persons and women lengthened during the week but shortened on Saturdays so that the average is 10 hours. All work must go on between 6 am and 6 pm, which meant the end of the relays system. The drawbacks of this law will be discussed shortly!

405:2 Under these circumstances a compromise between masters and men was effected that received the seal of Parliament in the additional Factory Act of August 5th, 1850. The working-day for “young persons and women,” was raised from 10 to 10 1/2 hours for the first five days of the week, and shortened to 7 1/2 on the Saturday. The work was to go on between 6 a.m. and 6 p.m.,¹⁶⁹ with pauses of not less than 1 1/2 hours for meal-times, these meal-times to be allowed at one and the same time for all, and conformably to the conditions of 1844. By this an end was put to the relay system once for all.¹⁷⁰ For children’s labor, the Act of 1844 remained in force.

¹⁶⁹ In winter, from 7 a.m. to 7 p.m. may be substituted.

¹⁷⁰ “The present law (of 1850) was a compromise whereby the employed surrendered the benefit of the Ten Hours’ Act for the advantage of one uniform period for the commencement and termination of the labor of those whose labor is restricted.” (Reports, etc., for 30th April, 1852, p. 14.)

↓ Exception for silk weavers:

405:3/oo One set of masters, this time as before, secured to itself special seigneurial rights over the children of the proletariat. These were the silk manufacturers. In 1833

309:4 Unter diesen Umständen kam es zu einem Kompromiß zwischen Fabrikanten und Arbeitern, der in dem neuen zusätzlichen Fabrikakt vom 5. August 1850 parlamentarisch besiegelt ist. Für „junge Personen und Frauenzimmer“ wurde der Arbeitstag in den ersten 5 Wochentagen von 10 auf 10 1/2 Stunden erhöht, für den Samstag auf 7 1/2 Stunden beschränkt. Die Arbeit muß in der Periode von 6 Uhr morgens bis 6 Uhr abends vorgehn,¹⁶⁹ mit 1 1/2 stündigen Pausen für Mahlzeiten, die gleichzeitig und gemäß den Bestimmungen von 1844 einzuräumen sind usw. Damit war dem Relais-system ein für allemal ein Ende gemacht.¹⁷⁰ Für die Kinderarbeit blieb das Gesetz von 1844 in Kraft.

¹⁶⁹ Im Winter kann die Periode zwischen 7 Uhr morgens und 7 Uhr abends an die Stellen treten.

¹⁷⁰ „Das gegenwärtige Gesetz“ (von 1850) „war ein Kompromiß, bei dem die Arbeiter auf den Segen des Zehnstundengesetzes für den Vorteil eines einheitlichen Arbeitsbeginns und Arbeitsschlusses jener verzichteten, deren Arbeitszeit der Begrenzung unterliegt.“ („Reports etc. for 30th April 1852“, p. 14.)

309:5–311:1 Eine Fabrikantenkategorie sicherte sich diesmal, wie früher, besondere Seigneurialrechte auf Proletariatkinder. Es waren dies die Seidenfabrikanten. Im Jahr

they had howled out in threatening fashion, “if the liberty of working children of any age for 10 hours a day were taken away, it would stop their works.”¹⁷¹ It would be impossible for them to buy a sufficient number of children over 13. They extorted the privilege they desired. The pretext was shown on subsequent investigation to be a deliberate lie. It did not, however, prevent them, during 10 years, from spinning silk 10 hours a day out of the blood of little children who had to be placed upon stools for the performance of their work.¹⁷² The Act of 1844 certainly “robbed” them of the “liberty” of employing children under 11 longer than 6 1/2 hours a day. But it secured to them, on the other hand, the privilege of working children between 11 and 13, 10 hours a day, and of annulling in their case the education made compulsory for all other factory children. This time the pretext was

“the delicate texture of the fabric in which they were employed, requiring a lightness of touch, only to be acquired by their early introduction to these factories.”¹⁷³

The children were slaughtered out-and-out for the sake of their delicate fingers, as in Southern Russia the horned cattle for the sake of their hide and tallow. At length, in 1850, the privilege granted in 1844, was limited to the departments of silk-twisting and silk-winding. But here, to make amends to capital bereft of its “freedom,” the worklime for children from 11 to 13 was raised from 10 to 10 1/2 hours. Pretext: “Labor in silk mills was lighter than in mills for other fabrics, and less likely in other respects also to be prejudicial to health.”¹⁷⁴ Official medical inquiries proved afterwards that, on the

1833 hatten sie drohend geheult, „wenn man ihnen die Freiheit raube, Kinder jedes Alters täglich 10 Stunden abzurackern, setze man ihre Fabriken still“ („if the liberty of working children of any age for 10 hours a day was taken away, it should stop their works“). Es sei ihnen unmöglich, eine hinreichende Anzahl von Kindern über 13 Jahren zu kaufen. Sie erpreßten das gewünschte Privilegium. Der Vorwand stellte sich bei später Untersuchung als bare Lüge heraus,¹⁷¹ was sie jedoch nicht verhinderte, während eines Dezenniums aus dem Blut kleiner Kinder, die zur Verrichtung ihrer Arbeit auf Stühle gestellt werden mußten, täglich 10 Stunden Seide zu spinnen.¹⁷² Der Akt von 1844 „beraubte“ sie zwar der „Freiheit“, Kinder unter 11 Jahren länger als 6 1/2 Stunden, sicherte ihnen dagegen das Privilegium, Kinder zwischen 11 und 13 Jahren 10 Stunden täglich zu verarbeiten, und kassierte den für andre Fabrikinder vorgeschriebenen Schulzwang. Diesmal der Vorwand:

„Die Delikatesse des Gewebes erheische eine Fingerzartheit, die nur durch frühen Eintritt in die Fabrik zu sichern.“¹⁷³

Der delikaten Finger wegen wurden die Kinder ganz geschlachtet, wie Hornvieh in Südrußland wegen Haut und Talg. Endlich, 1850, wurde das 1844 eingeräumte Privilegium auf die Departements der Seidenzwirnererei und Seidenhaspelei beschränkt, hier aber, zum Schadenersatz des seiner „Freiheit“ beraubten Kapitals, die Arbeitszeit für Kinder von 11 bis 13 Jahren von 10 auf 10 1/2 Stunden erhöht. Vorwand: „Die Arbeit sei leichter in Seidenfabriken als in den andren Fabriken und in keiner Weise so nachteilig für die Gesundheit.“¹⁷⁴ Offizielle ärztliche Untersuchung bewies hinterher,

contrary,

“the average death-rate is exceedingly high in the silk districts and amongst the female part of the population is higher even than it is in the cotton districts of Lancashire.”¹⁷⁵

Despite the protests of the Factory Inspector, renewed every 6 months, the mischief continues to this hour.¹⁷⁶

¹⁷¹ Reports, etc., for Sept., 1844, p. 13.

¹⁷² I.c.

¹⁷³ “Reports, etc., for 31st Oct., 1846,” p. 20.

¹⁷⁴ Reports, etc., for 31st Oct., 1861, p. 26.

¹⁷⁵ L.c., p. 27. On the whole the working population, subject to the Factory Act, has greatly improved physically. All medical testimony agrees on this point, and personal observation at different times has convinced me of it. Nevertheless, and exclusive of the terrible death-rate of children in the first years of their life, the official reports of Dr. Greenhow show the unfavourable health condition of the manufacturing districts as compared with “agricultural districts of normal health.” As evidence, take the following table from his 1861 report:

¹⁷⁶ It is well known with what reluctance the English “Free-traders,” gave up the protective duty on the silk manufacture. Instead of the protection against French importation, the absence of protection to English factory children now senes their turn.

↓ It was an anomaly, perhaps an oversight, in the Factory Acts that children could be used within the limits of a longer working-day than women. The factory owners intended to use this anomaly in order to lengthen the time for male adults back to 15 hours. But it became clear that this would meet fierce resistance of the male workers; therefore the act of 1853 closed this loophole.

407:1/o The Act of 1850 changed the

daß umgekehrt

„die durchschnittliche Sterblichkeitsrate in den Seidendistrikten ausnahmsweise hoch und unter dem weiblichen Teil der Bevölkerung selbst höher ist als in den Baumwolldistrikten von Lancashire“¹⁷⁵.

Trotz der halbjährlich wiederholten Proteste der Fabrikinspektoren dauert der Unfug bis zur Stunde fort.¹⁷⁶

¹⁷¹ „Reports etc. for 30th Sept. 1844“, p. 13.

¹⁷² I.c.

¹⁷³ „The delicate texture of the fabric in which they were employed requiring a lightness of touch, only to be acquired by their early introduction to these factories.“ „Rep. etc. for 31st Oct. 1846“, p. 20.)

¹⁷⁴ „Reports etc. for 31st Oct. 1861“, p. 26.

¹⁷⁵ I.c. p. 27. Im allgemeinen hat sich die dem Fabrikgesetz unterworfenen Arbeiterbevölkerung physisch sehr verbessert. Alle ärztlichen Zeugnisse stimmen darin überein und eigne persönliche Anschauung zu verschiedenen Perioden hat mich davon überzeugt. Dennoch, und abgesehen von der ungeheuren Sterblichkeitsrate der Kinder in den ersten Lebensjahren, zeigen die offiziellen Berichte des Dr. Greenhow den ungünstigen Gesundheitszustand der Fabrikdistrikte, verglichen mit „Agrikulturdistrikten von normaler Gesundheit“. Zum Beweis u.a. folgende Tabelle aus seinem Bericht von 1861:

¹⁷⁶ Man weiß, wie widerstrebend die englischen „Freihändler“ dem Schutzzoll für Seidenmanufaktur entsagten. Statt des Schutzes gegen französische Einfuhr dient nun die Schutzlosigkeit englischer Fabrikinder.

311:2/o Das Gesetz von 1850 verwandel-

15 hours' time from 6 a.m. to 8.30 p.m., into the 12 hours from 6 a.m. to 6 p.m. for “young persons and women” only. It did not, therefore, affect children who could always be employed for half an hour before and 2 1/2 hours after this period, provided the whole of their labor did not exceed 6 1/2 hours. Whilst the bill was under discussion, the Factory Inspectors laid before Parliament statistics of the infamous abuses due to this anomaly. To no purpose. In the background lurked the intention of screwing up, during prosperous years, the working-day of adult males to 15 hours by the aid of the children. The experience of the three following years showed that such an attempt must come to grief against the resistance of the adult male operatives.¹⁷⁷ The Act of 1850 was therefore finally completed in 1853 by forbidding the “employment of children in the morning before and in the evening after young persons and women.”

↓ This meant that the factory acts regulated the labor times of all workers.

Henceforth with a few exceptions the Factory Act of 1850 regulated the working-day of all workers in the branches of industry that come under it.¹⁷⁸ Since the passing of the first Factory Act half a century had elapsed.¹⁷⁹

¹⁷⁷ Reports etc. for 30th April 1853, p. 30.

↓ Footnote 178 shows how the male adult workers fought for a limitation of their working hours:

¹⁷⁸ During 1859 and 1860, the zenith years of the English cotton industry, some manufacturers tried, by the decoy bait of higher wages for over-time, to reconcile the adult male operatives to an extension of the working-day. The hand-mule spinners and self-actor mincers put an end

te nur für „junge Personen und Frauenzimmer“ die fünfzehnstündige Periode von halb 6 Uhr morgens bis halb 9 Uhr abends in die zwölfstündige Periode von 6 Uhr morgens bis 6 Uhr abends. Also nicht für Kinder, die immer noch eine halbe Stunde vor Beginn und 2 1/2 Stunden nach Schluß dieser Periode verwertbar blieben, wenn auch die Gesamtdauer ihrer Arbeit 6 1/2 Stunden nicht überschreiten durfte. Während der Diskussion des Gesetzes wurde dem Parlament von den Fabrikinspektoren eine Statistik über die infamen Mißbräuche jener Anomalie unterbreitet. Jedoch umsonst. Im Hintergrund lauerte die Absicht, den Arbeitstag der erwachsenen Arbeiter mit Beihilfe der Kinder in Prosperitätsjahren wieder auf 15 Stunden zu schrauben. Die Erfahrung der folgenden 3 Jahre zeigte, daß solcher Versuch am Widerstand der erwachsenen männlichen Arbeiter scheitern müsse.¹⁷⁷ Der Akt von 1850 wurde daher 1853 endlich ergänzt durch das Verbot, „Kinder des Morgens vor und Abends nach den jungen Personen und Frauenzimmern zu verwenden“.

Von nun an regelte, mit wenigen Ausnahmen, der Fabrikakt von 1850 in den ihm unterworfenen Industriezweigen den Arbeitstag aller Arbeiter.¹⁷⁸ Seit dem Erlass des ersten Fabrikakts war jetzt ein halbes Jahrhundert verflossen.¹⁷⁹

¹⁷⁷ „Reports etc. for 30th April 1853“, p. 30.

¹⁷⁸ Während der Zenitjahre der englischen Baumwollindustrie, 1859 und 1860, versuchten einige Fabrikanten durch die Lockangel hoher Arbeitslöhne für Extrazeit, die Erwachsenen männlichen Spinner usw. zur Verlängerung des Arbeitstags zu bestimmen. Die Hand-Mule Spin-

to the experiment by a petition to their employers in which they say, “Plainly speaking, our lives are to us a burthen; and, while we are confined to the mills *nearly two days a week more* than the other operatives of the country, we feel like helots in the land, and that we are perpetuating a system injurious to ourselves and future generations ... This, therefore, is to give you most respectful notice that when we commence work again after the Christmas and New Year’s holidays, we shall work 60 hours per week, and no more, or from six to six, with one hour and a half out.” (Reports, etc., for 30th April, 1860, p. 30.)

¹⁷⁹ On the means that the wording of this Act afforded for its violation cf. the Parliamentary Return “Factories Regulation Act” (6th August, 1859), and in it Leonard Homer’s “Suggestions for amending the Factory Acts to enable the Inspectors to prevent illegal working, now becoming very prevalent.”

10.6.h. [“Wonderful Development” 1853–1860]

The only remaining limitation preventing a general regulation of the working-day consisted in the fact that the factory acts applied only for a few selected industries.

↓ “Printworks’ Act of 1845” (i.e., 8 years before the 1853 laws which Marx is presently discussing) had been the first attempt to extend factory legislation beyond the industries for which it was originally intended.

408:1 Factory legislation for the first time went beyond its original sphere in the “Printworks’ Act of 1845.” The displeasure with which capital received this new “extravagance” speaks through every line of the Act.

In the machinery chapter, 625:8/o, Marx will say more about the contradiction between the necessity to pass the legislation, and the reluctance to apply it.

It limits the working-day for children from 8 to 13, and for women to 16 hours, between 6 a.m. and 10 p.m., without any legal pause for meal-times. It allows males over 13 to

ners und Self-Actor Minders machten dem Experiment ein Ende durch eine Denkschrift an ihre Anwender, worin es u.a. heißt: „Grad herausgesprochen, unser Leben ist uns zur Last, und solange wir fast 2 Tage die Woche“ (20 Stunden) „länger an die Fabrik gekettet sind als die andren Arbeiter, fühlen wir uns gleich Heloten im Lande und werfen uns selbst vor, ein System zu verewigen, das uns selbst und unsre Nachkommen physisch und moralisch beschädigt ... Daher geben wir hier mit respektvolle Notiz, daß wir von Neujahrstag an keine Minute mehr als 60 Stunden wöchentlich, von 6 Uhr bis 6 Uhr, mit Abzug der gesetzlichen Pausen von 1 1/2 Stunden, arbeiten werden.“ „Reports etc. for 30th April 1860“, p. 30.)

¹⁷⁹ Über die Mittel, die die Fassung dieses Gesetzes für seinen Bruch gewährt, cf. den Parliamentary Return „Factories Regulation Acts“ (9. August 1859) und darin Leonard Horner’s „Suggestions for Amending the Factory Acts to enable the Inspectors to prevent illegal working, now become very prevalent“.

312:1 Über ihre ursprüngliche Sphäre griff die Gesetzgebung zuerst hinaus durch den „Printworks’ Act“ (Gesetz über Kattundruckereien usw.) von 1845. Die Unlust, womit das Kapital diese neue „Extravaganz“ zuließ, spricht aus jeder Zeile des Akts!

Er beschränkt den Arbeitstag für Kinder von 8–13 Jahren und für Frauenzimmer auf 16 Stunden zwischen 6 Uhr morgens und 10 Uhr abends, ohne irgendeine gesetzliche

be worked at will day and night.¹⁸⁰ It is a Parliamentary abortion.¹⁸¹

¹⁸⁰ “Children of the age of 8 years and upwards, have, indeed, been employed from 6 a.m. to 9 p.m. during the last half year in my district.” (Reports, etc., for 31st October, 1857, p. 39.)

¹⁸¹ “The Printworks’ Act is admitted to be a failure both with reference to its educational and protective provisions.” (Reports, etc., for 31st October, 1862, p. 52.)

↑ This first attempt to extend the factory acts to other industries had therefore been a failure. ↓ But the 1853 victory of the factory acts in the original industries, which are the industries most characteristic of the capitalist mode of production, constituted a victory of “the principle,” opening the door to a “wonderful development” not only of the welfare of the working class but of the entire capitalist mode of production 1853–1860.

408:2/o However, the principle had triumphed with its victory in those great branches of industry which form the most characteristic creation of the modern mode of production. Their wonderful development from 1853 to 1860, hand-in-hand with the physical and moral regeneration of the factory workers, struck the most purblind.

Which principle? In his 1864 “Inaugural Address to the First International” Marx said that the Ten Hours’ Bill in England

was not only a great practical success; it was the victory of a principle; it was the first time that in broad daylight the political economy of the middle class succumbed to the political economy of the working class.

Marx mentions the political economy of the working class also in his Preface, 91:3/o; this is the reason why he put so much emphasis on the working-day. In chapter Fifteen, 635:1, Marx also mentions that despite its inevitability as a protective measure for the working class the factory legislation sharpens the contradictions inherent in the capitalist mode of production.

Question 744 Which principle did Marx mean when he said in 408:2/o that “the principle had triumphed”?

Pause für Mahlzeiten. Er erlaubt, männliche Arbeiter über 13 Jahre Tag und Nacht hindurch beliebig abzuarbeiten.¹⁸⁰ Er ist ein parlamentarischer Abort.¹⁸¹

¹⁸⁰ „Kinder von 8 Jahren und darüber sind in der Tat von 6 Uhr morgens bis 9 Uhr abends während des letzten Halbjahrs“ (1857) „in meinem Distrikt abgerackert worden.“ „Reports etc. for 31st Oct. 1857“, p. 39.)

¹⁸¹ „Das Gesetz über Kattundruckereien ist zugestandenermaßen ein Fehlgriff sowohl in bezug auf seine Erziehungs- als auch seine Schutzmaßregeln.“ „Reports etc. for 31st Oct. 1862“, p. 52.)

312:2/o Dennoch hatte das Prinzip gesiegt mit seinem Sieg in den großen Industriezweigen, welche das eigenste Geschöpf der modernen Produktionsweise. Ihre wundervolle Entwicklung von 1853–1860, Hand in Hand mit der physischen und moralischen Wiedergeburt der Fabrikarbeiter, schlug das blödeste Auge.

↓ The general benefits of the factory legislation were so obvious that even the capitalists, who had originally fought it tooth and nail, now bragged about it:

The masters from whom the legal limitation and regulation had been wrung step by step after a civil war of half a century, themselves referred ostentatiously to the contrast with the branches of exploitation still “free.”¹⁸²

¹⁸² Thus, e.g., E. Potter in a letter to the *Times* of March 24th, 1863. The *Times* reminded him of the manufacturers’ revolt against the Ten Hours’ Bill.

After their defeat, the capitalists did not admit that they ever had fought against this progressive legislation, but tried to even get credit for it.

Question 745 *Why did the capitalists praise the advantages of the factory acts after they were passed?*

↓ After the laws were achieved through class struggle, the political economists suddenly got the enlightenment that such laws were a necessity:

The Pharisees of “Political Economy” now proclaimed the discernment of the necessity of a legally fixed working-day as a characteristic new discovery of their “science.”¹⁸³

¹⁸³ Thus, among others, Mr. W. Newmarch, collaborator and editor of Tooke’s “History of Prices.” Is it a scientific advance to make cowardly concessions to public opinion?

↓ Also the resistance of the capitalists weakened. Once the laws were an actuality, they no longer seemed so outrageous.

It will be easily understood that after the factory magnates had resigned themselves and become reconciled to the inevitable, the power of resistance of capital gradually weakened, whilst at the same time the power of attack of the working-class grew with the number of its allies in the classes of society not immediately interested in the question. Hence the comparatively rapid advance since 1860.

↓ Expansion of this legislation into other industries.

Die Fabrikanten selbst, denen die gesetzliche Schranke und Regel des Arbeitstags durch halbhundertjährigen Bürgerkrieg Schritt für Schritt abgetrotzt, wiesen prahlend auf den Kontrast mit den noch „freien“ Exploitationsgebieten hin.¹⁸²

¹⁸² So z.B. E. Potter in Brief an „Times“ vom 24. März 1863. Die „Times“ erinnert ihn an die Fabrikantenrevolte gegen das ZehnStunden-gesetz.

Die Phariseer der „politischen Ökonomie“ proklamierten nun die Einsicht in die Notwendigkeit eines gesetzlich geregelten Arbeitstags als charakteristische Neuerrungenschaft ihrer „Wissenschaft“.¹⁸³

¹⁸³ So u.a. Herr W. Newmarch, Mitarbeiter an und Herausgeber von Tookes „History of Prices“. Ist es wissenschaftlicher Fortschritt, der öffentlichen Meinung feige Konzessionen zu machen?

Man versteht leicht, daß, nachdem sich die Fabrikmagnaten in das Unvermeidliche gefügt und mit ihm ausgesöhnt, die Widerstandskraft des Kapitals graduell abschwächte, während zugleich die Angriffskraft der Arbeiterklasse wuchs mit der Zahl ihrer Verbündeten in den nicht unmittelbar interessierten Gesellschaftsschichten. Daher vergleichungsweise rascher Fortschritt seit 1860.

409:1/00 The dye-works and bleach-works all came under the Factory Act of 1850 in 1860;¹⁸⁴ lace and stocking manufactures in 1861.

↓ The footnote shows that they tried to repeat the same tricks which were also tried in the cotton factories:

¹⁸⁴ The Act passed in 1860, determined that, in regard to dye and bleachworks, the working-day should be fixed on August 1st, 1861, provisionally at 12 hours, and definitely on August 1st, 1862, at 10 hours, i.e., at 10 1/2 hours for ordinary days, and 7 1/2 for Saturday. Now, when the fatal year, 1862, came, the old farce was repeated. Besides, the manufacturers petitioned Parliament to allow the employment of young persons and women for 12 hours during one year longer. “In the existing condition of the trade (the time of the cotton famine), it was greatly to the advantage of the operatives to work 12 hours per day, and make wages when they could.” A bill to this effect had been brought in, “and it was mainly due to the action of the operative bleachers in Scotland that the bill was abandoned.” (Reports, etc., for 31st October, 1862, pp. 14–15.) Thus defeated by the very workpeople, in whose name it pretended to speak. Capital discovered, with the help of lawyer spectacles, that the Act of 1860, drawn up, like all the Acts of Parliament for the “protection of labor,” in equivocal phrases, gave them a pretext to exclude from its working the calenderers and finishers. English jurisprudence, ever the faithful servant of capital, sanctioned in the Court of Common Pleas this piece of pettifoggery. “The operatives have been greatly disappointed . . . they have complained of over-work, and it is greatly to be regretted that the clear intention of the legislature should have failed by reason of a faulty definition.” (l.c., p. 18.)

↓ The *Children’s Employment Commission* caused regulation of many industries.

In consequence of the first report of the Commission on the employment of children (1863) the same fate was shared by the man-

313:1/00 Die Färbereien und Bleichereien¹⁸⁴ wurden 1860, die Spitzenfabriken und Strumpfwirkereien 1861 dem Fabrikakt von 1850 unterworfen.

¹⁸⁴ Der 1860 erlassene Akt über Bleichereien und Färbereien bestimmt, daß der Arbeitstag am 1. August 1861 vorläufig auf 12, am 1. August 1862 definitiv auf 10 Stunden, d.h. 10 1/2 für Werkeltage und 7 1/2 für Samstage herabgesetzt werde. Als nun das böse Jahr 1862 anbrach, wiederholte sich die alte Farce. Die Herrn Fabrikanten petitionierten das Parlament, nur noch für ein einziges Jahr länger die zwölfstündige Beschäftigung von jungen Personen und Frauenzimmern zu dulden . . . „Beim gegenwärtigen Zustand des Geschäfts“ (zur Zeit der Baumwollnot) „sei es ein großer Vorteil für die Arbeiter, wenn man ihnen erlaubt, 12 Stunden täglich zu arbeiten und so viel Arbeitslohn als möglich herauszuschlagen . . . Es war bereits gelungen, eine Bill in diesem Sinn ins Unterhaus zu bringen. Sie fiel vor der Agitation der Arbeiter in den Bleichereien Schottlands.“ („Reports etc. for 31st Oct. 1862“, p. 14, 15.) So geschlagen von den Arbeitern selbst, in deren Namen es zu sprechen vorgab, entdeckte das Kapital nun, mit Hilfe juristischer Brillen, daß der Akt von 1860, gleich allen Parlamentsakten zum „Schutz der Arbeit“, in sinnverwirren Wortschraubungen abgefaßt, einen Vorwand gebe, die „calenderers“ und „finishers“ von seiner Wirkung auszuschließen. Die englische Jurisdiktion, stets getreuer Knecht des Kapitals, sanktionierte durch den Hof der „Common Pleas“ die Rabulisterei. „Es hat große Unzufriedenheit unter den Arbeitern erregt und ist sehr bedauerlich, daß die klare Absicht der Gesetzgebung auf Vorwand einer mangelhaften Wortdefinition vereitelt wird.“ (l.c. p. 18.)

Infolge des ersten Berichts der „Kommission über die Beschäftigung der Kinder“ (1863) teilten dasselbe Schicksal die Ma-

ufacturers of all earthenwares (not merely pottery), Lucifer-matches, percussion-caps, cartridges, carpets, fustian-cutting, and many processes included under the name of “finishing.” In the year 1863 bleaching in the open air¹⁸⁵ and baking were placed under special Acts, by which, in the former case, the labor of young persons and women during the night-time (from 8 in the evening to 6 in the morning), and in the latter, the employment of journeymen bakers under 18, between 9 in the evening and 5 in the morning were forbidden.

¹⁸⁵ The “open-air bleachers” had evaded the law of 1860, by means of the lie that no women worked at it in the night. The lie was exposed by the Factory Inspectors, and at the same time Parliament was, by petitions from the operatives, bereft of its notions as to the cool meadow-fragrance, in which bleaching in the open-air was reported to take place. In this aerial bleaching, drying-rooms were used at temperatures of from 90° to 100° Fahrenheit, in which the work was done for the most part by girls. “Cooling” is the technical expression for their occasional escape from the drying-rooms into the fresh air. “Fifteen girls in stoves. Heat from 80° to 90° for linens, and 100° and upwards for cambrics. Twelve girls ironing and doing-up in a small room about 10 feet square, in the centre of which is a close stove. The girls stand round the stove, which throws out a terrific heat, and dries the cambrics rapidly for the ironers. The hours of work for these hands are unlimited. If busy, they work till 9 or 12 at night for successive nights.” (Reports, etc., for 31st October, 1862, p. 56.) A medical man states: “No special hours are allowed for cooling, but if the temperature gets too high, or the workers’ hands get soiled from perspiration, they are allowed to go out for a few minutes . . . My experience, which is considerable, in treating the diseases of stove workers, compels me to ex-

nufaktur aller Erdenwaren (nicht nur Töpferien), der Zündhölzer, Zündhütchen, Patronen, Tapetenfabrik, Baumwollsamtscherelei (fustian cutting) und zahlreiche Prozesse, die unter dem Ausdruck „finishing“ (letzte Appretur) zusammengefaßt sind. Im Jahre 1863 wurden die „Bleicherei in offener Luft“¹⁸⁵ und die Bäckerei unter eigne Akte gestellt, wovon der erste u.a. die Arbeit von Kindern, jungen Personen und Weibern zur Nachtzeit (von 8 Uhr abends bis 6 Uhr morgens) und der zweite die Anwendung von Bäckergehilfen unter 18 Jahren zwischen 9 Uhr abends und 5 Uhr morgens verbietet.

¹⁸⁵ Die „Bleicher in offener Luft“ hatten sich dem Gesetz von 1860 über „Bleicherei“ durch die Lüge entzogen, daß sie keine Weiber des Nachts verarbeiteten. Die Lüge wurde von den Fabrikinspektoren aufgedeckt, zugleich aber das Parlament durch Arbeiterpetitionen seiner wiesenduftigkühlen Vorstellungen von „Bleicherei in offener Luft“ beraubt. In dieser Luftbleicherei werden Trockenzimmer von 90 bis 100 Grad Fahrenheit angewandt, worin hauptsächlich Mädchen arbeiten. „Cooling“ (Abkühlung) ist der technische Ausdruck für gelegentliches Entrinnen aus dem Trockenzimmer in die freie Luft. „Fünfzehn Mädchen in den Trockenzimmern. Hitze von 80 zu 90° für Leinwand, von 100° und mehr für Cambrics. Zwölf Mädchen bügeln und legen auf (die Cambrics etc.) in einem kleinen Zimmer von ungefähr 10 Fuß im Quadrat, in der Mitte ein enggeschlossener Ofen. Die Mädchen stehen rund um den Ofen herum, der eine schreckliche Glut ausstrahlt und die Cambrics rasch für die Büglerinnen trocknet. Die Stundenzahl für diese Hände ist unbeschränkt. Wenn geschäftig, arbeiten sie bis 9 oder 12 Uhr nachts viele Tage hintereinander.“ „Reports etc. for 31st Oct. 1862“, p. 56.) Ein Arzt erklärt: „Für die Abkühlung sind keine besonderen Stunden erlaubt, aber wenn die Temperatur zu unerträglich wird, oder die Hände der Arbeiterinnen sich von Schweiß beschmut-

press the opinion that their sanitary condition is by no means so high as that of the operatives in a spinning factory (and Capital, in its memorials to Parliament, had painted them as floridly healthy after the manner of Rubens.) The diseases most observable amongst them are phthisis, bronchitis, irregularity of uterine functions, hysteria in its most aggravated forms, and rheumatism. All of these, I believe, are either directly or indirectly induced by the impure, overheated air of the apartments in which the hands are employed and the want of sufficient comfortable clothing to protect them from the cold, damp atmosphere, in winter, when going to their homes.” (l.c., pp. 56–57.)

↓ Despite these horrible conditions, the 1863 law remained ineffectual.

^{185 ctd} The Factory Inspectors remarked on the supplementary law of 1860, torn from these open-air bleachers: “The Act has not only failed to afford that protection to the workers which it appears to offer, but contains a clause . . . apparently so worded that, unless persons are detected working after 8 o’clock at night they appear to come under no protective provisions at all, and if they do so work the mode of proof is so doubtful that a conviction can scarcely follow.” (l.c., p. 52.) “To all intents and purposes, therefore, as an Act for any benevolent or educational purpose, it is a failure; since it can scarcely be called benevolent to permit, which is tantamount to compelling, women and children to work 14 hours a day with or without meals, as the case may be, and perhaps for longer hours than these, without limit as to age, without reference to sex, and without regard to the social habits of the families of the neighbourhood, in which such works (bleaching and dyeing) are situated.” (Reports, etc., for 30th April, 1863, p. 40.)

We shall return to the later proposals of the same Commission, which threatened to deprive of their “freedom” all the important

zen, ist ihnen gestattet, ein paar Minuten fortzugehen . . . Meine Erfahrung in der Behandlung der Krankheiten dieser Arbeiterinnen zwingt mich zu konstatieren, daß ihr Gesundheitszustand tief unter dem der Baumwollspinnerinnen steht“ (und das Kapital hatte sie in seinen Bittschriften an das Parlament in der Manier von Rubens übergesandt gemalt!). „Ihre auffallendsten Krankheiten sind Phthisis, Bronchitis, Uterinkrankheiten, Hysterie in der scheußlichsten Form und Rheumatismus. Alle diese entspringen, wie ich glaube, direkt oder indirekt, aus der überhitzten Luft ihrer Arbeitszimmer und dem Mangel genügender komfortabler Kleidung, um sie beim Nachhausegehen während der Wintermonate vor der kaltefeuchten Atmosphäre zu schützen.“ (l.c. p. 56, 57.)

^{185 ctd} Die Fabrikinspektoren bemerken über das den jovialen „Bleichern in offener Luft“ nachträglich abgetrotzte Gesetz von 1863: „Dieser Akt hat nicht nur verfehlt, den Arbeitern den Schutz zu gewähren, den er zu gewähren scheint . . . er ist so formuliert, daß der Schutz erst eintritt, sobald man Kinder und Frauenzimmer nach 8 Uhr abends an der Arbeit ertappt, und selbst dann ist die vorgeschriebene Beweismethode so verkompliziert, daß Bestrafung kaum erfolgen kann.“ (l.c. p. 52.) „Als ein Akt mit humanen und auf Erziehung gerichteten Zwecken ist er ganz und gar verfehlt. Man wird es doch kaum human nennen, Weibern und Kindern zu erlauben, oder, was auf dasselbe hinauskommt, sie zu zwingen, 14 Stunden täglich, mit oder ohne Mahlzeiten, wie es sich treffen mag, und vielleicht noch längere Stunden zu arbeiten, ohne Schranke mit Bezug auf das Alter, ohne Unterschied des Geschlechts und ohne Rücksicht auf die gesellschaftlichen Gewohnheiten der Familien der Nachbarschaft, worin die Bleichwerke liegen.“ („Reports etc. for 30th April 1863“, p. 40.)

Auf die späteren Vorschläge der erwähnten Kommission, welche, mit Ausnahme des Ackerbaus, der Minen und des Transport-

branches of English Industry, with the exception of agriculture, mines, and the means of transport.^{185a}

^{185a} Note to the 2nd Ed. Since 1866, when I wrote the above passages, a reaction has again set in.

10.7. The Struggle around the Normal Working-Day. Effect of the English Factory Acts on Other Countries

This section discusses not only the geographical dispersal of the Factory Acts, but also their generalization to other industries after they were first introduced as exceptional legislation in the cotton industry.

411:1 The reader will bear in mind that the production of surplus-value, or the extraction of surplus-labor, is the specific end and aim, the sum and substance, of capitalist production, quite apart from any changes in the mode of production, which may arise from the subordination of labor to capital.

↑ Marx has made a similar remark in footnote 152 to paragraph 399:3/o. The transformation of the mode of production itself is not the purpose. The capitalist does not care whether it occurs or not, he only cares about his profits. Why do we therefore discuss this transformation of production here in such detail? There is also another point where the present discussion seems atypical:

He will remember that as far as we have at present gone only the independent laborer, and therefore only the laborer legally qualified to act for himself, enters as a vendor of a commodity into a contract with the capitalist. If, therefore, in our historical sketch, on the one hand, modern industry, on the other, the labor of those who are physically and legally minors, play important parts, the former was to us only a special department, and the latter only a specially striking example of labor exploitation. Without, however, anticipating the subsequent development of

wesens, alle wichtigen englischen Industriezweige der „Freiheit“ zu berauben drohen, kommen wir zurück.^{185a}

^{185a} Note zur 2. Ausg. Seit 1866, wo ich das im Text Befindliche schrieb, ist wieder eine Reaktion eingetreten.

315:1 Der Leser erinnert sich, daß die Produktion von Mehrwert oder die Extraktion von Mehrarbeit den spezifischen Inhalt und Zweck der kapitalistischen Produktion bildet, abgesehen von jedweder aus der Unterordnung der Arbeit unter das Kapital etwa entspringenden Umgestaltung der Produktionsweise selbst.

Er erinnert sich, daß auf dem bisher entwickelten Standpunkt nur der selbständige und daher gesetzlich mündige Arbeiter als Warenverkäufer mit dem Kapitalisten kontrahiert. Wenn also in unsrer historischen Skizze einerseits die moderne Industrie eine Hauptrolle spielt, andererseits die Arbeit physisch und rechtlich Unmündiger, so galt uns die eine nur als besondere Sphäre, die andre nur als besonders schlagendes Beispiel der Arbeitsausaugung. Ohne jedoch der spätern Entwicklung vorzugreifen, folgt aus dem bloßen Zusammenhang der ge-

our inquiry, from the mere connexion of the historic facts before us it follows:

(1) Factory legislation started as exceptional legislation, restricted to textile production, where machinery was used first. This machinery changed the social relations of the producers (child labor). This made excesses possible which required social control.

411:2/o First. The passion of capital for an unlimited and reckless extension of the working-day, is first gratified in the industries earliest revolutionised by water-power, steam, and machinery, in those first creations of the modern mode of production, cotton, wool, flax, and silk spinning, and weaving. The changes in the material mode of production, and the corresponding changes in the social relations of the producers¹⁸⁶ gave rise first to an extravagance beyond all bounds, and then in opposition to this, called forth a control on the part of Society which legally limits, regulates, and makes uniform the working-day and its pauses.

↑ Interesting formulation: the excesses of the capitalists call forth social control. The conflict is here not seen as one between the capitalist class and the working class, but as one between capitalist agents who (driven by competition) commit excesses which require social control. Similar formulation also in the machinery chapter, 533:1.

¹⁸⁶ “The conduct of each of these classes (capitalists and workmen) has been the result of the relative situation in which they have been placed.” (Reports, etc., for 31st October, 1848, p. 113.)

↓ Reasons why this legislation lost its exceptional character.

This control appears, therefore, during the first half of the nineteenth century simply as exceptional legislation.¹⁸⁷ As soon as this primitive dominion of the new mode of production was conquered, it was found that, in the meantime, not only had many other branches of production been made to adopt the same factory system, but that manufactures with more or less obsolete methods, such as potteries, glass-making, etc., that

schichtlichen Tatsachen:

315:2/o Erstens: In den durch Wasser, Dampf und Maschinerie zunächst revolutionierten Industrien, in diesen ersten Schöpfungen der modernen Produktionsweise, den Baumwolle-, Wolle-, Flachs-, Seiden-Spinnereien und Webereien wird der Trieb des Kapitals nach maß- und rücksichtsloser Verlängerung des Arbeitstags zuerst befriedigt. Die veränderte materielle Produktionsweise und die ihr entsprechend veränderten sozialen Verhältnisse der Produzenten¹⁸⁶ schaffen erst die maßlose Ausschreitung und rufen dann im Gegensatz die gesellschaftliche Kontrolle hervor, welche den Arbeitstag mit seinen Pausen gesetzlich beschränkt, reguliert und uniformiert.

¹⁸⁶ „Das Verhalten jeder dieser Klassen“ (Kapitalisten und Arbeiter) „war das Ergebnis der jeweiligen Situation, in die sie versetzt worden waren.“ (Reports etc. for 31st Oct. 1848“, p. 113.)

Diese Kontrolle erscheint daher während der ersten Hälfte des 19. Jahrhunderts bloß als Ausnahmegesetzgebung.¹⁸⁷ Sobald sie das Urgebiet der neuen Produktionsweise erobert hatte, fand sich, daß unterdes nicht nur viele andre Produktionszweige in das eigentliche Fabrikregime eingetreten, sondern daß Manufakturen mit mehr oder minder verjährter Betriebsweise, wie Töpfereien, Glasereien usw., daß altmodische Hand-

old-fashioned handicrafts, like baking, and, finally, even that the so-called domestic industries, such as nail-making,¹⁸⁸ had long since fallen as completely under capitalist exploitation as the factories themselves. Legislation was, therefore, compelled to gradually get rid of its exceptional character, or where, as in England, it proceeds after the manner of the Roman Casuists, to declare any house in which work was done to be a factory.¹⁸⁹

¹⁸⁷ "The employments, placed under restriction, were connected with the manufacture of textile fabrics by the aid of steam or water-power. There were two conditions to which an employment must be subject to cause it to be inspected, viz., the use of steam or waterpower, and the manufacture of certain specified fibers." (Reports, etc., for 31st October, 1864, p. 8.)

¹⁸⁸ On the condition of so-called domestic industries, specially valuable materials are to be found in the latest reports of the Children's Employment Commission.

¹⁸⁹ "The Acts of last Session (1864) ... embrace a diversity of occupations, the customs in which differ greatly, and the use of mechanical power to give motion to machinery is no longer one of the elements necessary, as formerly, to constitute, in legal phrase, a 'Factory.'" (Reports, etc., for 31st October, 1864, p. 8.)

Question 746 Why was it generalized?

Secondly: As soon as capitalism has reached a certain maturity, the worker is defeated without being able to put up any resistance if he tries to fight back by himself. From this, Marx concludes that the struggle turns into a class struggle. More about that in the famous very last paragraph of this chapter 415:2/o. The class character of these struggles also implies that the struggle of the English working class benefits the working classes in the other countries as well. Marx also mentions another fact which can be considered a consequence of the struggles of the English working class: the English theoreticians also took on capital.

werke, wie die Bäckerei, und endlich selbst die zerstreute sog. Hausarbeit, wie Nägelmacherei usw.,¹⁸⁸ seit lange der kapitalistischen Exploitation ebenso sehr verfallen waren als die Fabrik. Die Gesetzgebung ward daher gezwungen, ihren Ausnahmecharakter allmählich abzustreifen, oder, wo sie römisch kasuistisch verfährt, wie in England, irgendein Haus, worin man arbeitet, nach Belieben für eine Fabrik (factory) zu erklären.¹⁸⁹

¹⁸⁷ „Die Verrichtungen, die unter die Einschränkung fielen, waren mit der Herstellung von Textilerzeugnissen mit Hilfe von Dampf- oder Wasserkraft verbunden. Zwei Bedingungen mußte eine Arbeitstätigkeit erfüllen, damit sie unter den Schutz der Fabrikinspektion fiel, nämlich die Anwendung von Dampf- oder Wasserkraft und die Verarbeitung bestimmter spezifizierter Faserstoffe.“ („Reports etc. for 31st October 1864“, p. 8.)

¹⁸⁸ Über den Zustand dieser sogenannten häuslichen Industrie äußerst reichhaltiges Material in den letzten Berichten der „Children's Employment Commission“.

¹⁸⁹ „Die Gesetze der letzten Sitzungsperiode“ (1864) „... umfassen Beschäftigungszweige verschiedener Art, in denen sehr verschiedene Gewohnheiten herrschen, und die Verwendung mechanischer Kraft zum Antrieb der Maschinerie gehört nicht mehr, wie früher, zu den notwendigen Bedingungen, unter denen ein Betrieb im Sinne des Gesetzes als Fabrik galt.“ „Reports etc. for 31st Oct. 1864“, p. 8.)

412:1/o *Second*. The history of the regulation of the working-day in certain branches of production, and the struggle still going on in others in regard to this regulation, prove conclusively that the isolated laborer, the laborer as "free" vendor of his labor-power, when capitalist production has once attained a certain stage, succumbs without any power of resistance. The creation of a normal working-day is, therefore, the product of a protracted civil war, more or less dissembled, between the capitalist class and the working-class.

↓ Not only is the cotton industry the original area of the specific capitalist mode of production, but England is also its home country.

As the contest takes place in the arena of modern industry, it first breaks out in the home of that industry—England.¹⁹⁰

↓ In contrast to England, the footnote tells about backwards Belgium:

¹⁹⁰ Belgium, the paradise of Continental Liberalism, shows no trace of this movement. Even in the coal and metal mines laborers of both sexes, and all ages, are consumed, in perfect "freedom" at any period and through any length of time. Of every 1,000 persons employed there, 733 are men, 88 women, 135 boys, and 44 girls under 16; in the blast furnaces, etc., of every 1,000, 668 are men, 149 women, 98 boys, and 85 girls under 16. Add to this the low wages for the enormous exploitation of mature and immature labor-power. The average daily pay for a man is 2s. 8d., for a woman, 1s. 8d., for a boy, 1s. 2 1/2d. As a result, Belgium had in 1863, as compared with 1850, nearly doubled both the amount and the value of its exports of coal, iron, etc.

The English factory workers were the champions, not only of the English, but of the modern working-class generally, as their theorists were the first to throw down the gauntlet to the theory of capital.¹⁹¹

316:1/o Zweitens: Die Geschichte der Regelung des Arbeitstags in einigen Produktionsweisen, in andren der noch fortdauernde Kampf um diese Regelung, beweisen handgreiflich, daß der vereinzelte Arbeiter, der Arbeiter als „freier“ Verkäufer seiner Arbeitskraft, auf gewisser Reifestufe der kapitalistischen Produktion, widerstandslos unterliegt. Die Schöpfung eines Normalarbeitstags ist daher das Produkt eines langwierigen, mehr oder minder versteckten Bürgerkriegs zwischen der Kapitalistenklasse und der Arbeiterklasse.

Wie der Kampf eröffnet wird im Umkreis der modernen Industrie, so spielt er zuerst in ihrem Heimatland, England.¹⁹⁰

¹⁹⁰ Belgien, das Paradies des kontinentalen Liberalismus, zeigt auch keine Spur dieser Bewegung. Selbst in seinen Kohlengruben und Metallminen werden Arbeiter beider Geschlechter und von jeder Altersstufe mit vollkommener „Freiheit“ für jede Zeitdauer und Zeitperiode konsumiert. Auf je 1000 darin beschäftigten Personen kommen 733 Männer, 88 Weiber, 135 Jungen und 44 Mädchen unter 16 Jahren; in den Hochöfen usw. kommen auf je 1000: 668 Männer, 149 Weiber, 98 Jungen und 85 Mädchen unter 16 Jahren. Kommt nun noch hinzu niedriger Arbeitslohn für enorme Ausbeutung reifer und unreifer Arbeitskräfte, im Tagesdurchschnitt 2 sh. 8 d. für Männer, 1 sh. 8 d. für Weiber, 1 sh. 2 1/2 d. für Jungen. Dafür hat Belgien aber auch 1863, verglichen mit 1850, Quantum und Wert seiner Ausfuhr von Kohlen, Eisen usw. ziemlich verdoppelt.

Die englischen Fabrikarbeiter waren die Preisfechter nicht nur der englischen, sondern der modernen Arbeiterklasse überhaupt, wie auch ihre Theoretiker der Theorie des Kapitals zuerst den Fehdehandschuh

↓ The footnote brings an example for a theoretician throwing the gauntlet:

¹⁹¹ Robert Owen, soon after 1810, not only maintained the necessity of a limitation of the working-day in theory, but actually introduced the 10 hours' day into his factory at New Lanark. This was laughed at as a communistic Utopia; so were his "Combination of children's education with productive labor" and the Co-operative Societies of workingmen first called into being by him. Today, the first Utopia is a Factory Act, the second figures as an official phrase in all Factory Acts, the third is already being used as a cloak for reactionary humbug.

↓ But the main text continues with a counterexample, a acientist defining capital:

Hence, the philosopher of the Factory, Ure, denounces as an ineffable disgrace to the English working-class that they inscribed "the slavery of the Factory Acts" on the banner which they bore against capital, manfully striving for "perfect freedom of labor."¹⁹²

¹⁹² Ure: "French translation, Philosophie des Manufactures." Paris, 1836, Vol. II, pp. 39, 40, 67, 77, etc.

↓ France: later than England, legislation gained not in a protracted hidden civil war but at one stroke in the February revolution. However it is weaker, 12 not 10 hours.

413:1/o France limps slowly behind England. The February revolution was necessary to bring into the world the 12 hours' law,¹⁹³ which is much more deficient than its English original.

¹⁹³ In the *Compte Rendu* of the International Statistical Congress at Paris, 1855, it is stated: "The French law, which limits the length of daily labor in factories and workshops to 12 hours, does not confine this work to definite fixed hours. Only for children's labor the work-time is prescribed as between 5 a.m. and 9 p.m. Therefore, some of the masters use the right which this fa-

hinwarfen.¹⁹¹

¹⁹¹ Als Robert Owen kurz nach dem ersten Dezennium dieses Jahrhunderts die Notwendigkeit einer Beschränkung des Arbeitstags nicht nur theoretisch vertrat, sondern den Zehnstundentag wirklich in seine Fabrik zu New-Lanark einführte, ward das als kommunistische Utopie verlacht, ganz so wie seine „Verbindung von produktiver Arbeit mit Erziehung der Kinder“, ganz wie die von ihm ins Leben gerufenen Kooperationsgeschäfte der Arbeiter. Heutzutage ist die erste Utopie Fabrikgesetz, die zweite figuriert als offizielle Phrase in allen „Factory Acts“, und die dritte dient sogar schon zum Deckmantel reaktionärer Schwindeleien.

Der Fabrikphilosoph Ure denunziert es daher als unauslöschliche Schmach der englischen Arbeiterklasse, daß sie „die Sklaverei der Fabrikakte“ auf ihre Fahne schrieb gegenüber dem Kapital, das männlich für „vollkommne Freiheit der Arbeit“ stritt.¹⁹²

¹⁹² Ure (franz. Übers.), „Philosophie des Manufactures“, Paris 1836, t. II, p. 39, 40, 67, 77 etc.

317:1/o Frankreich hinkt langsam hinter England her. Es bedarf der Februarrevolution zur Geburt des Zwölfstundengesetzes,¹⁹³ das viel mangelhafter ist als sein englisches Original.

¹⁹³ In dem *Compte Rendu* des „Internationalen Statistischen Kongresses zu Paris, 1855“, heißt es u.a.: „Das französische Gesetz, das die Dauer der täglichen Arbeit in Fabriken und Werkstätten auf 12 Stunden beschränkt, begrenzt diese Arbeit nicht innerhalb bestimmter fixer Stunden“ (Zeitperioden), „indem nur für die Kinderarbeit die Periode zwischen 5 Uhr vormittags

tal silence gives them to keep their works going, without intermission, day in, day out, possibly with the exception of Sunday. For this purpose they use two different sets of workers, of whom neither is in the workshop more than 12 hours at a time, but the work of the establishment lasts day and night. The law is satisfied, but is humanity?" Besides "the destructive influence or night-labor on the human organism," stress is also laid upon "the fatal influence of the association of the two sexes by night in the same badly-lighted workshops."

↓ French method has the advantage that the laws are enacted for all workshops and all workers. (1) Introduced everywhere at same time.

For all that, the French revolutionary method has its specific advantages. It once for all commands the same limit to the working-day in all shops and factories without distinction, whilst English legislation reluctantly yields to the pressure of circumstances, now on this point, now on that, and is getting lost in a hopelessly bewildering tangle of contradictory enactments.¹⁹⁴

Footnote 194 gives examples of this legislative tangle in England:

¹⁹⁴ "For instance, there is within my district one occupier who, within the same curtilage, is at the same time a bleacher and dyer under the Bleaching and Dyeing Works Act, a printer under the Print Works Act, and a finisher under the Factory Act." (Repon of Mr. Baker, in Reports, lic., for October 31st, 1861, p. 20.) After enumerating the different provisions of these Acts, and the complications arising from them, Mr. Baker says: "It will hence appear that it must be very difficult to secure the execution of these three Acts of Parliament where the occupier chooses to evade the law." But what is assured to the lawyers by this is law-suits.

↓ (2) Second advantage of French method: it is valid for everybody, not only children and

und 9 Uhr abends vorgeschrieben ist. Daher bedient sich ein Teil der Fabrikanten des Rechts, welches ihnen dies verhängnisvolle Schweigen gibt, um tagaus, tagein, vielleicht mit Ausnahme der Sonntage, ohne Unterbrechung arbeiten zu lassen. Sie wenden dazu zwei verschiedene Arbeiterreihen an, von denen keine mehr als 12 Stunden in der Werkstätte zubringt, aber das Werk des Etablissements dauert Tag und Nacht. Das Gesetz ist befriedigt, aber ist es die Humanität ebenfalls?" Außer dem „zerstörenden Einfluß der Nachtarbeit auf den menschlichen Organismus“, wird auch „der fatale Einfluß der nächtlichen Assoziation beider Geschlechter in denselben trüb erleuchteten Werkstätten“ betont.

Trotzdem macht die französische revolutionäre Methode auch ihre eigentümlichen Vorzüge geltend. Mit einem Schlag diktiert sie allen Ateliers und Fabriken ohne Unterschied dieselbe Schranke des Arbeitstags, während die englische Gesetzgebung bald an diesem Punkt, bald an jenem, dem Druck der Verhältnisse widerwillig weicht und auf dem besten Weg ist, einen neuen juristischen Rattenkönig auszubrüten.¹⁹⁴

¹⁹⁴ „Z.B. in meinem Distrikt, in denselben Fabrikbaulichkeiten, ist derselbe Fabrikant Bleicher und Färber unter dem ‚Bleicherei- und Färberei-Akt‘, Drucker unter dem ‚Printworks-Act‘ und finisher unter dem ‚Fabrikakt‘ ...“ (Report of Mr. Baker in „Reports etc. for 31st Oct. 1861“, p. 20.) Nach Aufzählung der verschiedenen Bestimmungen dieser Akte und der daher folgenden Komplikation, sagt Herr Baker: „Man sieht, wie schwer es sein muß, die Vollziehung dieser 3 Parlamentsakte zu sichern, wenn der Fabrikeigner das Gesetz zu umgehen beliebt.“ [l.c. p.21.] Was aber den Herrn Juristen dadurch gesichert ist, sind Prozesse.

women.

On the other hand, the French law proclaims as a principle that which in England was only won in the name of children, minors, and women, and has been only recently for the first time claimed as a general right.¹⁹⁵

Footnote 195 gives evidence that this generalization is also starting in England:

¹⁹⁵ Thus the Factory Inspectors at last venture to say: "These objections (of capital to the legal limitation of the working-day) must succumb before the broad principle of the rights of labor... There is a time when the master's right in his workman's labor ceases, and his time becomes his own, even if there were no exhaustion in the question." (Reports, 8cc., for 31st Oct., 1862, p. 54.)

Andrerseits proklamiert das französische Gesetz prinzipiell, was in England nur im Namen von Kindern, Unmündigen und Frauenzimmern erkämpft und erst neuerdings als allgemeines Recht beansprucht wird.¹⁹⁵

¹⁹⁵ So getrauen sich endlich die Fabrikinspektoren zu sagen: „Diese Einwände“ (des Kapitals gegen legale Beschränkung der Arbeitszeit) „müssen unterliegen vor dem großen Grundsatz der Rechte der Arbeit... es gibt einen Zeitpunkt, an dem des Unternehmers Recht auf die Arbeit seines Arbeiters aufhört und dieser selbst über seine Zeit verfügen kann, auch wenn er noch nicht erschöpft ist.“ („Reports etc. for 31st Oct. 1862“, p. 54.)

Question 747 *What are the advantages and disadvantages of the French revolutionary versus the more pragmatic English method?*

USA: the abolition of slavery was necessary before a vital labor movement could develop. Agitation for the Eight Hour Day was "first fruit of Civil War."

414:1/o In the United States of North America, every independent movement of the workers was paralysed so long as slavery disfigured a part of the Republic. Labor cannot emancipate itself in the white skin where in the black it is branded. But out of the death of slavery a new life at once arose. The first fruit of the Civil War was the eight hours' agitation, that ran with the seven-leagued boots of the locomotive from the Atlantic to the Pacific, from New England to California.

318:1–319:1 In den Vereinigten Staaten von Nordamerika blieb jede selbständige Arbeiterbewegung gelähmt, solange die Sklaverei einen Teil der Republik verunstaltete. Die Arbeit in weißer Haut kann sich nicht dort emanzipieren, wo sie in schwarzer Haut gebrandmarkt wird. Aber aus dem Tod der Sklaverei entsproß sofort ein neu verjüngtes Leben. Die erste Frucht des Bürgerkriegs war die Achtstundenagitation, mit den Siebenmeilenstiefeln der Lokomotive vom Atlantischen bis zum Stillen Ozean ausschreitend, von Neuengland bis nach Kalifornien.

The fundamental role of the limitation of the working-day for any other achievements of the labor movement is stressed in the following resolutions:

The General Congress of labor at Baltimore (August 16th, 1866) declared:

Der allgemeine Arbeiterkongreß zu Baltimore (Aug. 1866) erklärt:

"The first and great necessity of the present, to free the labor of this country from capitalistic slavery, is the passing of a law by which eight hours shall be the normal working-day in all States of the American Union. We are resolved to put forth all our strength until this glorious result is attained."¹⁹⁶

Footnote 196 gives the text of a resolution by one attending contingent of workers, presumably at the same congress:

¹⁹⁶ "We, the workers of Dunkirk, declare that the length of time of labor required under the present system is too great, and that, far from leaving the worker time for rest and education, it plunges him into a condition of servitude but little better than slavery. That is why we decide that 8 hours are enough for a working-day, and ought to be legally recognised as enough; why we call to our help that powerful lever, the press; ... and why we shall consider all those that refuse us this help as enemies of the reform of labor and of the rights of the laborer." (Resolution of the Working Men of Dunkirk, New York State, 1866.)

But similar statements also in Europe:

414:1p/o At the same time (the beginning of September 1866), the Congress of the International Working Men's Association at Geneva, on the proposition of the London General Council, resolved that "the limitation of the working-day is a preliminary condition without which all further attempts at improvement and emancipation must prove abortive ... The Congress proposes eight hours as the legal limit of the working-day."

↓ Limitation of working-day necessary before further progress can be made.

415:1/o Thus the movement of the working-class on both sides of the Atlantic, that had grown instinctively out of the conditions of production themselves, endorsed the words of the English Factory Inspector,

„Das erste und große Erheischnis der Gegenwart, um die Arbeit dieses Landes von der kapitalistischen Sklaverei zu befreien, ist der Erlass eines Gesetzes, wodurch 8 Stunden den Normalarbeitstag in allen Staaten der amerikanischen Union bilden sollen. Wir sind entschlossen, alle unsre Macht aufzubieten, bis dies glorreiche Resultat erreicht ist."¹⁹⁶

¹⁹⁶ „Wir, die Arbeiter von Dunkirk, erklären, daß die unter dem jetzigen System erheischte Länge der Arbeitszeit zu groß ist und dem Arbeiter keine Zeit für Erholung und Entwicklung läßt, ihn vielmehr auf einen Zustand der Knechtschaft herabdrückt, der wenig besser als die Sklaverei ist (a condition of servitude but little better than slavery). Deshalb beschlossen, daß 8 Stunden für einen Arbeitstag genügen und legal als genügend anerkannt werden müssen; daß wir zu unsrem Beistand die Presse anrufen, den gewaltigen Hebel ... und alle, die diesen Beistand versagen, als Feinde der Arbeitsreform und Arbeiterrechte betrachten.“ (Beschlüsse der Arbeiter zu Dunkirk, Staat New York, 1866.)

319:1 Gleichzeitig (Anfang September 1866) beschloß der „Internationale Arbeiterkongreß“ zu Genf auf Vorschlag des Londoner Generalrats: „Wir erklären die Beschränkung des Arbeitstags für eine vorläufige Bedingung, ohne welche alle andren Bestrebungen nach Emanzipation scheitern müssen ... Wir schlagen 8 Arbeitsstunden als legale Schranke des Arbeitstags vor.“

319:2–3 So besiegelt die auf beiden Seiten des Atlantischen Meers instinktiv aus den Produktionsverhältnissen selbst erwachsne Arbeiterbewegung den Ausspruch des englischen Fabrikinspektors R. J. Saun-

R. J. Saunders:

Further steps towards a reformation of society can never be carried out with any hope of success, unless the hours of labor be limited, and the prescribed limit strictly enforced.¹⁹⁷

¹⁹⁷ Reports, etc., for Oct., 1848, p. 112.

ders:

Weitere Schritte zur Reform der Gesellschaft sind niemals mit irgendeiner Aussicht auf Erfolg durchzuführen, wenn nicht zuvor der Arbeitstag beschränkt und seine vorgeschriebene Schranke strikt erzwungen wird.¹⁹⁷

¹⁹⁷ „Reports etc. for 31st Oct. 1848“, p. 112.

Question 748 *Why was the shortening of the labor day termed the condition for any further emancipation of the worker? Did the later history of the labor movement prove Marx's expectations right?*

↓ In order to understand why the shortening of the working-day is so important, we must answer the following question: why do the workers, who are selling their labor-power voluntarily, have to be prevented by law from selling too much of it?

415:2/o It must be acknowledged that our laborer comes out of the process of production other than he entered. In the market he stood as owner of the commodity “labor-power” face to face with other owners of commodities, dealer against dealer. The contract by which he sold to the capitalist his labor-power proved, so to say, in black and white that he disposed of himself freely. The bargain concluded, it is discovered that he was no “free agent,” that the time for which he is free to sell his labor-power is the time for which he is forced to sell it,¹⁹⁸ that in fact the vampire will not lose its hold on him “so long as there is a muscle, a nerve, a drop of blood to be exploited.”¹⁹⁹

319:4/o Man muß gestehn, daß unser Arbeiter anders aus dem Produktionsprozeß herauskommt, als er in ihn eintrat. Auf dem Markt trat er als Besitzer der Ware „Arbeitskraft“ andren Warenbesitzern gegenüber, Warenbesitzer dem Warenbesitzer. Der Kontrakt, wodurch er dem Kapitalisten seine Arbeitskraft verkaufte, bewies sozusagen schwarz auf weiß, daß er frei über sich selbst verfügt. Nach geschlossenem Handel wird entdeckt, daß er „kein freier Agent“ war, daß die Zeit, wofür es ihm freisteht, seine Arbeitskraft zu verkaufen, die Zeit ist, wofür er gezwungen ist, sie zu verkaufen,¹⁹⁸ daß in der Tat sein Sauger nicht losläßt, „solange noch ein Muskel, eine Sehne, ein Tropfen Bluts auszubeuten“¹⁹⁹.

Question 749 *What is the difference which Marx saw between the laborer entering the production process and the laborer coming out of it?*

The change of the worker has two components. First of all, the labor-time which he is free to sell turns out to be the time which he is forced to sell. This transformation will be discussed in more detail in chapter Twenty-Three, see 716:1.

Question 750 *Marx claims that the freedom of the laborer to sell his labor-power is really a coercion: he must sell his labor-power. Explain.*

Footnote 198 already gives the transition to a second kind of change among the workers: in order to defend themselves against the onslaught of capital, the workers can no longer act as atomistic individuals but must band their heads together in order to act as a class.

¹⁹⁸ “The proceedings (the manoeuvres of capital, e.g., from 1848–50) have afforded, moreover, incontrovertible proof of the fallacy of the assertion so often advanced, that operatives need no protection, but may be considered as free agents in the disposal of the only property which they possess—the labor of their hands and the sweat of their brows.” (Reports, etc., for April 30th, 1850, p. 45.) “Free labor (if so it may be termed) even in a free country, requires the strong arm of the law to protect it.” (Reports, etc., for October 31st, 1864, p. 34.) “To permit, which is tantamount to compelling . . . to work 14 hours a day with or without meals,” etc. (Repts., etc., for April 30th, 1863, p. 40.)

¹⁹⁹ Friedrich Engels, l.c., p. 5.

Here is now this other change not only in the footnote but in the main text:

For “protection” against “the serpent of their agonies,” the laborers must band together and, as a class, compel the passing of a law, an all-powerful social barrier that shall prevent the very workers from selling, by voluntary contract with capital, themselves and their families into slavery and death.²⁰⁰

This is the Moore-Aveling translation with the exception of the word “band together,” where Moore-Aveling has “put together.” “Put together” suggests that they

have to consult with each other; “band together” means they have to give up their individual action and act as a group. Fowkes does not say “other than

he entered” but “looking different.” This leaves it open whether there is a real change or not.

¹⁹⁸ „Diese Machenschaften“ (die Manöver des Kapitals z.B. 1848–1850) „haben überdies den unwiderlegbaren Beweis erbracht, wie falsch die so oft vorgebrachte Behauptung ist, die Arbeiter hätten keinen Schutz nötig, sondern müßten angesehen werden als frei verfügende Besitzer des einzigen Eigentums, das sie haben, der Arbeit ihrer Hände und des Schweißes ihrer Stirn.“ („Reports etc. for 30th April 1850“, p. 45.) „Freie Arbeit, wenn sie überhaupt so genannt werden kann, bedarf zu ihrem Schutze selbst in einem freien Land des starken Armes des Gesetzes.“ („Reports etc. for 31st Oct. 1864, p. 34.) „Zu erlauben, was gleichbedeutend ist mit zwingen, . . . 14 Stunden täglich mit oder ohne Mahlzeiten zu arbeiten usw.“ („Reports etc. for 30th April 1863“, p. 40.)

¹⁹⁹ Friedrich Engels, „Die englische Zehnstundenbill“, l.c. p. 5.

Zum „Schutz“ gegen die Schlange ihrer Qualen müssen die Arbeiter ihre Köpfe zusammennrotten und als Klasse ein Staatsgesetz erzwingen, ein übermächtiges gesellschaftliches Hindernis, das sie selbst verhindert, durch freiwilligen Kontrakt mit dem Kapital sich und ihr Geschlecht in Tod und Sklaverei zu verkaufen.²⁰⁰

“Zusammenrotten” is a rather drastic formulation which the usual translations do not capture. People are forced to make some fundamental changes in the ways they relate to each other, in order to be able to make their suffering bearable.

↓ Footnote 200 documents that also in the Faactory Reports the workers were deemed to need “protection”:

²⁰⁰ The 10 Hours' Act has, in the branches of industry that come under it, "put an end to the premature decrepitude of the former long-hour workers." (Reports, etc., for 31st Oct., 1859, p. 47.) "Capital (in factories) can never be employed in keeping the machinery in motion beyond a limited time, without certain injury to the health and morals of the laborers employed; and they are not in a position to protect themselves." (l.c., p. 8)

Question 751 Why do free laborers need legal "protection"?

Question 752 Discuss the objection that the factory acts infringe on the "freedom" of the workers. Draw parallels to the contemporary "right to work" campaigns.

↓ This is the birth of something new, but much less celebrated than the Human Rights:

In place of the ornate catalogue of the "inalienable rights of man" comes the modest Magna Charta of a legally limited working-day, which shall make clear "when the time which the worker sells is ended, and when his own begins."²⁰¹ Quantum mutatus ab illo!

↑ This is a reference to the end of chapter Six, 280:1, where we go from the sphere of circulation, the kingdom of human rights, to the sphere of production.

²⁰¹ "A still greater boon is the distinction at last made clear between the worker's own time and his master's. The worker knows now when that which he sells is ended, and when his own begins; and by possessing a sure foreknowledge of this, is enabled to prearrange his own minutes for his own purposes." (l.c., p. 52.) "By making them masters of their own time (the Factory Acts) have given them a moral energy which is directing them to the eventual possession of political power" (l.c., p. 47).

↓ Influence of the proletariat not only good for capital but also for the capitalists.

With suppressed irony, and in very well weighed words, the Factory Inspectors hint

²⁰⁰ Die Zehnstundenbill hat in den ihr unterworfenen Industriezweigen „die Arbeiter vor gänzlicher Degeneration gerettet und ihren physischen Zustand beschützt.“ („Reports etc. for 31st Oct. 1859“, p. 47.) „Das Kapital“ (in den Fabriken) „kann niemals die Maschinerie in Bewegung halten über eine begrenzte Zeitperiode, ohne die beschäftigten Arbeiter an ihrer Gesundheit und ihrer Moral zu beschädigen; und sie sind nicht in einer Lage, sich selbst zu schützen. (l.c. p. 8.)

An die Stelle des prunkvollen Katalogs der „unveräußerlichen Menschenrechte“ tritt die bescheidne Magna Charta eines gesetzlich beschränkten Arbeitstags, die „endlich klar macht, wann die Zeit, die der Arbeiter verkauft, endet und wann die ihm selbst gehörige Zeit beginnt“²⁰¹ Quantum mutatus ab illo!

²⁰¹ „Einen noch größeren Vorteil bedeutet es, daß endlich klar unterschieden wird zwischen der Zeit, die dem Arbeiter selbst und der, die seinem Unternehmer gehört. Der Arbeiter weiß nun, wann die Zeit, die er verkauft, beendet ist und seine eigne beginnt, und da er dies vorher genau weiß, kann er über seine eignen Minuten für seine eignen Zwecke im voraus verfügen.“ (l.c. p. 52.) „Indem sie“ (die Fabrikgesetze) sie zu Herrn ihrer eignen Zeit gemacht haben, haben sie ihnen eine moralische Energie gegeben, die sie dahinführt, möglicherweise die politische Macht in Besitz zu nehmen.“ (l.c. p. 47.)

Mit verhaltner Ironie und in sehr vorsichtigen Ausdrücken deuten die Fabrikinspektoren

that the actual law also frees the capitalist from some of the brutality natural to a man who is a mere embodiment of capital, and that it has given him time for a little "culture." "Formerly the master had no time for anything but money; the servant had no time for anything but labor" (l.c., p. 48).

About footnote 201 see also Foner [Fon47, p. 279].

Question 753 In whose interest were the English factory Acts?

Question 754 Why did the state interfere and and not the unions?

Question 755 What does the state do in chapter Ten?

ren an, daß das jetzige Zehnstundengesetz auch den Kapitalisten einigermaßen von seiner naturwüchsigen Brutalität als bloßer Verkörperung des Kapitals befreit und ihm Zeit zu einiger „Bildung“ gegeben habe. Vorher „hatte der Unternehmer für nichts anderes als Geld, der Arbeiter für nichts anderes als Arbeit Zeit“. (l.c. p. 48.)

12. The Concept of Relative Surplus-Value

12.1. [Introduction of Relative Surplus-Value]

As in chapter Ten, 340:2/o, Marx represents the working day as a two-part interval $a—b—c$, where $a—b$ is necessary labor and $b—c$ surplus labor:

429:1 That portion of the working day which produces a mere equivalent for the value of the labor-power paid by the capitalist has so far been treated as a constant magnitude. Under given conditions of production at a given stage in the economic development of society, it is indeed constant. Beyond this necessary labor-time, the worker continued to work for 2, 3, 4, 6, etc. hours. The rate of surplus-value and the length of the working day depended on the length of this extension. Although the necessary labor-time was constant, the total working day was variable.

↑ Until now, the assumptions were: necessary labor constant, total day variable. This variability was the subject of chapter Ten, see 341:1. ↓ Now Marx adds the assumption that the total day is constant. Marx also maintains, for now, the assumption that the necessary labor is fixed.

Now suppose a working day with a given length and division between necessary labor and surplus labor. Let the whole line AC , $A—B—C$, represent, for example, a working day of 12 hours; the section AB 10 hours of necessary labor, and the section BC 2 hours of surplus labor.

This is not just a hypothetical question, but it was the situation after passage of the Ten Hour Bills. The fixation of the work day to ten hours did not mean the end of capitalism. As before, capitalists were cutting costs and/or increasing output in order to increase their

331:1 Der Teil des Arbeitstags, der bloß ein Äquivalent für den vom Kapital gezahlten Wert der Arbeitskraft produziert, galt uns bisher als konstante Größe, was er in der Tat ist unter gegebenen Produktionsbedingungen, auf einer vorhandenen ökonomischen Entwicklungsstufe der Gesellschaft. Über diese seine notwendige Arbeitszeit hinaus konnte der Arbeiter 2, 3, 4, 6 usw. Stunden arbeiten. Von der Größe dieser Verlängerung hingen Rate des Mehrwerts und Größe des Arbeitstags ab. War die notwendige Arbeitszeit konstant, so dagegen der Gesamtarbeitstag variabel.

Unterstelle jetzt einen Arbeitstag, dessen Größe und dessen Teilung in notwendige Arbeit und Mehrarbeit gegeben sind. Die Linie ac , $a—b—c$, stelle z.B. einen zwölfstündigen Arbeitstag vor, das Stück ab 10 Stunden notwendige Arbeit, das Stück bc 2 Stunden Mehrarbeit.

Part IV.

The Production of Relative Surplus-Value

profits. And they still seemed to succeed. But how were they doing it now? According to the labor theory of value, profits can rise only if the unpaid labor of the laborers rises. The question before us is therefore:

How can the production of surplus-value be increased, i.e. how can surplus labor be prolonged, without any prolongation, or independently of any prolongation, of the line AC ?

As in other situations in *Capital*, Marx has set up the question in such a way that a simple solution suggests itself: the capitalists have to push b to the left. This is the only possibility.

429:2/o Although the boundaries of the working day, A and C , are given, it would seem possible to lengthen the line BC (other than by extending it beyond its end point C , which is also the end of the working day AC) by pushing back its starting point B in the direction of A .

Wie kann nun die Produktion von Mehrwert vergrößert, d.h. die Mehrarbeit verlängert werden, ohne jede weitere Verlängerung oder unabhängig von jeder weiteren Verlängerung von ac ?

331:2/o Trotz gegebener Grenzen des Arbeitstags ac scheint bc verlängerbar, wenn nicht durch Ausdehnung über seinen Endpunkt c , der zugleich der Endpunkt des Arbeitstags ac ist, so durch Verschiebung seines Anfangspunkts b in entgegengesetzter Richtung nach a hin.

Question 758 According to Marx, the only way to increase profits is to shorten the portion of the day during which the workers produce an equivalent of their wage, and to extend that portion of the day when they create unreimbursed new value for the capitalist. Are the capitalists aware of it that all their cost cutting measures, if successful, go at the expense of their workers?

But this solution is derived from the geometry of our little interval, which is a model of the working day but not the working day itself. Can this solution be implemented in the economy of which the interval is an image? In order to make the transition from the geometric model to the economy itself, Marx constructs a concrete example in which all numbers are known:

Assume that $B'B$ in the line $A-B-C$ is equal to half of BC , or to 1 hour's labor-time. If now, in the 12-hour working day AC , point B is moved to B' , then BC becomes $B'C$, the surplus labor increases by one half, from 2 hours to 3 hours, although the working day remains 12 hours as before.

Nimm an, $b'b$ in $a-b-c$ sei gleich der Hälfte von bc oder gleich einer Arbeitsstunde. Wird nun in dem zwölfstündigen Arbeitstag ac der Punkt b nach b' verrückt, so dehnt sich bc aus zu $b'c$, die Mehrarbeit wächst um die Hälfte, von 2 auf 3 Stunden, obgleich der Arbeitstag nach wie vor nur 12 Stunden zählt.

↑ Marx is proceeding here at a snail's pace. As expected, the shift from B to B' increases surplus-value. This is consistent with our experience of capitalism still thriving after the passage of the ten-hour laws. ↓ But what are the implications of this shift for the necessary labor?

This extension of the surplus labor-time from BC to $B'C$, from 2 hours to 3 hours, is however evidently impossible without a simultaneous contraction of the necessary labor-time from AB to AB' , from 10 hours to 9 hours. The prolongation of surplus labor would be accompanied by an equal shortening of necessary labor. A portion of the labor-time previously consumed, in effect, for the worker's own benefit, would be converted into labor-time expended for the capitalist. It would not be the length of the working day that changes, but its division into necessary labor-time and surplus labor-time.

Diese Ausdehnung der Mehrarbeit von bc auf $b'c$, von 2 auf 3 Stunden, ist aber offenbar unmöglich ohne gleichzeitige Zusammenziehung der notwendigen Arbeit von ab auf ab' , von 10 auf 9 Stunden. Der Verlängerung der Mehrarbeit entspräche die Verkürzung der notwendigen Arbeit, oder ein Teil der Arbeitszeit, die der Arbeiter bisher in der Tat für sich selbst verbraucht, verwandelt sich in Arbeitszeit für den Kapitalisten. Was verändert, wäre nicht die Länge des Arbeitstags, sondern seine Teilung in notwendige Arbeit und Mehrarbeit.

Fowkes (Moore-Aveling): "The prolongation of (the) surplus labor would correspond to a shortening of (the) necessary labor." But

Marx has it exactly the other way round: "To the prolongation of surplus labor would correspond a shortening of necessary labor." In

the translation used here, "the prolongation of surplus labor would be accompanied by an equal shortening of necessary labor."

↑ Surplus-value can only increase if necessary labor becomes shorter. ↓ But this does not seem possible! If the length of the working-day is given, and the value of labor-power is given, then surplus-value is given and cannot be reduced.

In the translation of Marx's numerical examples that follow, the English currency used by Marx is converted into a decimal currency (dollars), so that it is easier for the reader to follow the math.

430:1/o On the other hand, the magnitude of surplus labor is evidently given when the length of the working day and the value of labor-power are given. The value of labor-power, i.e. the labor-time necessary to produce labor-power, determines the labor-time necessary for the reproduction of the value of labor-power. If 1 hour of work is represented in 12 cents, and the value of a day's labor-power is \$1.20, the worker must work 10 hours every day in order to replace the value paid by capital for his labor-power, or to produce an equivalent for the value of the means of subsistence he needs to consume every day. Given the value of these means

332:1/o Andererseits ist die Größe der Mehrarbeit offenbar selbst gegeben mit gegebener Größe des Arbeitstags und gegebenem Wert der Arbeitskraft. Der Wert der Arbeitskraft, d.h. die zu ihrer Produktion erheischte Arbeitszeit, bestimmt die zur Reproduktion ihres Werts notwendige Arbeitszeit. Stellt sich eine Arbeitsstunde in einem Goldquantum von einem halben Shilling oder 6 d. dar, und beträgt der Tageswert der Arbeitskraft 5 sh., so muß der Arbeiter täglich 10 Stunden arbeiten, um den ihm vom Kapital gezahlten Tageswert seiner Arbeitskraft zu ersetzen oder ein Äquivalent für den Wert seiner notwendigen tägli-

of subsistence, the value of his labor-power can be calculated;¹ and given the value of his labor-power, the length of his necessary labor-time can be calculated. The duration of the surplus labor, however, is arrived at by subtracting the necessary labor-time from the total working day: 10 from 12 leaves 2, and it is not evident how, under the given conditions, the surplus labor could possibly be prolonged beyond 2 hours.

↓ Footnote 1 stresses through the voices of many economists that the value of labor-power is given, which contradicts our implication of a shorter necessary labor.

¹ The value of his average daily wages is determined by what the worker needs 'so as to live, labor, and generate' [Pet91, p. 64]. 'The price of labor is always constituted of the price of necessities . . . Whenever . . . the laboring man's wages will not, suitably to his low rank and station, as a laboring man, support such a family as is often the lot of many of them to have', he is not receiving the proper wages [Van34, p. 15]. 'The simple worker, who possesses nothing but his arms and his industriousness, has nothing unless he manages to sell his labor to others . . . In every kind of labor, it must happen, and it does in fact happen, that the wage of the worker is limited to what he needs to secure his own subsistence' (Turgot, *Reflexions*, etc., in *Oeuvres*, ed. Daire, Vol. I, p. 10). 'The price of the necessities of life is, in fact, the cost of producing labor' [Mal15, p. 48, Note]

chen Lebensmittel zu produzieren. Mit dem Wert dieser Lebensmittel ist der Wert seiner Arbeitskraft,¹ mit dem Wert seiner Arbeitskraft ist die Größe seiner notwendigen Arbeitszeit gegeben. Die Größe der Mehrarbeit aber wird erhalten durch Subtraktion der notwendigen Arbeitszeit vom Gesamtarbeitstag. Zehn Stunden subtrahiert von zwölf lassen zwei, und es ist nicht abzusehn, wie die Mehrarbeit unter den gegebenen Bedingungen über zwei Stunden hinaus verlängert werden kann.

¹ „Der Wert des täglichen Durchschnittslohns ist bestimmt durch das, was der Arbeiter braucht, um zu leben, zu arbeiten und sich fortzupflanzen“. [Pet91, p. 64] „Der Preis der Arbeit wird immer vom Preis der notwendigen Lebensmittel bestimmt.“ Der Arbeiter erhält nicht den entsprechenden Lohn, „wann immer . . . der Lohn des Arbeiters nicht hinreicht eine so große Familie, wie sie das Los vieler von ihnen ist, entsprechend seinem niedrigen Stand und als Arbeiter zu ernähren.“ [Van34, p. 15] „Der einfache Arbeiter, der nichts als seine Arme und seinen Fleiß besitzt, hat nichts, außer wenn es ihm gelingt, seine Arbeit an andre zu verkaufen . . . Bei jeder Art Arbeit muß es dahin kommen, und kommt es in der Tat dahin, daß der Lohn des Arbeiters auf das begrenzt ist, was er notwendig zu seinem Lebensunterhalt braucht.“ (Turgot, „*Reflexions* etc.“, „*Oeuvres*“, éd. Daire, t. I, p. 10.) „Der Preis der Subsistenzmittel ist in der Tat gleich den Kosten der Produktion der Arbeit.“ [Mal15, p. 48, Note]

Question 760 Turgot wrote: “In every kind of labor, it must happen, and it does in fact happen, that the wage of the worker is limited to what he needs to secure his own subsistence.” Why is this so? Is this still valid today?

We are at an impasse. The capitalist wants to change the division of the working-day into necessary and surplus-labor in his favor. Not only is it his motivation, he seems to be

successful at it. Capitalism is thriving, profits are growing, despite the limits on the working-day. But from the argument given it seems that the laws of economics do not permit this.

As in the other impasse situations, the resolution consists in opening up the inquiry, by bringing in things which were until now not considered. But this time, the resolution will not be given in one step but in two steps. First, Marx asks: can these continued profits be explained by the capitalists violating the law of value?

Of course, the capitalist could, instead of \$1.20, pay the worker \$1.08 or even less. 9 hours' labor-time would be sufficient to reproduce this value of \$1.08; and consequently 3 hours of surplus labor, instead of 2, would accrue to the capitalist. The surplus-value would rise from 24 cents to 36 cents. This result, however, could be attained only by depressing the wage of the worker below the value of his labor-power. With the \$1.08, which he produces in 9 hours, he commands one-tenth less of the means of subsistence than before, and consequently the reproduction of his labor-power can take place only in a stunted way. The surplus labor would in this case be prolonged only by transgressing its normal limits; its domain would be extended only by a usurpation of part of the domain of necessary labor-time.

↑ Marx does *not* say here that it is impossible to shorten the necessary labor by lengthening the surplus labor. It *is* possible and happens often. ↓ Nevertheless Marx will not discuss it here.

Despite the important part which this method plays in practice, we are barred from considering it here by our assumption, that all commodities, including labor-power, are bought and sold at their full values.

Allerdings mag der Kapitalist statt 5 sh. dem Arbeiter nur 4 sh. 6 d. oder noch weniger zahlen. Zur Reproduktion dieses Werts von 4 sh. 6 d. würden 9 Arbeitsstunden genügen, von dem zwölfstündigen Arbeitstag daher 3 statt 2 Stunden der Mehrarbeit anheimfallen und der Mehrwert selbst von 1 sh. auf 1 sh. 6 d. steigen. Dies Resultat wäre jedoch nur erzielt durch Herabdrückung des Lohns des Arbeiters unter den Wert seiner Arbeitskraft. Mit den 4 sh. 6 d., die er in 9 Stunden produziert, verfügt er über 1/10 weniger Lebensmittel als vorher, und so findet nur eine verkümmerte Reproduktion seiner Arbeitskraft statt. Die Mehrarbeit würde hier nur verlängert durch Überschreitung ihrer normalen Grenzen, ihre Domäne nur ausgedehnt durch usurpatorischen Abbruch von der Domäne der notwendigen Arbeitszeit.

Trotz der wichtigen Rolle, welche diese Methode in der wirklichen Bewegung des Arbeitslohnes spielt, ist sie hier ausgeschlossen durch die Voraussetzung, daß die Waren, also auch die Arbeitskraft, zu ihrem vollen Wert gekauft und verkauft werden.

Question 761 Marx clearly excludes, in 430:1/o, the discussion of situations where wages fall below the value of labor-power. Does he also exclude the discussion of situations where wages rise above the value of labor-power? (Compare 655:2 and 747:2–750:0.)

There are good reasons for the assumption that labor-power is paid its full price. A deviation from this can only allow a short-term boost in profits which will however create

problems for the capitalist system later on, since it undermines the development of the working-class. But capitalism is genuinely thriving in the long run, therefore deviations of the price of labor-power from its value cannot be the explanation. Therefore only one possible explanation remains:

Once we assume this, the labor-time necessary for the production of labor-power, or for the reproduction of its value, cannot be lessened by a fall in the worker's wages below the value of his labor-power, but only by a fall in this value itself.

↑ A solution just fell into our laps; where did it come from? ↓ To explain this, Marx remarks that the transition just made is a reversal of cause and effect. For a dialectician like Marx this means: this is the negation of a negation.

With the length of the working day as a given, the prolongation of the surplus labor must originate in the shortening of the necessary labor-time, instead of the latter arising from the former.

Dies einmal unterstellt, kann die zur Produktion der Arbeitskraft oder zur Reproduktion ihres Werts notwendige Arbeitszeit nicht abnehmen, weil der Lohn des Arbeiters unter den Wert seiner Arbeitskraft, sondern nur wenn dieser Wert selbst sinkt.

Bei gegebener Länge des Arbeitstags muß die Verlängerung der Mehrarbeit aus der Verkürzung der notwendigen Arbeitszeit entspringen, nicht umgekehrt die Verkürzung der notwendigen Arbeitszeit aus der Verlängerung der Mehrarbeit.

Fowkes Translation: "Given the length of the working-day, the prolongation of the surplus labor must of necessity originate in the curtailment of the necessary labor-time; the latter cannot arise from the former." The translator seems to have forgotten the context in which Marx makes this statement. There is nothing in the

German of which "of necessity" is the translation. Furthermore, since the verb in the first half of the sentence is "must," I am assuming the implied verb in the second half of the sentences is "must not" (instead of "cannot"), meaning: it is possible but our assumptions prohibit consideration of this case. I wrote "with the length of the

working day as a given" instead of "if the length of the working day is given," because I wanted to indicate that this is an assumption which has always been in the background, and which must therefore be added to the assumption of prices equal values, instead of taking its place.

↑ If the capitalist depresses the price of labor-power below its value in order to increase surplus-value, then the necessary labor decreases because the surplus labor increases. On the other hand, if the value of labor-power falls, then the surplus labor increases because the necessary labor decreases.

↓ In terms of the numerical example from 429:2/o, the second option would look as follows:

In our example, the value of labor-power must go through a decline of one-tenth, in order to shorten the necessary labor-time by one-tenth, i.e. from 10 hours to 9, and therefore to lengthen the surplus labor from 2 hours to 3.

In unsrem Beispiel muß der Wert der Arbeitskraft wirklich um 1/10 sinken, damit die notwendige Arbeitszeit um 1/10 abnehme, von 10 auf 9 Stunden, und daher die Mehrarbeit sich von 2 auf 3 Stunden verlängere.

The "wirklich" represents a real process brought about by the cumulative effect of productivity

changes (instead of just the wishful thinking of the capitalist, or his ability to cut wages because

of superior market power). I tried to render this in the translation by saying: must go through a decline.

↓ Now the second step in the way out of the above impasse: in order for this to be possible, an additional new point has to be brought in, namely, changes in productivity:

431:1/o A fall of this kind in the value of labor-power implies, however, that the same means of subsistence formerly produced in 10 hours can now be produced in 9 hours. But this is impossible without an increase in the productive power of labor.

333:1/o Eine solche Senkung des Werts der Arbeitskraft um 1/10 bedingt aber ihrerseits, daß dieselbe Masse Lebensmittel, die früher in 10, jetzt in 9 Stunden produziert wird. Dies ist jedoch unmöglich ohne eine Erhöhung der Produktivkraft der Arbeit.

An increase in productivity is therefore the solution of the dilemma. Note that Marx writes here: "the same means of subsistence," i.e., he makes the assumption that real wages remain constant.

For example, suppose a cobbler, with a given set of tools, makes one pair of boots in one working day of 12 hours. If he is to make two pairs in the same time, the productive power of his labor must be double; and this cannot happen without an alteration in his tools and/or work method. Hence the conditions of production of his labor, i.e. his mode of production, hence the labor process itself, must be revolutionized. By an increase in the productive power of labor, we mean an alteration in the labor process of such a kind as to shorten the labor-time socially required for the production of a commodity, therefore to endow a given quantity of labor with the power of producing a greater quantity of use-value.²

Mit gegebenen Mitteln kann ein Schuster z.B. ein Paar Stiefel in einem Arbeitstag von 12 Stunden machen. Soll er in der selben Zeit zwei Paar Stiefel machen, so muß sich die Produktivkraft seiner Arbeit verdoppeln, und sie kann sich nicht verdoppeln ohne eine Änderung in seinen Arbeitsmitteln oder seiner Arbeitsmethode oder beiden zugleich. Es muß daher eine Revolution in den Produktionsbedingungen seiner Arbeit eintreten, d.h. in seiner Produktionsweise und daher im Arbeitsprozeß selbst. Unter Erhöhung der Produktivkraft der Arbeit verstehen wir hier überhaupt eine Veränderung im Arbeitsprozeß, wodurch die zur Produktion einer Ware gesellschaftlich erheischte Arbeitszeit verkürzt wird, ein kleineres Quantum Arbeit also die Kraft erwirbt, ein größeres Quantum Gebrauchswert zu produzieren.²

"Productive power" is a better

translation of "Produktivkraft"

than the usual "productive force."

² 'When the crafts assume a more perfect form, this means nothing other than the discovery of new ways of making a product with fewer people, or (which is the same thing) in a shorter time,

² „Wenn die Gewerbe sich vervollkommen, so bedeutet das nichts anderes als die Entdeckung neuer Wege, auf denen ein Produkt mit weniger Menschen oder (was das selbe ist) in kürzerer Zeit

than previously' [Gal03, pp. 158–9] 'Economies in the cost of production can only be economies in the quantity of labor employed in production' (Sismondi, *Études*, Vol. I, p. 22).

Capitalism must therefore change its mode of production for this kind of exploitation to be possible.

For the production of surplus-value in the form considered until now, we have assumed that the mode of production was given and only the duration of the labor process was prolonged. But when surplus-value has to be produced by the conversion of necessary labor into surplus labor, it by no means suffices for capital to take over the labor process in its historically transmitted or given shape. The technical and social conditions of the labor process and consequently the mode of production itself must be revolutionized if the productivity of labor is to be increased, by this the value of labor-power to be lowered, and the portion of the working day necessary for the reproduction of that value to be shortened.

If capitalism revolutionizes its own presuppositions, this clinches its character as a self-acting force: it no longer depends on conditions provided to it from the outside. One can also consider this as a transition from quantity into quality: capital, which so far was only interested in a quantitative expansion of value, achieves this not merely by a quantitative extension of the working day, but by the qualitative revolutionizing of the production process.

432:1 I call that surplus-value which is produced by the lengthening of the working day, absolute surplus-value. In contrast to this, I call that surplus-value which arises from the shortening of the necessary labor-time, and from the corresponding alteration in the respective lengths of the two components of the working day, relative surplus-value.

The introduction of this new kind of surplus-value is concluded by giving it a name, "relative" because it is an increase in the gap between capitalist and laborer. These are not

als vorher verfertigt werden kann.“ [Gal03, pp. 158–9] „Die Ersparnis an den Kosten der Produktion kann nichts anderes sein als Ersparnis an der zur Produktion angewandten Arbeitsmenge.“ (Sismondi, „Études etc.“, t. I, p. 22.)

Während also bei der Produktion des Mehrwerts in der bisher betrachteten Form die Produktionsweise als gegeben unterstellt war, genügt es für die Produktion von Mehrwert durch Verwandlung notwendiger Arbeit in Mehrarbeit keineswegs, daß das Kapital sich des Arbeitsprozesses in seiner historisch überlieferten oder vorhandenen Gestalt bemächtigt und nur seine Dauer verlängert. Es muß die technischen und gesellschaftlichen Bedingungen des Arbeitsprozesses, also die Produktionsweise selbst umwälzen, um die Produktivkraft der Arbeit zu erhöhen, durch die Erhöhung der Produktivkraft der Arbeit den Wert der Arbeitskraft zu senken und so den zur Reproduktion dieses Werts notwendigen Teil des Arbeitstags zu verkürzen.

334:1 Durch Verlängerung des Arbeitstags produzierten Mehrwert nenne ich absoluten Mehrwert; den Mehrwert dagegen, der aus Verkürzung der notwendigen Arbeitszeit und entsprechender Veränderung im Größenverhältnis der beiden Bestandteile des Arbeitstags entspringt—relativen Mehrwert.

so much two kinds of surplus-value as two mechanisms to gain surplus-value.

Exam Question 764 *What is relative surplus-value? Which mechanisms, that were so far taken as given, affect the magnitude of relative surplus-value?*

This ends the first third of this chapter, and the chapter title "Concept of Relative Surplus-Value" apparently refers only to this first third of the chapter.

12.2. [From Productivity to Relative Surplus-Value]

We have seen that under the given conditions (constant working day and all commodities are sold at their values), the only possibility for the capitalists to increase surplus-value is a rise in the productivity of the production of the workers' means of consumption. Next Marx verifies whether such a rise, if it occurs, indeed has this effect. Marx conducts this investigation in form of a dialog: he introduces doubts why surplus-value may not rise noticeably and then answers these doubts.

432:2 In order to lower the value of labor-power, the rise in the productivity of labor must seize upon those branches of industry whose products determine the value of labor-power, and consequently either belong to the category of normal means of subsistence, or are capable of replacing them.

↑ We just read the first doubt: it looks as if only few branches of industry can affect the value of labor-power through increasing productivity. ↓ Reply:

But the value of a commodity is determined not only by the quantity of labor which gives it its final form, but also by the quantity of labor contained in the instruments by which it has been produced. For instance, the value of a pair of boots depends not only on the labor of the cobbler, but also on the value of the leather, wax, thread, etc. Hence a fall in the value of labor-power is also brought about by an increase in the productivity of labor, and by a corresponding cheapening of commodities, in those industries which supply the instruments of labor and the material for labor, i.e. the physical elements of constant capital which are required for producing the means of subsistence.

334:2 Um den Wert der Arbeitskraft zu senken, muß die Steigerung der Produktivkraft Industriezweige ergreifen, deren Produkte den Wert der Arbeitskraft bestimmen, also entweder dem Umkreis der gewohnheitsmäßigen Lebensmittel angehören oder sie ersetzen können.

Der Wert einer Ware ist aber nicht nur bestimmt durch das Quantum der Arbeit, welche ihr die letzte Form gibt, sondern ebenso wohl durch die in ihren Produktionsmitteln enthaltne Arbeitsmasse. Z.B. der Wert eines Stiefels nicht nur durch die Schusterarbeit, sondern auch durch den Wert von Leder, Pech, Draht usw. Steigerung der Produktivkraft und entsprechende Verwohlfeilerung der Waren in den Industrien, welche die stofflichen Elemente des konstanten Kapitals, die Arbeitsmittel und das Arbeitsmaterial, zur Erzeugung der notwendigen Lebensmittel liefern, senken also ebenfalls den Wert der Arbeitskraft.

↑ This increases the scope drastically, ↓ but there are still some branches left which are not affected.

But an increase in the productivity of labor in those branches of industry which supply neither the necessary means of subsistence nor the means by which they are produced leaves the value of labor-power undisturbed.

↓ Marx's second doubt is: the cheapening of one single kind of use-value can only have a negligible impact on wages.

432:3/o The cheapening of the commodity, of course, causes only a corresponding fall in the value of labor-power, a fall proportional to the extent to which that commodity enters into the reproduction of labor-power. Shirts, for instance, are a necessary means of subsistence, but only one out of many. Their cheapening merely reduces the expenses of the worker for shirts.

This last sentence is missing in the Fowkes translation.

Again this doubt can be answered:

The total sum of the necessary means of subsistence, however, consists of various commodities, each the product of a distinct industry; and the value of each of those commodities enters as a component part into the value of labor-power. The latter value decreases with the decrease of the labor-time necessary for its reproduction. The total decrease of necessary labor-time is equal to the sum of all the different reductions in labor-time which have occurred in those various distinct branches of production.

The flow of the argument might have been a little smoother if Marx had reversed the order of these two objections as follows: First objection: the cheapening of a single article of consumption can only have a negligible effect. Answer: workers' consumption covers more than one article. This answer, then, leads to the next objection: even if one looks at all means of consumption together, only a small part of the economy is devoted to workers' means of consumption. This can again be refuted, but not entirely. Also those industries count which enter the workers' means of consumption indirectly, but there are indeed industries which enter workers' consumption neither directly nor indirectly.

In Produktionszweigen dagegen, die weder notwendige Lebensmittel liefern noch Produktionsmittel zu ihrer Herstellung, läßt die erhöhte Produktivkraft den Wert der Arbeitskraft unberührt.

334:3/o Die verwohlfeilerte Ware senkt natürlich den Wert da Arbeitskraft nur pro tanto, d.h. nur im Verhältnis, worin sie in die Reproduktion der Arbeitskraft eingeht. Hemden z.B. sind ein notwendiges Lebensmittel, aber nur eins von vielen. Ihre Verwohlfeilerung vermindert bloß die Ausgabe des Arbeiters für Hemden.

Die Gesamtsumme der notwendigen Lebensmittel besteht jedoch nur aus verschiedenen Waren, lauter Produkten besondrer Industrien, und der Wert jeder solchen Ware bildet stets einen aliquoten Teil vom Wert der Arbeitskraft. Dieser Wert nimmt ab mit der zu seiner Reproduktion notwendigen Arbeitszeit, deren Gesamtverkürzung gleich der Summe ihrer Verkürzungen in allen jenen besondren Produktionszweigen ist.

Perhaps Marx brought his two objections in the "wrong" order because he wanted a smooth transition to the next issue: since this is an aggregate effect, negligible in the individual case, it cannot be the motivation of the individual capitalist. The rest of the paragraph discusses this important cleavage between surface and core.

We treat this general result here as if it were the immediate result and the immediate aim in each individual case.

Wir behandeln dies allgemeine Resultat hier so, als wäre es unmittelbares Resultat und unmittelbarer Zweck in jedem einzelnen Fall.

This sentence says three things:

- The reduction in the value of labor-power is a *general* result, i.e., it comes not from the cheapening of shirts, but from the cheapening of many means of subsistence.
- It is not always the *immediate result* of each individual case. This means, even if shirts become cheaper, this does not always mean immediately that the value of labor-power declines.
- And it is not always the *immediate aim* of each individual case, i.e., the shirt manufacturer may have had quite different aims than lowering the value of labor-power.

This last point is elaborated in the next sentence, and a laconic answer is given: what matters is not the capitalists' intentions, but what matters is what they actually do:

When an individual capitalist cheapens shirts, for instance, by increasing the productivity of labor, he by no means necessarily aims to reduce the value of labor-power and in this way shorten the necessary labor-time. But he contributes towards increasing the general rate of surplus-value only in so far as his actions ultimately contribute to the reduction in the value of labor-power.³

Wenn ein einzelner Kapitalist durch Steigerung der Produktivkraft der Arbeit z.B. Hemden verwohlfeilert, schwebt ihm keineswegs notwendig der Zweck vor, den Wert der Arbeitskraft und daher die notwendige Arbeitszeit pro tanto zu senken, aber nur soweit er schließlich zu diesem Resultat beiträgt, trägt er bei zur Erhöhung der allgemeinen Rate des Mehrwerts.³

Capitalists invariably increase productivity, and they may have various motivations to do so: gain extra surplus-value if they are the first ones, keep up with the competitors if they are followers, get machines which controls their laborers better, or respond to labor struggles, etc. Whatever their motivation, the *effect* of their actions will only then be a durable increase in surplus-value if it leads to a cheapening of the workers' means of subsistence. Ramsay, in the footnote, stresses this:

³ 'Let us suppose ... the products ... of the manufacturer are doubled by improvement in machinery ... he will be able to clothe his workmen by means of a smaller proportion of the entire return ... and thus his profit will be raised. But in no other way will it (ultimately) be influenced'. [Ram36, pp. 168–9]

³ „Wenn der Fabrikant durch Verbesserung der Maschinerie seine Produkte verdoppelt ... gewinnt er (schließlich) bloß, sofern er dadurch befähigt wird, den Arbeiter wohlfeiler zu kleiden ... und so ein kleinerer Teil des Gesamtertrags auf den Arbeiter fällt.“ [Ram36, pp. 168–9]

At the present point, Marx does not elaborate how the actions which lead to a cheapening of the laborer's means of subsistence may be motivated. Instead, he gives a general methodological remark, which is one of the few comments about his methodology one can find in *Capital*.

The general and necessary tendencies of capital must be distinguished from their forms of appearance.

Die allgemeinen und notwendigen Tendenzen des Kapitals sind zu unterscheiden von ihren Erscheinungsformen.

Question 767 What does Marx mean by the statement: “The general and necessary tendencies of capital must be distinguished from their forms of appearance”? Give examples of “general and necessary tendencies of capital” and of “forms of appearance” of such tendencies.

Term Paper Topic 768 How do modern intellectual property rights fit together with Marx's theory of capitalism?

12.3. [Individual Motivation for Innovation]

The last remaining question is: if the capitalists' motivation for introduction of technical innovations in the production of the workers' means of consumption is not the relative surplus-value, what then is their motivation? To answer this, Marx has to go into the sphere of competition. He introduces this with a famous general passage about “competition.” By the laws of “competition” Marx means the laws governing the surface interaction of individual capitals. Any activity by which an individual capitalist tries to best take advantage of market forces is an act of “competition.” Superior competitive skills can increase profits for individual capitalist firms, but Marx is not interested at this point in the differences between individual firms. The more important effect of competition, i.e., of the efforts of all market participants to beat out their competitors, is that these competitive pressures force everyone to act in such a way that the laws of “capital in general” are implemented.

433:1 This is not the place to investigate how the immanent laws of capitalist production manifest themselves in the external movement of the individual capitals, assert themselves as the necessities of competition, and therefore enter into the consciousness of the capitalist as his or her driving motives.

335:1 Die Art und Weise, wie die immanenten Gesetze der kapitalistischen Produktion in der äußern Bewegung der Kapitale erscheinen, sich als Zwangsgesetze der Konkurrenz geltend machen und daher als treibende Motive dem individuellen Kapitalisten zum Bewußtsein kommen, ist jetzt nicht zu betrachten, ...

In the German, “individual” is an attribute to “Kapitalisten”; in my

translation it is an attribute to “capitals.” I don't think this

changes the meaning but it makes the formulation clearer.

This is an interesting formulation: the competitive motivation of the capitalist is not really his own motivation, but this is how he experiences his subjugation to the laws of capital.

Marx's *Capital* is only one of several books about the political economy which Marx had planned to write. In one of his other books he wanted to discuss the “sphere of competition,” but he never had time to write this book. Without going into this specialized study, Marx can only make very general remarks here about competition:

But this much is clear from the beginning: a scientific analysis of competition is possible only after the inner nature of capital has been understood, just as the apparent motions of the heavenly bodies can be understood only by someone who is acquainted with their real motions—which are not perceptible to the senses.

... aber soviel erhellt von vornherein: Wissenschaftliche Analyse der Konkurrenz ist nur möglich, sobald die innere Natur des Kapitals begriffen ist, ganz wie die scheinbare Bewegung der Himmelskörper nur dem verständlich, der ihre wirkliche, aber sinnlich nicht wahrnehmbare Bewegung kennt.

This is an argument against empiricism. We first must grasp the inner nature of capital before we can understand the surface phenomena generated by the competition of the economic agents. This is why the book *Capital* itself contains only occasional references to the sphere of competition, only when it is necessary for a better understanding of the laws of “capital in general.” ↓ We are in such a situation right now.

Question 769 Why can we gain a scientific understanding of “the sphere of competition” only after having grasped the inner nature of capital?

Nevertheless, for the understanding of the production of relative surplus-value, and only on the basis of the results already achieved, we may add the following.

Dennoch ist zum Verständnis der Produktion des relativen Mehrwerts und bloß auf Grundlage der bereits gewonnenen Resultate folgendes zu bemerken.

Marx makes here a digression into the sphere of competition because he has not yet explained how individual capitalists are motivated to create relative surplus-value.

433:2/oo If 1 hour's labor is embodied in 12 cents, a value of \$1.44 will be produced in a working day of 12 hours. Suppose that with labor of the currently prevailing productive power, twelve articles are produced in these 12 hours. Let the value of the means of production used up in each article be 12 cents. Under these circumstances, each article costs 24 cents: 12 cents for the value of the means of production, and 12 cents for the value newly added in working with those means.

335:2/o Stellt sich eine Arbeitsstunde in einem Geldquantum von 6 d. oder 1/2 sh. dar, so wird in zwölfstündigem Arbeitstag ein Wert von 6 sh. produziert. Gesetzt, mit der gegebenen Produktivkraft der Arbeit wurden 12 Stück Waren in diesen 12 Arbeitsstunden verfertigt. Der Wert der in jedem Stück vernutzten Produktionsmittel, Rohmaterial usw. sei 6 d. Unter diesen Umständen kostet die einzelne Ware 1 sh., nämlich 6 d. für den Wert der Produktionsmittel, 6 d. für den in ihrer Verarbeitung neu zugesetzten Wert.

↑ Warning: the use of the word “costs” is misleading here. Marx is not adding the labor *costs* but the value created by that labor. This is the situation before the change in productivity. Now assume productivity changes:

Now let some one capitalist contrive to double the productivity of labor, and to produce twenty-four instead of twelve articles in the course of a working day of 12 hours. The value of the means of production remaining the same, the value of each article will fall to 18 cents, made up of 12 cents for the value of the means of production and 6 cents for the value newly added by the labor. Even though the productivity of labor has doubled, the day's labor creates no more new value than before, namely, \$1.44. However it is now spread over twice as many articles. Each article now has embodied in it 1/24th of the new value instead of 1/12th, 6 cents instead of 12 cents; or, what amounts to the same thing, only half an hour of labor-time, instead of a whole hour, is now added to the means of production when they are transformed into articles.

Es gelinge nun einem Kapitalisten die Produktivkraft der Arbeit zu verdoppeln und daher 24 statt 12 Stück dieser Warenart in dem zwölfstündigen Arbeitstag zu produzieren. Bei unverändertem Wert der Produktionsmittel sinkt der Wert der einzelnen Ware jetzt auf 9 d., nämlich 6 d. für den Wert der Produktionsmittel, 3 d. für den durch die letzte Arbeit neu zugesetzten Wert. Trotz der verdoppelten Produktivkraft schafft der Arbeitstag nach wie vor nur einen Neuwert von 6 sh., welcher sich jedoch jetzt auf doppelt soviel Produkte verteilt. Auf jedes einzelne Produkt fällt daher nur noch 1/24 statt 1/12 dieses Gesamtwerts, 3 d. statt 6 d. oder, was dasselbe ist, den Produktionsmitteln wird bei ihrer Verwandlung in Produkt, jedes Stück berechnet, jetzt nur noch eine halbe statt wie früher eine ganze Arbeitsstunde zugesetzt.

Question 771 *Do the workers after introduction of new machinery produce more value per hour?*

↑ In this example there is a huge change in productivity, but the same amount of labor is performed as before, therefore the total new value produced in this production process does not increase. Since more pieces are produced, the value of every piece falls. This is a dilemma. The capitalist increases productivity because he wants to get more surplus-value, but all he managed to do is produce more products, more wealth. The *value* produced remains the same. ↓ Marx takes a closer look. By the assumption of this example, only one capitalist is producing more efficiently; all the others still use the old production method. In order to deal with this situation, Marx introduces the concept of the innovator's “individual value” of the commodity, which is a category from the “sphere of competition.” The value calculation which Marx just made will eventually be relevant for all capitalists, when *all* producers have introduced the new production method; but right now it is only correct for the innovator's individual value:

The individual value of these articles is now below their social value; in other words, they have cost less labor-time than the great

Der individuelle Wert dieser Ware steht nun unter ihrem gesellschaftlichen Wert, d.h., sie kostet weniger Arbeitszeit als der große

bulk of the same articles produced under the average social conditions. Each article costs, on an average, 24 cents, and represents 2 hours of social labor; but under the altered mode of production it costs only 18 cents, or contains only 1 1/2 hours' labor. The effective value of a commodity, however, is not its individual but its social value; i.e., its value is not measured by the labor-time that the article actually costs the producer in this individual case, but by the labor-time socially required for its production.

What are the implications of this gap between individual and social value for the price of the commodity? If we assume that this is just one producer among many, who does not have an influence on the market, then the price remains unchanged. This makes it necessary for Marx to introduce another new concept, that of extra surplus-value:

If, therefore, the capitalist who applies the new method sells his commodity at its social value of 24 cents, he sells it for 6 cents above its individual value, and thus he realizes an extra surplus-value of 6 cents.

Haufen derselben Artikel, produziert unter den gesellschaftlichen Durchschnittsbedingungen. Das Stück kostet im Durchschnitt 1 sh. oder stellt 2 Stunden gesellschaftlicher Arbeit dar; mit der veränderten Produktionsweise kostet es nur 9 d. oder enthält nur 1 1/2 Arbeitsstunden. Der wirkliche Wert einer Ware ist aber nicht ihr individueller, sondern ihr gesellschaftlicher Wert, d.h., er wird nicht durch die Arbeitszeit gemessen, die sie im einzelnen Fall dem Produzenten tatsächlich kostet, sondern durch die gesellschaftlich zu ihrer Produktion erheischte Arbeitszeit.

Verkauft also der Kapitalist, der die neue Methode anwendet, seine Ware zu ihrem gesellschaftlichen Wert von 1 sh., so verkauft er sie 3 d. über ihrem individuellen Wert und realisiert so einen Extramehrwert von 3 d.

Can the capitalist therefore just keep his innovation secret, pretend that he is still using the same production methods as the others, and merrily rake in extra surplus-value? Well, there is one problem with this. He has now greater output and must see to it that this output is sold:

On the other hand, the working day of 12 hours is now represented, for him, by twenty-four articles instead of twelve. Hence, in order to sell the product of one working day, he needs double the demand than before, i.e. the market must become twice as extensive. Other things being equal, the capitalist's commodities can only command a more extensive market if their prices are reduced. He will therefore sell them above their individual but below their social value, say at 20 cents each. By this means he still squeezes an extra surplus-value of 2 cents out of each.

Andrerseits stellt sich aber der zwölfstündige Arbeitstag jetzt für ihn in 24 Stück Ware dar statt früher in 12. Um also das Produkt eines Arbeitstags zu verkaufen, bedarf er doppelten Absatzes oder eines zweifach größeren Markts. Unter sonst gleichbleibenden Umständen erobern seine Waren nur größeren Marktraum durch Kontraktion ihrer Preise. Er wird sie daher über ihrem individuellen, aber unter ihrem gesellschaftlichen Wert verkaufen, sage zu 10 d. das Stück. So schlägt er an jedem einzelnen Stück immer noch einen Extramehrwert von 1 d. heraus.

Important: the innovator has to lower the price to get room in the market for his increased output. Despite this price cut, he still sells the products above their individual values and therefore still makes an extra surplus-value:

This increase of surplus-value for the capitalist takes place whether or not his commodities belong to the class of necessary means of subsistence, and therefore enter the determination of the general value of labor-power. Whether or not this latter condition is satisfied, therefore, the motive exists for every individual capitalist to cheapen his commodities by increasing the productivity of labor.

This answers the question why capitalists innovate. We see that everyone has the incentive to innovate in order to gain extra surplus-value, not only those capitalists whose products enter the value of labor-power. And everybody's extra surplus-value is only temporary, over time it will be competed away again. But for those who produce the workers' means of consumption, this extra surplus-value does not entirely disappear but is reborn as relative surplus-value.

This raises the question: what is the source of this extra surplus-value? Marx argues that extra surplus-value, just like relative surplus-value, comes from a shortening of the necessary labor. But in the case of extra surplus-value, the value produced per hour by the innovating firm rises above the value produced per hour by the other firms.

435:1/o Nevertheless, even in this case, the increased production of surplus-value arises from the shortening of the necessary labor-time and the corresponding prolongation of the surplus labor.^{3a}

Marx is about to give a somewhat long-winded argument to support this non-obvious point. But first he sticks footnote 3a in, in which Cazenove comes to the same conclusion as Marx, although he seems to employ a rather simple-minded argument. Marx's development in the main text will fill in the missing links, by which Cazenove's argument can be viewed as a short form of Marx's own argument.

^{3a} 'A man's profit does not depend upon his command of the produce of other men's labor, but upon his command of labor itself. If he can sell his goods at a higher price, while his workmen's wages remain unaltered, he is clearly benefited ... A smaller proportion of what he produces is sufficient to put that labor into motion, and a larger proportion consequently remains for himself.' ([J. Cazenove,] *Outlines of Political*

Diese Steigerung des Mehrwerts findet für ihn statt, ob oder ob nicht seine Ware dem Umkreis der notwendigen Lebensmittel angehört und daher bestimmend in den allgemeinen Wert der Arbeitskraft eingeht. Vom letzten Umstand abgesehen, existiert also für jeden einzelnen Kapitalisten das Motiv, die Ware durch erhöhte Produktivkraft der Arbeit zu verwohlfeilern.

336:1/oo Indes entspringt selbst in diesem Fall die gesteigerte Produktion von Mehrwert aus der Verkürzung der notwendigen Arbeitszeit und entsprechender Verlängerung der Mehrarbeit.^{3a}

^{3a} „Der Profit eines Menschen hängt nicht ab von seinem Kommando über das Produkt der Arbeit anderer, sondern von seinem Kommando über Arbeit selbst. Wenn er seine Waren zu einem höheren Preis verkaufen kann, während die Löhne seiner Arbeiter unverändert bleiben, so zieht er augenscheinlich Gewinn daraus ... Ein kleinerer Teil dessen, was er produziert, reicht hin, jene Arbeit in Bewegung zu setzen, und demzufolge

Economy, London 1832. pp. 49, 50.)

verbleibt ihm ein größerer Teil.“ ([J. Cazenove,] „*Outlines of Polit. Econ.*“, London 1832. p. 49, 50.)

With this footnote Marx is not trying to argue that the laborer working with the new machines creates more surplus-value because the capitalist can use a smaller portion of the product to pay his wages. The causality goes the opposite direction: since the labor working with the new machine is converted into potentiated labor, the capitalist is able to replace the value of labor-power with a smaller portion of the value of the daily product. (This last sentence is an almost literal quote from the machinery chapter, 530:1.)

The *support* of the claim that the laborer working with the new machine creates more value per hour than the average worker is not given in the footnote, but in the main text. For this argument, Marx needs a quantitative accounting of the social mass of surplus-value:

Let the necessary labor-time amount to 10 hours, i.e. the value of a day's labor-power to \$1.20, and the surplus labor-time to 2 hours, i.e. the daily surplus-value to 24 cents.

Die notwendige Arbeitszeit betrage 10 Stunden oder der Tageswert der Arbeitskraft 5 sh., die Mehrarbeit 2 Stunden, der täglich produzierte Mehrwert daher 1 sh.

This was before the change in productivity, or under the average conditions. Remember that 12 cents represent 1 hour of labor. But for the one capitalist with the superior technology things look different:

But our capitalist produces 24 articles now, which he sells at 20 cents each, making \$4.80 in all. Since the value of the means of production is \$2.88, 14 2/5 of these articles merely replace the constant capital advanced. The labor of the 12 hour working day is represented by the remaining 9 3/5 articles. Since the price of the labor-power is \$1.20, 6 articles represent the necessary labor-time, and 3 3/5 articles the surplus labor. The ratio of necessary labor to surplus labor, which under average social conditions was 5:1, has now fallen to 5:3.

Unser Kapitalist produziert aber jetzt 24 Stück, die er zu 10 d. per Stück oder zusammen zu 20 sh. verkauft. Da der Wert der Produktionsmittel gleich 12 Schilling, ersetzen 14 2/5 Stück Ware nur das vorge-schoßne konstante Kapital. Der zwölfstündige Arbeitstag stellt sich in den übrigbleibenden 9 3/5 Stück dar. Da der Preis der Arbeitskraft = 5 sh., stellt sich im Produkt von 6 Stück die notwendige Arbeitszeit dar und in 3 3/5 Stück die Mehrarbeit. Das Verhältnis der notwendigen Arbeit zur Mehrarbeit, welches unter den gesellschaftlichen Durchschnittsbedingungen 5:1 betrug, beträgt jetzt nur noch 5:3.

This is the calculation hinted at in footnote 3a, which measures everything in unit of the final product. It can also be measured in money:

We may arrive at the same result in the following way. The value of the product of the working day of 12 hours is \$4.80. Of this sum, \$2.88 represent the value of the

Dasselbe Resultat erhält man so: Der Produktenwert des zwölfstündigen Arbeitstags ist 20 sh. Davon gehören 12 sh. dem nur wieder erscheinenden Wert der Produk-

means of production, a value that merely re-appears in the finished product. There remain \$1.92, which are the expression in money of the value newly created during the working day. This sum is greater than the sum in which average social labor of the same kind is expressed: 12 hours of the latter labor are expressed by only \$1.44. The exceptionally productive labor has the effect of potentiated labor; it creates in equal periods of time greater values than the labor of the same kind conforming with the social average.

Marx makes the same point also in the machinery chapter 530:1. In both places he uses the expression “potentiated labor,” i.e., labor made more potent, an expression which was first introduced in 134:3/o. The reason why different laborers produce different amounts of value in one hour is again the same: One labor-power is not exactly like any other. The potentiated labor of the laborer servicing the new machine produces a value of \$1.92 per day, i.e., 16 cents per hour, instead of the normal 12 cents.

Fowkes translates “*potenziert*” with “intensified,” which is blatantly wrong.

Once we know how much value has been produced, the implications for surplus-value follow immediately:

But our capitalist still continues to pay as before only \$1.20 as the daily value of labor-power. Hence, instead of 10 hours, the worker now needs to work for only 7 1/2 hours in order to reproduce this value. His surplus labor therefore grows by 2 1/2 hours, and the surplus-value he produces increases from 24 cents to 72 cents. Hence the capitalist who applies the improved method of production appropriates and devotes to surplus labor a greater portion of the working day than the other capitalists in the same business. He does individually what capital itself does as a whole when producing relative surplus-value.

tionsmittel. Bleiben also 8 sh. als Geldausdruck des Werts, worin sich der Arbeitstag darstellt. Dieser Geldausdruck ist höher als der Geldausdruck der gesellschaftlichen Durchschnittsarbeit von derselben Sorte, wovon sich 12 Stunden nur in 6 sh. ausdrücken. Die Arbeit von ausnahmsweiser Produktivkraft wirkt als potenzierte Arbeit oder schafft in gleichen Zeiträumen höhere Werte als die gesellschaftliche Durchschnittsarbeit derselben Art.

Aber unser Kapitalist zahlt nach wie vor nur 5 sh. für den Tageswert der Arbeitskraft. Der Arbeiter bedarf daher, statt früher 10, jetzt nur noch 7 1/2 Stunden zur Reproduktion dieses Werts. Seine Mehrarbeit wächst daher um 2 1/2 Stunden, der von ihm produzierte Mehrwert von 1 auf 3 sh. Der Kapitalist, der die verbesserte Produktionsweise anwendet, eignet sich daher einen größern Teil des Arbeitstags für die Mehrarbeit an als die übrigen Kapitalisten in demselben Geschäft. Er tut im einzelnen, was das Kapital bei der Produktion des relativen Mehrwerts im großen und ganzen tut.

There is a numerical discrepancy between the German and the English text, 7 1/2 versus 7 1/5 and

2 1/2 versus 2 4/5. But nowhere a remark why this is so. The German is right, and I took those

numbers also into my translation.

Exam Question 773 *What is extra surplus-value? How is it related to relative surplus-value?*

The above is an argument that the competitive mechanism is connected with its ultimate result after all; it is the same result which was aimed for on an individual plane—and was lost again, as will be seen in the next sentence:

On the other hand, however, this extra surplus-value disappears as soon as the new method of production is generalized, for then the difference between the individual value of the cheapened commodity and its social value vanishes. The same law of the determination of value by labor-time, which makes itself felt to the individual capitalist who applies the new method of production by compelling him to sell his goods under their social value, this same law, acting as a coercive law of competition, forces his competitors to adopt the new method.⁴

It was already discussed above that the innovator himself had to lower the price to get more room in the market. This stirs up competition and forces the others to follow suit. The footnote leaves no doubt that this is what is meant:

⁴ ‘If my neighbour by doing much with little labor, can sell cheap, I must contrive to sell as cheap as he. So that every art, trade, or engine, doing work with labor of fewer hands, and consequently cheaper, begets in others a kind of necessity and emulation, either of using the same art, trade, or engine, or of inventing something like it, that every man may be upon the square, that no man may be able to undersell his neighbour’ (The Advantages of the East-India Trade to England, London, 1720, p. 67).

Andrerseits aber verschwindet jener Extramehrwert, sobald die neue Produktionsweise sich verallgemeinert und damit die Differenz zwischen dem individuellen Wert der wohlfeiler produzierten Waren und ihrem gesellschaftlichen Wert verschwindet. Dasselbe Gesetz der Wertbestimmung durch die Arbeitszeit, das dem Kapitalisten mit der neuen Methode in der Form fühlbar wird, daß er seine Ware unter ihrem gesellschaftlichen Wert verkaufen muß, treibt seine Mitbewerber als Zwangsgesetz der Konkurrenz zur Einführung der neuen Produktionsweise.⁴

⁴ „Wenn mein Nachbar billig verkaufen kann, indem er mit wenig Arbeit viel herstellt, muß ich danach trachten, ebenso billig wie er zu verkaufen. So erzeugt jede Kunst, jedes Verfahren oder jede Maschine, die mit der Arbeit von weniger Händen und infolgedessen billiger arbeitet, bei andren eine Art Zwang und einen Wettbewerb, entweder dieselbe Kunst, dasselbe Verfahren oder dieselbe Maschine anzuwenden, oder etwas Ähnliches zu erfinden, damit alle auf gleichem Stand seien und keiner seinen Nachbar unterbieten könne.“ („The Advantages of the East-India Trade to England“. Lond. 1720, p. 67.)

Does this mean that this increase in productivity has *no* lasting effect on value relations? The general rate of surplus-value is therefore ultimately affected by the whole process only when the increase in the pro-

Die allgemeine Rate des Mehrwerts wird also durch den ganzen Prozeß schließlich nur berührt, wenn die Erhöhung der Produk-

ductivity of labor has seized upon those branches of production and cheapened those commodities that contribute towards the necessary means of subsistence, and are therefore elements of the value of labor-power.

Here one sees how the individual capitalists are motivated to produce relative surplus-value. Their motivation usually focuses on extra surplus-value only. This does increase their profits, but this benefit will usually be only short-lived and the extra surplus-value will be competed away again. In those cases, however, in which competition lowers the price of wage goods, this extra surplus-value does not disappear but becomes relative surplus-value benefiting all capitalists.

Marx no longer spins on his quantitative example to substantiate this last claim. Here is a proposed extension of his calculations, which shows that also quantitatively the extra surplus-value is equal to the relative surplus value arising later when the value has equalized.

As in Marx's example, one working hour produces 12 cents. The working day is 12 hours, therefore one man-day of labor produces a value of \$1.44. The year has 300 working days, therefore 1 man year of labor produces a value of \$432.

The hourly wage is 10 cents, therefore the hourly surplus-value is 2 cents. The daily wage is \$1.20, therefore the daily surplus-value is 24 cents. The annual wage is \$360, therefore the annual surplus-value is \$72.

Look at the whole society, say a big city. It has 60,000 productive workers with their families. During the year they produce a value of $60,000 \times \$432 = \$25,920,000$. Their wages during the year are $60,000 \times \$360 = \$21,600,000$. And the surplus-value in one year is \$4,320,000.

Now let us go to shirt manufacturing. In the manufactures, every shirt requires one man hour of labor and 12 cents worth of materials etc. Assuming this is the socially necessary labor, the value of the shirt is 24 cents, which splits up in 12 cents constant capital + 10 cents variable capital + 2 cents surplus-value. Assume there are two shirt manufacturers in the city with 25 workers each. Then every manufacturer produces $300 \times 12 \times 25 = 90,000$ shirts per year. These 180,000 shirts together are sufficient for every worker to buy for himself and his family 3 shirts per year.

To produce his shirts, each capitalist needs a constant capital of $90,000 \times 12 \text{ cents} = \$10,800$, wages of \$9000, and gets a surplus-value of \$1,800 per year. The value of the 90,000 shirts is \$21,600.

Now assume the following situation. One of the two capitalists improves his production method so that he needs only 1/2 hours of work for every shirt. The second capitalist learns that and starts to produce something other than shirts in his factory. The first capitalist works with as many laborers as before, producing twice as many shirts.

Now let us look at three different scenarios. First assume that the socially necessary production method and the value of the shirts is still the old one. This capitalist now needs twice as much constant capital as before, namely \$21,600 worth per year, and has twice

tivkraft der Arbeit Produktionszweige ergriffen, also Waren verwohlfeilert hat, die in den Kreis der notwendigen Lebensmittel eingehn, daher Elemente des Werts der Arbeitskraft bilden.

the sales as before, namely, \$43,200. That means, the new value produced by his 25 men is \$21,600, which is twice as much as before, or \$10,800 more than before. "The exceptionally productive labor has the effect of potentiated labor" (435:1/o). Since the wages for the 25 men are still the same as before, namely, \$9000, the surplus-value soared for this capitalist from \$1,800 to \$12,600 per year. This is an increase in the surplus-value by \$10,800. Since we assumed that the surplus-value of all other capitalists is still the same as before, the total value produced in our city rises from \$25,920,000 to \$25,930,800. The total sum of wages is still the same as before, namely, \$21,600,000, and the total sum of surplus-value is $\$25,920,000 + \$10,800 - \$21,600,000 = \$4,330,800$.

Second scenario: in order to avert the threat of re-entry by the other manufacturer, the unique manufacturer sells the shirts for 20 cents, this is 4 cents below the value before, but still 2 cents above the individual value of the shirt manufacturer. The total sales of the shirt manufacturer are now \$36,000, of which \$21,600 are constant capital and \$14,400 is newly created value. He still creates, with his 25 workers, \$3,600 more value per year than before the changes in productiveness, i.e., the labor of his workers still counts as multiplied labor. But now, also the value of the labor-power goes down: for the three shirts which every workers buys every year, he needs no longer 72 cents but only 60 cents, i.e., he saves 12 cents per year. Assuming the value of the labor-power is determined by the value of the necessary means of subsistence, it also goes down 12 cents per year, from \$360 to \$359.88. The total wage sum goes down by $60,000 \times 12 \text{ cents} = \$7,200$. The total surplus-value is now $\$25,920,000 + \$3,600 - (\$21,600,000 - \$7,200) = \$4,330,800$, which is the same as before.

Third scenario: the social value of the shirts falls to the level of the individual values of our manufacturer: he has to sell his shirts for 18 cents, which is 12 cents for constant capital, and 6 cents for 1/2 hour of labor. The total value produced in the city is back down where it was before. The wages fall once more by another 6 cents per year, i.e., the total wage sum falls by another \$3,600 and is therefore $\$21,600,000 - \$7,200 - \$3,600 = \$21,600,000 - \$10,800$. The total surplus-value is $\$25,920,000 - (\$21,600,000 - \$10,800) = \$4,330,800$ which is, again, the same as before.

The total amount of surplus-value is therefore the same in all three scenarios, only the distribution of the surplus-value is different. In the first scenario, only the capitalist who applied the exceptional productivity enjoyed this surplus-value, and in the third it is shared equally by all capitalists. "He does individually what capital itself does as a whole when producing relative surplus-value." (435:1/o).

Question 779 *Relative surplus-value requires the value of labor-power to fall. Does this mean that in today's world with sticky wages and union contracts, relative surplus-value is impossible?*

12.4. [Value and Productivity]

The last third of the chapter is an essay about the paradox that capitalists, who are only interested in the value-aspect of their products, nevertheless continually strive to decrease the exchange-values of their commodities. If a capitalist introduces more productive machinery, his motives are often to undercut competition, expand production to make more profits. Whatever the case, it is self-understood that he uses all the advantages of the improved machinery for himself and leaves the worker where he or she is. Thus the machinery increases the gap between capitalist and laborer, i.e., the relative surplus-value.

436:1/o The value of commodities stands in inverse ratio to the productivity of labor. So, too, does the value of labor-power, since it depends on the values of commodities. Relative surplus-value, however, is directly proportional to the productive power of labor. It rises and falls together with it.

Now Marx makes an assumption which colors everything he is going to say: the value of money, in terms of labor-time, is fixed:

The value of money being assumed to be constant, an average social working day of 12 hours always produces the same new value, \$1.44, no matter how this sum may be apportioned between surplus-value and wages. But if, as a result of an increase in productivity, there is a fall in the value of the means of subsistence, and the daily value of labor-power is thereby reduced from \$1.20 to 72 cents, the surplus-value will increase from 24 cents to 72 cents. 10 hours were necessary for the reproduction of the value of the labor-power; now only 6 are required. 4 hours have been set free, and can be annexed to the domain of surplus labor.

Interesting insight about competition which has practical implications for labor struggles: these 4 hours are up for grabs! Workers can fight for them too.

Capital therefore has an immanent drive, and a constant tendency, towards increasing the productivity of labor, in order to cheapen commodities and, by cheapening commodi-

338:1 Der Wert der Waren steht in umgekehrtem Verhältnis zur Produktivkraft der Arbeit. Ebenso, weil durch Warenwerte bestimmt, der Wert der Arbeitskraft. Dagegen steht der relative Mehrwert in direktem Verhältnis zur Produktivkraft der Arbeit. Er steigt mit steigender und fällt mit fallender Produktivkraft.

Ein gesellschaftlicher Durchschnittsarbeitstag von 12 Stunden, Geldwert als gleichbleibend vorausgesetzt, produziert stets dasselbe Wertprodukt von 6 sh., wie diese Wertsumme sich immer verteile zwischen Äquivalent für den Wert der Arbeitskraft und Mehrwert. Fällt aber infolge gesteigerter Produktivkraft der Wert der täglichen Lebensmittel und daher der Tageswert der Arbeitskraft von 5 sh. auf 3 sh., so wächst der Mehrwert von 1 sh. auf 3 sh. Um den Wert der Arbeitskraft zu reproduzieren, waren 10 und sind jetzt nur noch 6 Arbeitsstunden nötig. Vier Arbeitsstunden sind frei geworden und können der Domäne der Mehrarbeit annexiert werden.

Es ist daher der immanente Trieb und die beständige Tendenz des Kapitals, die Produktivkraft der Arbeit zu steigern, um die Ware und durch die Verwohlfeilung der

ties, to cheapen the worker himself.⁵

There are two statements in this sentence. (1) cheapening of the commodities implies cheapening of the laborer, and (2) hence capital has the immanent tendency to raise the productivity of labor. Footnote 5 concentrates on statement (1) only. Statement (2) is an interesting issue from the theory of competition. The present chapter gives only some isolated remarks about it but cannot give a full and systematic development of the issue.

⁵ In whatever proportion the expenses of a laborer are diminished, in the same proportion will his wages be diminished, if the restraints on industry are at the same time taken off' [Ano53, p. 7] 'The interest of trade requires, that corn and all provisions should be as cheap as possible; for whatever makes them dear, must make labor dear also ... in all countries, where industry is not restrained, the price of provisions must affect the price of labor. This will always be diminished when the necessities of life grow cheaper' [Ano53, p. 3] 'Wages are decreased in the same proportion as the powers of production increase. Machinery, it is true, cheapens the necessities of life, but it also cheapens the laborer' [Ano34, p. 27]

437:1 The absolute value of a commodity is, in itself, of no interest to the capitalist who produces it. All that interests him is the surplus-value present in it, which can be realized by sale. Realization of the surplus-value necessarily carries with it the replacement of the value advanced. Now, since relative surplus-value increases in direct proportion to the development of the productivity of labor, while the value of commodities stands in precisely the opposite relation to the growth of productivity; since the same process both cheapens commodities and augments the surplus-value contained in them, we have here the solution of the following riddle: Why does the capitalist, whose sole concern is to produce exchange-value, continually strive to bring down the

Ware den Arbeiter selbst zu verwohlfeilern.⁵

Ware den Arbeiter selbst zu verwohlfeilern.⁵

⁵ "In welchem Verhältnis immer die Ausgaben eines Arbeiters verringert werden, in gleichem Verhältnis wird auch sein Lohn verringert, wenn die Einschränkungen der Industrie gleichzeitig aufgehoben werden. [Ano53, p. 7] „Das Interesse der Industrie erfordert, daß Korn und alle Lebensmittel so billig wie möglich sind; was immer sie verteuert, muß auch die Arbeit verteuern ... in allen Ländern, in denen die Industrie keinen Einschränkungen unterliegt, muß der Preis der Lebensmittel auf den Preis der Arbeit einwirken. Dieser wird stets herabgesetzt werden, wenn die notwendigen Lebensmittel billiger werden.“ [Ano53, p. 3] Die Löhne werden im selben Verhältnis gesenkt, in dem die Produktionskräfte anwachsen. Die Maschine verbilligt zwar die notwendigen Lebensmittel, aber sie verbilligt außerdem auch den Arbeiter.“ [Ano34, p. 27]

338:2/o Der absolute Wert der Ware ist dem Kapitalisten, der sie produziert, an und für sich gleichgültig. Ihn interessiert nur der in ihr steckende und im Verkauf realisierbare Mehrwert. Realisierung von Mehrwert schließt von selbst Ersatz des vorgeschossenen Werts ein. Da nun der relative Mehrwert in direktem Verhältnis zur Entwicklung der Produktivkraft der Arbeit wächst, während der Wert der Waren in umgekehrtem Verhältnis zur selben Entwicklung fällt, da also derselbe identische Prozeß die Waren verwohlfeilert und den in ihnen enthaltenen Mehrwert steigert, löst sich das Rätsel, daß der Kapitalist, dem es nur um die Produktion von Tauschwert zu tun ist, den Tauschwert der Waren beständig zu senken strebt, ein Widerspruch, womit einer der Gründer

exchange-value of commodities? One of the founders of political economy, Quesnay, used to torment his opponents with this question, and they could find no answer to it.

'You acknowledge,' he says, that the more one can reduce the expenses and costs of labor in the manufacture of industrial products, without injury to production, the more advantageous is that reduction, because it diminishes the price of the finished article. And yet you believe that the production of wealth, which arises from the labor of the craftsmen, consists in the augmentation of the exchange-value of their products.

Footnote 6 brings the French text:

⁶ "Ils conviennent que plus on peut, sans préjudice, épargner de frais ou de travaux dispendieux dans la fabrication des ouvrages des artisans, plus cette épargne est profitable par la diminution des prix de ces ouvrages. Cependant ils croient que la production de richesse qui résulte des travaux des artisans consiste dans l'augmentation de la valeur vénale de leurs ouvrages." (Quesnay, *Dialogues sur le Commerce et sur les Travaux des Artisans*, pp. 188, 189.)

Question 780 Does the continual striving by the capitalists to lower the value of their products contradict the basic tenet of the labor theory of value that they are only interested in value, not use-value?

437:2/o The shortening of the working day, therefore, is by no means what is aimed at in capitalist production, when labor is economized by increasing its productivity.⁷ It is only the shortening of the labor-time necessary for the production of a definite quantity of commodities that is aimed at. The fact that the worker, when the productivity of his labor has been increased, produces say ten times as many commodities as before, and thus spends one-tenth as much

der politischen Ökonomie, Quesnay, seine Gegner quälte und worauf sie ihm die Antwort schuldig blieben.

„Ihr gebt zu“, sagt Quesnay, „daß, je mehr man, ohne Nachteil für die Produktion, Kosten oder kostspielige Arbeiten in der Fabrikation industrieller Produkte ersparen kann, desto vorteilhafter diese Ersparung, weil sie den Preis des Machwerks vermindert. Und trotzdem glaubt ihr, daß die Produktion des Reichtums, der aus den Arbeiten der Industriellen herkommt, in der Vermehrung des Tauscherts ihres Machwerks besteht.“⁶

⁶ „Ils conviennent que plus on peut, sans préjudice, épargner de frais ou de travaux dispendieux dans la fabrication des ouvrages des artisans, plus cette épargne est profitable par la diminution des prix de ces ouvrages. Cependant ils croient que la production de richesse qui résulte des travaux des artisans consiste dans l'augmentation de la valeur vénale de leurs ouvrages.“ (Quesnay, „Dialogues sur le Commerce et sur les Travaux des Artisans“, p. 188, 189.)

339:2/o Ökonomie der Arbeit durch Entwicklung der Produktivkraft der Arbeit⁷ bezweckt in der kapitalistischen Produktion also durchaus nicht Verkürzung des Arbeitstags. Sie bezweckt nur Verkürzung der für Produktion eines bestimmten Warenquantums notwendigen Arbeitszeit. Daß der Arbeiter bei gesteigerter Produktivkraft seiner Arbeit in einer Stunde z.B. 10mal mehr Ware als früher produziert, also für jedes Stück Ware 10mal weniger Arbeits-

labor-time on each, by no means prevents him from continuing to work 12 hours as before, nor from producing in those 12 hours 1,200 articles instead of 120. Indeed, his working day may simultaneously be prolonged, so as to make him produce say 1,400 articles in 14 hours. Therefore in the treatises of economists of the stamp of MacCulloch, Ure, Senior and the like, we may read on one page that the worker owes a debt of gratitude to capital for developing his productivity, because the necessary labor-time is thereby shortened, and on the next page that he must prove his gratitude by working in future for 15 hours instead of 10. The objective of the development of the productivity of labor within the context of capitalist production is the shortening of that part of the working day in which the worker must work for himself, and the lengthening, thereby, of the other part of the day, in which he is free to work for nothing for the capitalist.

Sometimes, the capitalists even have the gall to say: since we have invested so much in expensive machinery, now everyone must show up on time.

⁷ 'These speculators, who are so economical of the labor of the workers they would have to pay' (J. N. Bidaut, *Du monopole qui s'établit dans les arts industriels et le commerce*, Paris, 1828, p. 13). 'The employer will be always on the stretch to economise time and labor' (Dugald Stewart, *Lectures on Political Economy*, in *Works*, ed. by Sir W. Hamilton, Vol. 8, Edinburgh, 1855, p. 318). 'Their' (the capitalists') 'interest is that the productive powers of the laborers they employ should be the greatest possible. On promoting that power their attention is fixed and almost exclusively fixed' (R. Jones, op. cit., Lecture III [p. 38]).

How far this result can also be attained without cheapening commodities will appear from the following chapters, where we ex-

zeit braucht, verhindert durchaus nicht, ihn nach wie vor 12 Stunden arbeiten und in den 12 Stunden 1200 statt früher 120 Stück produzieren zu lassen. Ja, sein Arbeitstag mag gleichzeitig verlängert werden, so daß er jetzt in 14 Stunden 1400 Stück produziert usw. Man kann daher bei Ökonomen vom Schlag eines MacCulloch, Ure, Senior und tutti quanti auf einer Seite lesen, daß der Arbeiter dem Kapital für die Entwicklung der Produktivkräfte Dank schuldet, weil sie die notwendige Arbeitszeit verkürzt, und auf der nächsten Seite, daß er diesen Dank beweisen muß, indem er statt 10 künftig 15 Stunden arbeitet. Die Entwicklung der Produktivkraft der Arbeit, innerhalb der kapitalistischen Produktion, bezweckt, den Teil des Arbeitstags, den der Arbeiter für sich selbst arbeiten muß, zu verkürzen, um gerade dadurch den andren Teil des Arbeitstags, den er für den Kapitalisten umsonst arbeiten kann, zu verlängern.

⁷ „Diese Spekulant, die so sehr sparen an der Arbeit der Arbeiter, die sie bezahlen müßten.“ (J. N. Bidaut, „Du Monopole qui s'établit dans les arts industriels et le commerce“, Paris 1828, p. 13.) „Der Unternehmer wird immer alles daran setzen, um Zeit und Arbeit zu sparen.“ (Dugald Stewart, „Works“, ed. by Sir W. Hamilton, v. VIII, Edinburgh 1855, „Lectures on Polit. Econ.“, p. 318.) „Sie“ (die Kapitalisten) „sind daran interessiert, daß die Produktivkräfte der Arbeiter, die sie beschäftigen, so groß wie möglich seien. Diese Kraft zu steigern, darauf ist ihre Aufmerksamkeit, und zwar fast ausschließlich gerichtet.“ (R. Jones, l.c., Lecture III.)

Wieweit dies Resultat auch ohne Verwohlfelung der Waren erreichbar, wird sich zeigen in den besondern Produktionsmetho-

amine the particular methods of producing relative surplus-value.	den des relativen Mehrwerts, zu deren Betrachtung wir jetzt übergehen.

Question 790 *Why do machines not add new value to the product?*

13. Co-Operation

This and the following chapters are discussing the *specific capitalist mode of production*. The previous modes of production did not put much emphasis on technical progress. In the Middle Ages, inventors were sometimes beheaded, because their inventions threatened the established social order. Capitalism, by contrast, is extremely dynamic and innovative. Marx explains in this chapter how capitalism came to be so innovative.

Originally, capital introduced co-operation for reasons that were not technological. Each capitalist had to employ many workers in order to produce enough surplus value that he can live from it and still accumulate part of it. But this quantitative increase in the number of employees turned in a qualitative change, since these employees started to work together. This process will be discussed in this chapter.

13.1. [Changes in the Capitalist Production Process which Precede The Specific Capitalist Mode of Production]

Even without a change in the traditional technologies, the quantitative extension of production is already the cause of some “modifications.” They will be discussed in what is called here section 13.1.

13.1.a. [Implications of the Employment of Many Laborers by the Same Capital]

439:1 Capitalist production in fact only begins, as we have seen, when each individual capital simultaneously employs a comparatively large number of workers, and when, as a result, the labor-process is carried on on an extensive scale, and yields relatively large quantities of products.

↑ “As we have seen” apparently refers to 422:2/423.

A large number of workers working together, at the same time, in one place (or, if you like, in the same field of labor), in

341:1 Die kapitalistische Produktion beginnt, wie wir sahen, in der Tat erst, wo dasselbe individuelle Kapital eine größere Anzahl Arbeiter gleichzeitig beschäftigt, der Arbeitsprozeß also seinen Umfang erweitert und Produkt auf größerer quantitativer Stufenleiter liefert.

Das Wirken einer größeren Arbeiteranzahl zur selben Zeit, in demselben Raum (oder, wenn man will, auf demselben Arbeitsfeld),

order to produce the same sort of commodity under the command of the same capitalist, constitutes, historically and conceptually, the point of departure of capitalist production.

↑ If one thinks of capitalist production, one thinks of one capitalist employing many workers to produce a large quantity of the same product. This simple image is, according to Marx, historically and conceptually the point of departure of capitalist production. This image does not specify that the workers co-operate. All they have to do is act in the same “field of labor.” ↓ And indeed, initially the workers did not co-operate, they simply used the same methods familiar to them as independent craftsmen.

With regard to the mode of production itself, manufactories can hardly be distinguished, in their earliest stages, from the handicraft trades of the guilds, except by the greater number of workers simultaneously employed by the same capital. The workshop of the master craftsman is only enlarged.

↑ “Manufactories” are establishments based on hand work and division of labor. The historical fact that at the beginning, technology did not change qualitatively but only quantitatively, is supporting evidence for Marx’s claim that the reason for this co-operation was the necessity to add enough workers together so that the sum of their surplus-values can sustain a capitalist. There is no qualitative change in production yet. ↓ And the nature of value does not seem to require such qualitative change, since value is additive.

439:2 At first, then, the difference is purely quantitative. We have shown that the surplus-value produced by a given capital is equal to the surplus-value produced by each worker multiplied by the number of workers simultaneously employed. The number of workers does not in itself affect the rate of surplus-value or the degree of exploitation of labor-power and, with regard to the production of commodity-values in general, every qualitative alteration in the labor process seems irrelevant. This follows from the nature of value.

↑ Marx uses here the word “seem,” because this is the conclusion obtained if one follows the direct connections. The qualifier “in and for itself” goes in the same direction; it indicates that the inner nature of the value relations does not cause the rate of surplus-value to be

zur Produktion derselben Warensorte, unter dem Kommando desselben Kapitalisten, bildet historisch und begrifflich den Ausgangspunkt der kapitalistischen Produktion.

Mit Bezug auf die Produktionsweise selbst unterscheidet sich z.B. die Manufaktur in ihren Anfängen kaum anders von der zünftigen Handwerksindustrie als durch die größere Zahl der gleichzeitig von demselben Kapital beschäftigten Arbeiter. Die Werkstatt des Zunftmeisters ist nur erweitert.

341:2 Der Unterschied ist also zunächst bloß quantitativ. Man sah, daß die Masse des Mehrwerts, welche ein gegebenes Kapital produziert, gleich dem Mehrwert, den der einzelne Arbeiter liefert, multipliziert mit der Anzahl der gleichzeitig beschäftigten Arbeiter. Diese Anzahl ändert an und für sich nichts an der Rate des Mehrwerts oder dem Exploitationsgrad der Arbeitskraft, und mit Bezug auf die Produktion von Warenwert überhaupt scheint jede qualitative Veränderung des Arbeitsprozesses gleichgültig. Es folgt dies aus der Natur des Werts.

dependent on the number of laborers. From the point of view of value, therefore, the changes to be discussed in this chapter do not seem to be necessary. Qualitative changes in the labor process seem permitted but not required.

↓ Next Marx introduces a numerical example which will illustrate not only this point here but also other points to be made below.

If a working day of 12 hours is objectified in \$ 1.44, 1,200 working days of 12 hours will be objectified in 1,200 times \$1.44. In one case $12 \times 1,200$ working-hours are incorporated in the products, and in the other case 12 working-hours. In the production of value many workers always only count as so many individual workers, and it therefore makes no difference in the value produced whether the 1,200 men work separately or united under the command of one capitalist.

Vergegenständlicht sich ein zwölfstündiger Arbeitstag in 6 sh., so 1200 solcher Arbeitstage in 6 sh. $\times 1200$. In dem einen Fall haben sich 12×1200 , in dem andren 12 Arbeitsstunden den Produkten einverleibt. In der Wertproduktion zählen viele immer nur als viele einzelne. Für die Wertproduktion macht es also keinen Unterschied, ob 1200 Arbeiter vereinzelt produzieren oder vereint unter dem Kommando desselben Kapitals.

Question 791 What does Marx mean by: “In value production, many workers always only count as so many individual workers”?

[Co-Operative Labor is Average Labor]

Although there is no big qualitative change, there are some modifications:

440/o Nevertheless, within certain limits, a modification takes place.

341:2/oo Indes findet doch innerhalb gewisser Grenzen eine Modifikation statt.

Question 792 What is the difference between a change and a modification?

↑ Marx will repeat at the end of this paragraph 440/o that the “modifications” listed in this paragraph do not require the workers to actually co-operate; it is only necessary that all workers are working for the same capitalist.

First modification: co-operative labor is average labor. This is pretty obvious, but what makes it exciting is that average labor is exactly the labor that creates value. ↓ Marx begins this point with a little digression about the nature of value.

The labor objectified in *value* is labor of average social quality, i.e., the expenditure of average labor-power.

In *Wert* vergegenständlichte Arbeit ist Arbeit von gesellschaftlicher Durchschnittsqualität, also die Äußerung einer durchschnittlichen Arbeitskraft.

↑ This is true whether a capitalist has few or many employees. ↓ However the definition of the magnitude of value by an average leads to the question how this average *exists*, and for large capitals, the answer to this question is different than for small ones:

Any average magnitude, however, always only *exists* as the average of many separate magnitudes all of one kind, but differing as to quantity.

↑ Look at a die. The average of its throws is 3.5; this number does not exist as one of the faces of the die. The same is true for workers. There is no such thing as a Mr. Average. In every industry, each individual laborer, be he Peter or Paul, differs more or less from the average laborer. In jedem Industriezweig weicht der individuelle Arbeiter, Peter oder Paul, mehr oder minder vom Durchschnittsarbeiter ab.

↓ But one can synthesize the elusive Mr. Average by hiring several workers at the same time: These individual differences, or “errors” as they are called in mathematics, compensate one another, and vanish, whenever one adds a certain minimum number of workmen together. The celebrated sophist and sycophant, Edmund Burke, goes so far as to make the following assertion, based on his practical observations as a farmer; viz., that “in so small a platoon” as that of five farm laborers, all individual differences in the labor vanish, and that consequently any given five adult farm laborers taken together, will in the same time do as much work as any other five.⁸

⁸ “Unquestionably, there is a good deal of difference between the value of one man’s labor and that of another from strength, dexterity, and honest application. But I am quite sure, from my best observation, that any given five men will, in their total, afford a proportion of labor equal to any other five within the periods of life I have stated; that is, that among such five men there will be one possessing all the qualifications of a good workman, one bad, and the other three middling, and approximating to the first, and the last. So that in so small a platoon as that of even five, you will find the full complement of all that five men can earn.” (E. Burke, l.c., pp. 15, 16.) Compare Quételet on the average individual.

Eine Durchschnittsgröße *existiert* aber immer nur als Durchschnitt vieler verschiedener Größenindividuen derselben Art.

Diese individuellen Abweichungen, welche mathematisch „Fehler“ heißen, kompensieren sich und verschwinden, sobald man eine größere Anzahl Arbeiter zusammennimmt. Der berühmte Sophist und Sykophant Edmund Burke will aus seinen praktischen Erfahrungen als Pächter sogar wissen, daß schon „für ein so geringes Peloton“ wie 5 Ackerknechte aller individuelle Unterschied der Arbeit verschwindet, also die ersten besten im Mannesalter befindlichen fünf englischen Ackerknechte zusammengenommen in derselben Zeit grad soviel Arbeit verrichten als beliebige andre fünf englische Ackerknechte.⁸

⁸ „Ohne Frage besteht ein beträchtlicher Unterschied zwischen dem Wert der Arbeit eines Mannes und dem der Arbeit eines andren durch unterschiedliche Kraft, Geschicklichkeit und redlichen Fleiß. Aber ich bin auf Grund meiner sorgfältigen Beobachtung völlig sicher, daß beliebige fünf Mann in ihrer Gesamtheit eine gleiche Menge Arbeit liefern wie fünf andre, die in den erwähnten Lebensperioden stehen. Das heißt, daß sich unter diesen fünf Mann einer befindet, der alle Eigenschaften eines guten Arbeiters hat, einer ein schlechter Arbeiter ist, während die andren drei mittelmäßig sind und sich dem ersten und letzten annähern. So wird man also schon in einer so kleinen Gruppe von selbst fünf Mann die Gesamtheit all dessen finden, was fünf Mann leisten können.“ (E. Burke, l.c. p. 15, 16.)

Cf. Quételet über das Durchschnittsindividuum.

Burke’s claim may be exaggerated but in principle he is right:

But, however that may be, it is clear, that the aggregate working-day of a large number of workmen simultaneously employed, divided by the number of these workmen, gives one day of average social labor.

Wie dem auch sei, es ist klar, daß der Gesamtarbeitstag einer größeren Anzahl gleichzeitig beschäftigter Arbeiter, dividiert durch die Anzahl der Arbeiter, an und für sich ein Tag gesellschaftlicher Durchschnittsarbeit ist.

↓ To illustrate this, Marx resumes his earlier example:

For example, let the working-day of each individual be 12 hours. Then the aggregate working-day of 12 men simultaneously employed consists of 144 hours. The labor of each of the dozen men may deviate more or less from average social labor, each of them requiring a different time for the same operation. Nevertheless, if the working-day of each individual worker is taken to be one-twelfth of the aggregate working-day of 144 hours, it possesses the qualities of an average social working-day.

Der Arbeitstag des einzelnen sei z.B. zwölfstündig. So bildet der Arbeitstag von 12 gleichzeitig beschäftigten Arbeitern einen Gesamtarbeitstag von 144 Stunden, und obgleich die Arbeit eines jeden des Dutzend mehr oder minder von der gesellschaftlichen Durchschnittsarbeit abweichen, der einzelne daher etwas mehr oder weniger Zeit zu derselben Verrichtung brauchen mag, besitzt der Arbeitstag jedes einzelnen als ein Zwölftel des Gesamtarbeitstags von 144 Stunden die gesellschaftliche Durchschnittsqualität.

↑ Marx’s argument here can be broken up into two steps: (a) The individual differences of the 12 workers cancel each other out, therefore the total output is equal to the output of 144 average hours. (b) If each individual worker is considered one twelfth of the group of twelve then it follows that each individual hour of labor is average as well.

Ad (a): By the laws of probability, the standard deviation of the average of 12 independent random variables with equal standard deviation s is $1/\sqrt{12} s$, i.e., it is less than $1/3$ of the standard deviation of each individual variable, but it is not zero. Marx, however, says that the sample average is equal to the population mean, i.e., its standard deviation is zero. He can only say this if this standard deviation has become so small that it is no longer practically relevant. The differences between different teams of twelve are probably no greater than the differences between the same individual today and tomorrow. The production process must therefore be organized in such a way that such differences do not matter. Another justification for Marx’s assumption that the product of twelve workers is exactly equal to the social average may be that co-operation imposes a rhythm on the workers; they compensate for each other and help each other out.

Ad (b): It would be justified to consider the labor each worker as $1/12$ th of the total labor in a situation where the joint output cannot be attributed to individual laborers and where the assumption can be made that each worker contributes equally to this joint output. But Marx does not claim here that the contribution of each worker is equal, on the contrary, he stresses

that different workers may use different times for equal work processes. The conclusion is therefore counterfactual: Marx only says that each individual working-day has exactly social average quality *if* each individual working day is considered to be exactly one twelfth of the combined working-day. (The “*if*” is my own translation; the formulation in the German original does not make it quite as obvious that Marx means it counterfactually. Nevertheless I think this is the correct reading of Marx.)

↓ The next sentence says “however” in the sense of: although the above argument was counterfactual, since each individual laborer does not contribute exactly 1/12th of the overall output, this counterfactual outcome is reality for the capitalist in relation with his workers. The capitalist does not receive separate outputs from each worker individually but instead the aggregate output of their joint labor. And if time wages instead of piece wages are paid, the capitalist also does not pay each worker by his or her actual output, but all workers are paid the same hourly wage.

For the capitalist, however, who employs these 12 men, the working-day exists as the aggregate working-day of the whole dozen. Each individual man’s day exists as an aliquot part of the aggregate working-day, no matter whether the 12 men assist one another in their work, or whether the connexion between their operations consists merely in the fact, that the men are all working for the same capitalist.

But outside this relation, for instance if the twelve workers work for six different small masters, their individual differences do not cancel out:

But if the 12 men are employed in six pairs, by as many different small masters, it will be quite a matter of chance, whether each of these masters produces the same value, and consequently whether he realises the general rate of surplus-value. Individual deviations would take place.

Für den Kapitalisten aber, der ein Dutzend beschäftigt, existiert der Arbeitstag als Gesamtarbeitstag des Dutzend. Der Arbeitstag jedes einzelnen existiert als aliquoter Teil des Gesamtarbeitstags, ganz unabhängig davon, ob die zwölf einander in die Hand arbeiten oder ob der ganze Zusammenhang ihrer Arbeiten nur darin besteht, daß sie für denselben Kapitalisten arbeiten.

Werden dagegen von den 12 Arbeitern je zwei von einem kleinen Meister beschäftigt, so wird es zufällig, ob jeder einzelne Meister dieselbe Wertmasse produziert und daher die allgemeine Rate des Mehrwerts realisiert. Es fänden individuelle Abweichungen statt.

If my interpretation is correct, then this last sentence should not be translated as “there would be individual differences.” Individual

differences also exist among the workers hired by the big capitalist; but for the big capitalist, these differences will not lead to

differences in output, while in the case of only two employees they do.

[Average Laborer Must Exceed a Minimum of Dexterity]

↓ Next Marx discusses a second implication of employing many people together, which is dialectically related to the first. The real definition of an “average worker” is transfactual; the

average worker is not defined by his or her speed of output but an average worker is a worker who has no particular differences from any other worker. However capitalist co-operation imposes more stringent conditions on what *counts* as an average worker.

If one workman required considerably more time for the production of a commodity than is socially necessary, i.e., if the duration of his individual labor-time deviated considerably from the socially necessary or average labor-time, then his labor would not count as average labor, nor his labor-power as average labor-power. It would either be not saleable at all, or only at something below the average value of labor-power. A fixed minimum of efficiency in all labor is therefore assumed, and we shall see, later on, that capitalist production finds ways to measure this minimum.

Verbrauchte ein Arbeiter bedeutend mehr Zeit in der Produktion einer Ware, als gesellschaftlich erheischt ist, welche die für ihn individuell notwendige Arbeitszeit bedeutend ab von der gesellschaftlich notwendigen oder der Durchschnittsarbeitszeit, so gälte seine Arbeit nicht als Durchschnittsarbeit, seine Arbeitskraft nicht als durchschnittliche Arbeitskraft. Sie verkaufte sich gar nicht oder nur unter dem Durchschnittswert der Arbeitskraft. Ein bestimmtes Minimum der Arbeitsfertigkeit ist also vorausgesetzt, und wir werden später sehen, daß die kapitalistische Produktion Mittel findet, dieses Minimum zu messen.

One might say that, in contrast to Marx’s transfactual definition, capitalism imposes an *empiricist* conception of the average worker. Why does capitalism do this? Because the social average has now become a tangible quantity, individuals can and therefore will be compared against the group average.

Question 794 Did Marx overlook a possible source of profits when he calls also those workers average workers whose performance is below average? Why can’t the capitalist introduce a strict merit payment system in which each worker is paid by his or her performance, or why can’t the capitalist fire all those below average and in this way try to build up a superior workforce?

The elimination of the workers below the allowable minimum decreases the variability of the workforce, but it does not make the workforce completely homogeneous. The earlier-mentioned difference between big and small capitalists therefore still exists.

Nevertheless, this minimum deviates from the average, although on the other hand the capitalist has to pay the average value of labor-power.

Nichtsdestoweniger weicht das Minimum vom Durchschnitt ab, obgleich auf der anderen Seite der Durchschnittswert der Arbeitskraft gezahlt werden muß.

Question 795 Why does every worker get average pay, even if he or she does not match average performance?

For the small masters in 440/o, this has the following implications:

Of the six small masters, one would therefore squeeze out more than the average rate

Von den sechs Kleinmeistern würde der eine daher mehr, der andere weniger als die allge-

of surplus-value, another less. The inequalities would be compensated for the society at large, but not for the individual masters.

↓ The concluding sentence emphasizes the link between capitalism and commodity production in general:

Thus the law of valorization is only fully actualized for the individual producer, if he produces as a capitalist and employs a number of workmen together, whose labor, by its collective nature, is from the outset stamped as average social labor.⁹

The footnote brings a dissenting result from the literature, together with its refutation.

⁹ Professor Roscher claims to have discovered that one needlewoman employed by Mrs. Roscher during two days, does more work than two needlewomen employed together during one day. The learned professor should not study the capitalist process of production in the nursery, nor under circumstances where the principal personage, the capitalist, is wanting.

meine Rate des Mehrwerts herausschlagen. Die Ungleichheiten würden sich für die Gesellschaft kompensieren, aber nicht für den einzelnen Meister.

Das Gesetz der Verwertung überhaupt realisiert sich also für den einzelnen Produzenten erst vollständig, sobald er als Kapitalist produziert, viele Arbeiter gleichzeitig anwendet, also von vornherein gesellschaftliche Durchschnittsarbeit in Bewegung setzt.⁹

⁹ Herr Professor Roscher will entdeckt haben, daß eine Nähmamsell, die während zwei Tagen von der Frau Professorin beschäftigt wird, mehr Arbeit liefert, als zwei Nähmamsellen, welche die Frau Professorin am selben Tage beschäftigt. Der Herr Professor stelle seine Beobachtungen über den kapitalistischen Produktionsprozeß nicht in der Kinderstube an und nicht unter Umständen, worin die Hauptperson fehlt, der Kapitalist.

Question 796 *How does co-operation lend to individual labor the character of average social labor? What does that mean for the consciousness of the workers?*

13.1.b. [Effects of Employing Many Workers on the Same Premises]

Two interlinked points were made so far: the employment of many workers by the same capitalist has the effect that the actual labor-time performed by these workers is equal to the average labor-time, and that those workers performing too far below average are either paid a lower wage or altogether excluded from employment. Both points did not require that the workers work on the same place at the same time; they would also have been valid for workers working in different workshops or at home for the same capitalist.

↓ If the workers work at the same place and time, additional modifications occur. Even if they do not work together but just work side by side at the same place and time without a change in the mode of their labor, this results in a “revolution” (qualitative change) of the objective conditions of the labor process, namely, an economizing of certain parts of the constant capital.

441:1/o Even without an alteration in the system of working, the simultaneous employment of a large number of laborers effects a revolution in the material conditions of the labor-process. The buildings in which they work, the store-houses for the raw material, the implements and utensils used simultaneously or in turns by the workmen; in short, a portion of the means of production, are now consumed in common.

↓ This joint consumption of the means of production leads to a less than proportional increase in their costs:

On the one hand, the exchange-value of these means of production is not increased; for the exchange-value of a commodity is not raised by its use-value being consumed more thoroughly and to greater advantage. On the other hand, they are used in common, and therefore on a larger scale than before. A room where twenty weavers work at twenty looms must be larger than the room of a single weaver with two assistants. But it costs less labor to build one workshop for twenty persons than to build ten to accommodate two weavers each; thus the value of the means of production that are concentrated for use in common on a large scale does not increase in direct proportion to the expansion and to the increased useful effect of those means.

↓ Each product is therefore produced at a lower cost:

When consumed in common, they give up a smaller part of their value to each single product; partly because the total value they part with is spread over a greater quantity of products, and partly because their value, though absolutely greater, is, having regard to their sphere of action in the process, relatively less than the value of isolated means of production. Owing to this, the value of a

343:1/o Auch bei gleichbleibender Arbeitsweise bewirkt die gleichzeitige Anwendung einer größeren Arbeiteranzahl eine Revolution in den gegenständlichen Bedingungen des Arbeitsprozesses. Baulichkeiten, worin viele arbeiten, Lager für Rohmaterial usw., Gefäße, Instrumente, Apparate usw., die vielen gleichzeitig oder abwechselnd dienen, kurz, ein Teil der Produktionsmittel wird jetzt gemeinsam im Arbeitsprozeß konsumiert.

production leads to a less than proportional increase in their costs:

Einerseits wird der Tauschwert von Waren, also auch von Produktionsmitteln, durchaus nicht erhöht durch irgendwelche erhöhte Ausbeutung ihres Gebrauchswerts. Andererseits wächst der Maßstab der gemeinsam gebrauchten Produktionsmittel. Ein Zimmer, worin 20 Weber mit ihren 20 Webstühlen arbeiten, muß weiter gestreckt sein als das Zimmer eines unabhängigen Webers mit zwei Gesellen. Aber die Produktion einer Werkstatt für 20 Personen kostet weniger Arbeit als die von 10 Werkstätten für je zwei Personen, und so wächst überhaupt der Wert massenweise konzentrierter und gemeinsamer Produktionsmittel nicht verhältnismäßig mit ihrem Umfang und ihrem Nutzeffekt.

Gemeinsam vernutzte Produktionsmittel geben geringeren Wertbestandteil an das einzelne Produkt ab, teils weil der Gesamtwert, den sie abgeben, sich gleichzeitig auf eine größere Produktenmasse verteilt, teils weil sie, im Vergleich zu vereinzelter Produktionsmitteln, zwar mit absolut größerem, aber, ihren Wirkungskreis betrachtet, mit relativ kleinerem Wert in den Produktionspro-

part of the constant capital falls, and in proportion to the magnitude of the fall, the total value of the commodity also falls. The effect is the same as if the means of production had cost less.

↓ In other words, the means of production are socialized before labor itself is:

The economy in their application is entirely owing to their being consumed in common by a large number of workmen. Moreover, this character of being necessary conditions of social labor, a character that distinguishes them from the dispersed and relatively more costly means of production of isolated, independent laborers, or small masters, is acquired even when the numerous workmen assembled together do not assist one another, but merely work side by side. A portion of the instruments of labor acquires this social character before the labor-process itself does so.

Exam Question 797 *How does “a portion of the instruments of labor acquire a social character before the labor-process itself does”?*

↓ This is beneficial for capital on two counts.

442:1/o Economy in the use of the means of production has to be considered under two aspects. First, as cheapening commodities, and thereby bringing about a fall in the value of labor-power. Secondly, as altering the ratio of the surplus-value to the total capital advanced, i.e., to the sum of the values of the constant and variable capital.

↓ Only one of these benefits can be discussed here, the discussion of the other has to wait until volume Three:

The latter aspect will not be considered until we come to the third book, to which, with the object of treating them in their proper connexion, we also relegate many

zeß eintreten. Damit sinkt ein Wertbestandteil des konstanten Kapitals, also proportionell zu seiner Größe auch der Gesamtwert der Ware. Die Wirkung ist dieselbe, als ob die Produktionsmittel der Ware wohlfeiler produziert würden.

Diese Ökonomie in der Anwendung der Produktionsmittel entspringt nur aus ihrem gemeinsamen Konsum im Arbeitsprozeß vieler. Und sie erhalten diesen Charakter als Bedingungen gesellschaftlicher Arbeit oder gesellschaftliche Bedingungen der Arbeit im Unterschied von den zersplitterten und relativ kostspieligen Produktionsmitteln einzelner selbständiger Arbeiter oder Kleinmeister, selbst wenn die vielen nur räumlich zusammen, nicht miteinander arbeiten. Ein Teil der Arbeitsmittel erwirbt diesen gesellschaftlichen Charakter, bevor ihn der Arbeitsprozeß selbst erwirbt.

Der letzte Punkt wird erst im ersten Abschnitt des Dritten Buchs dieses Werks erörtert, wohin wir des Zusammenhangs wegen auch manches schon hierher Gehörige

other points that relate to the present question.

Question 798 *What are the twofold benefits of the economy of constant capital, and why can one of these two benefits only be discussed in Capital III?*

↓ The subject-matter must be split up because two different real generative mechanisms are at work. This difference is not only theoretical but it is part of the worker's everyday experience:

The march of our analysis compels this splitting up of the subject-matter, a splitting up that is quite in keeping with the spirit of capitalist production. For since, in this mode of production, the workman finds the instruments of labor existing independently of him as another man's property, economy in their use appears as a distinct operation, one that does not concern him, and which, therefore, has no connexion with the methods by which his own personal productiveness is increased.

ge verweisen.

Der Gang der Analyse gebietet diese Zerreißung des Gegenstands, die zugleich dem Geist der kapitalistischen Produktion entspricht. Da hier nämlich die Arbeitsbedingungen dem Arbeiter selbständig gegenüber treten, erscheint auch ihre Ökonomie als eine besondere Operation, die ihn nichts angeht und daher getrennt ist von den Methoden, welche seine persönliche Produktivität erhöhen.

Moore-Abveling had here: appears, with regards to him. This is wrong: it does not just appear this way with regards to him, but

the social form of appearance of the economy of constant capital is such that it does not concern the worker, although this economy

itself is the effect of the workers' combined labor.

Question 799 *The economy in the means of production due to increased scale of production benefits the capitalist in two different ways. What are they?*

13.2. [Simple Co-Operation]

From now on Marx talks about co-operation proper, which is qualitatively, not only quantitatively different from the individual labors. He begins with the definition of co-operation:

443:1 When numerous laborers work next to and with each other in accordance with a plan, whether in one and the same process, or in different but connected processes, they are said to co-operate, or to work in co-operation.¹⁰

¹⁰ “Confluence of forces.” (Destutt de Tracy, l.c., p. 80.)

344:2 Die Form der Arbeit vieler, die in demselben Produktionsprozeß oder in verschiedenen, aber zusammenhängenden Produktionsprozessen planmäßig neben- und miteinander arbeiten, heißt Kooperation.¹⁰

¹⁰ „Concours de forces.“ (Destutt de Tracy, l.c. p. 80.)

Co-operative labor is not just a quantitative change but the creation of something new, Marx calls it a new “social force.”

443:2 Just as the offensive power of a squadron of cavalry, or the defensive power of a regiment of infantry is essentially different from the sum of the offensive or defensive powers of the individual cavalry or infantry soldiers taken separately, so the sum total of the mechanical forces exerted by isolated workmen differs from the social force that is developed, when many hands take part simultaneously in one and the same undivided operation, such as raising a heavy weight, turning a winch, or removing an obstacle.¹¹

↑ The formulation “when many hands take part simultaneously in one and the same *undivided* operation” (my emphasis) makes it clear that Marx is talking here about *simple* co-operation. This is the simplest form of co-operation, in which people who do similar things work together. It must be distinguished from division of labor, which is a specific form of co-operation in which each of the workers co-operating specializes on a *different* task. Carrying a piano or participating in a discussion is a form of co-operation in which labor is not “divided.”

On the one hand Marx discusses this simple co-operation here, on the other he discusses those elements which all co-operative production processes have in common. ↓ Also the Wakefield quote in footnote 11 refers specifically to simple co-operation.

¹¹ There are numerous operations of so simple a kind as not to admit a division into parts, which cannot be performed without the co-operation of many pairs of hands. I would instance the lifting of a large tree on to a wain . . . , everything, in short, which cannot be done unless a great many pairs of hands help each other in the same undivided employment and at the same time.” (E. G. Wakefield: “A View of the Art of Colonization.” London, 1849, p. 168.)

In such cases the effect of the combined labor could either not be produced at all by isolated individual labor, or it could only be produced by a great expenditure of time, or on a very dwarfed scale. Not only have

345:1 Wie die Angriffskraft einer Kavallerieschwadron oder die Widerstandskraft eines Infanterieregiments wesentlich verschieden ist von der Summe der von jedem Kavalleristen und Infanteristen vereinzelt entwickelten Angriffs- und Widerstandskräfte, so die mechanische Kraftsumme vereinzelter Arbeiter von der gesellschaftlichen Kraftpotenz, die sich entwickelt, wenn viele Hände gleichzeitig in derselben ungeteilten Operation zusammenwirken, z.B. wenn es gilt, eine Last zu heben, eine Kurbel zu drehn oder einen Widerstand aus dem Weg zu räumen.¹¹

¹¹ „Es gibt zahlreiche Verrichtungen von so einfacher Art, daß sie keine Zerlegung in Teile zulassen, die jedoch nur durch das Zusammenwirken vieler Paare von Händen ausgeführt werden können. So das Heben eines großen Baumstamms auf einen Wagen . . . kurz, alles, was nicht getan werden kann, ohne daß sich eine große Zahl von Händepaaren gegenseitig und gleichzeitig bei derselben ungeteilten Beschäftigung helfen.“ (E. G. Wakefield, „A View of the Art of Colonization“, London 1849, p. 168.)

Die Wirkung der kombinierten Arbeit könnte hier von der vereinzelt gar nicht oder nur in viel längeren Zeiträumen oder nur auf einem Zwergmaßstab hervorgebracht werden. Es handelt sich hier nicht nur

we here an increase in the productive power of the individual, by means of co-operation, but the creation of a new power, namely, the collective power of masses.^{11a}

^{11a} “As one man cannot, and ten men must strain to lift a ton of weight, yet 100 men can do it only by the strength of a finger of each of them.” (John Bellers: “Proposals for Raising a Colledge of Industry.” London, 1696, p. 21.)

13.2.a. [Stimulation of Animal Spirits]

Co-operation not only generates a new collective productive power; it also enhances the individual productive powers by stimulating the “animal spirits” of the individual workers

443:3/o Apart from the new power that arises from the fusion of many forces into one single force, mere social contact begets in most industries an emulation and stimulation of the animal spirits that heighten the efficiency of each individual workman. Hence it is that a dozen persons working together will, in their collective working-day of 144 hours, produce far more than twelve isolated men each working 12 hours, or than one man who works twelve days in succession.¹² The reason of this is that man is, if not as Aristotle contends, a political,¹³ at all events a social animal.

um Erhöhung der individuellen Produktivkraft durch die Kooperation, sondern um die Schöpfung einer Produktivkraft, die an und für sich Massenkraft sein muß.^{11a}

^{11a} „Während ein Mann nicht fähig ist, eine Tonnenlast zu heben, und 10 Mann sich dabei anstrengen müssen, können es einhundert Mann aber mit der Kraft nur je eines ihrer Finger tun.“ (John Bellers, „Proposals for raising a colledge of industry“, London 1696, p. 21.)

345:2/o Abgesehen von der neuen Kraftpotenz, die aus der Verschmelzung vieler Kräfte in eine Gesamtkraft entspringt, erzeugt bei den meisten produktiven Arbeiten der bloße gesellschaftliche Kontakt einen Wetteifer und eine eigne Erregung der Lebensgeister (animal spirits), welche die individuelle Leistungsfähigkeit der einzelnen erhöhen, so daß ein Dutzend Personen zusammen in einem gleichzeitigen Arbeitstag von 144 Stunden ein viel größeres Gesamtprodukt liefern als zwölf vereinzelt Arbeiter, von denen jeder 12 Stunden, oder als ein Arbeiter, der 12 Tage nacheinander arbeitet.¹² Dies rührt daher, daß der Mensch von Natur, wenn nicht, wie Aristoteles meint, ein politisches¹³, jedenfalls ein gesellschaftliches Tier ist.

The German word “Wetteifer” means the eagerness to keep up with the others and not to be the slow person on the team, rather

than the desire to beat each other out. Moore/Aveling found the apt translation “emulation” (which I also saw in some of the footnotes),

while Fowkes uses rivalry, which gives the wrong connotations.

¹² “There is also” (when the same number of men are employed by one farmer on 300 acres, instead of by ten farmers with 30 acres

¹² „Man hat auch“ (wenn dieselbe Arbeiterzahl von einem Pächter auf 300, statt von 10 Pächtern auf je 30 acres angewandt wird) „in

a piece) “an advantage in the proportion of servants, which will not so easily be understood but by practical men; for it is natural to say, as 1 is to 4, so are 3 to 12; but this will not hold good in practice; for in harvest time and many other operations which require that kind of despatch by the throwing many hands together, the work is better and more expeditiously done: f.i. in harvest, 2 drivers, 2 loaders, 2 pitchers, 2 rakers, and the rest at the rick, or in the barn, will despatch double the work that the same number of hands would do if divided into different gangs on different farms.” (“An Inquiry into the Connexion between the Present Price of Provisions and the Size of Farms.” By a Farmer. London, 1773, pp. 7, 8.)

¹³ Strictly, Aristotle’s definition is that man is by nature a town-citizen. This is quite as characteristic of ancient classical society as Franklin’s definition of man, as a tool-making animal, is characteristic of Yankeeedom.

13.2.b. [Implicit Division of Labor in Simple Co-Operation]

Even if everyone does the *same*, his or her labor may represent a *different* phase of the labor process itself. Although this is still simple co-operation, it is already the transition to division of labor, which will briefly be mentioned in the next paragraph.

444:1/o Although a number of men may be occupied together at the same time on the same, or the same kind of work, yet the labor of each, as a part of the collective labor, may correspond to a different phase of the labor-process, through all whose phases, in consequence of co-operation, the subject of their labor passes with greater speed. For instance, if a dozen masons place themselves in a row, so as to pass stones from the foot of a ladder to its summit, each of them does the same thing; nevertheless, their separate acts form connected parts of one total operation; they are particular phases, which must be gone through by each stone; and

der relativen Zahl der Knechte einen Vorteil, der nicht so leicht zu erkennen ist, außer von Männern der Praxis. Man sagt natürlich, daß sich 1:4 wie 3:12 verhält; aber dies bewährt sich nicht in der Praxis. Denn in der Erntezeit und bei vielen andren Verrichtungen, die ähnliche Eile erfordern, wird durch Zusammenfassen vieler Arbeitskräfte die Arbeit besser und schneller geschafft. Z.B. bewältigen bei der Ernte 2 Fuhrleute, 2 Auflader, 2 Zureicher, 2 Recher, dazu der Rest beim Schober oder in der Scheune zusammen doppelt soviel Arbeit wie die gleiche Anzahl, wenn sie in verschiedene Gruppen und auf verschiedene Pachten aufgeteilt wäre.“ ([J. Arbuthnot,] „An Enquiry into the Connection between the present price of provisions and the size of farms.“ By a Farmer, London 1773, p. 7, 8.)

¹³ Aristoteles’ Definition ist eigentlich die, daß der Mensch von Natur Stadtbürger. Sie ist für das klassische Altertum ebenso charakteristisch als Franklins Definition, daß der Mensch von Natur Instrumentenmacher, für das Yankeetum.

346:1 Obgleich viele dasselbe oder Gleichartige gleichzeitig miteinander verrichten, kann die individuelle Arbeit eines jeden dennoch als Teil der Gesamtarbeit verschiedene Phasen des Arbeitsprozesses selbst darstellen, die der Arbeitsgegenstand, infolge der Kooperation, rascher durchläuft. Z.B. wenn Maurer eine Reihe von Händen bilden, um Bausteine vom Fuß eines Gestells bis zu seiner Spitze zu befördern, tut jeder von ihnen dasselbe, aber dennoch bilden die einzelnen Verrichtungen kontinuierliche Teile einer Gesamtverrichtung, besondere Phasen, die jeder Baustein im Arbeitsprozeß durchlaufen muß und wodurch

the stones are thus carried up quicker by the 24 hands of the row of men than they could be if each man went separately up and down the ladder with his burden.¹⁴ The object is carried over the same distance in a shorter time. Again, a combination of labor occurs whenever a building, for instance, is taken in hand on different sides simultaneously; although here also the co-operating masons are doing the same, or the same kind of work. The 12 masons, in their collective working-day of 144 hours, make much more progress with the building than one mason could make working for 12 days, or 144 hours. The reason is, that a body of men working in concert has hands and eyes both before and behind, and is, to a certain degree, omnipresent. The various parts of the work progress simultaneously.

¹⁴ “On doit encore remarquer que cette division partielle de travail peut se faire quand même les ouvriers sont occupés d’une même besogne. Des maçons par exemple, occupés à faire passer de mains en mains des briques à un échafaudage supérieur, font tous la même besogne, et pourtant il existe parmi eux une espèce de division de travail, qui consiste en ce que chacun d’eux fait passer la brique par un espace donné, et que tous ensemble la font parvenir beaucoup plus promptement à l’endroit marqué qu’ils ne le feraient si chacun d’eux portait sa brique séparément jusqu’à l’échafaudage supérieur.” (F. Skarbek: “Théorie des richesses sociales.” Paris, 1839, t. I, pp. 97, 98.)

↑ This implicit division of labor is an additional factor improving the productivity of simple co-operation.

ihn etwa die 24 Hände des Gesamtarbeiters rascher fördern als die zwei Hände jedes einzelnen Arbeiters, der das Gerüst auf- und abstiege.¹⁴ Der Arbeitsgegenstand durchläuft denselben Raum in kürzerer Zeit. Andererseits findet Kombination der Arbeit statt, wenn ein Bau z.B. von verschiedenen Seiten gleichzeitig angegriffen wird, obgleich die Kooperierenden dasselbe oder Gleichartige tun. Der kombinierte Arbeitstag von 144 Stunden, der den Arbeitsgegenstand vielseitig im Raum angreift, weil der kombinierte Arbeiter oder Gesamtarbeiter vorn und hinten Augen und Hände hat und in gewissem Grad Allgegenwart besitzt, fördert das Gesamtprodukt rascher als 12 zwölfstündige Arbeitstage mehr oder minder vereinzelter Arbeiter, die ihr Werk einseitiger angreifen müssen. In derselben Zeit reifen verschiedene Raumteile des Produkts.

¹⁴ „Ferner muß man feststellen, daß diese partielle Arbeitsteilung auch da erfolgen kann, wo die Arbeiter mit einer gleichen Verrichtung beschäftigt sind. Maurer z.B., die Ziegel von Hand zu Hand zu einem höheren Gerüst wandern lassen, tun alle die gleiche Arbeit, und dennoch existiert unter ihnen eine Art von Arbeitsteilung, die darin besteht, daß jeder von ihnen den Ziegel ein bestimmtes Stück weiterwandern läßt und alle zusammen ihn viel schneller an den gegebenen Ort kommen lassen, als wenn jeder von ihnen seinen Ziegel einzeln bis zum höheren Gerüst hinauftrüge.“ (F. Skarbek, „Théorie des richesses sociales“, 2ème éd., Paris 1839, t. I, p. 97, 98.)

Question 800 What is co-operation? What is simple co-operation? What is division of labor?

13.2.c. [Simple Co-Operation Can Lead to Division of Labor]

The subject of the present chapter is co-operation in general, while the next chapter discusses division of labor and the one after that co-operation mediated by machinery. Marx does not want to anticipate these later chapters, therefore the examples in the present chapter are situations in which co-operation occurs without a change in the individual labor-process itself. One benefit of this kind of co-operation is that it allows, if the labor process is complicated, to *divide* the different operations between different hands. This division of labor will be discussed in the next chapter, but Marx mentions the potential of division of labor as one of the benefits of simple co-operation already here.

445:1 In the above instances we have laid stress upon the point that the men do the same, or the same kind of work, because this, the most simple form of labor in common, plays a great part in co-operation, even in its most fully developed stage.

↑ Marx explains now, after the fact, why his earlier examples referred to simple co-operation only.

If the work be complicated, then the mere number of the men who co-operate allows to apportion the various operations to different hands, and, consequently, to carry them on simultaneously. The time necessary for the completion of the whole work is thereby shortened.¹⁵

¹⁵ “Est-il question d’exécuter un travail compliqué, plusieurs choses doivent être faites simultanément. L’un en fait une pendant que l’autre en fait une autre, et tous contribuent à l’effet qu’un seul homme n’aurait pu produire. L’un rame pendant que l’autre tient le gouvernail, et qu’un troisième jette le filet on harponne le poisson, et la pêche a un succès impossible sans ce concours.” (Destutt de Tracy, l.c.)

This apportionment to different laborers is called “division of labor,” and Marx will devote the whole chapter Fourteen to it.

346:2/o Wir betonten, daß die vielen, die einander ergänzen, dasselbe oder Gleichartige tun, weil diese einfachste Form gemeinsamer Arbeit auch in der ausgebildeten Gestalt der Kooperation eine große Rolle spielt.

Ist der Arbeitsprozeß kompliziert, so erlaubt die bloße Masse der Zusammenarbeitenden, die verschiedenen Operationen unter verschiedene Hände zu verteilen, daher gleichzeitig zu verrichten und dadurch die zur Herstellung des Gesamtprodukts nötige Arbeitszeit zu verkürzen.¹⁵

¹⁵ „Wenn es sich um die Ausführung einer komplizierten Arbeit handelt, müssen verschiedene Dinge gleichzeitig getan werden. Der eine macht das eine, während der andere etwas anderes macht, und alle tragen zu einer Wirkung bei, die ein einzelner Mensch nicht hätte erzeugen können. Der eine rudert, während der andere steuert und ein dritter das Netz auswirft oder den Fisch harpuniert, und der Fischfang hat einen Erfolg, der ohne diese Kooperation unmöglich wäre.“ (Destutt de Tracy, l.c. p. 78.)

13.2.d. [Concentration in Time]

An increase in productivity is not the only benefit of co-operative labor. Co-operation also allows a large amount of labor to be concentrated in a short timespan or on a small area. In certain situations, this is very necessary and beneficial even if the productivity per worker is not increased:

445:2/o In many industries, there are critical periods, determined by the nature of the process, during which certain definite results must be obtained. For instance, if a flock of sheep has to be shorn, or a field of wheat to be cut and harvested, the quantity and quality of the product depends on the work being begun and ended within a certain time. In these cases, the time that ought to be taken by the process is prescribed, just as it is in herring fishing. A single person cannot carve a working-day of more than, say 12 hours, out of the natural day, but 100 men co-operating extend the working-day to 1,200 hours. The shortness of the time allowed for the work is compensated for by the large mass of labor thrown upon the field of production at the decisive moment. The completion of the task within the proper time depends on the simultaneous application of numerous combined working-days; the amount of useful effect depends on the number of laborers; this number, however, is always smaller than the number of isolated laborers required to do the same amount of work in the same period.¹⁶ It is owing to the absence of this kind of co-operation that, in the western part of the United States, quantities of corn, and in those parts of East India where English rule has destroyed the old communities, quantities of cotton, are yearly wasted.¹⁷

347:1 In vielen Produktionszweigen gibt es kritische Momente, d.h. durch die Natur des Arbeitsprozesses selbst bestimmte Zeitepochen, während deren bestimmte Arbeitsergebnisse erzielt werden müssen. Soll z.B. eine Herde Schafe geschoren oder eine Morgenanzahl Kornland gemäht und geherbstet werden, so hängt Quantität und Qualität des Produkts davon ab, daß die Operation zu einer gewissen Zeit begonnen und zu einer gewissen Zeit beendet wird. Der Zeitraum, den der Arbeitsprozeß einnehmen darf, ist hier vorgeschrieben, wie etwa beim Heringsfang. Der einzelne kann aus einem Tag nur einen Arbeitstag heraus schneiden, sage von 12 Stunden, aber die Kooperation von 100 z.B. erweitert einen zwölfstündigen Tag zu einem Arbeitstag von 1200 Stunden. Die Kürze der Arbeitsfrist wird kompensiert durch die Größe der Arbeitsmasse, die im entscheidenden Augenblick auf das Produktionsfeld geworfen wird. Die rechtzeitige Wirkung hängt hier ab von der gleichzeitigen Anwendung vieler kombinierten Arbeitstage, der Umfang des Nutzeffekts von der Arbeiteranzahl, die jedoch stets kleiner bleibt als die Anzahl der Arbeiter, die vereinzelt in demselben Zeitraum denselben Wirkungsraum ausfüllen würden.¹⁶ Es ist der Mangel dieser Kooperation, wodurch im Westen der Vereinigten Staaten eine Masse Korn und in den Teilen Ostindiens, wo englische Herrschaft das alte Gemeinwesen zerstört hat, eine Masse Baumwolle jährlich verwüstet wird.¹⁷

¹⁶ “The doing of it (agricultural work) at the critical juncture is of so much the greater consequence.” (“An Inquiry into the Connexion between the Present Price,” etc., p. 9.) “In agriculture, there is no more important factor than that of time.” (Liebig: “Über Theorie und Praxis in der Landwirthschaft.” 1856, p. 23.)

¹⁷ “The next evil is one which one would scarcely expect to find in a country which exports more labor than any other in the world, with the exception, perhaps, of China and England—the impossibility of procuring a sufficient number of hands to clean the cotton. The consequence of this is that large quantities of the crop are left unpicked, while another portion is gathered from the ground when it has fallen, and is of course discoloured and partially rotted, so that for want of labor at the proper season the cultivator is actually forced to submit to the loss of a large part of that crop for which England is so anxiously looking.” (“Bengal Hurkaru.” Bi-Monthly Overland Summary of News, 22nd July, 1861.)

13.2.e. [Spacial Extension and Contraction of Arena]

Sometimes, co-operation is beneficial because it prevents the work area from spreading out too much, by arranging for the performance of many different labor processes in quick succession.

446:1 On the one hand, co-operation allows of the work being carried on over an extended space; it is consequently imperatively called for in certain undertakings, such as draining, constructing dykes, irrigation works, and the making of canals, roads and railways. On the other hand, while extending the scale of production, it renders possible a relative contraction of the arena. This contraction of arena simultaneous with, and arising from, extension of scale, whereby a number of useless expenses are cut down, is owing to the con-

¹⁶ „Ihre“ (der Arbeit in der Agrikultur) „Ausführung im entscheidenden Augenblick hat um so größere Wirkung.“ ([J. Arbuthnot,] „An Inquiry into the Connection between the present price etc.“, p. 7.) „In der Agrikultur gibt es keinen wichtigeren Faktor als den Faktor der Zeit.“ (Liebig, „Über Theorie und Praxis in der Landwirthschaft“, 1856, p. 23.)

¹⁷ „Das nächste Übel, das man schwerlich in einem Lande zu finden erwartet, welches mehr Arbeit exportiert als irgendein andres der Welt, abgesehen vielleicht von China und England, besteht in der Unmöglichkeit, eine genügende Anzahl von Händen zur Baumwollernte zu beschaffen. Infolgedessen bleiben große Mengen Baumwolle ungepflückt, während ein anderer Teil von der Erde aufgesammelt wird, wenn er abgefallen und selbstverständlich verfärbt und teilweise verfault ist, so daß wegen Arbeitermangels zur richtigen Jahreszeit der Pflanze tatsächlich gezwungen ist, sich mit dem Verlust eines großen Teils jener Baumwollernte abzufinden, auf die England so sehr wartet.“ („Bengal Hurkaru. Bi-Monthly Overland Summary of News“, 22nd July 1861.)

348:1 Auf der einen Seite erlaubt die Kooperation, die Raumsphäre der Arbeit auszudehnen, und wird daher für gewisse Arbeitsprozesse schon durch den räumlichen Zusammenhang des Arbeitsgegenstandes erheischt, wie bei Trockenlegung von Land, Eindämmung, Bewässerung, Kanal-, Straßen-, Eisenbahnbauten usw. Andererseits ermöglicht sie, verhältnismäßig zur Stufenleiter der Produktion, räumliche Verengung des Produktionsgebiets. Diese Beschränkung der Raumsphäre der Arbeit bei gleichzeitiger Ausdehnung ihrer Wir-

glomeration of laborers, to the aggregation of various processes, and to the concentration of the means of production.¹⁸

¹⁸ In the progress of culture “all, and perhaps more than all, the capital and labor which once loosely occupied 500 acres, are now concentrated for the more complete tillage of 100.” Although “relatively to the amount of capital and labor employed, space is concentrated, it is an enlarged sphere of production, as compared to the sphere of production formerly occupied or worked upon by one single independent agent of production.” (R. Jones: “An Essay on the Distribution of Wealth,” part I. On Rent. London, 1831. p. 191.)

13.2.f. [Summary: Social Productive Powers of Labor]

The concluding paragraph returns to the theme of social productive powers of co-operative labor. If one compares the *product* of co-operation with the product of individual labor, one sees that co-operation is the source of a new productive force, the productive force of social labor, or the social productive force of labor. This paragraph also contains a summary of all points made so far:

447:1 The combined working-day produces, relatively to an equal sum of isolated working-days, a greater quantity of use-values, and, consequently, diminishes the labor-time necessary for the production of a given useful effect. Whether the combined working-day, in a given case, acquires this increased productive power, because it heightens the mechanical force of labor, or extends its sphere of action over a greater space, or contracts the field of production relatively to the scale of production, or at the critical moment sets large masses of labor to work, or excites emulation between individuals and raises their animal spirits, or im-

kungssphäre, wodurch eine Masse falscher Kosten (faux frais) erspart werden, entspringt aus der Konglomeration der Arbeiter, dem Zusammenrücken verschiedener Arbeitsprozesse und der Konzentration der Produktionsmittel.¹⁸

¹⁸ „Beim Fortschritt in der Bodenbebauung wird alles Kapital und alle Arbeit, die früher zerstreut auf 500 acres verwandt wurden, ja vielleicht noch mehr, jetzt auf die gründlichere Bearbeitung von 100 acres konzentriert.“ Obgleich „im Verhältnis zum angewandten Betrage von Kapital und Arbeit der Raum enger geworden ist, stellt er doch eine erweiterte Produktionssphäre dar, im Vergleich zu der Produktionssphäre, die früher von einem einzigen, unabhängigen Produzenten besessen oder bebaut worden war“. (R. Jones, „An Essay on the Distribution of Wealth“, „On Rent“, London 1831, p. 191.)

348:2/o Verglichen mit einer gleich großen Summe vereinzelter individueller Arbeitstage, produziert der kombinierte Arbeitstag größere Massen von Gebrauchswert und vermindert daher die zur Produktion eines bestimmten Nutzeffekts nötige Arbeitszeit. Ob er im gegebenen Fall diese gesteigerte Produktivkraft erhält, weil er die mechanische Kraftpotenz der Arbeit erhöht oder ihre räumliche Wirkungssphäre ausdehnt oder das räumliche Produktionsfeld im Verhältnis zur Stufenleiter der Produktion verengt oder im kritischen Moment viel Arbeit in wenig Zeit flüssig macht oder den Wetteifer der einzelnen erregt und ihre Le-

presses on the similar operations carried on by a number of men the stamp of continuity and many-sidedness, or performs simultaneously different operations, or economises the means of production by use in common, or lends to individual labor the character of average social labor—whichever of these be the cause of the increase, the special productive power of the combined working-day is, under all circumstances, a social productive power of labor, or a productive power of social labor. This power is due to co-operation itself. When the laborer co-operates systematically with others, he strips off the fetters of his individuality, and develops the capabilities of his species.¹⁹

¹⁹ “La forza di ciascuno uomo è minima, ma la riunione delle minime forze forma una forza totale maggiore anche della somma delle forze medesime fino a che le forze per essere riunite possono diminuire il tempo ed accrescere lo spazio della loro azione.” (G. R. Carli, Note to P. Verri, l.c., t. xv., p. 196.)

13.3. [The Capitalist Character of Co-operation]

Let us recall how co-operation was introduced: in order to make enough surplus-value, the capitalist had to hire a certain minimum number of laborers, and out of this simultaneous hiring grew the co-operation of the laborers. Co-operation was needed because the surplus-value created by individual laborers had to be added together before the capitalist could be a full-time capitalist and therefore capital could become an independent force.

Once this co-operation was in place, it proved to be a very powerful lever for increased efficiency of the labor-process. The present section shows how this qualitative change in the production process acts back on the relations of production, causing a deepening of the capitalist relations of production: the minimum size of capital increases, the command of the capitalist over the laborer gains more authority.

While Marx showed earlier that capitalist relations of production lead to co-operation; now he focuses on the reverse causality, the effects of co-operation on the capitalist relations of production. Marx’s starting point is therefore the co-existence of capitalism and co-operation:

bensgeister spannt oder den gleichartigen Verrichtungen vieler den Stempel der Kontinuität und Vielseitigkeit aufdrückt, oder verschiedene Operationen gleichzeitig verrichtet oder die Produktionsmittel durch ihren gemeinschaftlichen Gebrauch ökonomisiert oder der individuellen Arbeit den Charakter gesellschaftlicher Durchschnittsarbeit verleiht, unter allen Umständen ist die spezifische Produktivkraft des kombinierten Arbeitstags gesellschaftliche Produktivkraft der Arbeit oder Produktivkraft gesellschaftlicher Arbeit. Sie entspringt aus der Kooperation selbst. Im planmäßigen Zusammenwirken mit andern streift der Arbeiter seine individuellen Schranken ab und entwickelt sein Gattungsvermögen.¹⁹

¹⁹ „Die Kraft des einzelnen Menschen ist ganz gering, aber die Vereinigung der ganz geringen Kräfte ergibt eine Gesamtkraft, die größer ist als die Summe aller Teilkkräfte, so daß schon die bloße Vereinigung der Kräfte die Zeit verringern und den Raum ihrer Wirkung vergrößern kann.“ (G. R. Carli, Note zu P. Verri, l.c., t. XV, p. 196.)

447:2/o As a general rule, laborers cannot co-operate without being brought together: their assemblage in one place is a necessary condition of their co-operation. Hence wage-laborers cannot co-operate, unless they are employed simultaneously by the same capital, the same capitalist, and unless therefore their labor-powers are bought simultaneously by him.

↑ What conditions must the capitalist relations satisfy so that co-operation is possible? The first condition is that the co-operating laborers must be employed by the same capitalist. This has several implications.

13.3.a. [Minimum Size of Capital Determined by Technology]

First of all, this capitalist must have enough variable capital to hire many workers.

The total value of these labor-powers, or the amount of the wages of these laborers for a day, or a week, as the case may be, must be ready in the pocket of the capitalist, before the workmen are assembled for the process of production. The payment of 300 workmen at once, though only for one day, requires a greater outlay of capital, than does the payment of a smaller number of men, week by week, during a whole year. Hence the number of the laborers that co-operate, or the scale of co-operation, depends, in the first instance, on the amount of capital that the individual capitalist can spare for the purchase of labor-power; in other words, on the extent to which a single capitalist has command over the means of subsistence of a number of laborers.

↓ And the capitalists must have enough constant capital, although the increase is sub-proportional.

448:1 And as with the variable, so it is with the constant capital. For example, the outlay on raw material is 30 times as great, for the capitalist who employs 300 men, as it is for each of the 30 capitalists who employ

349:1 Wenn Arbeiter überhaupt nicht unmittelbar zusammenwirken können, ohne zusammen zu sein, ihre Konglomeration auf bestimmtem Raum daher Bedingung ihrer Kooperation ist, können Lohnarbeiter nicht kooperieren, ohne daß dasselbe Kapital, derselbe Kapitalist sie gleichzeitig anwendet, also ihre Arbeitskräfte gleichzeitig kauft.

Der Gesamtwert dieser Arbeitskräfte oder die Lohnsumme der Arbeiter für den Tag, die Woche usw., muß daher in der Tasche des Kapitalisten vereint sein, bevor die Arbeitskräfte selbst im Produktionsprozeß vereint werden. Zahlung von 300 Arbeitern auf einmal, auch nur für einen Tag, bedingt mehr Kapitalauslage als Zahlung weniger Arbeiter Woche für Woche, während des ganzen Jahrs. Die Anzahl der kooperierenden Arbeiter, oder die Stufenleiter der Kooperation, hängt also zunächst ab von der Größe des Kapitals, das der einzelne Kapitalist im Ankauf von Arbeitskraft auslegen kann, d.h. von dem Umfang, worin je ein Kapitalist über die Lebensmittel vieler Arbeiter verfügt.

349:2 Und wie mit dem variablen, verhält es sich mit dem konstanten Kapital. Die Auslage für Rohmaterial z.B. ist 30mal größer für den einen Kapitalisten, der 300, als für jeden der 30 Kapitalisten, der je

10 men. The value and quantity of the instruments of labor used in common do not, it is true, increase at the same rate as the number of workmen, but they do increase very considerably. Hence, concentration of large masses of the means of production in the hands of individual capitalists, is a material condition for the co-operation of wage-laborers, and the extent of the co-operation or the scale of production, depends on the extent of this concentration.

↑ This last sentences echoes a parallel remark in the last sentence of the preceding paragraph regarding the variable capital only, and it will itself be echoed in the next chapter, about division of labor, in the last sentence of 480:2.

Question 801 *Is the degree of co-operation even today determined, limited, by the centralization of capital, or has the centralization overtaken the needs for co-operation?*

↓ In other words, limits of the capitalist relations of production which had been formal limits, i.e., which had arisen from the relations of production themselves, have turned now into technological conditions of production. One might say that “soft” limits have turned into “hard” limits.

448:2 We saw in a former chapter, that a certain minimum amount of capital was necessary, in order that the number of laborers simultaneously employed, and, consequently, the amount of surplus-value produced, might suffice to liberate the employer himself from manual labor, to convert him from a small master into a capitalist, and thus formally to establish capitalist production. We now see that a certain minimum amount is a necessary condition for the conversion of numerous isolated and independent processes into one combined social process.

The former chapter is apparently the same reference alluded to in 439:1, namely, 422:2/423.

10 Arbeiter beschäftigt. Wertumfang und Stoffmasse der gemeinsam benutzten Arbeitsmittel wachsen zwar nicht in demselben Grad wie die beschäftigte Arbeiteranzahl, aber sie wachsen beträchtlich. Konzentration größerer Massen von Produktionsmitteln in der Hand einzelner Kapitalisten ist also materielle Bedingung für die Kooperation von Lohnarbeitern, und der Umfang der Kooperation, oder die Stufenleiter der Produktion, hängt ab vom Umfang dieser Konzentration.

349:3/o Ursprünglich erschien eine gewisse Minimalgröße des individuellen Kapitals notwendig, damit die Anzahl der gleichzeitig ausgebeuteten Arbeiter, daher die Masse des produzierten Mehrwerts hinreiche, den Arbeitsanwender selbst von der Handarbeit zu entbinden, aus einem Kleinmeister einen Kapitalisten zu machen und so das Kapitalverhältnis formell herzustellen. Sie erscheint jetzt als materielle Bedingung für die Verwandlung vieler zersplitterter und voneinander unabhängiger individueller Arbeitsprozesse in einen kombinierten gesellschaftlichen Arbeitsprozeß.

13.3.b. [Capitalist becomes Supervisor in Co-Operation]

A change in the supervisory role of the capitalist is a second effect of co-operation back on capitalist relations. The supervision of the labor of the wage laborer by the capitalist was at first *only* a formal consequence of the relation of production: it was a consequence of the capitalist's ownership of the labor process. See Resultate 985:4/o 987:1 for an elaboration of the tasks of the capitalist.

448:3 We also saw that at first, the subjection of labor to capital was only a formal result of the fact, that the laborer, instead of working for himself, works for and consequently under the capitalist.

With the development of co-operation, some sort of organization and supervision becomes necessary for the labor process itself, not because of the capitalist nature of production but simply because the labor process is co-operative.

Since the capitalist is the one who brings the workers together also this second kind of supervision falls to him. (This step is not given explicitly but mentioned as a side remark in 449:1/o). Since this kind of supervision is legitimate and necessary, also the capitalist's supervision seems legitimate and necessary: his orders are as necessary as the general's orders on the battlefield.

By the co-operation of numerous wage-laborers, the sway of capital develops into a requisite for carrying on the labor-process itself, into a real requisite of production. That a capitalist should command on the field of production, is now as indispensable as that a general should command on the field of battle.

↓ Now Marx begins a major digression in which he distinguishes those elements of supervision which flow from the nature of co-operative labor from those which flow from capitalism. First some remarks about the co-operative labor process itself:

448:4/o All combined labor on a large scale requires, more or less, a directing authority, in order to secure the harmonious working of the individual activities, and to perform the general functions that have their origin in the action of the combined organism, as distinguished from the action of its separate organs. A single violin player is his own conductor; an orchestra requires a separate one.

350:1 Ebenso erschien ursprünglich das Kommando des Kapitals über die Arbeit nur als formelle Folge davon, daß der Arbeiter statt für sich, für den Kapitalisten und daher unter dem Kapitalisten arbeitet.

Mit der Kooperation vieler Lohnarbeiter entwickelt sich das Kommando des Kapitals zum Erheischnis für Ausführung des Arbeitsprozesses selbst, zu einer wirklichen Produktionsbedingung. Der Befehl des Kapitalisten auf dem Produktionsfeld wird jetzt so unentbehrlich wie der Befehl des Generals auf dem Schlachtfeld.

350:2 Alle unmittelbar gesellschaftliche oder gemeinschaftliche Arbeit auf größerem Maßstab bedarf mehr oder minder einer Direktion, welche die Harmonie der individuellen Tätigkeiten vermittelt und die allgemeinen Funktionen vollzieht, die aus der Bewegung des produktiven Gesamtkörpers im Unterschied von der Bewegung seiner selbständigen Organe entspringen. Ein einzelner Violinspieler dirigiert sich selbst, ein Orchester bedarf des Musikdirektors.

↑ Modern Jazz music shows that an orchestra does not always need a director: perhaps Marx was too timid in his assumptions how co-operation can be structured.

The work of directing, superintending, and adjusting becomes one of the functions of capital, from the moment that the labor under the control of capital, becomes co-operative. Once a function of capital, it acquires special characteristics.

↑ This last sentence introduces the main topic of this digression: specific characteristics of the supervision by the capitalist.

449:1/o The driving motive and determining purpose of capitalist production is to extract the greatest possible amount of surplus-value,²⁰ and consequently to exploit labor-power to the greatest possible extent. As the number of the co-operating laborers increases, so too does their resistance to the domination of capital, and with it, the necessity for capital to overcome this resistance by counterpressure. The control exercised by the capitalist is not only a particular function springing from the nature of the social labor-process which falls to the capitalist, but it is, at the same time, a function of the exploitation of a social labor-process, and is consequently rooted in the unavoidable antagonism between the exploiter and the target of his exploitation.

²⁰ "Profits . . . is the sole end of trade." (J. Vanderlint, l.c., p. 11.)

Question 802 Explain the twofold character of the control of the capitalist over the worker. Where are the foremen in this relationship?

↓ The resistance of the workers to exploitation and overwork is one reason why more supervision is necessary. But the need for supervision grows also for other reasons. Since the means of production confront the laborer as alien property, they need protection from the worker's wrath.

Again, in proportion to the increasing mass of the means of production, now no longer

Diese Funktion der Leitung, Überwachung und Vermittlung, wird zur Funktion des Kapitals, sobald die ihm untergeordnete Arbeit kooperativ wird. Als spezifische Funktion des Kapitals erhält die Funktion der Leitung spezifische Charaktermale.

350:3/o Zunächst ist das treibende Motiv und der bestimmende Zweck des kapitalistischen Produktionsprozesses möglichst große Selbstverwertung des Kapitals,²⁰ d.h. möglichst große Produktion von Mehrwert, also möglichst große Ausbeutung der Arbeitskraft durch den Kapitalisten. Mit der Masse der gleichzeitig beschäftigten Arbeiter wächst ihr Widerstand und damit notwendig der Druck des Kapitals zur Bewältigung dieses Widerstands. Die Leitung des Kapitalisten ist nicht nur eine aus der Natur des gesellschaftlichen Arbeitsprozesses entspringende und ihm angehörige besondere Funktion, sie ist zugleich Funktion der Ausbeutung eines gesellschaftlichen Arbeitsprozesses und daher bedingt durch den unvermeidlichen Antagonismus zwischen dem Ausbeuter und dem Rohmaterial seiner Ausbeutung.

²⁰ „Profite . . . sind der einzige Zweck des Geschäfts.“ (J. Vanderlint, l.c. p. 11.)

Ebenso wächst mit dem Umfang der Produktionsmittel, die dem Lohnarbeiter als

the property of the laborer, but of the capitalist, the necessity increases for some effective control over the proper application of those means.²¹

²¹ That Philistine paper, the *Spectator*, states that after the introduction of a sort of partnership between capitalist and workmen in the "Wire-work Company of Manchester," "the first result was a sudden decrease in waste, the men not seeing why they should waste their own property any more than any other master's, and waste is, perhaps, next to bad debts, the greatest source of manufacturing loss." The same paper finds that the main defect in the Rochdale co-operative experiments is this: "They showed that associations of workmen could manage shops, mills, and almost all forms of industry with success, and they immediately improved the condition of the men; but then they did not leave a clear place for masters." Quelle horreur!

Not only the means of production are alien to the workers, also their own connexion is imposed on them. The direction of their co-operation is therefore not participatory but despotic:

Moreover, the co-operation of wage-laborers is entirely brought about by the capital that employs them. Their union into one single productive body and the establishment of a connexion between their individual functions, are matters foreign and external to them, are not their own act, but the act of the capital that brings and keeps them together. Hence the connexion existing between their various labors confronts them, notionally, in the shape of a preconceived

fremdes Eigentum gegenüberstehn, die Notwendigkeit der Kontrolle über deren sachgemäße Verwendung.²¹

²¹ Ein englisches Philisterblatt, der „Spectator“ vom 26. Mai 1866, berichtet, daß nach Einführung einer Art von Kompagniegeschäft zwischen Kapitalist und Arbeitern in der „wire-work company of Manchester“: „das erste Ergebnis eine plötzliche Abnahme der Materialverschwendung war, da die Arbeiter nicht einsehen, weshalb sie mit ihrem Eigentum verschwenderischer umgehen sollten als mit dem der Kapitalisten, und Materialverschwendung ist neben schlechten Außenständen vielleicht die größte Verlustquelle in den Fabriken“. Das selbe Blatt entdeckt als Grundmangel der Rochdale co-operative experiments: „They showed that associations of workmen could manage shops, mills, and almost all forms of industry with success, and they immensely improved the condition of the men, but then they did not leave a clear place for masters.“ („Sie bewiesen, daß Arbeiterassoziationen Boutiquen, Fabriken und beinahe alle Formen der Industrie mit Erfolg handhaben können, und sie verbesserten außerordentlich die Lage der Leute selbst, aber! aber, dann ließen sie keinen sichtbaren Platz für Kapitalisten offen.“ Quelle horreur!)

Die Kooperation der Lohnarbeiter ist ferner bloße Wirkung des Kapitals, das sie gleichzeitig anwendet. Der Zusammenhang ihrer Funktionen und ihre Einheit als produktiver Gesamtkörper liegen außer ihnen, im Kapital, das sie zusammenbringt und zusammenhält. Der Zusammenhang ihrer Arbeiten tritt ihnen daher ideell als Plan, praktisch als Autorität des Kapitalisten gegenüber, als Macht eines fremden Willens, der ihr Tun seinem Zweck unterwirft.

plan of the capitalist, and practically in the shape of the authority of the same capitalist, in the shape of the powerful will of another, who subjects their activity to his aims.

↑ This is the most profound critique of the capitalist's leadership: it does not organically flow from the labor process itself but is imposed by an alien structure. ↓ The next paragraph juxtaposes form and content of this despotism:

450:1/o While the direction by the capitalist is therefore in substance two-fold—by reason of the two-fold nature of the process of production itself, which, on the one hand, is a social process for producing use-values, on the other, a process for creating surplus-value—the direction by the capitalist is, in form, despotic.

↑ 477:1 in chapter Fourteen talks about the dialectics between anarchy of the market and despotism in the production process.

↓ At this point, Marx briefly touches on the developmental forms of this despotism with the development of large-scale capitalist co-operation.

As co-operation extends its scale, this despotism takes its own peculiar forms. Just as at first the capitalist is relieved from actual labor so soon as his capital has reached that minimum amount with which capitalist production, as such, begins, so now, he hands over the work of direct and constant supervision of the individual workmen, and groups of workmen, to a special kind of wage-laborer. An industrial army of workmen, under the command of a capitalist, requires, like a real army, officers (managers), and sergeants (foremen, overlookers), who, while the work is being done, command in the name of the capitalist. The work of supervision becomes their established and exclusive function.

351:1/o Wenn daher die kapitalistische Leitung dem Inhalt nach zwieschlächtig ist, wegen der Zwieschlächtigkeit des zu leitenden Produktionsprozesses selbst, welcher einerseits gesellschaftlicher Arbeitsprozeß zur Herstellung eines Produkts, andererseits Verwertungsprozeß des Kapitals, so ist sie der Form nach despotisch.

Mit der Entwicklung der Kooperation auf größerem Maßstab entwickelt dieser Despotismus seine eigentümlichen Formen. Wie der Kapitalist zunächst entbunden wird von der Handarbeit, sobald sein Kapital jene Minimalgröße erreicht hat, womit die eigentlich kapitalistische Produktion erst beginnt, so tritt er jetzt die Funktion unmittelbarer und fortwährender Beaufsichtigung der einzelnen Arbeiter und Arbeitergruppen selbst wieder ab an eine besondere Sorte von Lohnarbeitern. Wie eine Armee militärischer, bedarf eine unter dem Kommando desselben Kapitals zusammenwirkende Arbeitermasse industrieller Oberoffiziere (Dirigenten, managers) und Unteroffiziere (Arbeitsaufseher, foremen, overlookers, contre-mâtres), die während des Arbeitsprozesses im Namen des Kapitals kommandieren. Die Arbeit der Oberaufsicht befestigt sich zu ihrer ausschließlichen Funktion.

Next, Marx discusses the connection between the two sides of this supervision, namely,

1) coming from the co-operative nature of the labor process itself, and 2) coming from exploitation.

When comparing the mode of production of isolated peasants and artisans with production by slave-labor, the political economist counts this labor of superintendence among the *faux frais* of production.^{21a} But, when considering the capitalist mode of production, he, on the contrary, treats the work of control made necessary by the co-operative character of the labor-process as identical with the different work of control, necessitated by the capitalist character of that process and the antagonism of interests between capitalist and laborer.²²

↑ In slavery, the political economists considered it only as *faux frais* of production (only point 2), while in capitalism, all supervision is attributed to the co-operative character of the labor process (only point 1). Side 1) falls to the capitalist because he has from the beginning side 2).

^{21a} Professor Cairnes, after stating that the superintendence of labor is a leading feature of production by slaves in the Southern States of North America, continues: "The peasant proprietor (of the North), appropriating the whole produce of his toil, needs no other stimulus to exertion. Superintendence is here completely dispensed with." (Cairnes, l.c., pp. 48, 49.)

It is not because he is a leader of industry that a man is a capitalist; on the contrary, he is a leader of industry because he is a capitalist. The leadership of industry is an attribute of capital, just as in feudal times the functions of general and judge were attributes of landed property.^{22a}

²² Sir James Steuart, a writer altogether remarkable for his quick eye for the characteristic social distinctions between different modes of production, says: "Why do large undertakings in the manufacturing way ruin private industry, but by coming nearer to the simplicity of slaves?"

Bei Vergleichung der Produktionsweise unabhängiger Bauern oder selbständiger Handwerker mit der auf Sklaverei beruhenden Plantagenwirtschaft zählt der politische Ökonom diese Arbeit der Oberaufsicht zu den *faux frais* de production.^{21a} Bei Betrachtung der kapitalistischen Produktionsweise identifiziert er dagegen die Funktion der Leitung, soweit sie aus der Natur des gemeinschaftlichen Arbeitsprozesses entspringt, mit derselben Funktion, soweit sie durch den kapitalistischen und daher antagonistischen Charakter dieses Prozesses bedingt wird.²²

^{21a} Nachdem Professor Cairnes die „superintendence of labour“ als einen Hauptcharakter der Sklavenproduktion in den südlichen Staaten von Nordamerika dargestellt hat, fährt er fort: „Da der bäuerliche Eigentümer“ (des Nordens) „das ganze Produkt seines Bodens für sich behält, braucht er keine besonderen Ansporn zur Anstrengung. Überwachung wird hier völlig unnötig.“ (Cairnes, l.c. p. 48, 49.)

Der Kapitalist ist nicht Kapitalist, weil er industrieller Leiter ist, sondern er wird industrieller Befehlshaber, weil er Kapitalist ist. Der Oberbefehl in der Industrie wird Attribut des Kapitals, wie zur Feudalzeit der Oberbefehl in Krieg und Gericht Attribut des Grundeigentums war.^{22a}

²² Sir James Steuart, überhaupt ausgezeichnet durch offenes Auge für die charakteristisch-gesellschaftlichen Unterschiede verschiedener Produktionsweisen, bemerkt: „Warum vernichten große Manufakturunternehmen das Hausgewerbe, wenn nicht dadurch, daß sie der Einfach-

(“Prin. of Pol. Econ.,” London, 1767, v. I., pp. 167, 168.)

^{22a} Auguste Comte and his school might therefore have shown that feudal lords are an eternal necessity in the same way that they have done in the case of the lords of capital.

heit der Sklavenarbeit näher kommen?“ („Princ. of Pol. Econ.“, London 1767, v. I, p. 167, 168.)

^{22a} Auguste Comte und seine Schule hätten daher in derselben Art die ewige Notwendigkeit von Feudalherren beweisen können, wie sie dies für die Kapitalherren getan.

13.3.c. [The Social Productive Powers of Labor Belong to Capital]

The central relation of capitalism is the sale and consumption of labor-power, which creates surplus-value. This relation is modified by co-operation as well. The laborer always sells his or her labor as an individual seller. Since the capitalist is the one who combines the laborers, the social productive forces of the co-operation of many laborers are the productive forces of capital.

451:1 The laborer is the owner of his labor-power until he has done bargaining for its sale with the capitalist; and he can sell no more than what he has, i.e., his individual, isolated labor-power. This state of things is in no way altered by the fact that the capitalist, instead of buying the labor-power of one man, buys that of 100, and enters into separate contracts with 100 unconnected men instead of with one. He is at liberty to set the 100 men to work, without letting them co-operate. He pays them the value of 100 independent labor-powers, but he does not pay for the combined labor-power of the hundred. Being independent of each other, the laborers are isolated persons, who enter into relations with the capitalist, but not with one another. This co-operation begins only with the labor-process, but they have then ceased to belong to themselves. On entering that process, they become incorporated with capital. As co-operators, as members of a working organism, they are but special modes of existence of capital.

↑ This is a form of alienation. ↓ The social productive powers of labor are productive power of capital which it seems to possess *by nature*.

352:1/o Eigentümer seiner Arbeitskraft ist der Arbeiter, solange er als Verkäufer derselben mit dem Kapitalist marketet, und er kann nur verkaufen, was er besitzt, seine individuelle, vereinzelte Arbeitskraft. Dies Verhältnis wird in keiner Weise dadurch verändert, daß der Kapitalist 100 Arbeitskräfte statt einer kauft oder mit 100 voneinander unabhängigen Arbeitern Kontrakte schließt statt mit einem einzelnen. Er kann die 100 Arbeiter anwenden, ohne sie kooperieren zu lassen. Der Kapitalist zahlt daher den Wert der 100 selbständigen Arbeitskräfte, aber er zahlt nicht die kombinierte Arbeitskraft der Hundert. Als unabhängige Personen sind die Arbeiter Vereinzelte, die in ein Verhältnis zu demselben Kapital, aber nicht zueinander treten. Ihre Kooperation beginnt erst im Arbeitsprozeß, aber im Arbeitsprozeß haben sie bereits aufgehört, sich selbst zu gehören. Mit dem Eintritt in denselben sind sie dem Kapital einverleibt. Als Kooperierende, als Glieder eines werktätigen Organismus, sind sie selbst nur eine besondere Existenzweise des Kapitals.

Hence, the productive power which the laborer develops when working in co-operation, is the productive power of capital. This social productive power of labor develops itself without cost to capital, whenever the workmen are placed under the appropriate conditions, and it is capital that places them under such conditions. Because this power costs capital nothing, and because, on the other hand, the laborer himself does not develop it before his labor belongs to capital, it appears as a power with which capital is endowed by nature, as capital's inherent productive power.

Die Produktivkraft, die der Arbeiter als gesellschaftlicher Arbeiter entwickelt, ist daher Produktivkraft des Kapitals. Die gesellschaftliche Produktivkraft der Arbeit entwickelt sich unentgeltlich, sobald die Arbeiter unter bestimmte Bedingungen gestellt sind, und das Kapital stellt sie unter diese Bedingungen. Weil die gesellschaftliche Produktivkraft der Arbeit dem Kapital nichts kostet, weil sie andererseits nicht von dem Arbeiter entwickelt wird, bevor seine Arbeit selbst dem Kapital gehört, erscheint sie als Produktivkraft, die das Kapital von Natur besitzt, als seine immanente Produktivkraft.

The sentence “the social productive power of labor ... appears ... as capital's inherent productive power” illustrates well how the word “appears as” is to be understood. The laborers are combined under the ownership and command of capital, therefore the benefits of the social productive powers of the workers fall to the capitalist. The workers do not have a claim on these productive powers because they have, one by one, sold their labor-power to capital. The word “appears” not only describes what things look like, but it also describes the social relations—which are such as if the productive powers came from capital rather than the workers.

Question 803 *What is the “productive power of capital”? Does it come from capital or from the worker?*

This paragraph is parallel to the earlier 447:1: Capital profits from the difference between individual labor and co-operative labor. In modern economics, the benefits from the co-operative labor process are called “economies of scale.” This terminology makes it sound as if these benefits came from capital, not from labor.

Question 804 *What effects does co-operation have on the working class?*

Question 805 *Is the subject of chapter Thirteen, on Co-operation, simply the economies of scale, without Marx ever using this term, or is something else going on?*

13.4. [Historical Overview of Simple Co-Operation]

The historical overview in the rest of the chapter culminates in a characterization of the historical role of capitalism. The first two paragraphs discuss the role of co-operation in the different relations of production.

451:2/op The colossal effects of simple co-operation are to be seen in the gigantic structures of the ancient Asiatics, Egyptians, Etruscans, etc.

“It has happened in times past that these Oriental States, after supplying the expenses of their civil and military establishments, have found themselves in possession of a surplus which they could apply to works of magnificence or utility and in the construction of these their command over the hands and arms of almost the entire non-agricultural population has produced stupendous monuments which still indicate their power. The teeming valley of the Nile . . . produced food for a swarming non-agricultural population, and this food, belonging to the monarch and the priesthood, afforded the means of erecting the mighty monuments which filled the land . . . In moving the colossal statues and vast masses of which the transport creates wonder, human labor almost alone, was prodigally used . . . The number of the laborers and the concentration of their efforts sufficed. We see mighty coral reefs rising from the depths of the ocean into islands and firm land, yet each individual depositor is puny, weak, and contemptible. The non-agricultural laborers of an Asiatic monarchy have little but their individual bodily exertions to bring to the task, but their number is their strength, and the power of directing these masses gave rise to the palaces and temples, the pyramids, and the armies of gigantic statues of which the remains astonish and perplex us. It is that confinement of the revenues which feed them, to one or a few hands, which makes such undertakings possible.”²³

²³ R. Jones, “Textbook of Lectures,” etc., pp. 77, 78. The ancient Assyrian, Egyptian, and other collections in London, and in other European capitals, make us eye-witnesses of the modes of carrying on that co-operative labor.

The examples of the Egyptian pyramids, etc., show two things. (1) The power of simple co-operation (not machinery or division of labor) as long as sufficiently many people are

353:1–2 Kolossal zeigt sich die Wirkung der einfachen Kooperation in den Riesenwerken der alten Asiaten, Ägypter, Etrusker usw.

„Es geschah in vergangnen Zeiten, daß diese asiatischen Staaten nach Bestreitung ihrer Zivil- und Militärausgaben sich im Besitz eines Überschusses von Lebensmitteln befanden, die sie für Werke der Pracht und des Nutzens verausgaben konnten. Ihr Kommando über die Hände und Arme fast der ganzen nicht ackerbauenden Bevölkerung und die ausschließliche Verfügung des Monarchen und der Priesterschaft über jenen Überschuß boten ihnen die Mittel zur Errichtung jener mächtigen Monumente, womit sie das Land erfüllten . . . In der Bewegung der kolossalen Statuen und der enormen Massen, deren Transport Staunen erregt, wurde fast nur menschliche Arbeit verschwenderisch angewandt. Die Zahl der Arbeiter und die Konzentration ihrer Mühen genügte. So sehn wir mächtige Korallenriffe aus den Tiefen des Ozeans zu Inseln anschwellen und festes Land bilden, obgleich jeder individuelle Ablagerer (depository) winzig, schwach und verächtlich ist. Die nicht ackerbauenden Arbeiter einer asiatischen Monarchie haben außer ihren individuellen körperlichen Bemühungen wenig zum Werk zu bringen, aber ihre Zahl ist ihre Kraft, und die Macht der Direktion über diese Massen gab jenen Riesenwerken den Ursprung. Es war die Konzentration der Revenuen, wovon die Arbeiter leben, in einer Hand oder wenigen Händen, welcher solche Unternehmungen möglich machte.“²³

²³ R. Jones, „Text-book of Lectures etc.“, p. 77, 78. Die altassyrischen, ägyptischen usw. Sammlungen in London und andren europäischen Hauptstädten machen uns zu Augenzeugen jener kooperativen Arbeitsprozesse.

combined in this labor process. (2) The social prerequisite for this co-operation was the combination of the revenues of the laborers in one or few hands.

452:0p This power of Asiatic and Egyptian kings, Etruscan theocrats, etc., has in modern society been transferred to the capitalist, whether he be an isolated, or as in joint-stock companies, a collective capitalist.

↑ The combination of the revenues of the laborers in one or few hands is still a condition for today’s co-operation: the revenues are combined in the hands of the capitalists.

The next paragraph points out some important *differences* between these early forms of co-operation and capitalistic co-operation: Those were based on common ownership of production, this on private ownership. Those were based on the fact that the individual had not yet torn himself off from the navel-string of the tribe or community; this is based on individualization. Those based on relation of domination and servitude, often slavery; this on the laborer formally freely selling his labor-power.

452:1 Co-operation, such as we find it at the dawn of human development, among races who live by the chase,^{23a} or, say, in the agriculture of Indian communities, is based, on the one hand, on ownership in common of the means of production, and on the other hand, on the fact, that in those cases, each individual has no more torn himself off from the navel-string of his tribe or community, than each bee has freed itself from connexion with the hive. Such co-operation is distinguished from capitalistic co-operation by both of the above characteristics. The sporadic application of co-operation on a large scale in ancient times, in the middle ages, and in modern colonies, reposes on relations of dominion and servitude, principally on slavery. The capitalistic form, on the contrary, pre-supposes from first to last, the free wage-laborer, who sells his labor-power to capital.

^{23a} Linguet, in his “Théorie des Lois Civiles,” is probably right, when he declares hunting to be

353:3 Diese Macht asiatischer und ägyptischer Könige oder etruskischer Theokraten usw. ist in der modernen Gesellschaft auf den Kapitalisten übergegangen, ob er nun als vereinzelter Kapitalist auftritt, oder, wie bei Aktiengesellschaften, als kombinierter Kapitalist.

353:4/o Die Kooperation im Arbeitsprozeß, wie wir sie in den Kulturanfängen der Menschheit, bei Jägervölkern^{23a} oder etwa in der Agrikultur indischer Gemeinwesen vorherrschend finden, beruht einerseits auf dem Gemeineigentum an den Produktionsbedingungen, andererseits darauf, daß das einzelne Individuum sich von der Nabelschnur des Stammes oder des Gemeinwesens noch ebensowenig losgerissen hat wie das Bienenindividuum vom Bienenstock. Beides unterscheidet sie von der kapitalistischen Kooperation. Die sporadische Anwendung der Kooperation auf großem Maßstab in der antiken Welt, dem Mittelalter und den modernen Kolonien beruht auf unmittelbaren Herrschafts- und Knechtschaftsverhältnissen, zumeist auf der Sklaverei. Die kapitalistische Form setzt dagegen von vornherein den freien Lohnarbeiter voraus, der seine Arbeitskraft dem Kapital verkauft.

^{23a} Linguet in seiner „Théorie des Lois civiles“ hat vielleicht nicht unrecht, wenn er die Jagd

the first form of co-operation, and man-hunting (war) one of the earliest forms of hunting.

↓ For this historical overview it is also important to note that capitalist co-operation is not the culmination of a historical succession of large scale co-operation. Rather, capitalism arose from a mode of production with little direct co-operation between different producers: Historically, however, this form is developed in opposition to peasant agriculture and to the carrying on of independent handicrafts whether in guilds or not.²⁴ From the standpoint of these, capitalist co-operation does not appear as a particular historical form of co-operation, but co-operation itself as a historical form peculiar to, and specifically distinguishing, the capitalist process of production.

²⁴ Peasant agriculture on a small scale, and the carrying on of independent handicrafts, which together form the basis of the feudal mode of production, and after the dissolution of that system, continue side by side with the capitalist mode, also form the economic foundation of the classical communities at their best, after the primitive form of ownership of land in common had disappeared, and before slavery had seized on production in earnest.

The next paragraph places capitalist co-operation in historical perspective. Compare also 775:1/o in the accumulation chapter.

The highest pre-capitalistic mode of production was the so-called petty production (Kleinbetrieb). This mode of production, in which the *individualized* productive forces find their ultimate development, is the necessary condition for the development of the free individuality of the producers themselves 927:2. The relation of production which fits best to this mode of production is the private ownership of the means of production by the producers themselves. Such private ownership does not allow for direct co-operation of several producers in the same labor process (exception military). This does not mean that petty production is not co-operative. Any social production is co-operative in some form. In petty production this co-operation does not have the form that the producers work side by side together in the same labor process, but the social production process is divided into many individual labor processes in which only one person produces one kind of commodity.

In earlier economic formations, the social production process was directly co-operative. However this co-operation was either based on communal property and societies in which the

für die erste Form der Kooperation und Menschenjagd (Krieg) für eine der ersten Formen der Jagd erklärt.

Historisch jedoch entwickelt sie sich im Gegensatz zur Bauernwirtschaft und zum unabhängigen Handwerksbetrieb, ob dieser zünftige Form besitze oder nicht.²⁴ Ihnen gegenüber erscheint die kapitalistische Kooperation nicht als eine besondere historische Form der Kooperation, sondern die Kooperation selbst als eine dem kapitalistischen Produktionsprozeß eigentümliche und ihn spezifisch unterscheidende historische Form.

²⁴ Die kleine Bauernwirtschaft und der unabhängige Handwerksbetrieb, die beide teils die Basis der feudalen Produktionsweise bilden, teils nach deren Auflösung neben dem kapitalistischen Betrieb erscheinen, bilden zugleich die ökonomische Grundlage der klassischen Gemeinwesen zu ihrer besten Zeit, nachdem sich das ursprünglich orientalische Gemeineigentum aufgelöst und bevor sich die Sklaverei der Produktion ernsthaft bemächtigt hat.

individual has not yet freed himself of the navelstring of the community, or direct domination and subordination (slavery etc.). The relations of production and also the mode of production had been inferior to petty production.

What is new about the co-operation under capitalism as opposed to those early forms of co-operation is that for the first time producers co-operate whose individuality is freely developed and who are not in a direct relationship of subordination. Although the capitalists give the labor process this co-operative form only in order to be able to exploit it better, they fulfill at the same time the historical task of developing the co-operative labor process.

Question 806 What distinguishes capitalist co-operation from earlier forms of co-operation?

453:1 Just as the social productive power of labor that is developed by co-operation, appears to be the productive power of capital, so co-operation itself, contrasted with the process of production carried on by isolated independent laborers, or even by small employers, appears to be a specific form of the capitalist process of production. It is the first change experienced by the actual labor-process, when subjected to capital. This change takes place spontaneously. The simultaneous employment of a large number of wage-laborers, in one and the same process, which is a necessary condition of this change, also forms the starting-point of capitalist production. This point coincides with the birth of capital itself. If then, on the one hand, the capitalist mode of production presents itself to us historically, as a necessary condition to the transformation of the labor-process into a social process, so, on the other hand, this social form of the labor-process presents itself, as a method employed by capital for the more profitable exploitation of labor, by increasing that labor's productiveness.

A clearer formulation of this last sentence can be found in the French edition, where it forms a paragraph of its own: "We see that the capitalistic mode of production presents itself as a historic necessity to transform the isolated labor into social labor; however, in the hands of capital, this socialization of labor augments the productive forces of labor only in order to exploit it with more profit." Note that the means and the end are interchanged in a

354:1 Wie die durch die Kooperation entwickelte gesellschaftliche Produktivkraft der Arbeit als Produktivkraft des Kapitals erscheint, so die Kooperation selbst als eine spezifische Form des kapitalistischen Produktionsprozesses im Gegensatz zum Produktionsprozeß einzelner unabhängiger Arbeiter oder auch Kleinmeister. Es ist die erste Änderung, welche der wirkliche Arbeitsprozeß durch seine Subsumtion unter das Kapital erfährt. Diese Änderung geht naturwüchsig vor sich. Ihre Voraussetzung, gleichzeitige Beschäftigung einer größeren Anzahl von Lohnarbeitern in demselben Arbeitsprozeß, bildet den Ausgangspunkt der kapitalistischen Produktion. Dieser fällt mit dem Dasein des Kapitals selbst zusammen. Wenn sich die kapitalistische Produktionsweise daher einerseits als historische Notwendigkeit für die Verwandlung des Arbeitsprozesses in einen gesellschaftlichen Prozeß darstellt, so andererseits diese gesellschaftliche Form des Arbeitsprozesses als eine vom Kapital angewandte Methode, um ihn durch Steigerung seiner Produktivkraft profitlicher auszubeuten.

cunning-of-reason-like fashion: While capitalism uses the co-operative production process for its own ends, in order to increase its profits, to better exploit labor, history uses capitalism as a means to achieve a co-operative production process.

453:2/o In the elementary form, under which we have hitherto viewed it, co-operation is a necessary concomitant of all production on a large scale, but it does not, in itself, represent a fixed form characteristic of a particular epoch in the development of the capitalist mode of production. At the most it appears to do so, and that only approximately, in the handicraft-like beginnings of manufacture,²⁵ and in that kind of agriculture on a large scale, which corresponds to the epoch of manufacture, and is distinguished from peasant agriculture, mainly by the number of the laborers simultaneously employed, and by the mass of the means of production concentrated for their use. Simple co-operation is always the prevailing form, in those branches of production in which capital operates on a large scale, and division of labor and machinery play but a subordinate part.

354:2/o In ihrer bisher betrachteten einfachen Gestalt fällt die Kooperation zusammen mit der Produktion auf größerer Stufenleiter, bildet aber keine feste charakteristische Form einer besondern Entwicklungs-epoche der kapitalistischen Produktionsweise. Höchstens erscheint sie annähernd so in den noch handwerksmäßigen Anfängen der Manufaktur²⁵ und in jener Art großer Agrikultur, welche der Manufakturperiode entspricht und sich wesentlich nur durch die Masse der gleichzeitig angewandten Arbeiter und den Umfang der konzentrierten Produktionsmittel von der Bauernwirtschaft unterscheidet. Die einfache Kooperation ist stets noch vorherrschende Form solcher Produktionszweige, worin das Kapital auf großer Stufeneiter operiert, ohne daß Teilung der Arbeit oder Maschinerie eine bedeutende Rolle spielte.

Misprint in the German edition:
"jeder Art großer Agrikultur"

should read "jener." French: en ce genre, English: in that kind. Also

Volksausgabe has "jener."

²⁵ "Whether the united skill, industry, and emulation of many together on the same work be not the way to advance it? And whether it had been otherwise possible for England, to have carried on her Woollen Manufacture to so great a perfection?" (Berkeley. "The Querist." London, 1751, p. 56, par. 521.)

454:1 Co-operation ever constitutes the fundamental form of the capitalist mode of production. Nevertheless the elementary form of co-operation continues to subsist as a particular form side by side with the more developed forms of co-operation.

↑ This last sentence of the chapter is somewhat ambiguous in German and has given

rise to incorrect translations in English. The French version is clearer and unambiguous: "Co-operation is the *fundamental mode* of capitalist production. The rudimentary form of co-operation, while containing the germ for more complex forms, not only reappears in these more complex forms as one of their elements, but maintains itself also beside them as a particular mode."

↑ These last two paragraphs are connected with the beginning of the next chapter.

²⁵ „Ist nicht die Vereinigung von Geschicklichkeit, Fleiß und Wetteifer vieler zusammen am selben Werk der Weg, es vorwärts zu bringen? Und wäre es sonst England möglich gewesen, seine Wollmanufaktur zu einem solchen Grad der Vollendung zu bringen?“ (Berkeley, „The Querist“, Lond. 1750, p. 56, § 521.)

355:1 Die Kooperation bleibt die Grundform der kapitalistischen Produktionsweise, obgleich ihre einfache Gestalt selbst als besondere Form neben ihren weiterentwickelten Formen erscheint.

14. Division of Labor and Manufacture

While the English word “manufacture” refers to any site of mass production, the German “*Manufaktur*” denotes a very specific kind of mass production which does not use heavy machinery but which achieves efficiency by division of labor and specialization of the operatives. Chapter Fourteen explains the origin of this kind of production, why it was the characteristic form of capitalistic production for over 200 years, but why it then gave way to a different form of the production process (production using machines, discussed in chapter Fifteen).

14.1. Two-Fold Origin of Manufacture

↓ The first paragraph is an introduction to the whole chapter, not just to section 14.1.

455:1 The co-operation based on division of labor assumes its typical form in manufacture, and is the prevalent characteristic form of the capitalist process of production throughout the manufacturing period properly so called. That period, roughly speaking, extends from the middle of the 16th to the last third of the 18th century.

↑ The first sentence says that division of labor is a form of co-operation. Marx does not say explicitly enough here that it is the *first* form of co-operation (other than simple co-operation) that naturally develops after the capitalist has assembled many workers under one roof. The French translation of 470:2/o deviates from the German in order to say something to this effect. In other words, after the workers were combined under one roof—not in order to make division of labor possible, but simply because each capitalist needed to employ many workers in order to get enough surplus-value—the division of labor between these workers developed spontaneously.

In *Poverty of Philosophy*, chapter 2, Sect. 2 [mecw6]178–190, Marx refutes Proudhon’s thesis that division of labor simply came out of the idea of “dividing the labor,” and argues that it must be explained by the relations of production.

356:1 Die auf Teilung der Arbeit beruhende Kooperation schafft sich ihre klassische Gestalt in der Manufaktur. Als charakteristische Form des kapitalistischen Produktionsprozesses herrscht sie vor während der eigentlichen Manufakturperiode, die, roh angeschlagen, von Mitte des 16. Jahrhunderts bis zum letzten Drittel des achtzehnten währt.

↓ The next brief paragraph repeats the claim already indicated in the title of this section, that the division of labor in the manufactures has a twofold origin:

455:2 Manufacture takes its rise in two ways:

356:2 Die Manufaktur entspringt auf doppelte Weise.

The next two paragraphs describe these two development paths one by one. One will see that they follow a simple logic: either previously independent labor processes are combined, or a given labor process is split up.

455:3/o (1.) By the assemblage, in one workshop under the control of a single capitalist, of laborers belonging to various independent handicrafts, but through whose hands a given article must pass on its way to completion. A carriage, for example, was formerly the product of the labor of a great number of independent artificers, such as wheelwrights, harness-makers, tailors, locksmiths, upholsterers, turners, fringe-makers, glaziers, painters, polishers, gilders, etc. In the manufacture of carriages, however, all these different artificers are assembled in one building where they work into one another’s hands. It is true that a carriage cannot be gilt before it has been made. But if a number of carriages are being made simultaneously, some may be in the hands of the gilders while others are going through an earlier process.

356:3/o Entweder werden Arbeiter von verschiedenartigen, selbständigen Handwerken, durch deren Hände ein Produkt bis zu seiner letzten Reife laufen muß, in eine Werkstatt unter dem Kommando desselben Kapitalisten vereinigt. Z.B. eine Kutsche war das Gesamtprodukt der Arbeiten einer großen Anzahl unabhängiger Handwerker, wie Stellmacher, Sattler, Schneider, Schlosser, Gürtler, Drechsler, Posamentierer, Glaser, Maler, Lackierer, Vergolder usw. Die Kutschenmanufaktur vereinigt alle diese verschiedenen Handwerker in ein Arbeitshaus, wo sie einander gleichzeitig in die Hand arbeiten. Man kann eine Kutsche zwar nicht vergolden, bevor sie gemacht ist. Werden aber viele Kutschen gleichzeitig gemacht, so kann ein Teil beständig vergoldet werden, während ein anderer Teil eine frühere Phase des Produktionsprozesses durchläuft.

↓ Now the changes which this production arrangement induces in the producers (negation):

So far, we are still in the domain of simple co-operation, which finds its materials ready to hand in the shape of men and things. But very soon an important change takes place. The tailor, the locksmith, and the other artificers, being now exclusively occupied in carriage-making, each gradually loses, through want of practice, the ability to carry on, to its full extent, his old handicraft. But, on the other hand, his activity now confined in one groove, assumes the form best adapted to the narrowed sphere of action.

Soweit stehn wir noch auf dem Boden der einfachen Kooperation, die ihr Material an Menschen und Dingen vorfindet. Indes tritt sehr bald eine wesentliche Veränderung ein. Der Schneider, Schlosser, Gürtler usw., der nur im Kutschenmachen beschäftigt ist, verliert nach und nach mit der Gewohnheit auch die Fähigkeit, sein altes Handwerk in seiner ganzen Ausdehnung zu betreiben. Andererseits erhält sein vereinseitigtes Tun jetzt die zweckmäßigste Form für die verengte Wirkungssphäre.

⇓ From combination of many different crafts to the division of one process (negation of negation):

At first, carriage manufacture is a combination of various independent handicrafts. By degrees, it becomes the splitting up of carriage-making into its various detail processes, each of which crystallizes into the exclusive function of a particular workman, the manufacture, as a whole, being carried on by the men in conjunction. In the same way, cloth manufacture, as also a whole series of other manufactures, arose by combining different handicrafts together under the control of a single capitalist.²⁶

²⁶ To give a more modern instance: The silk spinning and weaving of Lyon and Nîmes “est toute patriarcale; elle emploie beaucoup de femmes et d’enfants, mais sans les épuiser ni les corrompre; elle les laisse dans leur belles valises de la Drôme, du Var, de l’Isère, de Vaucluse, pour y élever des vers et dévider leurs cocons; jamais elle n’entre dans une véritable fabrique. Pour être aussi bien observe . . . le principe de la division du travail s’y revêt d’un caractère spécial. Il y a bien des dévideuses, des moulineurs, des teinturiers, des encolleurs, puis des tisserands; mais ils ne sont pas réunis dans un même établissement, ne dépendent pas d’un même maître, tous ils sont indépendants” (A. Blanqui: “Cours, d’Econ. Industrielle.” Recueilli par A. Blaise. Paris, 1838–39, p. 79.) Since Blanqui wrote this, the various independent laborers have, to some extent, been united in factories. [And since Marx wrote the above, the power-loom has invaded these factories, and is now 1886 rapidly superseding the hand-loom. (*Added in the 4th German edition.* The Krefeld silk industry also has its tale to tell anent this subject.) F. E.]

Ursprünglich erschien die Kutschenmanufaktur als eine Kombination selbständiger Handwerke. Sie wird allmählich Teilung der Kutschenproduktion in ihre verschiedenen Sonderoperationen, wovon jede einzelne zur ausschließlichen Funktion eines Arbeiters kristallisiert und deren Gesamtheit vom Verein dieser Teilarbeiter verrichtet wird. Ebenso entstand die Tuchmanufaktur und eine ganze Reihe anderer Manufakturen aus der Kombination verschiedener Handwerke unter Kommando desselben Kapitals.²⁶

²⁶ Um ein mehr modernes Beispiel dieser Bildungsart der Manufaktur anzuführen, folgendes Zitat. Die Seidenspinnerei und Weberei von Lyon und Nîmes „ist ganz patriarchalisch; sie beschäftigt viele Frauen und Kinder, aber ohne sie zu übermüden oder zugrunde zu richten; sie läßt sie in ihren schönen Tälern der Drôme, des Var, der Isère und von Vaucluse, um dort Seidenraupen zu züchten, und ihre Kokons abzuwickeln; sie wird niemals zu einem regelrechten Fabrikbetrieb. Um trotzdem in so hohen Maße angewandt zu werden . . . nimmt hier das Prinzip der Arbeitsteilung eine besondere Eigenart an. Es gibt zwar Hasplerinnen, Seidenzwirner, Färber, Kettenschlichter, ferner Weber; aber sie sind nicht in derselben Werkstatt vereinigt, nicht von demselben Meister abhängig; alle sind sie unabhängig.“ (A. Blanqui, „Cours d’Écon. Industrielle“, Recueilli par A. Blaise, Paris 1838–1839, p. 79.) Seit Blanqui dies schrieb, sind die verschiedenen unabhängigen Arbeiter zum Teil in Fabriken vereinigt worden. {Zur 4. Aufl.—Und seit Marx obiges schrieb, hat der Kraftstuhl sich in diesen Fabriken eingebürgert und verdrängt rasch den Handwebstuhl. Die Krefelder Seidenindustrie weiß ebenfalls ein Lied davon zu singen.—F. E.}

Second development process: a given labor process is split up.

456:1/o (2.) Manufacture also arises in a way exactly the reverse of this, namely, by one capitalist employing simultaneously in one workshop a number of artificers, who all do the same, or the same kind of work, such as making paper, type, or needles. This is co-operation in its most elementary form. Each of these artificers (with the help, perhaps, of one or two apprentices), makes the entire commodity, and he consequently performs in succession all the operations necessary for its production. He still works in his old handicraft-like way.

⇓ Again the changes from the original state (negation):

But very soon external circumstances cause a different use to be made of the concentration of the workmen on one spot, and of the simultaneousness of their work. An increased quantity of the article has perhaps to be delivered within a given time. The work is therefore re-distributed. Instead of each man being allowed to perform all the various operations in succession, these operations are changed into disconnected, isolated ones, carried on side by side; each is assigned to a different artificer, and the whole of them together are performed simultaneously by the co-operating workmen. This accidental repartition gets repeated, develops advantages of its own, and gradually ossifies into a systematic division of labor.

This, too, leads to new state which is the negation of the negation:

The commodity, from being the individual product of an independent artificer, becomes the social product of a union of artificers, each of whom performs one, and only one, of the constituent partial operations. The same operations which, in the case of a papermaker belonging to a German Guild,

357:1/o Die Manufaktur entspringt aber auch auf entgegengesetztem Wege. Es werden viele Handwerker, die dasselbe oder Gleichartiges tun, z.B. Papier oder Typen oder Nadeln machen, von demselben Kapital gleichzeitig in derselben Werkstatt beschäftigt. Es ist dies Kooperation in der einfachsten Form. Jeder dieser Handwerker (vielleicht mit einem oder zwei Gesellen) macht die ganze Ware und vollbringt also die verschiedenen, zu ihrer Herstellung erforderlichen Operationen der Reihe nach. Er arbeitet in seiner alten handwerksmäßigen Weise fort.

Indes veranlassen bald äußere Umstände, die Konzentration der Arbeiter in demselben Raum und die Gleichzeitigkeit ihrer Arbeiten anders zu vernutzen. Es soll z.B. ein größeres Quantum fertiger Ware in einer bestimmten Zeitfrist geliefert werden. Die Arbeit wird daher verteilt. Statt die verschiedenen Operationen von demselben Handwerker in einer zeitlichen Reihenfolge verrichten zu lassen, werden sie voneinander losgelöst, isoliert, räumlich nebeneinander gestellt, jede derselben einem andren Handwerker zugewiesen und alle zusammen von den Kooperierenden gleichzeitig ausgeführt. Diese zufällige Verteilung wiederholt sich, zeigt ihre eigentümlichen Vorteile und verknöchert nach und nach zur systematischen Teilung der Arbeit.

Aus dem individuellen Produkt eines selbständigen Handwerkers, der vielerlei tut, verwandelt sich die Ware in das gesellschaftliche Produkt eines Vereins von Handwerkern, von denen jeder fortwährend nur eine und dieselbe Teiloperation verrichtet. Dieselben Operationen, die ineinander flos-

merged one into the other as the successive acts of one artificer, became in the Dutch paper manufacture so many partial operations carried on side by side by numerous co-operating laborers. The needlemaker of the Nuremberg Guild was the cornerstone on which the English needle manufacture was raised. But while in Nuremberg that single artificer performed a series of perhaps 20 operations one after another, in England it was not long before there were 20 needle-makers side by side, each performing one alone of those 20 operations, and in consequence of further experience, each of those 20 operations was again split up, isolated, and made the exclusive function of a separate workman.

↓ The summary points out the inner connection between these two development paths:

457:1 The mode in which manufacture arises, its growth out of handicrafts, is therefore two-fold. On the one hand, it arises from the union of various independent handicrafts, which become stripped of their independence and specialized to such an extent as to be reduced to mere supplementary partial processes in the production of one particular commodity. On the other hand, it arises from the co-operation of artificers of one handicraft; it splits up that particular handicraft into its various detail operations, isolating, and making these operations independent of one another up to the point where each becomes the exclusive function of a particular laborer. On the one hand, therefore, manufacture either introduces division of labor into a process of production, or further develops that division; on the other hand, it unites together handicrafts that were formerly separate. But whatever may have been its particular starting-point, its final form is the same—a productive mechanism

sen als sukzessive Verrichtungen des deutschen zünftigen Papiermachers, verselbstständigten sich in der holländischen Papiermanufaktur zu nebeneinander laufenden Teiloperationen vieler kooperierenden Arbeiter. Der zünftige Nadler von Nürnberg bildet das Grundelement der englischen Nadelmanufaktur. Während aber jener eine Nadler eine Reihe von vielleicht 20 Operationen nacheinander durchlief, verrichteten hier bald 20 Nadler nebeneinander, jeder nur eine der 20 Operationen, die infolge von Erfahrungen noch viel weiter gespalten, isoliert und zu ausschließlichen Funktionen einzelner Arbeiter verselbstständigt wurden.

358:1 Die Ursprungsweise der Manufaktur, ihre Herausbildung aus dem Handwerk ist also zwieschlächtig. Einerseits geht sie von der Kombination verschiedenartiger, selbständiger Handwerke aus, die bis zu dem Punkt verunselbstständigt und vereinsseitigt werden, wo sie nur noch einander ergänzende Teiloperationen im Produktionsprozeß einer und derselben Ware bilden. Andererseits geht sie von der Kooperation gleichartiger Handwerker aus, zersetzt dasselbe individuelle Handwerk in seine verschiedenen besondern Operationen und isoliert und verselbstständigt diese bis zu dem Punkt, wo jede derselben zur ausschließlichen Funktion eines besondern Arbeiters wird. Einerseits führt daher die Manufaktur Teilung der Arbeit in einen Produktionsprozeß ein oder entwickelt sie weiter, andererseits kombiniert sie früher geschiedene Handwerke. Welches aber immer ihr besondrer Ausgangspunkt, ihre Schlußgestalt ist dieselbe—ein Produktionsmechanismus,

whose parts are human beings.

↑ The result of both development paths is the same: human beings are incorporated into a “mechanism of production” consisting of people. This composite production organism will be discussed in 468:1/o.

Question 808 *By which two different routes can division of labor develop? Does the character of the production process depend on which development route was taken?*

Interestingly, a similar twofoldness can be found in the development of the division of labor in society (4th section, 471:2/o).

Question 809 *What is the role of the capitalist in the development of the division of labor, and to what extent is this development driven by the inner dialectic of a co-operative labor-process?*

So far, Marx has introduced the development of the division of labor as an example of the general dialectic between dependence and independence: division of labor either arises from making independent labor processes dependent, or making dependent labor processes independent. ↓ Marx concludes this section with a paragraph which points to some particularities of this process which will later lead to its negation. Certain characteristics of the labor-process are excluded from development right now:

457:2/o For a proper understanding of the division of labor in manufacture, it is essential that the following points be firmly grasped.

↓ Division of labor decomposes the production process into smaller component parts. But each of these parts still must be carried out in a handicraft manner.

First, the analysis of a production process into its distinct phases coincides, here, strictly with the decomposition of a handicraft into its successive manual operations. Whether composite or simple, each operation has to be done by hand, retains the character of a handicraft, and is therefore dependent on the strength, skill, quickness, and sureness, of the individual workman in handling his tools. The handicraft continues to be the basis.

↓ This prevents a “truly scientific” analysis (i.e., a decomposition into its real components). As elsewhere in this volume, Marx uses here epistemological categories for actual (ontological) social processes:

This narrow technical basis precludes a truly scientific analysis of any definite process of

dessen Organe Menschen sind.

358:2/o Zum richtigen Verständnis der Teilung der Arbeit in der Manufaktur ist es wesentlich, folgende Punkte festzuhalten:

Zunächst fällt die Analyse des Produktionsprozesses in seine besondern Phasen hier ganz und gar zusammen mit der Zersetzung einer handwerksmäßigen Tätigkeit in ihre verschiedenen Teiloperationen. Zusammengesetzt oder einfach, die Verrichtung bleibt handwerksmäßig und daher abhängig von Kraft, Geschick, Schnelle, Sicherheit des Einzelarbeiters in Handhabung seines Instruments. Das Handwerk bleibt die Basis.

Diese enge technische Basis schließt wirklich wissenschaftliche Analyse des Pro-

industrial production, since it is still a condition that each detail process gone through by the product must be capable of being done by hand and of forming, in its way, a separate handicraft. It is just because handicraft skill continues, in this way, to be the foundation of the process of production, that each workman becomes exclusively assigned to a partial function, and that for the rest of his life, his labor-power is turned into the organ of this detail function.

↓ Some of the advantages of this division of labor are advantages of co-operation in general, not specific to this kind of co-operation.

Secondly, this division of labor is a particular sort of co-operation, and many of its advantages spring from the general character of co-operation, and not from this particular form of it.

Translation error in the original Moore-Aveling translation of the last sentence, as reproduced in the MEGA edition 293:1: what should

be “advantages” was translated as “disadvantages.” The German says “advantages” (*Vorteile*) not only in the fourth edition but also in the

first edition, MEGA 274:2/o, and the second edition, MEGA 334:1/o. Also the French edition 290:3 says “advantages.”

14.2. The Specialized Worker and His Tools

After discussing the origins of manufacture, Marx looks at its simple elements.

↓ The first “element” Marx looks at is the individual worker. The mechanized labor process changes the worker; the worker develops great specialized skills by doing one and the same limited task over and over again. Greater productivity goes therefore at the expense of a balanced development of the worker.

458:1 If we now go more into detail, it is, in the first place, clear that a laborer who all his life performs one and the same simple operation, converts his whole body into the automatic, specialised implement of that operation. Consequently, he takes less time in doing it, than the artificer who performs a whole series of operations in succession. But the collective laborer, who constitutes the living mechanism of man-

duktionsprozesses aus, da jeder Teilprozeß, den das Produkt durchmacht, als handwerksmäßige Teilarbeit ausführbar sein muß. Eben weil das handwerksmäßige Geschick so die Grundlage des Produktionsprozesses bleibt, wird jeder Arbeiter ausschließlich einer Teilfunktion angeeignet und seine Arbeitskraft in das lebenslängliche Organ dieser Teilfunktion verwandelt.

Endlich ist diese Teilung der Arbeit eine besondere Art der Kooperation, und manche ihrer Vorteile entspringen aus dem allgemeinen Wesen, nicht aus dieser besondern Form der Kooperation.

359:1 Gehn wir nun näher auf das einzelne ein, so ist zunächst klar, daß ein Arbeiter, der lebenslang eine und dieselbe einfache Operation verrichtet, seinen ganzen Körper in ihr automatisch einseitiges Organ verwandelt und daher weniger Zeit dazu verbraucht als der Handwerker, der eine ganze Reihe von Operationen abwechselnd ausführt. Der kombinierte Gesamtarbeiter, der den lebendigen Mechanismus der

ufacture, is made up solely of such specialised detail laborers. Hence, in comparison with the independent handicraft, more is produced in a given time, or the productive power of labor is increased.²⁷

²⁷ The more any manufacture of much variety shall be distributed and assigned to different artists, the same must needs be better done and with greater expedition, with less loss of time and labor.” (“The Advantages of the East India Trade,” Lond., 1720, p. 71.)

↓ This simplification and speedup of the individual processes also leads to their perfection (negation of negation):

Moreover, when once this fractional work is established as the exclusive function of one person, the methods it employs become perfected. The workman’s continued repetition of the same simple act, and the concentration of his attention on it, teach him by experience how to attain the desired effect with the minimum of exertion. But since at any given time there are always several generations of laborers living together, and working together at the manufacture of the same article, the technical skill, the tricks of the trade thus acquired, become established, and are accumulated and handed down.²⁸

²⁸ “Easy labor is transmitted skill.” (Th. Hodgskin, “Popular Political Economy,” p. 48.)

↑ The theme that workers harbor skills and pass these skills from one to the next also appears several times in this volume, for instance in 722:1–723:0.

The extreme division of labor which one finds in the manufacturing establishments corresponds to and expands the efforts in earlier societies to fix the division of labor (caste and guild system). Both spring from the same “natural law.” Marx also sees analogies to the particularization of plants and animals into species and subspecies.

458:2/oo Manufacture, in fact, produces the skill of the detail laborer, by reproducing, and systematically driving to an extreme within the workshop, the naturally

Manufaktur bildet, besteht aber aus lauter solchen einseitigen Teilarbeitern. Im Vergleich zum selbständigen Handwerk wird daher mehr in weniger Zeit produziert oder die Produktivkraft der Arbeiter gesteigert.²⁷

²⁷ „Je mehr eine Arbeit von großer Mannigfaltigkeit gegliedert und verschiedenen Teilarbeitern zugewiesen wird, um so mehr muß sie notwendigerweise besser und schneller ausgeführt werden, mit weniger Verlust an Zeit und Arbeit.“ („The Advantages of the East India Trade“, Lond. 1720, p. 71.)

Auch vervollkommnet sich die Methode der Teilarbeit, nachdem sie zur ausschließlichen Funktion einer Person verselbständigt ist. Die stete Wiederholung desselben beschränkten Tuns und die Konzentration der Aufmerksamkeit auf dieses Beschränkte lehren erfahrungsmäßig den bezweckten Nutzeffekt mit geringstem Kraftaufwand erreichen. Da aber immer verschiedene Arbeitergenerationen gleichzeitig zusammenleben und in denselben Manufakturen zusammenwirken, befestigen, häufen und übertragen sich bald die so gewonnenen technischen Kunstgriffe.²⁸

²⁸ „Leicht von der Hand gehende Arbeit ist überlieferte Geschicklichkeit.“ (Th. Hodgskin, Popular Political Economy, p. 48.)

359:2–360:1 Die Manufaktur produziert in der Tat die Virtuosität des Detailarbeiters, indem sie die naturwüchsige Sonderung der Gewerbe, die sie in der Gesellschaft vor-

developed differentiation of trades which it found ready to hand in society at large. On the other hand, the conversion of fractional work into the life-calling of one man, corresponds to the tendency shown by earlier societies, to make trades hereditary; either to petrify them into castes, or whenever definite historical conditions beget in the individual a tendency to vary in a manner incompatible with the nature of castes, to ossify them into guilds. Castes and guilds arise from the action of the same natural law, that regulates the differentiation of plants and animals into species and varieties, except that, when a certain degree of development has been reached, the heredity of castes and the exclusiveness of guilds are ordained as a law of society.²⁹

↓ Already Diodor argued for social restrictions to preventing people from doing too many different things (and he apparently also thought that popular assemblies are a waste of time):

²⁹ "The arts also have ... in Egypt reached the requisite degree of perfection. For it is the only country where artificers may not in any way meddle with the affairs of another class of citizens, but must follow that calling alone which by law is hereditary in their clan ... In other countries it is found that tradesmen divide their attention between too many objects. At one time they try agriculture, at another they take to commerce, at another they busy themselves with two or three occupations at once. In free countries, they mostly frequent the assemblies of the people ... In Egypt, on the contrary, every artificer is severely punished if he meddles with affairs of State, or carries on several trades at once. Thus there is nothing to disturb their application to their calling ... Moreover, since they inherit from their forefathers numerous rules, they are eager to discover fresh advantages" (Diodorus Siculus: *Bibl. Hist. I. I. c. 74.*)

fand, im Innern der Werkstatt reproduziert und systematisch zu Extrem treibt. Andererseits entspricht ihre Verwandlung der Teilarbeit in den Lebensberuf eines Menschen dem Trieb früherer Gesellschaften, die Gewerbe erblich zu machen, sie in Kasten zu versteinern oder in Zünfte zu verknöchern, falls bestimmte historische Bedingungen dem Kastenwesen widersprechende Variabilität des Individuums erzeugen. Kasten und Zünfte entspringen aus demselben Naturgesetz, welches die Sonderung von Pflanzen und Tieren in Arten und Unterarten regelt, nur daß auf einem gewissen Entwicklungsgrad die Erblichkeit der Kasten oder die Ausschließlichkeit der Zünfte als gesellschaftliches Gesetz dekretiert wird.²⁹

²⁹ „Auch die Künste sind ... in Ägypten zu dem gehörigen Grad von Vollkommenheit gediehen. Denn in diesem Lande allein dürfen die Handwerker durchaus nicht in die Geschäfte einer andren Bürgerklasse eingreifen, sondern bloß den nach dem Gesetz ihrem Stamme erblich zugehörigen Beruf treiben ... Bei andren Völkern findet man, daß die Gewerbsleute ihre Aufmerksamkeit auf zu viele Gegenstände verteilen ... Bald versuchen sie es mit dem Landbau, bald lassen sie sich in Handelsgeschäfte ein, bald befassen sie sich mit zwei oder drei Künsten zugleich. In Freistaaten laufen sie meist in die Volksversammlungen ... In Ägypten dagegen verfällt jeder Handwerker in schwere Strafen, wenn er sich in Staatsgeschäfte mischt oder mehrere Künste zugleich treibt. So kann nichts ihren Berufsfleiß stören ... Zudem wie sie von ihren Vorfahren viele Regeln haben, sind sie eifrig darauf bedacht, noch neue Vorteile aufzufinden.“ (Diodorus Siculus: „Historische Bibliothek“, I. I, c. 74.)

So far the footnote. The main text gives a striking example of the importance of skills,

which allow extraordinary products even with the most primitive tools:

“The muslins of Dakka in fineness, the calicoes and other piece goods of Coromandel in brilliant and durable colours, have never been surpassed. Yet they are produced without capital, machinery, division of labor, or any of those means which give such facilities to the manufacturing interest of Europe. The weaver is merely a detached individual, working a web when ordered of a customer, and with a loom of the rudest construction, consisting sometimes of a few branches or bars of wood, put roughly together. There is even no expedient for rolling up the warp; the loom must therefore be kept stretched to its full length, and becomes so inconveniently large, that it cannot be contained within the hut of the manufacturer, who is therefore compelled to ply his trade in the open air, where it is interrupted by every vicissitude of the weather.”³⁰

³⁰ “Historical and descriptive account of Brit. India, etc.,” by Hugh Murray and James Wilson, etc., Edinburgh 1832, v. II., p. 449. The Indian loom is upright, i.e., the warp is stretched vertically.

↓ However the Hindu’s specialization is nothing compared with that of the manufacturing laborer:

It is only the special skill accumulated from generation to generation, and transmitted from father to son, that gives to the Hindu, as it does to the spider, this proficiency. And yet the work of such a Hindu weaver is very complicated, compared with that of a manufacturing laborer.

↓ Productivity increases due to increased continuity of the labor process (fewer “gaps”) may either come from greater intensity or from less unproductive consumption of labor-power. But in any case, this monotoneity destroys the vital spirits (Lebensgeister).

460:1 An artificer, who performs one after another the various fractional operations in the production of a finished article, must

„Die Musline von Dakka sind an Feinheit, die Kattune und andre Zeuge von Koromandel an Pracht und Dauerhaftigkeit der Farben niemals übertroffen worden. Und dennoch werden sie produziert ohne Kapital, Maschinerie, Teilung der Arbeit oder irgendeins der andren Mittel, die der Fabrikation in Europa so viele Vorteile bieten. Der Weber ist ein einzeltes Individuum, der das Gewebe auf Bestellung eines Kunden verfertigt und mit einem Webstuhl von der einfachsten Konstruktion, manchmal nur bestehend aus hölzernen, roh zusammengefüigten Stangen. Er besitzt nicht einmal einen Apparat zum Aufziehn der Kette, der Webstuhl muß daher in seiner ganzen Länge ausgestreckt bleiben und wird so unförmlich und weit, daß er keinen Raum findet in der Hütte des Produzenten, der seine Arbeit daher in freier Luft verrichten muß, wo sie durch jede Wetteränderung unterbrochen wird.“³⁰

³⁰ „Historical and descriptive Account of Brit. India etc.“ By Hugh Murray, James Wilson etc., Edinburgh 1832, v. II, p. 449, 450. Der indische Webstuhl ist hochschäftig, d.h., die Kette ist vertikal aufgespannt.

360:2 Es ist nur das von Generation auf Generation gehäufte und von Vater auf Sohn vererbte Sondergeschick, das dem Hindu wie der Spinne diese Virtuosität verleiht. Und dennoch verrichtet ein solcher indischer Weber sehr komplizierte Arbeit, verglichen mit der Mehrzahl der Manufaktur-arbeiter.

360:3/o Ein Handwerker, der die verschiedenen Teilprozesse in der Produktion eines Machwerks nacheinander ausführt,

at one time change his place, at another his tools. The transition from one operation to another interrupts the flow of his labor, and creates, so to say, gaps in his working-day. These gaps close up so soon as he is tied to one and the same operation all day long; they vanish in proportion as the changes in his work diminish. The resulting increased productive power is owing either to an increased expenditure of labor-power in a given time, i.e., to increased intensity of labor, or to a decrease in the amount of labor-power unproductively consumed. The extra expenditure of power, demanded by every transition from rest to motion, is made up for by prolonging the duration of the normal velocity when once acquired. On the other hand, constant labor of one uniform kind disturbs the intensity and flow of a man's animal spirits, which find recreation and delight in mere change of activity.

Question 810 *If someone does the same thing all the time: is this greater efficiency or greater intensity?*

↑ This concludes the discussion of the worker. ↓ Now Marx looks at the tools.

460:2/o The productiveness of labor depends not only on the proficiency of the workman, but on the perfection of his tools. Tools of the same kind, such as knives, drills, gimlets, hammers, etc., may be employed in different processes; and the same tool may serve various purposes in a single process. But so soon as the different operations of a labor-process are disconnected the one from the other, and each fractional operation acquires in the hands of the detail laborer a suitable and peculiar form, alterations become necessary in the implements that previously served more than one pur-

muß bald den Platz, bald die Instrumente wechseln. Der Übergang von einer Operation zur andren unterbricht den Fluß seiner Arbeit und bildet gewissermaßen Poren in seinem Arbeitstag. Diese Poren verdichten sich, sobald er den ganzen Tag eine und dieselbe Operation kontinuierlich verrichtet, oder sie verschwinden in dem Maße, sie der Wechsel seiner Operation abnimmt. Die gesteigerte Produktivität ist hier entweder der zunehmenden Ausgabe von Arbeitskraft in einem gegebenen Zeitraum geschuldet, also wachsender Intensität der Arbeit oder einer Abnahme des unproduktiven Verzehrs von Arbeitskraft. Der Überschuß von Kraftaufwand nämlich, den jeder Übergang aus der Ruhe in die Bewegung erheischt, kompensiert sich bei längerer Fortdauer der einmal erreichten Normalgeschwindigkeit. Andererseits zerstört die Kontinuität gleichförmiger Arbeit die Spann- und Schwungkraft der Lebensgeister, die im Wechsel der Tätigkeit selbst ihre Erholung und ihren Reiz finden.

361:1/o Die Produktivität der Arbeit hängt nicht nur von der Virtuosität des Arbeiters ab, sondern auch von der Vollkommenheit seiner Werkzeuge. Werkzeuge derselben Art, wie Schneide-, Bohr-, Stoß-, Schlaginstrumente usw., werden in verschiedenen Arbeitsprozessen gebraucht, und in demselben Arbeitsprozeß dient dasselbe Instrument zu verschiedenen Verrichtungen. Sobald jedoch die verschiedenen Operationen eines Arbeitsprozesses voneinander losgelöst sind und jede Teiloperation in der Hand des Teilarbeiters eine möglichst entsprechende und daher ausschließliche Form gewinnt, wer-

pose. The direction taken by this change is determined by the difficulties experienced in consequence of the unchanged form of the implement.

Tools which were previously used for several different purposes are now only used for one purpose. This changes their shape: they are improved and simplified, and also multiplied:

Manufacture is characterised by the differentiation of the instruments of labor, a differentiation whereby implements of a given sort acquire fixed shapes, adapted to each particular application, and by the specialisation of those instruments, giving to each special implement its full play only in the hands of a specific detail laborer. In Birmingham alone 500 varieties of hammers are produced, and not only is each adapted to one particular process, but several varieties often serve exclusively for the different operations in one and the same process. The manufacturing period simplifies, improves, and multiplies the implements of labor, by adapting them to the exclusively special functions of each detail laborer.³¹

Comparison with Darwinian selection:

³¹ Darwin in his epoch-making work on the origin of species, remarks, with reference to the natural organs of plants and animals: "So long as one and the same organ has different kinds of work to perform, a ground for its changeability may possibly be found in this, that natural selection preserves or suppresses each small variation of form less carefully than if that organ were destined for one special purpose alone. Thus, knives that are adapted to cut all sorts of things, may, on the whole, be of one shape; but an implement destined to be used exclusively in one way must have a different shape for every different use."

den Veränderungen der vorher zu verschiedenen Zwecken dienenden Werkzeuge notwendig. Die Richtung ihres Formwechsels ergibt sich aus der Erfahrung der besondern Schwierigkeiten, welche die unveränderte Form in den Weg legt.

Die Differenzierung der Arbeitsinstrumente, wodurch Instrumente derselben Art besondere feste Formen für jede besondere Nutzanwendung erhalten, und ihre Spezialisierung, wodurch jedes solches Sonderinstrument nur in der Hand spezifischer Teilarbeiter in seinem ganzen Umfang wirkt, charakterisieren die Manufaktur. Zu Birmingham allein produziert man etwa 500 Varietäten von Hämmern, wovon jeder nicht nur für einen besondern Produktionsprozeß, sondern eine Anzahl Varietäten oft nur für verschiedene Operationen in demselben Prozeß dient. Die Manufakturperiode vereinfacht, verbessert und vermehrfacht die Arbeitswerkzeuge durch deren Anpassung an die ausschließlichen Sonderfunktionen der Teilarbeiter.³¹

³¹ Darwin bemerkt in seinem epochemachenden Werk „Über die Entstehung der Arten“ mit Bezug auf die natürlichen Organe der Pflanzen und Tiere: „Solange ein und dasselbe Organ verschiedene Arbeiten zu verrichten hat, läßt sich ein Grund für seine Veränderlichkeit vielleicht darin finden, daß natürliche Züchtung jede kleine Abweichung der Form weniger sorgfältig erhält oder unterdrückt, als wenn dasselbe Organ nur zu einem besondern Zwecke allein bestimmt wäre. So mögen Messer, welche allerlei Dinge zu schneiden bestimmt sind, im ganzen so ziemlich von einerlei Form sein, während ein nur zu einerlei Gebrauch bestimmtes Werkzeug für jeden andren Gebrauch

↓ This creates the material preconditions of machinery:
 It thus creates at the same time one of the material conditions for the existence of machinery, which consists of a combination of simple instruments.

↓ Transition to next section:
 461:1 The detail laborer and his implements are the simplest elements of manufacture. Let us now turn to its aspect as a whole.

auch eine andre Form haben muß.“
 Sie schafft damit zugleich eine der materiellen Bedingungen der Maschinerie, die aus einer Kombination einfacher Instrumente besteht.

362:1 Der Detailarbeiter und sein Instrument bilden die einfachen Elemente der Manufaktur. Wenden wir uns jetzt zu ihrer Gesamtgestalt.

14.3. The Two Basic Forms of Manufacture—Heterogeneous and Organic

After having discussed the elements of manufacture Marx looks now at manufacture as a whole, as a totality of interconnected elements.

14.3.a. [Two Forms of Manufacture]

Manufacture has two basic forms, according to the nature of the product: either the same object goes through many stages, or the final object is an assembly of many different parts.

461:2 The organisation of manufacture has two fundamental forms which, in spite of occasional blending, are essentially different in kind, and, moreover, play very distinct parts in the subsequent transformation of manufacture into modern industry carried on by machinery. This double character arises from the nature of the article produced. This article either results from the mere mechanical fitting together of partial products made independently, or owes its completed shape to a series of connected processes and manipulations.

Marx calls the first form heterogeneous manufacture and the second organic manufacture. Marx discusses heterogeneous manufacturing first. He begins with some examples:

461:3/oo A locomotive, for instance, consists of more than 5,000 independent parts.

362:2 Die Gliederung der Manufaktur besitzt zwei Grundformen, die trotz gelegentlicher Verschlingung zwei wesentlich verschiedene Arten bilden und namentlich auch bei der spätern Verwandlung der Manufaktur in die maschinenartig betriebne, große Industrie eine ganz verschiedene Rolle spielen. Dieser Doppelcharakter entspringt aus der Natur des Machwerks selbst. Es wird entweder gebildet durch bloß mechanische Zusammensetzung selbständiger Teilprodukte oder verdankt seine fertige Gestalt einer Reihenfolge zusammenhängender Prozesse und Manipulationen.

362:3/oo Eine Lokomotive z.B. besteht aus mehr als 5000 selbständigen Teilen. Sie

It cannot, however, serve as an example of the first kind of genuine manufacture, for it is a structure produced by modern mechanical industry.

The example of a locomotive shows that this classification of division of labor is not limited to the manufacturing period proper. Second example: watch.

But a watch can; and William Petty used it to illustrate the division of labor in manufacture. Formerly the individual work of a Nuremberg artificer, the watch has been transformed into the social product of an immense number of detail laborers, such as mainspring makers, dial makers, spiral spring makers, jewelled hole makers, ruby lever makers, hand makers, case makers, screw makers, gilders, with numerous subdivisions, such as wheel makers (brass and steel separate), pin makers, movement makers, acheveur de pignon (fixes the wheels on the axles, polishes the facets, etc.), pivot makers, planteur de finissage (puts the wheels and springs in the works), finisseur de barillet (cuts teeth in the wheels, makes the holes of the right size, etc.), escapement makers, cylinder makers for cylinder escapements, escapement wheel makers, balance wheel makers, raquette makers (apparatus for regulating the watch), the planteur d'échappement (escapement maker proper); then the repasseur de barillet (finishes the box for the spring, etc.), steel polishers, wheel polishers, screw polishers, figure painters, dial enamellers (melt the enamel on the copper), fabricant de pendants (makes the ring by which the case is hung), finisseur de charnière (puts the brass hinge in the cover, etc.), faiseur de secret (puts in the springs that open the case), graveur, ciseleur, polisseur de boite, etc., etc., and last of all the repasseur, who fits together the whole watch and hands it over

kann jedoch nicht als Beispiel der ersten Art der eigentlichen Manufaktur gelten, weil sie ein Gebilde der großen Industrie ist.

Wohl aber die Uhr, an welcher auch William Petty die manufakturmäßige Teilung der Arbeit veranschaulicht. Aus dem individuellen Werk eines Nürnberger Handwerkers verwandelte sich die Uhr in das gesellschaftliche Produkt einer Unzahl von Teilarbeitern, wie Rohwerkmacher, Uhrfedermacher, Zifferblattmacher, Spiralfedermacher, Steinloch- und Rubinhebelmacher, Zeigermacher, Gehäusemacher, Schraubenmacher, Vergolder, mit vielen Unterabteilungen, wie z.B. Räderfabrikant (Messing- und Stahlräder wieder geschieden), Triebmacher, Zeigerwerkmacher, acheveur de pignon (befestigt die Räder auf den Trieben, poliert die facettes usw.), Zapfenmacher, planteur de finissage (setzt verschiedene Räder und Triebe in das Werk), finisseur de barillet (läßt Zähne einschneiden, macht die Löcher zur richtigen Weite, härtet Stellung und Gesperr), Hemmungmacher, bei der Zylinderhemmung wieder Zylindermacher, Steigradmacher, Unruhemacher, Requettemacher (das Rückwerk, woran die Uhr reguliert wird), planteur d'échappement (eigentliche Hemmungmacher); dann der repasseur de barillet (macht Federhaus und Stellung ganz fertig), Stahlpolierer, Räderpolierer, Schraubenpolierer, Zahlenmaler, Blattmacher (schmilzt das Email auf das Kupfer), fabricant de pendants (macht bloß die Bügel des Gehäuses), finisseur de charnière (steckt den Messingstift in die Mitte des Gehäuses etc.), faiseur de secret (macht die Federn im Gehäuse, die den Deckel aufspringen ma-

in a going state.

After this impressive catalog Marx stresses that vertically, this division of labor is very shallow: the workers co-operate directly only on few places. Therefore there is not much advantage in combining them in the same building. Many parts still produced off-site.

Only a few parts of the watch pass through several hands; and all these membra disjecta come together for the first time in the hand that binds them into one mechanical whole. This external relation between the finished product, and its various and diverse elements makes it, as well in this case as in the case of all similar finished articles, a matter of chance whether the detail laborers are brought together in one workshop or not. The detail operations may further be carried on like so many independent handicrafts, as they are in the Cantons of Vaud and Neuchâtel; while in Geneva there exist large watch manufactories where the detail laborers directly co-operate under the control of a single capitalist. And even in the latter case the dial, the springs, and the case, are seldom made in the factory itself. To carry on the trade as a manufacture, with concentration of workmen, is, in the watch trade, profitable only under exceptional conditions, because competition is greater between the laborers who desire to work at home, and because the splitting up of the work into a number of heterogeneous processes, permits but little use of the instruments of labor in common, and the capitalist, by scattering the work, saves the outlay on workshops, etc.³² Nevertheless the position of this detail laborer who, though he works at home, does so for a capitalist (manufacturer, *établisseur*), is very different from that of the independent artificer, who works

chen), graveur, ciseleur, polisseur de boîte usw., usw., endlich der repasseur, der die ganze Uhr zusammensetzt und sie gehend abliefern.

Nur wenige Teile der Uhr laufen durch verschiedene Hände, und alle diese membra disjecta sammeln sich erst in der Hand, die sie schließlich in ein mechanisches Ganzes verbindet. Dies äußerliche Verhältnis des fertigen Produkts zu seinen verschiedenartigen Elementen läßt hier, wie bei ähnlichem Machwerk, die Kombination der Teilarbeiter in derselben Werkstatt zufällig. Die Teilarbeiten können selbst wieder als voneinander unabhängige Handwerke betrieben werden, wie im Kanton Waadt und Neuchâtel, während in Genf z.B. große Uhrenmanufakturen bestehn, d.h. unmittelbare Kooperation der Teilarbeiter unter dem Kommando eines Kapitals stattfindet. Auch im letzteren Fall werden Zifferblatt, Feder und Gehäuse selten in der Manufaktur selbst verfertigt. Der kombinierte manufakturmäßige Betrieb ist hier nur unter ausnahmsweisen Verhältnissen profitlich, weil die Konkurrenz unter den Arbeitern, die zu Hause arbeiten wollen, am größten ist, die Zersplitterung der Produktion in eine Masse heterogener Prozesse wenig Verwendung gemeinschaftlicher Arbeitsmittel erlaubt und der Kapitalist bei der zerstreuten Fabrikation die Auslage für Arbeitsgebäude usw. erspart.³² Indes ist auch die Stellung dieser Detailarbeiter, die zu Hause, aber für einen Kapitalisten (Fabrikant, *établisseur*) arbeiten, ganz und gar verschieden von der des selbständigen Handwerkers, welcher für seine eignen Kunden arbeitet.³³

for his own customers.³³

³² In the year 1854 Geneva produced 80,000 watches, which is not one-fifth of the production in the Canton of Neuchâtel. La Chaux-de-Fonds alone, which we may look upon as a huge watch manufactory, produces yearly twice as many as Geneva. From 1850–61 Geneva produced 720,000 watches. See "Report from Geneva on the Watch Trade" in "Reports by H. M.'s Secretaries of Embassy and Legation on the Manufactures, Commerce, etc., No. 6, 1863." The want of connexion alone, between the processes into which the production of articles that merely consist of parts fitted together is split up, makes it very difficult to convert such a manufacture into a branch of modern industry carried on by machinery; but in the case of a watch there are two other impediments in addition, the minuteness and delicacy of its parts, and its character as an article of luxury. Hence their variety, which is such, that in the best London houses scarcely a dozen watches are made alike in the course of a year. The watch manufactory of Messrs. Vacheron & Constantin, in which machinery has been employed with success, produces at the most three or four different varieties of size and form.

³³ In watchmaking, that classical example of heterogeneous manufacture, we may study with great accuracy the above-mentioned differentiation and specialisation of the instruments of labor caused by the subdivision of handicrafts.

Needle manufacturing is an example for the second form of manufacturing.

463:1 The second kind of manufacture, its perfected form, produces articles that go through connected phases of development, through a series of processes step by step, like the wire in the manufacture of needles, which passes through the hands of 72 and sometimes even 92 different detail workmen.

³² Genf hat im Jahr 1854 80 000 Uhren produziert, noch nicht ein Fünftel der Uhrenproduktion des Kantons Neuchâtel. Chaux-de-Fonds, das man als eine einzige Uhrenmanufaktur betrachten kann, liefert allein jährlich doppelt soviel als Genf. Von 1850–1861 lieferte Genf 720 000 Uhren. Siehe „Report from Geneva on the Watch Trade“ in „Reports by H.M.'s Secretaries of Embassy and Legation on the Manufactures, Commerce etc.“, Nr. 6, 1863. Wenn die Zusammenhangslosigkeit der Prozesse, worin die Produktion nur zusammengesetzter Machwerke zerfällt, an und für sich die Verwandlung solcher Manufakturen in den Maschinenbetrieb der großen Industrie sehr erschwert, kommen bei der Uhr noch zwei andre Hindernisse hinzu, die Kleinheit und Delikatesse ihrer Elemente und ihr Luxuscharakter, daher ihre Varietät, so daß z.B. in den besten Londoner Häusern das ganze Jahr hindurch kaum ein Dutzend Uhren gemacht werden, die sich ähnlich sehn. Die Uhrenfabrik von Vacheron & Constantin, die mit Erfolg Maschinerie anwendet, liefert auch höchstens 3–4 verschiedene Varietäten von Größe und Form.

³³ In der Uhrmacherei, diesem klassischen Beispiel der heterogenen Manufaktur, kann man sehr genau die oben erwähnte aus der Zersetzung der handwerksmäßigen Tätigkeit entspringende Differenzierung und Spezialisierung der Arbeitsinstrumente studieren.

364:1 Die zweite Art der Manufaktur, ihre vollendete Form, produziert Machwerke, die zusammenhängende Entwicklungsphasen, eine Reihenfolge von Stufenprozessen durchlaufen, wie z.B. der Draht in der Nähadelmanufaktur die Hände von 72 und selbst 92 spezifischen Teilarbeitern durchläuft.

14.3.b. [The Basic Contradiction of Manufacture]

Manufacture has a contradictory character: on the one hand it combines many different labor processes, but on the other hand it isolates and ossifies (*verselbständigt*) each phase of production since it must be done by a different worker. This creates an immanent limitation of manufacture, the need to establish the connection between the isolated functions:

463:2 In so far as such a manufacture, when first started, combines scattered handicrafts, it lessens the space by which the various phases of production are separated from each other. The time taken in passing from one stage to another is shortened, so is the labor that effectuates this passage.³⁴ In comparison with a handicraft, productive power is gained, and this gain is owing to the general co-operative character of manufacture.

³⁴ "In so close a cohabitation of the people, the carriage must needs be less." ("The Advantages of the East India Trade," p. 106.)

↑ Productivity is gained, ↓ but there is also a drawback:

On the other hand, division of labor, which is the distinguishing principle of manufacture, requires the isolation of the various stages of production and their independence of each other. The establishment and maintenance of a connexion between the isolated functions necessitates the incessant transport of the article from one hand to another, and from one process to another. From the standpoint of modern mechanical industry, this necessity stands forth as a characteristic and costly disadvantage, and one that is immanent in the principle of manufacture.³⁵

³⁵ "The isolation of the different stages of manufacture, consequent upon the employment of manual labor, adds immensely to the cost of production, the loss mainly arising from the mere removals from one process to another." ("The Industry of Nations." Lond., 1855, Part II, p. 200.)

364:2 Soweit solche Manufaktur ursprünglich zerstreute Handwerke kombiniert, vermindert sie die räumliche Trennung zwischen den besondern Produktionsphasen des Machwerks. Die Zeit seines Übergangs aus einem Stadium in das andre wird verkürzt, ebenso die Arbeit, welche diese Übergänge vermittelt.³⁴ Im Vergleich zum Handwerk wird so Produktivkraft gewonnen, und zwar entspringt dieser Gewinn aus dem allgemeinen kooperativen Charakter der Manufaktur.

³⁴ „Wenn die Menschen so dicht nebeneinander arbeiten, muß der Transport notwendigerweise geringer sein.“ („The Advantages of the East India Trade“, p. 106.)

Andrerseits bedingt ihr eigentümliches Prinzip der Teilung der Arbeit eine Isolierung der verschiedenen Produktionsphasen, die als ebenso viele handwerksmäßige Teilarbeiten gegeneinander verselbständigt sind. Die Herstellung und Erhaltung des Zusammenhangs zwischen den isolierten Funktionen ernötigt beständigen Transport des Machwerks aus einer Hand in die andre und aus einem Prozeß in den andren. Vom Standpunkt der großen Industrie tritt dies als eine charakteristische, kostspielige und dem Prinzip der Manufaktur immanente Beschränktheit hervor.³⁵

³⁵ „Die Vereinzelung der verschiedenen Produktionsstufen in der Manufaktur, die aus der Verwendung von Handarbeit folgt, erhöht die Produktionskosten ungeheuer, wobei der Verlust in der Hauptsache durch die bloße Beförderung von einem Arbeitsprozeß zum anderen entsteht.“

(„The Industry of Nations“, Lond. 1855, part II, p. 200.)

Question 811 Explain the costly disadvantage immanent in the principle of manufacture.

The temporal succession of the production processes also manifests itself locally as simultaneity.

463:3/o If we confine our attention to some particular lot of raw materials, of rags, for instance, in paper manufacture, or of wire in needle manufacture, we perceive that it passes in succession through a series of stages in the hands of the various detail workmen until completion. On the other hand, if we look at the workshop as a whole, we see the raw material in all the stages of its production at the same time. The collective laborer, with one set of his many hands armed with one kind of tools, draws the wire, with another set, armed with different tools, he, at the same time, straightens it, with another, he cuts it, with another, points it, and so on. The different detail processes, which were successive in time, have become simultaneous, go on side by side in space. Hence, production of a greater quantum of finished commodities in a given time.³⁶

³⁶ "It (the division of labor) produces also an economy of time by separating the work into its different branches, all of which may be carried on into execution at the same moment ... By carrying on all the different processes at once, which an individual must have executed separately, it becomes possible to produce a multitude of pins completely finished in the same time as a single pin might have been either cut or pointed." (Dugald Stewart, l.c., p. 319.)

↓ In the second half of this paragraph, Marx works out one of the main drawbacks of manufacturing: division of labor is pushed to crippling extremes.

This simultaneity, it is true, is due to the general co-operative form of the process as

364:3/o Betrachtet man ein bestimmtes Quantum Rohmaterial, z.B. von Lumpen in der Papiermanufaktur oder von Draht in der Nadelmanufaktur, so durchläuft es in den Händen der verschiednen Teilarbeiter eine zeitliche Stufenfolge von Produktionsphasen bis zu seiner Schlußgestalt. Betrachtet man dagegen die Werkstatt als einen Gesamtmechanismus, so befindet sich das Rohmaterial gleichzeitig in allen seinen Produktionsphasen auf einmal. Mit einem Teil seiner vielen instrumentbewaffneten Hände zieht der aus den Detailarbeiten kombinierte Gesamtarbeiter den Draht, während er gleichzeitig mit andren Händen und Werkzeugen ihn streckt, mit andren schneidet, spitzt etc. Aus einem zeitlichen Nacheinander sind die verschiednen Stufenprozesse in ein räumliches Nebeneinander verwandelt. Daher Lieferung von mehr fertiger Ware in demselben Zeitraum.³⁶

³⁶ „Sie“ (die Teilung der Arbeit) „verursacht auch eine Zeitersparnis, indem sie die Arbeit in ihre verschiedenen Zweige zerlegt, die alle im gleichen Augenblick ausgeführt werden können ... Durch die gleichzeitige Durchführung all der verschiedenen Arbeitsprozesse, die ein einzelner getrennt hätte ausführen müssen, wird es z.B. möglich, eine Menge Nadeln in derselben Zeit fertigzustellen, in der eine einzelne Nadel sonst nur abgeschnitten oder zugespitzt worden wäre.“ (Dugald Stewart, l.c. p. 319.)

Jene Gleichzeitigkeit entspringt zwar aus der allgemeinen kooperativen Form des Ge-

a whole; but Manufacture not only finds the conditions for co-operation ready to hand, it also, to some extent, creates them by the sub-division of handicraft labor. On the other hand, it accomplishes this social organisation of the labor-process only by riveting each laborer to a single fractional detail.

The localization of a temporal flow is in contradiction with the necessary independent existence of its individual elements as quasi-artisan labor processes. This leads to the chaining of each worker to a small detail in the labor process. ↓ But this is not the only drawback. The interrelation of the different processes also requires strict regimentation of time.

464:1/o Since the fractional product of each detail laborer is, at the same time, only a particular stage in the development of one and the same finished article, each laborer, or each group of laborers, prepares the raw material for another laborer or group. The result of the labor of the one is the starting-point for the labor of the other. The one workman therefore gives occupation directly to the other. The labor-time necessary in each partial process, for attaining the desired effect, is learnt by experience; and the mechanism of Manufacture, as a whole, is based on the assumption that a given result will be obtained in a given time. It is only on this assumption that the various supplementary labor-processes can proceed uninterruptedly, simultaneously, and side by side. It is clear that this direct dependence of the operations, and therefore of the laborers, on each other, compels each one of them to spend on his work no more than the necessary time, and thus a continuity, uniformity, regularity, order,³⁷ and even intensity of labor, of quite a different kind, is begotten than is to be found in an independent handicraft or even in simple co-operation.

↓ In a short digression Marx interjects that commodity production already imposes a

samtprozesses, aber die Manufaktur findet nicht nur die Bedingungen der Kooperation vor, sondern schafft sie teilweise erst durch die Zerlegung der handwerksmäßigen Tätigkeit. Andererseits erreicht sie diese gesellschaftliche Organisation des Arbeitsprozesses nur durch Festschmieden desselben Arbeiters an dasselbe Detail.

365:1/o Da das Teilprodukt jedes Teilarbeiters zugleich nur eine besondere Entwicklungsstufe desselben Machwerks ist, liefert ein Arbeiter dem andren oder eine Arbeitergruppe der andern ihr Rohmaterial. Das Arbeitsergebnis des einen bildet den Ausgangspunkt für die Arbeit des andren. Der eine Arbeiter beschäftigt daher hier unmittelbar den andren. Die notwendige Arbeitszeit zur Erreichung des bezweckten Nutzeffekts in jedem Teilprozeß wird erfahrungsmäßig festgestellt, und der Gesamtmechanismus der Manufaktur beruht auf der Voraussetzung, daß in gegebener Arbeitszeit ein gegebenes Resultat erzielt wird. Nur unter dieser Voraussetzung können die verschiedenen, einander ergänzenden Arbeitsprozesse ununterbrochen, gleichzeitig und räumlich nebeneinander fortgehn. Es ist klar, daß diese unmittelbare Abhängigkeit der Arbeiten und daher der Arbeiter voneinander jeden einzelnen zwingt, nur die notwendige Zeit zu seiner Funktion zu verwenden, und so eine ganz andre Kontinuität, Gleichförmigkeit, Regelmäßigkeit, Ordnung³⁷ und namentlich auch Intensität der Arbeit erzeugt wird als im unabhängigen Handwerk oder selbst der einfachen Kooperation.

discipline on the labor process: those who take longer than socially necessary will not be able to compete on the market.

In the production of commodities generally, the labor-time expended on a commodity must not exceed that which is socially necessary for its production. This takes the form of an external compulsion by competition, since, in the surface interactions, each individual producer is obliged to sell his commodity at its market-price.

An law on the level of production, namely, that production must not take more than the socially necessary labor-time, "appears" (*erscheint*) on the surface as the exterior compulsion of competition. It is not something the agents want to do, not something they see as their goal, but something that seems to be imposed on them from the outside, by market constraints. Although this looks like an exterior constraint, it is indeed the form of appearance of an internal law.

↓ The technology of manufacturing adds a second mechanism (besides market competition) which also requires the production method to be such that only the socially necessary time be used:

In Manufacture, on the contrary, the turning out of a given quantum of product in a given time is a technical law of the process of production itself.³⁸

³⁷ "The more variety of artists to every manufacture ... the greater the order and regularity of every work, the same must needs be done in less time, the labor must be less." ("The Advantages," etc., p. 68.)

³⁸ Nevertheless, the manufacturing system, in many branches of industry, attains this result but very imperfectly, because it knows not how to control with certainty the general chemical and physical conditions of the process of production.

Now the problems of coordination coming with this close interdependence:

465:1 Different operations take, however, unequal periods, and yield therefore in equal times unequal quantities of fractional products. If, therefore, the same laborer has, day after day, to perform the same operation, there must be a different number of la-

Daß auf eine Ware nur die zu ihrer Herstellung gesellschaftlich notwendige Arbeitszeit verwandt wird, erscheint bei der Warenproduktion überhaupt als äußerer Zwang der Konkurrenz, weil, oberflächlich ausgedrückt, jeder einzelne Produzent die Ware zu ihrem Marktpreis verkaufen muß.

Lieferung von gegebenem Produktenquantum in gegebener Arbeitszeit wird dagegen in der Manufaktur technisches Gesetz des Produktionsprozesses selbst.³⁸

³⁷ „Je mannigfaltiger die Spezialarbeiter in jeder Manufaktur, ... um so ordentlicher und regelmäßiger ist jede Arbeit; diese muß notwendig in weniger Zeit getan werden, und die Arbeit muß sich vermindern.“ („The Advantages etc.“, p. 68.)

³⁸ Indes erreicht der manufakturmäßige Betrieb dies Resultat in vielen Zweigen nur unvollkommen, weil er die allgemeinen chemischen und physikalischen Bedingungen des Produktionsprozesses nicht mit Sicherheit zu kontrollieren weiß.

366:1 Verschiedne Operationen bedürfen jedoch ungleicher Zeitlängen und liefern daher in gleichen Zeiträumen ungleiche Quantita von Teilprodukten. Soll also derselbe Arbeiter tagaus, tagein stets nur dieselbe Operation verrichten, so müssen für ver-

borers for each operation; for instance, in type manufacture, there are four founders and two breakers to one rubber: the founder casts 2,000 type an hour, the breaker breaks up 4,000, and the rubber polishes 8,000. Here we have again the principle of co-operation in its simplest form, the simultaneous employment of many doing the same thing; only now, this principle is the expression of an organic relation. The division of labor, as carried out in Manufacture, not only simplifies and multiplies the qualitatively different parts of the social collective laborer, but also creates a fixed mathematical relation or ratio which regulates the quantitative extent of those parts i.e., the relative number of laborers, or the relative size of the group of laborers, for each detail operation. It develops, along with the qualitative sub-division of the social labor-process, a quantitative rule and proportionality for that process.

465:2/o When once the most fitting proportion has been experimentally established for the numbers of the detail laborers in the various groups when producing on a given scale, that scale can be extended only by employing a multiple of each particular group.³⁹ There is this to boot, that the same individual can do certain kinds of work just as well on a large as on a small scale; for instance, the labor of superintendence, the carriage of the fractional product from one stage to the next, etc. The isolation of such functions, their allotment to a particular laborer, does not become advantageous till after an increase in the number of laborers employed; but this increase must affect every group proportionally.

schiedne Operationen verschiedene Verhältniszahlen von Arbeitern verwandt werden, z.B. 4 Gießer und 2 Abbrecher auf einen Frottierer in einer Typenmanufaktur, wo der Gießer stündlich 2000 Typen gießt, der Abbrecher 4000 abbricht und der Frottierer 8000 blank reibt. Hier kehrt das Prinzip der Kooperation in seiner einfachsten Form zurück, gleichzeitige Beschäftigung vieler, die Gleichartiges tun, aber jetzt als Ausdruck eines organischen Verhältnisses. Die manufakturmäßige Teilung der Arbeit vereinfacht und vermannigfaltigt also nicht nur die qualitativ unterschiedenen Organe des gesellschaftlichen Gesamtarbeiters, sondern schafft auch ein mathematisch festes Verhältnis für den quantitativen Umfang dieser Organe, d.h. für die relative Arbeiterzahl oder relative Größe der Arbeitergruppen in jeder Sonderfunktion. Sie entwickelt mit der qualitativen Gliederung die quantitative Regel und Proportionalität des gesellschaftlichen Arbeitsprozesses.

366:2/o Ist die passendste Verhältniszahl der verschiedenen Gruppen von Teilarbeitern erfahrungsmäßig festgesetzt für eine bestimmte Stufenleiter der Produktion, so kann man diese Stufenleiter nur ausdehnen, indem man ein Multipel jeder besondern Arbeitergruppe verwendet.³⁹ Es kommt hinzu, daß dasselbe Individuum gewisse Arbeiten ebensogut auf größerer als kleinerer Stafel ausführt, z.B. die Arbeit der Oberaufsicht, den Transport der Teilprodukte aus einer Produktionsphase in die andre usw. Die Verselbständigung dieser Funktionen oder ihre Zuweisung an besondere Arbeiter wird also erst vorteilhaft mit Vergrößerung der beschäftigten Arbeiterzahl, aber diese Vergrößerung muß sofort alle Gruppen proportionell ergreifen.

In this way manufacturing drives towards the increase in scale of production!

³⁹ "When (from the peculiar nature of the produce of each manufactory), the number of processes into which it is most advantageous to divide it is ascertained, as well as the number of individuals to be employed, then all other manufactories which do not employ a direct multiple of this number will produce the article at a greater cost ... Hence arises one of the causes of the great size of manufacturing establishments." (C. Babbage. "On the Economy of Machinery," 1st ed. London. 1832. Ch. xxi, pp. 172-73.)

Glass manufacturing as example for the structuring of the labor process:

466:1/o The isolated group of laborers to whom any particular detail function is assigned, is made up of homogeneous elements, and is one of the constituent parts of the total mechanism. In many manufactures, however, the group itself is an organised body of labor, the total mechanism being a repetition or multiplication of these elementary organisms. Take, for instance, the manufacture of glass bottles. It may be resolved into three essentially different stages. First, the preliminary stage, consisting of the preparation of the components of the glass, mixing the sand and lime, etc., and melting them into a fluid mass of glass.⁴⁰ Various detail laborers are employed in this first stage, as also in the final one of removing the bottles from the drying furnace, sorting and packing them, etc. In the middle, between these two stages, comes the glass melting proper, the manipulation of the fluid mass. At each mouth of the furnace, there works a group, called "the hole," consisting of one bottlemaker or finisher, one blower, one gatherer, one putter-up or whetter-off, and one taker-in. These five detail workers are so many special organs of a single working organism that acts only as a whole, and therefore can operate only by the direct

³⁹ „Wenn die Erfahrung, je nach der besondern Natur der Produkte jeder Manufaktur, sowohl die vorteilhafteste Art, die Fabrikation in Teiloperationen zu spalten, als auch die für sie nötige Arbeiterzahl kennen gelehrt hat, werden alle Etablissements, die kein exaktes Multipel dieser Zahl anwenden, mit mehr Kosten fabrizieren ... Dies ist eine der Ursachen der kolossalen Ausdehnung industrieller Etablissements.“ (Ch. Babbage, „On the Economy of Machinery“, Lond. 1832, ch. XXI, p. 172, 173.)

367:1/o Die einzelne Gruppe, eine Anzahl von Arbeitern, die dieselbe Teilfunktion verrichten, besteht aus homogenen Elementen und bildet ein besonderes Organ des Gesamtmechanismus. In verschiedenen Manufakturen jedoch ist die Gruppe selbst ein gegliederter Arbeitskörper, während der Gesamtmechanismus durch die Wiederholung oder Vervielfältigung dieser produktiven Elementarorganismen gebildet wird. Nehmen wir z.B. die Manufaktur von Glasflaschen. Sie zerfällt in drei wesentlich unterschiedne Phasen. Erstens die vorbereitende Phase, wie Bereitung der Glaskomposition, Mengung von Sand, Kalk usw. und Schmelzung dieser Komposition zu einer flüssigen Glasmasse.⁴⁰ In der ersten Phase sind verschiedene Teilarbeiter beschäftigt, ebenso in der Schlußphase, der Entfernung der Flaschen aus den Trockenöfen, ihrer Sortierung, Verpackung usw. Zwischen beiden Phasen steht in der Mitte die eigentliche Glasmacherei oder Verarbeitung der flüssigen Glasmasse. An demselben Munde eines Glasofens arbeitet eine Gruppe, die in England das „hole“ (Loch) heißt und aus einem bottle maker oder finisher, einem blower, einem gatherer, einem putter up oder whetter off und einem taker in zusammengesetzt

co-operation of the whole five. The whole body is paralysed if but one of its members be wanting. But a glass furnace has several openings (in England from 4 to 6), each of which contains an earthenware melting-pot full of molten glass, and employs a similar five-membered group of workers. The organisation of each group is based on division of labor, but the bond between the different groups is simple co-operation, which, by using in common one of the means of production, the furnace, causes it to be more economically consumed. Such a furnace, with its 4–6 groups, constitutes a glass house; and a glass manufactory comprises a number of such glass houses, together with the apparatus and workmen requisite for the preparatory and final stages.

⁴⁰ In England, the melting-furnace is distinct from the glass-furnace in which the glass is manipulated. In Belgium, one and the same furnace serves for both processes.

The technical necessities of production not only lead to the growth and internal differentiation of one operation, it can also lead to the combination of previously separate operations:

467:1 Finally, just as Manufacture arises in part from the combination of various handicrafts, so, too, it develops into a combination of various manufactures. The larger English glass manufacturers, for instance, make their own earthenware melting-pots, because, on the quality of these depends, to a great extent, the success or failure of the process. The manufacture of one of the means of production is here united with that of the product. On the other

ist. Diese fünf Teilarbeiter bilden ebenso viele Sonderorgane eines einzigen Arbeitskörpers, der nur als Einheit, also nur durch unmittelbare Kooperation der fünf wirken kann. Fehlt ein Glied des fünfteiligen Körpers, so ist er paralysiert. Derselbe Glasofen hat aber verschiedene Öffnungen, in England z.B. 4–6, deren jede einen irdenen Schmelztiegel mit flüssigem Glas birgt und wovon jede eine eigne Arbeitergruppe von derselben fünfgliedrigen Form beschäftigt. Die Gliederung jeder einzelnen Gruppe beruht hier unmittelbar auf der Teilung der Arbeit, während das Band zwischen den verschiedenen gleichartigen Gruppen einfache Kooperation ist, die eins der Produktionsmittel, hier den Glasofen, durch gemeinsamen Konsum ökonomischer verbraucht. Ein solcher Glasofen mit seinen 4–6 Gruppen bildet eine Glashütte, und eine Glasmanufaktur umfaßt eine Mehrzahl solcher Hütten, zugleich mit den Vorrichtungen und Arbeitern für die einleitenden und abschließenden Produktionsphasen.

⁴⁰ In England ist der Schmelzofen getrennt vom Glasofen, an dem das Glas verarbeitet wird, in Belgien z.B. dient derselbe Ofen zu beiden Prozessen.

368:1 Endlich kann die Manufaktur, wie sie teilweise aus der Kombination verschiedener Handwerke entspringt, sich zu einer Kombination verschiedener Manufakturen entwickeln. Die größten englischen Glashütten z.B. fabrizieren ihre irdenen Schmelztiegel selbst, weil von deren Güte das Gelingen oder Mißlingen des Produkts wesentlich abhängt. Die Manufaktur eines Produktionsmittels wird hier mit der Manufaktur des Produkts verbunden. Umgekehrt kann die

hand, the manufacture of the product may be united with other manufactures, of which that product is the raw material, or with the products of which it is itself subsequently mixed. Thus, we find the manufacture of flint glass combined with that of glass cutting and brass founding; the latter for the metal settings of various articles of glass.

↓ But this combination has its limits which cannot be overcome by manufacturing itself: The various manufactures so combined form more or less separate departments of a larger manufacture, but are at the same time independent processes, each with its own division of labor. In spite of the many advantages offered by this combination of manufactures, it never grows into a complete technical system on its own foundation. That happens only on its transformation into an industry carried on by machinery.

14.3.c. [Rebound effect of the System of Manufacture on the Laborer and his Instrument]

First paragraph shows the effects on the instruments. Manufacture leads to sporadic use of machinery.

467:2/o Early in the manufacturing period, the principle of lessening the necessary labor-time in the production of commodities,⁴¹ was accepted and formulated: and the use of machines, especially for certain simple first processes that have to be conducted on a very large scale, and with the application of great force, sprang up here and there. Thus, at an early period in paper manufacture, the tearing up of the rags was done by paper-mills; and in metal works, the pounding of the ores was effected by stamping mills.⁴² The Roman Empire had handed down the elementary form of all machinery in the water-wheel.⁴³

Manufaktur des Produkts verbunden werden mit Manufakturen, worin es selbst wieder als Rohmaterial dient oder mit deren Produkten es später zusammengesetzt wird. So findet man z.B. die Manufaktur von Flintglas kombiniert mit der Glasschleiferei und der Gelbgießerei, letztere für die metallische Einfassung mannigfacher Glasartikel.

Die verschiedenen kombinierten Manufakturen bilden dann mehr oder minder räumlich getrennte Departemente einer Gesamtmanufaktur, zugleich voneinander unabhängige Produktionsprozesse, jeder mit eigener Teilung der Arbeit. Trotz mancher Vorteile, welche die kombinierte Manufaktur bietet, gewinnt sie, auf eigener Grundlage, keine wirklich technische Einheit. Diese entsteht erst bei ihrer Verwandlung in den maschinenmäßigen Betrieb.

368:2/o Die Manufakturperiode, welche Verminderung der zur Warenproduktion notwendigen Arbeitszeit bald als bewußtes Prinzip ausspricht⁴¹, entwickelt sporadisch auch den Gebrauch von Maschinen, namentlich für gewisse einfache erste Prozesse, die massenhaft und mit großem Kraftaufwand auszuführen sind. So wird z.B. bald in der Papiermanufaktur das Zermahlen der Lumpen durch Papiermühlen und in der Metallurgie das Zerstoßen der Erze durch sogenannte Pochmühlen verrichtet.⁴² Die elementarische Form aller Maschinerie hatte das römische Kaiserreich überliefert in der Wassermühle.⁴³

⁴¹ This can be seen from W. Petty, John Bellers, Andrew Yarranton, "The Advantages of the East India Trade," and J. Vanderlint, not to mention others.

⁴² Towards the end of the 16th century, mortars and sieves were still used in France for pounding and washing ores.

⁴³ The whole history of the development of machinery can be traced in the history of the corn mill. The factory in England is still a "mill". In German technological works of the first decade of this century, the term "Mühle" is still found in use, not only for all machinery driven by the forces of Nature, but also for all manufactures where apparatus in the nature of machinery is applied.

↓ Big inventions come from the handicraft period; machinery had subordinate role. The handicraft period bequeathed to us the great inventions of the compass, of gunpowder, of type-printing, and of the automatic clock. But, on the whole, machinery played that subordinate part which Adam Smith assigns to it in comparison with division of labor.⁴⁴ The sporadic use of machinery in the 17th century was of the greatest importance, because it supplied the great mathematicians of that time with a practical basis and stimulant to the creation of the science of mechanics.

Question 812 Which great inventions were bequeathed by the handicraft period?

⁴⁴ As will be seen more in detail in the fourth book of this work, Adam Smith has not established a single new proposition relating to division of labor. What, however, characterises him as the political economist par excellence of the period of Manufacture, is the stress he lays on division of labor. The subordinate part which he assigns to machinery gave occasion in the early days of modern mechanical industry to the polemic of Lauderdale, and, at a later period, to that of Ure. A. Smith also confounds differentia-

⁴¹ Man kann dies unter andren ersehn aus W. Petty, John Bellers, Andrew Yarranton, „The Advantages of the East-India Trade“ und J. Vanderlint.

⁴² Noch gegen Ende des 16. Jahrhunderts bedient sich Frankreich der Mörser und Siebe zum Pochen und Waschen der Erze.

⁴³ Die ganze Entwicklungsgeschichte der Maschinerie läßt sich verfolgen an der Geschichte der Getreidemühlen. Die Fabrik heißt im Englischen immer noch mill. In deutschen technologischen Schriften aus den ersten Dezennien des 19. Jahrhunderts findet man noch den Ausdruck Mühle nicht nur für alle mit Naturkräften getriebene Maschinerie, sondern selbst für alle Manufakturen, die maschinenartige Apparate anwenden.

period; machinery had subordinate role.

Die Handwerksperiode vermachte die großen Erfindungen des Kompasses, des Pulvers, der Buchdruckerei und der automatischen Uhr. Im großen und ganzen jedoch spielt die Maschinerie jene Nebenrolle, die Adam Smith ihr neben der Teilung der Arbeit anweist.⁴⁴ Sehr wichtig wurde die sporadische Anwendung der Maschinerie im 17. Jahrhundert, weil sie den großen Mathematikern jener Zeit praktische Anhaltspunkte und Reizmittel zur Schöpfung der modernen Mechanik darbot.

⁴⁴ Wie man aus dem Vierten Buch dieser Schrift näher sehn wird, hat A. Smith keinen einzigen neuen Satz über die Teilung der Arbeit aufgestellt. Was ihn aber als den zusammenfassenden politischen Ökonomen der Manufakturperiode charakterisiert, ist der Akzent, den er auf die Teilung der Arbeiter legt. Die untergeordnete Rolle, die er der Maschinerie anweist, rief im Beginn der großen Industrie Lauderdale, in einer weiterentwickelten Epoche Ures Polemik hervor. A. Smith verwechselt auch die Differen-

tion of the instruments of labor, in which the detail laborers themselves took an active part, with the invention of machinery; in this latter, it is not the workmen in manufactories, but learned men, handicraftsman, and even peasants (Brindley), who play a part.

After this discussion of the tools, Marx discusses the workers next. Earlier, in 458:1, the workers were considered individually; now the combination of the detail laborers to an aggregate laborer is discussed.

468:1/o The collective laborer, formed by the combination of a number of detail laborers, is the machinery specially characteristic of the manufacturing period. The various operations that are performed in turns by the producer of a commodity, and coalesce one with another during the progress of production, lay claim to him in various ways. In one operation he must exert more strength, in another more skill, in another more attention; and the same individual does not possess all these qualities in an equal degree. After Manufacture has once separated, made independent, and isolated the various operations, the laborers are divided, classified, and grouped according to their predominating qualities. If their natural endowments are, on the one hand, the foundation on which the division of labor is built up, on the other hand, Manufacture, once introduced, develops in them new powers that are by nature fitted only for limited and special functions.

↑ The Simple commodity producer performs in turns various operations which require various skills, although one individual worker may not have all these skills to the same degree. In manufacture, these operations are separated, made independent, and isolated, and the laborers are allocated according to their prevailing skills and exclusively used for these specific functions.

↓ Therefore the aggregate laborer in manufacture is perfect, even though his individual components are one-sided:

The collective laborer now possesses, in an equal degree of excellence, all the qualities

zierung der Instrumente, wobei die Teilarbeiter der Manufaktur selbst sehr tätig waren, mit der Maschinenerfindung. Es sind nicht Manufakturarbeiter, sondern Gelehrte, Handwerker, selbst Bauern (Brindley) usw., die hier eine Rolle spielen.

369:1/o Die spezifische Maschinerie der Manufakturperiode bleibt der aus vielen Teilarbeitern kombinierte Gesamtarbeiter selbst. Die verschiedenen Operationen, die der Produzent einer Ware abwechselnd verrichtet und die sich im Ganzen seines Arbeitsprozesses verschlingen, nehmen ihn verschiedenartig in Anspruch. In der einen muß er mehr Kraft entwickeln, in der andren mehr Gewandtheit, in der dritten mehr geistige Aufmerksamkeit usw., und dasselbe Individuum besitzt diese Eigenschaften nicht in gleichem Grad. Nach der Trennung, Verselbständigung und Isolierung der verschiedenen Operationen werden die Arbeiter ihren vorwiegenden Eigenschaften gemäß geteilt, klassifiziert und gruppiert. Bilden ihre Naturbesonderheiten die Grundlage, worauf sich die Teilung der Arbeit pflöpft, so entwickelt die Manufaktur, einmal eingeführt, Arbeitskräfte, die von Natur nur zu einseitiger Sonderfunktion taugen.

Der Gesamtarbeiter besitzt jetzt alle produktiven Eigenschaften in gleich hohem

requisite for production, and expends them in the most economical manner, by exclusively employing all his organs, consisting of particular laborers, or groups of laborers, in performing their special functions.⁴⁵ The one-sidedness and the deficiencies of the detail laborer become perfections when he is a part of the collective laborer.⁴⁶ The habit of doing only one thing converts him into a never failing instrument, while his connexion with the whole mechanism compels him to work with the regularity of the parts of a machine.⁴⁷

↑ The individual workers are forced to keep up with the labor process as if they were part of a machine.

⁴⁵ “The master manufacturer, by dividing the work to be executed into different processes, each requiring different degrees of skill or of force, can purchase exactly that precise quantity of both which is necessary for each process; whereas, if the whole work were executed by one workman, that person must possess sufficient skill to perform the most difficult, and sufficient strength to execute the most laborious of the operations into which the article is divided.” (Ch. Babbage, *I.c.*, ch. xix.)

⁴⁶ For instance, abnormal development of some muscles, curvature of bones, etc.

⁴⁷ The question put by one of the Inquiry Commissioners, How the young persons are kept steadily to their work, is very correctly answered by Mr. Wm. Marshall, the general manager of a glass manufactory: “They cannot well neglect their work; when they once begin, they must go on; they are just the same as parts of a machine.” (“Children’s Empl. Comm.,” 4th Rep., 1865, p. 247.)

Since these specific functions have different complexities, the individual laborers have different degrees of education and different values, therefore there is a hierarchy. Then the

Grad der Virtuosität und verausgabte sie zugleich aufs ökonomischste, indem er alle seine Organe, individualisiert in besonderen Arbeitern oder Arbeitergruppen, ausschließlich zu ihren spezifischen Funktionen verwendet.⁴⁵ Die Einseitigkeit und selbst die Unvollkommenheit des Teilarbeiters werden zu seiner Vollkommenheit als Glied des Gesamtarbeiters.⁴⁶ Die Gewohnheit einer einseitigen Funktion verwandelt ihn in ihr naturgemäß sicher wirkendes Organ, während der Zusammenhang des Gesamtmechanismus ihn zwingt, mit der Regelmäßigkeit eines Maschinenteils zu wirken.⁴⁷

⁴⁵ „Indem man das Machwerk in mehrere verschiedene Operationen teilt, deren jede verschiedene Grade von Gewandtheit und Kraft erheischt, kann der Manufakturherr sich genau das jeder Operation entsprechende Quantum von Kraft und Gewandtheit verschaffen. Wäre dagegen das ganze Werk von einem Arbeiter zu verrichten, so müßte dasselbe Individuum genug Gewandtheit für die delikatesten und genug Kraft für die mühseligsten Operationen besitzen.“ (Ch. Babbage, *I.c.*, ch. XIX.)

⁴⁶ Z.B. einseitige Muskelentwicklung, Knochenverkrümmung usw.

⁴⁷ Sehr richtig antwortet Herr Wm. Marshall, der general manager einer Glasmanufaktur, auf die Frage des Untersuchungskommissärs, wie die Arbeitsamkeit unter den beschäftigten Jungen aufrechterhalten werde: „Sie können ihre Arbeit gar nicht vernachlässigen; haben sie erst einmal zu arbeiten begonnen, so müssen sie auch weitermachen; sie sind gradeso wie Teile einer Maschine.“ („Child. Empl. Comm., Fourth Report“, 1865, p. 247.)

different labor functions are assimilated to this hierarchy (in order to save wages, no laborer should perform functions which require different skills). Here the monotony of the labor process is revealed as the consequence of capitalism, not of mass production in general.

469:1/o Since the collective laborer has functions, both simple and complex, both high and low, his members, the individual labor-powers, require different degrees of training, and must therefore have different values. Manufacture, therefore, develops a hierarchy of labor-powers, to which there corresponds a scale of wages. If, on the one hand, the individual laborers are appropriated and annexed for life by a limited function; on the other hand, the various operations of the hierarchy are parcelled out among the laborers according to both their natural and their acquired capabilities.⁴⁸ Every process of production, however, requires certain simple manipulations, which every man is capable of doing. They too are now severed from their connexion with the more pregnant moments of activity, and ossified into exclusive functions of specially appointed laborers.

⁴⁸ Dr. Ure, in his apotheosis of Modern Mechanical Industry, brings out the peculiar character of manufacture more sharply than previous economists, who had not his polemical interest in the matter, and more sharply even than his contemporaries Babbage, e.g., who, though much his superior as a mathematician and mechanician, treated mechanical industry from the standpoint of manufacture alone. Ure says, “This appropriation . . . to each, a workman of appropriate value and cost was naturally assigned, forms the very essence of division of labor.” On the other hand, he describes this division as “adaptation of labor to the different talents of men,” and lastly, characterises the whole manufacturing system as “a system for the division or gradation of labor,” as “the division of labor into degrees of skill,” etc.

370:1 Da die verschiedenen Funktionen des Gesamtarbeiters einfacher oder zusammengesetzter, niedriger oder höher, erheischen seine Organe, die individuellen Arbeitskräfte, sehr verschiedene Grade der Ausbildung und besitzen daher sehr verschiedene Werte. Die Manufaktur entwickelt also eine Hierarchie der Arbeitskräfte, der eine Stufenleiter der Arbeitslöhne entspricht. Wird einerseits der individuelle Arbeiter einer einseitigen Funktion angeeignet und lebenslang annexiert, so werden ebensosehr die verschiedenen Arbeitsverrichtungen jener Hierarchie der natürlichen und erworbenen Geschicklichkeiten angepaßt.⁴⁸ Jeder Produktionsprozeß bedingt indes gewisse einfache Hantierungen, deren jeder Mensch, wie er geht und steht, fähig ist. Auch sie werden jetzt von ihrem flüssigen Zusammenhang mit den inhaltvollern Momenten der Tätigkeit losgelöst und zu ausschließlichen Funktionen verknöchert.

⁴⁸ Dr. Ure in seiner Apotheose der großen Industrie fühlt die eigentümlichen Charaktere der Manufaktur schärfer heraus als frühere Ökonomen, die nicht sein polemisches Interesse hatten, und selbst als seine Zeitgenossen, z.B. Babbage, der ihm zwar überlegen ist als Mathematiker und Mechaniker, aber dennoch die große Industrie eigentlich nur vom Standpunkt der Manufaktur auffaßt. Ure bemerkt: „Die Aneignung der Arbeiter an jede Sonderoperation bildet das Wesen der Verteilung der Arbeiten.“ Andererseits bezeichnet er diese Verteilung als „Anpassung der Arbeiten an die verschiedenen individuellen Fähigkeiten“ und charakterisiert endlich das ganze Manufaktursystem als „ein System von Gradationen nach dem Rang der Geschicklichkeit“, als „eine Teilung der Arbeit nach den verschied-

(Ure, l.c., pp. 19–23 passim.)

The simple “unskilled” manipulations are severed from the more difficult ones, and the unskilled laborer is created (same thing which was strictly excluded in the handicraft workshop).

Question 813 Explain how the category of “unskilled labor” (which did not exist in handicraft production) arose.

All these are means to make wages lower:

470:1 Hence, Manufacture begets, in every handicraft that it seizes upon, a class of so-called unskilled laborers, a class which handicraft industry strictly excluded. If it develops a one-sided speciality into a perfection, at the expense of the whole of a man’s working capacity, it also begins to make a speciality of the absence of all development. Alongside of the hierarchic gradation there steps the simple separation of the laborers into skilled and unskilled. For the latter, the cost of apprenticeship vanishes; for the former, it diminishes, compared with that of artificers, in consequence of the functions being simplified. In both cases the value of labor-power falls.⁴⁹

⁴⁹ “Each handicraftsman being ... enabled to perfect himself by practice in one point, became ... a cheaper workman.” (Ure, l.c., p. 19.)

Exception: the decomposition of the labor-process also creates new comprehensive functions.

An exception to this law holds good whenever the decomposition of the labor-process begets new and comprehensive functions, that either had no place at all, or only a very modest one, in handicrafts.

↓ The creation of unskilled labor and devaluation of the laborer is source of relative surplus-value.

The fall in the value of labor-power, caused by the disappearance or diminution of the expenses of apprenticeship, implies a direct

nen Graden des Geschicks“ usw. (Ure, „Philos. of Manuf.“, p. 19–23 passim.)

371:1 Die Manufaktur erzeugt daher in jedem Handwerk, das sie ergreift, eine Klasse sogenannter ungeschickter Arbeiter, die der Handwerksbetrieb streng ausschloß. Wenn sie die durchaus vereinseitigte Spezialität auf Kosten des ganzen Arbeitsvermögens zur Virtuosität entwickelt, beginnt sie auch schon den Mangel aller Entwicklung zu einer Spezialität zu machen. Neben die hierarchische Abstufung tritt die einfache Scheidung der Arbeiter in geschickte und ungeschickte. Für letztere fallen die Erlernungskosten ganz weg, für erstere sinken sie, im Vergleich zum Handwerker, infolge vereinfachter Funktion. In beiden Fällen sinkt der Wert der Arbeitskraft.⁴⁹

⁴⁹ „Jeder Handwerker, der ... instand gesetzt wurde, sich durch die Praxis in einer Einzelverrichtung zu vervollkommen ... wurde ein billigerer Arbeiter.“ (Ure, l.c. p. 19.)

Ausnahme findet statt, soweit die Zersetzung des Arbeitsprozesses neue zusammenfassende Funktionen erzeugt, die im Handwerksbetrieb gar nicht oder nicht in demselben Umfang vorkamen.

Die relative Entwertung der Arbeitskraft, die aus dem Wegfall oder der Verminderung der Erlernungskosten entspringt, schließt

increase of surplus-value for the benefit of capital; for everything that shortens the necessary labor-time required for the reproduction of labor-power, extends the domain of surplus-labor.

unmittelbar höhere Verwertung des Kapitals ein, denn alles, was die zur Reproduktion der Arbeitskraft notwendige Zeit verkürzt, verlängert die Domäne der Mehrarbeit.

14.4. Division of Labor in Manufacture and Division of Labor in Society

After having discussed the origin of the manufactural division of labor out of co-operation, its simple elements, and the totality of these elements, Marx discusses now its relation to the environment which gave birth to it, namely, the social division of labor underlying commodity production. This will then also reveal the capitalist character of the manufacturing type of division of labor.

470:2/o We first considered the origin of Manufacture, then its simple elements, then the detail laborer and his implements, and finally, the totality of the mechanism. We shall now lightly touch upon the relation between the division of labor in manufacture, and the social division of labor, which forms the foundation of all production of commodities.

After defining the subject-matter to be discussed, Marx classifies division of labor in society and in the manufactures using the categories general, particular, and individual (im einzelnen).

471:1 If we keep labor alone in view, we may designate the separation of social production into its main divisions or *genera*—viz., agriculture, industries, etc., as division of labor in general, and the splitting up of these genera into species and sub-species, as division of labor in particular, and the division of labor within the workshop as division of labor in singular or in detail.⁵⁰

⁵⁰ “Division of labor proceeds from the separation of professions the most widely different to that division, where several laborers divide between them the preparation of one and the same

371:2 Wir betrachteten erst den Ursprung der Manufaktur, dann ihre einfachen Elemente, den Arbeiter und sein Werkzeug, endlich ihren Gesamtmechanismus. Wir berühren jetzt kurz das Verhältnis zwischen der manufakturmäßigen Teilung der Arbeit und der gesellschaftlichen Teilung der Arbeit, welche die allgemeine Grundlage aller Warenproduktion bildet.

371:3 Hält man nur die Arbeit selbst im Auge, so kann man die Trennung der gesellschaftlichen Produktion in ihre großen Gattungen, wie Agrikultur, Industrie usw., als Teilung der Arbeit im allgemeinen, die Sondernung dieser Produktionsgattungen in Arten und Unterarten als Teilung der Arbeit im besondern, und die Teilung der Arbeit innerhalb einer Werkstatt als Teilung der Arbeit im einzelnen bezeichnen.⁵⁰

⁵⁰ „Die Teilung der Arbeit geht von der Trennung der verschiedenartigsten Professionen fort bis zu jener Teilung, wo mehrere Arbeiter sich in die Anfertigung eines und desselben Produkts

product, as in manufacture.” (Storch: “Cours d’Econ. Pol.”, Paris Edn. t. I., p. 173.) “Nous rencontrons chez les peuples parvenus à un certain degré de civilisation trois genres de divisions d’industrie: la première, que nous nommerons générale, amène la distinction des producteurs en agriculteurs, manufacturiers et commerçants, elle se rapporte aux trois principales branches d’industrie nationale; la seconde, qu’on pourrait appeler spéciale, est la division de chaque genre d’industrie en espèces ... la troisième division d’industrie, celle enfin qu’on devrait qualifier de division de la besogne ou de travail proprement dit, est celle qui s’établit dans les arts et les métiers séparés ... qui s’établit dans la plupart des manufactures et des ateliers.” (Skarbek, l.c., pp. 84, 85.)

teilen, wie in der Manufaktur.“ (Storch, „Cours d’Econ. Pol.“, Pariser Ausgabe, t. I, p. 173.) „Wir begegnen bei den Völkern, die eine gewisse Stufe der Zivilisation erreicht haben, drei Arten von Arbeitsteilung: die erste, die wir die allgemeine nennen, führt die Scheidung der Produzenten in Landwirte, Gewerbetreibende und Kaufleute herbei, sie entspricht den drei Hauptzweigen der nationalen Arbeit; die zweite, die man die besondere nennen könnte, ist die Teilung jedes Arbeitszweigs in Arten ... die dritte Arbeitsteilung endlich, die man als Teilung der Arbeitsverrichtung oder als Arbeitsteilung im eigentlichen Sinne bezeichnen sollte, ist diejenige, die sich in den einzelnen Handwerken und Berufen herausbildet ... und in den meisten Manufakturen und Werkstätten Fuß faßt.“ (Skarbek, l.c. p. 84, 85.)

14.4.a. [Communalities between Division of Labor in Society and in Manufacture]

Marx first collects the characteristics held in common by the division of labor in society and that in the workshop, their “analogies” as he calls them in 474:1/ooo).

↓ *Origin* of division of labor in society is twofold, just as that in manufacture. Again it is made clear that the dialectics between dependence and independence is responsible for this twofold origin. Note the *three* phases:

- 1) “Physiological” division of labor one of the points of departure.
- 2) Exchange on the borders of independent communities which produce different things due to different conditions the other point of departure.
- 3) This exchange acts back on the internal division of labor, until the connection is mediated only by the exchange of commodities between individuals.

This exchange occurs when the division of labor is fully developed and the centrifugal part, the independence, gains the upper hand.

471:2/o Division of labor in a society, and the corresponding tying down of individuals to a particular calling, develops itself, just as does the division of labor in manufacture, from opposite starting-points.

372/o Die Teilung der Arbeit innerhalb der Gesellschaft und die entsprechende Beschränkung der Individuen auf besondere Berufssphären entwickelt sich, wie die Teilung der Arbeit innerhalb der Manufaktur, von entgegengesetzten Ausgangspunkten.

First development path:
Within a family,^{50a} and after further development within a tribe, there springs up nat-

Innerhalb einer Familie,^{50a} weiter entwickelt eines Stammes, entspringt eine naturwüchsi-

urally a division of labor, caused by differences of sex and age, a division that is consequently based on a purely physiological foundation, which division enlarges its materials by the expansion of the community, by the increase of population, and more especially, by the conflicts between different tribes, and the subjugation of one tribe by another.

^{50a} *Note to the third edition.* Subsequent very searching study of the primitive condition of man, led the author to the conclusion, that it was not the family that originally developed into the tribe, but that, on the contrary, the tribe was the primitive and spontaneously developed form of human association, on the basis of blood relationship, and that out of the first incipient loosening of the tribal bonds, the many and various forms of the family were afterwards developed. F. E.

The second development path was already discussed earlier, in 181:3/o:

On the other hand, as I have before remarked, the exchange of products springs up at the points where different families, tribes, communities, come in contact; for, in the beginning of civilisation, it is not private individuals but families, tribes, etc., that meet on an independent footing. Different communities find different means of production, and different means of subsistence in their natural environment. Hence, their modes of production, and of living, and their products are different. It is this spontaneously developed difference which, when different communities come in contact, calls forth the mutual exchange of products, and the consequent gradual conversion of those products into commodities. Exchange does not create the differences between the spheres of production, but brings what are already different into relation, and thus converts them into more or less inter-dependent branches

ge Teilung der Arbeit aus den Geschlechts- und Altersverschiedenheiten, also auf rein physiologischer Grundlage, die mit der Ausdehnung des Gemeinwesens, der Zunahme der Bevölkerung und namentlich dem Konflikt zwischen verschiedenen Stämmen und der Unterjochung eines Stammes durch den andren ihr Material ausweitet.

^{50a} {Note zur 3. Aufl.—Spätere sehr gründliche Studien der menschlichen Urzustände führten den Verfasser zum Ergebnis, daß ursprünglich nicht die Familie sich zum Stamm ausgebildet, sondern umgekehrt, der Stamm die ursprüngliche naturwüchsige Form der auf Blutsverwandtschaft beruhenden menschlichen Vergesellschaftung war, so daß aus der beginnenden Auflösung der Stammesbände erst später die vielfach verschiednen Formen der Familie sich entwickelten.—F. E.}

Andrerseits, wie ich früher bemerkt, entspringt der Produktaustausch an den Punkten, wo verschiedene Familien, Stämme, Gemeinwesen in Kontakt kommen, denn nicht Privatpersonen, sondern Familien, Stämme usw. treten sich in den Anfängen der Kultur selbständig gegenüber. Verschiedne Gemeinwesen finden verschiedene Produktionsmittel und verschiedene Lebensmittel in ihrer Naturumgebung vor. Ihre Produktionsweise, Lebensweise und Produkte sind daher verschieden. Es ist diese naturwüchsige Verschiedenheit, die bei dem Kontakt der Gemeinwesen den Austausch der wechselseitigen Produkte und daher die allmähliche Verwandlung dieser Produkte in Waren hervorruft. Der Austausch schafft nicht den Unterschied der Produktionssphären, sondern setzt die unterschiednen in Beziehung und verwandelt sie so in mehr oder minder voneinander abhängige Zweige einer gesell-

of the collective production of an enlarged society.

Comparison of and connection between the two development paths: In the latter case, the social division of labor arises from the exchange between spheres of production, that are originally distinct and independent of one another. In the former, where the physiological division of labor is the starting-point, the particular organs of a compact whole grow loose, and break off, principally owing to the exchange of commodities with foreign communities, and then isolate themselves so far, that the sole bond still connecting the various kinds of work is the exchange of the products as commodities. In the one case, it is the making dependent what was before independent; in the other case, the making independent what was before dependent.

Separation between town and country “foundation of every division of labor that it *well developed*, and *brought about by the exchange of commodities*”.

472:1 The foundation of every division of labor that is well developed, and brought about by the exchange of commodities, is the separation between town and country.⁵¹ It may be said, that the whole economic history of society is summed up in the movement of this antithesis. We pass it over, however, for the present.

The formulation “movement of this contradiction” is revealing. It also applies to what Marx is doing in the present chapter: he is studying the movement of the contradiction inherent in the division of labor.

⁵¹ Sir James Steuart is the economist who has handled this subject best. How little his book, which appeared ten years before the “Wealth of Nations,” is known, even at the present time, may be judged from the fact that the admirers of Malthus do not even know that the first edition of the latter’s work on population contains, except in the purely declamatory part, very little

schaftlichen Gesamtproduktion.

two development paths:

Hier entsteht die gesellschaftliche Teilung der Arbeit durch den Austausch ursprünglich verschiedener, aber voneinander unabhängiger Produktionssphären. Dort, wo die physiologische Teilung der Arbeit den Ausgangspunkt bildet, lösen sich die besondern Organe eines unmittelbar zusammengehörigen Ganzen voneinander ab, zersetzen sich, zu welchem Zersetzungsprozeß der Warenaustausch mit fremden Gemeinwesen den Hauptanstoß gibt, und verselbständigen sich bis zu dem Punkt, wo der Zusammenhang der verschiedenen Arbeiten durch den Austausch der Produkte als Waren vermittelt wird. Es ist in dem einen Fall Verunselbständigung der früher Selbständigen, in dem andren Verselbständigung der früher Unselbständigen.

373:1 Die Grundlage aller entwickelten und durch Warenaustausch vermittelten Teilung der Arbeit ist die Scheidung von Stadt und Land.⁵¹ Man kann sagen, daß die ganze ökonomische Geschichte der Gesellschaft sich in der Bewegung dieses Gegensatzes resümiert, auf den wir jedoch hier nicht weiter eingehn.

⁵¹ Sir James Steuart hat diesen Punkt am besten behandelt. Wie wenig sein Werk, welches 10 Jahre vor dem „Wealth of Nations“ erschien, heutzutage bekannt ist, sieht man u.a. daraus, daß die Bewunderer des Malthus nicht einmal wissen, daß dieser in der ersten Ausgabe seiner Schrift über die „Population“, vom rein deklamatorischen Teil abgesehen, neben den Pfaffen

but extracts from Steuart, and in a less degree, from Wallace and Townsend.

Density of population in society a material prerequisite of division of labor, analogous to the number of workers in the same workshop.

472:3/o Just as a certain number of simultaneously employed laborers are the material pre-requisites for division of labor in manufacture, so are the number and density of the population, which here correspond to the agglomeration in one workshop, a necessary condition for the division of labor in society.⁵²

⁵² “There is a certain density of population which is convenient, both for social intercourse, and for that combination of powers by which the produce of labor is increased.” (James Mill, l.c., p. 50.) “As the number of laborers increases, the productive power of society augments in the compound ratio of that increase, multiplied by the effects of the division of labor.” (Th. Hodgskin, l.c., pp. 125, 126.)

↓ More details about what this density means:

Nevertheless, this density is more or less relative. A relatively thinly populated country, with well-developed means of communication, has a denser population than a more numerous populated country, with badly-developed means of communication; and in this sense the Northern States of the American Union, for instance, are more thickly populated than India.⁵³

⁵³ In consequence of the great demand for cotton after 1861, the production of cotton, in some thickly populated districts of India, was extended at the expense of rice cultivation. In consequence there arose local famines, the defective means of communication not permitting the failure of rice in one district to be compensated by importation from another.

Wallace und Townsend fast nur den Steuart abschreibt.

373:2 Wie für die Teilung der Arbeit innerhalb der Manufaktur eine gewisse Anzahl gleichzeitig angewandter Arbeiter die materielle Voraussetzung bildet, so für die Teilung der Arbeit innerhalb der Gesellschaft die Größe der Bevölkerung und ihre Dichtigkeit, die hier an die Stelle der Agglomeration in derselben Werkstatt tritt.⁵²

⁵² „Es gibt eine gewisse Bevölkerungsdichte, die zweckdienlich ist, sowohl für den gesellschaftlichen Verkehr als auch für jenes Zusammenwirken der Kräfte, durch das der Ertrag der Arbeit gesteigert wird.“ (James Mill, l.c. p. 50.) „Wenn die Zahl der Arbeiter wächst, steigt die Produktivkraft der Gesellschaft im gleichen Verhältnis zu diesem Wachstum, multipliziert mit der Wirkung der Arbeitsteilung.“ (Th. Hodgskin, l.c. p. 120.)

Indes ist diese Dichtigkeit etwas Relatives. Ein relativ spärlich bevölkertes Land mit entwickelten Kommunikationsmitteln besitzt eine dichtere Bevölkerung als ein mehr bevölkertes Land mit unentwickelten Kommunikationsmitteln, und in dieser Art sind z.B. die nördlichen Staaten der amerikanischen Union dichter bevölkert als Indien.⁵³

⁵³ Infolge der großen Baumwollnachfrage seit 1861 wurde in einigen sonst zahlreich bevölkerten Distrikten Ostindiens die Baumwollproduktion auf Kosten der Reisproduktion ausgedehnt. Es entstand daher partielle Hungersnot, weil wegen mangelnder Kommunikationsmittel und daher mangelnden physischen Zusammenhangs der Reisausfall in einem Distrikt nicht durch Zufuhr aus andren Distrikten ausgeglichen werden konnte.

14.4.b. [Connections between Division of Labor in Society and in Manufacture]

↓ Division of labor in manufactures can only develop after division of labor in society has already reached a certain level:

473:1/o Since the production and the circulation of commodities are the general prerequisites of the capitalist mode of production, division of labor in manufacture requires that division of labor in society at large should previously have attained a certain degree of development.

↓ But then the division of labor in the manufactories deepens and multiplies the social division of labor:

Inversely, the division of labor in the manufactures reacts upon and develops and multiplies that in society. Simultaneously, with the differentiation of the instruments of labor, the industries that produce these instruments, become more and more differentiated.⁵⁴ If the manufacturing system seize upon an industry, which, previously, was carried on in connexion with others, either as a chief or as a subordinate industry, and by one producer, these industries immediately separate their connexion, and become independent. If it seizes upon a particular stage in the production of a commodity, the other stages of its production become converted into so many independent industries. It has already been stated, that where the finished article consists merely of a number of parts fitted together, the detail operations may re-establish themselves as genuine and separate handicrafts. In order to carry out more perfectly the division of labor in manufacture, a single branch of production is, according to the varieties of its raw material, or the various forms that one and the same raw material may assume, split up into numerous, and to some extent, entirely

374/o Da Warenproduktion und Warenzirkulation die allgemeine Voraussetzung der kapitalistischen Produktionsweise, erheischt manufakturmäßige Teilung der Arbeit eine schon bis zu gewissem Entwicklungsgrad gereifte Teilung der Arbeit im Innern der Gesellschaft.

Umgekehrt entwickelt und vervielfältigt die manufakturmäßige Teilung der Arbeit rückwirkend jene gesellschaftliche Teilung der Arbeit. Mit der Differenzierung der Arbeitsinstrumente differenzieren sich mehr und mehr die Gewerbe, welche diese Instrumente produzieren.⁵⁴ Ergreift der manufakturmäßige Betrieb ein Gewerbe, das bisher als Haupt- oder Nebengewerbe mit andren zusammenhing und von demselben Produzenten ausgeführt wurde, so findet sofort Scheidung und gegenseitige Verselbständigung statt. Ergreift er eine besondere Produktionsstufe einer Ware, so verwandeln sich ihre verschiedenen Produktionsstufen in verschiedene unabhängige Gewerbe. Es ward bereits angedeutet, daß, wo das Machwerk ein bloß mechanisch zusammengesetztes Ganze von Teilprodukten, die Teilarbeiten sich selbst wieder zu eignen Handwerken verselbständigen können. Um die Teilung der Arbeiter vollkommener innerhalb einer Manufaktur auszuführen, wird derselbe Produktionszweig, je nach der Verschiedenheit seiner Rohstoffe oder der verschiedenen Formen, die derselbe Rohstoff erhalten kann, in verschiedene, zum Teil ganz neue Manu-

new manufactures. Accordingly, in France alone, in the first half of the 18th century, over 100 different kinds of silk stuffs were woven, and, in Avignon, it was law, that "every apprentice should devote himself to only one sort of fabrication, and should not learn the preparation of several kinds of stuff at once." The territorial division of labor, which confines special branches of production to special districts of a country, acquires fresh stimulus from the manufacturing system, which exploits every special advantage.⁵⁵ The Colonial system and the opening out of the markets of the world, both of which are included in the general conditions of existence of the manufacturing period, furnish rich material for developing the division of labor in society.

↓ Non-economic effects of the manufactural division of labor: specialization and sorting everywhere.

It is not the place, here, to go on to show how division of labor seizes upon, not only the economic, but every other sphere of society, and everywhere lays the foundation of that all engrossing system of specialising and sorting men, that development in a man of one single faculty at the expense of all other faculties, which caused A. Ferguson, the master of Adam Smith, to exclaim: "We make a nation of Helots, and have no free citizens."⁵⁶

⁵⁴ Thus the fabrication of shuttles formed as early as the 17th century, a special branch of industry in Holland.

⁵⁵ Whether the woollen manufacture of England is not divided into several parts or branches appropriated to particular places, where they are only or principally manufactured; fine cloths in Somersetshire, coarse in Yorkshire, long ells at Exeter, soies at Sudbury, crapes at Norwich, linseys at Kendal, blankets at Whitney, and so

fakturen gespaltet. So wurden bereits in der ersten Hälfte des 18. Jahrhunderts in Frankreich allein über 100 verschiedenartige Seidenzeuge gewebt, und in Avignon z.B. war es Gesetz, daß „jeder Lehrling sich immer nur einer Fabrikationsart widmen und nicht die Verfertigung mehrerer Zeugarten zugleich lernen durfte“. Die territoriale Teilung der Arbeit, welche besondere Produktionszweige an besondere Distrikte eines Landes bannt, erhält neuen Anstoß durch den manufakturmäßigen Betrieb, der alle Besonderheiten ausbeutet.⁵⁵ Reiches Material zur Teilung der Arbeit innerhalb der Gesellschaft liefert der Manufakturperiode die Erweiterung des Weltmarkts und das Kolonialsystem, die zum Umkreis ihrer allgemeinen Existenzbedingungen gehören.

division of labor: specialization and sorting

Es ist hier nicht der Ort, weiter nachzuweisen, wie sie neben der ökonomischen jede andre Sphäre der Gesellschaft ergreift und überall die Grundlage zu jener Ausbildung des Fachwesens, der Spezialitäten, und einer Parzellierung des Menschen legt, die schon A. Ferguson, den Lehrer A. Smiths, in den Ausruf ausbrechen ließ: „Wir machen eine Nation von Heloten, und es gibt keine Freien unter uns.“⁵⁶

⁵⁴ So bildete die Fabrikation der Weberschiffchen schon während des 17. Jahrhunderts einen besondern Industriezweig in Holland.

⁵⁵ „Ist nicht die Wollmanufaktur Englands in verschiedene Teile oder Zweige geschieden, die sich an besonderen Orten festgesetzt haben, wo sie allein oder hauptsächlich hergestellt werden; feine Tuche in Somersetshire, grobe in Yorkshire, doppelbreite in Exeter, in Sudbury, Krepps in Norwich, Halbwollstoffe in Kendal, Decken in

forth.” (Berkeley: “The Querist,” 1751, §520.)

⁵⁶ A. Ferguson: “History of Civil Society.” Edinburgh, 1767; Part iv, sect. ii., p. 285.

Whitney usw.!” (Berkeley, „The Querist“, 1750, §520.)

⁵⁶ A. Ferguson, „History of Civil Society“, Edinb. 1767, part IV, sect. II, p. 285.

14.4.c. [Essential Differences between Division of Labor in Society and in Manufacture]

474:1/000 But, in spite of the numerous analogies and links connecting them, division of labor in the interior of a society, and that in the interior of a workshop, differ not only in degree, but also in kind. The analogy appears most indisputable where an inner bond unites different branches of trade. For instance the cattle-breeder produces hides, the tanner makes the hides into leather, and the shoemaker, the leather into boots. Here the thing produced by each of them is but a step towards the final form, which is the product of all their labors combined. There are, besides, all the various industries that supply the cattle-breeder, the tanner, and the shoemaker with the means of production.

Marx is about to give an Achilles-heel critique of the notion that the distinction between division of labor in society and that in manufacture is only subjective: he critiques it at the point where it seems most convincing.

Now it is quite possible to imagine, with Adam Smith, that the difference between the above social division of labor, and the division in manufacture, is merely subjective, exists merely for the observer, who, in a manufacture, can see with one glance, all the numerous operations being performed on one spot, while in the instance given above, the spreading out of the work over great areas, and the great number of people employed in each branch of labor, obscure the connexion.⁵⁷

375:1/000 Trotz der zahlreichen Analogien jedoch und der Zusammenhänge zwischen der Teilung der Arbeit im Innern der Gesellschaft und der Teilung innerhalb einer Werkstatt sind beide nicht nur graduell, sondern wesentlich unterschieden. Am schlagendsten scheint die Analogie unstrittig, wo ein innres Band verschiedene Geschäftszweige verschlingt. Der Viehzüchter z.B. produziert Häute, der Gerber verwandelt die Häute in Leder, der Schuster das Leder in Stiefel. Jeder produziert hier ein Stufenprodukt, und die letzte fertige Gestalt ist das kombinierte Produkt ihrer Sonderarbeiten. Es kommen hinzu die mannigfachen Arbeitszweige, die dem Viehzüchter, Gerber, Schuster Produktionsmittel liefern.

Man kann sich nun mit A. Smith einbilden, diese gesellschaftliche Teilung der Arbeit unterscheide sich von der manufakturmäßigen nur subjektiv, nämlich für den Beobachter, der hier die mannigfachen Teilarbeiten auf einen Blick räumlich zusammensieht, während dort ihre Zerstreung über große Flächen und die große Zahl der in jedem Sonderzweig Beschäftigten den Zusammenhang verdunkeln.⁵⁷

⁵⁷ In manufacture proper, he says, the division of labor appears to be greater, because “those employed in every different branch of the work can often be collected into the same workhouse, and placed at once under the view of the spectator. In those great manufactures, (!) on the contrary, which are destined to supply the great wants of the great body of the people, every different branch of the work employs so great a number of workmen, that it is impossible to collect them all into the same workhouse ... the division is not near so obvious.” (A. Smith: “Wealth of Nations,” bk. i, ch. i.) The celebrated passage in the same chapter that begins with the words, “Observe the accommodation of the most common artificer or day-laborer in a civilised and thriving country,” etc., and then proceeds to depict what an enormous number and variety of industries contribute to the satisfaction of the wants of an ordinary laborer, is copied almost word for word from B. de Mandeville’s Remarks to his “Fable of the Bees, or Private Vices, Publick Benefits.” (First ed., without the remarks, 1706; with the remarks, 1714.)

↓ Now Marx brings a list of the differences between division of labor in society and in the manufactures: They are mediated by different mechanisms.

But what is it that forms the bond between the independent labors of the cattle-breeder, the tanner, and the shoemaker? It is the fact that their respective products are commodities. What, on the other hand, characterises division of labor in manufactures? The fact that the detail laborer produces no commodities.⁵⁸ It is only the common product of all the detail laborers that becomes a commodity.^{58a} Division of labor in society is brought about by the purchase and sale of the products of different branches of industry, while the connexion between the detail operations in a workshop is due to the sale of the labor-power of several workmen to one capitalist, who applies it as combined labor-

⁵⁷ In den eigentlichen Manufakturen, sagt er, scheint die Teilung der Arbeit größer, weil „die in jedem einzelnen Arbeitszweig Beschäftigten oft in einem Arbeitshaus zusammen sein und vom Beobachter mit einem Blick übersehen werden können. In jenen großen Manufakturen (!) dagegen, welche dazu bestimmt sind, die Hauptbedürfnisse der großen Masse der Bevölkerung zu befriedigen, sind in jedem einzelnen Arbeitszweig so viele Arbeiter beschäftigt, daß man sie unmöglich in einem Arbeitshaus zusammenbringen kann ... die Teilung ist nicht annähernd so offensichtlich.“ (A. Smith, „Wealth of Nations“, b. I, ch. I.) Der berühmte Passus in demselben Kapitel, der mit den Worten beginnt: „Man betrachte die Habe des gewöhnlichsten Handwerkers oder Tagelöhners in einem zivilisierten und blühenden Lande usw.“ und dann weiter ausmalt, wie zahllos mannigfaltige Gewerbe zur Befriedigung der Bedürfnisse eines gewöhnlichen Arbeiters zusammenwirken, ist ziemlich wörtlich kopiert aus B. de Mandevilles Remarks zu seiner „Fable of the Bees, or, Private Vices, Publick Benefits.“ (Erste Ausgabe ohne Remarks 1705, mit den Remarks 1714.)

Was aber stellt den Zusammenhang her zwischen den unabhängigen Arbeiten von Viehzüchter, Gerber, Schuster? Das Dasein ihrer respektiven Produkte als Waren. Was charakterisiert dagegen die manufakturmäßige Teilung der Arbeit? Daß der Teilarbeiter keine Ware produziert.⁵⁸ Erst das gemeinsame Produkt der Teilarbeiter verwandelt sich in Ware.^{58a} Die Teilung der Arbeit im Innern der Gesellschaft ist vermittelt durch den Kauf und Verkauf der Produkte verschiedener Arbeitszweige, der Zusammenhang der Teilarbeiten in der Manufaktur durch den Verkauf verschiedener Arbeitskräfte an denselben Kapitalisten, der sie als kombinierte Arbeitskraft verwendet.

power.

⁵⁸ “There is no longer anything which we can call the natural reward of individual labor. Each laborer produces only some part of a whole, and each part, having no value or utility in itself, there is nothing on which the laborer can seize, and say: It is my product, this I will keep to myself.” (“Labor Defended against the Claims of Capital.” Lond., 1825, p. 25.) The author of this admirable work is the Th. Hodgskin I have already cited.

^{58a} This distinction between division of labor in society and in manufacture, was practically illustrated to the Yankees. One of the new taxes devised at Washington during the civil war, was the duty of 6% “on all industrial products.” Question: What is an industrial product? Answer of the legislature: A thing is produced “when it is made,” and it is made when it is ready for sale. Now, for one example out of many. The New York and Philadelphia manufacturers had previously been in the habit of “making” umbrellas with all their belongings. But since an umbrella is a *mixtum compositum* of very heterogeneous parts, by degrees these parts became the products of various separate industries, carried on independently in different places. They entered as separate commodities into the umbrella manufactory, where they were fitted together. The Yankees have given to articles thus fitted together, the name of “assembled articles,” a name they deserve, for being an assemblage of taxes. Thus the umbrella “assembles,” first, 6% on the price of each of its elements, and a further 6% on its own total price.

Next point: concentration versus dispersion of the means of production:

The division of labor in the workshop implies concentration of the means of production in the hands of one capitalist; the division of labor in society implies their disper-

⁵⁸ „Es gibt aber nichts mehr, was man als den natürlichen Lohn der Arbeit eines einzelnen bezeichnen könnte. Jeder Arbeiter erzeugt nur einen Teil eines Ganzen, und da jeder Teil für sich allein ohne Wert oder Nutzen ist, gibt es nichts, was der Arbeiter nehmen und wovon er sagen könnte: Das ist mein Erzeugnis, das will ich für mich behalten.“ („Labour defended against the claims of Capital“, Lond. 1825, p. 25.) Der Verfasser dieser vorzüglichen Schrift ist der früher zitierte Th. Hodgskin.

^{58a} Note zur 2. Ausgabe. Dieser Unterschied zwischen gesellschaftlicher und manufakturmäßiger Teilung der Arbeit wurde den Yankees praktisch illustriert. Eine der während des Bürgerkriegs zu Washington neu ausgeheckten Steuern war die Akzise von 6% auf „alle industriellen Produkte“. Frage: Was ist ein industrielles Produkt? Antwort des Gesetzgebers: Ein Ding ist produziert, „wenn es gemacht ist“ (when it is made), und es ist gemacht, wenn für den Verkauf fertig. Nun ein Beispiel aus vielen. Manufakturen zu New York und Philadelphia hatten früher Regenschirme mit allem Zubehör „gemacht“. Da ein Regenschirm aber ein *Mixtum compositum* ganz heterogener Bestandteile, wurden letztere nach und nach zu Machwerken unabhängig voneinander und an verschiedenen Orten betriebener Geschäftszweige. Ihre Teilprodukte gingen nun als selbständige Waren ein in die Regenschirm-Manufaktur, welche sie nur noch in ein Ganzes zusammensetzt. Die Yankees haben derartige Artikel „assembled articles“ (versammelte Artikel) getauft, was sie namentlich verdienten als Sammelplätze von Steuern. So „versammelte“ der Regenschirm erstens 6% Akzise auf den Preis jedes seiner Elemente und hinwiederum 6% auf seinen eignen Gesamtpreis.

Die manufakturmäßige Teilung der Arbeit unterstellt Konzentration der Produktionsmittel in der Hand eines Kapitalisten, die gesellschaftliche Teilung der Arbeit Zersplitte-

sion among many independent producers of commodities.

Regulation a priori versus a posteriori:

While within the workshop, the iron law of proportionality subjects definite numbers of workmen to definite functions, in the society outside the workshop, chance and caprice have full play in distributing the producers and their means of production among the various branches of industry. The different spheres of production, it is true, constantly tend to an equilibrium: for, on the one hand, while each producer of a commodity is bound to produce a use-value, to satisfy a particular social want, and while the extent of these wants differs quantitatively, still there exists an inner relation which settles their proportions into a regular system, and that system one of spontaneous growth; and, on the other hand, the law of the value of commodities ultimately determines how much of its disposable working-time society can expend on each particular class of commodities. But this constant tendency to equilibrium, of the various spheres of production, is exercised, only in the shape of a reaction against the constant upsetting of this equilibrium. The *a priori* system on which the division of labor, within the workshop, is regularly carried out, becomes in the division of labor within the society, an *a posteriori*, nature-imposed necessity, controlling the lawless caprice of the producers, and perceptible in the barometrical fluctuations of the market-prices.

Anarchy of market and despotism in the workshop cause each other. Bourgeois apologists contradict themselves because they try to defend both on general grounds.

Division of labor within the workshop implies the undisputed authority of the cap-

ring der Produktionsmittel unter viele voneinander unabhängige Warenproduzenten.

Statt daß in der Manufaktur das ehernen Gesetz der Verhältniszahl oder Proportionalität bestimmte Arbeitermassen unter Funktionen subsumiert, treiben Zufall und Willkür ihr buntes Spiel in der Verteilung der Warenproduzenten und ihrer Produktionsmittel unter die verschiedenen gesellschaftlichen Arbeitszweige. Zwar suchen sich die verschiedenen Produktionssphären beständig ins Gleichgewicht zu setzen, indem einerseits jeder Warenproduzent einen Gebrauchswert produzieren, also ein besonderes gesellschaftliches Bedürfnis befriedigen muß, der Umfang dieser Bedürfnisse aber quantitativ verschieden ist und ein inneres Band die verschiedenen Bedürfnismassen zu einem naturwüchsigen System verkettet; indem andererseits das Wertgesetz der Waren bestimmt, wieviel die Gesellschaft von ihrer ganzen disponiblen Arbeitszeit auf die Produktion jeder besondern Warenart verausgaben kann. Aber diese beständige Tendenz der verschiedenen Produktionssphären, sich ins Gleichgewicht zu setzen, betätigt sich nur als Reaktion gegen die beständige Aufhebung dieses Gleichgewichts. Die bei der Teilung der Arbeit im Innern der Werkstatt a priori und planmäßig befolgte Regel wirkt bei der Teilung der Arbeit im Innern der Gesellschaft nur a posteriori als innere, stumme, im Barometerwechsel der Marktpreise wahrnehmbare, die regellose Willkür der Warenproduzenten überwältigende Naturnotwendigkeit.

Die manufakturmäßige Teilung der Arbeit unterstellt die unbedingte Autorität des Ka-

italist over men, that are but parts of a mechanism that belongs to him. The division of labor within the society brings into contact independent commodity-producers, who acknowledge no other authority but that of competition, of the coercion exerted by the pressure of their mutual interests; just as in the animal kingdom, the *bellum omnium contra omnes* more or less preserves the conditions of existence of every species. The same bourgeois mind which praises division of labor in the workshop, life-long annexation of the laborer to a partial operation, and his complete subjection to capital, as being an organisation of labor that increases its productiveness, that same bourgeois mind denounces with equal vigour every conscious attempt to socially control and regulate the process of production, as an inroad upon such sacred things as the rights of property, freedom and unrestricted play for the bent of the individual capitalist. It is very characteristic that the enthusiastic apologists of the factory system have nothing more damning to urge against a general organisation of the labor of society, than that it would turn all society into one immense factory.

↑ Those who celebrate factories so much don't want society to be turned into a factory.

14.4.d. [Capitalist versus Pre-Capitalist Division of Labor]

In capitalism anarchy of the market versus despotism in the manufacture or factory; in earlier modes of production the social division of labor is despotically controlled while individual workshops are kept small. Regulations which prevented the rise of capitalism.

477:1 If, in a society with capitalist production, anarchy in the social division of labor and despotism in that of the workshop are mutual conditions the one of the

pitalisten über Menschen, die bloße Glieder eines ihm gehörigen Gesamtmechanismus bilden; die gesellschaftliche Teilung der Arbeit stellt unabhängige Warenproduzenten einander gegenüber, die keine andre Autorität anerkennen als die der Konkurrenz, den Zwang, den der Druck ihrer wechselseitigen Interessen auf sie ausübt, wie auch im Tierreich das *bellum omnium contra omnes* die Existenzbedingungen aller Arten mehr oder minder erhält. Dasselbe bürgerliche Bewußtsein, das die manufakturmäßige Teilung der Arbeit, die lebenslängliche Annexation des Arbeiters an eine Detailverrichtung und die unbedingte Unterordnung der Teilarbeiter unter das Kapital als eine Organisation der Arbeit feiert, welche ihre Produktivkraft steigert, denunziert daher ebenso laut jede bewußte gesellschaftliche Kontrolle und Regelung des gesellschaftlichen Produktionsprozesses als einen Eingriff in die unverletzlichen Eigentumsrechte, Freiheit und sich selbst bestimmende „Genialität“ des individuellen Kapitalisten. Es ist sehr charakteristisch, daß die begeisterten Apologeten des Fabriksystems nichts Ärgres gegen jede allgemeine Organisation der gesellschaftlichen Arbeit zu sagen wissen, als daß sie die ganze Gesellschaft in eine Fabrik verwandeln würde.

377:1/o Wenn die Anarchie der gesellschaftlichen und die Despotie der manufakturmäßigen Arbeitsteilung einander in der Gesellschaft der kapitalistischen Produktions-

other, we find, on the contrary, in those earlier forms of society in which the separation of trades has been spontaneously developed, then crystallised, and finally made permanent by law, on the one hand, a specimen of the organisation of the labor of society, in accordance with an approved and authoritative plan, and on the other, the entire exclusion of division of labor in the workshop, or at all events a mere dwarflike or sporadic and accidental development of the same.⁵⁹

⁵⁹ „On peut ... établir en règle générale, que moins l'autorité préside à la division du travail dans l'intérieur de la société, plus la division du travail se développe dans l'intérieur de l'atelier, et plus elle y est soumise à l'autorité d'un seul. Ainsi l'autorité dans l'atelier et celle dans la société, par rapport à la division du travail, sont en raison inverse l'une de l'autre.“ (Karl Marx, „Misère,“ etc., pp. 130–131.)

477:2/oo Those small and extremely ancient Indian communities, some of which have continued down to this day, are based on possession in common of the land, on the blending of agriculture and handicrafts, and on an unalterable division of labor, which serves, whenever a new community is started, as a plan and scheme ready cut and dried. Occupying areas of from 100 up to several thousand acres, each forms a compact whole producing all it requires. The chief part of the products is destined for direct use by the community itself, and does not take the form of a commodity. Hence, production here is independent of that division of labor brought about, in Indian society as a whole, by means of the exchange of commodities. It is the surplus alone that becomes a commodity, and a portion of even that, not until it has reached the hands of the State, into whose hands from time im-

weise bedingen, bieten dagegen frühere Gesellschaftsformen, worin die Besonderung der Gewerbe sich naturwüchsig entwickelt, dann kristallisiert und endlich gesetzlich befestigt hat, einerseits das Bild einer plan- und autoritätsmäßigen Organisation der gesellschaftlichen Arbeit, während sie andererseits die Teilung der Arbeit innerhalb der Werkstatt ganz ausschließen oder nur auf einem Zwergmaßstab oder nur sporadisch und zufällig entwickeln.⁵⁹

⁵⁹ „Man kann als allgemeine Regel aufstellen: Je weniger die Autorität der Teilung der Arbeit innerhalb der Gesellschaft vorsteht, desto mehr entwickelt sich die Arbeitsteilung im Innern der Werkstatt und um so mehr ist sie der Autorität eines einzelnen unterworfen. Danach steht die Autorität in der Werkstatt und die in der Gesellschaft, in bezug auf die Arbeitsteilung, im umgekehrten Verhältnis zueinander.“ (Karl Marx, l.c. p. 130, 131.)

378:1/o Jene uraltertümlichen, kleinen indischen Gemeinwesen z.B., die zum Teil noch fortexistieren, beruhen auf gemeinschaftlichem Besitz des Grund und Bodens, auf unmittelbarer Verbindung von Agrikultur und Handwerk und auf einer festen Teilung der Arbeit, die bei Anlage neuer Gemeinwesen als gegebener Plan und Grundriß dient. Sie bilden sich selbst genügende Produktionsganzen, deren Produktionsgebiet von 100 bis auf einige 1000 Acres wechselt. Die Hauptmasse der Produkte wird für den unmittelbaren Selbstbedarf der Gemeinde produziert, nicht als Ware, und die Produktion selbst ist daher unabhängig von der durch Warenaustausch vermittelten Teilung der Arbeit im großen und ganzen der indischen Gesellschaft. Nur der Überschuß der Produkte verwandelt sich in Ware, zum Teil selbst wieder erst in der Hand des Staats, dem ein bestimmtes Quantum

memorial a certain quantity of these products has found its way in the shape of rent in kind. The constitution of these communities varies in different parts of India. In those of the simplest form, the land is tilled in common, and the produce divided among the members. At the same time, spinning and weaving are carried on in each family as subsidiary industries. Side by side with the masses thus occupied with one and the same work, we find the "chief inhabitant," who is judge, police, and tax-gatherer in one; the book-keeper, who keeps the accounts of the tillage and registers everything relating thereto; another official, who prosecutes criminals, protects strangers travelling through and escorts them to the next village; the boundary man, who guards the boundaries against neighbouring communities; the water-overseer, who distributes the water from the common tanks for irrigation; the Brahmin, who conducts the religious services; the schoolmaster, who on the sand teaches the children reading and writing; the calendar-Brahmin, or astrologer, who makes known the lucky or unlucky days for seed-time and harvest, and for every other kind of agricultural work; a smith and a carpenter, who make and repair all the agricultural implements; the potter, who makes all the pottery of the village; the barber, the washerman, who washes clothes, the silversmith, here and there the poet, who in some communities replaces the silversmith, in others the schoolmaster. This dozen of individuals is maintained at the expense of the whole community. If the population increases, a new community is founded, on the pattern of the old one, on unoccupied land. The whole mechanism discloses a systematic division of labor; but a division like that in

seit undenklichen Zeiten als Naturalrente zufließt. Verschiedne Teile Indiens besitzen verschiedene Formen des Gemeinwesens. In der einfachsten Form bebaut die Gemeinde das Land gemeinschaftlich und verteilt seine Produkte unter ihre Glieder, während jede Familie Spinnen, Weben usw. als häusliches Nebengewerb treibt. Neben dieser gleichartig beschäftigten Masse finden wir den „Haupteinwohner“, Richter, Polizei und Steuereinnahmer in einer Person; den Buchhalter, der die Rechnung über den Ackerbau führt und alles darauf Bezügliche katastriert und registriert; einen Beamten, der Verbrecher verfolgt und fremde Reisende beschützt und von einem Dorf zum andren geleitet; den Grenzmann, der die Grenzen der Gemeinde gegen die Nachbargemeinden bewacht; den Wasseraufseher, der das Wasser aus den gemeinschaftlichen Wasserbehältern zu Ackerbauzwecken verteilt; den Braminen, der die Funktionen des religiösen Kultus verrichtet; den Schulmeister, der die GemeindegKinder im Sand schreiben und lesen lehrt; den Kalenderbraminen, der als Astrolog die Zeiten für Saat, Ernte und die guten und bösen Stunden für alle besondern Ackerbauarbeiten angibt; einen Schmied und einen Zimmermann, welche alle Ackerbauwerkzeuge verfertigen und ausbessern; den Töpfer, der alle Gefäße für das Dorf macht; den Barbier, den Wäscher für die Reinigung der Kleider, den Silberschmied, hier und da den Poeten, der in einigen Gemeinden den Silberschmied, in andren den Schulmeister ersetzt. Dies Dutzend Personen wird auf Kosten der ganzen Gemeinde erhalten. Wächst die Bevölkerung, so wird eine neue Gemeinde nach dem Muster der alten auf unbebautem Boden angesiedelt. Der Gemeindeme-

manufactures is impossible, since the smith and the carpenter, etc., find an unchanging market, and at the most there occur, according to the sizes of the villages, two or three of each, instead of one.⁶⁰ The law that regulates the division of labor in the community acts with the irresistible authority of a law of Nature, at the same time that each individual artificer, the smith, the carpenter, and so on, conducts in his workshop all the operations of his handicraft in the traditional way, but independently, and without recognising any authority over him. The simplicity of the organisation for production in these self-sufficing communities that constantly reproduce themselves in the same form, and when accidentally destroyed, spring up again on the spot and with the same name,⁶¹ this simplicity supplies the key to the secret of the unchangeableness of Asiatic societies, an unchangeableness in such striking contrast with the constant dissolution and refounding of Asiatic States, and the never-ceasing changes of dynasty. The structure of the economic elements of society remains untouched by the storm-clouds of the political sky.

This division of labor is like a natural law, and like the natural laws it does not affect the freedom of the producers.

⁶⁰ Lieut.-Col. Mark Wilks: "Historical Sketches of the South of India." Lond., 1810–17, v. I, pp. 118–20. A good description of the various forms of the Indian communities is to be found in George Campbell's "Modern India." Lond., 1852.

⁶¹ "Under this simple form ... the inhabitants of the country have lived from time immemorial. The boundaries of the villages have been but seldom altered; and though the villages

chanismus zeigt planmäßige Teilung der Arbeit, aber ihre manufakturmäßige Teilung ist unmöglich, indem der Markt für Schmied, Zimmermann usw. unverändert bleibt und höchstens, je nach dem Größenunterschied der Dörfer, statt eines Schmieds, Töpfers usw. ihrer zwei oder drei vorkommen.⁶⁰ Das Gesetz, das die Teilung der Gemeindearbeit regelt, wirkt hier mit der unverbrüchlichen Autorität eines Naturgesetzes, während jeder besondere Handwerker, wie Schmied usw., nach überlieferter Art, aber selbständig und ohne Anerkennung irgendeiner Autorität in seiner Werkstatt, alle zu seinem Fach gehörigen Operationen verrichtet. Der einfache produktive Organismus dieser selbstgenügenden Gemeinwesen, die sich beständig in derselben Form reproduzieren und, wenn zufällig zerstört, an demselben Ort, mit demselben Namen, wieder aufbauen,⁶¹ liefert den Schlüssel zum Geheimnis der Unveränderlichkeit asiatischer Gesellschaften, so auffallend kontrastiert durch die beständige Auflösung und Neubildung asiatischer Staaten und rastlosen Dynastenwechsel. Die Struktur der ökonomischen Grundelemente der Gesellschaft bleibt von den Stürmen der politischen Wolkenregion unberührt.

⁶⁰ Lieut. Col. Mark Wilks, "Historical Sketches on the South of India", Lond. 1810 bis 1817, v. I, p. 118–120. Eine gute Zusammenstellung der verschiedenen Formen des indischen Gemeinwesens findet man in George Campbells „Modern India“, London 1852.

⁶¹ „Unter dieser einfachen Form ... haben die Einwohner des Landes seit unvordenklichen Zeiten gelebt. Die Grenzen der Dorfgebiete wurden nur selten geändert; und obgleich die Dörfer wie-

themselves have been sometimes injured, and even desolated by war, famine, and disease, the same name, the same limits, the same interests, and even the same families, have continued for ages. The inhabitants give themselves no trouble about the breaking up and division of kingdoms; while the village remains entire, they care not to what power it is transferred, or to what sovereign it devolves; its Internal economy remains unchanged." (Th. Stamford Raffles, late Lieut. Gov. of Java: "The History of Java." Lond., 1817, Vol. I., p. 285.)

The discussion of the guilds begins with an elaboration of a remark made in 422:2/423:

479:1/o The rules of the guilds, as I have said before, by limiting most strictly the number of apprentices and journeymen that a single master could employ, prevented him from becoming a capitalist. Moreover, he could not employ his journeymen in many other handicrafts than the one in which he was a master. The guilds zealously repelled every encroachment by the capital of merchants, the only form of free capital with which they came in contact. A merchant could buy every kind of commodity, but labor as a commodity he could not buy. He existed only on sufferance, as a dealer in the products of the handicrafts. If circumstances called for a further division of labor, the existing guilds split themselves up into varieties, or founded new guilds by the side of the old ones; all this, however, without concentrating various handicrafts in a single workshop. Hence, the guild organisation, however much it may have contributed by separating, isolating, and perfecting the handicrafts, to create the material conditions for the existence of manufacture, excluded division of labor in the workshop. On the whole, the laborer and his means of production remained closely united, like the snail

derholt durch Krieg, Hungersnot und Seuchen heimgesucht, ja verwüstet wurden, haben derselbe Name, dieselben Grenzen, dieselben Interessen und selbst dieselben Familien sich durch Generationen fortgesetzt. Die Einwohner ließen sich durch den Zusammenbruch und die Teilung von Königreichen nicht anfechten; solange das Dorf ungeteilt bleibt, ist es ihnen gleichgültig, an welche Macht es abgetreten wird oder welchem Herrscher es zufällt. Seine innere Wirtschaft bleibt unverändert." (Th. Stamford Raffles, late Lieut. Gov. of Java, „The History of Java“, Lond. 1817, v. I, p. 285.)

379:1/o Die Zunftgesetze, wie schon früher bemerkt, verhinderten planmäßig, durch äußerste Beschränkung der Gesellenzahl, die ein einzelner Zunftmeister beschäftigen durfte, seine Verwandlung in einen Kapitalisten. Ebenso konnte er Gesellen nur beschäftigen in dem ausschließlichen Handwerk, worin er selbst Meister war. Die Zunft wehrte eifersüchtig jeden Übergriff des Kaufmannskapitals ab, der einzig freien Form des Kapitals, die ihr gegenüberstand. Der Kaufmann konnte alle Waren kaufen, nur nicht die Arbeit als Ware. Er war nur geduldet als Verleger der Handwerksprodukte. Riefen äußere Umstände eine fortschreitende Teilung der Arbeit hervor, so zerspalteten sich bestehende Zünfte in Unterarten oder lagerten sich neue Zünfte neben die alten hin, jedoch ohne Zusammenfassung verschiedener Handwerke in einer Werkstatt. Die Zunftorganisation, so sehr ihre Besondrung, Isolierung und Ausbildung der Gewerbe zu den materiellen Existenzbedingungen der Manufakturperiode gehören, schloß daher die manufakturmäßige Teilung der Arbeit aus. Im großen und ganzen blieben der Arbeiter und seine Produktionsmittel miteinander verbunden wie die

with its shell, and thus there was wanting the principal basis of manufacture, the separation of the laborer from his means of production, and the conversion of these means into capital.

480:1 While division of labor in society at large, whether such division be brought about or not by exchange of commodities, is common to economic formations of society the most diverse, division of labor in the workshop, as practised by manufacture, is a special creation of the capitalist mode of production alone.

Schnecke mit dem Schneckenhaus, und so fehlte die erste Grundlage der Manufaktur, die Verselbständigung der Produktionsmittel als Kapital gegenüber dem Arbeiter.

380:1 Während die Teilung der Arbeit im Ganzen einer Gesellschaft, ob vermittelt oder unvermittelt durch den Warenaustausch, den verschiedenartigsten ökonomischen Gesellschaftsformationen angehört, ist die manufakturmäßige Teilung der Arbeit eine ganz spezifische Schöpfung der kapitalistischen Produktionsweise.

14.5. The Capitalist Character of Manufacture

This section shows how manufacture is the realization, objectification, of the capitalistic relations of production, and where its limits lie, which prevent it from being the ultimate capitalistic mode of production.

Question 814 *What are the limits of manufactories based on division of labor, preventing them from becoming the ultimate capitalistic mode of production?*

14.5.a. [Changes in the Capital-Labor Relations]

The introduction of the division of labor in the manufactories changes the capital-labor relations. These changes begin with the size of individual capitals:

480:2 An increased number of laborers under the control of one capitalist is the natural starting-point, as well of co-operation generally, as of manufacture in particular.

380:2/o Eine größere Arbeiteranzahl unter dem Kommando desselben Kapitals bildet den naturwüchsigen Ausgangspunkt, wie der Kooperation überhaupt, so der Manufaktur.

At the very beginning, the motivation of the capitalists to combine many workers was economic, not technological: the more workers the capitalist would employ, the more surplus-value he would get. From a technological point of view, this point of departure was therefore *naturwüchsig*. But once manufacture has been developed, the increase in establishments becomes a technical necessity:

But the division of labor in manufacture makes this increase in the number of workmen a technical necessity.

Umgekehrt entwickelt die manufakturmäßige Teilung der Arbeit das Wachstum der angewandten Arbeiterzahl zur technischen Notwendigkeit.

It does so in two ways: (a) size itself is determined by technology, and (b) increases in size, in order to capture further savings, cannot be done gradually but in jumps, by doubling etc., so that the already existing division of labor can be reproduced.

The minimum number that any given capitalist is bound to employ is here prescribed by the previously established division of labor. On the other hand, the advantages of further division are obtainable only by adding to the number of workmen, and this can be done only by adding multiples of the various detail groups.

↑ I.e., this increase cannot be incremental but it requires doubling or tripling of the original scale, so that the present economies of the division of labor can be maintained.

↓ Along with the number of workers also the constant capital must increase, even faster than the variable capital due to the increased productivity:

But an increase in the variable component of the capital employed necessitates an increase in its constant component, too, in the workshops, implements, etc., and, in particular, in the raw material, the call for which grows quicker than the number of workmen. The quantity of it consumed in a given time, by a given amount of labor, increases in the same ratio as does the productive power of that labor in consequence of its division. Hence, it is a law, based on the very nature of manufacture, that the minimum amount of capital, which is bound to be in the hands of each capitalist, must keep increasing; in other words, that the transformation into capital of the social means of production and subsistence must keep extending.⁶²

⁶² "It is not sufficient that the capital" (the writer should have said the necessary means of subsistence and of production) "required for the subdivision of handicrafts should be in readiness in the society: it must also be accumulated in the hands of the employers in sufficiently large quantities to enable them to conduct their operations on a large scale ... The more the division increases, the more does the constant em-

Das Arbeiterminimum, das ein einzelner Kapitalist anwenden muß, ist ihm jetzt durch die vorhandne Teilung der Arbeit vorgeschrieben. Andererseits sind die Vorteile weiterer Teilung bedingt durch weitere Vermehrung der Arbeiteranzahl, die nur noch in Vielfachen ausführbar.

Mit dem variablen muß aber auch der konstante Bestandteil des Kapitals wachsen, neben dem Umfang der gemeinsamen Produktionsbedingungen, wie Baulichkeiten, Öfen usw., namentlich auch und viel rascher als die Arbeiteranzahl, das Rohmaterial. Seine Masse, verzehrt in gegebener Zeit durch gegebenes Arbeitsquantum, nimmt in demselben Verhältnis zu wie die Produktivkraft der Arbeit infolge ihrer Teilung. Wachsender Minimalumfang von Kapital in der Hand der einzelnen Kapitalisten oder wachsende Verwandlung der gesellschaftlichen Lebensmittel und Produktionsmittel in Kapital ist also ein aus dem technischen Charakter der Manufaktur entspringendes Gesetz.⁶²

⁶² „Es genügt nicht, daß das zur Unterabteilung der Handwerke nötige Kapital“ (sollte heißen, die dazu nötigen Lebens- und Produktionsmittel) „sich in der Gesellschaft vorhanden vorfinde; es ist außerdem nötig, daß es in den Händen der Unternehmer in hinreichend beträchtlichen Massen akkumuliert sei, um sie zur Arbeit auf großer Stufenleiter zu befähigen ... Je mehr die Teilung zunimmt, erheischt

ployment of a given number of laborers require a greater outlay of capital in tools, raw material, etc." (Storch: "Cours d'Econ. Polit." Paris Ed., t. I., pp. 250, 251.) "La concentration des instruments de production et la division du travail sont aussi inséparables l'une de l'autre que le sont, dans le régime politique, la concentration des pouvoirs publics et la division des intérêts privés." (Karl Marx, I.c., p. 134.)

↑ The end of the footnote brings an interesting analogy to politics.

↓ As in simple co-operation, the productive forces springing from the combination of the laborers appear as productive forces of capital

481/o In manufacture, as well as in simple co-operation, the collective working organism is a form of existence of capital. The mechanism that is made up of numerous individual detail laborers belongs to the capitalist. Hence, the productive power resulting from a combination of labors appears as the productive power of capital.

die beständige Beschäftigung einer selben Zahl von Arbeitern immer beträchtlicheres Kapital in Werkzeugen, Rohstoffen usw." (Storch, „Cours d'Econ. Polit.“, Pariser Ausg., t. I, p. 250, 251.) „Die Konzentration der Produktionsinstrumente und die Arbeitsteilung sind ebenso untrennbar voneinander wie auf dem Gebiete der Politik die Zentralisation der öffentlichen Gewalten und die Teilung der Privatinteressen.“ (Karl Marx, I.c. p. 134.)

381:1/o Wie in der einfachen Kooperation ist in der Manufaktur der funktionierende Arbeitskörper eine Existenzform des Kapitals. Der aus vielen individuellen Teilarbeitern zusammengesetzte gesellschaftliche Produktionsmechanismus gehört dem Kapitalisten. Die aus der Kombination der Arbeiten entspringende Produktivkraft erscheint daher als Produktivkraft des Kapitals.

The Moore-Aveling translation

"appears to be" is wrong.

Question 816 What does Marx mean by "the collective working organism is a form of existence of capital"?

↑ The productive powers not only *seem* to be springing from capital but their social form is such that socially they *count* as springing from capital. A detailed argument is given in 451:1.

↓ Creation of a hierarchy among the workers:

Manufacture proper not only subjects the previously independent workman to the discipline and command of capital, but, in addition, creates a hierarchic gradation of the workmen themselves.

Die eigentliche Manufaktur unterwirft nicht nur den früher selbständigen Arbeiter dem Kommando und der Disziplin des Kapitals, sondern schafft überdem eine hierarchische Gliederung unter den Arbeitern selbst.

↑ Now there is no longer only a hierarchy between capitalist and laborer (with discipline for the laborer) but also hierarchy between the laborers.

14.5.b. [Changes Imposed on the Individual Laborer by the Division of Labor]

The changes within the working class go much further. ↓ The individual worker is turned into a “crippled monstrosity.”

While simple co-operation leaves the mode of working by the individual for the most part unchanged, manufacture thoroughly revolutionizes it, and seizes labor-power by its very roots. It converts the laborer into a crippled monstrosity, by forcing his detail dexterity at the expense of a world of productive capabilities and instincts; just as in the States of La Plata they butcher a whole beast for the sake of his hide or his tallow. Not only is the detail work distributed to the different individuals, but the individual himself is made the automatic motor of a fractional operation,⁶³ and the absurd fable of Menenius Agrippa, which makes man a mere fragment of his own body, becomes realised.⁶⁴

⁶³ Dugald Stewart calls manufacturing laborers “living automats . . . employed in the details of the work.” (l.c., p. 318.)

⁶⁴ In corals, each individual is, in fact, the stomach of the whole group; but it supplies the group with nourishment, instead of, like the Roman patrician, withdrawing it.

Question 818 *Explain how in manufacture, not only the labor is divided, but also the laborer is cut into pieces.*

↓ Labor is no longer only separated from the means of production, but labor itself has become unusable without capital.

If, at first, the workman sells his labor-power to capital, because the material means of producing a commodity fail him, now his very labor-power refuses its services unless

Während die einfache Kooperation die Arbeitsweise der einzelnen im großen und ganzen unverändert läßt, revolutioniert die Manufaktur sie von Grund aus und ergreift die individuelle Arbeitskraft an ihrer Wurzel. Sie verkrüppelt den Arbeiter in eine Abnormität, indem sie sein Detailgeschick treibhausmäßig fördert durch Unterdrückung einer Welt von produktiven Trieben und Anlagen, wie man in den La-Plata-Staaten ein ganzes Tier abschlachtet, um sein Fell oder seinen Talg zu erbeuten. Die besondern Teilarbeiten werden nicht nur unter verschiedene Individuen verteilt, sondern das Individuum selbst wird geteilt, in das automatische Triebwerk einer Teilarbeit verwandelt⁶³ und die abgeschmackte Fabel des Menenius Agrippa verwirklicht, die einen Menschen als bloßes Fragment seines eignen Körpers darstellt.⁶⁴

⁶³ Dugald Stewart nennt die Manufakturarbeiter „lebende Automaten . . ., die für Teilarbeiten verwandt werden.“ (l.c. p. 318.)

⁶⁴ Bei den Korallen bildet jedes Individuum in der Tat den Magen für die ganze Gruppe. Es führt ihr aber Nahrungsstoff zu, statt wie der römische Patrizier ihn wegzuführen.

Wenn der Arbeiter ursprünglich seine Arbeitskraft an das Kapital verkauft, weil ihm die materiellen Mittel zur Produktion einer Ware fehlen, versagt jetzt seine individuelle

it has been sold to capital. Its functions can be exercised only in an environment that exists in the workshop of the capitalist after the sale. By nature unfitted to make anything independently, the manufacturing laborer develops productive activity as a mere appendage of the capitalist's workshop.⁶⁵ As the chosen people bore in their features the sign manual of Jehovah, so division of labor brands the manufacturing workman as the property of capital.

⁶⁵ “L'ouvrier qui porte dans ses bras tout un métier, peut aller partout exercer son industrie et trouver des moyens de subsister: l'autre (the manufacturing laborer) n'est qu'un accessoire qui, séparé de ses confrères, n'a plus ni capacité, ni indépendance, et qui se trouve forcé d'accepter la loi qu'on juge à propos de lui imposer.” (Storch, l.c., Petersb. edit., 1815, t. I., p. 204.)

↑ The labor-power becomes really, not only economically, the property of capital because the individual laborer can not even use his labor-power otherwise. This is further developed in the machinery chapter 557:1/oo. This loss of use value also leads to a loss in exchange-value, lower wages.

Question 819 *How does the capitalistic division of labor brand the workman as the property of capital?*

482:1 The knowledge, the judgement, and the will, which, though in ever so small a degree, are practised by the independent peasant or handicraftsman, in the same way as the savage makes the whole art of war consist in the exercise of his personal cunning these faculties are now required only for the workshop as a whole. Intelligence in production expands in one direction, because it vanishes in many others. What is

Arbeitskraft selbst ihren Dienst, sobald sie nicht an das Kapital verkauft wird. Sie funktioniert nur noch in einem Zusammenhang, der erst nach ihrem Verkauf existiert, in der Werkstatt des Kapitalisten. Seiner natürlichen Beschaffenheit nach verunfähigt, etwas Selbständiges zu machen, entwickelt der Manufakturarbeiter produktive Tätigkeit nur noch als Zubehör zur Werkstatt des Kapitalisten.⁶⁵ Wie dem auserwählten Volk auf der Stirn geschrieben stand, daß es das Eigentum Jehovas, so drückt die Teilung der Arbeit dem Manufakturarbeiter einen Stempel auf, der ihn zum Eigentum des Kapitals brandmarkt.

⁶⁵ „Der Arbeiter, der ein ganzes Handwerk beherrscht, kann überall arbeiten und seinen Unterhalt finden: der andere“ (der Manufakturarbeiter) „ist nur noch ein Zubehör und besitzt, von seinen Arbeitskollegen getrennt, weder Befähigung noch Unabhängigkeit und ist deshalb gezwungen, das Gesetz anzunehmen, das man für richtig hält, ihm aufzuerlegen.“ (Storch, l.c., édit. Petersb. 1815, t. I, p. 204.)

382:1 Die Kenntnisse, die Einsicht und der Wille, die der selbständige Bauer oder Handwerker, wenn auch auf kleinem Maßstab, entwickelt, wie der Wilde alle Kunst des Kriegs als persönliche List ausübt, sind jetzt nur noch für das Ganze der Werkstatt erheischt. Die geistigen Potenzen der Produktion erweitern ihren Maßstab auf der einen Seite, weil sie auf vielen Seiten verschwinden. Was die Teilarbeiter verlie-

lost by the detail laborers, is concentrated in the capital that employs them.⁶⁶ It is a result of the division of labor in manufactures, that the laborer is brought face to face with the intellectual potencies of the material process of production, as the property of another, and as a ruling power. This separation begins in simple co-operation, where the capitalist represents to the single workman, the oneness and the will of the associated labor. It is developed in manufacture which cuts down the laborer into a detail laborer. It is completed in modern industry, which makes science a productive force distinct from labor and presses it into the service of capital.⁶⁷

⁶⁶ A. Ferguson, l.c., p. 281: "The former may have gained what the other has lost."

⁶⁷ "The man of knowledge and the productive laborer come to be widely divided from each other, and knowledge, instead of remaining the handmaid of labor in the hand of the laborer to increase his productive powers ... has almost everywhere arrayed itself against labor ... systematically deluding and leading them (the laborers) astray in order to render their muscular powers entirely mechanical and obedient." (W. Thompson: "An Inquiry into the Principles of the Distribution of Wealth." London, 1824, p. 274.)

↑ Increase of social at the expense of a decrease of the individual productive forces. The mental part of the production process, which is no longer required for the detail laborer but only for the aggregate laborer as a whole, are separated from the workers and appropriated by capital. This process will be completed in great industry.

How the division of labor *depends* on the ignorance of the workers.

483:1 In manufacture, in order to make the collective laborer, and through him capital, rich in social productive power, each laborer must be made poor in individual productive powers.

ren, konzentriert sich ihnen gegenüber im Kapital.⁶⁶ Es ist ein Produkt der manufakturmäßigen Teilung der Arbeit, ihnen die geistigen Potenzen des materiellen Produktionsprozesses als fremdes Eigentum und sie beherrschende Macht gegenüberzustellen. Dieser Scheidungsprozeß beginnt in der einfachen Kooperation, wo der Kapitalist den einzelnen Arbeitern gegenüber die Einheit und den Willen des gesellschaftlichen Arbeitskörpers vertritt. Er entwickelt sich in der Manufaktur, die den Arbeiter zum Teilarbeiter verstümmelt. Er vollendet sich in der großen Industrie, welche die Wissenschaft als selbständige Produktionspotenz von der Arbeit trennt und in den Dienst des Kapitals preßt.⁶⁷

⁶⁶ A. Ferguson, l.c. p. 281: „Der eine mag gewonnen haben, was der andere verloren hat.“

⁶⁷ „Der Mann des Wissens und der produktive Arbeiter sind weit voneinander getrennt, und die Wissenschaft, statt in der Hand des Arbeiters seine eignen Produktivkräfte für ihn selbst zu vermehren, hat sich fast überall ihm gegenübergestellt ... Kenntnis wird ein Instrument, fähig, von der Arbeit getrennt und ihr entgegengesetzt zu werden.“ (W. Thompson, „An Inquiry into the Principles of the Distribution of Wealth“, London 1824, p. 274.)

383:1–3 In der Manufaktur ist die Bereicherung des Gesamtarbeiters und daher des Kapitals an gesellschaftlicher Produktivkraft bedingt durch die Verarmung des Arbeiters an individuellen Produktivkräften.

"Ignorance is the mother of industry as well as of superstition. Reflection and fancy are subject to err; but a habit of moving the hand or the foot is independent of either. Manufactures, accordingly, prosper most where the mind is least consulted, and where the workshop may ... be considered as an engine, the parts of which are men."⁶⁸

As a matter of fact, some few manufacturers in the middle of the 18th century preferred, for certain operations that were trade secrets, to employ half-idiotic persons.⁶⁹

⁶⁸ A. Ferguson, l.c., p. 280.

⁶⁹ J. D. Tuckett: "A History of the Past and Present State of the Laboring Population." Lond., 1846.

↓ How the division of labor *causes* the crippling of body and mind. The quote of Garnier illustrates that the ruling class does not want to remedy this, since it depends on it.

483:2 "The understandings of the greater part of men," says Adam Smith, "are necessarily formed by their ordinary employments. The man whose whole life is spent in performing a few simple operations ... has no occasion to exert his understanding ... He generally becomes as stupid and ignorant as it is possible for a human creature to become."

After describing the dullness of the detail laborer he goes on:

"The uniformity of his stationary life naturally corrupts the courage of his mind ... It corrupts even the activity of his body and renders him incapable of exerting his strength with vigour and perseverance in any other employments than that to which he has been bred. His dexterity at his own particular trade seems in this manner to be acquired at the expense of his intellectual, social, and martial virtues. But in every improved and civilised society, this is the state into which the laboring poor, that is, the great body of the people, must necessarily

„Die Unwissenheit ist die Mutter der Industrie wie des Aberglaubens. Nachdenken und Einbildungskraft sind den Irrtum unterworfen; aber die Gewohnheit, den Fuß oder die Hand zu bewegen, hängt weder von dem einen noch von der andren ab. Manufakturen prosperieren also da am meisten, wo man am meisten sich des Geistes entschlügt, in der Art, daß die Werkstatt als eine Maschine betrachtet werden kann, deren Teile Menschen sind.“⁶⁸

In der Tat wandten einige Manufakturen in der Mitte des 18. Jahrhunderts für gewisse einfache Operationen, welche aber Fabrikgeheimnisse bildeten, mit Vorliebe halbe Idioten an.⁶⁹

⁶⁸ A. Ferguson, l.c. p. 280.

⁶⁹ J. D. Tuckett, „A History of the Past and Present State of the Labouring Population“, London 1846, v. I, p. 148.

383:4–6 „Der Geist der großen Mehrzahl der Menschen“, sagt A. Smith, „entwickelt sich notwendig aus und an ihren Alltagsverrichtungen. Ein Mensch, der sein ganzes Leben in der Verrichtung weniger einfacher Operationen verausgabt ... hat keine Gelegenheit, seinen Verstand zu üben ... Er wird im allgemeinen so stupid und unwissend, wie es für eine menschliche Kreatur möglich ist.“

Nachdem Smith den Stumpfsinn des Teilarbeiters geschildert, fährt er fort:

„Die Einförmigkeit seines stationären Lebens verdirbt natürlich auch den Mut seines Geistes ... Sie zerstört selbst die Energie seines Körpers und verunfähigt ihn, seine Kraft schwunghaft und ausdauernd anzuwenden, außer in der Detailbeschäftigung, wozu er herangezogen ist. Sein Geschick in seinem besondern Gewerbe scheint so erworben auf Kosten seiner intellektuellen, sozialen und kriegerischen Tugenden. Aber in jeder industriellen und zivilisierten Gesellschaft ist dies der Zustand, worin der arbeitende Arme (the la-

fall.”⁷⁰

⁷⁰ A. Smith: “Wealth of Nations,” Bk. v., ch. i, art. ii. Being a pupil of A. Ferguson who showed the disadvantageous effects of division of labor, Adam Smith was perfectly clear on this point. In the introduction to his work, where he *ex professo* praises division of labor, he indicates only in a cursory manner that it is the source of social inequalities. It is not till the 5th Book, on the Revenue of the State, that he reproduces Ferguson. In my “*Misère de la Philosophie*,” I have sufficiently explained the historical connexion between Ferguson, A. Smith, Lemontey, and Say, as regards their criticisms of Division of Labor, and have shown, for the first time, that Division of Labor as practised in manufactures, is a specific form of the capitalist mode of production.

483:1 For preventing the complete deterioration of the great mass of the people by division of labor, A. Smith recommends education of the people by the State, but prudently, and in homeopathic doses. G. Garnier, his French translator and commentator, who, under the first French Empire, quite naturally developed into a senator, quite as naturally opposes him on this point. Education of the masses, he urges, violates the first law of the division of labor, and with it

“our whole social system would be proscribed.” “Like all other divisions of labor,” he says, “that between hand labor and head labor”⁷¹ is more pronounced and decided in proportion as society (he rightly uses this word, for capital, landed property and their State) becomes richer. This division of labor, like every other, is an effect of past, and a cause of future progress ... ought the government then to work in opposition to this division of labor, and to hinder its natural course? Ought it to expend a part of the public money in the attempt to confound and blend together

bouring poor), d.h. die große Masse des Volks notwendig verfallen muß.”⁷⁰

⁷⁰ A. Smith, „Wealth of Nations“, b. V, ch. I, art. II. Als Schüler A. Fergusons, der die nachteiligen Folgen der Teilung der Arbeit entwickelt hatte, war A. Smith über diesen Punkt durchaus klar. Im Eingang seines Werks, wo die Teilung der Arbeit *ex professo* gefeiert wird, deutet er sie nur vorübergehend als Quelle der gesellschaftlichen Ungleichheiten an. Erst im 5. Buch über das Staatseinkommen reproduziert er Ferguson. Ich habe in „*Misère de la Philosophie*“ das Nötige über das historische Verhältnis von Ferguson, A. Smith, Lemontey und Say in ihrer Kritik der Teilung der Arbeit gegeben und dort auch zuerst die manufakturmäßige Teilung der Arbeit als spezifische Form der kapitalistischen Produktionsweise dargestellt. (l.c. p. 122 sq.)

384:1–2 Um die aus der Teilung der Arbeit entspringende völlige Verkümmern der Volksmasse zu verhindern, empfiehlt A. Smith Volksunterricht von Staats wegen, wenn auch in vorsichtig homöopathischen Dosen. Konsequenter polemisiert dagegen sein französischer Übersetzer und Kommentator, G. Garnier, der sich unter dem ersten französischen Kaisertum naturgemäß zum Senator entpuppte. Volksunterricht verstoße wider die ersten Gesetze der Teilung der Arbeit und mit demselben

„proskribiere man unser ganzes Gesellschaftssystem“. „Wie alle andren Teilungen der Arbeit“, sagte er, „wird die zwischen Handarbeit und Verstandesarbeit“⁷¹ ausgesprochener und entschiedener im Maße, wie die Gesellschaft“ (er wendet richtig diesen Ausdruck an für das Kapital, das Grundeigentum und ihren Staat) „reicher wird. Gleich jeder andren ist diese Teilung der Arbeit eine Wirkung vergangener und eine Ursache künftiger Fortschritte ... Darf die Regierung denn dieser Teilung der Arbeit entgegenwirken und sie in ihrem naturgemäßen Gang aufhalten? Darf sie einen Teil

two classes of labor, which are striving after division and separation?”⁷²

⁷¹ Ferguson had already said, l.c., p. 281: “And thinking itself, in this age of separations, may become a peculiar craft.”

⁷² G. Garnier, vol. V. of his translation of A. Smith, pp. 4–5.

Concluding remarks pointing out the exploitative character of this kind of division of labor.

484:2–485:0 Some crippling of body and mind is inseparable even from division of labor in society as a whole. Since, however, manufacture carries this social separation of branches of labor much further, and also, by its peculiar division, attacks the individual at the very roots of his life, it is the first to afford the materials for, and to give a start to, industrial pathology.⁷³

Now a quote:

“To subdivide a man is to execute him, if he deserves the sentence, to assassinate him if he does not ... The subdivision of labor is the assassination of a people.”⁷⁴

⁷³ Ramazzini, professor of practical medicine at Padua, published in 1713 his work “*De morbis artificum*,” which was translated into French 1781, reprinted 1841 in the “*Encyclopédie des Sciences Médicales*. 7me Dis. Auteurs Classiques.” The period of Modern Mechanical Industry has, of course, very much enlarged his catalogue of labor’s diseases. See “*Hygiène physique et morale de l’ouvrier dans les grandes villes en général et dans la ville de Lyon en particulier*. Par le Dr. A. L. Fonteret, Paris, 1858,” and “*Die Krankheiten, welche verschiedenen Ständen, Altern und Geschlechtern eigenthümlich sind*. 6 Vols. Ulm, 1860,” and others. In 1854 the Soci-

der Staatseinnahme zum Versuch verwenden, zwei Klassen von Arbeit, die ihre Teilung und Trennung erstreben, zu verwirren und zu vermischen?”⁷²

⁷¹ Ferguson sagt bereits l.c. p. 281: „Und das Denken selbst kann in diesem Zeitalter der Arbeitsteilungen zu einem besonderen Gewerbe werden.“

⁷² G. Garnier, t. V seiner Übersetzung, p. 4–5.

384:3–385:1 Eine gewisse geistige und körperliche Verkrüppelung ist unzertrennlich selbst von der Teilung der Arbeit im ganzen und großen der Gesellschaft. Da aber die Manufakturperiode diese gesellschaftliche Zerspaltung der Arbeitszweige viel weiter führt, andererseits erst mit der ihr eigentümlichen Teilung das Individuum an seiner Lebenswurzel ergreift, liefert sie auch zuerst das Material und den Anstoß zur industriellen Pathologie.⁷³

„Einen Menschen unterabteilen, heißt ihn hinrichten, wenn er das Todesurteil verdient, ihn meuchelmorden, wenn er es nicht verdient. Die Unterabteilung der Arbeit ist der Meuchelmord eines Volks.“⁷⁴

⁷³ Ramazzini, Professor der praktischen Medizin zu Padua, veröffentlichte 1713 sein Werk „*De morbis artificum*“, 1777 ins Französische übersetzt, wieder abgedruckt 1841 in der „*Encyclopédie des Sciences Médicales*. 7me Div. Auteurs Classiques“. Die Periode der großen Industrie hat seinen Katalog der Arbeiterkrankheiten natürlich sehr vermehrt. Siehe u.a. „*Hygiène physique et morale de l’ouvrier dans les grandes villes en général, et dans la ville de Lyon en particulier*“. Par le Dr. A. L. Fonteret, Paris 1858, und [R. H. Rohatzensch.] „*Die Krankheiten, welche verschiedenen Ständen, Altern und Geschlechtern eigenthümlich sind*“, 6 Bände, Ulm

ety of Arts appointed a Commission of Inquiry into industrial pathology. The list of documents collected by this commission is to be seen in the catalogue of the "Twickenham Economic Museum." Very important are the official "Reports on Public Health." See also Eduard Reich, M. D., "Ueber die Entartung des Menschen," Erlangen, 1868.

⁷⁴ (D. Urquhart: "Familiar Words." Lond., 1855, p. 119.) Hegel held very heretical views on division of labor. In his "Rechtsphilosophie" he says: "By well educated men we understand in the first instance, those who can do everything that others do."

1840. Im Jahre 1854 ernannte die Society of Arts eine Untersuchungskommission über industrielle Pathologie. Die Liste der von dieser Kommission gesammelten Dokumente findet man im Katalog des „Twickenham Economic Museum“. Sehr wichtig die offiziellen „Reports on Public Health“. Sieh auch Eduard Reich, M.D., „Ueber die Entartung des Menschen“, Erlangen 1868.

⁷⁴ „To subdivide a man is to execute him, if he deserves the sentence, to assassinate him, if he does not ... the subdivision of labour is the assassination of a people.“ (D. Urquhart, „Familiar Words“, London 1855, p. 119.) Hegel hatte sehr ketzerische Ansichten über die Teilung der Arbeit. „Unter gebildeten Menschen kann man zunächst solche verstehen, die alles machen können, was andre tun“, sagt er in seiner Rechtsphilosophie.

14.5.c. [Division of Labor as a Means of Exploitation]

This is an insert which partly repeats things developed before. Characterization of division of labor in manufacture as a means of exploitation, contrast to earlier *social* division of labor.

↓ Origin of manufacture.

485:1 Co-operation based on division of labor, in other words, manufacture, commences as a spontaneous formation. So soon as it attains some consistence and extension, it becomes the recognised methodical and systematic form of capitalist production. History shows how the division of labor peculiar to manufacture, strictly so called, acquires the best adapted form at first by experience, as it were behind the backs of the actors, and then, like the guild handicrafts, strives to hold fast that form when once found, and here and there succeeds in keeping it for centuries. Any alteration in this form, except in trivial matters, is solely owing to a revolution in the instruments of labor. Modern manufacture wherever it arises I do not here allude to

385:2 Die auf Teilung der Arbeit beruhende Kooperation oder die Manufaktur ist in ihren Anfängen ein naturwüchsiges Gebild. Sobald sie einige Konsistenz und Breite des Daseins gewonnen, wird sie zur bewußten, planmäßigen und systematischen Form der kapitalistischen Produktionsweise. Die Geschichte der eigentlichen Manufaktur zeigt, wie die ihr eigentümliche Teilung der Arbeit zunächst erfahrungsmäßig, gleichsam hinter dem Rücken der handelnden Personen, die sachgemäßen Formen gewinnt, dann aber, gleich dem zünftigen Handwerke, die einmal gefundene Form traditionell festzuhalten strebt und in einzelnen Fällen jahrhundertlang festhält. Ändert sich diese Form, so, außer in Nebendingen, immer nur infolge einer Re-

modern industry based on machinery either finds the disjecta membra poetae ready to hand, and only waiting to be collected together, as is the case in the manufacture of clothes in large towns, or it can easily apply the principle of division, simply by exclusively assigning the various operations of a handicraft (such as book-binding) to particular men. In such cases, a week's experience is enough to determine the proportion between the numbers of the hands necessary for the various functions.⁷⁵

⁷⁵ The simple belief in the inventive genius exercised a priori by the individual capitalist in division of labor, exists now-a-days only among German professors, of the stamp of Herr Roscher, who, to recompense the capitalist from whose Jovian head division of labor sprang ready formed, dedicates to him "various wages" (diverse Arbeitslöhne). The more or less extensive application of division of labor depends on length of purse, not on greatness of genius.

↓ Productive forces developed in manufacture are used for production of relative surplus-value, exploitation.

486:1 By decomposition of handicrafts, by specialisation of the instruments of labor, by the formation of detail laborers, and by grouping and combining the latter into a single mechanism, division of labor in manufacture creates a qualitative gradation, and a quantitative proportion in the social process of production; it consequently creates a definite organisation of the labor of society, and thereby develops at the same time new productive forces in the society. As a specific capitalist form of the social process of production—and under the given condi-

tion der Arbeitsinstrumente. Die moderne Manufaktur—ich spreche hier nicht von der auf Maschinerie beruhenden großen Industrie—findet entweder, wie z.B. die Kleidermanufaktur, in den großen Städten, wo sie entsteht, die disjecta membra poetae bereits fertig vor und hat sie nur aus ihrer Zerstreuung zu sammeln, oder das Prinzip der Teilung liegt auf flacher Hand, indem einfach die verschiedenen Verrichtungen der handwerksmäßigen Produktion (z.B. beim Buchbinden) besondern Arbeitern ausschließlich angeeignet werden. Es kostet noch keine Woche Erfahrung, in solchen Fällen die Verhältniszahl zwischen den für jede Funktion nötigen Händen zu finden.⁷⁵

⁷⁵ Der gemüthliche Glaube an das Erfindungs-genie, das der einzelne Kapitalist in der Teilung der Arbeit a priori ausübe, findet sich nur noch bei deutschen Professoren, wie Herrn Roscher z.B., der dem Kapitalisten, aus dessen Jupiterhaupt die Teilung der Arbeit fertig hervorspringe, zum Dank „diverse Arbeitslöhne“ widmet. Die größere oder geringere Anwendung der Teilung der Arbeit hängt von der Länge der Börse ab, nicht von der Größe des Genies.

386:1 Die manufakturmäßige Teilung der Arbeit schafft durch Analyse der handwerksmäßigen Tätigkeit, Spezifizierung der Arbeitsinstrumente, Bildung der Teilarbeiter, ihre Gruppierung und Kombination in einem Gesamtmechanismus die qualitative Gliederung und quantitative Proportionalität gesellschaftlicher Produktionsprozesse, also eine bestimmte Organisation gesellschaftlicher Arbeit und entwickelt damit zugleich neue, gesellschaftliche Produktivkraft der Arbeit. Als spezifisch kapitalistische Form des gesellschaftlichen

tions, it could not develop under any other form than the capitalistic one—manufacture is but a particular method of begetting relative surplus-value, or of augmenting at the expense of the laborer the self-expansion of capital usually called social wealth, “Wealth of Nations,” etc. It increases the social productive power of labor, not only for the benefit of the capitalist instead of for that of the laborer, but it does this by crippling the individual laborers. It creates new conditions for the lordship of capital over labor. If, therefore, on the one hand, it presents itself historically as a progress and as a necessary phase in the economic development of society, on the other hand, it is a refined and civilised method of exploitation.

By contrast: the *social* division of labor in antiquity serves to improve the quality of product and capability of producer, not an instrument of exploitation!

486:2/000 Political Economy, which as an independent science, first sprang into being during the period of manufacture, views the social division of labor only from the standpoint of manufacture,⁷⁶ and sees in it only the means of producing more commodities with a given quantity of labor, and, consequently, of cheapening commodities and hurrying on the accumulation of capital. In most striking contrast with this accentuation of quantity and exchange-value, is the attitude of the writers of classical antiquity, who hold exclusively by quality and use-value.⁷⁷ In consequence of the separation of the social branches of production, commodities are better made, the various bents and talents of men select a suitable field,⁷⁸ and without some restraint no important results can be obtained anywhere.⁷⁹

Produktionsprozesses—und auf den vorgefundnen Grundlagen konnte sie sich nicht anders als in der kapitalistischen Form entwickeln—ist sie nur eine besondere Methode, relativen Mehrwert zu erzeugen oder die Selbstverwertung des Kapitals—was man gesellschaftlichen Reichtum, „Wealth of Nations“ usw. nennt—auf Kosten der Arbeiter zu erhöh'n. Sie entwickelt die gesellschaftliche Produktivkraft der Arbeit nicht nur für den Kapitalisten, statt für den Arbeiter, sondern durch die Verkrüppelung des individuellen Arbeiters. Sie produziert neue Bedingungen der Herrschaft des Kapitals über die Arbeit. Wenn sie daher einerseits als historischer Fortschritt und notwendiges Entwicklungsmoment im ökonomischen Bildungsprozeß der Gesellschaft erscheint, so andererseits als ein Mittel zivilisierter und raffinierter Exploitation.

386:2/000 Die politische Ökonomie, die als eigne Wissenschaft erst in der Manufakturperiode aufkommt, betrachtet die gesellschaftliche Teilung der Arbeit überhaupt nur vom Standpunkt der manufakturmäßigen Teilung der Arbeit⁷⁶, als Mittel, mit demselben Quantum Arbeit mehr Ware zu produzieren, daher die Waren zu verwohlfeilern und die Akkumulation des Kapitals zu beschleunigen. Im strengsten Gegensatz zu dieser Akzentuierung der Quantität und des Tauschwerths halten sich die Schriftsteller des klassischen Altertums ausschließlich an Qualität und Gebrauchswert.⁷⁷ Infolge der Scheidung der gesellschaftlichen Produktionszweige werden die Waren besser gemacht, die verschiednen Triebe und Talente der Menschen wählen sich entsprechende Wirkungssphären,⁷⁸ und ohne Be-

Hence both product and producer are improved by division of labor. If the growth of the quantity produced is occasionally mentioned, this is only done with reference to the greater abundance of use-values. There is not a word alluding to exchange-value or to the cheapening of commodities. This aspect, from the standpoint of use-value alone, is taken as well by Plato,⁸⁰ who treats division of labor as the foundation on which the division of society into classes is based, as by Xenophon,⁸¹ who with characteristic bourgeois instinct, approaches more nearly to division of labor within the workshop. Plato's Republic, in so far as division of labor is treated in it, as the formative principle of the State, is merely the Athenian idealisation of the Egyptian system of castes, Egypt having served as the model of an industrial country to many of his contemporaries also, amongst others to Isocrates,⁸² and it continued to have this importance to the Greeks of the Roman Empire.⁸³

⁷⁶ The older writers, like Petty and the anonymous author of “Advantages of the East India Trade,” bring out the capitalist character of division of labor as applied in manufacture more than A. Smith does.

⁷⁷ Amongst the moderns may be excepted a few writers of the 18th century, like Beccaria and James Harris, who with regard to division of labor almost entirely follow the ancients. Thus, Beccaria: “Ciascuno prova coll'esperienza, che applicando la mano e l'ingegno sempre allo stesso genere di opere e di prodotte, egli più facili, più abbondanti e migliori ne traca risultati, di quello che se ciascuno isolatamente le cose tutte a se necessarie soltanto facesse . . . Dividendosi in tal maniera per la comune e privata utilità gli uomini in varie classi e condizioni.” (Ce-

schränkung ist nirgendwo Bedeutendes zu leisten.⁷⁹ Also Produkt und Produzent werden verbessert durch die Teilung der Arbeit. Wird gelegentlich auch das Wachstum der Produktenmasse erwähnt, so nur mit Bezug auf die größte Fülle des Gebrauchswerts. Es wird mit keiner Silbe des Tauschwerths, der Verwohlfeilung der Waren gedacht. Dieser Standpunkt des Gebrauchswerts herrscht sowohl bei Plato⁸⁰, der die Teilung der Arbeit als Grundlage der gesellschaftlichen Scheidung der Stände behandelt, als bei Xenophon⁸¹, der mit seinem charakteristisch bürgerlichen Instinkt schon der Teilung der Arbeit innerhalb einer Werkstatt näher rückt. Platos Republik, soweit in ihr die Teilung der Arbeit als das gestaltende Prinzip des Staats entwickelt wird, ist nur atheniensische Idealisierung des ägyptischen Kastenwesens, wie Ägypten als industrielles Musterland auch andren seiner Zeitgenossen gilt, z.B. dem Isokrates⁸², und diese Bedeutung selbst noch für die Griechen der römischen Kaiserzeit behielt.⁸³

⁷⁶ Mehr als A. Smith fixieren ältere Schriftsteller, wie Petty, wie der anonyme Verfasser der „Advantages of the East-India Trade“ etc., den kapitalistischen Charakter der manufakturmäßigen Teilung der Arbeit.

⁷⁷ Ausnahme unter den Modernen bilden einige Schriftsteller des 18. Jahrhunderts, die in bezug auf Teilung der Arbeit fast nur den Alten nachsprechen, wie Beccaria und James Harris. So Beccaria: „Jedem bewiest seine eigne Erfahrung, daß, wenn man Hand und Geist immer derselben Art von Arbeiten und Produkten zuwendet, man diese leichter, reichlicher und besser herstellt, als wenn jeder einzeln für sich das, was er benötigt, herstellen würde . . . Auf diese Weise teilen sich die Menschen zum Nutzen der Allgemeinheit und zu ihrem eignen Vorteil

sare Beccaria: "Elementi di Econ. Publica," ed. Custodi, Parte Moderna, t. xi, p. 29.) James Harris, afterwards Earl of Malmesbury, celebrated for the "Diaries" of his embassy at St. Petersburg, says in a note to his "Dialogue Concerning Happiness," Lond., 1741, reprinted afterwards in "Three Treatises, 3 Ed., Lond., 1772: "The whole argument to prove society natural (i.e., by division of employments) ... is taken from the second book of Plato's Republic."

⁷⁸ Thus, in the Odyssey xiv., 228, ἄλλος γὰρ τ' ἄλλοισιν ἄνῃρ ἐπιτέρπεται ἔργοις and Archilochus quoted by Sextus Empiricus ἄλλος ἄλλω ἐπ' ἔργῳ καρδὴν ἰαίνεται in , [greek: "".

⁷⁹ Πολλ' ἡπίστατο ἔργα, κακῶς δ' ἡπίστατο πάντα' Every Athenian considered himself superior as a producer of commodities to a Spartan; for the latter in time of war had men enough at his disposal but could not command money, as Thucydides makes Pericles say in the speech inciting the Athenians to the Peloponnesian war: "σωμασι τε ἐτοιμότεροι οἱ αὐτουργοὶ τῶν ἀνθρώπων ἢ κρήμασι πολεμεῖν" (Thuc.: Bk I. para. 141.) Nevertheless, even with regard to material production, αὐταρχεία, as opposed to division of labor remained their ideal, παρ' ὧν γὰρ τὸ, εὖ, παρὰ τούτων καὶ τὸ αὐταρχες It should be mentioned here that at the date of the fall of the 30 Tyrants there were still not 5,000 Athenians without landed property.

⁸⁰ With Plato, division of labor within the community is a development from the multifarious requirements, and the limited capacities of individuals. The main point with him is, that the laborer must adapt himself to the work, not the work to the laborer; which latter is unavoidable, if he carries on several trades at once, thus making one or the other of them subordinate. Οὐ γὰρ ἐθέλει τὸ πραττόμενον τὴν τοῦ πράττοντος σχολὴν περιμένειν, ἀλλ' ἀνάγκη

in verschiedene Klassen und Stände." (Cesare Beccaria, „Elementi di Econ. Publica“, ed. Custodi, Part. Moderna, t. XI, p. 28.) James Harris, später Earl of Malmesbury, berühmt durch die „Diaries“ über seine Gesandtschaft in Petersburg, sagt selbst in einer Note zu seinem „Dialogue concerning Happiness“, London 1741, später wieder abgedruckt in „Three Treatises etc.“, 3. ed., Lond. 1772: „Der ganze Beweis dafür, daß die Gesellschaft etwas Natürliches ist“ (nämlich durch die „Teilung der Beschäftigungen“), „ist dem zweiten Buch von Platos „Republik“ entnommen.“

⁷⁸ So in der Odyssee, XIV, 228: „Denn ein anderer Mann ergötzt sich auch an andren Arbeiten“ und Archilochus beim Sextus Empiricus: „Jeder erquickt seinen Sinn bei andrer Arbeit.“

⁷⁹ „Πολλ' ἡπίστατο ἔργα, κακῶς δ' ἡπίστατο πάντα“—Der Athener fühlte sich als Warenproduzent dem Spartaner überlegen, weil dieser im Krieg wohl über Menschen, nicht aber über Geld verfügen könne, wie Thukysides den Perikles sagen läßt in der Rede, worin er die Athener zum Peloponnesischen Krieg aufstachelte: „Mit ihren Körpern Krieg zu führen sind die Selbstwirtschaftenden eher bereit als mit Geld.“ (Thuk., I. I, c. 141.) Dennoch blieb ihr Ideal, auch in der materiellen Produktion, die αὐταρχεία, die der Teilung der Arbeit gegenübersteht, „denn bei diesen gibt es Wohlstand, bei jenen aber auch die Unabhängigkeit“. Man muß dabei erwägen, daß es noch zur Zeit des Sturzes der 30 Tyrannen keine 5000 Athener ohne Grundeigentum gab.

⁸⁰ Plato entwickelt die Teilung der Arbeit innerhalb des Gemeinwesens aus der Vielseitigkeit der Bedürfnisse und der Einseitigkeit der Anlagen der Individuen. Hauptgesichtspunkt bei ihm, daß der Arbeiter sich nach dem Werk richten müsse, nicht das Werk nach dem Arbeiter, was unvermeidlich, wenn er verschiedene Künste zugleich, also eine oder die andre als Nebenwerk treibe. „Denn die Arbeit will nicht warten auf die freie Zeit dessen, der sie macht, son-

τὸν πράττοντα τῷ πραττομένῳ ἐπακολουθεῖν μὴ ἐν παρέργου μέρει. Ἀνάγκη. Ἐκ δὲ τούτων πλείω τε ἕκαστα γίγνεται καὶ καλλίον καὶ ῥᾶον, ὅταν εἷς ἐν κατὰ φύσιν καὶ ἐν καιρῷ σχολὴν τῶν ἄλλων ἔγων, πράττη. (Rep. I. 2. Ed. Baiter, Orelli, etc.) So in Thucydides, I.c., c. 142: "Seafaring is an art like any other, and cannot, as circumstances require, be carried on as a subsidiary occupation; nay, other subsidiary occupations cannot be carried on alongside of this one." If the work, says Plato, has to wait for the laborer, the critical point in the process is missed and the article spoiled, ἔργου καιρὸν, διόλλυται' The same Platonic idea is found recurring in the protest of the English bleachers against the clause in the Factory Act that provides fixed mealtimes for all operatives. Their business cannot wait the convenience of the workmen, for "in the various operations of singeing, washing, bleaching, mangling, calendering, and dyeing, none of them can be stopped at a given moment without risk of damage ... to enforce the same dinner hour for all the workpeople might occasionally subject valuable goods to the risk of danger by incomplete operations." *Le platonisme où va-t-il se nicher!*

⁸¹ Xenophon says, it is not only an honour to receive food from the table of the King of Persia, but such food is much tastier than other food. "And there is nothing wonderful in this, for as the other arts are brought to special perfection in the great towns, so the royal food is prepared in a special way. For in the small towns the same man makes bedsteads, doors, ploughs, and tables: often, too, he builds houses into the bargain, and is quite content if he finds custom sufficient for his sustenance. It is altogether impossible for a man who does so many things to do them all well. But in the great towns, where each can find many buyers, one trade is sufficient to main-

ten der Arbeiter muß sich an die Arbeit halten, aber nicht in leichtfertiger Weise.—Dies ist notwendig.—Daraus folgt also, daß man mehr von allem verfertigt und sowohl schöner als auch leichter, wenn einer nur eine Sache macht, seiner natürlichen Begabung gemäß und zur richtigen Zeit, frei von andern Geschäften." („De Republica“, II, 2. ed., Baiter, Orelli etc.) Ähnlich bei Thukydides, I.c. c. 142: „Das Seewesen ist eine Kunst so sehr wie irgend etwas andres und kann nicht bei etwa vorkommenden Fällen als Nebenwerk betrieben werden, sondern vielmehr nichts andres neben ihm als Nebenwerk.“ Muß das Werk, sagt Plato, auf den Arbeiter warten, so wird oft der kritische Zeitpunkt der Produktion verpaßt und das Machwerk verdorben, ἔργου καιρὸν διόλλυται“. Dieselbe platonische Idee findet man wieder im Protest der englischen Bleichereibesitzer gegen die Klausel des Fabrikakts, die eine bestimmte Eßstunde für alle Arbeiter festsetzt. Ihr Geschäft könne sich nicht nach den Arbeitern richten, denn „von den verschiedenen Operationen des Absengens, Waschens, Bleichens, Mangels, Pressens und Färbens kann keine in einem bestimmten Augenblick ohne Gefahr der Schädigung abgebrochen werden ... Das Erzwingen derselben Essensstunde für alle Arbeiter kann gelegentlich wertvolle Güter dadurch in Gefahr bringen, daß der Arbeitsprozeß nicht beendet wird.“ *Le platonisme où va-t-il se nicher!*

⁸¹ Xenophon erzählt, es sei nicht nur ehrenvoll, Speisen von der Tafel des Perserkönigs zu erhalten, sondern diese Speisen seien auch viel schmackhafter als andre. „Und dies ist nichts Wunderbares, denn wie die übrigen Künste in den großen Städten besonders vervollkommen sind, ebenso werden die königlichen Speisen ganz eigens zubereitet. Denn in den kleinen Städten macht derselbe Bettstelle, Türe, Pflug, Tisch; oft baut er obendrein noch Häuser und ist zufrieden, wenn er selbst so eine für seinen Unterhalt ausreichende Kundschaft findet. Es ist rein unmöglich, daß ein Mensch, der so vielerlei treibt, alles gut mache. In den großen

tain the man who carries it on. Nay, there is often not even need of one complete trade, but one man makes shoes for men, another for women. Here and there one man gets a living by sewing, another by cutting out shoes; one does nothing but cut out clothes, another nothing but sew the pieces together. It follows necessarily then, that he who does the simplest kind of work, undoubtedly does it better than anyone else. So it is with the art of cooking.” (Xen. Cyrop. I. viii., c. 2.) Xenophon here lays stress exclusively upon the excellence to be attained in use-value, although he well knows that the gradations of the division of labor depend on the extent of the market.

⁸² He (Busiris) divided them all into special castes ... commanded that the same individuals should always carry on the same trade, for he knew that they who change their occupations become skilled in none; but that those who constantly stick to one occupation bring it to the highest perfection. In truth, we shall also find that in relation to the arts and handicrafts, they have outstripped their rivals more than a master does a bungler; and the contrivances for maintaining the monarchy and the other institutions of their State are so admirable that the most celebrated philosophers who treat of this subject praise the constitution of the Egyptian State above all others. (Isocrates, Busiris, c. 8.)

⁸³ Cf. Diodorus Siculus.

14.5.d. [Limitations of Division of Labor from Point of View of Capital]

Division of labor has limitations which do not yet make it the most adequate form of capitalist production, because it is still too much built on the basis of the earlier mode of production.

↓ Laborer: Since the skill of the laborer is still the basis of manufacture, resistance and insubordination of the skilled laborers:

Städten aber, wo jeder einzelne viele Käufer findet, genügt auch ein Handwerk, um seinen Mann zu nähren. Ja oft gehört dazu nicht einmal ein ganzes Handwerk, sondern der eine macht Mannsschuhe, der andre Weiberschuhe. Hier und da lebt einer bloß vom Nähen, der andre vom Zuschneiden der Schuhe; der eine schneidet bloß Kleider zu, der andre setzt die Stücke nur zusammen. Notwendig ist es nun, daß der Verrichter der einfachsten Arbeit sie unbedingt auch am besten macht. Ebenso steht's mit der Kochkunst.“ (Xen., „Cyrop.“, I. VIII, c. 2.) Die zu erzielende Güte des Gebrauchswerts wird hier ausschließlich fixiert, obgleich schon Xenophon die Stufenleiter der Arbeitsteilung vom Umfang des Markts abhängig weiß.

⁸² „Er“ (Busiris) „teilte alle in besondere Kasten ... befahl, daß immer die nämlichen die gleichen Geschäfte treiben sollten, weil er wußte, daß die, welche mit ihren Beschäftigungen wechseln, in keinem Geschäft gründlich werden; die aber, welche beständig bei denselben Beschäftigungen bleiben, jedes aufs vollendetste zustande bringen. Wirklich werden wir auch finden, daß sie in Beziehung auf Künste und Gewerbe ihre Rivalen mehr übertroffen haben als sonst der Meister den Stümper und in Beziehung auf die Einrichtung, wodurch sie die Königsherrschaft und übrige Staatsverfassung erhalten, so vortrefflich sind, daß die berühmten Philosophen, welche darüber zu sprechen unternehmen, die Staatsverfassung Ägyptens vor andren lobten.“ (Isokr., „Busiris“, c. 8.)

⁸³ cf. Diod. Sic.

489:1/o During the manufacturing period proper, i.e., the period during which manufacture is the predominant form taken by capitalist production, many obstacles are opposed to the full development of the peculiar tendencies of manufacture. Although manufacture creates, as we have already seen, a simple separation of the laborers into skilled and unskilled, simultaneously with their hierarchic arrangement in classes, yet the number of the unskilled laborers, owing to the preponderating influence of the skilled, remains very limited. Although it adapts the detail operations to the various degrees of maturity, strength, and development of the living instruments of labor, thus conducing to exploitation of women and children, yet this tendency as a whole is wrecked on the habits and the resistance of the male laborers. Although the splitting up of handicrafts lowers the cost of forming the workman, and thereby lowers his value, yet for the more difficult detail work, a longer apprenticeship is necessary, and, even where it would be superfluous, is jealously insisted upon by the workmen. In England, for instance, we find the laws of apprenticeship, with their seven years' probation, in full force down to the end of the manufacturing period; and they are not thrown on one side till the advent of Modern Industry. Since handicraft skill is the foundation of manufacture, and since the mechanism of manufacture as a whole possesses no framework, apart from the laborers themselves, capital is constantly compelled to wrestle with the insubordination of the workmen.

Now a quote:

“By the infirmity of human nature,” says friend Ure, “it happens that the more skilful the workman, the more self-willed and in-

389:1–2 Während der eigentlichen Manufakturperiode, d.h. der Periode, worin die Manufaktur die herrschende Form der kapitalistischen Produktionsweise, stößt die volle Ausführung ihrer eignen Tendenzen auf vielseitige Hindernisse. Obgleich sie, wie wir sahen, neben der hierarchischen Gliederung der Arbeiter eine einfache Scheidung zwischen geschickten und ungeschickten Arbeitern schafft, bleibt die Zahl der letzteren durch den überwiegenden Einfluß der erstren sehr beschränkt. Obgleich sie die Sonderoperationen dem verschiedenen Grad von Reife, Kraft und Entwicklung ihrer lebendigen Arbeitsorgane anpaßt und daher zu produktiver Ausbeutung von Weibern und Kindern drängt, scheitert diese Tendenz im großen und ganzen an den Gewohnheiten und dem Widerstand der männlichen Arbeiter. Obgleich die Zersetzung der handwerksmäßigen Tätigkeit die Bildungskosten und daher den Wert der Arbeiter senkt, bleibt für schwierigere Detailarbeit eine längere Erlernungszeit nötig und wird auch da, wo sie vom Überfluß, eifersüchtig von den Arbeitern aufrechterhalten. Wir finden z.B. in England die laws of apprenticeship mit ihrer siebenjährigen Lernzeit bis zum Ende der Manufakturperiode in Vollkraft und erst von der großen Industrie über Haufen geworfen. Da das Handwerksge- schick die Grundlage der Manufaktur bleibt und der in ihr funktionierende Gesamtmechanismus kein von den Arbeitern selbst unabhängiges objektives Skelett besitzt, ringt das Kapital beständig mit der Insubordination der Arbeiter.

„Die Schwäche der menschlichen Natur“, ruft Freund Ure aus, „ist so groß, daß der Arbeiter, je geschickter, desto eigenwilliger

tractable he is apt to become, and of course the less fit a component of a mechanical system in which ... he may do great damage to the whole.”⁸⁴

⁸⁴ Ure, I.c., p. 20.

Hence throughout the whole manufacturing period there runs the complaint of want of discipline among the workmen.⁸⁵ And had we not the testimony of contemporary writers, the simple facts, that during the period between the 16th century and the epoch of Modern Industry, capital failed to become the master of the whole disposable working-time of the manufacturing laborers, that manufactures are short-lived, and change their locality from one country to another with the emigrating or immigrating workmen, these facts would speak volumes. “Order must in one way or another be established,” exclaims in 1770 the oft-cited author of the “Essay on Trade and Commerce.” “Order,” re-echoes Dr. Andrew Ure 66 years later, “Order” was wanting in manufacture based on “the scholastic dogma of division of labor,” and “Arkwright created order.”

⁸⁵ This is more the case in England than in France, and more in France than in Holland.

Question 820 *Why is the manufacture based on the division of labor not yet the best form for capital to exploit labor? Why were the laborers in the manufactures rebellious?*

⇓ Means of production: Technical basis too narrow.

490:1 At the same time manufacture was unable, either to seize upon the production of society to its full extent, or to revolutionise that production to its very core. It towered up as an economic work of art, on the broad foundation of the town handicrafts, and of the rural domestic industries.

und schwieriger zu behandeln wird und folglich dem Gesamtmechanismus durch seine rappelköpfigen Launen schweren Schaden zufügt.“⁸⁴

⁸⁴ Ure, I.c. p. 20.

390:1 Durch die ganze Manufakturperiode läuft daher die Klage über den Disziplinmangel der Arbeiter.⁸⁵ Und hätten wir nicht die Zeugnisse gleichzeitiger Schriftsteller, die einfachen Tatsachen, daß es vom 16. Jahrhundert bis zur Epoche der großen Industrie dem Kapital mißlingt, sich der ganzen disponiblen Arbeitszeit der Manufakturarbeiter zu bemächtigen, daß die Manufakturen kurzlebig sind und mit der Ein- oder Auswanderung der Arbeiter ihren Sitz in dem einen Land verlassen und in dem anderen aufschlagen, würden Bibliotheken sprechen. „Ordnung muß auf die eine oder die andre Weise gestiftet werden“, ruft 1770 der wiederholt zitierte Verfasser des „Essay on Trade and Commerce“. Ordnung, hallt es 66 Jahre später zurück aus dem Mund des Dr. Andrew Ure, „Ordnung“ fehlte in der auf „dem scholastischen Dogma der Arbeit“ beruhenden Manufaktur, und „Arkwright schuf die Ordnung“.

⁸⁵ Das im Text Gesagte gilt viel mehr für England als für Frankreich und mehr für Frankreich als Holland.

390:2 Zugleich konnte die Manufaktur die gesellschaftliche Produktion weder in ihrem ganzen Umfang ergreifen noch in ihrer Tiefe umwälzen. Sie gipfelte als ökonomisches Kunstwerk auf der breiten Grundlage des städtischen Handwerks und der ländlich häuslichen Industrie. Ihre eigne en-

At a given stage in its development, the narrow technical basis on which manufacture rested, came into conflict with requirements of production that were created by manufacture itself.

But manufacture itself creates the way out of this impasse by producing—machinery. 490:2/o One of its most finished creations was the workshop for the production of the instruments of labor themselves, including especially the complicated mechanical apparatus then already employed.

A machine-factory, says Ure, “displayed the division of labor in manifold gradations the file, the drill, the lathe, having each its different workman in the order of skill.” (p. 21.)

This workshop, the product of the division of labor in manufacture, produced in its turn—machines. It is they that sweep away the handicraftsman’s work as the regulating principle of social production. Thus, on the one hand, the technical reason for the life-long annexation of the workman to a detail function is removed. On the other hand, the fetters that this same principle laid on the dominion of capital, fall away.

Question 821 *What is specific capitalistic about the division of labor in manufacture?*

This, of course, is a fitting transition to the next chapter.

ge technische Basis trat auf einem gewissen Entwicklungsgrad mit den von ihr selbst geschaffenen Produktionsbedürfnissen in Widerspruch.

But manufacture itself creates the way out of this impasse by producing—machinery.

390:3–5 Eins ihrer vollendetsten Gebäude war die Werkstatt zur Produktion der Arbeitsinstrumente selbst, und namentlich auch der bereits angewandten komplizierteren mechanischen Apparate.

„Ein solches Atelier“, sagt Ure, „bot dem Auge die Teilung der Arbeit in ihren mannigfachen Abstufungen. Bohrer, Meißel, Drechselbank hatten jede ihre eignen Arbeiter, hierarchisch gegliedert nach dem Grad ihrer Geschicklichkeit.“

Dies Produkt der manufakturmäßigen Teilung der Arbeit produzierte seinerseits—Maschinen. Sie heben die handwerksmäßige Tätigkeit als das regelnde Prinzip der gesellschaftlichen Produktion auf. So wird einerseits der technische Grund der lebenslangen Annexation des Arbeiters an eine Teilfunktion weggeräumt. Andererseits fallen die Schranken, welche dasselbe Prinzip der Herrschaft des Kapitals noch auferlegte.

15. Machinery and Modern Industry

15.1. The Development of Machinery

The first paragraph is an introduction to the whole chapter, not just the first section:

492:1 John Stuart Mill says in his “Principles of Political Economy”:

“It is questionable if all the mechanical inventions yet made have lightened the day’s toil of any human being.”⁸⁶

391:1–3 John Stuart Mill sagt in seinen „Prinzipien der politischen Ökonomie“:

„Es ist fraglich, ob alle bisher gemachten mechanischen Erfindungen die Tagesmühe irgendeines menschlichen Wesens erleichtert haben.“⁸⁶

↑ Despite this quote, it is not the purpose of chapter Fifteen to decide whether machines help lighten the day’s work for any human being. On the contrary, Marx thought this was the wrong question to ask. Machines are wonderful labor-saving devices. But this does not mean they were introduced for the purpose of saving labor for people. Instead, they were introduced in order to increase exploitation.

Marx’s critique of Mill is twofold. (1) In the footnote ↓, he re-formulates the aphorism in order to bring in the class dimension which Mill had left out:

⁸⁶ Mill should have said, “OF ANY HUMAN BEING NOT FED BY OTHER PEOPLE’S LABOR,” for, without doubt, machinery has greatly increased the number of well-to-do idlers.

⁸⁶ „It is questionable, if all the mechanical inventions yet made have lightened the day’s toil of any human being.“ Mill hätte sagen sollen, „of any human being not fed by other people’s labor“, denn die Maschinerie hat unstreitig die Zahl der vornehmen Müßiggänger sehr vermehrt.

↑ Yes machines save labor, but not for those operating the machines. Marx takes it as a generally known fact that machinery increases the number of “well-to-do idlers”; more about this in 572:3/o at end of section ??.

↓ (2) In the main text, Marx criticizes Mill for asking the wrong question:

That is, however, by no means the aim of the capitalistic application of machinery. Like every other increase in the productiveness of labour, the purpose of machinery is to cheapen commodities, and, by shortening that portion of the working-day, in which the laborer works for himself, to lengthen the other portion that he gives, without an

Solches ist jedoch auch keineswegs der Zweck der kapitalistisch verwandten Maschinerie. Gleich jeder andren Entwicklung der Produktivkraft der Arbeit soll sie Waren verwohlfeilern und den Teil des Arbeitstags, den der Arbeiter für sich selbst braucht, verkürzen, um den andren Teil seines Arbeitstags, den er dem Kapitalisten umsonst

equivalent, to the capitalist.

| gibt, zu verlängern.

↑ Marx juxtaposes here the immediate goal of the capitalist and the systemic function of the development of the productive forces. The immediate goal of the capitalist is a “cheapening” of the commodities—and Marx does not say this here but takes it as self-understood that a capitalist will of course do this only in order to increase of maintain profits. The second half of the sentence uses the theoretical result that higher profits without a lengthening of the work day can only come from a shortening of the part of the day the worker works for himself or herself. The capitalist is not necessarily aware of this, the capitalist is perhaps pursuing extra profits without understanding that the pursuit of extra surplus-value by many different capitalists will, behind their backs, lead to an increase of relative surplus-value for all. (The capitalist may not even know that his profits come from the unpaid labor of the workers.) The capitalist becomes here the unconscious agent for the in-built systemic tendency of capitalism to increase the exploitation of the workers.

↓ The production process of use-values in capitalism is at the same time a valorization process. Clearly, machines are a means of production, i.e., they assist in the production of use-values. The above abbreviated argument showed that machines are also a means in the valorization process:

In short, it is a means for producing surplus-value.

| Sie ist Mittel zur Produktion von Mehrwert.

Exam Question 823 *What is the purpose of the introduction of machinery under capitalism?*

The question whether and how the capitalist application of machinery achieves this purpose, and what the implications of this process are for the laborer, will be developed in the present chapter. ↓ In order to determine the proper starting point for this inquiry, Marx looks at the commonalities and differences between machinery and the manufactories based on division of labor:

492:2 In manufacture, the revolution in the mode of production has labor-power as its point of origin, and in modern industry the instruments of labor.

391:4 Die Umwälzung der Produktionsweise nimmt in der Manufaktur die Arbeitskraft zum Ausgangspunkt, in der großen Industrie das Arbeitsmittel.

↑ Both were technical innovations driven by the profit motive, but the division of labor in the manufactories is a development of the laborer himself and his work process, while machinery is a development of his tools. ↓ The question to be addressed in this first section is therefore:

Our first inquiry then is, how the instruments of labor are converted from tools into machines, or how a machine distinguishes itself from the implements of a handicraft?

Es ist also zunächst zu untersuchen, wodurch das Arbeitsmittel aus einem Werkzeug in eine Maschine verwandelt wird oder wodurch sich die Maschine vom Handwerksinstrument unterscheidet.

The “or,” as so often, connects two aspects of the same process: the first aspect sees it as historical forces at work, while the second aspect looks at the inner logic generating these forces. “Distinguish itself” does not mean here “how machinery is special” but “which are the real characteristics differentiating hand tools from machinery.” Marx is therefore looking for the real definition of machinery. The real definition of machinery and the historical origin of capitalist machinery take up the first section.

Question 824 *How does a machine distinguish itself from the implements of a handicraft?*

↓ Marx concludes these preliminary remarks with an interesting methodological disclaimer:

We are only concerned here with the grand and general characteristics; for epochs in the history of society are no more separated from each other by hard and fast lines of demarcation, than are geological epochs.

Es handelt sich hier nur um große, allgemeine Charakterzüge, denn abstrakt strenge Grenzl意思ien scheiden ebensowenig die Epochen der Gesellschafts- wie der Erdgeschichte.

Große, allgemeine Charakterzüge should not be translated with “striking,” as the Moore-Aveling

translation does. The basic regularities are likely to be enduring but, exactly because of

their persistence, are not necessarily perceived as striking.

15.1.a. [Difference between Tool and Machine]

Now it starts. Marx first looks at the capitalist production process as a labor process, and in section 15.2 he will discuss the valorization aspect of it. Marx’s first project is the development of a real definition of machinery. ↓ For this, he examines two common definitions of a machine from the literature:

492:3/o Mathematicians and mechanicians, and in this they are followed by a few English economists, call a tool a simple machine, and a machine a complex tool. They see no essential difference between tool and machine, and even give the name of machine to the simple mechanical powers, the lever, the inclined plane, the screw, the wedge, etc.⁸⁷

391:5/o Mathematiker und Mechaniker—und man findet dies hier und da von englischen Ökonomen wiederholt—erklären das Werkzeug für eine einfache Maschine und die Maschine für ein zusammengesetztes Werkzeug. Sie sehn hier keinen wesentlichen Unterschied und nennen sogar die einfachen mechanischen Potenzen, wie Hebel, schiefe Ebene, Schraube, Keil usw., Maschinen.⁸⁷

⁸⁷ See, for instance, Hutton: “Course of Mathematics.”

Although it is undeniable that machines are composed of these simple mechanical elements, Marx rejects this explanation:

It is true, every machine is a combination of those simple powers, no matter how

In der Tat besteht jede Maschine aus jenen einfachen Potenzen, wie immer verkleidet

⁸⁷ Sieh z.B. Huttons „Course of Mathematics“.

they may be disguised. From the economic standpoint however this explanation is useless, because it lacks the historical element.

The engineering explanation is useless for an economist—because “it lacks the historical element,” i.e., it does not give the specific reasons that led to the development of machinery. A few paragraphs later, in 494:1, Marx gives an analysis in which the historical element is included.

Exam Question 826 *Why is the definition that a machine is just a complex tool, and a tool a simple machine, not useful for an economist?*

↓ The next explanation cannot be dismissed as quickly for methodological reasons. It has some merit, but we will see later that it is still not quite correct. This definition recognizes that machinery replaces the workers, but only the worker in his function as motive power, not the worker as the operator of the tools. Marx will deal at length with this distinction later in this section:

One also finds the following explanation of the difference between tool and machine: in the case of a tool, man is the motive power, while the motive power of a machine is something different from man, as, for instance, an animal, water, wind, and so on.⁸⁸

Andrerseits sucht man den Unterschied zwischen Werkzeug und Maschine darin, daß beim Werkzeug der Mensch die Bewegungskraft, bei der Maschine eine von der menschlichen verschiedene Naturkraft, wie Tier, Wasser, Wind usw.⁸⁸

Marx does not say here whether or to what extent he agrees with this definition. He sends mixed signals. On the one hand, footnote 88 says that the book containing this definition is “in many respects to be recommended.”

⁸⁸ “From this point of view we may draw a sharp line of distinction between a tool and a machine: spades, hammers, chisels, etc., combinations of levers and of screws, in all of which, no matter how complicated they may be in other respects, man is the motive power, ... all this falls under the idea of a tool; but the plough, which is drawn by animal power, and wind-mills, etc., must be classed among machines.” (Wilhelm Schulz: “Die Bewegung der Produktion.” Zürich, 1843, p. 38.) In many respects a book to be recommended.

⁸⁸ „Von diesem Gesichtspunkt aus läßt sich denn auch eine scharfe Grenze zwischen Werkzeug und Maschine ziehen: Spaten, Hammer, Meißel usw., Hebel- und Schraubenwerke, für welche, mögen sie übrigens noch so künstlich sein, der Mensch die bewegende Kraft ist ... dies alles fällt unter den Begriff des Werkzeugs; während der Pflug mit der ihn bewegenden Tierkraft, Wind- usw. Mühlen zu den Maschinen zu zählen sind.“ (Wilhelm Schulz, „Die Bewegung der Produktion“, Zürich 1843, p. 38.) Eine in mancher Hinsicht lobenswerte Schrift.

↓ Despite these positive remarks in the footnote, the main text brings considerations making it questionable that this is the right definition:

According to this, a plough drawn by oxen, which is a contrivance common to the most different epochs, would be a machine, while Claussen’s circular loom, which, worked by

Danach wäre ein mit Ochsen bespannter Pflug, der den verschiedensten Produktions-epochen angehört, eine Maschine, Claussens Circular Loom, der von der Hand eines

a single laborer, weaves 96,000 picks per minute, would be a mere tool. Nay, this very loom, though a tool when worked by hand, would, if worked by steam, be a machine. And since the application of animal power is one of man's earliest inventions, production by machinery would have preceded production by handicrafts.

We will see later that the replacement of the human as a power source is not the real definition of machinery; its real definition is the replacement of the human as the one who holds and operates the tools that manipulate the object of labor.

Marx will also argue that, once the human as operator of tools has been replaced, also his replacement as a power source is imminent. The error of the present definition is therefore that it does not capture the *main* driving force leading to the industrial revolution, but uses a secondary criterion instead, which is a consequence of this main driving force. At the end of the paragraph Marx anticipates the right definition of machinery, but he will develop it later in more detail:

When in 1735, John Wyatt brought out his spinning machine, and began the industrial revolution of the 18th century, not a word did he say about an ass driving it instead of a man, and yet this part fell to the ass. He described it as a machine "to spin without fingers."⁸⁹

↑ We will see shortly that the criterion "to spin without fingers" resonates with Marx's real definition of machinery.

Footnote 89 gives more historical details, leading to a general plea how important it would be to write a history of technology.

⁸⁹ Before his time, spinning machines, although very imperfect ones, had already been used, and Italy was probably the country of their first appearance. A critical history of technology would show how little any of the inventions of the 18th century are the work of a single individual. Hitherto there is no such book. Darwin has interested us in the history of Nature's Technology, i.e., in the formation of the organs of plants and animals, which organs serve as instruments of production for sustaining life. Does not the history of the productive organs of man, of or-

einigen Arbeiters bewegt, 96 000 Maschen in einer Minute verfertigt, ein bloßes Werkzeug. Ja, derselbe loom wäre Werkzeug, wenn mit der Hand, und Maschine, wenn mit Dampf bewegt. Da die Anwendung von Tierkraft eine der ältesten Erfindungen der Menschheit, ginge in der Tat die Maschinenproduktion der Handwerksproduktion voraus.

Als John Wyatt 1735 seine Spinnmaschine und mit ihr die industrielle Revolution des 18. Jahrhunderts ankündigte, erwähnte er mit keinem Wort, daß statt eines Menschen ein Esel die Maschine treibe, und dennoch fiel diese Rolle dem Esel zu. Eine Maschine, „um ohne Finger zu spinnen“, lautete sein Programm.⁸⁹

⁸⁹ Schon vor ihm wurden, wenn auch sehr unvollkommene, Maschinen zum Vorspinnen angewandt, wahrscheinlich zuerst in Italien. Eine kritische Geschichte der Technologie würde überhaupt nachweisen, wie wenig irgendeine Erfindung des 18. Jahrhunderts einem einzelnen Individuum gehört. Bisher existiert kein solches Werk. Darwin hat das Interesse auf die Geschichte der natürlichen Technologie gelenkt, d.h. auf die Bildung der Pflanzen- und Tierorgane als Produktionsinstrumente für das Leben der Pflanzen und Tiere. Verdient die Bildungsgeschichte der

gans that are the material basis of all social organisation, deserve equal attention? And would not such a history be easier to compile, since, as Vico says, human history differs from natural history in this, that we have made the former, but not the latter?

Not only would such an inquiry be easier than Darwin's work, it would also be extremely important for understanding society:

^{89 ctd} Technology discloses man's mode of dealing with Nature, the process of production by which he sustains his life, and thereby also lays bare the mode of formation of his social relations, and of the mental conceptions that flow from them.

↑ The central role assigned to the relations *in* production is also apparent in Marx's wording in chapter One, 172:1/o.

The second half of footnote 89 criticizes the abstract physicalist materialism in favor of the truly materialist and therefore scientific method. Marx switches somewhat abruptly from technology to religion in order to give an Achilles heel critique: even in religion a materialist approach is necessary, one which not only deciphers the content of the historical forms but also derives the origin of these forms themselves.

^{89 ctd} Every history of religion, even, that fails to take account of this material basis, is uncritical. It is, in reality, much easier to discover by analysis the earthly core of the misty creations of religion, than, conversely, it is, to develop from the actual relations of life the corresponding celestialized forms of those relations. The latter method is the only materialistic, and therefore the only scientific one. The weak points in the abstract materialism of natural science, a materialism that excludes history and its process, are at once evident from the abstract and ideological conceptions of its spokespeople, whenever they venture beyond the bounds of their own speciality.

produktiven Organe des Gesellschaftsmenschen, der materiellen Basis jeder besondern Gesellschaftsorganisation, nicht gleiche Aufmerksamkeit? Und wäre sie nicht leichter zu liefern, da, wie Vico sagt, die Menschengeschichte sich dadurch von der Naturgeschichte unterscheidet, daß wir die eine gemacht und die andre nicht gemacht haben?

^{89 ctd} Die Technologie enthüllt das aktive Verhalten des Menschen zur Natur, den unmittelbaren Produktionsprozeß seines Lebens, damit auch seiner gesellschaftlichen Lebensverhältnisse und der ihnen entquellenden geistigen Vorstellungen.

^{89 ctd} Selbst alle Religionsgeschichte, die von dieser materiellen Basis abstrahiert, ist—unkritisch. Es ist in der Tat viel leichter, durch Analyse den irdischen Kern der religiösen Nebelbildungen zu finden, als umgekehrt, aus den jedesmaligen wirklichen Lebensverhältnissen ihre verhimmelten Formen zu entwickeln. Die letztere ist die einzig materialistische und daher wissenschaftliche Methode. Die Mängel des abstrakt naturwissenschaftlichen Materialismus, der den geschichtlichen Prozeß ausschließt, ersieht man schon aus den abstrakten und ideologischen Vorstellungen seiner Wortführer, sobald sie sich über ihre Spezialität hinauswagen.

Question 827 Which approach to religion is in Marx's view uncritical, and which approach, used much more rarely, is the only scientific one? What does this analogy about religion say about how machinery should be investigated?

15.1.b. [The real definition of machinery]

Now Marx begins his own analysis of what a machine is and how it differs from a handicraft tool. In order to arrive at a real definition of the machine, he begins not with the individual machine but with the totality, the “machine system.” Marx takes a careful look at a typical machine system of his time, in order to find clues about the essential character of the machines. One might say he listens carefully what the machine itself tells him about its origin. Marx does not take for granted what he deciphers; immediately after giving his interpretation of what the machine tells him, he brings a number of arguments, mostly historical, confirming that he has indeed found the real definition of the machine. This whole procedure demonstrates what he meant with an archeology-like critical history of technology in footnote 23c154s489akmc. After distilling the real definition of the machine from this empirical evidence, he will use this definition to reconstruct the machine in his mind, and he will return to a theoretically better grounded understanding of the machine system in 499:1.

⇓ If you look at the machine system empirically, even if you are not armed with a deeper understanding of its structure, it is nevertheless evident that such a machine system can usually be divided into three parts, two of which are subsidiary to the third part, the so-called working machine:

494:1 All fully developed machinery consists of three essentially different parts, the motor mechanism, the transmitting mechanism, and finally the tool or working machine. The motor mechanism is that which puts the whole in motion. It either generates its own motive power, like the steam-engine, the caloric engine, the electromagnetic machine, etc., or it receives its impulse from some already existing natural force, like the water-wheel from a head of water, the wind-mill from wind, etc. The transmitting mechanism, composed of fly-wheels, shafting, toothed wheels, pullies, straps, ropes, bands, pinions, and gearing of the most varied kinds, regulates the motion, changes its form, where necessary, as for instance, from linear to circular, and divides and distributes it among the working machines.

Factories at Marx’s time had one huge motor (typically a steam engine) which drove many machines through an intricate mechanical transmission mechanism. Today, this transmission

393:1 Alle entwickelte Maschinerie besteht aus drei wesentlich verschiedenen Teilen, der Bewegungsmaschine, dem Transmissionsmechanismus, endlich der Werkzeugmaschine oder Arbeitsmaschine. Die Bewegungsmaschine wirkt als Triebkraft des ganzen Mechanismus. Sie erzeugt ihre eigne Bewegungskraft, wie die Dampfmaschine, kalorische Maschine, elektromagnetische Maschine usw., oder sie empfängt den Anstoß von einer schon fertigen Naturkraft außer ihr, wie das Wasserrad vom Wassergefälle, der Windflügel vom Wind usw. Der Transmissionsmechanismus, zusammengesetzt aus Schwungrädern, Treibwellen, Zahnrädern, Kreiselrädern, Schäften, Schnüren, Riemen, Zwischengeschrir und Vorgelege der verschiedensten Art, regelt die Bewegung, verwandelt, wo es nötig, ihre Form, z.B. aus einer perpendikulären in eine kreisförmige, verteilt und überträgt sie auf die Werkzeugmaschinerie.

of power is usually less conspicuous using a hydraulic or compressed air system. Also, in many cases, cheap electric power has made a central driving motor unnecessary: many machines have several electric motors built in.

The two parts of the machinery discussed until now play a subordinate role to what Marx calls the “working machines.”

These two first parts of the whole mechanism exist solely for putting the working machines in motion, by means of which motion the object of labor is seized upon and modified as desired.

⇓ Marx asserts that this third part, the working machine, is the significant part not only historically but also for mechanization of new industries:

The tool machine or working machine is that part of the machinery with which the industrial revolution of the 18th century started. And to this day it constantly serves as such a starting-point, whenever a handicraft, or a manufacture, is turned into an industry carried on by machinery.

This last sentence is reminiscent of 247:3 at the beginning of chapter Four, where Marx says something similar about capital in money form: it is not only historically the first form of capital, but also nowadays every startup capital begins in the form of money.

Question 828 What are the three essentially different parts of all fully developed machinery? Which of these three parts is Marx focusing on, and why?

⇓ A closer look at the above-defined working machine proper shows that the familiar handicraft tools are still recognizable in it. This is the lead on which Marx will base his real definition of the machine a little later in the same paragraph. Given the importance of the conclusion he is going to draw, he proceeds slowly and carefully, with many examples:

494:2/o On a closer examination of the working machine proper, we find in it, as a general rule, though often, no doubt, under very altered forms, the apparatus and tools used by the handicraftsman or manufacturing workman; with this difference, that instead of being human implements, they are the implements of a mechanism, or mechanical implements. Either the entire machine is only a more or less altered mechanical edition of the old handicraft tool, as, for instance, the power-loom,⁹⁰ or the work-

Beide Teile des Mechanismus sind nur vorhanden, um der Werkzeugmaschine die Bewegung mitzuteilen, wodurch sie den Arbeitsgegenstand anpackt und zweckgemäß verändert.

Dieser Teil der Maschinerie, die Werkzeugmaschine, ist es, wovon die industrielle Revolution im 18. Jahrhundert ausgeht. Sie bildet noch jeden Tag von neuem den Ausgangspunkt, sooft Handwerksbetrieb oder Manufakturbetrieb in Maschinenbetrieb übergeht.

393:2/o Sehn wir uns nun die Werkzeugmaschine oder eigentliche Arbeitsmaschine näher an, so erscheinen im großen und ganzen, wenn auch oft in sehr modifizierter Form, die Apparate und Werkzeuge wieder, womit der Handwerker und Manufakturarbeiter arbeitet, aber statt als Werkzeuge des Menschen jetzt als Werkzeuge eines Mechanismus oder als mechanische. Entweder ist die ganze Maschine nur eine mehr oder minder veränderte mechanische Ausgabe des alten Handwerksinstruments, wie

ing parts fitted in the frame of the machine are old acquaintances, as spindles are in a mule, needles in a stocking-loom, saws in a sawing-machine, and knives in a chopping machine.

⁹⁰ Especially in the original form of the power-loom, we recognise, at the first glance, the ancient loom. In its modern form, the power-loom has undergone essential alterations.

↑ The working machine consists of tools interacting with the object of labor (which, at least in the beginning, are similar to the handicraft implements), and the mechanism holding the tools. ↓ The distinction between tools and the apparatus holding the tools is not only apparent in the machine itself but also in the production process which produces the machine. The distinction between these tools and the body proper of the machine, exists from their very birth; for they continue for the most part to be produced by handicraft, or by manufacture, and are afterwards fitted into the body of the machine, which is the product of machinery.⁹¹

Footnote 91 makes the correction that this latter difference is apparently fading away with the further development of machinery:

⁹¹ It is only during the last 15 years (i.e., since about 1850), that a constantly increasing portion of these machine tools have been made in England by machinery, although it was not done by the same firms which make the machines themselves. Instances of machines for the fabrication of these mechanical tools are the automatic bobbin-making engine, the cardsetting engine, shuttle-making machines, and machines for forging mule and throstle spindles.

↓ Guided by this closer look at the tool machine Marx arrives at the following “real definition” of the machine: the machine is a mechanism taking over the worker’s manipulation of the object of labor.

The machine proper is therefore a mechanism that, when the appropriate motive power is fed into it, performs with its tools

bei dem mechanischen Webstuhl,⁹⁰ oder die am Gerüst der Arbeitsmaschine angebrachten tätigen Organe sind alte Bekannte, wie Spindeln bei der Spinnmaschine, Nadeln beim Strumpfwirkerstuhl, Sägeblätter bei der Sägemaschine, Messer bei der Zerkhackmaschine usw.

⁹⁰ Namentlich in der ursprünglichen Form des mechanischen Webstuhls erkennt man den alten Webstuhl auf den ersten Blick wieder. Wesentlich verändert erscheint er in seiner modernen Form.

Der Unterschied dieser Werkzeuge von dem eigentlichen Körper der Arbeitsmaschine erstreckt sich bis auf ihre Geburt. Sie werden nämlich immer noch größtenteils handwerksmäßig oder manufakturmäßig produziert und später erst an den maschinenmäßig produzierten Körper der Arbeitsmaschine befestigt.⁹¹

⁹¹ Erst seit ungefähr 1850 wird ein stets wachsender Teil der Werkzeuge der Arbeitsmaschinen maschinenmäßig in England fabriziert, obgleich nicht von denselben Fabrikanten welche die Maschinen selbst machen. Maschinen zur Fabrikation solcher mechanischen Werkzeuge sind z.B. die automatic bobbin-making engine, card-setting engine, Maschinen zum Machen der Weberlitzten, Maschinen zum Schmieden von mule und throstle Spindeln.

Die Werkzeugmaschine ist also ein Mechanismus, der nach Mitteilung der entsprechenden Bewegung mit seinen Werkzeugen

the same operations that were formerly done by the workman with similar tools.

↑ Note the historical element in this definition: the tool machine performs operations *formerly* done by workers. ↓ Apparently responding to q, Marx adds that it does not matter here whether or not the motive force is human. This does not change the essence of the matter.

Whether the motive power is derived from man, or from some other machine, makes no difference in this respect. From the moment that the tool proper is taken from man, and fitted into a mechanism, it is machine and no longer a mere implement. The difference strikes one at once, even in those cases where man himself continues to be the prime mover.

↑ A first test that the above is indeed the “real definition” of machinery is that it will not be confused or made ambiguous by secondary factors. Even if humans remain the motive force, the difference between tool and machine is still clearly discernible.

Question 831 *How does a machine differ from a hand tool?*

Also the historical development of many of the machines available at Marx’s time shows that the issue was not a mechanized supply of power, but the fact that a machine can manipulate a much larger number of tools than a human.

The number of implements that he himself can use simultaneously, is limited by the number of his own natural instruments of production, by the number of his bodily organs. In Germany, they tried at first to make one spinner work two spinning-wheels, that is, to work simultaneously with both hands and both feet. This was too strenuous. Later, a treddle spinning-wheel with two spindles was invented, but adepts in spinning, who could spin two threads at once, were almost as scarce as two-headed men. The Jenny, on the other hand, even at its very birth, spun with 12–18 spindles, and the stocking-loom knits with many thousand needles at once. The number of tools that a machine can bring into play simultaneously is from

gen dieselben Operationen verrichtet, welche früher der Arbeiter mit ähnlichen Werkzeugen verrichtete.

Ob die Triebkraft nun vom Menschen ausgeht oder selbst wieder von einer Maschine, ändert am Wesen der Sache nichts. Nach Übertragung des eigentlichen Werkzeugs vom Menschen auf einen Mechanismus tritt eine Maschine an die Stelle eines bloßen Werkzeugs. Der Unterschied springt sofort ins Auge, auch wenn der Mensch selbst noch der erste Motor bleibt.

Die Anzahl von Arbeitsinstrumenten, womit er gleichzeitig wirken kann, ist durch die Anzahl seiner natürlichen Produktionsinstrumente, seiner eignen körperlichen Organe, beschränkt. Man versuchte in Deutschland erst einen Spinner zwei Spinnräder treten, ihn also gleichzeitig mit zwei Händen und zwei Füßen arbeiten zu lassen. Dies war zu anstrengend. Später erfand man ein Tretspinnrad mit zwei Spindeln, aber die Spinnvirtuosen, die zwei Fäden gleichzeitig spinnen konnten, waren fast so selten als zweiköpfige Menschen. Die Jenny spinnt dagegen von vornherein mit 12–18 Spindeln, der Strumpfwirkerstuhl strickt mit viel 1000 Nadeln auf einmal usw. Die Anzahl der Werkzeuge, womit dieselbe Werk-

the very first emancipated from the organic limits that hedge in the tools of a handicraftsman.

↑ This last sentence is important: a machine, even one that is driven by human power, overcomes the limitation that a human, with his or her two arms and legs, can only operate a limited number of tools.

The next paragraph brings several specific examples all of which show that the essential driving moment in the development of machinery was not the replacement of human motive power, but the multiplication of the tools. ↓ First example: with those tools where the exercise of power was separable from the direction of the activity, the direction of the activity often was mechanized first, while the exercise of power still remained with the human operator:

495:1/00 In many manual implements the distinction between man as mere motive power, and man as the workman or operator properly so called, is brought into striking contrast. For instance, the foot is merely the prime mover of the spinning-wheel, while the hand, working with the spindle, and drawing and twisting, performs the real operation of spinning. It is this last part of the handicraftsman's implement that is first seized upon by the industrial revolution, leaving to the workman, in addition to his new labor of watching the machine with his eyes and correcting its mistakes with his hands, the merely mechanical part of being the moving power.

The next group of examples discusses tools which by their nature require so little direction that the main task of humans was to supply power.

On the other hand, implements, in regard to which man has always acted as a simple motive power, as, for instance, by turning the crank of a mill,⁹² by pumping, by moving up and down the arm of a bellows, by pounding with a mortar, etc., it is true that such implements are the first to call for the application of animals, water⁹³ and wind as motive powers.

↑ Although they are the first to call forth the application of non-human motive power,

zeugmaschine gleichzeitig spielt, ist von vornherein emanzipiert von der organischen Schranke, wodurch das Handwerkszeug eines Arbeiters beengt wird.

394:1/00 An vielem Handwerkszeug besitzt der Unterschied zwischen dem Menschen als bloßer Triebkraft und als Arbeiter mit dem eigentlichen Operateur eine sinnlich besonderte Existenz. Z.B. beim Spinnrad wirkt der Fuß nur als Triebkraft, während die Hand, die an der Spindel arbeitet, zupft und dreht, die eigentliche Spinnoperation verrichtet. Grade diesen letzten Teil des Handwerksinstruments ergreift die industrielle Revolution zuerst und überläßt dem Menschen, neben der neuen Arbeit, die Maschine mit seinem Auge zu überwachen und ihre Irrtümer mit seiner Hand zu verbessern, zunächst noch die rein mechanische Rolle der Triebkraft.

Werkzeuge dagegen, auf die der Mensch von vornherein nur als einfache Triebkraft wirkt, wie z.B. beim Drehn der Kurbel einer Mühle,⁹² bei[m] Pumpen, beim Auf- und Abbewegen der Arme eines Blasebalgs, beim Stoßen eines Mörsers etc., rufen zwar zuerst die Anwendung von Tieren, Wasser, Wind⁹³ als Bewegungskraften hervor.

Marx will say next that that these early machines remained isolated and did *not* lead to the development of machine technology. Before we get to this, let's look at footnotes 92 and 93. They are digressions commenting on the early replacement of human power by other sources. ↓ Regarding the replacement of human power by animals Marx says that animals were often treated better than humans.

⁹² Moses says: "Thou shalt not muzzle the ox that treads the corn." The Christian philanthropists of Germany, on the contrary, fastened a wooden board round the necks of the serfs, whom they used as a motive power for grinding, in order to prevent them from putting flour into their mouths with their hands.

↓ Footnote 93 gives some anecdotes about the early use of wind as motive power:

⁹³ It was partly the want of streams with a good fall on them, and partly their battles with superabundance of water in other respects, that compelled the Dutch to resort to wind as a motive power. The wind-mill itself they got from Germany, where its invention was the origin of a pretty squabble between the nobles, the priests, and the emperor, as to which of those three the wind "belonged." The air makes bondage, was the cry in Germany, at the same time that the wind was making Holland free. What it reduced to bondage in this case, was not the Dutchman, but the land for the Dutchman. In 1836, 12,000 windmills of 6,000 horse-power were still employed in Holland, to prevent two-thirds of the land from being reconverted into morasses.

↓ In the main text, the next sentence contains the "but" (*aber*) corresponding to the "it is true" (*zwar*) above:

Here and there, long before the period of manufacture, and also, to some extent, during that period, these implements pass over into machines, but without creating any revolution in the mode of production.

↑ Marx says two things about the tools where human intervention has the main purpose of supplying power:

- They were the first to be powered by a non-human source of power and in this way "stretched" to be machines, some of them long before the manufacturing period.
- Their conversion into machines did not cause the industrial revolution.

⁹² Moses von Ägypten sagt: „Du sollst dem Ochsen, der drischt, nicht das Maul verbinden.“ Die christlich germanischen Philanthropen legten dagegen dem Leibeignen, den sie als Triebkraft zum Mahlen verwandten, eine große hölzerne Scheibe um den Hals, damit er kein Mehl mit der Hand zum Mund bringen könne.

⁹³ Teils Mangel an lebendigem Wassergefäll, teils Kampf gegen sonstigen Wasserüberfluß zwangen die Holländer zur Anwendung des Winds als Triebkraft. Die Windmühle selbst erhielten sie aus Deutschland, wo diese Erfindung einen artigen Kampf zwischen Adel, Pfaffen und Kaiser hervorrief, wem denn von den drei der Wind „gehöre“. Luft macht eigen, hieß es in Deutschland, während der Wind Holland frei macht. Was er hier eigen machte, war nicht der Holländer, sondern der Grund und Boden für den Holländer. Noch 1836 wurden 12 000 Windmühlen von 6000 Pferdekraft in Holland verwandt, um zwei Dritteile des Lands vor Rückverwandlung in Morast zu schützen.

Sie recken sich, teilweise innerhalb, sporadisch schon lange vor der Manufakturperiode zu Maschinen, aber sie revolutionieren die Produktionsweise nicht.

⇓ Two examples of such early machines: pumps in Holland, blacksmith's bellows in England

It becomes evident, in the period of Modern Industry, that these implements, even under their form of manual tools, are already machines. For instance, the pumps with which the Dutch, in 1836–7, emptied the Lake of Harlem, were constructed on the principle of ordinary pumps; the only difference being, that their pistons were driven by cyclopean steam-engines, instead of by men. The common and very imperfect bellows of the blacksmith is, in England, occasionally converted into a blowing-engine, by connecting its arm with a steam-engine.

⇓ Marx's last example is the steam engine itself: it did not cause the industrial revolution either, but conversely, the industrial revolution required a revolutionized steam engine.

The steam-engine itself, such as it was at its invention, during the manufacturing period at the close of the 17th century, and such as it continued to be down to 1780,⁹⁴ did not give rise to any industrial revolution. It was, on the contrary, the invention of machines that made a revolution in the form of steam-engines necessary.

⁹⁴ It was, indeed, very much improved by Watt's first so-called single acting engine; but, in this form, it continued to be a mere machine for raising water, and the liquor from salt mines.

Daß sie selbst in ihrer handwerksmäßigen Form bereits Maschinen sind, zeigt sich in der Periode der großen Industrie. Die Pumpen z.B., womit die Holländer 1836/37 den See von Harlem auspumpten, waren nach dem Prinzip gewöhnlicher Pumpen konstruiert, nur daß zyklische Dampfmaschinen statt der Menschenhände ihre Kolben trieben. Der gewöhnliche und sehr unvollkommene Blasbalg des Grobschmieds wird noch zuweilen in England durch bloße Verbindung seines Arms mit einer Dampfmaschine in eine mechanische Luftpumpe verwandelt.

Die Dampfmaschine selbst, wie sie Ende des 17. Jahrhunderts während der Manufakturperiode erfunden ward und bis zum Anfang der 80er Jahre des 18. Jahrhunderts fortexistierte,⁹⁴ rief keine industrielle Revolution hervor. Es war vielmehr umgekehrt die Schöpfung der Werkzeugmaschinen, welche die revolutionierte Dampfmaschine notwendig machte.

⁹⁴ Sie wurde zwar schon sehr verbessert durch Watts erste, sogenannte einfach wirkende Dampfmaschine, blieb aber in dieser Form bloße Hebmachine für Wasser und Salzsole.

Question 832 *Is the steam engine the origin of the industrial revolution?*

⇓ Marx uses this occasion to explain why the replacement of human power with non-human power does not lag far behind the introduction of machinery, although the power source is not the differentia specifica (Marx does not use this word here although it would be appropriate) of machinery. The reason is that human power very quickly becomes too limited to drive the many tools the machine is holding:

As soon as man, instead of working with an implement on the object of his labor, becomes merely the motive power of an

Sobald der Mensch, statt mit dem Werkzeug auf den Arbeitsgegenstand, nur noch als Triebkraft auf eine Werkzeugmaschine

implement-machine, it is a mere accident that motive power takes the disguise of human muscle; and it may equally well take the form of wind, water or steam. Of course, this does not prevent such a change of form from producing great technical alterations in the mechanism that was originally constructed to be driven by man alone. Nowadays, all machines that have their way to make, such as sewing-machines, bread-making machines, etc., are, unless from their very nature their use on a small scale is excluded, constructed to be driven both by human and by purely mechanical motive power.

wirkt, wird die Verkleidung der Triebkraft in menschliche Muskel zufällig und kann Wind, Wasser, Dampf usw. an die Stelle treten. Dies schließt natürlich nicht aus, daß solcher Wechsel oft große technische Änderungen des ursprünglich für menschliche Triebkraft allein konstruierten Mechanismus bedingt. Heutzutage werden alle Maschinen, die sich erst Bahn brechen müssen, wie Nähmaschinen, Brotbackmaschinen usw., wenn sie den kleinen Maßstab nicht von vornherein durch ihre Bestimmung ausschließen, für menschliche und rein mechanische Triebkraft zugleich konstruiert.

15.1.c. [From the Individual Machine to the Machine System]

After this confirmation that the real definition of a machine in 494:1 is correct, Marx now proceeds to use this definition. ⇓ He begins with a recapitulation of the definition itself:

497:1 The machine which is the starting-point of the industrial revolution supersedes the workman, who handles a single tool, by a mechanism operating with a number of similar tools, and set in motion by a single motive power, whatever the form of that power may be.⁹⁵

⁹⁵ "The union of all these simple instruments, set in motion by a single motor, constitutes a machine." (Babbage, l.c.)

396:1 Die Maschine, wovon die industrielle Revolution ausgeht, ersetzt den Arbeiter, der ein einzelnes Werkzeug handhabt, durch einen Mechanismus, der mit einer Masse derselben oder gleichartiger Werkzeuge auf einmal operiert und von einer einzigen Triebkraft, welches immer ihre Form, bewegt wird.⁹⁵

⁹⁵ „Die Vereinigung aller dieser einfachen Instrumente, durch einen einzigen Motor in Bewegung gesetzt, bildet eine Maschine.“ (Babbage, l.c. [p. 136.])

Once this definition is worked out, Marx shows that the historical evolution of machinery can be derived from this definition. Here, as usual, in the background is the realist principle that what things do depends on what they are. Marx's next subject is therefore the development of the machine over time. Marx shows here the development through which these machines become only the elements in a big machine system.

Here we have the machine, but only as an elementary factor of production by machinery.

Hier haben wir die Maschine, aber erst als einfaches Element der maschinenmäßigen Produktion.

This evolution into a machine system goes through two phases: (a) first the machines

spawn a stronger motive power, and then (b) this motive power acts back on the machines by linking them together into a machine system.

(a) The first development after the transition from hand implements to machinery (in which the tools were no longer operated by humans) was, as already remarked in 495:1/oo, the replacement of humans also as motive power. ↓ The increasing size of the machines made this replacement necessary, and the fact that the handling of the tools was separated from the transmission of power and had become part of the machine made the transition to non-human power possible.

497:2–499 Increase in the size of the machine, and in the number of its working tools, calls for a more massive mechanism to drive it; and this mechanism requires, in order to overcome its resistance, a mightier moving power than that of man, apart from the fact that man is a very imperfect instrument for producing uniform continued motion. But assuming that he is acting simply as a motor, that a machine has taken the place of his tool, it is evident that he can be replaced by natural forces.

Now a description of the powers which replaced the humans: horses, water, wind, steam engine. ↓ First the horse:

Of all the great motors handed down from the manufacturing period, horse-power is the worst, partly because a horse has a head of his own, partly because he is costly, and the extent to which he is applicable in factories is very restricted.⁹⁶ Nevertheless the horse was extensively used during the infancy of Modern Industry. This is proved, as well by the complaints of contemporary agriculturists, as by the term “horse-power,” which has survived to this day as an expression for mechanical force.

⁹⁶ In January, 1861, John C. Morton read before the Society of Arts a paper on “The forces employed in agriculture.” He there states: “Every improvement that furthers the uniformity of

396:2/oo Die Erweiterung des Umfangs der Arbeitsmaschine und der Zahl ihrer gleichzeitig operierenden Werkzeuge bedingt einen massenhafteren Bewegungsmechanismus, und dieser Mechanismus zur Überwältigung seines eignen Widerstands eine mächtigere Triebkraft als die menschliche, abgesehen davon, daß der Mensch ein sehr unvollkommenes Produktionsinstrument gleichförmiger und kontinuierlicher Bewegung ist. Vorausgesetzt, daß er nur noch als einfache Triebkraft wirkt, also an die Stelle seines Werkzeugs eine Werkzeugmaschine getreten ist, können Naturkräfte ihn jetzt auch als Triebkraft ersetzen.

Von allen aus der Manufakturperiode überlieferten großen Bewegungskräften war die Pferdekraft die schlechteste, teils weil ein Pferd seinen eignen Kopf hat, teils wegen seiner Kostspieligkeit und des beschränkten Umfangs, worin es in Fabriken allein anwendbar ist.⁹⁶ Dennoch wurde das Pferd häufig während der Kinderzeit der großen Industrie angewandt, wie außer dem Jammer gleichzeitiger Agronomen schon der bis heute überlieferte Ausdruck der mechanischen Kraft in Pferdekraft bezeugt.

⁹⁶ John C. Morton verlas Dezember 1859 in der Society of Arts einen Aufsatz über „die in der Agrikultur angewandten Kräfte“. Es heißt darin u.a.: „Jede Verbeßrung, welche die Gleichförmigkeit des Bodens fördert macht die Dampfmaschine zur Erzeugung rein mechanischer Kraft anwendbarer ... Pferdekraft wird erheischt, wo krumme Hecken und andre Hindernisse gleichförmige Aktion verhindern. Diese Hindernisse schwinden täglich mehr. In Operationen, die mehr Ausübung des Willens und weniger wirkliche Kraft erfordern, ist die durch den menschlichen Geist von Minute zu Minute gelenkte Kraft, also Menschenkraft, allein anwendbar.“ Herr Morton reduziert dann Dampfkraft, Pferdekraft und Menschenkraft auf die bei Kampfmaschinen gewöhnliche Maßeinheit, nämlich die Kraft, 33000 Pfund in der Minute um einen Fuß zu heben, und berechnet die Kosten einer Dampfpferdekraft bei der Dampfmaschine auf 3 d. und beim Pferde auf 5 1/2 d. per Stunde. Ferner kann das Pferd bei voller Erhaltung seiner Gesundheit nur 8 Stunden täglich angewandt werden. Durch Dampfkraft können mindestens 3 von je 7 Pferden auf bebautem Land während des ganzen Jahrs erspart werden, zu einem Kostenpreis, nicht größer als dem der entlassenen Pferde während der 3 oder 4 Monate, wo sie allein wirklich vernutzt werden. In den Agrikulturoperationen, worin die Dampfkraft angewandt werden kann, verbessert sie endlich, verglichen mit der Pferdekraft, die Qualität des Machwerks. Um das Werk der Dampfmaschine zu verrichten, müßten 66 Arbeiter per Stunde zu zusammen 15 sh., und um das der Pferde zu verrichten, 32 Mann zu zusammen 8 sh. per Stunde angewandt werden.

the land makes the steam-engine more and more applicable to the production of pure mechanical force ... Horse-power is requisite wherever crooked fences and other obstructions prevent uniform action. These obstructions are vanishing day by day. For operations that demand more exercise of will than actual force, the only power applicable is that controlled every instant by the human mind—in other words, man-power.” Mr. Morton then reduces steam-power, horse-power, and man-power, to the unit in general use for steam-engines, namely, the force required to raise 33,000 lbs. one foot in one minute, and reckons the cost of one horse-power from a steam-engine to be 3d., and from a horse to be 5 1/2 d. per hour. Further, if a horse must fully maintain its health, it can work no more than 8 hours a day. Three at the least out of every seven horses used on tillage land during the year can be dispensed with by using steam-power, at an expense not greater than that which, the horses dispensed with, would cost during the 3 or 4 months in which alone they can be used effectively. Lastly, steam-power, in those agricultural operations in which it can be employed, improves, in comparison with horse-power, the quality of the work. To do the work of a steam-engine would require 66 men, at a total cost of 15s. an hour, and to do the work of a horse, 32 men, at a total cost of 8s. an hour.

↓ Now a brief mention of the other motive powers available:

Wind was too inconstant and uncontrollable, and besides, in England, the birthplace of Modern Industry, the use of water-power preponderated even during the manufacturing period.

↓ Embedded in this discussion of motive powers Marx makes a side remark about how the development of machinery leads to the development of science:

In the 17th century attempts had already been made to turn two pairs of millstones with a single water-wheel. But the increased size of the gearing was too much for the

mitigkeit des Bodens fördert macht die Dampfmaschine zur Erzeugung rein mechanischer Kraft anwendbarer ... Pferdekraft wird erheischt, wo krumme Hecken und andre Hindernisse gleichförmige Aktion verhindern. Diese Hindernisse schwinden täglich mehr. In Operationen, die mehr Ausübung des Willens und weniger wirkliche Kraft erfordern, ist die durch den menschlichen Geist von Minute zu Minute gelenkte Kraft, also Menschenkraft, allein anwendbar.“ Herr Morton reduziert dann Dampfkraft, Pferdekraft und Menschenkraft auf die bei Kampfmaschinen gewöhnliche Maßeinheit, nämlich die Kraft, 33000 Pfund in der Minute um einen Fuß zu heben, und berechnet die Kosten einer Dampfpferdekraft bei der Dampfmaschine auf 3 d. und beim Pferde auf 5 1/2 d. per Stunde. Ferner kann das Pferd bei voller Erhaltung seiner Gesundheit nur 8 Stunden täglich angewandt werden. Durch Dampfkraft können mindestens 3 von je 7 Pferden auf bebautem Land während des ganzen Jahrs erspart werden, zu einem Kostenpreis, nicht größer als dem der entlassenen Pferde während der 3 oder 4 Monate, wo sie allein wirklich vernutzt werden. In den Agrikulturoperationen, worin die Dampfkraft angewandt werden kann, verbessert sie endlich, verglichen mit der Pferdekraft, die Qualität des Machwerks. Um das Werk der Dampfmaschine zu verrichten, müßten 66 Arbeiter per Stunde zu zusammen 15 sh., und um das der Pferde zu verrichten, 32 Mann zu zusammen 8 sh. per Stunde angewandt werden.

Der Wind war zu unstat und unkontrollierbar, und die Anwendung der Wasserkraft überwog außerdem in England, dem Geburtsort der großen Industrie, schon während der Manufakturperiode.

Man hatte bereits im 17. Jahrhundert versucht, zwei Läufer und also auch zwei Mahlgänge mit einem Wasserrad in Bewegung zu setzen. Der geschwollne Umfang

water-power, which had now become insufficient, and this was one of the circumstances that led to a more accurate investigation of the laws of friction. In the same way the irregularity caused by the motive power in mills that were put in motion by pushing and pulling a lever, led to the theory, and the application, of the fly-wheel, which afterwards plays so important a part in Modern Industry.⁹⁷ In this way, during the manufacturing period, were developed the first scientific and technical elements of Modern Mechanical Industry.

⁹⁷ Faulhaber, 1625; De Cous, 1688.

↓ Back to the discussion of motive powers. The deficiencies of water power were overcome by steam power.

Arkwright's throstle-spinning mill was from the very first turned by water. But for all that, the use of water, as the predominant motive power, was beset with difficulties. It could not be increased at will, it failed at certain seasons of the year, and, above all, it was purely local.⁹⁸

⁹⁸ The modern turbine frees the industrial exploitation of water-power from many of its former fetters.

↑ Marx's remark that water and wind is "purely local" does not give justice to the fact that wind and hydro energy (and also biomass, which Marx does not mention at all), being derivatives of solar energy in the present or near past, are local and dispersed by their nature, because solar energy is dispersed.

↓ This dispersion and irregularity of water power was overcome by the cheap and concentrated energy of fossil fuels (coal) made useable by the steam engine. Marx is not aware of the significance of the bonanza of this cheap, concentrated, and dispatchable source of energy and puts too much emphasis on the technology of the steam engine:

Not till the invention of Watt's second and so-called double-acting steam-engine, was a prime mover found, that begot its own force by the consumption of coal and water, whose power was entirely under man's con-

des Transmissionsmechanismus geriet aber jetzt in Konflikt mit der nun unzureichenden Wasserkraft, und dies ist einer der Umstände, der zur genauern Untersuchung der Reibungsgesetze trieb. Ebenso führte das ungleichförmige Wirken der Bewegungskraft bei Mühlen, die durch Stoßen und Ziehen mit Schwengeln in Bewegung gesetzt wurden, auf die Theorie und Anwendung des Schwungrads,⁹⁷ das später eine so wichtige Rolle in der großen Industrie spielt. In dieser Art entwickelte die Manufakturperiode die ersten wissenschaftlichen und technischen Elemente der großen Industrie.

⁹⁷ Faulhaber, 1625; De Cous, 1688.

The deficiencies of water power were over-

Arkwrights Throstlesspinnerei wurde von vornherein mit Wasser getrieben. Indes war auch der Gebrauch der Wasserkraft als herrschender Triebkraft mit erschwerenden Umständen verbunden. Sie konnte nicht beliebig erhöht und ihrem Mangel nicht abgeholfen werden, sie versagte zuweilen und war vor allem rein lokaler Natur.⁹⁸

⁹⁸ Die moderne Erfindung der Turbinen befreit die industrielle Ausbeutung der Wasserkraft von vielen frühern Schranken.

Erst mit Watts zweiter, sog. doppelt wirkender Dampfmaschine war ein erster Motor gefunden, der seine Bewegungskraft selbst erzeugt aus der Verspeisung von Kohlen und Wasser, dessen Kraftpotenz ganz un-

trol, that was mobile and a means of locomotion, that was urban and not, like the waterwheel, rural, that permitted production to be concentrated in towns instead of, like the water-wheels, being scattered up and down the country,⁹⁹ that was of universal technical application, and, relatively speaking, little affected in its choice of residence by local circumstances.

The footnote emphasizes that only fossil fuels allowed the machines to come together in an urban system:

⁹⁹ "In the early days of textile manufactures, the locality of the factory depended upon the existence of a stream having a sufficient fall to turn a water-wheel; and, although the establishment of the water-mills was the commencement of the breaking up of the domestic system of manufacture, yet the mills necessarily situated upon streams, and frequently at considerable distances the one from the other, formed part of a rural, rather than an urban system; and it was not until the introduction of the steam-power as a substitute for the stream that factories were congregated in towns, and localities where the coal and water required for the production of steam were found in sufficient quantities. The steam-engine is the parent of manufacturing towns." (A. Redgrave in "Reports of the Insp. of Fact., 30th April, 1860," p. 36.)

Watt's invention was not a machine for a particular purpose but a "general agent." Marx will say more about this in 497:2–499.

The greatness of Watt's genius showed itself in the specification of the patent that he took out in April, 1784. In that specification his steam-engine is described, not as an invention for a specific purpose, but as an agent universally applicable in Mechanical Industry. In it he points out applications, many of which, as for instance, the steam-hammer, were not introduced till half a century later. Nevertheless he doubted the use of steam-engines in navigation. His succes-

ter menschlicher Kontrolle steht, der mobil und ein Mittel der Lokomotion, städtisch und nicht gleich dem Wasserrad ländlich, die Konzentration der Produktion in Städten erlaubt, statt sie wie das Wasserrad über das Land zu zerstreuen,⁹⁹ universell in seiner technologischen Anwendung, in seiner Residenz verhältnismäßig wenig durch lokale Umstände bedingt.

⁹⁹ „In der Frühzeit der Textilmanufaktur war der Standort der Fabrik von der Existenz eines Wasserlaufs abhängig, der genügend Gefälle hatte, um ein Wasserrad zu drehen; und obwohl nun die Einrichtung der Wassermühlen den Beginn der Auflösung des Systems der Hausindustrie bedeutete, stellten die Mühlen, die notwendigerweise an Wasserläufen gelegen sein mußten und häufig in beträchtlicher Entfernung voneinander standen, eher einen Teil eines ländlichen als eines städtischen Systems dar; erst durch die Einführung der Dampfkraft als Ersatz für den Wasserlauf wurden die Fabriken in Städten und an Orten zusammengedrängt, wo Kohle und Wasser, die zur Dampferzeugung benötigt wurden, in ausreichender Menge vorhanden waren. Die Dampfmaschine ist die Mutter der Industriestädte.“ (A. Redgrave in „Reports of the Insp. of Fact. 30th April 1860“, p. 36.)

Das große Genie Watts zeigt sich in der Spezifikation des Patents, das er April 1784 nahm, und worin seine Dampfmaschine nicht als eine Erfindung zu besondern Zwecken, sondern als allgemeiner Agent der großen Industrie geschildert wird. Er deutet hier Anwendungen an, wovon manche, wie z.B. der Dampfhammer, mehr als ein halbes Jahrhundert später erst eingeführt wurden. Jedoch bezweifelte er die Anwendbarkeit der Dampfmaschine auf Seeschifffahrt. Sei-

sors, Boulton and Watt, sent to the exhibition of 1851 steam-engines of colossal size for ocean steamers.

↑ A modern analogy would perhaps be the smart grid. Like Watt's engine it is not a tool for just one particular purpose but it leads to a paradigm shift in the consumption and production of energy.

↓ (b) After discussing how the development of machinery affected the development of motive power, now the opposite effect: how the development of motive power acts back on the machinery. Since the newly developed more powerful motive power can drive many machines at once, the *machine system* is born. This in turn leads to the development of the transmission apparatus, the third aspect of the machine system, which was the starting point for Marx's real definition of the machine:

499:1 As soon as tools had been converted from being manual implements of man into implements of a mechanical apparatus, of a machine, the motive mechanism also acquired an independent form, entirely emancipated from the restraints of human strength. Thereupon the individual machine, that we have hitherto been considering, sinks into a mere factor in production by machinery. One motive mechanism was now able to drive many machines at once. The motive mechanism grows with the number of the machines that are turned simultaneously, and the transmitting mechanism becomes a wide-spreading apparatus.

ne Nachfolger, Boulton und Watt, stellten 1851 die kolossalste Dampfmaschine für Ocean steamers auf der Londoner Industrieausstellung aus.

398:1/o Nachdem erst die Werkzeuge aus Werkzeugen des menschlichen Organismus in Werkzeuge eines mechanischen Apparats, der Werkzeugmaschine, verwandelt, erhielt nun auch die Bewegungsmaschine eine selbständige, von den Schranken menschlicher Kraft völlig emanzipierte Form. Damit sinkt die einzelne Werkzeugmaschine, die wir bisher betrachtet, zu einem bloßen Element der maschinenmäßigen Produktion herab. Eine Bewegungsmaschine konnte jetzt viele Arbeitsmaschinen gleichzeitig treiben. Mit der Anzahl der gleichzeitig bewegten Arbeitsmaschinen wächst die Bewegungsmaschine und dehnt sich der Transmissionsmechanismus zu einem weitläufigen Apparat aus.

Question 833 *Why did the single working or tool machine develop into a whole system of machinery?*

15.1.d. [The Machine System]

Since it is the essence of the machine to mechanize the human handling of the tools in the production process, it is not surprising that some of the elementary facts of human co-operation also have their expression in the machine system.

499:2 We now proceed to distinguish the co-operation of a number of machines of one kind from a complex system of machin-

399:1 Es ist nun zweierlei zu unterscheiden, Kooperation vieler gleichartiger Maschinen und Maschinensystem.

ery.

↑ This is reminiscent of the two basic forms of division of labor discussed in 461:2.

500/o In the one case, the product is entirely made by a single machine, which performs all the various operations previously done by one handicraftsman with his tool; as, for instance, by a weaver with his loom; or by several handicraftsman successively, either separately or as members of a system of Manufacture.¹⁰⁰ For example, in the manufacture of envelopes, one man folded the paper with the folder, another laid on the gum, a third turned the flap over, on which the device is impressed, a fourth embossed the device, and so on; and for each of these operations the envelope had to change hands. One single envelope machine now performs all these operations at once, and makes more than 3,000 envelopes in an hour. In the London exhibition of 1862, there was an American machine for making paper cornets. It cut the paper, pasted, folded, and finished 300 in a minute. Here, the whole process, which, when carried on as Manufacture, was split up into, and carried out by, a series of operations, is completed by a single machine, working a combination of various tools.

399:2/o In dem einen Fall wird das ganze Machwerk von derselben Arbeitsmaschine verrichtet. Sie führt alle die verschiedenen Operationen aus, welche ein Handwerker mit seinem Werkzeug, z.B. der Weber mit seinem Webstuhl, verrichtete oder welche Handwerker mit verschiedenen Werkzeugen, sei es selbständig oder als Glieder einer Manufaktur, der Reihe nach ausführten.¹⁰⁰ Z.B. in der modernen Manufaktur von Briefkuverts faltete ein Arbeiter das Papier mit dem Falzbein, ein anderer legte den Gummi auf, ein dritter schlug die Klappe um, auf welche die Devise aufgedrückt wird, ein vierter bossierte die Devise usw., und bei jeder dieser Teiloperationen mußte jede einzelne Enveloppe die Hände wechseln. Eine einzige Enveloppemaschine verrichtet alle diese Operationen auf einen Schlag und macht 3000 und mehr Enveloppes in einer Stunde. Eine auf der Londoner Industrieausstellung von 1862 ausgestellte amerikanische Maschine zur Bereitung von Papiertüten schneidet das Papier, kleistert, faltet und vollendet 300 Stück per Minute. Der innerhalb der Manufaktur geteilte und in einer Reihenfolge ausgeführte Gesamtprozeß wird hier von einer Arbeitsmaschine vollbracht, die durch Kombination verschiedener Werkzeuge wirkt.

↓ The footnote rebuts the myth that machinery first comes to those operations which had been simplified by the division of labor.

¹⁰⁰ From the standpoint of division of labor in Manufacture, weaving was not simple, but, on the contrary, complicated manual labor; and consequently the power-loom is a machine that does very complicated work. It is altogether erroneous to suppose that modern machinery originally appropriated those operations alone, which division of labor had simplified. Spinning and weaving

¹⁰⁰ Vom Standpunkt der manufakturmäßigen Teilung war Weben keine einfache, sondern vielmehr eine komplizierte handwerksmäßige Arbeit, und so ist der mechanische Webstuhl eine Maschine, die sehr Mannigfaltiges verrichtet. Es ist überhaupt eine falsche Vorstellung, daß die moderne Maschinerie sich ursprünglich solcher Operationen bemächtigt, welche die manu-

were, during the manufacturing period, split up into new species, and the implements were modified and improved; but the labor itself was in no way divided, and it retained its handicraft character. It is not the labor, but the instrument of labor, that serves as the starting-point of the machine.

Question 834 *Did machinery first seize those labor processes which had been simplified in the manufactures? Comment.*

Question 835 *Why is it the instrument of labor, and not the labor, that serves as the starting-point of the machine?*

↓ Going back to the main text, the distinction between process-co-operation and parallel execution of many identical operations can only be made for the individual machine. In the factories, the simple co-operation of many similar machines is always the starting point.

Now, whether such a machine be merely a reproduction of a complicated manual implement, or a combination of various simple implements specialised by Manufacture, in either case, in the factory, *i.e.*, in the workshop in which machinery alone is used, we meet again with simple co-operation; and, leaving the workman out of consideration for the moment, this co-operation presents itself to us, in the first instance, as the conglomeration in one place of similar and simultaneously acting machines. Thus, a weaving factory is constituted of a number of power-looms, working side by side, and a sewing factory of a number of sewing-machines all in the same building.

↓ At first, these machines are just added together, although at Marx's time they usually were integrated from the beginning by a shared power supply:

But there is here a technical oneness in the whole system, owing to all the machines receiving their impulse simultaneously, and in an equal degree, from the pulsations of the common prime mover, by the intermediary of the transmitting mechanism; and this mechanism, to a certain extent, is also common to them all, since only particular ram-

fakturmäßige Teilung der Arbeit vereinfacht hatte. Spinnen und Weben wurden während der Manufakturperiode in neue Arten gesondert und ihre Werkzeugen verbessert und variiert, aber der Arbeitsprozeß selbst, in keiner Weise geteilt, blieb handwerksmäßig. Es ist nicht die Arbeit, sondern das Arbeitsmittel, wovon die Maschine ausgeht.

Ob nun eine solche Arbeitsmaschine nur mechanische Wiedergeburt eines komplizierteren Handwerkszeuges sei oder Kombination verschiedenartiger, manufakturmäßig partikularisierter einfacher Instrumente—in der Fabrik, d.h. in der auf Maschinenbetrieb gegründeten Werkstatt, erscheint jedesmal die einfache Kooperation wieder, und zwar zunächst (wir sehn hier vom Arbeiter ab) als räumliche Konglomeration gleichartiger und gleichzeitig zusammenwirkender Arbeitsmaschinen. So wird eine Webfabrik durch das Nebeneinander vieler mechanischen Webstühle und eine Nähfabrik durch das Nebeneinander vieler Nähmaschinen in demselben Arbeitsgebäude gebildet.

Aber es existiert hier eine technische Einheit, indem die vielen gleichartigen Arbeitsmaschinen gleichzeitig und gleichmäßig ihren Impuls empfangen vom Herzschlag des gemeinsamen ersten Motors, auf sie übertragen durch den Transmissionsmechanismus, der ihnen auch teilweise gemeinsam ist, indem sich nur besondere Ausläufe davon für

ifications of it branch off to each machine. Just as a number of tools, then, form the organs of a machine, so a number of machines of one kind constitute the organs of the motive mechanism.

↓ But inherent in the machine system is the tendency to deepen the integration:

501:1/o A system of machinery in the true sense of the word, however, does not take the place of these independent machines, until the object of labor goes through a connected series of detail processes, that are carried out by a chain of machines of various kinds, the one supplementing the other. Here we have again the co-operation by division of labor that characterizes Manufacture; only now, it is a combination of detail machines. The special tools of the various detail workmen, such as those of the beaters, cambers, spinners, etc., in the woollen manufacture, are now transformed into the tools of specialised machines, each machine constituting a special organ, with a special function, in the system. In those branches of industry in which the machinery system is first introduced, Manufacture itself furnishes, in a general way, the natural basis for the division, and consequent organisation, of the process of production.¹⁰¹

↑ The principles of the division of labor were inherited from the manufactories. ↓ The footnote says generally how different branches of industry learn from each other.

¹⁰¹ Before the epoch of Mechanical Industry, the wool manufacture was the predominating manufacture in England. Hence it was in this industry that, in the first half of the 18th century, the most experiments were made. Cotton, which required less careful preparation for its treatment by machinery, derived the benefit of the experience gained on wool, just as afterwards the manipulation of wool by machinery was developed

jede einzelne Werkzeugmaschine verästeln. Ganz wie viele Werkzeuge die Organe einer Arbeitsmaschine, bilden viele Arbeitsmaschinen jetzt nur noch gleichartige Organe desselben Bewegungsmechanismus.

400:1/o Ein eigentliches Maschinensystem tritt aber erst an die Stelle der einzelnen selbständigen Maschine, wo der Arbeitsgegenstand eine zusammenhängende Reihe verschiedener Stufenprozesse durchläuft, die von einer Kette verschiedenartiger, aber einander ergänzender Werkzeugmaschinen ausgeführt werden. Hier erscheint die der Manufaktur eigentümliche Kooperation durch Teilung der Arbeit wieder, aber jetzt als Kombination von Teilarbeitsmaschinen. Die spezifischen Werkzeuge der verschiedenen Teilarbeiter, in der Wollmanufaktur z.B. der Wollschläger, Wollkämmer, Wollschere, Wollspinner usw., verwandeln sich jetzt in die Werkzeuge spezifizierter Arbeitsmaschinen, von denen jede ein besonderes Organ für eine besondere Funktion im System des kombinierten Werkzeugmechanismus bildet. Die Manufaktur selbst liefert dem Maschinensystem in den Zweigen, worin es zuerst eingeführt wird, im großen und ganzen die naturwüchsige Grundlage der Teilung und daher der Organisation des Produktionsprozesses.¹⁰¹

¹⁰¹ Vor der Epoche der großen Industrie war die Wollmanufaktur die herrschende Manufaktur Englands. In ihr wurden daher während der ersten Hälfte des 18. Jahrhunderts die meisten Experimente gemacht. Der Baumwolle, deren mechanische Verarbeitung minder mühsame Vorbereitungen erfordert, kamen die an der Schafwolle gemachten Erfahrungen zugute, wie später umgekehrt die mechanische Wollindustrie sich auf

on the lines of cotton-spinning and weaving by machinery. It was only during the 10 years immediately preceding 1866, that isolated details of the wool manufacture, such as woolcombing, were incorporated in the factory system. "The application of power to the process of combing wool ... extensively in operation since the introduction of the combingmachine, especially Lister's ... undoubtedly had the effect of throwing a very large number of men out of work. Wool was formerly combed by hand, most frequently in the cottage of the comber. It is now very generally combed in the factory, and hand-labor is superseded, except in some particular kinds of work, in which hand-combed wool is still preferred. Many of the hand-combers found employment in the factories, but the produce of the hand-combers bears so small a proportion to that of the machine, that the employment of a very large number of combers has passed away." ("Rep. of Insp. of Fact. for 31st Oct., 1856," p. 16.)

↓ One big difference between the system in the manufactories and these fully mechanized systems is that the stages in this system are no longer tied to human capabilities. This process is no longer subjective:

Nevertheless an essential difference at once manifests itself. In Manufacture it is the workmen who, with their manual implements, must, either singly or in groups, carry on each particular detail process. If, on the one hand, the workman becomes adapted to the process, on the other, the process was previously made suitable to the workman. This subjective principle of the division of labor no longer exists in production by machinery. Here, the process as a whole is examined objectively, in itself, that is to say, without regard to the question of its execution by human hands, it is analysed into its constituent phases; and the problem, how to execute each detail process, and bind them all into a whole, is solved by

Grundlage der mechanischen Baumwollspinnerei und Weberei entwickelt. Einzelne Elemente der Wollmanufaktur sind erst seit den letzten Jahrzehnten dem Fabrikssystem einverleibt worden, z.B. das Wollkämmen. „Die Anwendung mechanischer Kraft auf den Prozeß des Wollkämmens ..., die seit der Einführung der „Kämmaschine“, speziell der Listerschen, in großem Ausmaß erfolgt ..., hatte unzweifelhaft die Wirkung, daß eine große Anzahl von Arbeitern aus der Arbeit geworfen wurde. Wolle wurde vorher mit der Hand gekämmt, zumeist in der Cottage des Kämmers. Jetzt wird sie ganz allgemein in der Fabrik gekämmt, und Handarbeit ist, abgesehen von einigen besonderen Arten von Arbeit, bei denen handgekämmte Wolle noch vorgezogen wird, verdrängt worden. Viele von den Handkämmern fanden Arbeit in den Fabriken, aber das Arbeitsprodukt des Handkämmers ist im Verhältnis zu dem der Maschine so klein, daß eine sehr große Zahl von Kämmern ohne Beschäftigung geblieben ist.“ „Rep. of Insp. of Fact. for 31st Oct. 1856“, p. 16.)

Indes tritt sofort ein wesentlicher Unterschied ein. In der Manufaktur müssen Arbeiter, vereinzelt oder in Gruppen, jeden besonderen Teilprozeß mit ihrem Handwerkszeug ausführen. Wird der Arbeiter dem Prozeß angeeignet, so ist aber auch vorher der Prozeß dem Arbeiter angepaßt. Dies subjektive Prinzip der Teilung fällt weg für die maschinenartige Produktion. Der Gesamtprozeß wird hier objektiv, an und für sich betrachtet, in seine konstituierenden Phasen analysiert, und das Problem, jeden Teilprozeß auszuführen und die verschiedenen Teilprozesse zu verbinden, durch technischen Anwendung der Mechanik, Chemie usw. gelöst,¹⁰² wobei natürlich nach wie vor die theoretische Konzeption durch gehäuf-

the aid of machines, chemistry, etc.¹⁰² But, of course, in this case also, theory must be perfected by accumulated experience on a large scale. Each detail machine supplies raw material to the machine next in order; and since they are all working at the same time, the product is always going through the various stages of its fabrication, and is also constantly in a state of transition, from one phase to another. Just as in Manufacture, the direct co-operation of the detail laborers establishes a numerical proportion between the special groups, so in an organised system of machinery, where one detail machine is constantly kept employed by another, a fixed relation is established between their numbers, their size, and their speed.

¹⁰² "The principle of the factory system, then, is to substitute ... the partition of a process into its essential constituents, for the division or graduation of labour among artisans." (Andrew Ure: "The Philosophy of Manufactures," Lond., 1835, p. 20.)

↓ The removal of the human element from this system allows the processes to become more and more continuous:

The collective machine, now an organised system of various kinds of single machines, and of groups of single machines, becomes more and more perfect, the more the process as a whole becomes a continuous one, i.e., the less the raw material is interrupted in its passage from its first phase to its last; in other words, the more its passage from one phase to another is effected, not by the hand of man, but by the machinery itself. In Manufacture the isolation of each detail process is a condition imposed by the nature of division of labor, but in the fully developed factory the continuity of those processes is, on the contrary, imperative.

The whole of these parts, integrated by its dependence on the prime mover, is the automa-

te praktische Erfahrung auf großer Stufenleiter vervollkommnet werden muß. Jede Teilmaschine liefert der zunächst folgenden ihr Rohmaterial, und da sie alle gleichzeitig wirken, befindet sich das Produkt ebenso fortwährend auf den verschiedenen Stufen seines Bildungsprozesses, wie im Übergang aus einer Produktionsphase in die andre. Wie in der Manufaktur die unmittelbare Kooperation der Teilarbeiter bestimmte Verhältniszahlen zwischen den besondern Arbeitergruppen schafft, so in dem gegliederten Maschinensystem die beständige Beschäftigung der Teilmaschinen durch einander ein bestimmtes Verhältnis zwischen ihrer Anzahl, ihrem Umfang und ihrer Geschwindigkeit.

¹⁰² „Das Prinzip des Fabriksystems besteht also darin ... die Teilung des Arbeitsprozesses in seine wesentlichen Bestandteile an die Stelle der Verteilung oder Abstufung der Arbeit unter die einzelnen Handwerker zu setzen.“ (Ure, l.c. p. 20.)

Die kombinierte Arbeitsmaschine, jetzt ein gegliedertes System von verschiedenartigen einzelnen Arbeitsmaschinen und von Gruppen derselben, ist um so vollkommener, je kontinuierlicher ihr Gesamtprozeß, d.h. mit je weniger Unterbrechung das Rohmaterial von seiner ersten Phase zu seiner letzten übergeht, je mehr also statt der Menschenhand der Mechanismus selbst es von einer Produktionsphase in die andre fördert. Wenn in der Manufaktur die Isolierung der Sonderprozesse ein durch die Teilung der Arbeit selbst gegebenes Prinzip ist, so herrscht dagegen in der entwickelten Fabrik die Kontinuität der Sonderprozesse.

ton. But the human element re-enters in the need for human control:

502:1/o A system of machinery, whether it reposes on the mere co-operation of similar machines, as in weaving, or on a combination of different machines, as in spinning, constitutes in itself a huge automaton, whenever it is driven by a self-acting prime mover. But although the factory as a whole be driven by its steam-engine, yet either some of the individual machines may require the aid of the workman for some of their movements (such aid was necessary for the running in of the mule carriage, before the invention of the self-acting mule, and is still necessary in fine-spinning mills); or, to enable a machine to do its work, certain parts of it may require to be handled by the workman like a manual tool; this was the case in machine-makers' workshops, before the conversion of the slide rest into a self-actor. As soon as a machine executes, without man's help, all the movements requisite to elaborate the raw material, needing only attendance from him, we have an automatic system of machinery, and one that is susceptible of constant improvement in its details. Such improvements as the apparatus that stops a drawing frame, whenever a sliver breaks, and the self-acting stop, that stops the power-loom so soon as the shuttle bobbin is emptied of weft, are quite modern inventions.

Why the paper industry is such a good example:

As an example, both of continuity of production, and of the carrying out of the automatic principle, we may take a modern paper mill. In the paper industry generally, we may advantageously study in detail not only

401:1/o Ein System der Maschinerie, beruhe es nun auf bloßer Kooperation gleichartiger Arbeitsmaschinen, wie in der Weberei, oder auf einer Kombination verschiedenartiger, wie in der Spinnerei, bildet an und für sich einen großen Automaten, sobald es von einem sich selbst bewegenden ersten Motor getrieben wird. Indes kann das Gesamtsystem z.B. von der Dampfmaschine getrieben werden, obgleich entweder einzelne Werkzeugmaschinen für gewisse Bewegungen noch den Arbeiter brauchen, wie die zum Einfahren der Mule nötige Bewegung vor der Einführung der selfacting mule und immer noch bei Feinspinnerei, oder aber bestimmte Teile der Maschine zur Verrichtung ihres Werks gleich einem Werkzeug vom Arbeiter gelenkt werden müssen, wie beim Maschinenbau vor der Verwandlung des slide rest (ein Drehapparat) in einen selfactor. Sobald die Arbeitsmaschine alle zur Bearbeitung des Rohstoffs nötigen Bewegungen ohne menschliche Beihilfe verrichtet und nur noch menschlicher Nachhilfe bedarf, haben wir ein automatisches System der Maschinerie, das indes beständiger Ausarbeitung im Detail fähig ist. So sind z.B. der Apparat, der die Spinnmaschine von selbst stillsetzt, sobald ein einzelner Faden reißt, und der selfacting stop, der den verbesserten Dampfwebstuhl stillsetzt, sobald der Spule des Weberschiffs der Einschlagsfaden ausgeht, ganz moderne Erfindungen.

Als Beispiel sowohl der Kontinuität der Produktion als der Durchführung des automatischen Prinzips kann die moderne Papierfabrik gelten. An der Papierproduktion kann überhaupt der Unterschied verschied-

the distinctions between modes of production based on different means of production, but also the connexion of the social conditions of production with those modes: for the old German paper-making furnishes us with a sample of handicraft production; that of Holland in the 17th and of France in the 18th century with a sample of manufacturing in the strict sense; and that of modern England with a sample of automatic fabrication of this article. Besides these, there still exist, in India and China, two distinct antique Asiatic forms of the same industry.

↓ At the end a description of a fully-developed machine system at Marx's time:

503:1 An organised system of machines, to which motion is communicated by the transmitting mechanism from a central automaton, is the most developed form of production by machinery. Here we have, in the place of the isolated machine, a mechanical monster whose body fills whole factories, and whose demon power, at first veiled under the slow and measured motions of his giant limbs, at length breaks out into the fast and furious whirl of his countless working organs.

ner Produktionsweisen, auf Basis verschiedener Produktionsmittel, wie der Zusammenhang der gesellschaftlichen Produktionsverhältnisse mit diesen Produktionsweisen, im einzelnen vorteilhaft studiert werden, da uns die ältere deutsche Papiermacherei Muster der handwerksmäßigen Produktion, Holland im 17. und Frankreich im 18. Jahrhundert Muster der eigentlichen Manufaktur und das moderne England Muster der automatischen Fabrikation in diesem Zweig liefern, außerdem in China und Indien noch zwei verschiedene altasiatische Formen derselben Industrie existieren.

402:1 Als gegliedertes System von Arbeitsmaschinen, die ihre Bewegung nur vermittelt der Transmissionsmaschinerie von einem zentralen Automaten empfangen, besitzt der Maschinenbetrieb seine entwickeltste Gestalt. An die Stelle der einzelnen Maschine tritt hier ein mechanisches Ungeheuer, dessen Leib ganze Fabrikgebäude füllt und dessen dämonische Kraft, erst versteckt durch die fast feierlich gemeßene Bewegung seiner Riesenglieder, im fieberhaft tollen Wirbeltanz seiner zahllosen eigentlichen Arbeitsorgane ausbricht.

15.1.e. [Development of Industries Producing Machines, Demand for Machines, Transportation and Communication]

Each such system of machines must itself be produced. This necessity generates additional developmental impulses not only for the machine systems themselves, but for the economy in which these machine systems are embedded.

Of course, the first machines were not produced by specialists who would only produce machines, but by workers who had obtained their skills from producing other things in artisan workshops or manufactures.

↓ The very first sentence here is an echo of 133:1:

503:2/oo There were mules and steam-engines before there were any laborers,

402:2/oo Es gab Mules, Dampfmaschinen usw., bevor es Arbeiter gab, deren aus-

whose exclusive occupation it was to make mules and steam-engines; just as men wore clothes before there were such people as tailors. The inventions of Vaucanson, Arkwright, Watt, and others, were, however, practicable, only because those inventors found, ready to hand, a considerable number of skilled mechanical workmen, placed at their disposal by the manufacturing period. Some of these workmen were independent handicraftsmen of various trades, others were grouped together in manufactures, in which, as before-mentioned, division of labor was strictly carried out.

This dependence of machinery on handicraft labor and manufactories (manual division of labor) is a contradiction. It first leads to changes in the manufactories themselves.

As inventions increased in number, and the demand for the newly discovered machines grew larger, the machine-making industry split up, more and more, into numerous independent branches, and division of labor in these manufactures was more and more developed. Here, then, we see in Manufacture the immediate technical foundation of Modern Industry. Manufacture produced the machinery, by means of which Modern Industry abolished the handicraft and manufacturing systems in those spheres of production that it first seized upon.

But these changes are not enough; manual division of labor is a too narrow basis for machinery and must eventually be abolished.

The factory system was therefore raised, in the natural course of things, on an inadequate foundation. When the system attained to a certain degree of development, it had to root up this ready-made foundation, which in the meantime had been elaborated on the old lines, and to build up for itself a basis that should correspond to its methods of production. Just as the individual machine

schließliches Geschäft es war, Dampfmaschinen, Mules usw. zu machen, ganz wie der Mensch Kleider trug, bevor es Schneider gab. Die Erfindungen von Vaucanson, Arkwright, Watt usw. waren jedoch nur ausführbar, weil jene Erfinder ein von der Manufakturperiode fertig geliefertes und beträchtliches Quantum geschickter mechanischer Arbeiter voranden. Ein Teil dieser Arbeiter bestand aus selbständigen Handwerkern verschiedener Profession, ein anderer Teil war in Manufakturen vereinigt, worin, wie früher erwähnt, die Teilung der Arbeit mit besondrer Strenge waltete.

Mit der Zunahme der Erfindungen und der wachsenden Nachfrage nach den neu erfundenen Maschinen entwickelte sich mehr und mehr einerseits die Sondrung der Maschinenfabrikation in mannigfaltige selbständige Zweige, andererseits die Teilung der Arbeit im Innern der maschinenbauenden Manufakturen. Wir erblicken hier also in der Manufaktur die unmittelbare technische Grundlage der großen Industrie. Jene produzierte die Maschinerie, womit diese in den Produktionssphären, die sie zunächst ergriff, den handwerks- und manufakturmäßigen Betrieb aufhob.

division of labor is a too narrow basis for

Der Maschinenbetrieb erhob sich also naturwüchsig auf einer ihm unangemeßnen materiellen Grundlage. Auf einem gewissen Entwicklungsgrad mußte er diese erst fertig vorgefundne und dann in ihrer alten Form weiter ausgearbeitete Grundlage selbst umwälzen und sich eine seiner eignen Produktionsweise entsprechende neue Basis schaffen. Wie die einzelne

retains a dwarfish character, so long as it is worked by the power of man alone, and just as no system of machinery could be properly developed before the steam-engine took the place of the earlier motive powers, animals, wind, and even water; so, too, Modern Industry was crippled in its complete development, so long as its characteristic instrument of production, the machine, owed its existence to personal strength and personal skill, and depended on the muscular development, the keenness of sight, and the cunning of hand, with which the detail workmen in manufactures, and the manual laborers in handicrafts, wielded their dwarfish implements'.

↑ In this last overlong sentence, Marx already identifies the concrete element which held the development back: the human element, which was increasingly removed from the mechanized labor process itself, still lingered in the production process of the machinery. ↓ This incoherence makes itself felt in the following manner:

Thus, apart from the dearness of the machines made in this way, a circumstance that is ever present to the mind of the capitalist, the expansion of industries carried on by means of machinery, and the invasion by machinery of fresh branches of production, were dependent on the growth of a class of workmen, who, owing to the almost artistic nature of their employment, could increase their numbers only gradually, and not by leaps and bounds.

↑ Two things were hindering the extension of machinery. One was: machines built by hand were too expensive. This obstacle imposed itself on capital as a conscious motive, capitalists were aware of this and this impeded their will to expand. The other obstacle worked more in a background, automatically, namely the number of workers skilled enough to produce machines could be increased only gradually.

↓ But this is only the economic side of it. The basis is also too narrow technologically:

But besides this, at a certain stage of its development, Modern Industry became technologically incompatible with the basis furnished for it by handicraft and Manufacture.

Maschine zwergmäßig bleibt, solange sie nur durch Menschen bewegt wird, wie das Maschinensystem sich nicht frei entwickeln konnte, bevor an die Stelle der vorgefundenen Triebkräfte—Tier, Wind und selbst Wasser—die Dampfmaschine trat, ebenso war die große Industrie in ihrer ganzen Entwicklung gelähmt, solange ihr charakteristisches Produktionsmittel, die Maschine selbst, persönlicher Kraft und persönlichem Geschick seine Existenz verdankte, also abhing von der Muskelentwicklung, der Schärfe des Blicks und der Virtuosität der Hand, womit der Teilnehmer in der Manufaktur und der Handwerker außerhalb derselben ihr Zwerginstrument führten.

Abgesehen von der Verteuerung der Maschinen infolge dieser Ursprungsweise—ein Umstand, welcher das Kapital als bewußtes Motiv beherrscht—blieb so die Ausdehnung der bereits maschinenmäßig betriebenen Industrie und das Eindringen der Maschinerie in neue Produktionszweige rein bedingt durch das Wachstum einer Arbeiterkategorie, die wegen der halbkünstlerischen Natur ihres Geschäfts nur allmählich und nicht sprungweis vermehrt werden konnte.

Aber auf einer gewissen Entwicklungsstufe geriet die große Industrie auch technisch in Widerstreit mit ihrer handwerks- und manufakturmäßigen Unterlage. Aus-

The increasing size of the prime movers, of the transmitting mechanism, and of the machines proper, the greater complication, multiformity and regularity of the details of these machines, as they more and more departed from the model of those originally made by manual labor, and acquired a form, untrammelled except by the conditions under which they worked,¹⁰³ the perfecting of the automatic system, and the use, every day more unavoidable, of a more refractory material, such as iron instead of wood—the solution of all these problems, which sprang up by the force of circumstances, everywhere met with a stumbling-block in the personal restrictions, which even the collective laborer of Manufacture could not break through, except to a limited extent. Such machines as the modern hydraulic press, the modern power-loom, and the modern carding engine, could never have been furnished by Manufacture.

Here again Marx comments on it how these obstacles impose themselves: by spontaneously arising tasks and problems.

¹⁰³ The power-loom was at first made chiefly of wood; in its improved modern form it is made of iron. To what an extent the old forms of the instruments of production influenced their new forms at first starting, is shown by, amongst other things, the most superficial comparison of the present power-loom with the old one, of the modern blowing apparatus of a blast-furnace with the first inefficient mechanical reproduction of the ordinary bellows, and perhaps more strikingly than in any other way, by the attempts before the invention of the present locomotive, to construct a locomotive that actually had two feet, which after the fashion of a horse, it raised alternately from the ground. It is only after considerable development of the science of mechanics, and accumulated practical experience, that the form

reckung des Umfangs der Bewegungsmaschinen, des Transmissionsmechanismus und der Werkzeugmaschinen, größere Komplikation, Mannigfaltigkeit und strengere Regelmäßigkeit ihrer Bestandteile, im Maße wie die Werkzeugmaschine sich von dem handwerksmäßigen Modell, das ihren Bau ursprünglich beherrscht, losriß und eine freie, nur durch ihre mechanische Aufgabe bestimmte Gestalt erhielt,¹⁰³ Ausbildung des automatischen Systems und stets unvermeidlichere Anwendung von schwer zu bewältigendem Material, z.B. Eisen statt Holz—die Lösung aller dieser naturwüchsig entspringenden Aufgaben stieß überall auf die persönlichen Schranken, die auch das in der Manufaktur kombinierte Arbeiterpersonal nur dem Grad, nicht dem Wesen nach durchbricht. Maschinen z.B. wie die moderne Druckerpresse, der moderne Dampfwebstuhl und die moderne Kardiermaschine, konnten nicht von der Manufaktur geliefert werden.

¹⁰³ Der mechanische Webstuhl in seiner ersten Form besteht hauptsächlich aus Holz, der verbesserte, moderne, aus Eisen. Wie sehr im Anfang die alte Form des Produktionsmittels seine neue Form beherrscht, zeigt u.a. die oberflächlichste Vergleichung des modernen Dampfwebstuhls mit dem alten, der modernen Blasinstrumente in Eisengießereien mit der ersten unbehilflichen mechanischen Wiedergeburt des gewöhnlichen Blasbalgs, und vielleicht schlagender als alles andre eine vor der Erfindung der jetzigen Lokomotiven versuchte Lokomotive, die in der Tat zwei Füße hatte, welche sie abwechselnd wie ein Pferd aufhob. Erst nach weiterer Entwicklung der Mechanik und gehäufte praktischer Erfahrung wird die Form gänzlich durch das mechanische Prinzip bestimmt und daher gänzlich emanzi-

of a machine becomes settled entirely in accordance with mechanical principles, and emancipated from the traditional form of the tool that gave rise to it.

Not only from the side of production but also from the utilization of machinery: Machinery spreads necessarily from one branch of production to another, and this also calls for improved means of transport and communication.

505:1/o A radical change in the mode of production in one sphere of industry involves a similar change in other spheres. This happens at first in such branches of industry as are connected together by being separate phases of a process, and yet are isolated by the social division of labor, in such a way, that each of them produces an independent commodity. Thus spinning by machinery made weaving by machinery a necessity, and both together made the mechanical and chemical revolution that took place in bleaching, printing, and dyeing, imperative. So too, on the other hand, the revolution in cotton-spinning called forth the invention of the gin, for separating the seeds from the cotton fibre; it was only by means of this invention, that the production of cotton became possible on the enormous scale at present required.¹⁰⁴ But more especially, the revolution in the modes of production of industry and agriculture made necessary a revolution in the general conditions of the social process of production, i.e., in the means of communication and of transport. In a society whose pivot, to use an expression of Fourier, was agriculture on a small scale, with its subsidiary domestic industries, and the urban handicrafts, the means of communication and transport were so utterly inadequate to the productive requirements of the manufacturing period, with its extended division of social labor, its concentration of the instruments of labor, and of

piert von der überlieferten Körperform des Werkzeugs, das sich zur Maschine entpuppt.

404:1/o Die Umwälzung der Produktionsweise in einer Sphäre der Industrie bedingt ihre Umwälzung in der andren. Es gilt dies zunächst für solche Industriezweige, welche zwar durch die gesellschaftliche Teilung der Arbeit isoliert sind, so daß jeder derselben eine selbständige Ware produziert, sich aber dennoch als Phasen eines Gesamtprozesses verschlingen. So machte die Maschinenspinnerei Maschinenweberei nötig und beide zusammen die mechanisch-chemische Revolution in der Bleicherei, Druckerei und Färberei. So rief andererseits die Revolution in der Baumwollspinnerei die Erfindung des gin zur Trennung der Baumwollfaser vom Samen hervor, womit erst die Baumwollproduktion auf dem nun erheischten großen Maßstab möglich ward.¹⁰⁴ Die Revolution in der Produktionsweise der Industrie und Agrikultur ernötigte namentlich aber auch eine Revolution in den allgemeinen Bedingungen des gesellschaftlichen Produktionsprozesses, d.h. den Kommunikations- und Transportmitteln. Wie die Kommunikations- und Transportmittel einer Gesellschaft, deren Pivot, um mich eines Ausdrucks Fouriers zu bedienen, die kleine Agrikultur mit ihrer häuslichen Nebenindustrie und das städtische Handwerk waren, den Produktionsbedürfnissen der Manufakturperiode mit ihrer erweiterten Teilung der gesellschaftlichen Arbeit, ihrer Konzentration von Arbeitsmitteln und Arbeitern und ihren Kolonialmärkten durchaus

the workmen, and its colonial markets, that they became in fact revolutionised. In the same way the means of communication and transport handed down from the manufacturing period soon became unbearable trammels on Modern Industry, with its feverish haste of production, its enormous extent, its constant flinging of capital and labor from one sphere of production into another, and its newly-created connexions with the markets of the whole world. Hence, apart from the radical changes introduced in the construction of sailing vessels, the means of communication and transport became gradually adapted to the modes of production of mechanical industry, by the creation of a system of river steamers, railways, ocean steamers, and telegraphs. But the 'huge masses of iron that had now to be forged, to be welded, to be cut, to be bored, and to be shaped, demanded, on their part, cyclopean machines, for the construction of which the methods of the manufacturing period were utterly inadequate.

¹⁰⁴ Eli Whitney's cotton gin had until very recent times undergone less essential changes than any other machine of the 18th century. It is only during the last decade (i.e., since 1856) that another American, Mr. Emery, of Albany, New York, has rendered Whitney's gin antiquated by an improvement as simple as it is effective.

This contradiction requires machinery to be produced by machinery. Only then can machinery "stand on its own feet". Today we see a similar situation in computer programming: only after computers learn to program computers, instead of people having to do this, will computers truly stand on their own feet.

506:1 Modern Industry had therefore itself to take in hand the machine, its characteristic instrument of production, and to construct machines by machines. It was not till it did this, that it built up for itself a fitting technical foundation, and stood on its

nicht mehr genügen konnten, daher auch in der Tat umgewälzt wurden, so verwandelten sich die von der Manufakturperiode überlieferten Transport- und Kommunikationsmittel bald in unerträgliche Hemmschuhe für die große Industrie mit ihrer fieberhaften Geschwindigkeit der Produktion, ihrer massenhaften Stufenleiter, ihrem beständigen Werfen von Kapital- und Arbeitermassen aus einer Produktionssphäre in die andre und ihren neugeschaffnen weltmarktlichen Zusammenhängen. Abgesehen von ganz umgewälztem Segelschiffbau, wurde das Kommunikations- und Transportwesen daher allmählich durch ein System von Flußdampfschiffen, Eisenbahnen, ozeanischen Dampfschiffen und Telegraphen der Produktionsweise der großen Industrie angepaßt. Die furchtbaren Eisenmassen aber, die jetzt zu schmieden, zu schweißen, zu schneiden, zu bohren und zu formen waren, erforderten ihrerseits zyklische Maschinen, deren Schöpfung der manufakturmäßige Maschinenbau versagte.

¹⁰⁴ Des Yankee Eli Whitney cottongin war bis zur neuesten Zeit im wesentlichen weniger verändert worden als irgendeine andre Maschine des 18. Jahrhunderts. Erst in den letzten Dezennien (vor 1867) hat ein anderer Amerikaner, Herr Emery von Albany, New York, Whitneys Maschine durch eine ebenso einfache als wirksame Verbeßerung antiquiert.

405:1 Die große Industrie mußte sich also ihres charakteristischen Produktionsmittels, der Maschine selbst, bemächtigen und Maschinen durch Maschinen produzieren. So erst schuf sie ihre adäquate technische Unterlage und stellte sich auf ihre

own feet. Machinery, simultaneously with the increasing use of it, in the first decades of this century, appropriated, by degrees, the fabrication of machines proper. But it was only during the decade preceding 1866, that the construction of railways and ocean steamers on a stupendous scale called into existence the cyclopean machines now employed in the construction of prime movers.

Question 836 *Why did the introduction of machinery soon require machines to be produced by machines?*

Technical conditions to make this possible:

506:2/o The most essential condition to the production of machines by machines was a prime mover capable of exerting any amount of force, and yet under perfect control. Such a condition was already supplied by the steam-engine. But at the same time it was necessary to produce the geometrically accurate straight lines, planes, circles, cylinders, cones, and spheres, required in the detail parts of the machines. This problem Henry Maudsley solved in the first decade of this century by the invention of the slide rest, a tool that was soon made automatic, and in a modified form was applied to other constructive machines besides the lathe, for which it was originally intended. This mechanical appliance replaces, not some particular tool, but the hand itself, which produces a given form by holding and guiding the cutting tool along the iron or other material operated upon. Thus it became possible to produce the forms of the individual parts of machinery

eigenen Füße. Mit dem wachsenden Maschinenbetrieb in den ersten Dezennien des 19. Jahrhunderts bemächtigte sich die Maschinerie in der Tat allmählich der Fabrikation der Werkzeugmaschinen. Jedoch erst während der letztverfloßnen Dezennien riefen ungeheurer Eisenbahnbau und ozeanische Dampfschiffahrt die zur Konstruktion von ersten Motoren angewandten zyklischen Maschinen ins Leben.

405:2–406:1 Die wesentlichste Produktionsbedingung für die Fabrikation von Maschinen durch Maschinen war eine jeder Kraftpotenz fähige und doch zugleich ganz kontrollierbare Bewegungsmaschine. Sie existierte bereits in der Dampfmaschine. Aber es galt zugleich die für die einzelnen Maschinenteile nötigen streng geometrischen Formen wie Linie, Ebene, Kreis, Zylinder, Kegel und Kugel maschinenmäßig zu produzieren. Dies Problem löste Henry Maudslay im ersten Dezennium des 19. Jahrhunderts durch die Erfindung des slidere, der bald automatisch gemacht und in modifizierter Form von der Drechselbank, wofür er zuerst bestimmt war, auf andre Konstruktionsmaschinen übertragen wurde. Diese mechanische Vorrichtung ersetzt nicht irgendein besonderes Werkzeug, sondern die menschliche Hand selbst, die eine bestimmte Form hervorbringt, durch Vorhalten Anpassen und Richtung der Schärfe von Schneideinstrumenten usw. gegen oder über das Arbeitsmaterial, z.B. Eisen. So gelang es, die geometrischen Formen der einzelnen Maschinenteile

“with a degree of ease, accuracy, and speed, that no accumulated experience of the hand of the most skilled workman could give.”¹⁰⁵

¹⁰⁵ “The Industry of Nations,” Lond., 1855, Part II., p. 239. This work also remarks: ‘Simple and outwardly unimportant as this appendage to lathes may appear, it is not, we believe, averring too much to state, that its influence in improving and extending the use of machinery has been as great as that produced by Watt’s improvements of the steam-engine itself. Its introduction went at once to perfect all machinery, to cheapen it, and to stimulate invention and improvement.’

507:1/o If we now fix our attention on that portion of the machinery employed in the construction of machines, which constitutes the operating tool, we find the manual implements re-appearing, but on a cyclopean scale. The operating part of the boring machine is an immense drill driven by a steam-engine; without this machine, on the other hand, the cylinders of large steam-engines and of hydraulic presses could not be made. The mechanical lathe is only a cyclopean reproduction of the ordinary foot-lathe; the planing machine, an iron carpenter, that works on iron with the same tools that the human carpenter employs on wood; the instrument that, on the London wharves, cuts the veneers, is a gigantic razor; the tool of the shearing machine, which shears iron as easily as a tailor’s scissors cut cloth, is a monster pair of scissors; and the steam-hammer works with an ordinary hammer head, but of such a weight that not Thor himself could wield it.¹⁰⁶ These steam-hammers are an invention of Nasmyth, and there is one that weighs over 6 tons and

„mit einem Grad von Leichtigkeit, Genauigkeit und Raschheit zu produzieren, den keine gehäufte Erfahrung der Hand des geschicktesten Arbeiters verleihen konnte“.¹⁰⁵

¹⁰⁵ „The Industry of Nations“, Lond. 1855, Part II., p. 239. Es heißt ebendasselbst: „So einfach und äußerlich unbedeutend, wie dieses Zubehör zur Drehbank erscheinen mag, glauben wir doch nicht zu viel zu behaupten, wenn wir feststellen, daß sein Einfluß auf die bessere und ausgedehntere Verwendung von Maschinen ebenso groß gewesen ist wie der, den Watts Verbesserungen der Dampfmaschine hervorgerufen haben. Seine Einführung hatte sofort eine Vervollkommnung und Verbilligung aller Maschinen zur Folge und trieb zu weiteren Erfindungen und Verbesserungen.“

406:2/o Betrachten wir nun den Teil der zum Maschinenbau angewandten Maschinerie, der die eigentliche Werkzeugmaschine bildet, so erscheint das handwerksmäßige Instrument wieder, aber in zyklonischem Umfang. Der Operateur der Bohrmaschine z.B. ist ein ungeheurer Bohrer, der durch eine Dampfmaschine getrieben wird und ohne den umgekehrt die Zylinder großer Dampfmaschinen und hydraulischer Pressen nicht produziert werden könnten. Die mechanische Drechselbank ist die zyklonische Wiedergeburt der gewöhnlichen Fußdrechselbank, die Hobelmaschine ein eiserner Zimmermann, der mit denselben Werkzeugen in Eisen arbeitet, womit der Zimmermann in Holz; das Werkzeug, welches in den Londoner Schiffswerften das Furnierwerk schneidet, ist ein riesenartiges Rasiermesser, das Werkzeug der Schermaschine, welche Eisen schneidet, wie die Schneiderschere Tuch, eine Monsterschere, und der Dampfhammer operiert mit einem gewöhnlichen Hammerkopf, aber von solchem Gewicht, daß Thor selbst ihn nicht schwingen könnte.¹⁰⁶

strikes with a vertical fall of 7 feet, on an anvil weighing 36 tons. It is mere child’s-play for it to crush a block of granite into powder, yet it is no less capable of driving, with a succession of light taps, a nail into a piece of soft wood.¹⁰⁷

¹⁰⁶ One of these machines, used for forging paddle-wheel shafts in London, is called “Thor.” It forges a shaft of 16 1/2 tons with as much ease as a blacksmith forges a horseshoe.

¹⁰⁷ Wood-working machines that are also capable of being employed on a small scale are mostly American inventions.

Summary conclusion of the whole section which now stresses more the differences than the common features of hand tools and machinery. Co-operation *technical* necessity!

508:2 The implements of labor, in the form of machinery, necessitate the substitution of natural forces for human force, and the conscious application of science, instead of rule of thumb. In Manufacture, the organisation of the social labor-process is purely subjective; it is a combination of detail laborers; in its machinery system, Modern Industry has a productive organism that is purely objective, in which the laborer becomes a mere appendage to an already existing material condition of production. In simple co-operation, and even in that founded on division of labor, the suppression of the isolated, by the collective, workman still appears to be more or less accidental. Machinery, with a few exceptions to be mentioned later, operates only by means of associated labor, or labor in common. Hence the co-operative character of the labor-process is, in the latter case, a technical necessity dictated by the instrument of

Einer dieser Dampfhammer z.B., die eine Erfindung von Nasmyth sind, wiegt über 6 Tonnen und stürzt mit einem perpendicularen Fall von 7 Fuß auf einen Amboß von 36 Tonnen Gewicht. Er pulverisiert spielend einen Granitblock und ist nicht minder fähig, einen Nagel in weiches Holz mit einer Aufeinanderfolge leiser Schläge einzutreiben.¹⁰⁷

¹⁰⁶ Eine dieser Maschinen in London zum Schmieden von paddle-wheel shafts führt den Namen „Thor“. Sie schmiedet einen Schaft von 16 1/2 Tonnen Gewicht mit derselben Leichtigkeit, wie der Schmied ein Hufeisen.

¹⁰⁷ Die in Holz arbeitenden Maschinen, die auch kleinem Maßstab angewandt werden können, sind meist amerikanische Erfindung.

407:1 Als Maschinerie erhält das Arbeitsmittel eine materielle Existenzweise, welche Ersetzung der Menschenkraft durch Naturkräfte und erfahrungsmäßiger Routine durch bewußte Anwendung der Naturwissenschaft bedingt. In der Manufaktur ist die Gliederung des gesellschaftlichen Arbeitsprozesses rein subjektiv, Kombination von Teilarbeitern; im Maschinensystem besitzt die große Industrie einen ganz objektiven Produktionsorganismus, den der Arbeiter als fertige materielle Produktionsbedingung vorfindet. In der einfachen und selbst in der durch Teilung der Arbeit spezifizierten Kooperation erscheint die Verdrängung des vereinzelt arbeitenden durch den vergesellschafteten immer noch mehr oder minder zufällig. Die Maschinerie, mit einigen später zu erwähnenden Ausnahmen, funktioniert nur in der Hand unmittelbar vergesellschafteter oder gemeinsamer Arbeit. Der kooperative Charakter des Arbeitspro-

labor itself.

zesses wird jetzt also durch die Natur des Arbeitsmittels selbst diktierter technische Notwendigkeit.

↑ In this section, Marx described the evolution of machinery as the exercise of the forces which he identified at the beginning as the driving forces for the development of machinery. The replacement of the worker was the starting point, and the development is only finished after also the production of machinery itself is mechanized.

15.2. The Value Transferred by the Machinery to the Product

Since the purpose of machinery is to replace the laborer in the production process, does this mean that it also takes over the role of the laborer in the valorization process, namely, incorporate new value in the product? The answer is no; the machine transfers its own value but does not create new value.

The second section begins with a summary how machines increase productivity: machinery is the vessel allowing the capitalist to capture the productive forces yielded without cost by co-operation, the natural forces, and science.

508:2/o We saw that the productive powers resulting from co-operation and division of labor cost capital nothing. They are natural forces of social labor. So also physical forces, like steam, water, etc., when appropriated to productive processes, cost nothing. But just as a man requires lungs to breathe with, so he requires something that is work of man's hand, in order to consume physical forces productively. A water-wheel is necessary to exploit the force of water, and a steam-engine to exploit the elasticity of steam. And the same thing that holds for the natural forces also holds for science. Once discovered, the law of the deviation of the magnetic needle in the field of an electric current, or the law of the magnetisation of iron, around which an electric current circulates, cost never a penny.¹⁰⁸ But the exploitation of these laws for the purposes of telegraphy, etc., necessitates a costly and extensive apparatus.

407:2/o Man sah, daß die aus Kooperation und Teilung der Arbeit entspringenden Produktivkräfte dem Kapital nichts kosten. Sie sind Naturkräfte der gesellschaftlichen Arbeit. Naturkräfte, wie Dampf, Wasser usw., die zu produktiven Prozessen angeeignet werden, kosten ebenfalls nichts. Wie aber der Mensch eine Lunge zum Atmen braucht, braucht er ein „Gebild von Menschenhand“, um Naturkräfte produktiv zu konsumieren. Ein Wasserrad ist nötig, um die Bewegungskraft des Wassers, eine Dampfmaschine, um die Elastizität des Dampfes auszubeuten. Wie mit den Naturkräften verhält es sich mit der Wissenschaft. Einmal entdeckt, kostet das Gesetz über die Abweichung der Magnethadel im Wirkungskreise eines elektrischen Stroms oder über Erzeugung von Magnetismus im Eisen, um das ein elektrischer Strom kreist, keinen Deut.¹⁰⁸ Aber zur Ausbeutung dieser Gesetze für Telegraphie usw. bedarf es eines sehr

kostspieligen und weitläufigen Apparats.

The sentence “and what is true for the natural forces is also true for science” is present (in German) in MEW 23, but it is not present in MEGA II/9, 337:1 (which is a

reproduction of the original English translation). MECW gives this sentence as an editorial footnote. The Vintage translation omits it altogether. But the

German counterpart of this sentence is present in the 2nd edition already (according to MEGA).

Question 837 *How does machinery increase the productiveness of labor?*

Question 838 *In 508:2/o, Marx distinguishes the productive forces of nature from those of science. Is this justified?*

↑ Nothing about energy. ↓ The footnote introduces an interesting concept of capitalist exploitation of science, parallel to the capitalist exploitation of labor.

¹⁰⁸ Science, generally speaking, costs the capitalist nothing, a fact that by no means hinders him from exploiting it. The science of others is as much annexed by capital as the labor of others. Capitalistic appropriation and personal appropriation, whether of science or of material wealth, are, however, totally different things. Dr. Ure himself deplores the gross ignorance of mechanical science existing among his dear machinery-exploiting manufacturers, and Liebig can tell us about the astounding ignorance of chemistry displayed by English chemical manufacturers.

¹⁰⁸ Die Wissenschaft kostet dem Kapitalisten überhaupt „nichts“, was ihn durchaus nicht hindert, sie zu exploitierten. Die „fremde“ Wissenschaft wird dem Kapital einverleibt wie fremde Arbeit. „Kapitalistische“ Aneignung und „persönliche“ Aneignung, sei es von Wissenschaft, sei es von materiellem Reichtum, sind aber ganz und gar disparate Dinge. Dr. Ure selbst bejammerte die grobe Unbekanntheit seiner lieben, Maschinen exploitierenden Fabrikanten mit der Mechanik, und Liebig weiß von der haarsträubenden Unwissenheit der englischen chemischen Fabrikanten in der Chemie zu erzählen.

Moore-Aveling (according to MECW) has: “Liebig can a tale

unfold about the astounding ignorance of chemistry.” This

sentence does not make sense, we follow here the Fowkes translation.

Question 839 *What is the difference between “capitalist” and “personal” appropriation of science?*

Now Marx begins to explain how machines take advantage of natural forces and of science:

The machine, as we have seen, does not drive out the tool. Rather does the tool expand and multiply, changing from a dwarf implement of the human organism to the implement of a mechanism created by man. Capital now sets the laborer to work, not with a manual tool, but with a machine

Durch die Maschine wird, wie wir sahen, das Werkzeug nicht verdrängt. Aus einem Zwergwerkzeug des menschlichen Organismus reckt es sich in Umfang und Anzahl zum Werkzeug eines vom Menschen geschaffenen Mechanismus. Statt mit dem Handwerkszeug, läßt das Kapital den Ar-

which itself handles the tools.

↓ Although the productivity of the laborer using the machine is multiplied, it is not clear whether the total labor input declines, since machines themselves contain much more labor than hand tools.

Although, therefore, it is clear at the first glance that, by incorporating both stupendous physical forces, and the natural sciences, with the process of production, Modern Industry raises the productiveness of labor to an extraordinary degree, it is by no means equally clear, that this increased productive force is not, on the other hand, purchased by an increased expenditure of labor. Machinery, like every other component of constant capital, creates no new value, but yields up its own value to the product that it serves to beget. In so far as the machine has value, and, in consequence, parts with value to the product, it forms an element in the value of that product. Instead of being cheapened, the product is made dearer in proportion to the value of the machine. And it is clear as noon-day, that machines and systems of machinery, the characteristic instruments of labor of Modern Industry, are incomparably more loaded with value than the implements used in handicrafts and manufactures.

↑ Although machinery allows to harness natural forces, there is no a priori reason why this use of machinery decreases the labor content of the product: direct labor diminishes only at the expense of increased past labor. ↓ In the next paragraph Marx brings four arguments why the overall expenditure of labor decreases.

(1) Although big machines must be present in the labor process, they enter the valorization process only piecemeal.

509:1/o In the first place, it must be observed that the machinery, while always entering as a whole into the labor-process, enters into the value-begetting process only by bits. It never adds more value than it loses, on an average, by wear and tear. Hence there

beiter jetzt mit einer Maschine arbeiten, die ihre Werkzeuge selbst führt.

Wenn es daher auf den ersten Blick klar ist, daß die große Industrie durch Einverleibung ungeheurer Naturkräfte und der Naturwissenschaft in den Produktionsprozeß die Produktivität der Arbeit außerordentlich steigern muß, ist es keineswegs ebenso klar, daß diese gesteigerte Produktivkraft nicht durch vermehrte Arbeitsausgabe auf der andren Seite erkaufte wird. Gleich jedem andren Bestandteil des konstanten Kapitals schafft die Maschinerie keinen Wert, gibt aber ihren eignen Wert an das Produkt ab, zu dessen Erzeugung sie dient. Soweit die Wert hat und daher Wert auf das Produkt überträgt, bildet sie einen Wertbestandteil desselben. Statt es zu verwohlfeilern, verteuert sie es im Verhältnis zu ihrem eignen Wert. Und es ist handgreiflich, daß Maschine und systematisch entwickelte Maschinerie, das charakteristische Arbeitsmittel der großen Industrie, unverhältnismäßig an Wert schwillt, verglichen mit den Arbeitsmitteln des Handwerks- und Manufakturenbetriebs.

408:1/o Es ist nun zunächst zu bemerken, daß die Maschinerie stets ganz in den Arbeitsprozeß und immer nur teilweise in den Verwertungsprozeß eingeht. Sie setzt nie mehr Wert zu, als sie im Durchschnitt durch ihre Abnutzung verliert. Es findet also große

is a great difference between the value of a machine, and the value transferred in a given time by that machine to the product.

↓ (2) This difference rises with the useful length of life of the machine (and machines live longer).

The longer the life of the machine in the labor-process, the greater is that difference.

↓ (3) This difference also rises because machines use scientific principles.

It is true, no doubt, as we have already seen, that every instrument of labor enters as a whole into the labor-process, and only piece-meal, proportionally to its average daily loss by wear and tear, into the value-begetting process. But this difference between the instrument as a whole and its daily wear and tear is much greater in a machine than in a tool, because the machine, being made from more durable material, has a longer life; because its employment, being regulated by strictly scientific laws, allows of greater economy in the wear and tear of its parts, and in the materials it consumes; and lastly, because its field of production is incomparably larger than that of a tool.

↑ (4) The end of the last sentence had a fourth reason: machines produce many more products.

↓ Marx sums this up as follows: machines are a productive power that costs nothing, namely, humankind has learned to make its own past labor as effective for their purposes as natural forces.

After making allowance, both in the case of the machine and of the tool, for their average daily cost, that is for the value they transmit to the product by their average daily wear and tear, and for their consumption of auxiliary substance, such as oil, coal, and so

Differenz statt zwischen dem Wert der Maschinen und dem periodisch von ihr auf das Produkt übertragenen Wertteil. Es findet eine große Differenz statt zwischen der Maschine als wertbildendem und als produktbildendem Element.

Je größer die Periode, während welcher dieselbe Maschinerie wiederholt in demselben Arbeitsprozeß dient, desto größer jene Differenz.

Allerdings haben wir gesehen, daß jedes eigentliche Arbeitsmittel oder Produktionsinstrument immer ganz in den Arbeitsprozeß und stets nur stückweis, im Verhältnis zu seinem täglichen Durchschnittverschleiß, in den Verwertungsprozeß eingeht. Diese Differenz jedoch zwischen Benutzung und Abnutzung ist viel größer bei der Maschinerie als bei dem Werkzeug, weil sie, aus dauerhafterem Material gebaut, länger lebt, weil ihre Anwendung, durch streng wissenschaftliche Gesetze geregelt, größere Ökonomie in der Verausgabung ihrer Bestandteile und ihrer Konsumtionsmittel ermöglicht, und endlich, weil ihr Produktionsfeld unverhältnismäßig größer ist als das des Werkzeugs.

Zieh wir von beiden, von Maschinerie und Werkzeug, ihre täglichen Durchschnittskosten ab oder den Wertbestandteil, den sie durch täglichen Durchschnittverschleiß und den Konsum von Hilfsstoffen, wie Öl, Kohlen usw., dem Produkt zusetzen, so

on, they each do their work gratuitously, just like the forces furnished by Nature without the help of man. The greater the productive power of the machinery compared with that of the tool, the greater is the extent of its gratuitous service compared with that of the tool. In Modern Industry man succeeded for the first time in making the product of his past labor work on a large scale gratuitously, like the forces of Nature.¹⁰⁹

↓ Footnote: Ricardo says this too, even overstates it:

¹⁰⁹ Ricardo lays such stress on this effect of machinery (of which, in other connexions, he takes no more notice than he does of the general distinction between the labor process and the process of creating surplus-value), that he occasionally loses sight of the value given up by machines to the product, and puts machines on the same footing as natural forces. Thus "Adam Smith nowhere undervalues the services which the natural agents and machinery perform for us, but he very justly distinguishes the nature of the value which they add to commodities ... as they perform their work gratuitously, the assistance which they afford us, adds nothing to value in exchange." (Ric., l.c., pp. 336, 337.) This observation of Ricardo is of course correct in so far as it is directed against J. B. Say, who imagines that machines render the "service" of creating value which forms a part of "profits."

↓ After this economy in the transfer of value by each individual machine, Marx discusses now the economy of the machine *system*. Here we find again the economy of constant capital, which we know from the co-operation chapter 441:1/o. These savings are multiplied because the jointly used conditions of the labor-process include the motor and transmission mechanisms.

510:1 In treating of Co-operation and Manufacture, it was shown that certain general factors of production, such as buildings, are, in comparison with the scattered means of production of the isolated workman, economised by being consumed in

wirken sie umsonst, ganz wie ohne Zutun menschlicher Arbeit vorhandne Naturkräfte. Um soviel größer der produktive Wirkungsumfang der Maschinerie als der des Werkzeuge, um soviel größer ist der Umfang ihres unentgeltlichen Dienstes, verglichen mit dem des Werkzeugs. Erst in der großen Industrie lernt der Mensch, das Produkt seiner vergangen, bereits vergegenständlichten Arbeit auf großem Maßstab gleich einer Naturkraft umsonst wirken zu lassen.¹⁰⁹

¹⁰⁹ Ricardo faßt diese, übrigens von ihm ebenso wenig wie der allgemeine Unterschied zwischen Arbeitsprozeß und Verwertungsprozeß entwickelte Wirkung der Maschinen manchmal so vorzugsweise ins Auge, daß er gelegentlich den Wertbestandteil vergißt, den Maschinen an das Produkt abgeben, und sie ganz und gar mit den Naturkräften zusammenwirft. So z.B. „Adam Smith unterschätzt nirgends die Dienste, die Naturkräfte und Maschinerie uns leisten, aber er unterscheidet sehr richtig die Natur des Wertes, den sie den Waren zusetzen ... da sie ihre Arbeit kostenlos tun, setzt ihr uns geleisteter Beistand dem Tauschwert nichts zu“. (Ricardo, l.c. p. 336, 337.) Ricardos Bemerkung ist natürlich richtig gegen J.B. Say, der sich vorfaselt, die Maschinen leisteten den „Dienst“, Wert zu schaffen, der Teil des „Profits“ bilde.

409:1 Es ergab sich bei Betrachtung der Kooperation und Manufaktur, daß gewisse allgemeine Produktionsbedingungen, wie Baulichkeiten usw., im Vergleich mit den zersplitterten Produktionsbedingungen einzelner Arbeiter durch den gemeinsamen

common, and that they therefore make the product cheaper. In a system of machinery, not only is the framework of the machine consumed in common by its numerous operating implements, but the prime mover, together with a part of the transmitting mechanism, is consumed in common by the numerous operative machines.

Question 840 Why does machinery cheapen the product even though machines are much more expensive than manual tools? How do you measure the labor saved by machines?

↓ The scale of production argument, which was already used for the single machine, is even more powerful for the machine system:

510:2/o Given the difference between the value of the machinery, and the value transferred by it in a day to the product, the extent to which this latter value makes the product dearer, depends in the first instance, upon the size of the product; so to say, upon its area. Mr. Baynes, of Blackburn, in a lecture published in 1858, estimates that

“each real mechanical horse-power^{109a} will drive 450 self-acting mule spindles, with preparation, or 200 throstle spindles, or 15 looms for 40 inch cloth with the appliances for warping, sizing, etc.”

In the first case, it is the day's produce of 450 mule spindles, in the second, of 200 throstle spindles, in the third, of 15 power-loom, over which the daily cost of one horse-power, and the wear and tear of the machinery set in motion by that power, are spread; so that only a very minute value is transferred by such wear and tear to a pound of yarn or a yard of cloth. The same is the case with the steam-hammer mentioned above. Since its daily wear and tear, its coal-consumption, etc., are spread over the stupendous masses of iron hammered by it in

Konsum ökonomisiert werden, daher das Produkt weniger verteuern. Bei der Maschinerie wird nicht nur der Körper einer Arbeitsmaschine von ihren vielen Werkzeugen, sondern dieselbe Bewegungsmaschine nebst einem Teil des Transmissionsmechanismus von vielen Arbeitsmaschinen gemeinsam verbraucht.

409:2–410:2 Gegeben die Differenz zwischen dem Wert der Maschinerie und dem auf ihr Tagesprodukt übertragenen Wertteil, hängt der Grad, worin dieser Wertteil das Produkt verteuert, zunächst vom Umfang des Produkts ab, gleichsam von seiner Oberfläche. Herr Baynes aus Blackburn schätzt in einer 1857 veröffentlichten Vorlesung, daß

„jede reale^{109a} mechanische Pferdekraft 450 selfacting Mulespindeln nebst Vorgeschrirrtreibt oder 200 Throstlespindeln oder 15 Webstühle für 40 inch cloth nebst den Vorrichtungen zum Aufziehen der Kette, Schlichten usw.“

Es ist im ersten Fall das Tagesprodukt von 450 Mulespindeln, im zweiten von 200 Throstlespindeln, im dritten von 15 mechanischen Webstühlen, worüber sich die täglichen Kosten einer Dampfpferdekraft und der Verschleiß der von ihr in Bewegung gesetzten Maschinerie verteilen, so daß hierdurch auf eine Unze Garn oder eine Elle Geweb nur ein winziger Wertteil übertragen wird. Ebenso im obigen Beispiel mit dem Dampfhammer. Da sich sein täglicher Verschleiß, Kohlenkonsum usw. verteilen auf die furchtbaren Eisenmassen, die

a day, only a small value is added to a hundred weight of iron; but that value would be very great, if the cyclopean instrument were employed in driving in nails.

Now a footnote by Engels about the changing definition of horse-power:

^{109a} A horse-power is equal to a force of 33,000 foot-pounds per minute, i.e., to a force that raises 33,000 pounds one foot in a minute, or one pound 33,000 feet. This is the horse power meant in the text. In ordinary language, and also here and there in quotations in this work, a distinction is drawn between the “nominal” and the “commercial” or “indicated” horse-power of the same engine. The old or nominal horse-power is calculated exclusively from the length of piston-stroke, and the diameter of the cylinder, and leaves pressure of steam and piston speed out of consideration. It expresses practically this: This engine would be one of 50 horse-power, if it were driven with the same low pressure of steam, and the same slow piston speed, as in the days of Boulton and Watt. But the two latter factors have increased enormously since those days. In order to measure the mechanical force exerted today by an engine, an indicator has been invented which shows the pressure of the steam in the cylinder. The piston speed is easily ascertained. Thus the “indicated” or “commercial” horse-power of an engine is expressed by a mathematical formula, involving diameter of cylinder, length of stroke, piston speed, and steam pressure, simultaneously, and showing what multiple of 33,000 pounds is really raised by the engine in a minute. Hence, one “nominal” horse-power may exert three, four, or even five “indicated” or “real” horse-powers. This observation is made for the purpose of explaining various citations in the subsequent pages.—F. E.

↓ The scale of production is size times speed, and speed has been increasing greatly:

511:1/o Given a machine’s capacity for work, that is, the number of its operating tools, or, where it is a question of force, their

er täglich hämmert, hängt sich jedem Zentner Eisen nur ein geringer Wertteil an, der sehr groß wäre, sollte das zyklische Instrument kleine Nägel eintreiben.

^{109a} {Note zur 3. Aufl.—Eine „Pferdekraft“ ist gleich der Kraft von 33 000 Fußpfund in der Minute, d.h. der Kraft, die 33 000 Pfund in der Minute um 1 Fuß (englisch) hebt oder 1 Pfund um 33 000 Fuß. Dies ist die oben gemeinte Pferdekraft. In der gewöhnlichen Geschäftssprache und auch hie und da in Zitaten dieses Buchs wird aber unterschieden zwischen „nominellen“ und „kommerziellen“ oder „indizierten“ Pferdekraften derselben Maschine. Die alte oder nominelle Pferdekraft wird berechnet ausschließlich aus Kolbenhub und Zylinderdurchmesser und läßt Dampfdruck und Kolbengeschwindigkeit ganz außer Berücksichtigung. D.h., faktisch sagt sie aus: Diese Dampfmaschine hat z.B. 50 Pferdekraft, wenn sie mit demselben schwachen Dampfdruck und derselben geringen Kolbengeschwindigkeit getrieben wird wie zur Zeit von Boulton und Watt. Letztere beiden Faktoren sind aber seitdem enorm gewachsen. Um die von einer Maschine heute wirklich gelieferte mechanische Kraft zu messen, wurde der Indikator erfunden, der den Dampfdruck anzeigt. Die Kolbengeschwindigkeit läßt sich leicht feststellen. So ist das Maß der „indizierten“ oder „kommerziellen“ Pferdekraft einer Maschine eine mathematische Formel, welche Zylinderdurchmesser, Höhe des Kolbenhubs, Kolbengeschwindigkeit und Dampfdruck gleichzeitig berücksichtigt und damit anzeigt, wievielfach die Maschine in der Minute 33000 Fußpfund wirklich leistet. Eine nominelle Pferdekraft kann daher in Wirklichkeit drei, vier, selbst fünf indizierte oder wirkliche Pferdekraften leisten. Dies zur Erklärung verschiedener späterer Zitate.—F.E.}

410:3/o Den Wirkungskreis der Arbeitsmaschine, also die Anzahl ihrer Werkzeuge, oder, wo es sich um Kraft handelt, deren

mass, the amount of its product will depend on the velocity of its working parts, on the speed, for instance, of the spindles, or on the number of blows given by the hammer in a minute. Many of these colossal hammers strike seventy times in a minute, and Ryder’s patent machine for forging spindles with small hammers gives as many as 700 strokes per minute.

Another systemic factor is the value of the machine itself, which is diminished in the production of machines by machines.

512:1 Given the rate at which machinery transfers its value to the product, the amount of value so transferred depends on the total value of the machinery.¹¹⁰ The less labor it contains, the less value it imparts to the product. The less value it gives up, so much the more productive it is, and so much the more its services approximate to those of natural forces. But the production of machinery by machinery lessens its value relatively to its extension and efficacy.

Side remark that machines do not transfer interest costs to the product:

¹¹⁰ The reader who is imbued with capitalist notions will naturally miss here the “interest” that the machine, in proportion to its capital value, adds to the product. It is, however, easily seen that since a machine no more creates new value than any other part of constant capital, it cannot add any value under the name of “interest.” It is also evident that here, where we are treating of the production of surplus-value, we cannot assume *a priori* the existence of any part of that value under the name of interest. The capitalist mode of calculating, which appears, *prima facie*, absurd and repugnant to the laws of the creation of value, will be explained in the third book of this work.

↑ This was a fleeting reference to the prices of production. ↓ Finally Marx also looks at

Umfang gegeben, wird die Produktenmasse von der Geschwindigkeit abhängen, womit sie operiert, also z.B. von der Geschwindigkeit, womit sich die Spindel dreht, oder der Anzahl Schläge, die der Hammer in einer Minute austreibt. Manche jener kolossalen Hämmer geben 70 Schläge, Ryders Schmiedepatentmaschine, die Dampfhämmer in kleineren Dimensionen zum Schmieden von Spindeln anwendet, 700 Schläge in einer Minute.

411:1 Die Proportion gegeben, worin die Maschinerie Wert auf das Produkt überträgt, hängt die Größe dieses Wertteils von ihrer eignen Wertgröße ab.¹¹⁰ Je weniger Arbeit sie selbst enthält, desto weniger Wert setzt sie dem Produkt zu. Je weniger Wert abgebend, desto produktiver ist sie und desto mehr nähert sich ihr Dienst dem der Naturkräfte. Die Produktion der Maschinerie durch Maschinerie verringert aber ihren Wert, verhältnismäßig zu ihrer Ausdehnung und Wirkung.

¹¹⁰ Der in kapitalistischen Vorstellungen befangene Leser vermißt hier natürlich den „Zins“, den die Maschine, pro rata ihres Kapitalwerts, dem Produkt zusetzt. Es ist jedoch leicht einzusehen, daß die Maschine, da sie so wenig als irgendein anderer Bestandteil des konstanten Kapitals Neuwert erzeugt, keinen solchen unter dem Namen „Zins“ zusetzen kann. Es ist ferner klar, daß hier, wo es sich um die Produktion des Mehrwerts handelt, kein Teil desselben unter dem Namen „Zins“ *a priori* vorausgesetzt werden kann. Die kapitalistische Rechnungsweise, die *prima facie* abgeschmackt und den Gesetzen der Wertbildung widersprechend scheint, findet im dritten Buch dieser Schrift ihre Erklärung.

the empirical evidence:

512:2 An analysis and comparison of the prices of commodities produced by handicrafts or manufactures, and of the prices of the same commodities produced by machinery, shows generally, that, in the product of machinery, the value due to the instruments of labor increases relatively, but decreases absolutely. In other words, its absolute amount decreases, but its amount, relatively to the total value of the product, of a pound of yarn, for instance, increases.¹¹¹

↑ Marx will refer to these same empirical findings also in chapter Twenty-Five, 773:2/o.

This theorem here looks like a general principle governing technical progress: labor can be shortened only by transferring relatively more to the means of labor.

↓ Footnote 111 gives a counterexample where the value part falls even absolutely:

¹¹¹ This portion of value which is added by the machinery, decreases both absolutely and relatively, when the machinery does away with horses and other animals that are employed as mere moving forces, and not as machines for changing the form of matter. It may here be incidentally observed, that Descartes, in defining animals as mere machines, saw with eyes of the manufacturing period, while to eyes of the middle ages, animals were assistants to man, as they were later to Von Haller in his "Restauration der Staatswissenschaften." That Descartes, like Bacon, anticipated an alteration in the form of production, and the practical subjugation of Nature by Man, as a result of the altered methods of thought, is plain from his "Discours de la Méthode." He there says: "If est possible (by the methods he introduced in philosophy) de parvenir i des connaissances fort utiles i la vie, et qu'au lieu de cette philosophic speculative qu'on enseigne dans les écoles, on en peut trouver une pratique, par laquelle, connaissant la force et les actions du feu, de l'eau, de l'air, des astres, et de tons les autres corps qui nous environnent, aussi distinctement que nous connaissons les divers métiers de nos artisans, nous les pourrions employer en même façon à tous les

411:2 Eine vergleichende Analyse der Preise handwerks- oder manufakturmäßig produzierter Waren und der Preise derselben Waren als Maschinenprodukt ergibt im allgemeinen das Resultat, daß beim Maschinenprodukt der dem Arbeitsmittel geschuldete Wertbestandteil relativ wächst, aber absolut abnimmt. Das heißt, seine absolute Größe nimmt ab, aber seine Größe im Verhältnis zum Gesamtwert des Produkts, z.B. eines Pfundes Garns, nimmt zu.¹¹¹

¹¹¹ Dieser von der Maschine zugesetzte Wertbestandteil fällt absolut und relativ, wo sie Pferde verdrängt, überhaupt Arbeitstiere, die nur als Bewegungskraft, nicht als Stoffwechselmaschinen benutzt werden. Nebenbei bemerkt, Descartes mit seiner Definition der Tiere als bloßer Maschinen sieht mit den Augen der Manufakturperiode im Unterschied zum Mittelalter, dem das Tier als Gehilfe des Menschen galt, wie später wieder dem Herrn v. Haller in seiner „Restauration der Staatswissenschaften“. Daß Descartes ebenso wie Bacon eine veränderte Gestalt der Produktion und praktische Beherrschung der Natur durch den Menschen als Resultat der veränderten Denkmethode betrachtete, zeigt sein „Discours de la Méthode“, wo es u.a. heißt: „Es ist möglich“ (durch die von ihm in die Philosophie eingeführte Methode), „zu Kenntnissen zu gelangen, die für das Leben sehr nützlich sind, und an Stelle jener spekulativen Philosophie, die man in den Schulen lehrt, eine praktische Philosophie zu finden, durch die wir die Kräfte und die Wirksamkeit des Feuers, des Wassers, der Luft, der Gestirne und aller anderen uns umgebenden Körper—indem wir sie ebenso genau kennen wie die verschiedenen Gewerbe unserer Handwerker—auch ebenso zu all den Ge-

usages auxquels ils sont propres, et ainsi nous rendre comme maîtres et possesseurs de la nature" and thus "contribuer au perfectionnement de la vie humaine." In the preface to Sir Dudley North's "Discourses upon Trade" (1691) it is stated, that Descartes' method had begun to free Political Economy from the old fables and superstitious notions of gold, trade, etc. On the whole, however, the early English economists sided with Bacon and Hobbes as their philosophers; while, at a later period, the philosopher [...] of Political Economy in England, France, and Italy, was Locke.

brauchszwecken verwenden könnten für die sie geeignet sind, und uns so zu Meistern und Besitzern der Natur machen können“, und so „zur Vollkommenung des menschlichen Lebens beitragen.“ In der Vorrede zu Sir Dudley Norths, „Discourses upon Trade“ (1691) heißt es, die Methode des Descartes, auf die politische Ökonomie angewandt, habe sie von alten Märgen und abergläubischen Vorstellungen über Geld, Handel usw. zu befreien angefangen. Im Durchschnitt schließen sich jedoch die englischen Ökonomen der frühern Zeit an Bacon und Hobbes als ihre Philosophen an, während Locke später „der Philosoph“ *κατ' ἐξοχὴν* der politischen Ökonomie für England, Frankreich und Italien ward.

Question 841 *Why is it a medieval point of view to see animals as machines?*

↓ After taking a negative approach, which shows how little value the machine transfers to the product, Marx takes now a positive approach how to compute the productivity of machines in terms of value: compare the labor replaced by the machine with the labor necessary to produce the machine itself.

513/o It is evident that whenever it costs as much labor to produce a machine as is saved by the employment of that machine, there is nothing but a transposition of labor; consequently the total labor required to produce a commodity is not lessened or the productiveness of labor is not increased. It is clear, however, that the difference between the labor a machine costs, and the labor it saves, in other words, that the degree of its productiveness does not depend on the difference between its own value and the value of the implement it replaces. As long as the labor spent on a machine, and consequently the portion of its value added to the product, remains smaller than the value added by the workman to the product with his tool, there is always a difference of labor saved in favour of the machine. The productiveness of a machine is therefore measured by the human labor-power it replaces.

412:1/o Es ist klar, daß bloßes Deplacement der Arbeit stattfindet, also die Gesamtsumme der zur Produktion einer Ware erheischten Arbeit nicht vermindert oder die Produktivkraft der Arbeit nicht vermehrt wird, wenn die Produktion einer Maschine so viel Arbeit kostet, als ihre Anwendung erspart. Die Differenz jedoch zwischen der Arbeit, die sie kostet, und der Arbeit, die sie erspart, oder der Grad ihrer Produktivität hängt offenbar nicht ab von der Differenz zwischen ihrem eignen Wert und dem Wert des von ihr ersetzten Werkzeugs. Die Differenz dauert so lange, als die Arbeitskosten der Maschine und daher der von ihr dem Produkt zugesetzte Wertteil kleiner bleiben als der Wert, den der Arbeiter mit seinem Werkzeug dem Arbeitsgegenstand zusetzen würde. Die Produktivität der Maschinen mißt sich daher an dem Grad, worin sie menschliche Arbeitskraft ersetzt.

↑ The use of the machines increases productivity if the labor which it costs is less than the labor it replaces. ↓ Now Marx brings four examples, three of which are documented in the literature. (1) Spinning:

According to Mr. Baynes, 2 operatives are required for the 450 mule spindles, inclusive of preparation machinery,¹¹² that are driven by one-horse power; each self-acting mule spindle, working ten hours, produces 13 ounces of yarn (average number of thickness); consequently 2 1/2 operatives spin weekly 365 5/8 lbs. of yarn. Hence, leaving waste on one side, 366 lbs. of cotton absorb, during their conversion into yarn, only 150 hours' labor, or fifteen days' labor of ten hours each. But with a spinning-wheel, supposing the hand-spinner to produce thirteen ounces of yarn in sixty hours, the same weight of cotton would absorb 2,700 days' labor of ten hours each, or 27,000 hours' labor.¹¹³

¹¹² According to the annual report (1863) of the Essen chamber of commerce, there was produced in 1862, at the cast-steel works of Krupp, with its 161 furnaces, thirty-two steam-engines (in the year 1800 this was about the number of all the steam-engines working in Manchester), and fourteen steam-hammers (representing in all 1,236 horse-power) forty-nine forges, 203 tool-machines, and about 2,400 workmen—thirteen million pounds of cast steel. Here there are not two workmen to each horse-power.

¹¹³ Babbage estimates that in Java the spinning labor alone adds 117% to the value of the cotton. At the same period (1832) the total value added to the cotton by machinery and labor in the fine-spinning industry, amounted to about 33% of the value of the cotton. ("On the Economy of Machinery," pp. 165, 166.)

↓ (2) Calico printing:

Where blockprinting, the old method of printing calico by hand, has been super-

Nach Herrn Baynes kommen auf 450 Mulespindeln nebst Vormaschinerie, die von einer Dampfpferdekraft getrieben werden, 2 1/2 Arbeiter¹¹² und werden mit jeder self-acting mule spindle bei zehnstündigem Arbeitstag 13 Unzen Garn (Durchschnittsnummer), also wöchentlich 365 5/8 Pfund Garn von 2 1/2 Arbeitern gesponnen. Bei ihrer Verwandlung in Garn absorbieren ungefähr 366 Pfund Baumwolle (wir sehn der Vereinfachung halber vom Abfall ab) also nur 150 Arbeitsstunden oder 15 zehnstündige Arbeitstage, während mit dem Spinnrad, wenn der Handspinner 13 Unzen Garn in 60 Stunden liefert, dasselbe Quantum Baumwolle 2700 Arbeitstage von 10 Stunden oder 27 000 Arbeitsstunden absorbieren würde.¹¹³

¹¹² Nach einem Jahresbericht der Handelskammer zu Essen (Okt. 1863) produzierte 1862 die Kruppsche Gußstahlfabrik mittelst 161 Schmelz- Glüh- und Zementöfen, 32 Dampfmaschinen (im Jahr 1800 war das ungefähr die Gesamtzahl der in Manchester angewandten Dampfmaschinen) und 14 Dampfhammern, welche zusammen 1236 Pferdekraft repräsentieren, 49 Schmiedessen, 203 Werkzeugmaschinen und zirka 2400 Arbeitern—13 Millionen Pfund Gußstahl. Hier noch nicht 2 Arbeiter auf 1 Pferdekraft.

¹¹³ Babbage berechnet, daß in Java 117% dem Baumwollwert fast nur durch die Spinnarbeit zugesetzt werden. Zur selben Zeit (1832) betrug in England der Gesamtwert, den Maschinerie und Arbeit der Baumwolle bei der Feinspinnerei zusetzten, ungefähr 33%, "On the Economy of Machinery", p. 165, 166.)

Wo die alte Methode des blockprinting oder der Handkattundruckerei durch Maschinen-

seded by machine printing, a single machine prints, with the aid of one man or boy, as much calico of four colones in one hour, as it formerly took 200 men to do.¹¹⁴

¹¹⁴ Machine printing also economises colour.

↓ (3) Separating the cotton from the seeds (carding):

Before Eli Whitney invented the cotton gin in 1793, the separation of the seed from a pound of cotton cost an average day's labor. By means of his invention one negress was enabled to clean 100 lbs. daily; and since then, the efficacy of the gin has been considerably increased. A pound of cotton wool, previously costing 50 cents to produce, included after that invention more unpaid labor, and was consequently sold with greater profit, at 10 cents. In India they employ for separating the wool from the seed, an instrument, half machine, half tool, called a churka; with this one man and a woman can clean 28 lbs. daily. With the churka invented some years ago by Dr. Forbes, one man and a boy produce 250 lbs. daily. If oxen, steam, or water, be used for driving it, only a few boys and girls as feeders are required. Sixteen of these machines driven by oxen do as much work in a day as formerly 750 people did on an average.¹¹⁵

¹¹⁵ See Paper read by Dr. Watson, Reporter on Products to the Government of India, before the Society of Arts, 17th April, 1860.

↓ (4) Steam-plough. Marx revisits the data given earlier in footnote 96 to paragraph 497:2–499. Using this example he makes a new point: the amount of labor replaced by the machine is much larger than the cost savings realized by the capitalist, since not all labor is paid labor.

514:1/o As already stated, a steam-plough does as much work in one hour at a cost

druck verdrängt ist, druckt eine einzige Maschine mit dem Beistand eines Mannes oder Jungen so viel vierfarbigen Kattun in einer Stunde wie früher 200 Männer.¹¹⁴

¹¹⁴ Beim Maschinendruck außerdem Farbe erspart.

Bevor Eli Whitney 1793 den cottongin erfand, kostete die Trennung eines Pfundes Baumwolle vom Samen einen Durchschnittsarbeitstag. Infolge seiner Erfindung konnten täglich 100 Pfd. Baumwolle von einer Negerin gewonnen werden und die Wirksamkeit des gin ward seitdem noch bedeutend erhöht. Ein Pfund Baumwollfaser, früher zu 50 Cents produziert, wird später mit größerem Profit, d.h. mit Einschluß von mehr unbezahlter Arbeit, zu 10 Cents verkauft. In Indien wendet man zur Trennung der Faser vom Samen ein halbmaschinenartiges Instrument an, die Churka, womit ein Mann und eine Frau täglich 28 Pfd. reinigen. Mit der von Dr. Forbes vor einigen Jahren erfundenen Churka produzieren 1 Mann und 1 Junge täglich 250 Pf.; wo Ochsen, Dampf oder Wasser als Triebkräfte gebraucht werden, sind nur wenige Jungen und Mädchen als feeders (Handlanger des Materials für die Maschine) erheischt. Sechzehn dieser Maschinen, mit Ochsen getrieben, verrichten täglich das frühere Durchschnittstagewerk von 750 Leuten.¹¹⁵

¹¹⁵ Vgl. „Paper read by Dr. Watson, Reporter on Products to the Government of India, before the Society of Arts“, 17. April 1860.

413:1/o Wie bereits erwähnt, verrichtet die Dampfmaschine, beim Dampfpflug, in

of three-pence, as 66 men at a cost of 15 shillings. I return to this example in order to clear up an erroneous notion. The 15 shillings are by no means the expression in money of all the labor expended in one hour by the 66 men. If the ratio of surplus-labor to necessary labor were 100%, these 66 men would produce in one hour a value of 30 shillings, although their wages, 15 shillings, represent only their labor for half an hour. Suppose, then, a machine cost as much as the wages for a year of the 150 men it displaces, say £3,000; this £3,000 is by no means the expression in money of the labor added to the object produced by these 150 men before the introduction of the machine, but only of that portion of their year's labor which was expended for themselves and represented by their wages. On the other hand, the £3,000, the money-value of the machine, expresses all the labor expended on its production, no matter in what proportion this labor constitutes wages for the workman, and surplus-value for the capitalist. Therefore, though a machine cost as much as the labor-power displaced by it costs, yet the labor materialised in it is even then much less than the living labor it replaces.¹¹⁶

¹¹⁶ "These mute agents (machines) are always the produce of much less labor than that which they displace, even when they are of the same money-value." (Ricardo, l.c., p. 40.)

↑ 150 men, annual wage £ 20, one man year = £ 40. 150 man years is £3000v + £3000s = £6000.

The point made under example (4) is not only a method of calculation, but this prohibits the application of labor-saving machines and leads to shameless waste of labor:

515:1/oo The use of machinery for the exclusive purpose of cheapening the prod-

einer Stunde zu 3 d. oder 1/4 sh. so viel Werk wie 66 Menschen zu 15 sh. per Stunde. Ich komme auf dieses Beispiel zurück gegen eine falsche Vorstellung. Die 15 sh. sind nämlich keineswegs der Ausdruck der während einer Stunde von den 66 Menschen zugefügten Arbeit. War das Verhältnis von Mehrarbeit zu notwendiger Arbeit 100%, so produzierten diese 66 Arbeiter per Stunde einen Wert von 30 sh., obgleich sich nur 33 Stunden in einem Äquivalent für sie selbst, d.h. im Arbeitslohn von 15 sh. darstellen. Gesetzt also, eine Maschine koste ebensoviel als der Jahreslohn von 150 durch sie verdrängten Arbeitern, sage 3000 Pfd.St., so sind 3000 Pfd.St. keineswegs der Geldausdruck der von 150 Arbeitern gelieferten und dem Arbeitsgegenstand zugesetzten Arbeit, sondern nur des Teils ihrer Jahresarbeit, der sich für sie selbst in Arbeitslohn darstellt. Dagegen drückt der Geldwert der Maschine von 3000 Pfd.St. alle während ihrer Produktion verausgabte Arbeit aus, in welchem Verhältnis immer diese Arbeit Arbeitslohn für den Arbeiter und Mehrwert für den Kapitalisten bilde. Kostet die Maschine also ebensoviel als die von ihr ersetzte Arbeitskraft, so ist die in ihr selbst vergegenständlichte Arbeit stets viel kleiner als die von ihr ersetzte lebendige Arbeit.¹¹⁶

¹¹⁶ „Diese stummen Agenten“ (die Maschinen) „sind immer das Produkt von viel weniger Arbeit als jene, die sie verdrängen, selbst dann, wenn sie gleichen Geldwert haben.“ (Ricardo, l.c. p. 40.)

414:1/oo Ausschließlich als Mittel zur Verwohlfeilerung des Produkts betrachtet,

uct, is limited in this way, that less labor must be expended in producing the machinery than is displaced by the employment of that machinery. For the capitalist, however, this use is still more limited. Instead of paying for the labor, he only pays the value of the labor-power employed; therefore, the limit to his using a machine is fixed by the difference between the value of the machine and the value of the labor-power replaced by it. Since the division of the day's work into necessary and surplus-labor differs in different countries, and even in the same country at different periods, or in different branches of industry; and further, since the actual wage of the laborer at one time sinks below the value of his labor-power, at another rises above it, it is possible for the difference between the price of the machinery and the price of the labor-power replaced by that machinery to vary very much, although the difference between the quantity of labor requisite to produce the machine and the total quantity replaced by it, remain constant.^{116a} But it is the former difference alone that determines the cost, to the capitalist, of producing a commodity, and, through the pressure of competition, influences his action. Hence the invention now-a-days of machines in England that are employed only in North America; just as in the sixteenth and seventeenth centuries, machines were invented in Germany to be used only in Holland, and just as many a French invention of the eighteenth century was exploited in England alone. In the older countries, machinery, when employed in some branches of industry, creates such a redundancy of labor in other branches that in these latter the fall of wages below the value of labor-power impedes the use of machinery, and, from

ist die Grenze für den Gebrauch der Maschinerie darin gegeben, daß ihre eigne Produktion weniger Arbeit kostet, als ihre Anwendung Arbeit ersetzt. Für das Kapital jedoch drückt sich diese Grenze enger aus. Da es nicht die angewandte Arbeit zahlt, sondern den Wert der angewandten Arbeitskraft, wird ihm der Maschinengebrauch begrenzt durch die Differenz zwischen dem Maschinenwert und dem Wert der von ihr ersetzten Arbeitskraft. Da die Teilung des Arbeitstags in notwendige Arbeit und Mehrarbeit in verschiedenen Ländern verschieden ist, ebenso in demselben Lande zu verschiedenen Perioden oder während derselben Periode in verschiedenen Geschäftszweigen; da ferner der wirkliche Lohn des Arbeiters bald unter den Wert seiner Arbeitskraft sinkt, bald über ihn steigt, kann die Differenz zwischen dem Preise der Maschinerie und dem Preise der von ihr zu ersetzenden Arbeitskraft sehr variieren, wenn auch die Differenz zwischen dem zur Produktion der Maschine nötigen Arbeitsquantum und dem Gesamtquantum der von ihr ersetzten Arbeit dieselbe bleibt.^{116a} Es ist aber nur die erstere Differenz, welche die Produktionskosten der Ware für den Kapitalisten selbst bestimmt und ihn durch die Zwangsgesetze der Konkurrenz beeinflusst. Es werden daher heute Maschinen in England erfunden, die nur in Nordamerika angewandt werden, wie Deutschland im 16. und 17. Jahrhundert Maschinen erfand, die nur Holland anwandte, und wie manche französische Erfindung des 18. Jahrhunderts nur in England ausgebeutet ward. Die Maschine selbst produziert in älter entwickelten Ländern durch ihre Anwendung auf einige Geschäftszweige in andren Zweigen solchen Arbeitsüberfluß (redundancy of labour, sagt Ricardo),

the standpoint of the capitalist, whose profit comes, not from a diminution of the labor employed, but of the labor paid for, renders that use superfluous and often impossible. In some branches of the woollen manufacture in England the employment of children has during recent years been considerably diminished, and in some cases has been entirely abolished. Why? Because the Factory Acts made two sets of children necessary, one working six hours, the other four, or each working five hours. But the parents refused to sell the "half-timers" cheaper than the "full-timers." Hence the substitution of machinery for the "half-timers."¹¹⁷ Before the labor of women and of children under 10 years of age was forbidden in mines, capitalists considered the employment of naked women and girls, often in company with men, so far sanctioned by their moral code, and especially by their ledgers, that it was only after the passing of the Act that they had recourse to machinery. The Yankees have invented a stone-breaking machine. The English do not make use of it, because the "wretch"/fn35 who does this work gets paid for such a small portion of his labor, that machinery would increase the cost of production to the capitalist./fn36 In England women are still occasionally used instead of horses for hauling canal boats,/fn37 because the labor required to produce horses and machines is an accurately known quantity, while that required to maintain the women of the surplus-population is below all calculation. Hence nowhere do we find a more shameful squandering of human labor-power for the most despicable purposes than in England, the land of machinery.

daß hier der Fall des Arbeitslohns unter den Wert der Arbeitskraft den Gebrauch der Maschinerie verhindert und ihn vom Standpunkt des Kapitals, dessen Gewinn ohnehin aus der Verminderung nicht der angewandten, sondern der bezahlten Arbeit entspringt, überflüssig, oft unmöglich macht. In einigen Zweigen der englischen Wollmanufaktur ist während der letzten Jahre die Kinderarbeit sehr vermindert, hier und da fast verdrängt worden. Warum? Der Fabrikakt ernötigte eine doppelte Kinderreihe, von denen je eine 6, die andre 4 Stunden, oder jede nur 5 Stunden arbeitet. Die Eltern wollten aber die half-times (Halbzeitle) nicht wohlfeiler verkaufen als früher die full-times (Vollzeitle). Daher Ersetzung der half-times durch Maschinerie.¹¹⁷ Vor dem Verbot der Arbeit von Weibern und Kindern (unter 10 Jahren) in Minen fand das Kapital die Methode, nackte Weiber und Mädchen, oft mit Männern zusammengebunden in Kohlen- und andren Minen zu vernutzen, so übereinstimmend mit seinem Moralkodex und namentlich auch seinem Hauptbuch, daß es erst nach dem Verbot zur Maschinerie griff. Die Yankees haben Maschinen zum Steinklopfen erfunden. Die Engländer wenden sie nicht an, weil der „Elende“ („wretch“ ist Kunstaussdruck der englischen politischen Ökonomie für den Agrikulturarbeiter), der diese Arbeit verrichtet, einen so geringen Teil seiner Arbeit bezahlt erhält, daß Maschinerie die Produktion für den Kapitalisten verteuern würde.¹¹⁸ In England werden gelegentlich statt der Pferde immer noch Weiber zum Ziehen usw. bei den Kanalbooten verwandt,¹¹⁹ weil die zur Produktion von Pferden und Maschinen erheischte Arbeit ein mathematisch gegebenes Quantum, die

zur Erhaltung von Weibern der Surpluspopulation dagegen unter aller Berechnung steht. Man findet daher nirgendwo schamlosere Verschwendung von Menschenkraft für Lumpereien, als gerade in England, dem Land der Maschinen.

Question 842 *How does capitalism restrict the use of labor-saving machines?*

Question 843 *Why did high wages and advanced technology historically go together in the USA?*

Question 844 *Why could one, at Marx' times, find nowhere "a more shameful squandering of human labor-power for the most despicable purposes than in England, the land of machinery"?* (p. 515:1/oo.)

^{116a} Hence in a communistic society there would be a very different scope for the employment of machinery than there can be in a bourgeois society.

¹¹⁷ "Employers of labor would not unnecessarily retain two sets of children under thirteen ... In fact one class of manufacturers, the spinners of woollen yarn, now rarely employ children under thirteen years of age, i.e., half-timers. They have introduced improved and new machinery of various kinds, which altogether supersedes the employment of children (i.e., under 13 years); f.i., I will mention one process as an illustration of this diminution in the number of children, wherein by the addition of an apparatus, called a piecing machine, to existing machines, the work of six or four half-timers, according to the peculiarity of each machine, can be performed by one young person (over 13 years) ... the half-time system 'stimulated' the invention of the piecing machine." (Reports of Insp. of Fact. for 31st Oct., 1858.)

¹¹⁸ "Machinery ... can frequently not be employed until labor (he means wages) rises." (Ricardo, l.c., p. 479.)

¹¹⁹ See "Report of the Social Science Congress, at Edinburgh." Oct., 1863.

^{116a} Note zur 2. Ausgabe. In einer kommunistischen Gesellschaft hätte daher die Maschinerie einen ganz andren Spielraum als in der bürgerlichen Gesellschaft.

¹¹⁷ „Die Anwender der Arbeit wollen nicht unnötig zwei Schichten von Kindern unter dreizehn in Dienst nehmen ... Eine Gruppe von Fabrikanten, die Spinner von Wollgarn, verwendet tatsächlich heute selten Kinder unter dreizehn Jahren, d.h. Halbzeitle. Sie haben verbesserte und neue Maschinen verschiedener Art eingeführt, durch die eine Verwendung von Kindern“ (d.h. unter 13 J.) „ganz überflüssig wurde; als Beispiel will ich zur Illustration für diese Verminderung der Zahl der Kinder einen Arbeitsprozeß erwähnen, bei dem an die bestehenden Maschinen ein Apparat, genannt Anstückmaschine, angeschlossen wurde, durch den die Arbeit von sechs oder vier Halbzeitle, je nach der Beschaffenheit der einzelnen Maschine, von einer jugendlichen Person“ (über 13 J.) „geleistet werden kann ... Das Halbzeitsystem“ stimulierte „die Erfindung der Anstückmaschine.“ („Reports of Insp. of Fact. for 31st Oct. 1858“, [p. 42, 43].)

¹¹⁸ „Maschinerie ... kann häufig solange nicht verwendet werden, solange die Arbeit“ (er meint Lohn) „nicht steigt.“ (Ricardo, l.c. p. 479.)

¹¹⁹ Sieh „Report of the Social Science Congress at Edinburgh. Octob. 1863“.

15.3. Proximate Effects of Machinery on the Worker

The first paragraph gives a short overview of this section, which discusses the *general* effects of the introduction of machinery on the workers, as opposed to the relation between worker and machinery in the work-process itself (section 4).

513:1 The starting-point of Modern Industry is, as we have shown, the revolution in the instruments of labor, and this revolution attains its most highly developed form in the organized system of machinery in a factory. Before we inquire how human material is incorporated with this objective organism, let us consider some general effects of this revolution on the laborer himself.

Is machinery, a means introduced to replace the worker, successful at replacing workers? The answer is yes, namely, it replaces able-bodied and highly skilled male workers with women and children.

15.3.a. Appropriation of Supplementary Labor-Power by Capital. The Employment of Women and Children

Instead of decreasing the demand for labor, the first effect of machinery is that it *increases* the supply of exploitable workers under capitalism. How? Women and children are now able to do the lighter machine labor.

517:2 In so far as machinery dispenses with muscular power, it becomes a means of employing laborers of slight muscular strength, and those whose bodily development is incomplete, but whose limbs are all the more supple. The labor of women and children was, therefore, the first thing sought for by capitalists who used machinery. That mighty substitute for labor and laborers turned into a means for increasing the number of wage-laborers by enrolling, under the direct sway of capital, every member of the workman's family, without distinction of age or sex. Compulsory work for the capitalist usurped the place, not only of the children's play, but also of free labor at

416:1 Den Ausgangspunkt der großen Industrie bildet, wie gezeigt, die Revolution des Arbeitsmittels, und das umgewälzte Arbeitsmittel erhält seine meist entwickelte Gestalt im gegliederten Maschinensystem der Fabrik. Bevor wir zusehn, wie diesem objektiven Organismus Menschenmaterial einverleibt wird, betrachten wir einige allgemeine Rückwirkungen jener Revolution auf den Arbeiter selbst.

416:2 Sofern die Maschinerie Muskelkraft entbehrlich macht, wird sie zum Mittel, Arbeiter ohne Muskelkraft oder von unreifer Körperentwicklung, aber größerer Geschmeidigkeit der Glieder anzuwenden. Weiber- und Kinderarbeit war daher das erste Wort der kapitalistischen Anwendung der Maschinerie! Dies gewaltige Ersatzmittel von Arbeit und Arbeitern verwandelte sich damit sofort in ein Mittel, die Zahl der Lohnarbeiter zu vermehren durch Einreihung aller Mitglieder der Arbeiterfamilie, ohne Unterschied von Geschlecht und Alter, unter die unmittelbare Botmäßigkeit des Kapitals. Die Zwangsarbeit für den Kapitalisten usurpierte nicht nur die Stelle des

home within moderate limits for the support of the family.¹²⁰

Question 845 *How does machinery, since it saves labor, increase the exploitable workforce under capitalism?*

In the following, Marx will enumerate four consequences of children's labor: it lowers wages, children are traded as slaves, infant mortality surges, and children are deprived of schooling. ↓ Footnote 120 already anticipates some of these consequences.

¹²⁰ Dr. Edward Smith, during the cotton crisis caused by the American Civil War, was sent by the English Government to Lancashire, Cheshire, and other places, to report on the sanitary condition of the cotton operatives. He reported, that from a hygienic point of view, and apart from the banishment of the operatives from the factory atmosphere, the crisis had several advantages. The women now had sufficient leisure to give their infants the breast, instead of poisoning them with "Godfrey's cordial." They had time to learn to cook. Unfortunately the acquisition of this art occurred at a time when they had nothing to cook. But from this we see how capital, for the purposes of its self-expansion, has usurped the labor necessary in the home of the family. This crisis was also utilised to teach sewing to the daughters of the workmen in sewing schools. An American revolution and a universal crisis, in order that the working girls, who spin for the whole world, might learn to sew!

↓ (1) Lowering of wages and increase in the degree of exploitation, because more members of the same family are working.

518:1 The value of labor-power was determined, not only by the labor-time necessary to maintain the individual adult laborer, but also by that necessary to maintain his family. Machinery, by throwing every member of that family on to the labor-market, spreads the value of the man's labor-power over his whole family. It thus depreciates his labor-power. To purchase the labor-power of a family of four workers may, perhaps,

Kinderspiels, sondern auch der freien Arbeit im häuslichen Kreis, innerhalb sittlicher Schranke, für die Familie selbst.¹²⁰

¹²⁰ Dr. Edward Smith wurde während der den Amerikanischen Bürgerkrieg begleitenden Baumwollkrise von der englischen Regierung nach Lancashire, Cheshire usw. geschickt, zur Berichterstattung über den Gesundheitszustand der Baumwollarbeiter. Er berichtet u.a.: Hygienisch habe die Krise, abgesehen von der Verbannung der Arbeiter aus der Fabrikatmosphäre, vielerlei andre Vorteile. Die Arbeiterfrauen fänden jetzt die nötige Muße, ihren Kindern die Brust zu reichen, statt sie mit Godfrey's Cordial (einem Opiat) zu vergiften. Sie hätten die Zeit gewonnen, kochen zu lernen. Unglücklicherweise fiel diese Kochkunst in einen Augenblick, wo sie nichts zu essen hatten. Aber man sieht, wie das Kapital die für die Konsumtion nötige Familienarbeit usurpiert hat zu seiner Selbstverwertung. Ebenso wurde die Krise benutzt, um in eignen Schulen die Töchter der Arbeiter nähen zu lehren. Eine amerikanische Revolution und eine Weltkrise erheischt, damit die Arbeitermädchen, die für die ganze Welt spinnen, nähen lernen!

417:1 Der Wert der Arbeitskraft war bestimmt nicht nur durch die zur Erhaltung des individuellen erwachsenen Arbeiters, sondern durch die zur Erhaltung der Arbeiterfamilie nötige Arbeitszeit. Indem die Maschinerie alle Glieder der Arbeiterfamilie auf den Arbeitsmarkt wirft, verteilt sie den Wert der Arbeitskraft des Mannes über seine ganze Familie. Sie entwertet daher seine Arbeitskraft. Der Ankauf der in 4 Ar-

cost more than it formerly did to purchase the labor-power of the head of the family, but, in return, four days' labor takes the place of one, and their price falls in proportion to the excess of the surplus-labor of four over the surplus-labor of one. In order that the family may live, four people must now, not only labor, but expend surplus-labor for the capitalist. Thus we see, that machinery, while augmenting the human material that forms the principal object of capital's exploiting power,¹²¹ at the same time raises the degree of exploitation.

↑ Even if the total wage received by the family increases, they have to work longer for it, i.e., the price of labor falls.

¹²¹ "The numerical increase of laborers has been great, through the growing substitution of female for male, and above all, of childish for adult labor. Three girls of 13, at wages of from 6 shillings to 8 shillings a week, have replaced the one man of mature age, of wages varying from 18 shillings to 45 shillings." (Th. de Quincey: "The Logic of Political Econ.," London, 1844. Note to p. 147.) Since certain family functions, such as nursing and suckling children, cannot be entirely suppressed, the mothers confiscated by capital, must try substitutes of some sort. Domestic work, such as sewing and mending, must be replaced by the purchase of ready-made articles. Hence, the diminished expenditure of labor in the house is accompanied by an increased expenditure of money. The cost of keeping the family increases, and balances the greater income. In addition to this, economy and judgment in the consumption and preparation of the means of subsistence becomes impossible. Abundant material relating to these facts, which are concealed by official Political Economy, is to be found in the Reports of the Inspectors of Factories, of the Children's Employment Commission, and more especially in the Reports on Public Health.

beitskräfte z.B. parzellierten Familie kostet vielleicht mehr als früher der Ankauf der Arbeitskraft des Familienhaupts, aber dafür treten 4 Arbeitstage an die Stelle von einem, und ihr Preis fällt im Verhältnis zum Überschuß der Mehrarbeit der vier über die Mehrarbeit des einen. Vier müssen nun nicht nur Arbeit, sondern Mehrarbeit für das Kapital liefern, damit eine Familie lebe. So erweitert die Maschinerie von vornherein mit dem menschlichen Exploitationsmaterial, dem eigensten Ausbeutungsfeld des Kapitals,¹²¹ zugleich den Exploitationsgrad.

¹²¹ „Die Zahl der Arbeiter hat sehr zugenommen, weil man immer mehr Männer durch Frauenarbeit und vor allem Erwachsenen- durch Kinderarbeit ersetzt. Drei Mädchen im Alter von 13 Jahren mit Löhnen von 6 bis 8 sh. die Woche haben einen Mann reifen Alters mit einem Lohn von 18 bis 45 sh. verdrängt.“ (Th. de Quincey, „The Logic of Politic. Econ.“, Lond. 1844, Note zu p. 147.) Da gewisse Funktionen der Familie, z.B. Warten und Säugen der Kinder usw., nicht ganz unterdrückt werden können, müssen die vom Kapital konfiszierten Familienmütter mehr oder minder Stellvertreter dinge. Die Arbeiten, welche der Familienkonsum erheischt, wie Nähen, Flicken usw., müssen durch Kauf fertiger Waren ersetzt werden. Der verminderten Ausgabe von häuslicher Arbeit entspricht also vermehrte Geldausgabe. Die Produktionskosten der Arbeiterfamilie wachsen daher und gleichen die Mehreinnahme aus. Es kommt hinzu, daß Ökonomie und Zweckmäßigkeit in Verwertung und Bereitung der Lebensmittel unmöglich werden. Über diese von der offiziellen politischen Ökonomie verheimlichten Tatsachen findet man reichliches Material in den „Reports“ der Fabrikinspektoren, der „Children's Employment Commission“ und namentlich auch den „Reports on Public health“.

↓ (2) The formal mediation of the capital relation, i.e., the contract between laborer and capitalist, is revolutionized. Since the children do not have full rights, slave-dealership with children.

519/o Machinery also revolutionizes out and out the formal mediation of the capital relation, i.e., the contract between laborer and capitalist. Taking the exchange of commodities as our basis, our first assumption was that capitalist and laborer met as free persons, as independent owners of commodities; the one possessing money and means of production, the other labor-power. But now the capitalist buys children and young persons under age. Previously, the workman sold his own labor-power, which he disposed of nominally as a free agent. Now he sells wife and child. He has become a slave-dealer.¹²² The demand for children's labor often resembles in form the inquiries for negro slaves, such as were formerly to be read among the advertisements in American journals.

"My attention," says an English factory inspector, "was drawn to an advertisement in the local paper of one of the most important manufacturing towns of my district, of which the following is a copy: Wanted, 12 to 20 young persons, not younger than what can pass for 13 years. Wages, 4 shillings a week.] Apply etc."¹²³

The phrase "what can pass for 13 years," has reference to the fact, that by the Factory Act, children under 13 years may work only 6 hours. A surgeon officially appointed must certify their age. The manufacturer, therefore, asks for children who look as if they we're already 13 years old. The decrease, often by leaps and bounds, in the number of children under 13 years employed in factories, a decrease that is shown in an astonishing manner by the English statistics of the last 20 years, was for the most part,

417:2–419:0 Sie revolutioniert ebenso von Grund aus die formelle Vermittlung des Kapitalverhältnisses, den Kontrakt zwischen Arbeiter und Kapitalist. Auf Grundlage des Warenaustausches war es erste Voraussetzung, daß sich Kapitalist und Arbeiter als freie Personen, als unabhängige Warenbesitzer, der eine Besitzer von Geld und Produktionsmitteln, der andre Besitzer von Arbeitskraft, gegenübertraten. Aber jetzt kauft das Kapital Unmündige oder Halbmündige. Der Arbeiter verkaufte früher seine eigne Arbeitskraft, worüber er als formell freie Person verfügte. Er verkauft jetzt Weib und Kind. Er wird Sklavenhändler.¹²² Die Nachfrage nach Kinderarbeit gleicht oft auch in der Form der Nachfrage nach Negerklaven, wie man sie in amerikanischen Zeitungsinseraten zu lesen gewohnt war.

„Meine Aufmerksamkeit“, sagt z.B. ein englischer Fabrikinspektor, „wurde gelenkt auf eine Annonce in dem Lokalblatt einer der bedeutendsten Manufakturstädte meines Distrikts, wovon folgendes die Kopie: Gebraucht 12 bis 20 Jungen, nicht jünger, als was für 13 Jahre passieren kann. Lohn 4 sh. per Woche. Anzufragen etc.“¹²³

Die Phrase „was für 13 Jahre passieren kann“ bezieht sich darauf, daß nach dem Factory Act Kinder unter 13 Jahren nur 6 Stunden arbeiten dürfen. Ein amtlich qualifizierter Arzt (certifying surgeon) muß das Alter bescheinigen. Der Fabrikant verlangt also Jungen, die so aussehen, als ob sie schon dreizehnjährig. Die manchmal sprunghafte Abnahme in der Anzahl der von Fabrikanten beschäftigten Kinder unter 13 Jahren, überraschend in der englischen Statistik der letzten 20 Jahre, war nach Aussage der Fabrik-

according to the evidence of the factory inspectors themselves, the work of the certifying surgeons, who overstated the age of the children, agreeably to the capitalist's greed for exploitation, and the sordid trafficking needs of the parents. In the notorious district of Bethnal Green, a public market is held every Monday and Tuesday morning, where children of both sexes from 9 years of age upwards, hire themselves out to the silk manufacturers. "The usual terms are 1 s. 8 d. a week (this belongs to the parents) and '2d. for myself and tea.' The contract is binding only for the week. The scene and language while this market is going on are quite disgraceful."¹²⁴ It has also occurred in England, that women have taken "children from the workhouse and let any one have them out for 2s. 6d. a week."¹²⁵ In spite of legislation, the number of boys sold in Great Britain by their parents to act as live chimney-sweeping machines (although there exist plenty of machines to replace them) exceeds 2,000.¹²⁶ The revolution effected by machinery in the juridical relations between the buyer and the seller of labor-power, causing the transaction as a whole to lose the appearance of a contract between free persons, afforded the English Parliament an excuse, founded on juridical principles, for the interference of the state with factories. Whenever the law limits the labor of children to 6 hours in industries not before interfered with, the complaints of the manufacturers are always renewed. They allege that numbers of the parents withdraw their children from the industry brought under the Act, in order to sell them where "freedom of labor" still rules, i.e., where children under 13 years are compelled to work like grown-up people, and therefore

inspektoren selbst größtenteils das Werk von certifying surgeons, welche das Kindesalter der Exploitationslust der Kapitalisten und dem Schacherbedürfnis der Eltern gemäß verschoben. In dem berühmten Londoner Distrikt von Bethnal Green wird jeden Montag und Dienstag morgen offener Markt gehalten, worin Kinder beiderlei Geschlechts vom 9. Jahre an sich selbst an die Londoner Seidenmanufakturen vermieten. „Bei gewöhnlichen Bedingungen sind 1 sh. 8 d. die Woche (die den Eltern gehören) und 2 d. für mich selbst nebst Tee.“ Die Kontrakte gelten nur für die Woche. Die Szenen und die Sprache während der Dauer dieses Markts sind wahrhaft empörend.¹²⁴ Es kommt immer noch in England vor, daß Weiber „Jungen vom Workhouse nehmen und sie jedem beliebigen Käufer für 2 sh. 6 d. wöchentlich vermieten.“¹²⁵ Trotz der Gesetzgebung werden immer noch mindestens 2000 Jungen in Großbritannien als lebendige Schornsteinfegemaschinen (obgleich Maschinen zu ihrem Ersatz existieren) von ihren eignen Eltern verkauft.¹²⁶ Die von der Maschinerie bewirkte Revolution im Rechtsverhältnis zwischen Käufer und Verkäufer der Arbeitskraft, so daß die ganze Transaktion selbst den Schein eines Kontrakts zwischen freien Personen verliert, bot dem englischen Parlament später den juristischen Entschuldigungsgrund für Staatseinmischung in das Fabrikwesen. Sooft das Fabrikgesetz die Kinderarbeit in bisher unangefochtenen Industriezweigen auf 6 Stunden beschränkt, ertönt stets neu der Fabrikantenjammer: ein Teil der Eltern entziehe die Kinder nun der gemäßregelten Industrie, um sie in solche zu verkaufen, wo noch „Freiheit der Arbeit“ herrscht, d.h., wo Kinder unter 13 Jahren gezwungen werden, wie Erwachsene zu arbei-

can be got rid of at a higher price. But since capital is by nature a leveller, since it exacts in every sphere of production equality in the conditions of the exploitation of labor, the limitation by law of children's labor, in one branch of industry, becomes the cause of its limitation in others.

¹²² In striking contrast with the great fact, that the shortening of the hours of labor of women and children in English factories was exacted from capital by the male operatives, we find in the latest reports of the Children's Employment Commission traits of the operative parents in relation to the traffic in children, that are truly revolting and thoroughly like slave-dealing. But the Pharisee of a capitalist, as may be seen from the same reports, denounces this brutality which he himself creates, perpetuates, and exploits, and which he moreover baptises "freedom of labor." "Infant labor has been called into aid ... even to work for their own daily bread. Without strength to endure such disproportionate toil, without instruction to guide their future life, they have been thrown into a situation physically and morally polluted. The Jewish historian has remarked upon the overthrow of Jerusalem by Titus that it was no wonder it should have been destroyed, with such a signal destruction, when an inhuman mother sacrificed her own offspring to satisfy the cravings of absolute hunger." ("Public Economy Concentrated." Carlisle, 1833, p. 66.)

¹²³ A. Redgrave in "Reports of Insp. of Fact. for 31st October, 1858," pp. 40, 41.

¹²⁴ "Children's Employment Commission, Fifth Report," London, 1866, p. 81, n. 31. {Added in the 4th German edition.—The Bethnal Green silk industry is now almost destroyed.—F. E.}

ten, also auch teurer loszuschlagen sind. Da aber das Kapital von Natur ein Leveller ist, d.h. in allen Produktionssphären Gleichheit der Exploitationsbedingungen der Arbeit als sein angeborenes Menschenrecht verlangt, wird die legale Beschränkung der Kinderarbeit in einem Industriezweig Ursache ihrer Beschränkung in dem andren.

¹²² Im Kontrast zur großen Tatsache, daß die Beschränkung der Weiber- und Kinderarbeit in den englischen Fabriken von den erwachsenen männlichen Arbeitern dem Kapital aberobert wurde, findet man noch in den jüngsten Berichten der „Children's Employment Commission“ wahrhaft empörende und durchaus sklavenhändlerische Züge der Arbeitereltern mit Bezug auf den Kinderschacher. Der kapitalistische Pharisäer aber, wie man aus denselben „Reports“ sehn kann, denunziert diese von ihm selbst geschaffne, verewigte und exploitierte Bestialität, die er sonst „Freiheit der Arbeit“ tauft. „Arbeit von kleinen Kindern wurde zu Hilfe genommen ... sogar um für ihr eigen täglich Brot zu arbeiten. Ohne die Kraft, eine so über alles Maß schwere Arbeit zu ertragen, ohne Belehrung, die ihrer künftigen Lebensführung zustatten käme, wurden sie in eine physisch und moralisch verseuchte Umgebung hineingestoßen. Der jüdische Historiker hat über die Zerstörung Jerusalems durch Titus die Bemerkung gemacht, es sei kein Wunder gewesen, daß die Stadt vernichtet, ja so völlig vernichtet worden sei, wenn eine unmenschliche Mutter ihren eigenen Sprößling opferte, um die Gier hemmungslosen Hungers zu stillen.“ „Public Economy Concentrated“, Carlisle 1833, p. 66.)

↓ (3) Enormous infant mortality because the women have to work:

520:1/oo We have already alluded to the physical deterioration as well of the children and young-persons as of the women, whom machinery, first directly in the factories that shoot up on its basis, and then indirectly in all the remaining branches of industry, subjects to the exploitation of capital. In this place, therefore, we dwell only on one point, the enormous mortality, during the first few years of their life, of the children of the operatives. In sixteen of the registration districts into which England is divided, there are, for every 100,000 children alive under the age of one year, only 9,000 deaths in a year on an average (in one district only 7,047); in 24 districts the deaths are over 10,000, but under 11,000; in 39 districts, over 11,000, but under 12,000; in 48 districts over 12,000, but under 13,000; in 22 districts over 20,000; in 25 districts over 21,000; in 17 over 22,000; in 11 over 23,000; in Hoo, Wolverhampton, Ashton-under-Lyne, and Preston, over 24,000; in Nottingham, Stockport, and Bradford, over 25,000; in Wisbeach, 16,000; and in Manchester, 26,125.¹²⁷ As was shown by an official medical inquiry in the year 1861, the high death-rates are, apart from local causes, principally due to the employment of the mothers away from their homes, and to the neglect and maltreatment, consequent on her absence, such as, amongst others, insufficient nourishment, unsuitable food, and dosing with opiates; besides this, there arises an unnatural estrangement between mother and child, and as a consequence intentional starving and poisoning of the

¹²⁵ „Child. Employ. Comm., III. Report“, Lond. 1864, p. 53, n. 15.

¹²⁶ I.c., „V. Report“, p. XXII, n. 137.

419:1–421:4 Bereits früher wurde der physische Verderb der Kinder und jungen Personen angedeutet, wie der Arbeiterweiber, welche die Maschinerie erst direkt in den auf ihrer Grundlage aufschießenden Fabriken und dann indirekt in allen übrigen Industriezweigen der Exploitation des Kapitals unterwirft. Hier verweilen wir daher nur bei einem Punkt, der ungeheuren Sterblichkeit von Arbeiterkindern in ihren ersten Lebensjahren. In England gibt es 16 Registrationsdistrikte, wo im jährlichen Durchschnitt auf 100 000 lebende Kinder unter einem Jahr nur 9085 Todesfälle (in einem Distrikt nur 7047) kommen, in 24 Distrikten über 10 000, aber unter 11 000, in 39 Distrikten über 11 000, aber unter 12 000, in 48 Distrikten über 12 000, aber unter 13 000, in 22 Distrikten über 20 000, in 25 Distrikten über 21 000, in 17 über 22 000, in 11 über 23 000, in Hoo, Wolverhampton, Ashton-under-Lyne und Preston über 24 000, in Nottingham, Stockport und Bradford über 25 000, in Wisbeach 26 001 und in Manchester 26 125.¹²⁷ Wie eine offizielle ärztliche Untersuchung im Jahre 1861 nachwies, sind, von Lokalamständen abgesehen, die hohen Sterblichkeitsraten vorzugsweise der außerhäuslichen Beschäftigung der Mütter geschuldet und der daher entspringenden Vernachlässigung und Mißhandlung der Kinder, u.a. unpassender Nahrung, Mangel an Nahrung, Fütterung mit Opiaten usw., dazu die unnatürliche Entfremdung der Mütter gegen ihre Kinder, im Gefolge davon absichtliche Aushungierung und Vergiftung.¹²⁸ In solchen Agri-

children.¹²⁸ In those agricultural districts, "where a minimum in the employment of women exists, the death-rate is on the other hand very low."¹²⁹ The Inquiry Commission of 1861 led, however, to the unexpected result, that in some purely agricultural districts bordering on the North Sea, the death-rate of children under one year old almost equalled that of the worst factory districts. Dr. Julian Hunter was therefore commissioned to investigate this phenomenon on the spot. His report is incorporated with the "Sixth Report on Public Health."¹³⁰ Up to that time it was supposed, that the children were decimated by malaria, and other diseases peculiar to low-lying and marshy districts. But the inquiry showed the very opposite, namely,

that the same cause which drove away malaria, the conversion of the land, from a morass in winter and a scanty pasture in summer, into fruitful corn land, created the exceptional death-rate of the infants.¹³¹

The 70 medical men, whom Dr. Hunter examined in that district, were "wonderfully in accord" on this point. In fact, the revolution in the mode of cultivation had led to the introduction of the industrial system.

"Married women, who work in gangs along with boys and girls, are, for a stipulated sum of money, placed at the disposal of the farmer, by a man called the 'undertaker', who contracts for the whole gang. These gangs will sometimes travel many miles from their own village; they are to be met morning and evening on the roads, dressed in short petticoats, with suitable coats and boots, and sometimes trousers, looking wonderfully strong and healthy, but tainted with a customary immorality and heedless of the fatal results which their love of this busy and independent

kulturdistrikten, „wo ein Minimum weiblicher Beschäftigung existiert, ist dagegen die Sterblichkeitsrate am niedrigsten“¹²⁹. Die Untersuchungskommission von 1861 ergab jedoch das unerwartete Resultat, daß in einigen an der Nordsee gelegenen rein ackerbauenden Distrikten die Sterblichkeitsrate von Kindern unter einem Jahr fast die der verrufensten Fabrikdistrikte erreichte. Dr. Julian Hunter wurde daher beauftragt, dies Phänomen an Ort und Stelle zu erforschen. Sein Bericht ist dem „VI. Report on Public Health“ einverleibt.¹³⁰ Man hatte bisher vermutet, Malaria und andre, niedrig gelegenen und sumpfigen Landstrichen eigentümliche Krankheiten dezimierten die Kinder. Die Untersuchung ergab das grade Gegenteil, nämlich,

„daß dieselbe Ursache, welche die Malaria vertrieb, nämlich die Verwandlung des Bodens aus Morast im Winter und dürrtger Weide im Sommer in fruchtbares Kornland, die außerordentliche Todesrate der Säuglinge schuf“¹³¹.

Die 70 ärztlichen Praktiker, die Dr. Hunter in jenen Distrikten verhörte, waren „wunderbar einstimmig“ über diesen Punkt. Mit der Revolution der Bodenkultur wurde nämlich das industrielle System eingeführt.

„Verheiratete Weiber, die in Banden mit Mädchen und Jungen zusammen arbeiten, werden dem Pächter von einem Manne, welcher der „Gangmeister“ heißt und die Banden im ganzen mietet, für eine bestimmte Summe zur Verfügung gestellt. Diese Banden wandern oft viele Meilen von ihren Dörfern weg, man trifft sie morgens und abends auf den Landstraßen, die Weiber bekleidet mit kurzen Unterröcken und entsprechenden Röcken und Stiefeln und manchmal Hosen, sehr kräftig und gesund von Aussehn, aber verdorben durch gewohnheitsmäßige Liederlichkeit und rücksichtslos

life is bringing on their unfortunate offspring who are pining at home.”¹³²

Every phenomenon of the factory districts is here reproduced, including, but to a greater extent, ill-disguised infanticide, and dosing children with opiates.¹³³

¹²⁷ “Sixth Report on Public Health,” Lond., 1864, p. 34.

¹²⁸ “It (the inquiry of 1861) . . . showed, moreover, that while, with the described circumstances, infants perish under the neglect and mismanagement which their mothers’ occupations imply, the mothers become to a grievous extent denaturalised towards their offspring—commonly not troubling themselves much at the death, and even sometimes . . . taking direct measures to insure it.” (l.c.)

¹²⁹ l.c., p. 454.

¹³⁰ l.c., pp. 454–463. “Report by Dr. Henry Julian Hunter on the excessive mortality of infants in some rural districts of England.”

¹³¹ l.c., p. 35 and pp. 455, 456.

¹³² l.c., p. 456.

¹³³ In the agricultural as well as in the factory districts the consumption of opium among the grown-up laborers, both male and female, is extending daily. “To push the sale of opiate . . . is the great aim of some enterprising wholesale merchants. By druggists it is considered the leading article.” (l.c., p. 459.) Infants that take opiates “shrank up into little old men,” or “wizened like little monkeys.” (l.c., p. 460.) We here see how India and China avenged themselves on England.

“My knowledge of such evils,” says Dr. Simon, the medical officer of the Privy Council and editor in chief of the Reports on Public Health, “may excuse the profound misgiv-

gegen die unheilvollen Folgen, welche ihre Vorliebe für diese tätige und unabhängige Lebensart auf ihre Sprößlinge wälzt, die zu Haus verkümmern.“¹³²

Alle Phänomene der Fabrikdistrikte reproduzieren sich hier, in noch höherem Grad versteckter Kindermord und Behandlung der Kinder mit Opiaten.¹³³

¹²⁷ „Sixth Report on Public Health“, Lond. 1864, p. 34.

¹²⁸ „Sie“ (die Untersuchung von 1861) „... zeigte überdies, daß, während unter den beschriebenen Umständen die Kleinkinder an der Vernachlässigung und schlechten Behandlung zugrunde gehen, die durch die Arbeit ihrer Mütter bedingt sind, die Mütter in erschreckendem Ausmaß die natürlichen Regungen gegenüber ihren Sprößlingen verlieren—gewöhnlich kümmert sie deren Tod nicht sehr, und manchmal . . . ergreifen sie direkte Maßnahmen, um ihn herbeizuführen.“ (l.c.)

¹³¹ l.c. p. 35 u. p. 455, 456.

¹³² l.c. p. 456.

¹³³ Wie in den englischen Fabrikdistrikten, so dehnt sich auch in den Agrikulturdistrikten der Opiumkonsum unter den erwachsenen Arbeitern und Arbeiterinnen täglich aus. „Den Verkauf von Opiaten voranzutreiben . . . ist das große Ziel einiger unternehmender Großhändler. Von Drogi- sten werden sie als der gangbarste Artikel angesehen.“ (l.c. p. 459.) Säuglinge, die Opiate empfangen, „verrumpelten in kleine alte Männchen oder verschrumpfen zu kleinen Affen“. (l.c. p. 460.) Man sieht, wie Indien und China sich an England rächen.

„Meine Kenntnis der von ihr erzeugten Übel“, sagt Dr. Simon, der ärztliche Beamte des englischen Privy-Council und Redakteur en chef der Berichte über „Public Health“, „muß den

ing with which I regard any large industrial employment of adult women.”¹³⁴ “Happy indeed,” exclaims Mr. Baker, the factory inspector, in his official report, “happy indeed will it be for the manufacturing districts of England, when every married woman having a family is prohibited from working in any textile works at all.”¹³⁵

¹³⁴ l.c., p. 37.

¹³⁵ “Rep. of Insp. of Fact. for 31st Oct., 1862,” p. 59. Mr. Baker was formerly a doctor.

(4) Intellectual desolation; although schools were required by law, the laws were carelessly written and did not ensure the children were really taught something.

522:1–526:0 The moral degradation caused by the capitalistic exploitation of women and children has been so exhaustively depicted by F. Engels in his “Lage der Arbeitenden Klasse Englands,” and other writers, that I need only mention the subject in this place. But the intellectual desolation artificially produced by converting immature human beings into mere machines for the fabrication of surplus-value, a state of mind clearly distinguishable from that natural ignorance which keeps the mind fallow without destroying its capacity for development, its natural fertility, this desolation finally compelled even the English Parliament to make elementary education a compulsory condition to the “productive” employment of children under 14 years, in every industry subject to the Factory Acts. The spirit of capitalist production stands out clearly in the ludicrous wording of the so-called education clauses in the Factory Acts, in the absence of an administrative machinery, an absence that again makes the compulsion illusory, in the opposition of the manufacturers themselves to these education clauses, and in the tricks and dodges they put in prac-

tiefen Abscheu entschuldigen, womit ich jede umfassende industrielle Beschäftigung erwachsener Weiber betrachte.“¹³⁴ „Es wird“, ruft Fabrikinspektor R. Baker in einem offiziellen Bericht aus, „es wird in der Tat ein Glück für die Manufakturdistrikte Englands sein, wenn jeder verheirateten Frau, die Familie hat, verboten wird, in irgendeiner Fabrik zu arbeiten.“¹³⁵

¹³⁴ l.c. p. 37.

¹³⁵ „Reports of Insp. of Fact. for 31st Oct. 1862“, p. 59. Dieser Fabrikinspektor war früher Arzt.

421:5–425:0 Die aus der kapitalistischen Exploitation der Weiber- und Kinderarbeit entspringende moralische Verkümmrung ist von F. Engels in seiner „Lage der arbeitenden Klasse Englands“ und von andren Schriftstellern so erschöpfend dargestellt worden, daß ich hier nur daran erinnere. Die intellektuelle Verödung aber, künstlich produziert durch die Verwandlung unreifer Menschen in bloße Maschinen zur Fabrikation von Mehrwert und sehr zu unterscheiden von jener naturwüchsigen Unwissenheit, welche den Geist in Brache legt ohne Verderb seiner Entwicklungsfähigkeit, seiner natürlichen Fruchtbarkeit selbst, zwang endlich sogar das englische Parlament in allen dem Fabrikgesetz unterworfenen Industrien, den Elementarunterricht zur gesetzlichen Bedingung für den „produktiven“ Verbrauch von Kindern unter 14 Jahren zu machen. Der Geist der kapitalistischen Produktion leuchtete hell aus der liederlichen Redaktion der sog. Erziehungsklauseln der Fabrikakte, aus dem Mangel administrativer Maschinerie, wodurch dieser Zwangsunterricht grobenteils wieder illusorisch wird, aus der Fabrikantenopposition selbst gegen dies

tice for evading them.

“For this the legislature is alone to blame, by having passed a delusive law, which, while it would seem to provide that the children employed in factories shall be *educated*, contains no enactment by which that professed end can be secured. It provides nothing more than that the children shall on certain days of the week, and for a certain number of hours (three) in each day, be inclosed within the four walls of a place called a school, and that the employer of the child shall receive weekly a certificate to that effect signed by a person designated by the subscriber as a schoolmaster or schoolmistress.”¹³⁶

¹³⁶ L. Horner in “Reports of Insp. of Fact. for 30th June, 1857,” p. 17.

Previous to the passing of the amended Factory Act, 1844, it happened, not unfrequently, that the certificates of attendance at school were signed by the schoolmaster or schoolmistress with a cross, as they themselves were unable to write.

“On one occasion, on visiting a place called a school, from which certificates of school attendance, had issued, I was so struck with the ignorance of the master, that I said to him: ‘Pray, sir, can you read?’ His reply was: ‘Aye, summat!’ and as a justification of his right to grant certificates, he added: ‘At any rate, I am before my scholars.’

The inspectors, when the Bill of 1844 was in preparation, did not fail to represent the disgraceful state of the places called schools, certificates from which they were obliged to admit as a compliance with the laws, but they were successful only in obtaining thus much, that since the passing of the Act of 1844,

“the figures in the school certificate must be filled up in the handwriting of the schoolmaster, who must also sign his Christian and sur-

Unterrichtsgesetz und aus ihren praktischen Kniffen und Schlichen zu seiner Umgehung.

„Die Gesetzgebung allein ist zu tadeln, weil sie ein Truggesetz (delusive law) erlassen hat, das unter dem Schein, für die Erziehung der Kinder zu sorgen, keine einzige Bestimmung enthält, wodurch dieser vorgeschützte Zweck gesichert werden kann. Es bestimmt nichts, außer daß die Kinder für eine bestimmte Stundenzahl“ (3 Stunden) „per Tag innerhalb der vier Wände eines Platzes, Schule benamst, eingeschlossen werden sollen und daß der Anwender des Kindes hierüber wöchentlich ein Zertifikat von einer Person erhalten muß, die sich als Schullehrer oder Schullehrerin mit ihrem Namen unterzeichnet.“¹³⁶

¹³⁶ Leonard Horner in „Reports of Insp. of Fact. for 30th April 1857“, p. 17.

Vor dem Erlaß des amendierten Fabrikakts von 1844 waren Schulbesuchszertifikate nicht selten, die von Schulmeister oder Schulmeisterin mit einem Kreuz unterzeichnet wurden, da letztere selbst nicht schreiben konnten.

„Beim Besuch, den ich einer solchen Zertifikate ausstellenden Schule abstattete, war ich so betroffen von der Unwissenheit des Schulmeisters, daß ich zu ihm sagte: ‚Bitte, mein Herr, können Sie lesen?‘ Seine Antwort war: ‚Ih jeh, Ebbes (summat).‘ Zu seiner Rechtfertigung fügte er hinzu: ‚Jedenfalls stehe ich vor meinen Schülern.‘“

Während der Vorbereitung des Akts von 1844 denunzierten die Fabrikinspektoren den schmachlichen Zustand der Plätze, Schulen benamst, deren Zertifikate sie als zu Gesetz vollgültig zulassen mußten. Alles was sie durchsetzten, war, daß seit 1844

„die Zahlen im Schulzertifikat in der Handschrift des Schulmeisters ausgefüllt, ditto sein Vor- und Zuname von ihm selbst unterschrie-

name in full.”¹³⁷

¹³⁷ L. Horner in “Rep. of Insp. of Fact. for 31st Oct., 1855,” pp. 18, 19.

Sir John Kincaid, factory inspector for Scotland, relates experiences of the same kind.

“The first school we visited was kept by a Mrs. Ann Killin. Upon asking her to spell her name, she straightway made a mistake, by beginning with the letter C, but correcting herself immediately, she said her name began with a K. On looking at her signature, however, in the school certificate books, I noticed that she spelt it in various ways, while her handwriting left no doubt as to her unfitness to teach. She herself also acknowledged that she could not keep the registre ... In a second school I found the schoolroom 15 feet long, and 10 feet wide, and counted in this space 75 children, who were gobbling something unintelligible.”¹³⁸ But it is not only in the miserable places above referred to that the children obtain certificates of school attendance without having received instruction of any value, for in many schools where there is a competent teacher, his efforts are of little avail from the distracting crowd of children of all ages, from infants of 3 years old and upwards; his livelihood, miserable at the best, depending on the pence received from the greatest number of children whom it is possible to cram into the space. To this is to be added scanty school furniture, deficiency of books, and other materials for teaching, and the depressing effect upon the poor children themselves of a close, noisome atmosphere. I have been in many such schools, where I have seen rows of children doing absolutely nothing; and this is certified as school attendance, and, in statistical returns, such children are set down as being educated.”¹³⁹

¹³⁸ Sir John Kincaid in “Rep. of Insp. of Fact. for 31st Oct., 1858,” pp. 31, 32.

ben sein müssen“.¹³⁷

¹³⁷ id. in „Reports of Insp. of Fact. for 31st Oct. 1855“, p. 18, 19.

Sir John Kincaid, Fabrikinspektor für Schottland, erzählt von ähnlichen amtlichen Erfahrungen.

„Die erste Schule, die wir besuchten, wurde von einer Mrs. Ann Killin gehalten. Auf meine Aufforderung, ihren Namen zu buchstabieren, machte sie gleich einen Schnitzer, indem sie mit dem Buchstaben C begann, aber sich sofort korrigierend sagte, ihr Name fange mit K an. Bei Ansicht ihrer Unterschrift in den Schulzertifikatbüchern bemerkte ich jedoch, daß sie ihn verschiedenartig buchstabierte, während die Handschrift keinen Zweifel über ihre Lehnunfähigkeit ließ. Auch gab sie selbst zu, sie könne das Register nicht führen ... In einer zweiten Schule fand ich das Schulzimmer 15 Fuß lang und 10 Fuß breit und zählte in diesem Raum 75 Kinder, die etwas Unverständliches herquiekten.“¹³⁸ „Es sind jedoch nicht nur solche Jammerhöhlen, worin die Kinder Schulzertifikate, aber keinen Unterricht erhalten, denn in vielen Schulen, wo der Lehrer kompetent ist, scheitern seine Bemühungen fast ganz an dem sinnverwirrenden Knäuel von Kindern aller Alter, aufwärts von Dreijährigen. Sein Auskommen, elend im besten Fall, hängt ganz von der Zahl der Pence ab, empfangen von der größten Anzahl Kinder, die es möglich ist, in ein Zimmer zu stopfen. Dazu kommt spärliche Schulmöblierung, Mangel an Büchern und andrem Lehrmaterial und die niederschlagende Wirkung einer be-nauten und ekelhaften Luft auf die armen Kinder selbst. Ich war in vielen solchen Schulen, wo ich ganze Reihen Kinder sah, die absolut nichts taten; und dies wird als Schulbesuch bescheinigt, und solche Kinder figurieren in der offiziellen Statistik als erzogen (educated).“¹³⁹

¹³⁸ Sir John Kincaid in „Reports of Insp. of Fact. for 31st Oct. 1858“, p. 31, 32.

¹³⁹ L. Horner in "Reports, etc., for 31st Oct., 1857," pp. 17, 18.

In Scotland the manufacturers try all they can to do without the children that are obliged to attend school.

"It requires no further argument to prove that the educational clauses of the Factory Act, being held in such disfavour among mill-owners, tend in a great measure to exclude that class of children alike from the employment and the benefit of education contemplated by this Act."¹⁴⁰

¹⁴⁰ Sir J. Kincaid in "Reports, etc., 31st Oct., 1856," p. 66.

Horribly grotesque does this appear in print works, which are regulated by a special Act. By that Act,

"every child, before being employed in a print work must have attended school for at least 30 days, and not less than 150 hours, during the six months immediately preceding such first day of employment, and during the continuance of its employment in the print works, it must attend for a like period of 30 days, and 150 hours during every successive period of six months ... The attendance at school must be between 8 a.m. and 6 p.m. No attendance on any one day, shall be reckoned as part of the 150 hours. Under ordinary circumstances the children attend school morning and afternoon for 30 days, for at least 5 hours each day, and upon the expiration of the 30 days, the statutory total of 150 hours having been attained, having, in their language, made up their book, they return to the print work, where they continue until the six months have expired, when another instalment of school attendance becomes due, and they again seek the school until the book is again made up ... Many boys having attended school for the required number of hours, when they return to school after the expiration of their six months' work in

¹³⁹ Leonard Horner in "Reports etc. for 30th Apr. 1857", p. 17, 18.

In Schottland suchen die Fabrikanten dem Schulbesuch unterworfenen Kinder möglichst auszuschließen.

„Dies genügt, um die große Mißgunst der Fabrikanten gegen die Erziehungsklauseln zu beweisen.“¹⁴⁰

¹⁴⁰ Sir J. Kincaid [in] „Rep. Insp. Fact. 31st Oct. 1856“, p. 66.

Grotesk-entsetzlich erscheint dies in den Kattun- usw. Druckereien, die durch ein eigenes Fabrikgesetz geregelt sind. Nach den Bestimmungen des Gesetzes

„muß jedes Kind, bevor es in einer solchen Druckerei beschäftigt wird, Schule besucht haben für mindestens 30 Tage und nicht weniger als 150 Stunden während der 6 Monate, die dem ersten Tag seiner Beschäftigung unmittelbar vorhergehn. Während der Fortdauer seiner Beschäftigung in der Druckerei muß es Schule besuchen ebenfalls für eine Periode von 30 Tagen und 150 Stunden während jeder Wechselperiode von 6 Monaten ... Der Schulbesuch muß zwischen 8 Uhr morgens und 6 Uhr nachmittags stattfinden. Kein Besuch von weniger als 2 1/2 oder mehr als 5 Stunden an demselben Tag soll als Teil der 150 Stunden gezählt werden. Unter gewöhnlichen Umständen besuchen die Kinder die Schule vormittags und nachmittags für 30 Tage, 5 Stunden per Tag, und nach Ablauf der 30 Tage, wenn die statutenmäßige Gesamtsumme von 150 Stunden erreicht ist, wenn sie, in ihrer eignen Sprache zu reden, ihr Buch abgemacht haben, kehren sie zur Druckerei zurück, wo sie wieder 6 Monate bleiben, bis ein anderer Abschlagstermin des Schulbesuchs fällig wird, und dann bleiben sie wieder in der Schule, bis das Buch wieder abgemacht ist ... Sehr viele

the print work, are in the same condition as when they first attended school as print-work boys, that they have lost all they gained by their previous school attendance ... In other print works the children's attendance at school is made to depend altogether upon the exigencies of the work in the establishment. The requisite number of hours is made up each six months, by instalments consisting of from 3 to 5 hours at a time, spreading over, perhaps, the whole six months ... For instance, the attendance on one day might be from 8 to 11 a.m., on another day from 1 p.m. to 4 p.m., and the child might not appear at school again for several days, when it would attend from 3 p.m. to 6 p.m.; then it might attend for 3 or 4 days consecutively, or for a week, then it would not appear in school for 3 weeks or a month, after that upon some odd days at some odd hours when the operative who employed it chose to spare it; and thus the child was, as it were, buffeted from school to work, from work to school, until the tale of 150 hours was told."¹⁴¹

¹⁴¹ A. Redgrave in "Rep. of Insp. of Fact., 31st. Oct., 1857," pp. 41–42. In those industries where the Factory Act proper (not the Print Works Act referred to in the text) has been in force for some time, the obstacles in the way of the education clauses have, in recent years, been overcome. In industries not under the Act, the views of Mr. J. Geddes, a glass manufacturer, still extensively prevail. He informed Mr. White, one of the Inquiry Commissioners: "As far as I can see, the greater amount of education which a part of the working-class has enjoyed for some years past is an evil. It is dangerous, because it makes them independent." ("Children's Empl. Comm.,

Jungen, welche die Schule während der vor-schriftsmäßigen 150 Stunden besuchen, sind bei ihrer Rückkehr aus dem sechsmonatlichen Aufenthalt in der Druckerei gradeso weit wie im Anfang ... Sie haben natürlich alles wieder verloren, was sie durch den früheren Schulbesuch gewonnen hatten. In anderen Kattundruckereien wird der Schulbesuch ganz und gar abhängig gemacht von den Geschäftsbedürfnissen der Fabrik. Die erforderliche Stundenzahl wird vollgemacht während jeder sechsmonatlichen Periode durch Abschlagszahlungen von 3 bis 5 Stunden auf einmal, die vielleicht über 6 Monate zerstreut sind. Z.B. an einem Tage wird die Schule besucht von 8 bis 11 Uhr morgens, an einem andren Tage von 1 bis 4 Uhr nachmittags, und nachdem das Kind dann wieder für eine Reihe Tage weggeblieben, kommt es plötzlich wieder von 3 bis 6 Uhr nachmittags; dann erscheint es vielleicht für 3 oder 4 Tage hintereinander, oder für eine Woche, verschwindet dann wieder für 3 Wochen oder einen ganzen Monat und kehrt zurück an einigen Abfallstagen für einige Sparstunden, wenn seine Anwender seiner zufällig nicht bedürfen; und so wird das Kind sozusagen hin und her gepufft (buffeted) von der Schule in die Fabrik, von der Fabrik in die Schule, bis die Summe der 150 Stunden abgezählt ist."¹⁴¹

¹⁴¹ A. Redgrave in „Reports of Insp. of Fact. for 31st Oct. 1857“, p. 41–43. In den englischen Industriezweigen, wo der eigentliche Fabrikakt (nicht der zuletzt im Text angeführte Print Work's Act) seit längerer Zeit herrscht, sind die Hindernisse gegen die Erziehungsklauseln in den letzten Jahren einigermassen überwältigt worden. In den nicht dem Farbrückgesetz unterworfenen Industrien herrschen noch sehr die Ansichten des Glasfabrikanten J. Geddes, der den Untersuchungskommissär White dahin belehrt: „Soviel ich sehn kann, ist das größere Quantum Erziehung, welches ein Teil der Arbeiterklasse seit den letzten Jahren genoß, vom Übel. Es ist gefährlich, in-

Fourth Report,” Lond., 1865, p. 253.)

↓ (5) Marx concludes with an important side effect of these moral outrages: the resistance of the male worker is broken.

526:1 By the excessive addition of women and children to the ranks of the workers, machinery at last breaks down the resistance which the male operatives in the manufacturing period continued to oppose to the despotism of capital.¹⁴²

¹⁴² “Mr. E., a manufacturer . . . informed me that he employed females exclusively at his power-looms . . . gives a decided preference to married females, especially those who have families at home dependent on them for support; they are attentive, docile, more so than unmarried females, and are compelled to use their utmost exertions to procure the necessities of life. Thus are the virtues, the peculiar virtues of the female character to be perverted to her injury—thus all that is most dutiful and tender in her nature is made a means of her bondage and suffering.” (Ten Hours’ Factory Bill. The Speech of Lord Ashley, March 15th, Lond., 1844, p. 20.)

dem es sie zu unabhängig macht.“ „Children’s Empl. Commission, IV. Report“, London 1865, p. 253.)

424:1 Durch den überwiegenden Zusatz von Kindern und Weibern zum kombinierten Arbeitspersonal bricht die Maschinerie endlich den Widerstand, den der männliche Arbeiter in der Manufaktur der Despotie des Kapitals noch entgegensetzte.¹⁴²

¹⁴² „Herr E., ein Fabrikant, unterrichtete mich, daß er ausschließlich Weiber bei seinen mechanischen Webstühlen beschäftigt; er gebe verheirateten Weibern den Vorzug, besonders solchen mit Familie zu Hause, die von ihnen für den Unterhalt abhängt; sie sind viel aufmerksamer und gelehriger als unverheiratete und zur äußersten Anstrengung ihrer Kräfte gezwungen, um die notwendigen Lebensmittel beizuschaffen. So werden die Tugenden, die eigentümlichen Tugenden des weiblichen Charakters, zu seinem Schaden verkehrt—so wird alles Sittliche und Zarte ihrer Natur zum Mittel ihrer Sklaverei und ihres Leidens gemacht.“ „Ten Hours’ Factory Bill. The Speech of Lord Ashley, 15th March“, London 1844, p. 20.)

Question 846 *What effects did the employment of women and children have on the value of labor-power, the nature of the contract between capitalists and laborer, public health, the intellectual development of the working class, and its powers to resist the onslaughts of the capitalists?*

15.3.b. Prolongation of the Working-Day.

There is again a paradoxical effect, as in (a). Machinery, while increasing productiveness of labor (and thus shortening the time to produce use-values) produces under capitalism the most powerful means to prolong the working-day. This is a different effect than that in (a). In (a), the labor-savings referred to the decreased input of labor, while now we speak of the increased output of the product.

If machinery be the most powerful means for increasing the productiveness of labor—i.e., for shortening the working-time re-

425:1 Wenn die Maschinerie das gewaltigste Mittel ist, die Produktivität der Arbeit zu steigern, d.h. die zur Produktion ei-

quired in the production of a commodity, it becomes in the hands of capital the most powerful means, in those industries first invaded by it, for lengthening the working-day beyond all bounds set by human nature. It creates, on the one hand, new conditions by which capital is enabled to give free scope to this its constant tendency, and on the other hand, new motives with which to whet capital’s appetite for the labor of others.

↑ Machinery creates both new motives and new conditions for prolonging the working-day.

↓ Description of the new *motives*. (1) Machines want to be kept in motion perpetually.

526:3/o In the first place, in the form of machinery, the implements of labor become automatic, things moving and working independent of the workman. They are thenceforth an industrial *perpetuum mobile*, that would go on producing forever, did it not meet with certain natural obstructions in the weak bodies and the strong wills of its human attendants. The automaton, as capital, and because it is capital, is endowed, in the person of the capitalist, with intelligence and will; it is therefore animated by the longing to reduce to a minimum the resistance offered by that repellent yet elastic natural barrier, man.¹⁴³ This resistance is moreover lessened by the apparent lightness of machine work, and by the more pliant and docile character of the women and children employed on it.¹⁴⁴

¹⁴³ “Since the general introduction of machinery, human nature has been forced far beyond its average strength.” (Rob. Owen: “Observations on the Effects of the Manufacturing System,” 2nd Ed., London, 1817.)

¹⁴⁴ The English, who have a tendency to look upon the earliest form of appearance of a thing as

ner Ware nötige Arbeitszeit zu verkürzen, wird sie als Träger des Kapitals zunächst in den unmittelbar von ihr ergriffenen Industrien zum gewaltigsten Mittel, den Arbeitstag über jede naturgemäße Schranke hinaus zu verlängern. Sie schafft einerseits neue Bedingungen, welche das Kapital befähigen, dieser seiner beständigen Tendenz die Zügel frei schießen zu lassen, andererseits neue Motive zur Wetzung seines Heißhüners nach fremder Arbeit.

425:2 Zunächst verselbständigt sich in der Maschinerie die Bewegung und Werkτικότητα des Arbeitsmittels gegenüber dem Arbeiter. Es wird an und für sich ein industrielles Perpetuum mobile, das ununterbrochen fortproduzieren würde, stieße es nicht auf gewisse Naturschranken in seinen menschlichen Gehilfen: ihre Körperschwäche und ihren Eigenwillen. Als Kapital, und als solches besitzt der Automat im Kapitalisten Bewußtsein und Willen, ist es daher mit dem Trieb begeistert, die widerstrebende, aber elastische menschliche Naturschranke auf den Minimalwiderstand einzuzwängen.¹⁴³ Dieser ist ohnehin vermindert durch die scheinbare Leichtigkeit der Arbeit an der Maschine und das füg- und biegsamere Weiber- und Kinderelement.¹⁴⁴

¹⁴³ „Seit der allgemeinen Einführung von kostspieligen Maschinen ist die menschliche Natur weit über ihre durchschnittliche Kraft beansprucht worden.“ (Robert Owen, „Observations on the effects of the manufacturing system“, 2nd ed., London 1817, [p. 16].)

¹⁴⁴ Die Engländer, die gern die erste empirische Erscheinungsform einer Sache als ih-

the cause of its existence, are in the habit of attributing the long hours of work in factories to the extensive kidnapping of children, practised by capitalists in the infancy of the factory system, on workhouses and orphanages, by means of which robbery, unresisting material for exploitation was procured. Thus, for instance, Ficiden, himself a manufacturer, says: "It is evident that the long hours of work were brought about by the circumstance of so great a number of destitute children being supplied from different parts of the country, that the masters were independent of the hands, and that having once established the custom by means of the miserable materials they had procured in this way, they could impose it on their neighbours with the greater facility." (J. Ficiden: "The Curse of the Factory System," Lond., 1836, p. I 1.) With reference to the labor of women, Saunders, the factory inspector, says in his report of 1844: "Amongst the female operatives there are some women who, for many weeks in succession, except for a few days, are employed from 6 a.m. till midnight, with less than 2 hours for meals, so that on 5 days of the week they have only 6 hours left out of the 24, for going to and from their homes and resting in bed."

(2) The investment into machines wants to be recovered as quickly as possible.

527:1 The productiveness of machinery is, as we saw, inversely proportional to the value transferred by it to the product. The longer the life of the machine, the greater is the mass of the products over which the value transmitted by the machine is spread, and the less is the portion of that value added to each single commodity. The active lifetime of a machine is, however, clearly dependent on the length of the working-day, or on the duration of the daily labor-process multiplied by the number of days for which the process is carried on.

ren Grund betrachten, geben oft den großen herodischen Kinderraub, den das Kapital in den Anfängen des Fabriksystems an den Armen- und Waisenhäusern verübte und wodurch es sich ein ganz willenloses Menschenmaterial einverleibte, als Grund der langen Arbeitszeit in den Fabriken an. So z.B. Fielden, selbst englischer Fabrikant: „Es ist klar, daß die lange Arbeitszeit durch den Umstand herbeigeführt wurde, daß man eine so große Anzahl verlassener Kinder aus verschiedenen Teilen des Landes bekommen hat, so daß die Fabrikherren von den Arbeitern unabhängig waren und sie, nachdem sie erst einmal mit Hilfe des auf diese Weise aufgetriebenen armseligen Menschenmaterials die lange Arbeitszeit zur Gewohnheit gemacht hatten, diese auch ihren Nachbarn leichter aufzwingen konnten.“ (J. Fielden, „The Curse of the Factory System“, Lond. 1836, p. 11.) Mit Bezug auf Weiberarbeit sagt Fabrikinspektor Saunders im Fabrikbericht von 1844: „Unter den Arbeiterinnen gibt es Frauen, die hintereinander für viele Wochen, mit Ausfall nur weniger Tage, von 6 Uhr morgens bis 12 Uhr nachts beschäftigt werden, mit weniger als 2 Stunden für Mahlzeiten, so daß ihnen für 5 Tage in der Woche von den 24 Tagesstunden nur 6 bleiben, um von und nach Haus zu gehn und im Bett auszuruhen.“

426:1 Die Produktivität der Maschine steht, wie wir sahen, in umgekehrtem Verhältnis zur Größe des von ihr auf das Machwerk übertragenen Wertbestandteils. Je länger die Periode, worin sie funktioniert, desto größer die Produktenmasse, worüber sich der von ihr zugesetzte Wert verteilt, und desto kleiner der Wertteil, den sie der einzelnen Ware zufügt. Die aktive Lebensperiode der Maschinerie ist aber offenbar bestimmt durch die Länge des Arbeitstags oder die Dauer des täglichen Arbeitsprozesses, multipliziert mit der Anzahl Tage, worin er sich wiederholt.

527:2/o The wear and tear of a machine is not exactly proportional to its working-time. And even if it were so, a machine working 16 hours daily for 7 1/2 years, covers as long a working period as, and transmits to the total product no more value than, the same machine would if it worked only 8 hours daily for 15 years. But in the first case the value of the machine would be reproduced twice as quickly as in the latter, and the capitalist would, by this use of the machine, absorb in 7 1/2 years as much surplus-value as in the second case he would in 15.

(3) Danger of obsolescence requires quick utilization of the machinery.

528:1 The material wear and tear of a machine is of two kinds. The one arises from use, as coins wear away by circulating, the other from non-use, as a sword rusts when left in its scabbard. The latter kind is due to the elements. The former is more or less directly proportional, the latter to a certain extent inversely proportional, to the use of the machine.¹⁴⁵

¹⁴⁵ "Occasion ... injury to the delicate moving parts of metallic mechanism by inaction." (Ure, l.c., p. 281.)

528:2 But in addition to the material wear and tear, a machine also undergoes, what we may call a moral depreciation. It loses exchange-value, either by machines of the same sort being produced cheaper than it, or by better machines entering into competition with it.¹⁴⁶ In both cases, be the machine ever so young and full of life, its value is no longer determined by the labor actually materialised in it, but by the labor-time requisite to reproduce either it or

426:2 Der Maschinenverschleiß entspricht keineswegs exakt mathematisch ihrer Benutzungszeit. Und selbst dies vorausgesetzt, umfaßt eine Maschine, die während 7 1/2 Jahren täglich 16 Stunden dient, eine ebenso große Produktionsperiode und setzt dem Gesamtprodukt nicht mehr Wert zu als dieselbe Maschine, die während 15 Jahren nur 8 Stunden täglich dient. Im ersten Fall aber wäre der Maschinenwert doppelt so rasch reproduziert als im letzten und der Kapitalist hätte vermittelst derselben in 7 1/2 Jahren so viel Mehrarbeit eingeschluckt als sonst in 15.

(3) Gefahr der Obsoleszenz erfordert schnelle Nutzung der Maschinerie.

426:3 Der materielle Verschleiß der Maschine ist doppelt. Der eine entspringt aus ihrem Gebrauch, wie Geldstücke durch Zirkulation verschleifen, der andre aus ihrem Nichtgebrauch, wie ein untätig Schwert in der Scheide verrostet. Es ist dies ihr Verzehr durch die Elemente. Der Verschleiß erster Art steht mehr oder minder in direktem Verhältnis, der letztere zu gewissem Grad in umgekehrtem Verhältnis zu ihrem Gebrauch.¹⁴⁵

¹⁴⁵ „Der Anlaß ... zur Schädigung der empfindlichen beweglichen Teile des metallenen Mechanismus kann im Stillstand liegen.“ (Ure, l.c. p. 281.)

426:4/o Neben dem materiellen unterliegt die Maschine aber auch einem sogenannten moralischen Verschleiß. Sie verliert Tauschwert im Maße, worin entweder Maschinen derselben Konstruktion wohlfeiler reproduziert werden können oder bessere Maschinen konkurrierend neben sie treten.¹⁴⁶ In beiden Fällen ist ihr Wert, so jung und lebenskräftig sie sonst noch sein mag, nicht mehr bestimmt durch die tatsächlich in ihr selbst vergegenständlichte, sondern durch

the better machine. It has, therefore, lost value more or less. The shorter the period taken to reproduce its total value, the less is the danger of moral depreciation; and the longer the working-day, the shorter is that period. When machinery is first introduced into an industry, new methods of reproducing it more cheaply follow blow upon blow,¹⁴⁷ and so do improvements, that not only affect individual parts and details of the machine, but its entire build. It is, therefore, in the early days of the life of machinery that this special incentive to the prolongation of the working-day makes itself felt most acutely.¹⁴⁸

¹⁴⁶ The Manchester Spinner (*Times*, 26th Nov., 1862) before referred to says in relation to this subject: "It (namely, the "allowance for deterioration of machinery") is also intended to cover the loss which is constantly arising from the superseding of machines before they are worn out, by others of a new and better construction."

¹⁴⁷ "It has been estimated, roughly, that the first individual of a newly-invented machine will cost about five times as much as the construction of the second." (Babbage, l.c., p. 349.)

¹⁴⁸ "The improvements which took place not long ago in frames for making patent net were so great that a machine in good repair which had cost £1,200, sold a few years after for £60 ... improvements succeeded each other so rapidly, that machines which had never been finished were abandoned in the hands of their makers, because new improvements had superseded their utility." (Babbage, l. c., p. 233.) In these stormy, go-ahead times, therefore, the tulle manufacturers soon extended the working-day, by means of

die zu ihrer eignen Reproduktion oder zur Reproduktion der beßren Maschine notwendige Arbeitszeit. Sie ist daher mehr oder minder entwertet. Je kürzer die Periode, worin ihr Gesamtwert reproduziert wird, desto geringer die Gefahr des moralischen Verschleißes, und je länger der Arbeitstag, um so kürzer jene Periode. Bei der ersten Einführung der Maschinerie in irgendeinen Produktionszweig folgen Schlag auf Schlag neue Methoden zu ihrer wohlfeilern Reproduktion¹⁴⁷ und Verbeßrungen, die nicht nur einzelne Teile oder Apparate, sondern ihre ganze Konstruktion ergreifen. In ihrer ersten Lebensperiode wirkt daher dies besondere Motiv zur Verlängerung des Arbeitstags am akutesten.¹⁴⁸

¹⁴⁶ Der schon früher erwähnte „Manchester Spinner“ (*„Times“*, 26. Nov. 1862) zählt unter den Kosten der Maschinerie auf: „Er“ (nämlich der „Abzug für Verschleiß der Maschinerie“) „hat auch den Zweck, den Verlust zu decken, der fortgesetzt dadurch entsteht, daß Maschinen, bevor sie verschlissen sind, durch andre von neuer und besserer Konstruktion außer Gebrauch gesetzt werden.“

¹⁴⁷ „Man schätzt im großen, daß eine einzige Maschine nach einem neuen Modell zu konstruieren fünfmal soviel kostet als die Rekonstruktion derselben Maschine nach demselben Modell.“ (Babbage, l.c. p. 211, 212.)

¹⁴⁸ „Seit einigen Jahren sind so bedeutende und zahlreiche Verbesserungen in der Tüllfabrikation gemacht worden, daß eine gut erhaltne Maschine zum ursprünglichen Kostenpreis von 1200 Pfd.St. einige Jahre später zu 60 Pfd.St. verkauft wurde ... Die Verbeßrungen folgten sich mit solcher Geschwindigkeit, daß Maschinen unvollendet in der Hand ihrer Bauer blieben, weil sie durch glücklichere Erfindungen bereits veraltet waren.“ In dieser Sturm- und Drangperiode dehnten daher die Tüllfabrikanten bald die ur-

double sets of hands, from the original 8 hours to 24.

(4) A longer workday requires diminishes fixed capital outlay per product:

529/o Given the length of the working-day, all other circumstances remaining the same, the exploitation of double the number of workmen demands, not only a doubling of that part of constant capital which is invested in machinery and buildings, but also of that part which is laid out in raw material and auxiliary substances. The lengthening of the working-day, on the other hand, allows of production on an extended scale without any alteration in the amount of capital laid out on machinery and buildings.¹⁴⁹ Not only is there, therefore, an increase of surplus-value, but the outlay necessary to obtain it diminishes. It is true that this takes place, more or less, with every lengthening of the working-day; but in the case under consideration, the change is more marked, because the capital converted into the instruments of labor preponderates to a greater degree.¹⁵⁰ The development of the factory system fixes a constantly increasing portion of the capital in a form, in which, on the one hand, its value is capable of continual self-expansion, and in which, on the other hand, it loses both use-value and exchange-value whenever it loses contact with living labor.

„When a laborer,” said Mr. Ashworth, a cotton magnate, to Professor Nassau W. Senior, “lays down his spade, he renders useless, for that period, a capital worth eighteen-pence. When one of our people leaves the mill, he renders useless a capital that has cost £100,000.”¹⁵¹

Only fancy! making “useless” for a single moment, a capital that has cost £100,000! It is, in truth, monstrous, that a single one

springliche Arbeitszeit von 8 Stunden mit doppelter Mannschaft auf 24 Stunden aus. (l.c. p. 233.)

427:1–428:2 Unter sonst gleichbleibenden Umständen und bei gegebenem Arbeitstag erheischt Exploitation verdoppelter Arbeiteranzahl ebensowohl Verdopplung des in Maschinerie und Baulichkeiten ausgelegten Teils des konstanten Kapitals als des in Rohmaterial, Hilfsstoffen usw. ausgelegten. Mit verlängertem Arbeitstag dehnt sich die Stufenleiter der Produktion, während der in Maschinerie und Baulichkeiten ausgelegte Kapitalteil unverändert bleibt.¹⁴⁹ Nicht nur der Mehrwert wächst daher, sondern die zur Ausbeutung desselben notwendigen Auslagen nehmen ab. Zwar findet dies auch sonst mehr oder minder bei aller Verlängerung des Arbeitstags statt, fällt aber hier entscheidender ins Gewicht, weil der in Arbeitsmittel verwandelte Kapitalteil überhaupt mehr ins Gewicht fällt.¹⁵⁰ Die Entwicklung des Maschinenbetriebs bindet nämlich einen stets wachsenden Bestandteil des Kapitals in eine Form, worin es einerseits fortwährend verwertbar ist, andererseits Gebrauchswert und Tauschwert verliert, sobald sein Kontakt mit der lebendigen Arbeit unterbrochen wird. „Wenn“, belehrte Herr Ashworth, ein englischer Baumwollmagnat, den Professor Nassau W. Senior,

„wenn ein Ackersmann seinen Spaten niederlegt, macht er für diese Periode ein Kapital von 18 d. nutzlos. Wenn einer von unsren Leuten“ (d.h. den Fabrikarbeitern) „die Fabrik verläßt, macht er ein Kapital nutzlos, das 100 000 Pfd.St. gekostet hat.“¹⁵¹

Man denke nur! Ein Kapital, das 100 000 Pfd.St. gekostet hat, auch nur für einen Augenblick „nutzlos“ zu machen! Es ist in der

of our people should ever leave the factory! The increased use of machinery, as Senior after the instruction he received from Ashworth clearly perceives, makes a constantly increasing lengthening of the working-day “desirable.”¹⁵²

¹⁴⁹ “It is self-evident, that, amid the ebbings and flowings of the markets and the alternate expansions and contractions of demand, occasions will constantly recur, in which the manufacturer may employ additional floating capital without employing additional fixed capital ... if additional quantities of raw material can be worked up without incurring an additional expense for buildings and machinery.” (R. Torrens: “On Wages and Combination.” London, 1834, p. 64.)

¹⁵⁰ This circumstance is mentioned only for the sake of completeness, for I shall not consider the rate of profit, i.e., the ratio of the surplus-value to the total capital advanced, until I come to the third book.

¹⁵¹ Senior, “Letters on the Factory Act.” London, 1837, pp. 13, 14.

Senior’s original says 100 £ instead of 100 000 £.

¹⁵² “The great proportion of fixed to circulating capital ... makes long hours of work desirable.” With the increased use of machinery, etc., “the motives to long hours of work will become greater, as the only means by which a large proportion of fixed capital can be made profitable.” (l.c., pp. 11–13.) “There are certain expenses upon a mill which go on in the same proportion whether the mill be running short or full time, as, for instance, rent rates, and taxes, insurance against fire, wages of several permanent servants, deterioration of machinery, with various other charges upon a manufacturing establishment, the proportion of which to profits increases as the production decreases.” (“Rep. of

Tat himmelschreiend, daß einer unsrer Leute überhaupt jemals die Fabrik verläßt! Der wachsende Umfang der Maschinerie macht, wie der von Ashworth belehrte Senior ein- sieht, eine stets wachsende Verlängerung des Arbeitstags „wünschenswert“.¹⁵²

¹⁴⁹ „Es ist selbstverständlich, daß mit der Eb- und Flut des Marktes und dem abwechselnden Wachsen und Schrumpfen der Nachfrage die Gelegenheiten ständig wiederkehren werden, wo der Fabrikant zusätzliches zirkulierendes Kapital anwenden kann, ohne zusätzliches fixes Kapital zu verwenden ... wenn zusätzliche Mengen an Rohmaterial ohne zusätzliche Ausgaben für Gebäude und Maschinerie verarbeitet werden können.“ (R. Torrens, „On Wages and Combination“, Lond. 1834, p. 64.)

¹⁵⁰ Der im Text erwähnte Umstand ist nur der Vollständigkeit wegen erwähnt, da ich erst im Dritten Buch die Profitrate, d.h. das Verhältnis des Mehrwerts zum vorgeschossenen Gesamtkapi- tal, behandle.

¹⁵¹ „When a labourer“, said Mr. Ashworth, „lays down his spade, he renders useless, for that period, a capital worth 18 d. When one of our people leaves the mill, he renders useless a capital that has cost 100 000 pounds.“ (Senior, „Let- ters on the Factory Act“, Lond. 1837, p. 14.)

¹⁵² „Das große Übergewicht des fixen im Ver- hältnis zum zirkulierenden Kapital ... macht lan- ge Arbeitszeit wünschenswert.“ Mit dem wach- senden Umfang der Maschinerie usw. „wird der Antrieb zur Verlängerung der Arbeitszeit stärker, da dies das einzige Mittel ist, eine große Mas- se fixen Kapitals profitabel zu machen“. (l.c. p. 11–14.) Es gibt verschiedene Auslagen bei ei- ner Fabrik, welche konstant bleiben, ob die Fa- brik mehr oder weniger Zeit arbeite, z.B. Ren- te für die Baulichkeiten, lokale und allgemeine Steuern, Feuerversicherung, Arbeitslohn für ver- schiedene permanente Arbeiter. Verschlechterung der Maschinerie nebst verschiednen andern La- sten, deren Proportion zum Profit im selben Ver-

Insp. of Fact. for 31st Oct., 1862,” p. 19.)

(5) Here is another reason why machinery prolongs the labor day: The capitalist has to hurry to take advantage of transitory extra surplus-value.

530:1 Machinery produces relative surplus- value; not only by directly depreciating the value of labor-power, and by indirectly cheapening the same through cheapening the commodities that enter into its repro- duction, but also, when it is first introduced sporadically into an industry, by convert- ing the labor employed by the owner of that machinery, into labor of a higher degree and greater efficacy, by raising the social value of the article produced above its individual value, and thus enabling the capitalist to re- place the value of a day’s labor-power by a smaller portion of the value of a day’s prod- uct.

Wertteil des Tagesprodukts = Teil des Wertes des Tagesprodukts.

↑ Look at this formulation carefully; it is an important addition to what Marx already says in chapter Twelve, pp. 433:2–436:0.

↓ Footnote 3a to 435:1/o is a good illustration how the capitalist can replace the daily value of the labor-power with a smaller part of the value of the daily product.

During this transition period, when the use of machinery is a sort of monopoly, the prof- its are therefore exceptional, and the capi- talist endeavours to exploit thoroughly “the sunny time of this his first love,” by prolong- ing the working-day as much as possible. The magnitude of the profit whets his ap- petite for more profit.

(6) However the mechanism generating this additional motive fizzles out again, and the dominant tendency of machinery is to lower the rate of profits, instead of raising it. This fall in the rate of profits is another reason to lengthen the workday.

530:2/o As the use of machinery becomes more general in a particular industry, the so- cial value of the product sinks down to its

hältnis abnimmt, wie der Umfang der Produktion zunimmt.“ („Reports of the Insp. of Fact. for 31st Oct. 1862“, p. 19.)

428:3/o Die Maschine produziert relati- ven Mehrwert, nicht nur, indem sie die Ar- beitskraft direkt entwertet und dieselbe indi- rekt durch Verwohlfeilerung der in ihre Re- produktion eingehenden Waren verwohlfei- lert, sondern auch, indem sie bei ihrer ersten sporadischen Einführung die vom Maschi- nenbesitzer verwandte Arbeit in potenzierte Arbeit verwandelt, den gesellschaftlichen Wert des Maschinenprodukts über seinen in- dividuellen Wert erhöht und den Kapitali- sten so befähigt, mit geringem Wertteil des Tagesprodukts den Tageswert der Arbeits- kraft zu ersetzen.

Während dieser Übergangsperiode, worin der Maschinenbetrieb eine Art Monopol bleibt, sind daher die Gewinne außerordent- lich, und der Kapitalist sucht diese „erste Zeit der jungen Liebe“ gründlichst auszu- beuten durch möglichste Verlängerung des Arbeitstags. Die Größe des Gewinns wetzt den Heißhunger nach mehr Gewinn.

429:1/o Mit der Verallgemeinerung der Maschinerie im selben Produktionszweig sinkt der gesellschaftliche Wert des Maschi-

individual value, and the law that surplus-value does not arise from the labor-power that has been replaced by the machinery, but from the labor-power actually employed in working with the machinery, asserts itself. Surplus-value arises from variable capital alone, and we saw that the amount of surplus-value depends on two factors, viz., the rate of surplus-value and the number of the workmen simultaneously employed. Given the length of the working-day, the rate of surplus-value is determined by the relative duration of the necessary labor and of the surplus-labor in a day. The number of the laborers simultaneously employed depends, on its side, on the ratio of the variable to the constant capital. Now, however much the use of machinery may increase the surplus-labor at the expense of the necessary labor by heightening the productiveness of labor, it is clear that it attains this result, only by diminishing the number of workmen employed by a given amount of capital. It converts what was formerly variable capital, invested in labor-power, into machinery which, being constant capital, does not produce surplus-value. It is impossible, for instance, to squeeze as much surplus-value out of 2 as out of 24 laborers. If each of these 24 men gives only one hour of surplus-labor in 12, the 24 men give together 24 hours of surplus-labor, while 24 hours is the total labor of the two men. Hence, the application of machinery to the production of surplus-value implies a contradiction which is immanent in it, since of the two factors of the surplus-value created by a given amount of capital, one, the rate of surplus-value, cannot be increased, except by diminishing the other, the number of workmen. This contradiction comes to light, as soon as by

nenprodukts auf seinen individuellen Wert und macht sich das Gesetz geltend, daß der Mehrwert nicht aus den Arbeitskräften entspringt, welche der Kapitalist durch die Maschine ersetzt hat, sondern umgekehrt aus den Arbeitskräften, welche er an ihr beschäftigt. Der Mehrwert entspringt nur aus dem variablen Teil des Kapitals, und wir sahen, daß die Masse des Mehrwerts durch zwei Faktoren bestimmt ist, die Rate des Mehrwerts und die Anzahl der gleichzeitig beschäftigten Arbeiter. Bei gegebener Länge des Arbeitstags wird die Rate des Mehrwerts bestimmt durch das Verhältnis, worin der Arbeitstag in notwendige Arbeit und Mehrarbeit zerfällt. Die Anzahl der gleichzeitig beschäftigten Arbeiter hängt ihrerseits ab von dem Verhältnis des variablen Kapitalteils zum konstanten. Es ist nun klar, daß der Maschinenbetrieb, wie er immer durch Steigerung der Produktivkraft der Arbeit die Mehrarbeit auf Kosten der notwendigen Arbeit ausdehne, dies Resultat nur hervorbringt, indem er die Anzahl der von einem gegebenen Kapital beschäftigten Arbeiter vermindert. Er verwandelt einen Teil des Kapitals, der früher variabel war, d.h. sich in lebendige Arbeitskraft umsetzte, in Maschinerie, also in konstantes Kapital, das keinen Mehrwert produziert. Es ist unmöglich, z.B. aus zwei Arbeitern so viel Mehrwert auszupressen als aus 24. Wenn jeder der 24 Arbeiter auf 12 Stunden nur eine Stunde Mehrarbeit liefert, liefern sie zusammen 24 Stunden Mehrarbeit, während die Gesamtarbeit der zwei Arbeiter nur 24 Stunden beträgt. Es liegt also in der Anwendung der Maschinerie zur Produktion von Mehrwert ein immanenter Widerspruch, indem sie von den beiden Faktoren des Mehrwerts, den ein Kapital von gegebener Größe liefert,

the general employment of machinery in a given industry, the value of the machine-produced commodity regulates the value of all commodities of the same sort; and it is this contradiction, that in its turn, drives the capitalist, without his being conscious of the fact,¹⁵³ to excessive lengthening of the working-day, in order that he may compensate the decrease in the relative number of laborers exploited, by an increase not only of the relative, but of the absolute surplus-labor.

¹⁵³ Why it is, that the capitalist, and also the political economists who are imbued with his views, are unconscious of this immanent contradiction, will appear from the first part of the third book.

Question 847 Give the several reasons why machinery makes it desirable for capital to prolong the working-day and introduce shiftwork. One of the reasons is the immanent contradiction in the application of machinery to the production of surplus-value. Explain.

Machinery also creates the conditions enabling capital to pursue these motives because of overpopulation in two ways: a) increase of employable workforce, b) displacement of existing laborers by machinery.

531:1/00 If, then, the capitalistic employment of machinery, on the one hand, supplies new and powerful motives to an excessive lengthening of the working-day, and radically changes, as well the methods of labor, as also the character of the social working organism, in such a manner as to break down all opposition to this tendency, on the other hand it produces, partly by opening out to the capitalist new strata of the working-class, previously inaccessible to him, partly by setting free the laborers it

den einen Faktor, die Rate des Mehrwerts, nur dadurch vergrößert, daß sie den andren Faktor, die Arbeiterzahl, verkleinert. Dieser immanente Widerspruch tritt hervor, sobald mit der Verallgemeinerung der Maschinerie in einem Industriezweig der Wert der maschinenmäßig produzierten Ware zum regelnden gesellschaftlichen Wert aller Waren derselben Art wird, und es ist dieser Widerspruch, der wiederum das Kapital, ohne daß es sich dessen bewußt wäre,¹⁵³ zur gewaltsamsten Verlängerung des Arbeitstags treibt, um die Abnahme in der verhältnismäßigen Anzahl der exploitierten Arbeiter durch Zunahme nicht nur der relativen, sondern auch absoluten Mehrarbeit zu kompensieren.

¹⁵³ Warum dieser immanente Widerspruch dem einzelnen Kapitalisten und daher auch der in seinen Anschauungen befangenen politischen Ökonomie nicht zum Bewußtsein kommt, wird man aus den ersten Abschnitten des Dritten Buchs ersehn.

430:1–431:0 Wenn also die kapitalistische Anwendung der Maschinerie einerseits neue mächtige Motive zur maßlosen Verlängerung des Arbeitstags schafft und die Arbeitsweise selbst wie den Charakter des gesellschaftlichen Arbeitskörpers in einer Art umwälzt, die den Widerstand gegen diese Tendenz bricht, produziert sie andererseits, teils durch Einstellung dem Kapital früher unzugänglicher Schichten der Arbeiterklasse, teils durch Freisetzung der von der Maschine verdrängten Arbeiter, ei-

supplants, a surplus working population,¹⁵⁴ which is compelled to submit to the dictation of capital. Hence that remarkable phenomenon in the history of Modern Industry, that machinery sweeps away every moral and natural restriction on the length of the working-day. Hence, too, the economic paradox, that the most powerful instrument for shortening labor-time, becomes the most unfailing means for placing every moment of the laborer's time and that of his family, at the disposal of the capitalist for the purpose of expanding the value of his capital.

¹⁵⁴ It is one of the great merits of Ricardo to have seen in machinery not only the means of producing commodities, but of creating a "redundant population."

At the end, this capitalist reality is contrasted with the potential of machines already envisioned by Aristotle:

"If," dreamed Aristotle, the greatest thinker of antiquity,

"if every tool, when summoned, or even of its own accord, could do the work that befits it, just as the creations of Daedalus moved of themselves, or the tripods of Hephaestus went of their own accord to their sacred work, if the weavers' shuttles were to weave of themselves, then there would be no need either of apprentices for the master workers, or of slaves for the lords."¹⁵⁵

¹⁵⁵ F. Biese. "Die Philosophie des Aristoteles," Vol. 2. Berlin, 1842, p. 408.

Another example is Antipatros:

And Antipatros, a Greek poet of the time of Cicero, hailed the invention of the water-wheel for grinding corn, an invention that is the elementary form of all machinery, as the giver of freedom to female slaves, and the bringer back of the golden age.¹⁵⁶

¹⁵⁶ I give below the translation of this poem by

ne überflüssige Arbeiterpopulation¹⁵⁴, die sich das Gesetz vom Kapital diktieren lassen muß. Daher das merkwürdige Phänomen in der Geschichte der modernen Industrie, daß die Maschine alle sittlichen und natürlichen Schranken des Arbeitstags über den Haufen wirft. Daher das ökonomische Paradoxon, daß das gewaltigste Mittel zur Verkürzung der Arbeitszeit in das unfehlbarste Mittel umschlägt, alle Lebenszeit des Arbeiters und seiner Familie in disponible Arbeitszeit für die Verwertung des Kapitals zu verwandeln.

¹⁵⁴ Es ist eins der großen Verdienste Ricardos, die Maschinerie nicht nur als Produktionsmittel von Waren, sondern auch von „redundant population“ begriffen zu haben.

„Wenn“, träumte Aristoteles, der größte Denker des Altertums,

„wenn jedes Werkzeug auf Geheiß, oder auch voraussahnend, das ihm zukommende Werk verrichten könnte, wie des Dädalus Kunstwerke sich von selbst bewegten oder die Dreifüße des Hephästos aus eigenem Antrieb an die heilige Arbeit gingen, wenn so die Weberschiffe von selbst webten, so bedürfte es weder für den Werkmeister der Gehilfen noch für die Herrn der Sklaven.“¹⁵⁵

¹⁵⁵ F. Biese, „Die Philosophie des Aristoteles“, Zeiter Band, Berlin 1842, p. 408.

Und Antipatros, ein griechischer Dichter aus der Zeit des Cicero, begrüßte die Erfindung der Wassermühle zum Mahlen des Getreides, diese Elementarform aller produktiven Maschinerie, als Befreierin der Sklavinnen und Herstellerin des goldenen Zeitalters!¹⁵⁶

¹⁵⁶ Ich gebe hier die Stolbergsche Überset-

Stolberg, because it brings into relief, quite in the spirit of former quotations referring to division of labor, the antithesis between the views of the ancients and the moderns.

^{156 ctd} "Spare the hand that grinds the corn,
Oh, miller girls, and softly sleep.
Let Chanticleer announce the morn in vain!
Deo has commanded the work of the girls to be done by the Nymphs,
and now they skip lightly over the wheels,
so that the shaken axles revolve with their spokes
and pull round the load of the revolving stones.
Let us live the life of our fathers, and let us rest from work
and enjoy the gifts that the Goddess sends us."

^{156 ctd} "Gedichte aus dem Griechischen übersetzt von Christian Graf zu Stolberg", Hamburg 1782.)

Back to capitalism.

Oh! those heathens! They understood, as the learned Bastiat, and before him the still wiser MacCulloch have discovered, nothing of Political Economy and Christianity. They did not, for example, comprehend that machinery is the surest means of lengthening the working-day. They perhaps excused the slavery of one on the ground that it was a means to the full development of another. But to preach slavery of the masses, in order that a few crude and half-educated parvenus, might become "eminent spinners," "extensive sausage-makers," and "influential shoe-black dealers," to do this, they lacked the bump of Christianity.

↑ Interesting contrast between necessary and unnecessary slavery.

Question 848 Compare the thought of Greek philosophers about division of labor (quoted

zung des Gedichts, weil es ganz so wie die früheren Zitate über Teilung der Arbeit den Gegensatz der antiken Anschauung zur modernen charakterisiert.

^{156 ctd} „Schonet der mahlenden Hand, o Mülerrinnen, und schlafet
Sanft! es verkünde der Hahn euch den Morgen umsonst!
Däo hat die Arbeit der Mädchen den Nymphen befohlen,
Und itzt hüpfen sie leicht über die Räder dahin,
Daß die erschütterten Achsen mit ihren Speichen sich wälzen,
Und im Kreise die Last drehen des wälzenden Steins.
Laßt uns Leben das Leben der Väter, und laßt uns der Gaben
Arbeitslos uns freuen, welche die Göttin uns schenkt.“

^{156 ctd} „Gedichte aus dem Griechischen übersetzt von Christian Graf zu Stolberg“, Hamburg 1782.)

„Die Heiden, ja die Heiden!“ Sie begriffen, wie der gescheite Bastiat entdeckt hat, und schon vor ihm der noch klügre MacCulloch, nichts von politischer Ökonomie und Christentum. Sie begriffen u.a. nicht, daß die Maschine das probateste Mittel zur Verlängerung des Arbeitstags ist. Sie entschuldigeten etwa die Sklaverei des einen als Mittel zur vollen menschlichen Entwicklung des andren. Aber Sklaverei der Massen predigen, um einige rohe oder halbgebildete Parvenüs zu „eminent spinners“, „extensive sausage makers“ und „influential shoe black dealers“ zu machen, dazu fehlte ihnen das spezifisch christliche Organ.

in the last chapter, “division of labor and manufacture,”) and machinery (quoted in this chapter) with capitalistic practice.

15.3.c. Intensification of Labor

This subsection begins with an interesting nutshell-summary of chapter Ten:

533:1 The immoderate lengthening of the working-day, produced by machinery in the hands of capital, leads to a reaction on the part of society, the very sources of whose life are menaced; and, thence, to a normal working-day whose length is fixed by law.

↓ Only after the length of the working-day was limited did labor turn from an extensive to an intensive magnitude.

Thenceforth a phenomenon that we have already met with, namely, the intensification of labor, develops into great importance. Our analysis of absolute surplus-value had reference primarily to the extension or duration of the labor, its intensity being assumed as given. We now proceed to consider the substitution of a more intensified labor for labor of more extensive duration, and the degree of the former.

431:1 Die maßlose Verlängerung des Arbeitstags, welche die Maschinerie in der Hand des Kapitals produziert, führt, wie wir sahen, später eine Reaktion der in ihrer Lebenswurzel bedrohten Gesellschaft herbei und damit einen gesetzlich beschränkten Normalarbeitstag.

Auf Grundlage des letzteren entwickelt sich ein Phänomen, das uns schon früher begegnete, zu entscheidender Wichtigkeit—nämlich die Intensifikation der Arbeit. Bei der Analyse des absoluten Mehrwerts handelte es sich zunächst um die extensive Größe der Arbeit, während der Grad ihrer Intensität als gegeben vorausgesetzt war. Wir haben jetzt den Umschlag der extensiven Größe in intensive oder Gradgröße zu betrachten.

Question 849 Discuss the dialectics between length and intensity of the working-day.

↓ As machinery progresses technologically, speed and intensity of the labor process increase.

533:2/o It is self-evident, that in proportion as the use of machinery spreads, and the experience of a special class of workmen habituated to machinery accumulates, the rapidity and intensity of labor increase as a natural consequence. Thus in England, during half a century, lengthening of the working-day went hand in hand with increasing intensity of factory labor.

431:2/oo Es ist selbstverständlich, daß mit dem Fortschritt des Maschinenwesens und der gehäuften Erfahrung einer eignen Klasse von Maschinenarbeitern die Geschwindigkeit und damit die Intensität der Arbeit naturwüchsig zunehmen. So geht in England während eines halben Jahrhunderts die Verlängerung des Arbeitstags Hand in Hand mit der wachsenden Intensität der Fabrikarbeit.

↓ However the intensification of labor has its limits.

Nevertheless the reader will clearly see, that where we have labor, not carried on by fits and starts, but repeated day after day with unvarying uniformity, a nodal point must inevitably be reached, where extension of the working-day and intensity of the labor mutually exclude one another, in such a way that lengthening of the working-day becomes compatible only with a lower degree of intensity, and a higher degree of intensity, only with a shortening of the working-day. So soon as the gradually surging revolt of the working-class compelled Parliament to shorten compulsorily the hours of labor, and to begin by imposing a normal working-day on factories proper, so soon consequently as an increased production of surplus-value by the prolongation of the working-day was once for all put a stop to, from that moment capital threw itself with all its might into the production of relative surplus-value, by hastening on the further improvement of machinery.

↓ After the limitation of the working-day, relative surplus-value changes its nature. Now relative surplus-value is generated no longer only by increases in productivity, but also by increases in intensity.

At the same time a change took place in the nature of relative surplus-value. Generally speaking, the mode of producing relative surplus-value consists in raising the productive power of the workman, so as to enable him to produce more in a given time with the same expenditure of labor. Labor-time continues to transmit as before the same value to the total product, but this unchanged amount of exchange-value is spread over more use-value; hence the value of each individual commodity sinks.

↑ This is how relative surplus-value has been generated until now. ↓ But after the limitation of the working-day relative surplus-value is generated in a different way:

Indes begreift man, daß bei einer Arbeit, wo es sich nicht um vorübergehende Paroxysmen handelt, sondern um tagaus, tagein wiederholte, regelmäßige Gleichförmigkeit, ein Knotenpunkt eintreten muß, wo Ausdehnung des Arbeitstags und Intensität der Arbeit einander ausschließen, so daß die Verlängerung des Arbeitstags nur mit schwächerem Intensitätsgrad der Arbeit und umgekehrt ein erhöhter Intensitätsgrad nur mit Verkürzung des Arbeitstags verträglich bleibt. Sobald die allmählich anschwellende Empörung der Arbeiterklasse den Staat zwang, die Arbeitszeit gewaltsam zu verkürzen und zunächst der eigentlichen Fabrik einen Normalarbeitstag zu diktieren, von diesem Augenblick also, wo gesteigerte Produktion von Mehrwert durch Verlängerung des Arbeitstags ein für allemal abgeschnitten war, warf sich das Kapital mit aller Macht und vollem Bewußtsein auf die Produktion von relativem Mehrwert durch beschleunigte Entwicklung des Maschinensystems.

Gleichzeitig tritt eine Änderung in dem Charakter des relativen Mehrwerts ein. Im allgemeinen besteht die Produktionsmethode des relativen Mehrwerts darin, durch gesteigerte Produktivkraft der Arbeit den Arbeiter zu befähigen, mit derselben Arbeitsausgabe in derselben Zeit mehr zu produzieren. Dieselbe Arbeitszeit setzt nach wie vor dem Gesamtprodukt denselben Wert zu, obgleich dieser unveränderte Tauschwert sich jetzt in mehr Gebrauchswerten darstellt und daher der Wert der einzelnen Ware sinkt.

Otherwise, however, so soon as the compulsory shortening of the hours of labor, alongside with the immense impetus it gives to the development of productive power and to economy in the means of production, imposes on the workman increased expenditure of labor in a given time, heightened tension of labor-power, and closer filling up of the pores of the working-day, i.e., condensation of labor to a degree that is attainable only within the limits of the shortened working-day.

↑ Increases in productivity were accompanied by other efficiency measures: better economizing of constant capital and intensification of labor. The intensity of labor reached a degree which would have been unsustainable with the previous longer workday. I.e., the nodal point from 533:2/o was reached where “extension of the working-day and intensity of the labor mutually exclude one another.” ↓ From this point on, the more intense labor is recognized as labor producing more value.

This condensation of a greater mass of labor into a given period thenceforward counts for what it really is, a greater quantity of labor. In addition to a measure of its extension, i.e., duration, labor now acquires a measure of its intensity or of the degree of its condensation or density.¹⁵⁷ The denser hour of the ten hours’ working-day contains more labor, i.e., expended labor-power, than the more porous hour of the twelve hours’ working-day. The product therefore of one of the former hours has as much or more value than has the product of 1 1/5 of the latter hours.

↑ Since every hour of labor produces now more value, the necessary labor is produced in a shorter time, even if the value of labor-power remains constant. ↓ This effect takes place in addition to the other effect, that higher productivity lowers the value of the labor-power.

Apart from the increased yield of relative surplus-value through the heightened productiveness of labor, the same mass of value is now produced for the capitalist say by 3 1/3 hours of surplus-labor, and 6 2/3 hours of necessary labor, as was previously produced by four hours of surplus-labor and

Anders jedoch, sobald die gewaltsame Verkürzung des Arbeitstags mit dem ungeheuren Anstoß, den sie der Entwicklung der Produktivkraft und der Ökonomisierung der Produktionsbedingungen gibt, zugleich vergrößerte Arbeitsausgabe in derselben Zeit, erhöhte Anspannung der Arbeitskraft, dichtere Ausfüllung der Poren der Arbeitszeit, d.h. Kondensation der Arbeit dem Arbeiter zu einem Grad aufzwingt, der nur innerhalb des verkürzten Arbeitstags erreichbar ist.

Diese Zusammenpressung einer größeren Masse Arbeit in eine gegebene Zeitperiode zählt jetzt als was sie ist, als größeres Arbeitsquantum. Neben das Maß der Arbeitszeit als „ausgedehnter Größe“ tritt jetzt das Maß ihres Verdichtungsgrads.¹⁵⁷ Die intensive-re Stunde des zehnstündigen Arbeitstags enthält jetzt so viel oder mehr Arbeit, d.h. verausgabte Arbeitskraft, als die porösere Stunde des zwölfstündigen Arbeitstags. Ihr Produkt hat daher so viel oder mehr Wert als das der poröseren 1 1/5 Stunden.

Abgesehen von der Erhöhung des relativen Mehrwerts durch die gesteigerte Produktivkraft der Arbeit, liefern jetzt z.B. 3 1/3 Stunden Mehrarbeit auf 6 2/3 Stunden notwendiger Arbeit dem Kapitalisten dieselbe Wertmasse wie vorher 4 Stunden Mehrarbeit auf 8 Stunden notwendiger Arbeit.

eight hours of necessary labor.

↑ In this example, the value of labor-power remains constant, but due to intensification of labor, this value is produced in a shorter time.

↓ Footnote 157 discusses the differences in intensity which arise spontaneously, not as a consequence of catching-up after the limitation of the workday? Marx makes two points: (1) these differences are compensated by other minor circumstances. (2) these differences in intensity do not result in more or less value per hour unless intensity gets to high that it requires a shortening of the labor-day.

¹⁵⁷ There are, of course, always differences, in the intensities of the labor in various industries. But these differences are, as Adam Smith has shown, compensated to a partial extent by minor circumstances, peculiar to each sort of labor. Labor-time, as a measure of value, is not, however, affected in this case, except in so far as the duration of labor, and the degree of its intensity, are two antithetical and mutually exclusive expressions for one and the same quantity of labor.

↓ The rule that the worker has to be at the workplace for 10 hours a day is easy to enforce. It is much less easy to force him or her to work at some elevated intensity. How is this done?

534:1 We now come to the question: How is the labor intensified?

535/o The first effect of shortening the working-day results from the self-evident law, that the efficiency of labor-power is in an inverse ratio to the duration of its expenditure. Hence, within certain limits what is lost by shortening the duration is gained by the increasing tension of labor-power. That the workman moreover really does expend more labor-power, is ensured by the mode in which the capitalist pays him.¹⁵⁸ In those industries, such as potteries, where machinery plays little or no part, the introduction of the Factory Acts has strikingly shown that the mere shortening of the working-day increases to a wonderful degree the regularity, uniformity, order, continuity, and energy of the labor.¹⁵⁹ It seemed, however, doubtful whether this effect was produced

¹⁵⁷ Es finden natürlich überhaupt Unterschiede in der Intensität der Arbeiten verschiedener Produktionszweige statt. Diese kompensieren sich, wie schon A. Smith gezeigt hat, zum Teil durch jeder Arbeitsart eigne Nebenumstände. Einwirkung auf die Arbeitszeit als Wertmaß findet aber auch hier nur statt, soweit intensive und extensive Größe sich als entgegengesetzte und einander ausschließende Ausdrücke desselben Arbeitsquantums darstellen.

433:1 Es fragt sich nun, wie wird die Arbeit intensiviert?

433:2–3 Die erste Wirkung des verkürzten Arbeitstags beruht auf dem selbstverständlichen Gesetz, daß die Wirkungsfähigkeit der Arbeitskraft im umgekehrten Verhältnis zu ihrer Wirkungszeit steht. Es wird daher, innerhalb gewisser Grenzen, am Grad der Kraftäußerung gewonnen, was an ihrer Dauer verlorengiht. Daß der Arbeiter aber auch wirklich mehr Arbeitskraft flüssig macht, dafür sorgt das Kapital durch die Methode der Zahlung.¹⁵⁸ In Manufakturen, der Töpferei z.B., wo die Maschinerie keine oder unbedeutende Rolle spielt, hat die Einführung des Fabrikgesetzes schlagend bewiesen, daß bloße Verkürzung des Arbeitstags die Regelmäßigkeit, Gleichförmigkeit, Ordnung, Kontinuität und Energie der Arbeit wundervoll erhöht.¹⁵⁹ Die-

in the factory proper, where the dependence of the workman on the continuous and uniform motion of the machinery had already created the strictest discipline. Hence, when in 1844 the reduction of the working-day to less than twelve hours was being debated, the masters almost unanimously declared

“that their overlookers in the different rooms took good care that the hands lost no time,” that “the extent of vigilance and attention on the part of the workmen was hardly capable of being increased,” and, therefore, that the speed of the machinery and other conditions remaining unaltered, “to expect in a well-managed factory any important result from increased attention of the workmen was an absurdity.”¹⁶⁰

¹⁵⁸ Especially by piece-work, a form we shall investigate in Part VI. of this book.

¹⁵⁹ See “Rep. of Insp. of Fact. for 31st October, 1865.”

¹⁶⁰ Rep. of Insp. of Fact. for 1844 and the quarter ending 30th April, 1845, pp. 20–21.

↑ Would shorter hours bring an increase in intensity in mechanized industry, where the intensity was already very high, controlled by supervision and prescribed by the machinery itself? ↓ To the surprise of the capitalists, yes it did.

This assertion was contradicted by experiments. Mr. Robert Gardner reduced the hours of labor in his two large factories at Preston, on and after the 20th April, 1844, from twelve to eleven hours a day. The result of about a year’s working was that

“the same amount of product for the same cost was received, and the workpeople as a whole earned in eleven hours as much wages as they did before in twelve.”¹⁶¹

I pass over the experiments made in the

se Wirkung schien jedoch zweifelhaft in der eigentlichen Fabrik, weil die Abhängigkeit des Arbeiters von der kontinuierlichen und gleichförmigen Bewegung der Maschine hier längst die strengste Disziplin geschaffen hatte. Als daher 1844 die Herabsetzung des Arbeitstags unter 12 Stunden verhandelt ward, erklärten die Fabrikanten fast einstimmig,

„ihre Aufseher paßten in den verschiedenen Arbeitsräumen auf, daß die Hände keine Zeit verlören“, „der Grad der Wachsamkeit und Aufmerksamkeit auf seiten der Arbeiter (the extent of vigilance and attention on the part of the workmen) sei kaum steigerungsfähig“, und alle andren Umstände, wie Gang der Maschinerie usw. als gleichbleibend vorausgesetzt, „sei es daher Unsinn, in wohlgeführten Fabriken von der gesteigerten Aufmerksamkeit usw. der Arbeiter irgendein erkleckliches Resultat zu erwarten“.¹⁶⁰

¹⁵⁸ Namentlich durch den Stücklohn, eine Form, die im sechsten Abschnitt entwickelt wird.

¹⁵⁹ Siehe „Reports of Insp. of Fact. for 31st Oct. 1865“.

¹⁶⁰ „Reports of Insp. of Fact. for 1844 and the quarter ending 30th April 1845“, p. 20, 21.

433:4–434:3 Diese Behauptung ward durch Experimente widerlegt. Herr R. Gardner ließ in seinen zwei großen Fabriken zu Preston vom 20. April 1844 anstatt 12 nur noch 11 Stunden per Tag arbeiten. Nach ungefähr Jahresfrist ergab sich das Resultat, daß

„dasselbe Quantum Produkt zu denselben Kosten erhalten ward, und sämtliche Arbeiter in 11 Stunden ebensoviel Arbeitslohn verdieneten, wie früher in 12“.¹⁶¹

Ich übergehe hier die Experimente in den

spinning and carding rooms, because they were accompanied by an increase of 2% in the speed of the machines. But in the weaving department, where, moreover, many sorts of figured fancy articles were woven, there was not the slightest alteration in the conditions of the work. The result was:

“From 6th January to 20th April, 1844, with a twelve hours’ day, average weekly wages of each hand 10 s. 1 1/2 d., from 20th April to 29th June, 1844, with day of eleven hours, average weekly wages 10 s. 3 1/2 d.”¹⁶²

¹⁶¹ I.c., p. 19. Since the wages for piece-work were unaltered, the weekly wages depended on the quantity produced.

¹⁶² I.c., p. 20.

↓ Win-win situation for both workers and capitalists:

Here we have more produced in eleven hours than previously in twelve, and entirely in consequence of more steady application and economy of time by the workpeople. While they got the same wages and gained one hour of spare time, the capitalist got the same amount produced and saved the cost of coal, gas, and other such items, for one hour. Similar experiments, and with the like success, were carried out in the mills of Messrs. Horrocks and Jacson.¹⁶³

↓ Why did shorter hours have such a powerful effect intensifying the labor? Workers have a much better attitude.

¹⁶³ The moral element played an important part in the above experiments. The workpeople told the factory inspector: “We work with more spirit, we have the reward ever before us of getting away sooner at night, and one active and cheerful spirit pervades the whole mill, from the youngest piecer to the oldest hand, and we can greatly help each other.” (I.c., p. 21.)

Spinn- und Kardierräumen, weil sie mit Zunahme in der Geschwindigkeit der Maschinerie (um 2%) verbunden waren. In dem Webedepartement dagegen, wo zudem sehr verschiedene Sorten leichter, figurenhaltiger Phantasieartikel gewebt wurden, fand durchaus keine Änderung in den objektiven Produktionsbedingungen statt. Das Resultat war:

„Vom 6. Januar bis 20. April 1844, mit zwölfstündigem Arbeitstag, wöchentlicher Durchschnittslohn jedes Arbeiters 10 sh. 1 1/2 d., vom 20. April bis 29. Juni 1844, mit elfstündigem Arbeitstag, wöchentlicher Durchschnittslohn 10 sh. 3 1/2 d.“¹⁶²

¹⁶¹ I.c. p. 19. Da der Stücklohn derselbe blieb, hing die Höhe des Wochenlohns vom Quantum des Produkts ab.

¹⁶² I.c. p. 20.

434:4 Es wurde hier in 11 Stunden mehr produziert als früher in 12, ausschließlich infolge größerer gleichmäßiger Ausdauer der Arbeiter und Ökonomie ihrer Zeit. Während sie denselben Lohn empfangen und 1 Stunde freie Zeit gewannen, erhielt der Kapitalist dieselbe Produktenmasse und sparte Verausgabung von Kohle, Gas usw. für eine Stunde. Ähnliche Experimente wurden mit gleichem Erfolg in den Fabriken der Herren Horrocks und Jacson ausgeführt.¹⁶³

¹⁶³ I.c. p. 21. Das moralische Element spielte bedeutende Rolle in den oben erwähnten Experimenten. „Wir“, erklärten die Arbeiter dem Fabrikinspektor, „wir arbeiten munterer, wir denken ständig an die Belohnung, abends früher wegzukommen, und ein tatkräftiger und freudiger Geist durchdringt die ganze Fabrik, vom jüngsten Anstücker bis zum ältesten Arbeiter, und wir können einander viel bei der Arbeit helfen.“ (I.c.)

↑ But such enthusiasm can only be temporary. ↓ In order to actualize the increases in intensity made possible by the shortening of the workday, machinery is the main factor forcing the workers to work harder. But also the wage structure is such that it elicits maximum efforts and longest hours from the workers, as will be discussed in the Piece Wage Chapter starting with 695:2/o.

536:1/o The shortening of the hours of labor creates, to begin with, the subjective conditions for the condensation of labor, by enabling the workman to exert more strength in a given time. So soon as that shortening becomes compulsory, machinery becomes in the hands of capital the objective means, systematically employed for squeezing out more labor in a given time. This is effected in two ways: by increasing the speed of the machinery, and by giving the workman more machinery to tent.

↓ Improvement of the machines is both the condition enabling the capitalist to squeeze more labor out of the workers, and at the same time a result of the intensified labor.

Improved construction of the machinery is necessary, partly because without it greater pressure cannot be put on the workman, and partly because the shortened hours of labor force the capitalist to exercise the strictest watch over the cost of production. The improvements in the steam-engine have increased the piston speed, and at the same time have made it possible, by means of a greater economy of power, to drive with the same or even a smaller consumption of coal more machinery with the same engine. The improvements in the transmitting mechanism have lessened friction, and, what so strikingly distinguishes modern from the older machinery, have reduced the diameter and weight of the shafting to a constantly decreasing minimum. Finally, the improvements in the operative machines have, while reducing their size, increased

434:5/o Sobald die Verkürzung des Arbeitstags, welche zunächst die subjektive Bedingung der Kondensation der Arbeit schafft, nämlich die Fähigkeit des Arbeiters, mehr Kraft in gegebener Zeit flüssig zu machen, zwangsgesetzlich wird, wird die Maschine in der Hand des Kapitals zum objektiven und systematisch angewandten Mittel, mehr Arbeit in derselben Zeit zu erpressen. Es geschieht dies in doppelter Weise: durch erhöhte Geschwindigkeit der Maschinen und erweiterten Umfang der von demselben Arbeiter zu überwachenden Maschinerie oder seines Arbeitsfeldes.

Verbesserte Konstruktion der Maschinerie ist teils notwendig zur Ausübung des größten Drucks auf den Arbeiter, teils begleitet sie von selbst die Intensifikation der Arbeit, weil die Schranke des Arbeitstags den Kapitalisten zu strengstem Haushalt der Produktionskosten zwingt. Die Verbesserung der Dampfmaschine erhöht die Anzahl ihrer Kolbensschläge in einer Minute und erlaubt zugleich, durch größere Kraftersparung einen umfangreichen Mechanismus mit demselben Motor zu treiben, bei gleichbleibendem oder selbst fallendem Kohlenverzehr. Die Verbesserung des Transmissionsmechanismus vermindert die Reibung und, was die moderne Maschinerie so augenfällig vor der älteren auszeichnet, reduziert Durchmesser und Gewicht der großen und kleinen Wellenbäume auf ein stets fallendes Minimum. Die Verbesserungen der

their speed and efficiency, as in the modern power-loom; or, while increasing the size of their framework, have also increased the extent and number of their working parts, as in spinning-mules, or have added to the speed of these working parts by imperceptible alterations of detail, such as those which ten years ago increased the speed of the spindles in self-acting mules by one-fifth.

↑ Improvement of machinery made it faster and easier to handle. ↓ All this had amazing effects on productivity:

537:1–538:0 The reduction of the working-day to 12 hours dates in England from 1832. In 1836 a manufacturer stated:

“The labor now undergone in the factories is much greater than it used to be ... compared with thirty or forty years ago ... owing to the greater attention and activity required by the greatly increased speed which is given to the machinery.”¹⁶⁴

¹⁶⁴ John Fielden, l.c., p. 32.

In the year 1844, Lord Ashley, now Lord Shaftesbury, made in the House of Commons the following statements, supported by documentary evidence:

“The labor performed by those engaged in the processes of manufacture, is three times as great as in the beginning of such operations. Machinery has executed, no doubt, the work that would demand the sinews of millions of men; but it has also prodigiously multiplied the labor of those who are governed by its fearful movements ... In 1815, the labor of following a pair of mules spinning cotton of No. 40—reckoning 12 hours to the working-day—involved a necessity of walking 8 miles. In 1832, the distance travelled in following a pair of mules, spinning cotton yarn of the same

Arbeitsmaschinerie endlich vermindern bei erhöhter Geschwindigkeit und ausgedehnterer Wirkung ihren Umfang, wie beim modernen Dampfwebstuhl, oder vergrößern mit dem Rumpf Umfang und Zahl der von ihr geführten Werkzeuge, wie bei der Spinnmaschine, oder vermehren die Beweglichkeit dieser Werkzeuge durch unscheinbare Detailveränderungen, wie derartig bei der selfacting mule in der Mitte der fünfziger Jahre die Geschwindigkeit der Spindeln um 1/5 gesteigert wurde.

435:1–2 Die Verkürzung des Arbeitstags auf 12 Stunden datiert in England von 1832. Schon 1836 erklärte ein englischer Fabrikant:

„Verglichen mit früher ist die Arbeit, die in den Fabriken zu verrichten, sehr gewachsen, infolge der größten Aufmerksamkeit und Tätigkeit, welche die bedeutend vermehrte Geschwindigkeit der Maschinerie vom Arbeiter erheischt.“¹⁶⁴

¹⁶⁴ John Fielden, l.c. p. 32.

435:3–436:0 Im Jahr 1844 machte Lord Ashley, jetzt Graf Shaftesbury, folgende dokumentarisch belegte Aufstellungen im Hause der Gemeinen:

„Die Arbeit der in den Fabrikprozessen Beschäftigten ist jetzt dreimal so groß, als bei der Einführung solcher Operationen. Die Maschinerie hat zweifelsohne ein Werk verrichtet, welches die Sehnen und Muskeln von Millionen Menschen ersetzt, aber sie hat auch erstaunlich (prodigiously) die Arbeit der durch ihre furchtbare Bewegung beherrschten Menschen vermehrt ... Die Arbeit, einem Paar Mules während 12 Stunden auf und ab zu folgen, zum Spinnen von Garn Nr. 40, schloß im Jahre 1815 das Durchlaufen einer Distanz von 8 Meilen ein. Im Jahre 1832 betrug die im Ge-

number, was 20 miles, and frequently more. In 1825 the spinner put up daily, on each of these mules, 820 stretches, making a total of 1,640 stretches in the course of the day. In 1832, the spinner put up on each mule 2,200 stretches, making a total of 4,400. In 1844, 2,400 stretches, making a total of 4,800; and in some cases the amount of labor required is even still greater ... I have another document sent to me in 1842, stating that the labor is progressively increasing—increasing not only because the distance to be travelled is greater, but because the quantity of goods produced is multiplied, while the hands are fewer in proportion than before; and, moreover, because an inferior species of cotton is now often spun, which it is more difficult to work ... In the carding-room there has also been a great increase of labor. One person there does the work formerly divided between two. In the weaving-room, where a vast number of persons are employed, and principally females ... the labor has increased within the last few years fully 10 per cent., owing to the increased speed of the machinery in spinning. In 1838, the number of hanks spun per week was 18,000, in 1843 it amounted to 21,000. In 1819, the number of picks in power-loom-weaving per minute was 60—in 1842 it was 140, showing a vast increase of labor.”¹⁶⁵

¹⁶⁵ Lord Ashley, l.c., pp. 6–9, *passim*.

↓ The 12-hour act resulted in such remarkable increase in intensity, that the capitalists, and even Factory Inspector Horner, thought that the 10-hour day would not be able to bring additional improvements.

In the face of this remarkable intensity of labor which had already been reached in 1844 under the Twelve Hours’ Act, there appeared to be a justification for the assertion

folge eines Mulepaars, zum Spinnen derselben Nummer, während 12 Stunden zu durchreisende Distanz 20 Meilen und oft mehr. Im Jahre 1825 hatte der Spinner während 12 Stunden 820 Auszüge an jeder Mule zu machen, was eine Gesamtsumme von 1640 für 12 Stunden ergab. Im Jahre 1832 hatte der Spinner während seines zwölfstündigen Arbeitstags an jeder Mule 2200 Auszüge zu machen, zusammen 4400, im Jahre 1844 an jeder Mule 2400, zusammen 4800: und in einigen Fällen ist die erheischte Arbeitsmasse (amount of labour) noch größer ... Ich habe hier ein andres Dokument von 1842 in der Hand, worin nachgewiesen wird, daß die Arbeit progressiv zunimmt, nicht nur, weil eine größere Entfernung zu durchreisen ist, sondern weil die Quantität der produzierten Waren sich vermehrt, während die Händezahl proportionell abnimmt; und ferner, weil nun oft schlechtere Baumwolle gesponnen wird, die mehr Arbeit erfordert ... Im Kardierraum hat auch große Zunahme der Arbeit stattgefunden. Eine Person tut jetzt die Arbeit, die früher zwischen zwei verteilt war ... In der Weberei, worin eine große Anzahl Personen, meist weiblichen Geschlechts, beschäftigt ist, ist die Arbeit während der letzten Jahre um volle 10% gewachsen, infolge der vermehrten Geschwindigkeit der Maschinerie. Im Jahre 1838 war die Zahl der hanks, die wöchentlich gesponnen wurde, 18 000, im Jahre 1843 belief sie sich auf 21 000. Im Jahr 1819 war die Zahl der picks beim Dampfwebstuhl 60 per Minute, im Jahre 1842 betrug sie 140, was einen großen Zuwachs von Arbeit anzeigt.“¹⁶⁵

¹⁶⁵ Lord Ashley, l.c. p. 6–9 *passim*.

436:1–2 Angesichts dieser merkwürdigen Intensität, welche die Arbeit unter der Herrschaft des Zwölfstundengesetzes bereits 1844 erreicht hatte, schien damals die

made at that time by the English manufacturers, that any further progress in that direction was impossible, and therefore that every further reduction of the hours of labor meant a lessened production. The apparent correctness of their reasons will be best shown by the following contemporary statement by Leonard Horner, the factory inspector, their ever watchful censor.

“Now, as the quantity produced must, in the main, be regulated by the speed of the machinery, it must be the interest of the mill-owner to drive it at the utmost rate of speed consistent with these following conditions, viz., the preservation of the machinery from too rapid deterioration; the preservation of the quality of the article manufactured; and the capability of the workman to follow the motion without a greater exertion than he can sustain for a constancy. One of the most important problems, therefore, which the owner of a factory has to solve is to find out the maximum speed at which he can run, with a due regard to the above conditions. It frequently happens that he finds he has gone too fast, that breakages and bad work more than counterbalance the increased speed, and that he is obliged to slacken his pace. I therefore concluded, that as an active and intelligent mill-owner would find out the safe maximum, it would not be possible to produce as much in eleven hours as in twelve. I further assumed that the operative paid by piecework, would exert himself to the utmost consistent with the power of continuing at the same rate.”¹⁶⁶

¹⁶⁶ Rep. of Insp. of Fact. for Quarter ending 30th September, 1844, and from 1st October, 1844, to 30th April, 1845, p. 20.

Horner, therefore, came to the conclusion, despite the experiments of Gardner and others, that a reduction of the working-hours below twelve would necessarily diminish production.¹⁶⁷ He himself, ten years later,

Erklärung der englischen Fabrikanten berechtigt, jeder weitere Fortschritt in dieser Richtung sei unmöglich, daher jede weitere Abnahme der Arbeitszeit identisch mit Abnahme der Produktion. Die scheinbare Richtigkeit ihres Räsonnements wird am besten bewiesen durch folgende gleichzeitige Äußerung ihres rastlosen Zensors, des Fabrikinspektors Leonard Horner:

„Da die produzierte Quantität hauptsächlich geregelt wird durch die Geschwindigkeit der Maschinerie, muß es das Interesse des Fabrikanten sein, sie mit dem äußersten Geschwindigkeitsgrad zu treiben, der mit folgenden Bedingungen vereinbar ist: Bewahrung der Maschinerie vor zu raschem Verderb, Erhaltung der Qualität des fabrizierten Artikels, und Fähigkeit des Arbeiters, der Bewegung zu folgen ohne größere Anstrengung, als er kontinuierlich leisten kann. Es ereignet sich oft, daß der Fabrikant in seiner Hast die Bewegung zu sehr beschleunigt. Brüche und schlechtes Machwerk wiegen dann die Geschwindigkeit mehr als auf, und er ist gezwungen, den Gang der Maschinerie zu mäßigen. Da ein aktiver und einsichtsvoller Fabrikant das erreichbare Maximum ausfindet, schloß ich, daß es unmöglich ist, in 11 Stunden so viel zu produzieren als in 12. Ich nahm außerdem an, daß der per Stücklohn bezahlte Arbeiter sich aufs äußerste austrengt, soweit er denselben Arbeitsgrad kontinuierlich aushalten kann.“¹⁶⁶

¹⁶⁶ „Reports of Insp. of Fact. to 30th April 1845“, p. 20.

436:3/o Horner schloß daher, trotz der Experimente von Gardner usw., daß eine weite Herabsetzung des Arbeitstages unter 12 Stunden die Quantität des Produkts vermindern müsse.¹⁶⁷ Er selbst zitiert 10 Jah-

cites his opinion of 1845 in proof of how much he under-estimated in that year the elasticity of machinery, and of man's labor-power, both of which are simultaneously stretched to an extreme by the compulsory shortening of the working-day.

¹⁶⁷ l.c., p. 22.

↓ After introduction of the ten-hour day, it turned out that, despite these pessimistic forecasts, a further intensification was possible:

539:1–540:1 We now come to the period that follows the introduction of the Ten Hours' Act in 1847 into the English cotton, woollen, silk, and flax mills.

„The speed of the spindles has increased upon throstles 500, and upon mules 1,000 revolutions a minute, i.e., the speed of the throstle spindle, which in 1839 was 4,500 times a minute, is now (1862) 5,000; and of the mule spindle, that was 5,000, is now 6,000 times a minute, amounting in the former case to one-tenth, and in the second case to one-fifth additional increase.“¹⁶⁸

¹⁶⁸ „Rep. of Insp. of Fact. for 31st October, 1862“, p. 62.

James Nasmyth, the eminent civil engineer of Patricroft, near Manchester, explained in a letter to Leonard Horner, written in 1852, the nature of the improvements in the steam-engine that had been made between the years 1848 and 1852. After remarking that the horse-power of steam-engines, being always estimated in the official returns according to the power of similar engines in 1828,¹⁶⁹ is only nominal, and can serve only as an index of their real power, he goes on to say:

„I am confident that from the same weight of steam-engine machinery, we are now obtaining at least 50 per cent. more duty or work performed on the average, and that in many cases

re später sein Bedenken von 1845 zum Beweis, wie wenig er damals noch die Elastizität der Maschinerie und der menschlichen Arbeitskraft begriff, die beide gleichmäßig durch die zwangsweise Verkürzung des Arbeitstags aufs höchste gespannt werden.

¹⁶⁷ l.c. p. 22.

437:1–2 Kommen wir nun zur Periode nach 1847, seit Einführung des Zehnstundengesetzes in die englischen Baumwoll-, Woll-, Seiden- und Flachsfabriken.

„Die Geschwindigkeit der Spindeln ist auf Throstles um 500, auf Mules um 1000 Drehungen in einer Minute gewachsen, d.h. die Geschwindigkeit der Throstlespindel, die 1839 4500 Drehungen in einer Minute zählte, beträgt nun“ (1862) „5000, und die der Mulespindel, die 5000 zählte, beträgt jetzt 6000 in der Minute; dies beläuft sich im ersten Fall auf 1/10 und im zweiten auf 1/6 zusätzlicher Geschwindigkeit.“¹⁶⁸

¹⁶⁸ „Reports of Insp. of Fact. for 31st Oct. 1862“, p. 62.

437:3–438:2 Jas. Nasmyth, der berühmte Zivilingenieur von Patricroft, bei Manchester, setzte 1852 in einem Brief an Leonard Horner die von 1848–1852 gemachten Verbesserungen in der Dampfmaschine auseinander. Nachdem er bemerkt, daß die Dampfpferdekraft, in der offiziellen Fabrikstatistik fortwährend geschätzt nach ihrer Wirkung im Jahr 1828,¹⁶⁹ nur noch nominell ist und nur als Index der wirklichen Kraft dienen kann, sagt er u.a.:

„Es unterliegt keinem Zweifel, daß Dampfmaschinerie von demselben Gewicht, oft dieselben identischen Maschinen, an denen nur die modernen Verbeßrungen angebracht sind,

the identical steam-engines which in the days of the restricted speed of 220 feet per minute, yielded 50 horsepower, are now yielding upwards of 100 ...“ „The modern steam-engine of 100 horse-power is capable of being driven at a much greater force than formerly, arising from improvements in its construction, the capacity and construction of the boilers, etc. ...“ „Although the same number of hands are employed in proportion to the horse-power as at former periods, there are fewer hands employed in proportion to the machinery.“¹⁷⁰

„In the year 1850, the factories of the United Kingdom employed 134,217 nominal horse-power to give motion to 25,638,716 spindles and 301,445 looms. The number of spindles and looms in 1856 was respectively 33,503,580 of the former, and 369,205 of the latter, which, reckoning the force of the nominal horse-power required to be the same as in 1850, would require a force equal to 175,000 horses, but the actual power given in the return for 1856 is 161,435, less by above 10,000 horses than, calculating upon the basis of the return of 1850, the factories ought to have required in 1856.“¹⁷¹

„The facts thus brought out by the Return (of 1856) appear to be that the factory system is increasing rapidly; that although the same number of hands are employed in proportion to the horse-power as at former periods, there are fewer hands employed in proportion to the machinery; that the steam-engine is enabled to drive an increased weight of machinery by economy of force and other methods, and that an increased quantity of work can be turned off by improvements in machinery, and in methods of manufacture, by increase of speed of the machinery, and by a variety of other causes.“¹⁷² „The great improvements made in

im Durchschnitt 50% mehr Werk als früher verrichten und daß in vielen Fällen dieselben identischen Dampfmaschinen, die in den Tagen der beschränkten Geschwindigkeit von 220 Fuß per Minute 50 Pferdekraft lieferten, heute, mit vermindertem Kohlenkonsum, über 100 liefern ... Die moderne Dampfmaschine von derselben nominellen Pferdekraft wird mit größerer Gewalt als früher getrieben, infolge der Verbeßrungen in ihrer Konstruktion, vermindertem Umfang und Bau der Dampfkessel usw. ... Obgleich daher dieselbe Händezahl wie früher im Verhältnis zur nominellen Pferdekraft beschäftigt wird, werden weniger Hände verwandt im Verhältnis zur Arbeitsmaschinerie.“¹⁷⁰

Im Jahre 1850 verwandten die Fabriken des Vereinigten Königreichs 134 217 nominelle Pferdekraft zur Bewegung von 25 638 716 Spindeln und 301 445 Webstühlen. Im Jahr 1856 betrug die Zahl der Spindeln und Webstühle respektive 33 503 580 und 369 205. Wäre die erheischte Pferdekraft dieselbe geblieben wie 1850, so waren 1856: 175 000 Pferdekraft nötig. Sie betrug aber nach dem offiziellen Ausweis nur 161 435, also über 10 000 Pferdekraft weniger, als wenn man nach der Basis von 1850 rechnet.¹⁷¹

„Die durch den letzten Return von 1856“ (offizielle Statistik) „festgestellten Tatsachen sind, daß das Fabriksystem reißend rasch um sich greift, die Zahl der Hände im Verhältnis zur Maschinerie abgenommen hat, die Dampfmaschine durch Ökonomie der Kraft und andere Methoden ein größeres Maschinengewicht treibt und ein vermehrtes Quantum Machwerk erzielt wird infolge verbesserter Arbeitsmaschinen, veränderter Methoden der Fabrikation, erhöhter Geschwindigkeit der Maschinerie und vieler anderer Ursachen.“¹⁷² „Die großen in Maschinen jeder Art eingeführten Verbeßrungen haben deren Produktivkraft sehr ge-

machines of every kind have raised their productive power very much. Without any doubt, the shortening of the hours of labor ... gave the impulse to these improvements. The latter, combined with the more intense strain on the workman, have had the effect, that at least as much is produced in the shortened (by two hours or one-sixth) working-day as was previously produced during the longer one.”¹⁷³

¹⁶⁹ This was altered in the “Parliamentary Return” of 1862. In it the actual horse-power of the modern steam engines and water wheels appears in place of the nominal. The doubling spindles, too, are no longer included in the spinning spindles (as was the case in the “Returns” of 1839, 1850, and 1856); further, in the case of woollen mills, the number of “gigs” is added, a distinction made between jute and hemp mills on the one hand and flax mills on the other, and finally stocking-weaving is for the first time inserted in the report.

¹⁷⁰ “Rep. of Insp. of Fact. for 31st October, 1856,” pp. 13–14, 20 and 1852, p. 23.

¹⁷¹ l.c., pp. 14–15.

¹⁷² l.c., p. 20.

¹⁷³ “Reports, etc., for 31st October, 1858,” p. 10. Compare “Reports, etc., for 30th April, 1860,” p. 30, sqq.

↓ This intensification of labor increased profits and therefore the growth rate of the industry:

540:2/o One fact is sufficient to show how greatly the wealth of the manufacturers increased along with the more intense exploitation of labor-power. From 1838 to 1850, the average proportional increase in English cotton and other factories was 32%, while from 1850 to 1856 it amounted to 86%.

541:1 But however great the progress of English industry had been during the 8 years from 1848 to 1856 under the influ-

steigert. Ohne allen Zweifel gab die Verkürzung des Arbeitstags ... den Stachel zu diesen Verbeßrungen. Letztre und die intensivere Anstrengung des Arbeiters bewirkten, daß wenigstens ebensoviel Machwerk in dem“ (um zwei Stunden oder 1/6) „verkürzten Arbeitstag als früher während des längeren geliefert wird.“¹⁷³

¹⁶⁹ Dies hat sich geändert mit dem „Parliamentary Return“ von 1862. Hier tritt die wirkliche Dampfpferdekraft der modernen Dampfmaschinen und Wasserräder an die Stelle der nominalen (s. Note 109a, S. 352). Auch sind die Dublierspindeln nicht mehr zusammengeworfen mit den eigentlichen Spinnspindeln (wie in den „Returns“ von 1839, 1850 und 1856); ferner ist für die Wollfabriken die Zahl der „gigs“ hinzugefügt, Scheidung eingeführt zwischen Jute- und Hanffabriken einerseits, Flachsfabriken andererseits, endlich zum ersten Mal die Strumpfwirkelei in den Bericht aufgenommen.

¹⁷⁰ „Reports of Insp. of Fact. for 31st Oct. 1856“, p. 14, 20.

¹⁷¹ l.c. p. 14, 15.

¹⁷² l.c. p. 20.

¹⁷³ „Reports etc. for 31st Oct. 1858“, p. 10. Vgl. „Reports etc. for 30th April 1860“, p. 30 sqq.

438:3 Wie die Bereicherung der Fabrikanten mit der intensiven Ausbeutung der Arbeitskraft zunahm, beweist schon der Umstand, daß das durchschnittliche Wachstum der englischen Baumwollens- usw. -Fabriken von 1838 bis 1850 pro Jahr 32, von 1850 bis 1856 dagegen 86 jährlich betrug.

438:4/o So groß in den 8 Jahren 1848 bis 1856, unter der Herrschaft des zehnstündigen Arbeitstags, der Fortschritt der eng-

ence of a working-day of 10 hours, it was far surpassed during the next period of 6 years from 1856 to 1862. In silk factories, for instance, there were in 1856, spindles 1,093,799; in 1862, 1,388,544; in 1856, looms 9,260; in 1862, 10,709. But the number of operatives was, in 1856, 56,131; in 1862, 52,429. The increase in the spindles was therefore 26.9% and in the looms 15.6%, while the number of the operatives decreased 7%. In the year 1850 there were employed in worsted mills 875,830 spindles; in 1856, 1,324,549 (increase 51.2%), and in 1862, 1,289,172 (decrease 2.7%). But if we deduct the doubling spindles that figure in the numbers for 1856, but not in those for 1862, it will be found that after 1856 the number of spindles remained nearly stationary. On the other hand, after 1850, the speed of the spindles and looms was in many cases doubled. The number of power-looms in worsted mills was, in 1850, 32,617; in 1856, 38,956; in 1862, 43,048. The number of the operatives was, in 1850, 79,737; in 1856, 87,794; in 1862, 86,063; included in these, however, the children under 14 years of age were, in 1850, 9,956; in 1856, 11,228; in 1862, 13,178. In spite, therefore, of the greatly increased number of looms in 1862, compared with 1856, the total number of the workpeople employed decreased, and that of the children exploited increased.¹⁷⁴

¹⁷⁴ “Reports of Insp. of Fact. for 31st Oct., 1862,” pp. 100 and 130.

↓ Further indirect proof of the intensification are the protests of the workers themselves:
541:2/o On the 27th April, 1863, Mr. Ferrand said in the House of Commons:

“I have been informed by delegates from 16 districts of Lancashire and Cheshire, in whose behalf I speak, that the work in the factories

lischen Industrie, wurde er wieder weit überflügelt in der folgenden sechsjährigen Periode von 1856 bis 1862. In der Seidenfabrik z.B. 1856: Spindeln 1093 799, 1862: 1388 544; 1856: Webstühle 9260 und 1862: 10 709. Dagegen 1856: Arbeiteranzahl 56 137 und 1862: 52 429. Dies ergibt Zunahme der Spindelzahl 26,9% und der Webstühle 15,6% mit gleichzeitiger Abnahme der Arbeiteranzahl um 7%. Im Jahre 1850 wurden in der Worsted-Fabrik angewandt 875 830 Spindeln, 1856: 1324 549 (Zunahme von 51,2%) und 1862: 1289 172 (Abnahme von 2,7%). Zählt man aber die Dublierspindeln ab, die in der Aufzählung für das Jahr 1856, aber nicht für 1862 figurieren, so blieb die Anzahl der Spindeln seit 1856 ziemlich stationär. Dagegen ward seit 1850 in vielen Fällen die Geschwindigkeit der Spindeln und Webstühle verdoppelt. Die Zahl der Dampfwebstühle in der Worsted-Fabrik 1850: 32 617, 1856: 38 956 und 1862: 43 048. Es waren dabei beschäftigt 1850: 79 737 Personen, 1856: 87 794 und 1862: 86 063, aber davon Kinder unter 14 Jahren 1850: 9 956, 1856: 11 228 und 1862: 13 178. Trotz sehr vermehrter Anzahl der Webstühle, 1862 verglichen mit 1856, nahm also die Gesamtzahl der beschäftigten Arbeit ab, die der exploitierten Kinder zu.¹⁷⁴

¹⁷⁴ „Reports of Insp. of Fact. for 31st Oct. 1862“, p. 100, 103, 129, 130.

439:1–2 Am 27. April 1863 erklärte das Parlamentsmitglied Ferrand im Unterhause:

„Arbeiterdelegierte von 16 Distrikten von Lancashire und Cheshire, in deren Auftrag ich spreche, haben mir mitgeteilt, daß die

is, in consequence of the improvements in machinery, constantly on the increase. Instead of as formerly one person with two helps tenting two looms, one person now tents three looms without helps, and it is no uncommon thing for one person to tent four. Twelve hours' work, as is evident from the facts adduced, is now compressed into less than 10 hours. It is therefore self-evident, to what an enormous extent the toil of the factory operative has increased during the last 10 years."¹⁷⁵

¹⁷⁵ On 2 modern power-loom a weaver now makes in a week of 60 hours 26 pieces of certain quality, length, and breadth; while on the old power-loom he could make no more than 4 such pieces. The cost of weaving a piece of such cloth had already soon after 1850 fallen from 2s. 9d. to 5 1/8 d.

(addition to 2nd edition:) "Thirty years ago" (1841) "one spinner with three placers was not required to attend to more than one pair of mules with 300–324 spindles. At the present time (1871) he has to mind with the help of 5 piecers 2,200 spindles, and produces not less than seven times as much yarn as in 1841." (Alex. Redgrave, Factory Inspector, in the *Journal of Arts*, 5th January, 1872.)

↓ These productivity increases came at the cost of an intensification of labor which is injurious to the health of the workers:

542:1 Although, therefore, the Factory Inspectors unceasingly and with justice, commend the results of the Acts of 1844 and 1850, yet they admit that the shortening of the hours of labor has already called forth such an intensification of the labor as is injurious to the health of the workman and to his capacity for work.

"In most of the cotton, worsted, and silk mills, an exhausting state of excitement necessary to enable the workers satisfactorily to mind the machinery, the motion of which has been

Arbeit in den Fabriken infolge der Verbeßerung der Maschinerie beständig wachse. Statt daß früher eine Person mit Gehilfen zwei Webstühle bediente, bedient sie jetzt drei ohne Gehilfen, und es ist gar nichts Ungewöhnliches, daß eine Person ihrer vier bedient usw. Zwölf Stunden Arbeit, wie aus den mitgeteilten Tatsachen hervorgeht, werden jetzt in weniger als 10 Arbeitsstunden gepreßt. Es ist daher selbstverständlich, in welchem ungeheuren Umfang die Mühen der Fabrikarbeiter sich seit den letzten Jahren vermehrt haben."¹⁷⁵

¹⁷⁵ Mit dem modernen Dampfwebstuhl fabriziert ein Weber jetzt in 60 Stunden per Woche auf 2 Stühlen 26 Stück einer gewissen Art von bestimmter Länge und Breite, wovon er auf dem alten Dampfwebstuhl nur 4 fabrizieren konnte. Die Webkosten eines solchen Stücks waren schon Anfang der 1850er Jahre von 2 sh. 9 d. auf 5 1/8 d. gefallen.

Zusatz zur 2. Ausgabe. „Vor 30 Jahren“ (1841) „verlangte man von einem Baumwollgarnspinner mit 3 Gehilfen nur die Überwachung eines Mulepaars mit 300 bis 324 Spindeln. Mit 5 Gehilfen hat er jetzt“ (Ende 1871) „Mules zu überwachen, deren Spindelzahl 2200 beträgt, und produziert mindestens siebenmal mehr Garn als 1841.“ (Alexander Redgrave, Fabrikinspektor, in „*Journal of the Soc. of Arts*“, Jan. 5. 1872.)

439:3–440:1 Obgleich daher die Fabrikinspektoren die günstigen Resultate der Fabrikgesetze von 1844 und 1850 unermüdlich und mit vollem Recht lobpreisen, gestehn sie doch, daß die Verkürzung des Arbeitstags bereits eine die Gesundheit der Arbeiter, also die Arbeitskraft selbst zerstörende Intensität der Arbeit hervorgerufen habe.

„In den meisten Baumwoll-, Worsted- und Seidenfabriken scheint der erschöpfende Zustand von Aufregung, nötig für die Arbeit an der Maschinerie, deren Bewegung in den

greatly accelerated within the last few years, seems to me not unlikely to be one of the causes of that excess of mortality from lung disease, which Dr. Greenhow has pointed out in his recent report on this subject."¹⁷⁶

¹⁷⁶ "Rep. of Insp. of Fact. for 31st Oct., 1861," pp. 25, 26.

↓ The next step must therefore be a renewed reduction of working hours.

There cannot be the slightest doubt that the tendency that urges capital, so soon as a prolongation of the hours of labor is once for all forbidden, to compensate itself, by a systematic heightening of the intensity of labor, and to convert every improvement in machinery into a more perfect means of exhausting the workman, must soon lead to a state of things in which a reduction of the hours of labor will again be inevitable.¹⁷⁷ On the other hand, the rapid advance of English industry between 1848 and the present time, under the influence of a day of 10 hours, surpasses the advance made between 1833 and 1847, when the day was 12 hours long, by far more than the latter surpasses the advance made during the half century after the first introduction of the factory system, when the working-day was without limits.¹⁷⁸

¹⁷⁷ The agitation for a working-day of 8 hours has now (1867) begun in Lancashire among the factory operatives.

¹⁷⁸ The following few figures indicate the increase in the "factories" of the United Kingdom since 1848: See the Blue books "Statistical Abstract of the United Kingdom," Nos. 8 and 13, Lond., 1861 and 1866. In Lancashire the number of mills increased only 4 per cent. between 1839 and 1850; 19 per cent. between 1850 and 1856; and 33 per cent. between 1856 and 1862; while the persons employed in them during each of the above periods of 11 years increased absolutely, but diminished relatively. (See "Rep. of

letzten Jahren so außerordentlich beschleunigt worden ist, eine der Ursachen des Überschusses der Sterblichkeit an Lungenkrankheiten, den Dr. Greenhow in seinem jüngsten bewundernswerten Bericht nachgewiesen hat."¹⁷⁶

¹⁷⁶ „Reports of Insp. of Fact. for 31st Oct. 1861“, p. 25, 26.

↓ The next step must therefore be a renewed reduction of working hours.

440:2 Es unterliegt nicht dem geringsten Zweifel, daß die Tendenz des Kapitals, sobald ihm Verlängerung des Arbeitstags ein für allemal durch das Gesetz abgeschnitten ist, sich durch systematische Steigerung des Intensitätsgrads der Arbeit gütlich zu tun und jede Verbeßerung der Maschinerie in ein Mittel zu größerer Aussaugung der Arbeitskraft zu verkehren, bald wieder zu einem Wendepunkt treiben muß, wo abermalige Abnahme der Arbeitsstunden unvermeidlich wird.¹⁷⁷ Andererseits überflügelt der Sturm marsch der englischen Industrie von 1848 bis zur Gegenwart, d.h. während der Periode des zehnstündigen Arbeitstags, noch weit mehr die Zeit von 1833 bis 1837, d.h. die Periode des zwölfstündigen Arbeitstags, als letztere das halbe Jahrhundert seit Einführung des Fabriksystems, d.h. die Periode des unbeschränkten Arbeitstags.¹⁷⁸

¹⁷⁷ Die Achtstundenagitation hat jetzt (1867) in Lancashire unter den Fabrikarbeitern begonnen.

¹⁷⁸ Folgende wenige Zahlen zeigen den Fortschritt der eigentlichen „Factories“ im U[nited] Kingd[om] seit 1848: (see Table ??) (Sieh die Blaubücher: „Statistical Abstract for the U. Kingd.“, Nr. 8 und Nr. 13, Lond. 1861 und 1866.) In Lancashire vermehrten sich die Fabriken zwischen 1839 und 1850 nur um 4%, zwischen 1850 und 1856 um 19%, zwischen 1856 und 1862 um 33%, während in beiden elfjährigen Perioden die Zahl der beschäftigten Personen absolut zunahm, relativ fiel. Cf. „Reports of Fact. for

Insp. of Fact., for 31st Oct., 1862,” p. 63.) The cotton trade preponderates in Lancashire. We may form an idea of the stupendous nature of the cotton trade in that district when we consider that, of the gross number of textile factories in the United Kingdom, it absorbs 45.2 per cent., of the spindles 83.3 per cent., of the power-loom 81.4 per cent., of the mechanical horse-power 72.6 per cent., and of the total number of persons employed 58.2 per cent. (l.c., pp. 62–63.)

31st Oct. 1862“, p. 63. In Lancashire herrscht die Baumwollfabrik vor. Welchen proportionellen Raum sie aber in der Fabrikation von Garn und Gewebe überhaupt einnimmt, sieht man daraus, daß auf sie allein von allen derartigen Fabriken in England, Wales, Schottland und Irland 45,2% fallen, von allen Spindeln 83,3%, von allen Dampfwebstühlen 81,4%, von aller sie bewegenden Dampfpferdekraft 72,6% und von der Gesamtzahl der beschäftigten Personen 58,2%. (l.c. p. 62, 73.)

Part V.

The Production of Absolute and of Relative Surplus-Value

After discussing separately the two different kinds of surplus-value, absolute and relative, now their unity is discussed.

16. Absolute and Relative Surplus-Value

Chapter Sixteen is a continuation of chapter Seven, about the labor process and the valorization process. Chapter Seven could only give a preliminary definition of valorization. It derived what valorization must be, namely, a labor process extended beyond the point where it has produced an equivalent of the worker's wages. When looking at it in more detail in the intervening chapters, Marx discovered that surplus-value comes in two varieties, absolute and relative. After this, he can give a fuller answer about the origin of surplus-value and the character of the labor producing surplus-value.

Chapter Seven had two parts, one discussing the labor process as a process between humans and nature, and one discussing it as a process forming value and surplus-value. Chapter Sixteen has two main parts as well. The first part continues the discussion of the process from its value side. It traces the evolution of the production process with the development of the specific capitalist mode of production. Triggered by the question about the natural conditions for exploitation the second part gives a brief sketch of the historical evolution of the productivity of labor.

16.1. [The Specifically Capitalist Mode of Production]

16.1.a. [Extension and Narrowing of the Notion of Productive Labor]

The chapter begins with an elaboration of the concept of productive labor first briefly introduced in chapter Seven, 287:2.

643:1 In considering the labor-process, we began (see chapter VII.) by treating it in the abstract, apart from its historical forms, as a process between man and Nature. We there stated, "If we examine the whole labor-process, from the point of view of its result, it is plain that both the instruments and the subject of labor are means of production, and that the labor itself is productive labor." And in Note 2, same page,

531:1 Der Arbeitsprozeß wurde (siehe fünftes Kapitel) zunächst abstrakt betrachtet, unabhängig von seinen geschichtlichen Formen, als Prozeß zwischen Mensch und Natur. Es hieß dort: „Betrachtet man den ganzen Arbeitsprozeß vom Standpunkt seines Resultats, so erscheinen beide, Arbeitsmittel und Arbeitsgegenstand, als Produktionsmittel und die Arbeit selbst als produktive Arbeit.“ Und in Note 7 wurde ergänzt:

we further added: “This method of determining, from the standpoint of the labor-process alone, what is productive labor, is by no means directly applicable to the case of the capitalist process of production.” We now proceed to the further development of this subject.

↑ This is a quote from 287:2. Marx seems to be asking here an epistemological question: how does the concept of productive labor change if we no longer speak of the labor process as a process between humans and nature, but of the capitalist production process? But Marx’s answer will show that he has an ontological question in mind. Since the production process is not guided by the laborer but by the capitalist, who is solely interested in the product (while the laborer also has a stake in the process), society indeed looks at the labor process from the point of view of its product. Somewhere Marx says that the re-structuring of the production process under the command of the capitalist often went *against* the laborer. Marx’s elaboration of the concept of productive labor is therefore, at the same time, a discussion of the changed character of the production process with the advent of capitalism.

[Broadening of the Concept of Productive Labor]

The first thing he says is that the concept of productive labor *broadens*. I.e., in capitalism, certain kinds of activities are productive labor which do not directly manipulate and shape the product. In order to make this point, he first reminds the reader that an individual laborer, producing a product by himself, performs many different functions which later become separated:

643:2/o Whenever the labor-process is purely individual, one and the same laborer unites in himself all the functions, that later on become separated.

↓ Marx begins with an important example of the separation of functions: intellectual and manual labor are separated from each other.

When an individual appropriates natural objects for his livelihood, no one controls him but himself. Afterwards he is controlled by others. A single man cannot operate upon Nature without calling his own muscles into play under the control of his own brain. As in the natural body head and hand wait upon each other, so the labor-process unites the labor of the hand with that of the head. Later on they part company and even become deadly foes.

„Diese Bestimmung produktiver Arbeit, wie sie sich vom Standpunkt des einfachen Arbeitsprozesses ergibt, reicht keineswegs hin für den kapitalistischen Produktionsprozeß.“ Dies ist hier weiter zu entwickeln.

531:2/o Soweit der Arbeitsprozeß ein rein individueller, vereinigt derselbe Arbeiter alle Funktionen, die sich später trennen.

In der individuellen Aneignung von Naturgegenständen zu seinen Lebenszwecken kontrolliert er sich selbst. Später wird er kontrolliert. Der einzelne Mensch kann nicht auf die Natur wirken ohne Betätigung seiner eignen Muskeln unter Kontrolle seines eignen Hirns. Wie im Natursystem Kopf und Hand zusammengehören, vereint der Arbeitsprozeß Kopfarbeit und Handarbeit. Später scheiden sie sich bis zum feindlichen Gegensatz.

This separation is only one example of the disintegration of the labor process into many partial processes co-operating with each other:

The product ceases to be the direct product of the individual, and becomes a social product, produced in common by a collective laborer, i.e., by a combination of workmen, each of whom takes only a part, greater or less, in the manipulation of the object of their labor.

Das Produkt verwandelt sich überhaupt aus dem unmittelbaren Produkt des individuellen Produzenten in ein gesellschaftliches, in das gemeinsame Produkt eines Gesamtarbeiters, d.h. eines kombinierten Arbeitspersonals, dessen Glieder der Handhabung des Arbeitsgegenstandes näher oder ferner stehn.

Along with this transition of the labor process into a collective process, the concept of productive labor widens:

As the co-operative character of the labor-process becomes more and more marked, so, as a necessary consequence, does our notion of productive labor and of its agent the productive laborer, become extended. In order to labor productively, it is no longer necessary for you to do manual work yourself; it suffices to be an organ of the collective laborer and somehow perform one of its subordinate functions.

Mit dem kooperativen Charakter des Arbeitsprozesses selbst erweitert sich daher notwendig der Begriff der produktiven Arbeit und ihres Trägers, des produktiven Arbeiters. Um produktiv zu arbeiten, ist es nun nicht mehr nötig, selbst Hand anzulegen; es genügt, Organ des Gesamtarbeiters zu sein, irgendeine seiner Unterfunktionen zu vollziehen.

This broader definition of productive labor does not invalidate the earlier definition but extends it:

The first definition given above of productive labor, a definition deduced from the very nature of the production of material objects, still remains correct for the collective laborer, considered as a whole. But it no longer holds good for each member taken individually.

Die obige ursprüngliche Bestimmung der produktiven Arbeit, aus der Natur der materiellen Produktion selbst abgeleitet, bleibt immer wahr für den Gesamtarbeiter, als Gesamtheit betrachtet. Aber sie gilt nicht mehr für jedes seiner Glieder, einzeln genommen.

Question 850 *How does the development of co-operative labor-processes extend the concept of productive labor? Give examples.*

[Narrowing of the Concept of Productive Labor]

↓ The notion of productive labor is also *narrowed*. Capitalism is more than the co-operative production of commodities, it is production of surplus-value:

644:1 On the other hand, however, our notion of productive labor becomes narrowed. Capitalist production is not merely

532:1 Andererseits aber verengt sich der Begriff der produktiven Arbeit. Die kapitalistische Produktion ist nicht nur Produktion

the production of commodities, it is essentially the production of surplus-value. The laborer produces, not for himself, but for capital. It no longer suffices, therefore, that he should simply produce. He must produce surplus-value. That laborer alone is productive, who produces surplus-value for the capitalist, and thus works for the self-expansion of capital.

↑ This is the definition of a productive laborer in capitalism. ↓ Now a quick example: If we may take an example from outside the sphere of production of material objects, a schoolmaster is a productive laborer when, in addition to belaboring the heads of his scholars, he works like a horse to enrich the school proprietor. That the latter has laid out his capital in a teaching factory, instead of a sausage factory, does not alter the relation.

von Ware, sie ist wesentlich Produktion von Mehrwert. Der Arbeiter produziert nicht für sich, sondern für das Kapital. Es genügt daher nicht länger, daß er überhaupt produziert. Er muß Mehrwert produzieren. Nur der Arbeiter ist produktiv, der Mehrwert für den Kapitalisten produziert oder zur Selbstverwertung des Kapitals dient.

Steht es frei, ein Beispiel außerhalb der Sphäre der materiellen Produktion zu wählen, so ist ein Schulmeister produktiver Arbeiter, wenn er nicht nur Kinderköpfe bearbeitet, sondern sich selbst abarbeitet zur Bereicherung des Unternehmers. Daß letzterer sein Kapital in einer Lehrfabrik angelegt hat, statt in einer Wurstfabrik, ändert nichts an dem Verhältnis.

Question 851 *How, on the other hand, is the concept of productive labor narrowed under capitalism? Give examples of labors that are necessary for the capitalist class or for society as a whole, and are nevertheless “unproductive” for capital.*

↓ The above definition implies that the question whether someone is a productive laborer is decided outside the production process, in the larger social context:

Hence the notion of a productive laborer implies not merely a relation between work and useful effect, between laborer and product of labor, but also a specific, social relation of production, a relation that has sprung up historically and stamps the laborer as the direct means of creating surplus-value.

Der Begriff des produktiven Arbeiters schließt daher keineswegs bloß ein Verhältnis zwischen Tätigkeit und Nutzeffekt, zwischen Arbeiter und Arbeitsprodukt ein, sondern auch ein spezifisch gesellschaftliches, geschichtlich entstandenes Produktionsverhältnis, welches den Arbeiter zum unmittelbaren Verwertungsmittel des Kapitals stemmelt.

This has serious implications for the laborer himself or herself. Marx underlines this with a memorable phrase which summarizes the development that follows:

To be a productive laborer is, therefore, not a piece of luck, but a misfortune.

Produktiver Arbeiter zu sein ist daher kein Glück, sondern ein Pech.

Question 852 *Why is it a misfortune to be a productive laborer under capitalism?*

↓ Before diving into the development fleshing out this phrase, Marx brings a few references to the literature which show that the economists agree with his definition of productive labor in capitalism: they consider that labor productive which creates surplus-value.

In Book IV. which treats of the history of the theory, it will be more clearly seen, that the production of surplus-value has at all times been made, by classical political economists, the distinguishing characteristic of the productive laborer. Hence their definition of a productive laborer changes with their comprehension of the nature of surplus-value. Thus the Physiocrats insist that only agricultural labor is productive, since that alone, they say, yields a surplus-value. And they say so because, with them, surplus-value has no existence except in the form of rent.

Im Vierten Buch dieser Schrift, welches die Geschichte der Theorie behandelt, wird man näher sehn, daß die klassische politische Ökonomie von jeher die Produktion von Mehrwert zum entscheidenden Charakter des produktiven Arbeiters machte. Mit ihrer Auffassung von der Natur des Mehrwerts wechselt daher ihre Definition des produktiven Arbeiters. So erklären die Physiokraten, nur die Ackerbauarbeit sei produktiv, weil sie allein einen Mehrwert liefere. Für die Physiokraten existiert Mehrwert aber ausschließlich in der Form der Grundrente.

Question 853 *How can labor be unproductive?*

16.1.b. [The Dialectic of Absolute and Relative Surplus-Value]

Since productive labor under capitalism is defined as labor producing surplus-value, Marx looks now at the two specific ways to produce surplus-value, namely, absolute and relative surplus-value:

645:1 The prolongation of the working-day beyond the point at which the laborer would have produced just an equivalent for the value of his labor-power, and the appropriation of that surplus-labor by capital, this is production of absolute surplus-value. It constitutes the general base of the capitalist system, and the starting-point for the production of relative surplus-value.

532:2/o Die Verlängerung des Arbeitstags über den Punkt hinaus, wo der Arbeiter nur ein Äquivalent für den Wert seiner Arbeitskraft produziert hätte, und die Aneignung dieser Mehrarbeit durch das Kapital—das ist die Produktion des absoluten Mehrwerts. Sie bildet die allgemeine Grundlage des kapitalistischen Systems und den Ausgangspunkt der Produktion des relativen Mehrwerts.

Relative surplus-value can only develop on the basis of absolute surplus-value, ↓ but unlike absolute surplus-value, it revolutionizes the technology:

The latter pre-supposes that the working-day is already divided into two parts, necessary labor, and surplus-labor. In order to prolong the surplus-labor, the necessary la-

Bei dieser ist der Arbeitstag von vornherein in zwei Stücke geteilt: notwendige Arbeit und Mehrarbeit. Um die Mehrarbeit zu verlängern, wird die notwendige Ar-

bor is shortened by methods whereby the equivalent for the wages is produced in less time. The production of absolute surplus-value turns exclusively upon the length of the working-day; the production of relative surplus-value, by contrast, revolutionizes out and out the technical processes of labor, and the composition of society.

↑ The production of relative surplus-value engenders an entirely new mode of production. ↓ Marx calls it the “specifically capitalist mode of production” or “real subsumption of labor under capital,” and in contrast to this, capitalism prior to the production of relative surplus-value is called “formal subsumption of labor under capital.”

645:2 It therefore pre-supposes a specific mode, the capitalist mode of production, a mode which, along with its methods, means, and conditions, arises and develops itself spontaneously on the foundation afforded by the formal subsumption of labor under capital. In the course of this development, the formal subsumption is replaced by the real subsumption of labor under capital.

↓ Besides formal and real subsumption, there are also situations in which the labor process is not (yet) subsumed under capital at all:

645:3 It will suffice merely to refer to certain intermediate forms, in which surplus-labor is not extorted by direct compulsion from the producer, nor the producer himself yet formally subjected to capital. In such forms, capital has not yet acquired the direct control of the labor-process. By the side of independent producers who carry on their handicrafts and agriculture in the traditional old-fashioned way, there stands the usurer or the merchant, with his usurer’s capital or merchant’s capital, feeding on them like a parasite. The predominance, in a society, of this form of exploitation excludes the capitalist mode of production; to which mode, however, this form may serve as a transition, as it did towards the close of the Middle

beit verkürzt durch Methoden, vermittelt deren das Äquivalent des Arbeitslohns in weniger Zeit produziert wird. Die Produktion des absoluten Mehrwerts dreht sich nur um die Länge des Arbeitstags; die Produktion des relativen Mehrwerts revolutioniert durch und durch die technischen Prozesse der Arbeit und die gesellschaftlichen Gruppierungen.

533:1 Sie unterstellt also eine spezifisch kapitalistische Produktionsweise, die mit ihren Methoden, Mitteln und Bedingungen selbst erst auf Grundlage der formellen Subsumtion der Arbeit unter das Kapital naturwüchsig entsteht und ausgebildet wird. An die Stelle der formellen tritt die reelle Subsumtion der Arbeit unter das Kapital.

533:2 Es genügt bloßer Hinweis auf Zwitterformen, worin die Mehrarbeit weder durch direkten Zwang dem Produzenten ausgepumpt wird, noch auch dessen formelle Unterordnung unter das Kapital eingetreten ist. Das Kapital hat sich hier noch nicht unmittelbar des Arbeitsprozesses bemächtigt. Neben die selbständigen Produzenten, die in überlieferter, urväterlicher Betriebsweise handwerkern oder ackerbauen, tritt der Wucherer oder Kaufmann, das Wucherkapital oder das Handelskapital, das sie parasitenmäßig aussaugt. Vorherrschaft dieser Exploitationsform in einer Gesellschaft schließt die kapitalistische Produktionsweise aus, zu der sie andererseits, wie im spätern Mittelalter, den Übergang bilden kann. End-

Agas. Finally, as is shown by modern “domestic industry,” some intermediate forms are here and there reproduced in the background of Modern Industry, though their physiognomy is totally changed.

↑ The “domestic industry” modern at Marx’s time was the putting-out system. It is a kind of wage-labor, i.e., the underlying social form is not the same as the parasitic exploitation of medieval domestic labor by usury capital. Therefore also the “physiognomy” of the domestic labor process is quite different. This concludes Marx’s brief discussion of formal and real subsumption.

↓ Despite the importance of relative surplus-value for the revolutionizing of the mode of production, relative surplus-value is not the dominant pole in the dialectic between absolute and relative surplus-value.

645:4/o If, on the one hand, the mere formal subsumption of labor under capital suffices for the production of absolute surplus-value, if, e.g., it is sufficient that handicraftsman who previously worked on their own account, or as apprentices of a master, should become wage laborers under the direct control of a capitalist; so, on the other hand, we have seen, how the methods of producing relative surplus-value, are, at the same time, methods of producing absolute surplus-value. Nay, more, the excessive prolongation of the working-day turned out to be the peculiar product of Modern Industry. Generally speaking, the specifically capitalist mode of production ceases to be a mere means of producing relative surplus-value, so soon as that mode has conquered an entire branch of production; and still more so, so soon as it has conquered all the important branches. It then becomes the general, socially predominant form of production. As a special method of producing relative surplus-value, it remains effective only, first, in so far as it seizes upon industries that previously were only formally subject to capital, that is, so far as it propagates; secondly, in so far as the industries that have

lich, wie das Beispiel der modernen Hausarbeit zeigt, werden gewisse Zwitterformen auf dem Hintergrund der großen Industrie stellenweis reproduziert, wenn auch mit gänzlich veränderter Physiognomie.

533:3 Wenn zur Produktion des absoluten Mehrwerts die bloß formelle Subsumtion der Arbeit unter das Kapital genügt, z.B. daß Handwerker, die früher für sich selbst oder auch als Gesellen eines Zunftmeisters arbeiteten, nun als Lohnarbeiter unter die direkte Kontrolle des Kapitalisten treten, zeigt sich andererseits, wie die Methoden zur Produktion des relativen Mehrwerts zugleich Methoden zur Produktion des absoluten Mehrwerts sind. Ja, die maßlose Verlängerung des Arbeitstags stellte sich als eigenstes Produkt der großen Industrie dar. Überhaupt hört die spezifisch kapitalistische Produktionsweise auf, bloßes Mittel zur Produktion des relativen Mehrwerts zu sein, sobald sie sich eines ganzen Produktionszweigs, und noch mehr, sobald sie sich aller entscheidenden Produktionszweige bemächtigt hat. Sie wird jetzt allgemeine, gesellschaftlich herrschende Form des Produktionsprozesses. Als besondere Methode zur Produktion des relativen Mehrwerts wirkt sie nur noch, erstens soweit sie dem Kapital bisher nur formell untergeordnete Industrien ergreift, also in ihrer Propaganda. Zweitens, soweit ihr bereits anheimgefallne Industrien fortwährend revolutioniert werden durch

been taken over by it, continue to be revolutionized by changes in the methods of production.

⇓ The unity between absolute and relative surplus-value:

646:1 From one standpoint, any distinction between absolute and relative surplus-value appears illusory. Relative surplus-value is absolute, since it compels the absolute prolongation of the working-day beyond the labor-time necessary to the existence of the laborer himself. Absolute surplus-value is relative, since it makes necessary such a development of the productivity of labor, as will allow of the necessary labor-time being confined to a portion of the working-day.

⇓ But their difference comes forward if surplus-value changes:

But if we investigate the movement of surplus-value, this appearance of identity vanishes. Once the capitalist mode of production is established and become general, the difference between absolute and relative surplus-value makes itself felt, whenever there is a question of raising the rate of surplus-value. Assuming that labor-power is paid for at its value, we are confronted by this alternative: given the productivity of labor and its normal intensity, the rate of surplus-value can be raised only by the actual prolongation of the working-day; on the other hand, given the length of the working-day, that rise can be effected only by a change in the relative magnitudes of the components of the working-day, viz., necessary labor and surplus-labor; a change which, if the wages are not to fall below the value of labor-power, presupposes a change either in the productivity or in the intensity of the labor.

↑ This is a nutshell summary of Marx's argument in chapter Twelve.

Wechsel der Produktionsmethoden.

533:4/o Von gewissem Gesichtspunkt scheint der Unterschied zwischen absolutem und relativem Mehrwert überhaupt illusorisch. Der relative Mehrwert ist absolut, denn er bedingt absolute Verlängerung des Arbeitstags über die zur Existenz des Arbeiters selbst notwendige Arbeitszeit. Der absolute Mehrwert ist relativ, denn er bedingt eine Entwicklung der Arbeitsproduktivität, welche erlaubt, die notwendige Arbeitszeit auf einen Teil des Arbeitstags zu beschränken.

Faßt man aber die Bewegung des Mehrwerts ins Auge, so verschwindet dieser Schein der Einerleiheit. Sobald die kapitalistische Produktionsweise einmal hergestellt und allgemeine Produktionsweise geworden, macht sich der Unterschied zwischen absolutem und relativem Mehrwert fühlbar, sobald es gilt, die Rate des Mehrwerts überhaupt zu steigern. Vorausgesetzt, die Arbeitskraft werde zu ihrem Wert bezahlt, stehn wir dann vor dieser Alternative: Die Produktivkraft der Arbeit und ihren Normalgrad von Intensität gegeben, ist die Rate des Mehrwerts nur erhöhbar durch absolute Verlängerung des Arbeitstags; andererseits, bei gegebener Grenze des Arbeitstags, ist die Rate des Mehrwerts nur erhöhbar durch relativen Größenwechsel seiner Bestandteile, der notwendigen Arbeit und der Mehrarbeit, was seinerseits, soll der Lohn nicht unter den Wert der Arbeitskraft sinken, Wechsel in der Produktivität oder Intensität der Arbeit voraussetzt.

Question 854 *Someone argues: The absolute surplus-value is relative because productivity must be so high that the worker must work only a part of the day for his own subsistence. The relative surplus-value is absolute because even relative surplus-value requires prolongation of the working-day over the necessary labor. Right or wrong?*

Question 855 *In what respects do absolute and relative surplus-value depend on each other, cause each other, and blend together? In which cases can they be clearly distinguished?*

16.2. [Natural basis of surplus-value and capitalism]

16.2.a. [Link between Exploitation and the Productivity of Labor]

⇓ There is a natural basis of exploitation. Exploitation possible only after productiveness of labor has risen enough that not every laborer was busy all day to produce for himself.

646:2/o If the laborer requires all his time to produce the necessary means of subsistence for maintaining himself and his race, he has no time left in which to work gratis for others. Without a certain degree of productiveness in his labor, he has no such superfluous time at his disposal; without such superfluous time, no surplus-labor, and therefore no capitalists, no slave-owners, no feudal lords, in one word, no class of large proprietors.¹

¹ "The very existence of the master-capitalists, as a distinct class, is dependent on the productiveness of industry." (Ramsay, l.c., p. 206.) "If each man's labor were but enough to produce his own food, there could be no property." (Ravenstone, l.c. p. 14, 15.)

⇓ But this natural basis only explains the possibility, not the reality of exploitation (as Marx will say in 0).

647:1 Thus we may say that surplus-value rests on a natural basis—but only in the very general sense that there is no natural obstacle absolutely preventing one man from disburdening himself of the labor requisite for his own existence, and burdening another

534:1 Braucht der Arbeiter alle seine Zeit, um die zur Erhaltung seiner selbst und seiner Race nötigen Lebensmittel zu produzieren, so bleibt ihm keine Zeit, um unentgeltlich für dritte Personen zu arbeiten. Ohne einen gewissen Produktivitätsgrad der Arbeit keine solche disponible Zeit für den Arbeiter, ohne solche überschüssige Zeit keine Mehrarbeit und daher keine Kapitalisten, aber auch keine Sklavenhalter, keine Feudalbarone, in einem Wort keine Großbesitzerklasse.¹

¹ „Das bloße Vorhandensein der zu Kapitalisten gewordenen Meister als besondere Klasse hängt ab von der Produktivität der Arbeit.“ (Ramsay, l.c. p. 206.) „Wenn die Arbeit jedes Mannes nur genügen würde, seine eigne Nahrung zu produzieren, könnte es kein Eigentum geben.“ (Ravenstone, l.c. p. 14.)

534:2/o So kann von einer Naturbasis des Mehrwerts gesprochen werden, aber nur in dem ganz allgemeinen Sinn, daß kein absolutes Naturhindernis den einen abhält, die zu seiner eignen Existenz nötige Arbeit von sich selbst ab- und einem

with it. Neither is there, for instance, an unconquerable natural obstacle preventing one man from eating the flesh of another.^{1a}

↑ Someone who says exploitation is natural because labor produces more than is necessary for the subsistence of the laborer would also have to say that cannibalism is natural because human flesh is as edible as pork or beef. ↓ And according to the footnote, the number of cannibals alive during Marx's time was surprisingly high.

^{1a} According to a recent calculation, there are yet at least 4,000,000 cannibals in those parts of the earth which have already been explored.

ändern aufzuwälzen, z.B. ebenso wenig wie absolute Naturhindernisse die einen abhalten, das Fleisch der andern als Nahrung zu verwenden.^{1a}

^{1a} Nach einer kürzlich gemachten Berechnung leben allein in den bereits erforschten Erdgegenden mindestens noch vier Millionen Kannibalen.

Question 856 In 647:1, Marx argues in effect that exploitation is as natural as cannibalism. Explain how he arrives at this seemingly far-fetched conclusion. Do you agree that exploitation is as natural as cannibalism?

No mystical imaginations must in any way be connected, as sometimes happens, with this historically developed productiveness of labor.

↑ An imagination is an a-theoretical picture thinking, and the attribute "mystical" shows Marx's disdain for the conclusion, perhaps instigated by the direct experience in capitalism that all labor is exploited, that labor produces surplus-value somehow by nature. In 650:1/o, Marx says human labor has no such "occult quality." ↓ In order to get away from this mysticism, Marx adds a historical dimension to the theoretical finding that surplus-labor has a natural basis:

It is only after men have raised themselves above the rank of animals, when therefore their labor has been to some extent socialized, that a state of things arises in which the surplus-labor of the one becomes a condition of existence for the other.

↑ Since exploitation, the transfer of the burden of labor from one to the other, is as social process, it is only possible if the labor process itself has been socialized. ↓ Now a brief sketch about how productivity of labor and exploitation co-evolved historically:

At the dawn of civilisation the productiveness acquired by labor is small, but so too are the wants which develop with and by the means of satisfying them. Further, at that early period, the portion of society that lives on the labor of others is infinitely small compared with the mass of direct producers.

Es sind durchaus nicht, wie es hier und da geschehn, mystische Vorstellungen mit dieser naturwüchsigen Produktivität der Arbeit zu verbinden.

Nur sobald die Menschen sich aus ihren ersten Tierzuständen herausgearbeitet, ihre Arbeit selbst also schon in gewissem Grad vergesellschaftet ist, treten Verhältnisse ein, worin die Mehrarbeit des einen zur Existenzbedingung des andern wird.

In den Kulturanfängen sind die erworbenen Produktivkräfte der Arbeit gering, aber so sind die Bedürfnisse, die sich mit und an den Mitteln ihrer Befriedigung entwickeln. Ferner ist in jenen Anfängen die Proportion der Gesellschaftsteile, die von fremder Arbeit leben, verschwindend klein gegen die

Along with the progress in the productiveness of labor, that small portion of society increases both absolutely and relatively.²

² "Among the wild Indians in America, almost everything is the laborer's, 99 parts of a hundred are to be put upon the account of labor. In England, perhaps, the laborer has not 2/3." (The Advantages of the East India Trade, etc., p. 73.)

↓ Next, Marx surprises the reader with an abrupt jump from the earliest forms of exploitation to capitalism:

By the way, capital with its accompanying relations springs up from an economic soil that is the product of a long process of development. The productiveness of labor that serves as its foundation and starting-point, is a gift, not of nature, but of a history embracing thousands of centuries.

↑ This was only a side remark. We are still at the beginning of Marx's account of the historical development of productivity and, with it, exploitation. After saying that low productivity means that only a small portion of the population can live off the labor of others, Marx looks now for the conditions for high labor productivity. In early times, abundance of means of subsistence, and at a higher stage, abundance of means of production was decisive.

647:2/o Apart from the degree of development, greater or less, in the form of social production, the productiveness of labor is fettered by physical conditions. These are all referable to the constitution of man himself (race, etc.), and to surrounding nature.

↑ Marx thinks that there are natural differences between the races. This dovetails with his formulation in 151:5/o that equality a "commonly held prejudice" (*Volksvorurteil*). ↓ But he does not elaborate. He concentrates on the external physical conditions for productivity.

The external physical conditions fall into two great economic classes, (1) Natural wealth in means of subsistence, i.e., a fruitful soil, waters teeming with fish, etc., and (2), natural wealth in the instruments of labor, such as waterfalls, navigable rivers,

Masse der unmittelbaren Produzenten. Mit dem Fortschritt der gesellschaftlichen Produktivkraft der Arbeit wächst diese Proportion absolut und relativ.²

² „Bei den wilden Indianern in Amerika gehört fast alles dem Arbeiter. 99 Teile von hundert sind dem Konto Arbeit zuzuschreiben. In England hat der Arbeiter vielleicht nicht einmal 2/3.“ („The Advantages of the East India etc.“, p. 72, 73.)

Das Kapitalverhältnis entspringt übrigens auf einem ökonomischen Boden, der das Produkt eines langen Entwicklungsprozesses ist. Die vorhandne Produktivität der Arbeit, wovon es als Grundlage ausgeht, ist nicht Gabe der Natur, sondern einer Geschichte, die Tausende von Jahrhunderten umfaßt.

535:1 Von der mehr oder minder entwickelten Gestalt der gesellschaftlichen Produktion abgesehen, bleibt die Produktivität der Arbeit an Naturbedingungen gebunden. Sie sind alle rückführbar auf die Natur des Menschen selbst, wie Race usw., und die ihn umgebende Natur.

Die äußeren Naturbedingungen zerfallen ökonomisch in zwei große Klassen, natürlichen Reichtum an Lebensmitteln, also Bodenfruchtbarkeit, fischreiche Gewässer usw., und natürlichen Reichtum an Arbeitsmitteln, wie lebendige Wassergefälle, schiffba-

wood, metal, coal, etc. At the dawn of civilisation, it is the first class that turns the scale; at a higher stage of development, it is the second. Compare, for example, England with India, or in ancient times, Athens and Corinth with the shores of the Black Sea.

↑ Apparently, Marx classifies India and the shores of the Black Sea as abundant in means of subsistence, and England and Athens/Corinth abundant in means of production. ↓ Abundance of means of subsistence, combined with few wants, makes necessary labor short, which enables big public works (pyramids). But it does not promote increases in productivity as much as the abundance and variety in means of production does.

648:1 The fewer the number of natural wants imperatively calling for satisfaction, and the greater the natural fertility of the soil and the favourableness of the climate, so much less is the labor-time necessary for the maintenance and reproduction of the producer. So much greater therefore can be the excess of his labors for others over his labor for himself. Diodorus long ago remarked this in relation to the ancient Egyptians.

„It is altogether incredible how little trouble and expense the bringing up of their children causes them. They cook for them the first simple food at hand; they also give them the lower part of the papyrus stem to eat, so far as it can be roasted in the fire, and the roots and stalks of marsh plants, some raw, some boiled and roasted. Most of the children go without shoes and unclothed, for the air is so mild. Hence a child, until he is grown up, costs his parents not more, on the whole, than twenty drachmas. It is this, chiefly, which explains why the population of Egypt is so numerous, and, therefore, why so many great works can be undertaken.“³

³ Diodorus, l.c., I. I., c. 80.

↓ Marx disagrees with Diodorus's last sentence which proclaims the population to be a natural basis of exploitation. It is not the absolute size of the population but the proportion of it which was disposable.

re Flüsse, Holz, Metalle, Kohle usw. In den Kulturanfängen gibt die erstere, auf höherer Entwicklungsstufe die zweite Art des natürlichen Reichtums den Ausschlag. Man vergleiche z.B. England mit Indien oder, in der antiken Welt, Athen und Korinth mit den Uferländern des Schwarzen Meeres.

535:2–536:0 Je geringer die Zahl der absolut zu befriedigenden Naturbedürfnisse und je größer die natürliche Bodenfruchtbarkeit und Gunst des Klimas, desto geringer die zur Erhaltung und Reproduktion des Produzenten notwendige Arbeitszeit. Desto größer kann also der Überschuss seiner Arbeit für andere über seine Arbeit für sich selbst sein. So bemerkt schon Diodor über die alten Ägypter:

„Es ist ganz unglaublich, wie wenig Mühe und Kosten die Erziehung ihrer Kinder ihnen verursacht. Sie kochen ihnen die nächste beste einfache Speise; auch geben sie ihnen von der Papierstaude den untern Teil zu essen, soweit man ihn im Feuer rösten kann, und die Wurzeln und Stengel der Sumpfwächse, teils roh, teils gesotten und gebraten. Die meisten Kinder gehn ohne Schuhe und unbekleidet, da die Luft so mild ist. Daher kostet ein Kind seinen Eltern, bis es erwachsen ist, im ganzen nicht über zwanzig Drachmen. Hierhaus ist es hauptsächlich zu erklären, daß in Ägypten die Bevölkerung so zahlreich ist und darum so viele große Werke angelegt werden konnten.“³

³ Diodor, l.c., I. I., c. 80.

Nevertheless the grand structures of ancient Egypt are less due to the extent of its population than to the large proportion of it that was freely disposable. Just as the individual laborer can do more surplus-labor in proportion as his necessary labor-time is less, so with regard to the working population. The smaller the part of it which is required for the production of the necessary means of subsistence, so much the greater is the part that can be set to do other work.

↑ Another absolute/relative distinction.

↓ Again a side remark about capitalism illustrating the general principles discussed here: capitalism did not originate in the lush tropics but in the temperate zones:

648:2/oo Capitalist production once assumed, then, all other circumstances remaining the same, and given the length of the working day, the quantity of surplus-labor will vary with the physical conditions of labor, especially with the fertility of the soil. But it by no means follows from this that the most fruitful soil is the most fitted for the growth of the capitalist mode of production. This mode is based on the domination of man over nature. Where nature is too lavish, she “keeps him in hand, like a child in leading-strings.” She does not impose upon him any necessity to develop himself.⁴ It is not the tropics with their luxuriant vegetation, but the temperate zone, that is the mother-country of capital.

⁴ “The first (natural wealth) as it is most noble and advantageous, so doth it make the people careless, proud, and given to all excesses; whereas the second enforceth vigilancy, literature, arts and policy.” (England's Treasure by Foreign Trade. Or the Balance of our Foreign Trade is the Rule of our Treasure. Written by Thomas Mun of London, merchant, and now published for the common good by his son John

536:1 Indes sind die großen Bauwerke des alten Ägyptens dem Umfang seiner Bevölkerung weinger geschuldet, als der großen Proportion, worin sie disponibel war. Wie der individuelle Arbeiter um so mehr Mehrarbeit liefern kann, je geringer seine notwendige Arbeitszeit, so, je geringer der zur Produktion der notwendigen Lebensmittel erheischte Teil der Arbeiterbevölkerung, desto größer ihr für andres Werk disponibler Teil.

536:2/o Die kapitalistische Produktion einmal vorausgesetzt, wird, unter sonst gleichbleibenden Umständen und bei gegebener Länge des Arbeitstags, die Größe der Mehrarbeit mit den Naturbedingungen der Arbeit, namentlich auch der Bodenfruchtbarkeit, variieren. Es folgt aber keineswegs umgekehrt, daß der fruchtbarste Boden der geeignetste zum Wachstum der kapitalistischen Produktionsweise. Sie unterstellt Herrschaft des Menschen über die Natur. Eine zu verschwenderische Natur „hält ihn an ihrer Hand wie ein Kind am Gängelband“. Sie macht seine eigne Entwicklung nicht zu einer Naturnotwendigkeit.⁴ Nicht das tropische Klima mit seiner überwuchernden Vegetation, sondern die gemäßigte Zone ist das Mutterland des Kapitals.

⁴ „Da der erste“ (der natürliche Reichtum) „höchst nobel und vorteilhaft ist, macht er das Volk sorglos, stolz und allen Ausschweifungen ergeben; der zweite dagegen erzwingt Sorgfalt, Gelehrsamkeit, Kunstfertigkeit und Staatsklugheit.“ („England's Treasure by Foreign Trade. Or the Balance of our Foreign Trade is the Rule of our Treasure. Written by Thomas Mun, of London, Merchant, and now published for the com-

Mun. London, 1669, p. 181, 182.) "Nor can I conceive a greater curse upon a body of people, than to be thrown upon a spot of land, where the productions for subsistence and food were, in great measure, spontaneous, and the climate required or admitted little care for raiment and covering ... there may be an extreme on the other side. A soil incapable of produce by labor is quite as bad as a soil that produces plentifully without any labor." (An Inquiry into the Present High Price of Provisions. Lond. 1767, p. 10.)

↓ This is not only true for capitalism but for any technologically advanced production. Not fertility itself, but differentiation of soils, changes of seasons form social basis for divisions of labor, and the necessity to control natural forces (irrigation) is the basis of big industry:

It is not the mere fertility of the soil, but the differentiation of the soil, the variety of its natural products, the changes of the seasons, which form the physical basis for the social division of labor, and which, by changes in the natural surroundings, spur man on to the multiplication of his wants, his capabilities, his means and modes of labor. It is the necessity of bringing a natural force under the control of society, of economizing, of appropriating or subduing it on a large scale by the work of man's hand, that first plays the decisive part in the history of industry. Examples are the irrigation works in Egypt,⁵ Lombardy, Holland, or in India and Persia, where irrigation by means of artificial canals, not only supplies the soil with the water indispensable to it, but also carries down to it, in the shape of sediment from the hills, mineral fertilisers. The secret of the flourishing state of industry in Spain and Sicily under the dominion of the Arabs lay in their irrigation works.⁶

mon good by his son John Mun", Lond. 1669, p. 181, 182.) „Auch kann ich mir für die Gesamtheit eines Volkes keinen schlimmeren Fluch vorstellen, als auf einen Fleck Erde gesetzt zu sein, auf dem die Erzeugung von Subsistenz- und Nahrungsmitteln zum großen Teil selbsttätig erfolgt und das Klima wenig Sorge für Kleidung und Obdach erfordert oder zuläßt ... möglich ist allerdings auch ein Extrem nach der andren Seite. Ein Boden, der trotz Arbeit keine Früchte hervorbringen kann, ist ebenso schlecht wie ein Boden, der ohne Arbeit reichlich Produkte erzeugt.“ (N. Forster,] „An Inquiry into the Present High Price of Provisions“, Lond. 1767, p. 10.)

Es ist nicht die absolute Fruchtbarkeit des Bodens, sondern seine Differenzierung, die Mannigfaltigkeit seiner natürlichen Produkte, welche die Naturgrundlage der gesellschaftlichen Teilung der Arbeit bildet und den Menschen durch den Wechsel der Naturumstände, innerhalb deren er haust, zur Vermannigfachung seiner eignen Bedürfnisse, Fähigkeiten, Arbeitsmittel und Arbeitsweisen spornt. Die Notwendigkeit, eine Naturkraft gesellschaftlich zu kontrollieren, damit hauszuhalten, sie durch Werke von Menschenhand auf großem Maßstab erst anzueignen oder zu zähmen, spielt die entscheidendste Rolle in der Geschichte der Industrie. So z.B. die Wasserreglung in Ägypten⁵, Lombardei, Holland usw. Oder in Indien, Persien usw., wo die Überrieselung durch künstliche Kanäle dem Boden nicht nur das unentbehrliche Wasser, sondern mit dessen Geschlämme zugleich den Mineräldünger von den Bergen zuführt. Das Geheimnis der Industrieblüte von Spanien und Sizilien unter arabischer Herrschaft war die Kanalisation.⁶

⁵ The necessity for predicting the rise and fall of the Nile created Egyptian astronomy, and with it the dominion of the priests, as directors of agriculture. "Le solstice est le moment de l'année ou commence la crue du Nil, et celui que les Egyptiens ont du observer avec le plus d'attention... C'était cette année tropique qu'il leur importait de marquer pour se diriger dans leurs opérations agricoles. Ils durent donc chercher dans le ciel un signe apparent de son retour." (Cuvier: Discours sur les révolutions du globe, ed. Hoefer, Paris, 1863, p. 141.)

⁶ One of the material bases of the power of the state over the small disconnected producing organisms in India, was the regulation of the water supply. The Mahometan rulers of India understood this better than their English successors. It is enough to recall to mind the famine of 1866, which cost the lives of more than a million Hindus in the district of Orissa, in the Bengal presidency.

So far, this historical sketch emphasized the conditions for increases in productivity. What else is needed to translate higher productivity into more exploitation?

650:1/o Favourable natural conditions alone, give us only the possibility, never the reality, of surplus-labor, nor, consequently, of surplus-value or a surplus-product. The result of difference in the natural conditions of labor is this, that the same quantity of labor satisfies, in different countries, a different mass of requirements,⁷ consequently, that under circumstances in other respects analogous, the necessary labor-time is different. These conditions affect surplus-labor only as natural limits, i.e., by fixing the points at which labor for others can begin. In proportion as industry advances, these natural limits recede.

⁷ "There are no two countries which furnish an equal number of the necessities of life in equal plenty, and with the same quantity of la-

⁵ Die Notwendigkeit, die Perioden der Nilbewegung zu berechnen, schuf die ägyptische Astronomie und mit ihr die Herrschaft der Priesterkaste als Leiterin der Agrikultur. „Die Sonnenwende ist der Zeitpunkt des Jahres, an dem das Steigen des Nils beginnt und den daher die Ägypter mit der größten Sorgfalt beobachten mußten ... Es war dieses Äquinoktialjahr, das sie festsetzen mußten, um sich in ihren agrikollen Operationen danach zu richten. Sie mußten daher am Himmel ein sichtbares Zeichen seiner Wiederkehr suchen.“ (Cuvier, „Discours sur les révolutions du globe“, éd. Hoefer, Paris 1863, p. 141.)

⁶ Eine der materiellen Grundlagen der Staatsmacht über die zusammenhangslosen kleinen Produktionsorganismen Indiens war Reglung der Wasserzufuhr. Die muhammedanischen Herrscher Indiens verstanden dies besser als ihre englischen Nachfolger. Wir erinnern nur an die Hungersnot von 1866, die mehr als einer Million Hindus in dem Distrikt von Orissa, Präsidentschaft Bengalen, das Leben kostete.

537:1–538:1 Die Gunst der Naturbedingungen liefert immer nur die Möglichkeit, niemals die Wirklichkeit der Mehrarbeit, also des Mehrwerts oder des Mehrprodukts. Die verschiedenen Naturbedingungen der Arbeit bewirken, daß dieselbe Quantität Arbeit in verschiedenen Ländern verschiedene Bedürfnismassen befriedigt,⁷ daß also, unter sonst analogen Umständen, die notwendige Arbeitszeit verschieden ist. Auf die Mehrarbeit wirken sie nur als Naturschranke, d.h. durch die Bestimmung des Punkts, wo die Arbeit für andre beginnen kann. In demselben Maß, worin die Industrie vortritt, weicht diese Naturschranke zurück.

⁷ „Es gibt keine zwei Länder, die eine gleiche Zahl der notwendigen Lebensmittel in gleicher Fülle und mit gleichem Aufwand an Arbeit

bor. Men's wants increase or diminish with the severity or temperateness of the climate they live in; consequently, the proportion of trade which the inhabitants of different countries are obliged to carry on through necessity cannot be the same, nor is it practicable to ascertain the degree of variation farther than by the degrees of Heat and Cold; from whence one may make this general conclusion, that the quantity of labor required for a certain number of people is greatest in cold climates, and least in hot ones; for in the former men not only want more clothes, but the earth more cultivating than in the latter." (An Essay on the Governing Causes of the Natural Rate of Interest. Lond. 1750. p. 60.) The author of this epoch-making anonymous work is J. Massy. Hume took his theory of interest from it.

↓ In order to refute the notion that considers profits to be the natural outgrowth of labor, Marx brings an example in which necessary labor is very short. Instead of a high surplus this may lead to lots of free time:

In the midst of our West European society, where the laborer purchases the right to work for his own livelihood only by paying for it in surplus-labor, the idea easily takes root that it is an inherent quality of human labor to furnish a surplus-product.⁸ But consider, for example, an inhabitant of the eastern islands of the Asiatic Archipelago, where sago grows wild in the forests.

"When the inhabitants have convinced themselves, by boring a hole in the tree, that the pith is ripe, the trunk is cut down and divided into several pieces, the pith is extracted, mixed with water and filtered: it is then quite fit for use as sago. One tree commonly yields 300 lbs., and occasionally 500 to 600 lbs. There, then, people go into the forests, and cut bread for themselves, just as with us they cut firewood."⁹

liefern. Die Bedürfnisse der Menschen wachsen oder vermindern sich mit der Strenge oder Milde des Klimas, in dem sie leben, und folglich kann das verhältnismäßige Ausmaß an Erwerbstätigkeit, das die Bewohner der verschiedenen Länder notwendigerweise betreiben müssen, nicht gleich sein, noch läßt sich der Grad der Verschiedenheit anders als nach den Hitze- und Kältegraden ermitteln. Man kann daher allgemein schließen, daß die Menge der für den Unterhalt einer gewissen Menschenzahl erforderlichen Arbeit in kalten Klimaten am größten, in warmen am geringsten ist; in jenen brauchen die Menschen nicht nur mehr Kleidung, sondern der Boden muß auch besser bebaut werden als in diesen." (An Essay on the Governing Causes of the Natural Rate of Interest, Lond. 1750, p. 59.) Der Verfasser dieser epochemachenden anonymen Schrift ist J. Massie. Hume nahm daraus seine Zinstheorie.

Mitten in der westeuropäischen Gesellschaft, wo der Arbeiter die Erlaubnis, für seine eigne Existenz zu arbeiten, nur durch Mehrarbeit erkaufte, wird sich leicht eingebildet, es sei eine der menschlichen Arbeit eingeborne Qualität, ein Surplusprodukt zu liefern.⁸ Man nehme aber z.B. den Einwohner der östlichen Inseln des asiatischen Archipelagus, wo der Sago wild im Walde wächst.

„Wenn die Einwohner, indem sie ein Loch in den Baum bohren, sich davon überzeugt haben, daß das Mark reif ist, so wird der Stamm umgeschlagen und in mehrere Stücke geteilt, das Mark wird herausgekratzt, mit Wasser gemischt und geseiht, es ist dann vollkommen brauchbares Sagomehl. Ein Baum gibt gemeinlich 300 Pfund und kann 500 bis 600 Pfund geben. Man geht dort also in den Wald und schneidet sich sein Brot, wie man bei uns sein Brennholz schlägt.“⁹

⁸ "Chaque travail doit (this appears also to be part of the *droits et devoirs du citoyen*) laisser un excédant." Proudhon.

⁹ F. Schouw: "Die Erde, die Pflanze und der Mensch," 2. Ed. Leipz. 1854, p. 148.

↓ Although generally higher productivity is accompanied by higher exploitation, these counterexamples show that the productivity of labor alone is not enough reason to explain surplus-value.

Suppose now such an East Asian bread-cutter requires 12 working hours a week for the satisfaction of all his wants. Nature's direct gift to him is plenty of leisure time. Before he can apply this leisure time productively for himself, a whole series of historical events is required; before he spends it in surplus-labor for strangers, compulsion is necessary. If capitalist production were introduced, the honest fellow would perhaps have to work six days a week, in order to appropriate to himself the product of one working day. The bounty of Nature does not explain why he would then have to work 6 days a week, or why he must furnish 5 days of surplus-labor. It explains only why his necessary labor-time would be limited to one day a week. But in no case would his surplus-product arise from some occult quality inherent in human labor.

↓ At the end of this historical sketch a brief paragraph about the parallel ideology which thinks profits are produced by capital. Compare 451:1.

651:1 Thus, not only does the historically developed social productiveness of labor, but also its natural productiveness, appear to be productiveness of the capital with which that labor is incorporated.

⁸ „Jede Arbeit muß“ (scheint auch zu den *droits et devoirs du citoyen* zu gehören) „einen Überschuß lassen.“ (Proudhon)

⁹ F. Schouw, „Die Erde, die Pflanze und der Mensch“, 2. Aufl., Leipzig 1854, p. 148.

538:2 Gesetzt, ein solcher ostasiatischer Brotschneider brauche 12 Arbeitsstunden in der Woche zur Befriedigung aller seiner Bedürfnisse. Was ihm die Gunst der Natur unmittelbar gibt, ist viel Mußezeit. Damit er diese produktiv für sich selbst verwenden, ist eine ganze Reihe geschichtlicher Umstände, damit er sie in Mehrarbeit für fremde Personen verausgabe, ist äußerer Zwang erheischt. Würde kapitalistische Produktion eingeführt, so müßte der Brave vielleicht 6 Tage in der Woche arbeiten, um sich selbst das Produkt eines Arbeitstags anzueignen. Die Gunst der Natur erklärt nicht, warum er jetzt 6 Tage in der Woche arbeitet oder warum er 5 Tage Mehrarbeit liefert. Sie erklärt nur, warum seine notwendige Arbeitszeit auf einen Tag in der Woche beschränkt ist. In keinem Fall aber entspränge sein Mehrprodukt aus einer der menschlichen Arbeit eingebornen, okkulten Qualität.

538:3 Wie die geschichtlich entwickelten, gesellschaftlichen, so erscheinen die naturbedingten Produktivkräfte der Arbeit als Produktivkräfte des Kapitals, dem sie einverleibt wird.—

16.3. [Critique of John Stuart Mill]

As is often the case, Marx devotes the last few pages of the chapter to a critical survey of the literature. After a few sentences about Ricardo he discusses in detail John Stuart Mill.

651:2/o Ricardo never concerns himself about the origin of surplus-value. He treats it as a thing inherent in the capitalist mode of production, a mode which in his eyes is the natural form of social production. Whenever he discusses the productiveness of labor, he seeks in it, not the cause of surplus-value, but the cause that determines the magnitude of that value. On the other hand, his school has openly proclaimed the productiveness of labor to be the originating cause of profit (read: surplus-value). This at all events is a progress as against the mercantilists who, on their side, derived the excess of the price over the cost of production of the product, from the act of exchange, from the product being sold above its value. Nevertheless, Ricardo's school simply shirked the problem, they did not solve it. In fact these bourgeois economists instinctively saw, and rightly so, that it is very dangerous to stir too deeply the burning question of the origin of surplus-value.

↑ That labor in capitalism produces surplus-value is no more astounding to Ricardo than the fact that labor produces a product.

But what are we to think of John Stuart Mill, who, half a century after Ricardo, solemnly claims superiority over the mercantilists, by clumsily repeating the wretched evasions of Ricardo's earliest vulgarizers?

↓ Here is an example of such a wretched evasion:

652:1 Mill says:

"The cause of profit is that labor produces more than is required for its support."

↑ Marx showed already why and to what extent this is wrong.

Question 857 Discuss how surplus-labor depends on natural conditions. Does it lie in the nature of labor to produce more than is necessary for its support?

539:1 Ricardo kümmert sich nie um den Ursprung des Mehrwerts. Er behandelt ihn wie eine der kapitalistischen Produktionsweise, der in seinen Augen natürlichen Form der gesellschaftlichen Produktion, inhärente Sache. Wo er von der Produktivität der Arbeit spricht, da sucht er in ihr nicht die Ursache des Daseins von Mehrwert, sondern nur die Ursache, die seine Größe bestimmt. Dagegen hat seine Schule die Produktivkraft der Arbeit laut proklamiert als die Entstehungsursache des Profits (lies: Mehrwerts). Jedenfalls ein Fortschritt gegenüber den Merkantilisten, die ihrerseits den Überschuß des Preises der Produkte über ihre Produktionskosten aus dem Austausch herleiten, aus ihrem Verkauf über ihren Wert. Trotzdem hatte auch Ricardos Schule das Problem bloß umgangen, nicht gelöst. In der Tat hatten diese bürgerlichen Ökonomen den richtigen Instinkt, es sei sehr gefährlich, die brennende Frage nach dem Ursprung des Mehrwerts zu tief zu ergründen.

Was aber sagen, wenn ein halbes Jahrhundert nach Ricardo Herr John Stuart Mill würdevoll seine Überlegenheit über die Merkantilisten konstatiert, indem er die faulen Ausflüchte der ersten Verflacher Ricardos schlecht wiederholt?

539:2–5 Mill sagt:

„Die Ursache des Profits ist die, daß die Arbeit mehr produziert, als für ihren Unterhalt erforderlich ist.“

↓ But Mill gives a new argument:

So far, nothing but the old story; but Mill wishing to add something of his own, proceeds:

"To vary the form of the theorem; the reason why capital yields a profit, is because food, clothing, materials and tools, last longer than the time which was required to produce them."

He here confounds the duration of labor-time with the duration of its products. According to this view, a baker whose product lasts only a day, could never extract from his workpeople the same profit, as a machine maker whose products endure for 20 years and more. Of course it is very true, that if a bird's nest did not last longer than the time it takes in building, birds would have to do without nests.

652:2 This fundamental truth once established, Mill establishes his own superiority over the mercantilists.

"We thus see," he proceeds, "that profit arises, not from the incident of exchange, but from the productive power of labor; and the general profit of the country is always what the productive power of labor makes it, whether any exchange takes place or not. If there were no division of employments, there would be no buying or selling, but there would still be profit."

For Mill then, exchange, buying and selling, those general conditions of capitalist production, are but an incident, and there would always be profits even without the purchase and sale of labor-power!

652:3 He continues:

"If the laborers of the country collectively produce twenty per cent more than their wages, profits will be twenty per cent, whatever prices may or may not be."

Soweit nicht als die alte Leier; aber Mill will auch Eignes hinzutun:

„Oder um die Form des Satzes zu variieren: der Grund, weshalb das Kapital einen Profit liefert, ist der, daß Nahrung, Kleider, Rohstoffe und Arbeitsmittel längere Zeit dauern, als zu ihrer Produktion erforderlich ist.“

539:6 Mill verwechselt hier die Dauer der Arbeitszeit mit der Dauer ihrer Produkte. Nach dieser Ansicht würde ein Bäcker, dessen Produkte nur einen Tag dauern, aus seinen Lohnarbeitern nie denselben Profit ziehen können wie ein Maschinenbauer, dessen Produkte zwanzig Jahre und länger dauern. Allerdings, wenn die Vogelnester nicht längere Zeit vorhielten, als zu ihrem Bau erforderlich, so würden die Vögel sich ohne Nester behelfen müssen.

539:7–8 Diese Grundwahrheit einmal festgestellt, stellt Mill seine Überlegenheit über die Merkantilisten fest:

„Wir sehn also, daß der Profit entsteht, nicht aus dem Zwischenfall der Austausche, sondern aus der Produktivkraft der Arbeit; der Gesamtprofit eines Landes ist immer bestimmt durch die Produktivkraft der Arbeit, gleichviel ob Austausch stattfindet oder nicht. Bestände keine Teilung der Beschäftigungen, so gäbe es weder Kauf noch Verkauf, aber immer noch Profit.“

540:1 Hier sind also Austausch, Kauf und Verkauf, die allgemeinen Bedingungen der kapitalistischen Produktion, ein purer Zwischenfall, und es gibt immer noch Profit ohne Kauf und Verkauf der Arbeitskraft!

540:2–4 Weiter:

„Produziert die Gesamtheit der Arbeiter eines Landes 20% über ihre Lohnsumme, so werden die Profite 20% sein, was auch immer der Stand der Warenpreise.“

This is, on the one hand, a rare bit of tautology; for if laborers produce a surplus-value of 20% for the capitalist, his profit will be to the total wages of the laborers as 20:100. On the other hand, it is absolutely false to say that "profits will be 20%." They will always be less, because they are calculated upon the *sum total* of the capital advanced. If, for example, the capitalist have advanced £500, of which £400 is laid out in means of production and £100 in wages, and if the rate of surplus-value be 20%, the rate of profit will be 20:500, *i.e.*, 4% and not 20%.

653:1 Then follows a splendid example of Mill's method of handling the different historical forms of social production:

"I assume, throughout, the state of things which prevails, with few exceptions, universally; namely, that the capitalist advances the whole expenses, including the entire remuneration of the laborer."

Strange optical illusion to see everywhere a state of things which as yet exists only exceptionally on our earth.

Had Marx had the opportunity he would have certainly changed the preceding passage as follows (as suggested in a letter:) Good explanation in Vintage edition.

653:1 Then follows a splendid example of Mill's method of handling the different historical forms of social production:

"I assume, throughout, the state of things which, where the laborers and capitalists are separate classes, prevails, with few exceptions, universally; namely, that the capitalist advances the whole expenses, including the entire remuneration of the laborer."

Mr. Mill is willing to believe that it is not

Dies ist einerseits eine äußerst gelungne Tautologie, denn wenn Arbeiter einen Mehrwert von 20% für ihre Kapitalisten produzieren, so werden sich die Profite zum Gesamtlohn der Arbeiter verhalten wie 20:100. Andererseits ist es absolut falsch, daß die Profite „20% sein werden“. Sie müssen immer kleiner sein, weil Profite berechnet werden auf die Totalsumme des vorgeschossenen Kapitals. Der Kapitalist habe z.B. 500 Pfd. St. vorgeschossen, davon 400 Pfd. St. in Produktionsmitteln, 100 Pfd. St. in Arbeitslohn. Die Rate des Mehrwerts sei, wie angenommen, 20%, so wird die Profitrate sein wie 20:500, d.h. 4% und nicht 20%.

540:5–8 Folgt eine glänzende Probe, wie Mill die verschiedenen geschichtlichen Formen der gesellschaftlichen Produktion behandelt:

„Ich setze überall den gegenwärtigen Stand der Dinge voraus, der bis auf wenige Ausnahmen überall herrscht, d.h. daß der Kapitalist alle Vorschüsse macht, die Bezahlung des Arbeiters einbegriffen.“

Seltsame optische Täuschung, überall einen Zustand zu sehn, der bis jetzt nur ausnahmsweise auf dem Erdball herrscht!

540:5–8 Folgt eine glänzende Probe, wie Mill die verschiedenen geschichtlichen Formen der gesellschaftlichen Produktion behandelt:

„Ich setze überall“, sagt er, „den gegenwärtigen Stand der Dinge voraus, der bis auf wenige Ausnahmen überall herrscht, wo Arbeiter und Kapitalisten einander als Klassen gegenüberstehen, d.h., daß der Kapitalist alle Vorschüsse macht, die Bezahlung des Arbeiters einbegriffen.“

Herr Mill wird gern glauben, es sei nicht

an absolute necessity for it to be so, even in an economic system where workers and capitalists confront each other as separate classes.

But let us finish—Mill is willing to concede, "that he should do so is not a matter of inherent necessity." On the contrary:

"the laborer might wait, until the production is complete, for all that part of his wages which exceeds mere necessities: and even for the whole, if he has funds in hand sufficient for his temporary support. But in the latter case, the laborer is to that extent really a capitalist in the concern, by supplying a portion of the funds necessary for carrying it on."

Mill might have gone further and have added, that the laborer who advances to himself not only the necessities of life but also the means of production, is in reality nothing but his own wage-laborer. He might also have said that the American peasant proprietor is but a serf who does enforced labor for himself instead of for his lord.

653:2/o After thus proving clearly, that even if capitalist production had no existence, still it would always exist, Mill is consistent enough to show, on the contrary, that it has no existence, even when it does exist.

"And even in the former case" (when the workman is a wage laborer to whom the capitalist advances all the necessities of life, he the laborer), "may be looked upon in the same light," (*i.e.*, as a capitalist), "since, contributing his labor at less than the market-price, (!) he may be regarded as lending the difference (?) to his employer and receiving it back with interest, etc."^{9a}

^{9a} J. St. Mill. Principles of Pol. Econ. Lond. 1868, p. 252–53 *passim*.

eine absolute Notwendigkeit, daß dem so sei—selbst in dem ökonomischen System, in dem Arbeiter und Kapitalisten einander als Klassen gegenüberstehen.

Doch weiter. Mill ist gut genug, zuzugeben, „es sei nicht eine absolute Notwendigkeit, daß dem so sei“. Im Gegenteil.

„Der Arbeiter könnte, selbst mit seinem ganzen Lohnbetrage, die Zahlung abwarten, bis die Arbeit vollständig fertig ist, wenn er die zu seiner Erhaltung in der Zwischenzeit nötigen Mittel hätte. Aber in diesem Falle wäre er in gewissem Grade ein Kapitalist, der Kapital ins Geschäft legte, und einen Teil der zu seiner Fortführung nötigen Fonds lieferte.“

541:1 Ebensogut könnte Mill sagen, der Arbeiter, der sich selbst nicht nur die Lebensmittel, sondern auch die Arbeitsmittel vorschießt, sei in Wirklichkeit sein eigener Lohnarbeiter. Oder der amerikanische Bauer sei sein eigener Sklave, der nur für sich selbst statt für einen fremden Herrn frondet.

541:2–3 Nachdem uns Mill derart klärlich erwiesen, daß die kapitalistische Produktion, selbst wenn sie nicht existierte, dennoch immer existieren würde, ist er nun konsequent genug, zu beweisen, daß sie selbst dann nicht existiert, wenn sie existiert:

„Und selbst im vorigen Fall“ (wenn der Kapitalist dem Lohnarbeiter seine sämtlichen Subsistenzmittel vorschießt) „kann der Arbeiter unter demselben Gesichtspunkt betrachtet werden“ (d.h. als ein Kapitalist). „Denn indem er seine Arbeit unter dem Marktpreise (!) hergibt, kann er angesehen werden, als schösse er die Differenz (?) seinem Unternehmer vor usw.“^{9a}

^{9a} J. St. Mill, „Principles of Political Economy“, Lond. 1868, p. 252–253, *passim*.—{Obige Stellen sind nach der französischen Ausgabe des

In reality, the laborer advances his labor gratuitously to the capitalist during, say one week, in order to receive the market price at the end of the week, etc., and it is this which, according to Mill, transforms him into a capitalist. On the level plain, simple mounds look like hills; and the imbecile flatness of the present bourgeoisie is to be measured by the altitude of its great intellects.

„Kapital“ übersetzt.—F.E.}

541:4 In der tatsächlichen Wirklichkeit schießt der Arbeiter dem Kapitalisten seine Arbeit während einer Woche usw. umsonst vor, um am Ende der Woche usw. ihren Marktpreis zu erhalten; das macht ihn, nach Mill, zum Kapitalisten! In der platten Ebene erscheinen auch Erdhaufen als Hügel; man messe die Platitude unsrer heutigen Bourgeoisie am Kaliber ihrer „großen Geister“.

17. Changes of Magnitude in the Price of Labor-Power and Surplus-Value

This chapter discusses changes in the rate of surplus-value caused by variations in productivity of labor, intensity of labor, and length of the working day—under the assumption that the worker’s real wage income remains constant. It is a continuation of chapter Nine, which discussed changes in the rate of surplus-value caused by variations in the length of the working-day.

The first two paragraphs develop the assumptions just mentioned. Marx begins with a summary of the mechanisms determining the value of labor-power.

655:1 The value of labor-power is determined by the value of the habitually necessary means of consumption of the average laborer. The quantity of these means of consumption—although their form may vary—is given at any particular epoch in a particular society. It is therefore to be treated as a constant magnitude. What changes, is the value of this quantity.

542:1 Der Wert der Arbeitskraft ist bestimmt durch den Wert der gewohnheitsmäßig notwendigen Lebensmittel des Durchschnittsarbeiters. Die Masse dieser Lebensmittel, obgleich ihre Form wechseln mag, ist in einer bestimmten Epoche einer bestimmten Gesellschaft gegeben und daher als konstante Größe zu behandeln. Was wechselt, ist der Wert dieser Masse.

Moore and Aveling translate

“gegeben” with “known,” which is the epistemic fallacy.

↑ The reader should keep in mind that the value of labor-power determines the total *daily* or *weekly* wage income, not the hourly wage. In the discussion of wages in 683:3 and 701:1, Marx will say that a simple reformulation is needed to translate the results gained here into laws governing the wages themselves.

Question 858 *At the beginning of chapter Seventeen, Marx says that he is not discussing changes in the standard of living of the working class, but that he is keeping them constant during this chapter. Why does he make this assumption? Does he follow through with this assumption, or will he discuss changes in the standard of living later in the chapter anyway?*

↓ Since the quantity of the workers’ consumption goods is assumed constant, all those factors cannot be discussed here which affect the magnitude of wages and profits through the kinds and amounts of use-values necessary to reproduce labor-power:

There are, besides, two other factors that enter into the determination of the value of labor-power. One, the expenses of developing that power, which expenses vary with the mode of production; the other, its natural diversity, the difference between the labor-power of men and women, of children and adults. The employment of these different sorts of labor-power, an employment which is again conditional on the mode of production, makes a great difference in the cost of maintaining the family of the laborer, and in the value of the labor-power of the adult male. Both these factors, however, are excluded in the following investigation.^{9b}

In footnote 9b, Engels names a third case which is also not discussed here:

^{9b} Note in the 3rd German edition.—The case considered at pages 300–302 is here of course also omitted.—F. E.

↑ Engels refers here to the situation where the individual value of the product is below its social value, which may lead to extra surplus-value, see 433:2/oo. ↓ Engels's assumption in the footnote is related to the assumption Marx makes in in the main text right after that footnote:

655:2 I assume (1) that commodities are sold at their value; (2) that the price of labor-power rises occasionally above its value, but never sinks below it.

↑ In both Marx's and Engels's assumptions, market prices reflect social values. The assumption that labor-power is sold at its value is also made in 430:1/o.

↓ If all assumptions hold that have been listed so far, then wages and surplus-value are determined by three factors: productivity, intensity, and length of the working-day.

655:3/o On this assumption we have seen that the relative magnitudes of surplus-value and of price of labor-power are determined by three circumstances; (1) the length of the working-day, or the extensive magnitude of labor; (2) the normal intensity of labor, its intensive magnitude, whereby a given quantity of labor is expended in a given time; (3) the productive power of labor, whereby

Zwei andre Faktoren gehn in die Wertbestimmung der Arbeitskraft ein. Einerseits ihre Entwicklungskosten, die sich mit der Produktionsweise ändern, andererseits ihre Naturdifferenz, ob sie männlich oder weiblich, reif oder unreif. Der Verbrauch dieser differenten Arbeitskräfte, wieder bedingt durch die Produktionsweise, macht großen Unterschied in den Reproduktionskosten der Arbeiterfamilie und dem Wert des erwachsenen männlichen Arbeiters. Beide Faktoren bleiben jedoch bei der folgenden Untersuchung ausgeschlossen.^{9b}

^{9b} Der S. 281 behandelte Fall ist hier natürlich ebenfalls ausgeschlossen. {Note zur 3. Aufl.—F. E.}

542:2 Wir unterstellen, 1. daß die Waren zu ihrem Wert verkauft werden, 2. daß der Preis der Arbeitskraft wohl gelegentlich über ihren Wert steigt, aber nie unter ihn sinkt.

542:3/o Dies einmal unterstellt, fand sich, daß die relativen Größen von Preis der Arbeitskraft und von Mehrwert durch drei Umstände bedingt sind: 1. die Länge des Arbeitstags oder die extensive Größe der Arbeit; 2. die normale Intensität der Arbeit oder ihre intensive Größe, so daß ein bestimmtes Arbeitsquantum in bestimmter Zeit verausgabt wird; 3. endlich die Produk-

the same quantum of labor yields, in a given time, a greater or lesser quantum of product, dependent on the degree of development in the conditions of production.

tivkraft der Arbeit, so daß je nach dem Entwicklungsgrad der Produktionsbedingungen dasselbe Quantum Arbeit in derselben Zeit ein größeres oder kleineres Quantum Produkt liefert.

Mathematically, these relations can be expressed by the four parameters

$$\begin{aligned} l &= \text{length of working day} && \left(\frac{\text{working hours}}{\text{working days}} \right) \\ i &= \text{intensity of labor} && \left(\frac{\text{value units}}{\text{working hours}} \right) \\ m &= \text{“habitually necessary” means of subsistence} && \left(\frac{\text{use-value units}}{\text{working days}} \right) \\ q &= \text{productive power of labor} && \left(\frac{\text{use-value units}}{\text{value units}} \right) \end{aligned}$$

and the three derived variables

$$\begin{aligned} u &= \text{value produced per day} = l \times i && \left(\frac{\text{value units}}{\text{working days}} \right) \\ v &= \text{value of labor-power per day} = \frac{m}{q} && \left(\frac{\text{value units}}{\text{working days}} \right) \\ s &= \text{surplus-value per day} = l \times i - \frac{m}{q} && \left(\frac{\text{value units}}{\text{working days}} \right) \end{aligned}$$

Very different combinations are clearly possible, according as one of the three factors is constant and two variable, or two constant and one variable, or lastly, all three simultaneously variable. And the number of these combinations is augmented by the fact that, when these factors simultaneously vary, the amount and direction of their respective variations may differ. In what follows the chief combinations alone are considered.

Sehr verschiedene Kombinationen sind offenbar möglich, je nachdem einer der drei Faktoren konstant und zwei variabel, oder zwei Faktoren konstant und einer variabel, oder endlich alle gleichzeitig variabel sind. Diese Kombinationen werden noch dadurch vermehrfacht, daß bei gleichzeitiger Variation verschiedener Faktoren die Größe und Richtung der Variation verschieden sein können. Im folgenden sind nur die Hauptkombinationen dargestellt.

A modern economist would represent the variations Marx is going to discuss now as the partial derivatives of s with respect to q , i , and l . In modern economics this is called a “comparative statics” analysis.

I. Length of Working Day and Intensity of Labor Constant, Productivity Variable

As announced in the section title, Marx first discusses the situation where l and i are constant and only the productivity q varies. And as announced at the very beginning of the chapter, in 655:1, m is kept constant as well. Let us first see how a modern mathematical economist would analyze this situation. Surplus-value depends on the four basic parameters l , i , m , and q through the following equation:

$$s = l \times i - \frac{m}{q}. \quad (17.1)$$

Taking time derivatives with l , i , and m treated as constants gives

$$\dot{s} = \frac{m}{q^2} \dot{q} = v \times \frac{\dot{q}}{q} \quad (17.2)$$

from which follows

$$\frac{\dot{s}}{s} = \frac{\dot{q}}{q} / \frac{s}{v} \quad (17.3)$$

i.e., the relative increase in surplus-value (perhaps expressed in percentage points) is equal to the relative increase in productivity divided by the rate of exploitation.

Where a modern economist would see one law, symbolized by (17.1) or (17.3), Marx speaks of three different laws:

656:1 On these assumptions the value of labor-power, and the magnitude of surplus-value, are determined by three laws.

543:1 Unter dieser Voraussetzung sind Wert der Arbeitskraft und Mehrwert durch drei Gesetze bestimmt.

Marx will derive these three laws by a dialectical derivation with two σ -transforms. I will attempt to show that it is justified to speak of three laws because three different generative mechanisms are at work. In other words, formula (17.1) or (17.3) is the symbolic representation of an empirical regularity, which is maintained by the confluence of several different underlying mechanisms.

I.a. [First Law: Total Value Created is Constant]

656:2 Firstly, a working day of given length always represents itself in the same amount of value, no matter how much the productivity of labor may change and, with it, the mass of the product, therefore the price of each individual commodity.

↑ The quantity of value does not depend on productivity but is determined by labor-time alone. (From this we can deduce another assumption made by Marx: Marx assumes that all laborers are average laborers, so that it is a group of workers large enough that their

543:2 Erstens: Der Arbeitstag von gegebener Größe stellt sich stets in demselben Wertprodukt dar, wie auch die Produktivität der Arbeit, mit ihr die Produktenmasse und daher der Preis der einzelnen Ware wechsele.

individual differences cancel out, see chapter Thirteen, 440/o.) The law that value only depends on labor time was introduced in chapter One, see 129:3/o. The great exception to this law, the introduction of new machinery which leads to extra surplus-value, was explicitly ruled out in footnote 9b to paragraph 655:1 earlier in this chapter here.

Although this is an important and by no means obvious economic law, it has a very simple mathematical form: it says that the formula for u , the value produced per day, $u = l \times i$, does not have q in it.

value product of one day = $l \times i$	constant
use-value product of one day = $l \times i \times q$	changes with productivity.

↓ If one divides these two equations, one gets the value of the individual article, which changes inversely with productivity.

If the value created by a working-day of 12 hours be, say, six shillings, then, although the mass of the articles produced varies with the productive power of labor, the only result is that the value represented by six shillings is spread over a greater or lower number of articles.

543:3 Das Wertprodukt eines zwölfstündigen Arbeitstags ist 6 sh. z.B., obgleich die Masse der produzierten Gebrauchswerte mit der Produktivkraft der Arbeit wechselt, der Wert von 6 sh. sich also über mehr oder weniger Waren verteilt.

↑ Instead of the value of the individual article Marx discusses here its inverse, the “spread” of a given value over a greater or lower number of articles.

I.b. [Second Law: Increases in Productivity lead to Increases in Surplus-value]

Even though an increase in productivity does not lead to an increase in value, the second law states that it leads to an increase in *surplus-value* and a decrease in the value of labor-power.

656:3 Secondly, surplus-value and the value of labor-power vary in opposite directions. A variation in the productive power of labor, its increase or diminution, causes a variation in the opposite direction in the value of labor-power, and in the same direction in surplus-value.

543:4 Zweitens: Wert der Arbeitskraft und Mehrwert wechseln in umgekehrter Richtung zueinander. Wechsel in der Produktivkraft der Arbeit, ihre Zunahme oder Abnahme, wirkt in umgekehrter Richtung auf den Wert der Arbeitskraft und in direkter auf den Mehrwert.

↑ The second sentence of this two-sentence paragraph states the second law. Marx does not specify whether it is a law about the value of labor-power or about surplus-value. The same mechanism affects both: a rise (fall) in the productivity of labor leads both to a fall (rise) in the value of labor-power and a rise (fall) in surplus-value. The first sentence of the paragraph is an explanation, given beforehand, why this one cause, a change in the productivity of labor, has such a double outcome: because value of labor-power and surplus-value always move in opposite directions to each other.

A modern mathematical economist would see a proof of this law in its very formulation. First sentence: since the surplus-value is total value produced minus value of the labor-power consumed (see chapter Seven, 302:2), surplus-value and value of labor-power vary inversely with each other. First half of second sentence: on the other hand, as discussed in chapter Twelve, value of labor-power varies inversely with productivity. Second half of second sentence: If one puts these two inverse relations together, one gets a direct relationship between surplus-value and productivity.

But Marx would not consider such a concatenation of equations to be a proof, since this purely mathematical operation is silent about the causalities involved. Marx's proof of the second law takes up the next two paragraphs. ↓ It can be viewed as a dialectical derivation which takes off from the first law.

656:4/o The value created by a working day of 12 hours is a constant quantity, say, six shillings.

543:5 Das Wertprodukt des zwölfstündigen Arbeitstags ist eine konstante Größe, z.B. 6 sh.

The dialectic comes in with the observation that this *constant* is the sum of two *variables*. This is a σ -transform, the discovery of a not entirely obvious contradiction: how can a constant be the sum of two variables?

This constant quantity is the sum of the surplus-value plus the value of the labor-power, which latter value the laborer replaces by an equivalent.

Diese konstante Größe ist gleich der Summe des Mehrwerts plus dem Wert der Arbeitskraft, den der Arbeiter durch ein Äquivalent ersetzt.

↓ There is only one way to resolve this contradiction. Two variables can only then have a constant as their sum if their variations are opposite to each other.

It is self-evident that, if a constant quantity consists of two parts, neither of them can increase without the other diminishing.

Es ist selbstverständlich, daß von zwei Teilen einer konstanten Größe keiner zunehmen kann, ohne daß der andre abnimmt.

↓ For value of labor-power and surplus-value, the following must therefore be true (if they are the component parts of a constant magnitude):

Let the two parts at starting be equal; 3 shillings value of labor-power, 3 shillings surplus-value. Then the value of the labor-power cannot rise from three shillings to four, without the surplus-value falling from three shillings to two; and the surplus-value cannot rise from three shillings to four, without the value of labor-power falling from three shillings to two.

Der Wert der Arbeitskraft kann nicht von 3 sh. auf 4 steigen, ohne daß der Mehrwert von 3 sh. auf 2 fällt, und der Mehrwert kann nicht von 3 auf 4 sh. steigen, ohne daß der Wert der Arbeitskraft von 3 sh. auf 2 fällt.

↑ This statement is entirely symmetric in value of labor-power and surplus-value. It does not say anything about causality, only association. This association must hold if the sum of value of labor-power and surplus-value is a constant. The next step must therefore be to check whether causal mechanisms exist which generate this association.

↓ But before checking whether such causal mechanisms exist, Marx makes a brief digression in order to draw out an implication of this negative association between value of labor-power and surplus-value: it is not possible that both rise at the same time. The rise of one always goes at the expense of the other.

Under these circumstances, therefore, no change can take place in the absolute magnitude, either of the surplus-value, or of the value of labor-power, without a simultaneous change in their relative magnitudes, *i.e.*, relatively to each other. It is impossible for them to rise or fall simultaneously.

Unter diesen Umständen also ist kein Wechsel in der absoluten Größe, sei es des Werts der Arbeitskraft, sei es des Mehrwerts, möglich ohne gleichzeitigen Wechsel ihrer relativen oder verhältnismäßigen Größen. Es ist unmöglich, daß sie gleichzeitig fallen oder steigen.

↑ The relative magnitudes can be obtained by the trivial mathematical operation of dividing the absolute magnitudes by each other. Why does Marx even bother with this mathematically trivial reformulation? Because in the real world, relative changes are sustained by different mechanisms and also have different effects than absolute changes. Changes in the absolute magnitude of the value of labor-power are caused by changes in productivity, while changes in the relative magnitudes are the results of distributional battles between the classes.

↓ After this digression about relative magnitudes, Marx looks for the causal mechanisms which maintain this negative association between value of labor-power and surplus-value. For this, Marx adds yet another variable to the association, namely, productivity:

657:1 Further, the value of labor-power cannot fall, and consequently surplus-value cannot rise, without a rise in the productive power of labor.

543:6/o Der Wert der Arbeitskraft kann ferner nicht fallen, also der Mehrwert nicht steigen, ohne daß die Produktivkraft der Arbeit steigt,

↓ But with productivity of labor we have found the variable whose change causes the other changes. The remainder of this sentence no longer talks about association but about causality:

For instance, in the above case, the value of the labor-power cannot sink from three shillings to two, unless an increase in the productive power of labor makes it possible to produce in 4 hours the same quantity of means of consumption as previously required 6 hours to produce. On the other hand, the value of the labor-power cannot rise from three shillings to four, without a decrease in the productive power of labor, whereby eight hours become requisite to produce the same quantity of means of consumption, for the production of which

z.B. im obigen Fall kann der Wert der Arbeitskraft nicht von 3 auf 2 sh. sinken, ohne daß erhöhte Produktivkraft der Arbeit erlaubt, in 4 Stunden dieselbe Masse Lebensmittel zu produzieren, die vorher 6 Stunden zu ihrer Produktion erheischen. Umgekehrt kann der Wert der Arbeitskraft nicht von 3 auf 4 sh. steigen, ohne daß die Produktivkraft der Arbeit fällt, also 8 Stunden zur Produktion derselben Masse von Lebensmitteln erheischt sind, wozu früher 6 Stunden genügen.

six hours previously sufficed.

⇓ In other words, that what first was only known to be an association is now seen to be a causal effect going from productivity to value of labor-power to surplus-value.

It follows from this, that an increase in the productive power of labor causes a fall in the value of labor-power and a consequent rise in surplus-value, while, on the other hand, a decrease in such productive power causes a rise in the value of labor-power, and a fall in surplus-value.

↑ This formulation, echoing the statement of the law at the beginning of 656:3, concludes the proof of this law. This proof did not consist in the extraneous and unmediated concatenation of mathematical relationships, but in a dialectical derivation. Note that the result of this dialectic is an entirely linear causality—but this causality starts in the hidden sphere of production. The above σ -transform allowed us to go from the starting point on the surface (the constancy of the total value created) to the underlying sphere of production.

⇓ Marx does not stay long with this linear causality but immediately finds another σ -transform. Since the relationship between productivity and surplus-value is a direct relationship, i.e., since an increase in productivity leads to an increase in surplus-value, one might think that productivity is the source of surplus-value. Against this, Marx brings the observation that it is not a proportional relationship, i.e., not a relationship of the form $s = a \times q$ with a constant a . An increase in productivity by 3 percent, say, does therefore not lead to an increase of surplus-value by 3 percent. Marx introduces this observation as something that Ricardo overlooked:

657:2/o In formulating this law, Ricardo overlooked one circumstance; although a change in the magnitude of the surplus-value or surplus-labor has as its condition a change in the opposite direction in the magnitude of the value of labor-power, or in the quantity of necessary labor, it by no means follows that they vary in the same proportion. They do increase or diminish by the same quantity. But their proportional increase or diminution depends on their original magnitudes before the change in the productive power of labor took place.

↑ This is a verbal description of the mathematical equation (17.3): $\frac{ds}{s}$ is not equal to $\frac{dq}{q}$, but instead the following relationship holds: $\frac{ds}{s} = \frac{dq}{q} \cdot \frac{s}{v}$. In words, the percentage by which surplus-value increases is the percentage by which productivity increases divided by the rate

Es folgt hieraus, daß die Zunahme in der Produktivität der Arbeit den Wert der Arbeitskraft senkt und damit den Mehrwert steigert, während umgekehrt die Abnahme der Produktivität den Wert der Arbeitskraft steigert und den Mehrwert senkt.

544:1 Bei Formulierung dieses Gesetzes übersah Ricardo einen Umstand: Obgleich der Wechsel in der Größe des Mehrwerts oder der Mehrarbeit einen umgekehrten Wechsel in der Größe des Werts der Arbeitskraft oder der notwendigen Arbeit bedingt, folgt keineswegs, daß sie in derselben Proportion wechseln. Sie nehmen zu oder ab um dieselbe Größe. Das Verhältnis aber, worin jeder Teil des Wertprodukts oder des Arbeitstags zu- oder abnimmt, hängt von der ursprünglichen Teilung ab, die vor dem Wechsel in der Produktivkraft der Arbeit stattfand.

of exploitation. Instead of writing out this relationship as a mathematical formula, as is the custom in modern economics, Marx gives a numerical example. To make it easier for the modern reader to follow the math, the translation converted the british pounds used by Marx into dollars. As in 430:1/o, one hour of work is represented in 12 cents.

If the value of the labor-power be 96 cents, or the necessary labor-time 8 hours, and the surplus-value be 48 cents, or the surplus-labor 4 hours, and if, in consequence of an increase in the productive power of labor, the value of the labor-power falls to 72 cents, or the necessary labor to 6 hours, the surplus-value will rise to 72 cents, or the surplus-labor to 6 hours. The same quantity, 24 cents or 2 hours, is added in one case and subtracted in the other. But the proportional change of magnitude is different in each case. While the value of the labor-power falls from 96 cents to 72, i.e., by 1/4 or 25%, the surplus-value rises from 48 cents to 72, i.e., by 1/2 or 50%. It therefore follows that the proportional increase or diminution in surplus-value, consequent on a given change in the productive power of labor, depends on the original magnitude of that portion of the working day which embodies itself in surplus-value; the smaller that portion, the greater is the proportional change; the greater that portion, the less is the proportional change.

War der Wert der Arbeitskraft 4 sh. oder die notwendige Arbeitszeit 8 Stunden, der Mehrwert 2 sh. oder die Mehrarbeit 4 Stunden und fällt, infolge erhöhter Produktivkraft der Arbeit, der Wert der Arbeitskraft auf 3 sh. oder die notwendige Arbeit auf 6 Stunden, so steigt der Mehrwert auf 3 sh. oder die Mehrarbeit auf 6 Stunden. Es ist dieselbe Größe von 2 Stunden oder 1 sh., die dort zugefügt, hier weggenommen wird. Aber der proportionelle Größenwechsel ist auf beiden Seiten verschieden. Während der Wert der Arbeitskraft von 4 sh. auf 3, also um 1/4 oder 25% sinkt, steigt der Mehrwert von 2 sh. auf 3, also um 1/2 oder 50%. Es folgt daher, daß die proportionelle Zu- oder Abnahme des Mehrwerts, infolge eines gegebenen Wechsels in der Produktivkraft der Arbeit, um so größer, je kleiner, und um so kleiner, je größer ursprünglich der Teil des Arbeitstags war, der sich in Mehrwert darstellt.

In this situation, the parameter values of l , i , and m , which remain fixed, are (with the arbitrary introduction of widgets as use-value units of the workers' consumption goods):

$$\begin{aligned} l &= \text{length of working day} &= \frac{12 \text{ hours}}{\text{day}} \\ i &= \text{intensity of labor} &= \frac{12 \text{ cents}}{\text{hour}} \\ m &= \text{workers' consumption} &= \frac{8 \text{ widgets}}{\text{day}} \end{aligned}$$

Therefore

$$u = \text{value produced per day} = l \times i = \frac{\$1.44}{\text{day}}$$

Before the increase in productivity, the other parameters are:

$$\begin{aligned} q_0 &= \text{productive power of labor} = \frac{1 \text{ widget}}{12 \text{ cents}} \\ v_0 &= \text{value of daily labor-power} = \frac{m}{q_0} = \frac{96 \text{ cents}}{\text{day}} \\ s_0 &= \text{surplus-value per day} = l \times i - \frac{m}{q_0} = \frac{48 \text{ cents}}{\text{day}} \end{aligned}$$

After the productivity increase, the parameters are

$$\begin{aligned} q_1 &= \text{productive power of labor} = \frac{1 \text{ widget}}{8 \text{ cents}} \\ v_1 &= \text{value of daily labor-power} = \frac{m}{q_1} = \frac{72 \text{ cents}}{\text{day}} \\ s_1 &= \text{surplus-value per day} = l \times i - \frac{m}{q_1} = \frac{72 \text{ cents}}{\text{day}} \end{aligned}$$

The ratios computed by Marx in the text are

$$\frac{\Delta v}{v} = \frac{v_1 - v_0}{v_0} = -\frac{1}{4} \quad (17.4)$$

$$\frac{\Delta s}{s} = \frac{s_1 - s_0}{s_0} = \frac{1}{2} \quad (17.5)$$

Clearly, the proportional decrease of v is not equal to the proportional increase of s . Instead, since $\Delta s = -\Delta v$, the following equation

$$\frac{\Delta s}{s} = -\frac{\Delta v}{v} \bigg/ \frac{s}{v} \quad (17.6)$$

always holds.

Equation (17.6) looks similar to (17.3), but it relates the proportional increase of s only to the proportional decrease in v , not to the more basic proportional increase in productivity q . Had Marx computed the change in productivity itself instead of the change in variable capital, he would have obtained

$$\frac{\Delta q}{q} = \frac{q_1 - q_0}{q_0} = \frac{1}{2} \quad (17.7)$$

which happens in this particular example to be equal to $\frac{\Delta s}{s}$ — but this is a fluke; in general, $\frac{\Delta q}{q}$ and $\frac{\Delta s}{s}$ are unequal.

Question 859 Make this same calculation with the exchange rate £1 = \$5. Assume one hour of labor produces a value of 12.5 cents. Also assume that 1 day has 12 hours, and that the means of subsistence necessary for one day have a value of \$1. Compute surplus-value and the rate of exploitation. Then assume that by an increase of productivity the value of the necessary means of subsistence falls by 25%, i.e., now it is 75 cents. Compute surplus-value and the rate of exploitation in this situation.

In Marx's example, the rate of exploitation is rather low, it is only 50%. Therefore a small increase in productivity is rewarded by a large increase in surplus-value. This was, presumably, the situation during the industrial revolution. Today the opposite case is more relevant (which Marx discusses somewhere in Grundrisse): if the rate of exploitation is already high, then increases in productivity will not make that much difference. Here it would be much more profitable to increase intensity.

Question 860 Assume that the necessary labor is 2 hours and the rate of surplus-value 300%. How long is the surplus-labor? If the product of one hour's labor is \$20—how much surplus-value is produced per day, and what is the daily wage?

Question 861 Assume that in the above branch of production the intensity of labor is increased by 15%. How many dollars worth of value would then be produced in one hour? How much surplus-value would be produced in one day, if the daily wages would remain the same?

Question 862 Assume that instead of increasing intensity of labor by 15%, the productivity of labor in all branches of production would increase by a whopping 100%, while the standard of living of the workers would remain the same. How much surplus-value would then be produced in one day?

Question 863 Comparing the answers of the preceding two questions, why do the capitalist even bother to increase productivity? Note that in 3 we calculated only the long term trend. What would be the effect of an increase in productivity in the short run? How does international trade give an extra incentive to increased technology?

I.c. [Third Law: Causality from Productivity to Surplus-Value]

In the formulation of the second law, the value of labor-power and surplus-value were treated in a strictly parallel fashion. The same mechanism, an increase in productivity, affects both variable capital and surplus-value. This parallel formulation was even maintained at the beginning of the proof. But the very last step of the proof, which identified the causality

involved, suddenly no longer makes any mention of surplus-value but only talks about the link from productivity to the value of labor-power. Surplus-value is only affected indirectly, by a change in the value of labor-power. The third law emphasizes this one-sided causal directionality behind the negative correlation between value of labor-power and surplus-value. An increase in surplus-value can never be the cause, but always only the consequence, of a decrease in the value of labor-power (i.e., in the value of the workers' habitual means of subsistence, whose mass is here considered constant). This was already discussed in chapter Twelve, 430:1/o.

658:1 (3.) Increase or diminution in surplus-value is always the effect of, and never the cause of, the corresponding diminution or increase in the value of labor-power.¹⁰

↑ Even if the capitalists have the market power to increase their profit margins, profits are not created in circulation but in production. If the length of the working-day is fixed, then a durable increase in profits can only come from a decrease of the value of labor-power, i.e. an increase in productivity. But the motivation of the capitalist focuses on profits, not the value of labor-power. The third law says: the capitalists' efforts to increase profits will only then lead to a durable increase in profits if they have the effect of lowering the value of the worker's habitual means of subsistence. ↓ Methods to increase surplus-value which do not go through the value of the workers' means of subsistence must therefore be illusory:

¹⁰ To this third law MacCulloch has made, amongst others, this absurd addition, that a rise in surplus-value, unaccompanied by a fall in the value of labor-power, can occur through the abolition of taxes payable by the capitalist. The abolition of such taxes makes no change whatever in the quantity of surplus-value that the capitalist extorts at first-hand from the laborer. It alters only the proportion in which that surplus-value is divided between himself and third persons. It consequently makes no alteration whatever in the relation between surplus-value and value of labor-power. MacCulloch's exception therefore proves only his misapprehension of the rule, a misfortune that as often happens to him in the vulgarisation of Ricardo, as it does to J. B. Say in the vulgarisation of Adam Smith.

Until now, the third law was only formulated but not yet proved. ↓ Here is its proof:

658:2 Since the working-day is constant in magnitude, and is represented by a value of constant magnitude, since, to every vari-

544:2 Drittens: Zu- oder Abnahme des Mehrwerts ist stets Folge und nie Grund der entsprechenden Ab- und Zunahme des Werts der Arbeitskraft.¹⁰

¹⁰ Zu diesem dritten Gesetz hat MacCulloch u.a. den abgeschmackten Zusatz gemacht, daß der Mehrwert ohne Fall im Wert der Arbeitskraft steigen kann durch Abschaffung von Steuern, die der Kapitalist früher zu zahlen hatte. Die Abschaffung solcher Steuern ändert absolut nichts an dem Quantum Mehrwert, das der industrielle Kapitalist in erster Hand dem Arbeiter auspumpt. Sie ändert nur die Proportion, worin er Mehrwert in seine eigne Tasche steckt oder mit dritten Personen teilen muß. Sie ändert also nichts an dem Verhältnis zwischen Wert der Arbeitskraft und Mehrwert. Die Ausnahme des MacCulloch beweist also nur sein Mißverständnis der Regel, ein Malheur, das ihm in der Vulgarisation Ricardos ebensooft passiert als dem J. B. Say in der Vulgarisation A. Smiths.

545:1 Da der Arbeitstag von konstanter Größe ist, sich in einer konstanten Wertgröße darstellt, jedem Größenwechsel des

ation in the magnitude of surplus-value, there corresponds an inverse variation in the value of labor-power, and since the value of labor-power cannot change, except in consequence of a change in the productive power of labor, it clearly follows, under these conditions, that every change in the magnitude of surplus-value arises from an inverse change in the magnitude of the value of labor-power.

↑ One sees that this third law is not due to the separate action of an independent causal mechanism but a consequence of the constraints imposed in the given situation. ↓ Although the theoretical derivation of this law is simple, the law itself is by no means trivial and obvious if one applies it to the real world. Whatever means the capitalist may apply to increase profits, be it cost savings or innovation in production or figuring out what the customers want to buy, etc., the third law says that it can only then *permanently* increase surplus-labor if it has the effect of lowering the reproduction costs of the laborer. The next passage expresses this idea in terms of absolute and relative changes in value of labor-power and surplus-value: If, then, as we have already seen, there can be no change of absolute magnitude in the value of labor-power, and in surplus-value, unaccompanied by a change in their relative magnitudes, so now it follows that no change in their relative magnitudes is possible, without a change in the absolute magnitude of the value of labor-power.

↑ Although this looks like a symmetric counterpart of the law derived in 656:4/o, it is really its negation. Whereas the earlier law ruled out a situation in which both wage and surplus-value rise at the same time, this law here rules out a situation in which a few minutes or hours of the working-day are directly reallocated from necessary labor to surplus-labor. It is not possible to directly move the divider between necessary labor and surplus-labor as suggested in 429:2/o. This is only true under the assumption that prices are equal to values; but given this assumption, the capitalists cannot directly transfer surplus-value from the workers to themselves. An increase in surplus-value can only happen indirectly, as the consequence of a fall in the value of labor-power. ↓ The next paragraph shows that this indirectness can be beneficial to the working class:

I.d. [A rise in the workers' consumption]

658:3/o According to the third law, a change in the magnitude of surplus-value

Mehrwerts ein umgekehrter Größenwechsel im Wert der Arbeitskraft entspricht und der Wert der Arbeitskraft nur wechseln kann mit einem Wechsel in der Produktivkraft der Arbeit, folgt unter diesen Bedingungen offenbar, daß jeder Größenwechsel des Mehrwerts aus einem umgekehrten Größenwechsel im Wert der Arbeitskraft entspringt.

Wenn man daher gesehen, daß kein absoluter Größenwechsel im Wert der Arbeitskraft und des Mehrwerts möglich ist ohne einen Wechsel ihrer relativen Größen, so folgt jetzt, daß kein Wechsel ihrer relativen Wertgrößen möglich ist ohne einen Wechsel in der absoluten Wertgröße der Arbeitskraft.

545:2 Nach dem dritten Gesetz unterstellt der Größenwechsel des Mehrwerts ei-

presupposes a movement in the value of labor-power, brought about by a variation in the productive power of labor.

↓ Assume, for instance, that capitalists introduce technical innovations in order to increase their profits, and the value of labor-power indeed falls. But the price paid for labor-power does not fall immediately or does not fall as far as it should. (The consideration of the process of adjustment can be considered a σ -transform.) Then the efforts of the capitalists to increase profits lead to higher wages for the workers.

The limit of this change is given by the altered value of labor-power. Nevertheless, even when circumstances allow the law to operate, subsidiary movements may occur. For example: if in consequence of the increased productive power of labor, the value of labor-power falls from 96 cents to 72, or the necessary labor-time from 8 hours to 6, the price of labor-power may possibly not fall below 88 cents, 84 cents, or 76 cents, and the surplus-value consequently not rise above 56 cents, 60 cents, or 68 cents. The amount of this fall, the lowest limit of which is 72 cents (the new value of labor-power), depends on the relative weight, which the pressure of capital on the one side, and the resistance of the laborer on the other, throw into the scale.

In his calculation of surplus-value, Marx seems to be off by 1 shilling. Instead of surplus-values of 3 sh. 4 d., 3sh. 6 d., and 3 sh. 10 d., the right number seem to be 2 sh. 4 d., 2sh. 6 d., and 2 sh. 10 d. On the German side, I left Marx's original numbers, but I adjusted the dollar amounts given in the English.

One might think that this advantage for the working-class is only temporary, because the price of labor-power has risen above its value. But in this situation, the pressure of the capitalist class to drive the price of labor-power down to its value is mitigated because capitalist profits rise as well. The capitalists may not object to the rise in wages because the purchasing power of their profits increases as well, and their accumulation and consumption plans can proceed without obstacles. The higher wages may even be perceived as an advantage, since they ensure labor peace and willing performance by the workers. This effect is also known in modern macroeconomics as the "ratchet effect" of consumption: once personal consumption has been allowed to increase, it is very difficult to get it back down to the previous lower level.

↓ The limiting case in the direction favorable to the workers is described in Marx's next

ne durch Wechsel in der Produktivkraft der Arbeit verursachte Wertbewegung der Arbeitskraft.

Die Grenze jenes Wechsels ist durch die neue Wertgrenze der Arbeitskraft gegeben. Es können aber, auch wenn die Umstände dem Gesetz zu wirken erlauben, Zwischenbewegungen stattfinden. Fällt z.B. infolge erhöhter Produktivkraft der Arbeit der Wert der Arbeitskraft von 4 sh. auf 3 oder die notwendige Arbeitszeit von 8 Stunden auf 6, so könnte der Preis der Arbeitskraft nur auf 3 sh. 8 d., 3 sh. 6 d., 3 sh. 2 d. usw. fallen, der Mehrwert daher nur auf 3 sh. 4 d., 3sh. 6 d., 3 sh. 10 d. usw. steigen. Der Grad des Falls, dessen Minimalgrenze 3 sh., hängt von dem relativen Gewicht ab, das der Druck des Kapitals von der einen Seite, der Widerstand der Arbeiter von der andern Seite in die Waagschale wirft.

example, which makes a break with the assumption from 655:1 that real wages are constant:

659:1 The value of labor-power is determined by the value of a given quantity of necessary means of consumption. It is the value and not the mass of these means of consumption that varies with the productive power of labor. It is, however, possible that, owing to an increase of productive power, both the laborer and the capitalist may simultaneously be able to appropriate a greater quantity of means of consumption, without any change in the price of labor-power or in surplus-value. If the value of labor-power be 72 cents, and the necessary labor-time amount to 6 hours, if the surplus-value likewise be 72 cents, and the surplus-labor 6 hours, then if the productive power of labor were doubled without altering the ratio of necessary labor to surplus-labor, there would be no change of magnitude in surplus-value and price of labor-power. The only result would be that each of them would represent twice as many use-values as before; these use-values being twice as cheap as before. Although labor-power would be unchanged in price, it would be above its value.

↑ The movements which are in full compliance with the constraint that real wages are constant generate therefore forces that push for a change in real wages. Through its own dialectics, therefore, this process subverts the presuppositions on which it is based.

↓ At the very end, Marx shows that this leakage, which allows workers to capture parts of the productivity increase and add it to their socially accepted consumption norm, is strictly limited: it can improve the absolute position of the laborer, but it will not narrow the gulf between laborer and capitalist, indeed this gulf will probably widen:

If, however, the price of labor-power had fallen, not to 36 cents, the lowest possible point consistent with its new value, but to 68 cents or 60 cents, still this falling price would represent an increased mass of means of consumption. In this way it is possible with an increasing productive power of la-

545:3/o Der Wert der Arbeitskraft ist bestimmt durch den Wert eines bestimmten Quantums von Lebensmitteln. Was mit der Produktivkraft der Arbeit wechselt, ist der Wert dieser Lebensmittel, nicht ihre Masse. Die Masse selbst kann, bei steigender Produktivkraft der Arbeit, für Arbeiter und Kapitalist gleichzeitig und in demselben Verhältnis wachsen ohne irgendeinen Größenwechsel zwischen Preis der Arbeitskraft und Mehrwert. Ist der ursprüngliche Wert der Arbeitskraft 3 sh. und beträgt die notwendige Arbeitszeit 6 Stunden, ist der Mehrwert ebenfalls 3 sh. oder beträgt die Mehrarbeit auch 6 Stunden, so würde eine Verdopplung in der Produktivkraft der Arbeit, bei gleichbleibender Teilung des Arbeitstags, Preis der Arbeitskraft und Mehrwert unverändert lassen. Nur stellte sich jeder derselben in doppelt so vielen, aber verhältnismäßig verwohlfeilerten Gebrauchswerten dar. Obgleich der Preis der Arbeitskraft unverändert, wäre er über ihren Wert gestiegen.

Fiele der Preis der Arbeitskraft, aber nicht bis zu der durch ihren neuen Wert gegebenen Minimalgrenze von 1 1/2 sh., sondern auf 2 sh. 10 d., 2 sh. 6 d. usw., so repräsentierte dieser fallende Preis immer noch eine wachsende Masse von Lebensmitteln. Der Preis der Arbeitskraft könnte so bei stei-

bor, for the price of labor-power to keep on falling, and yet this fall to be accompanied by a constant growth in the mass of the laborer's means of consumption. But relatively, compared with surplus-value, the value of labor-power would fall continuously, and thus the abyss between the laborer's position and that of the capitalist would keep widening.¹¹

¹¹ "When an alteration takes place in the productiveness of industry, and that either more or less is produced by a given quantity of labor and capital, the proportion of wages may obviously vary, whilst the quantity, which that proportion represents, remains the same, or the quantity may vary, whilst the proportion remains the same." ([J. Cazenove,] *Outlines of Political Economy*, etc., p. 67.)

Question 864 Describe a situation in which workers get higher wages because of the capitalists' attempts to increase their profits.

I.e. [Ricardo]

↓ The section concludes with brief remarks about Ricardo, who first formulated these laws. On this occasion, Marx distinguishes the rate of surplus-value from the rate of profits:

660:1 Ricardo was the first who accurately formulated the three laws we have above stated. But he falls into the following errors: (1) he looks upon the special conditions under which these laws hold good as the general and sole conditions of capitalist production. He knows no change, either in the length of the working-day, or in the intensity of labor; consequently with him there can be only one variable factor, viz., the productive power of labor; (2), and this error vitiates his analysis much more than (1), he has not, any more than have the other economists, investigated surplus-value as such, i.e., independently of its par-

gender Produktivkraft der Arbeit beständig fallen mit gleichzeitigem, fortwährendem Wachstum der Lebensmittelmasse des Arbeiters. Relativ aber, d.h. verglichen mit dem Mehrwert, sänke der Wert der Arbeitskraft beständig und erweiterte sich also die Kluft zwischen den Lebenslagen von Arbeiter und Kapitalist.¹¹

¹¹ „Wenn in der Produktivität der Industrie eine Änderung Platz greift, so daß durch eine gegebene Menge von Arbeit und Kapital mehr oder weniger erzeugt wird, kann der Lohnanteil sich offensichtlich ändern, während die Menge, welche dieser Anteil darstellt, die gleiche bleibt, oder die Menge kann sich ändern, während der Anteil unverändert bleibt.“ ([J. Cazenove,] „*Outlines of Political Economy* etc.“, p. 67.)

546:1/o Ricardo hat die oben aufgestellten drei Gesetze zuerst streng formuliert. Die Mängel seiner Darstellung sind, 1. daß er die besondern Bedingungen, innerhalb deren jene Gesetze gelten, für die sich von selbst verstehenden, allgemeinen und ausschließlichen Bedingungen der kapitalistischen Produktion ansieht. Er kennt keinen Wechsel, weder in der Länge des Arbeitstags noch in der Intensität der Arbeit, so daß bei ihm die Produktivität der Arbeit von selbst zum einzigen variablen Faktor wird;—2. aber, und dies verfälscht seine Analyse in viel höherem Grad, hat er ebensowenig wie die andern Ökonomen jemals

ticular forms, such as profit, rent, etc. He therefore confounds together the laws of the rate of surplus-value and the laws of the rate of profit. The rate of profit is, as we have already said, the ratio of the surplus-value to the total capital advanced; the rate of surplus-value is the ratio of the surplus-value to the variable part of that capital. Assume that a capital *C* of £500 is made up of raw material, instruments of labor, etc. (*c*) to the amount of £400; and of wages (*v*) to the amount of £100; and further, that the surplus-value (*s*) is £100. Then we have rate of surplus-value $s/v = £100/£100 = 100\%$. But the rate of profit $s/c = £100/£500 = 20\%$. It is, besides, obvious that the rate of profit may depend on circumstances that in no way affect the rate of surplus-value. I shall show in Book III that, with a given rate of surplus-value, we may have any number of rates of profit, and that various rates of surplus-value may, under given conditions, express themselves in a single rate of profit.

den Mehrwert als solchen untersucht, d.h. unabhängig von seinen besondern Formen, wie Profit, Grundrente usw. Er wirft daher die Gesetze über die Rate des Mehrwerts unmittelbar zusammen mit den Gesetzen der Profitrate. Wie schon gesagt, ist die Profitrate das Verhältnis des Mehrwerts zum vorgeschossenen Gesamtkapital, während die Mehrwertsrate das Verhältnis ist des Mehrwerts zum bloß variablen Teil dieses Kapitals. Nimm an, ein Kapital von 500 Pfd.St. (*C*) teile sich in Rohstoffe, Arbeitsmittel etc. für zusammen 400 Pfd.St. (*c*) und in 100 Pfd.St. Arbeitslöhne (*v*); daß ferner der Mehrwert = 100 Pfd.St. (*m*). Dann ist die Mehrwertsrate $m/v = 100\text{Pfd.St.}/100\text{Pfd.St.} = 100\%$. Aber die Profitrate $m/C = 100\text{Pfd.St.}/500\text{Pfd.St.} = 20\%$. Es leuchtet außerdem ein, daß die Profitrate abhängen kann von Umständen, die keineswegs auf die Mehrwertsrate einwirken. Ich werde später im Dritten Buch dieser Schrift beweisen, daß dieselbe Rate des Mehrwerts sich in den verschiedensten Profitraten und verschiedene Raten des Mehrwerts, unter bestimmten Umständen, sich in derselben Profitrate ausdrücken können.

II. Working Day Constant, Productivity of Labor Constant, Intensity of Labor Variable

The second section discusses variations in intensity, always contrasting them with the variations in productivity discussed in the first section. Marx asks whether the three laws derived in the first section are still valid.

660:2/o Increased intensity of labor means increased expenditure of labor in a given time. Hence a working-day of more intense labor is embodied in more products than is one of less intense labor, the length of each day being the same. Increased productive

547:1 Wachsende Intensität der Arbeit unterstellt vermehrte Ausgabe von Arbeit in demselben Zeitraum. Der intensivere Arbeitstag verkörpert sich daher in mehr Produkten als der minder intensive von gleicher Stundenzahl. Mit erhöhter Produktivkraft

power of labor also, it is true, will supply more products in a given working-day. But in this latter case, the value of each single product falls, for it costs less labor than before; in the former case, that value remains unchanged, for each article costs the same labor as before. Here we have an increase in the number of products, unaccompanied by a fall in their individual prices: as their number increases, so does the sum of their prices. By contrast, if the productive power increases, then the same value is only represented in a greater mass of products.

↑ This is however not the whole story. Two paragraphs later, in 661:2/o, Marx says that this effect is negated if intensity rises everywhere.

This discussion of intensity seems different than that in chapter Fifteen, section 15.3.c, especially footnote 157 to paragraph 533:2/o. In that earlier discussion, intensity does not affect the value produced at all, unless the intensity is so strong that it requires a shortened working-day. In the present discussion, intensity affects the value produced, but if the intensification is generalized, then the increase in value produced is lost again.

↓ If the intensity of labor exceeds the social norm, then more value is produced per hour. The first of the three laws from the first section no longer holds: if intensity varies, the value product of a day's labor is not constant but variable.

Hence the length of the working-day being constant, a day's labor of increased intensity will be embodied in an increased value and, the value of money remaining unchanged, in more money. The value created varies with the extent to which the intensity of labor deviates from its normal intensity in the society. A given working-day, therefore, no longer creates a constant, but a variable value; in a day of 12 hours of ordinary intensity, the value created is, say \$1.44, but with increased intensity, the value created may be \$1.68, \$1.92, or more.

↓ Second law: surplus-value and wages are no longer necessarily negatively related.

It is clear that, if the value created by a day's labor increases from, say, \$1.44 to \$1.92 then the two parts into which this value is divided, viz., price of labor-power

liefert zwar auch derselbe Arbeitstag mehr Produkte. Aber im letztern Fall sinkt der Wert des einzelnen Produkts, weil es weniger Arbeit als vorher kostet, im erstern Fall bleibt er unverändert, weil das Produkt nach wie vor gleich viel Arbeit kostet. Die Anzahl der Produkte steigt hier ohne Fall ihres Preises. Mit ihrer Anzahl wächst ihre Preissumme, während dort dieselbe Wertsumme sich nur in vergrößerter Produktenmasse darstellt.

Bei gleichbleibender Stundenzahl verkörpert sich also der intensivere Arbeitstag in höherem Wertprodukt, also, bei gleichbleibendem Wert des Geldes, in mehr Geld. Sein Wertprodukt variiert mit den Abweichungen seiner Intensität von dem gesellschaftlichen Normalgrad. Derselbe Arbeitstag stellt sich also nicht wie vorher in einem konstanten, sondern in einem variablen Wertprodukt dar, der intensivere, zwölfstündige Arbeitstag z.B. in 7 sh., 8 sh. usw. statt in 6 sh. wie der zwölfstündige Arbeitstag von gewöhnlicher Intensität.

Es ist klar: Variiert das Wertprodukt des Arbeitstags, etwa von 6 auf 8 sh., so können beide Teile dieses Wertprodukts, Preis der Arbeitskraft und Mehrwert, gleichzeitig

and surplus-value, may both of them increase simultaneously, and either equally or unequally. They may both simultaneously increase from 72 cents to 96.

↓ But even if hourly wages rise, this does not necessarily raise the wages above the value of the labor-power consumed, since higher intensity also results in greater wear and tear.

Here, the rise in the price of labor-power does not necessarily imply that the price has risen above the value of labor-power. On the contrary, the rise in price may be accompanied by a fall below its value. This occurs whenever the rise in the price of labor-power does not compensate for its increased wear and tear.

↓ Regarding the third law, the effect of intensity on surplus-value is more direct than that of productivity. This gives an important difference between increases in intensity and increases in productivity as means to increase surplus-value: Higher productivity leads to higher relative surplus-value only if the products produced enter the habitual consumption of the workers. By contrast, higher intensity *always* leads to higher surplus-value.

661:1 We know that, with transitory exceptions, a change in the productive power of labor does not cause any change in the value of labor-power, nor consequently in the magnitude of surplus-value, unless the products of the industries affected are articles habitually consumed by the laborers. In the present case this condition no longer applies. For when the variation is either in the duration or in the intensity of labor, there is always a corresponding change in the magnitude of the value created, independently of the nature of the article in which that value is embodied.

Higher intensity of labor seems therefore more advantageous to the capitalist than higher productivity. ↓ But higher intensity differs from increases in productivity in yet another way, which reduces this advantage again. (This might be considered the negation of the first difference.)

661:2/o If the intensity of labor were to increase simultaneously and equally in every branch of industry, then the new and

wachsen, sei es in gleichem oder ungleichem Grad. Preis der Arbeitskraft und Mehrwert können beide zur selben Zeit von 3 sh. auf 4 wachsen, wenn das Wertprodukt von 6 auf 8 steigt.

Preiserhöhung der Arbeitskraft schließt hier nicht notwendig Steigerung ihres Preises über ihren Wert ein. Sie kann umgekehrt von einem Fall unter ihren Wert begleitet sein. Dies findet stets statt, wenn die Preiserhöhung der Arbeitskraft ihren beschleunigten Verschleiß nicht kompensiert.

547:2/o Man weiß, daß mit vorübergehenden Ausnahmen ein Wechsel in der Produktivität der Arbeit nur dann einen Wechsel in der Wertgröße der Arbeitskraft und daher in der Größe des Mehrwerts bewirkt, wenn die Produkte der betroffenen Industriezweige in den gewohnheitsmäßigen Konsum des Arbeiters eingehn. Diese Schranke fällt hier fort. Ob die Größe der Arbeit extensiv oder intensiv wechsele, ihrem Größenwechsel entspricht ein Wechsel in der Größe ihres Wertprodukts, unabhängig von der Natur des Artikels, worin sich dieser Wert darstellt.

548:1 Steigerte sich die Intensität in allen Industriezweigen gleichzeitig und gleichmäßig, so würde der neue höhere Intensi-

higher degree of intensity would become the normal degree for the society, and would therefore cease to be taken account of.

↓ But this is only true nationally. On an international scale, the advantages of higher intensity remain. (This would then be the negation of the negation):

But still, even then, the intensity of labor would be different in different countries, and would modify the international application of the law of value. The more intense working-day of one nation would be represented by a greater sum of money than would the less intense day of another nation.¹²

¹² “All things being equal, the English manufacturer can turn out a considerably larger amount of work in a given time than a foreign manufacturer, so much as to counterbalance the difference of the working-days, between 60 hours a week here, and 72 or 80 elsewhere.” (Rep. of Insp. of Fact. for 31st Oct., 1855, p. 65.) The most infallible means for reducing this qualitative difference between the English and Continental working hour would be a law shortening quantitatively the length of the working-day in Continental factories.

↑ Obviously, Marx is thinking here of the evidence cited in chapter Fifteen, for instance Gardner’s experiment in 535/o.

The Moore-Aveling translation of this footnote makes a point not given in the German: the legal shortening of the labor day would be a quantitative measure, while the result would be a qualitative change in the working day. I.e., this is an example where quantity turns into quality. Again Marx stresses here that a too long working-day decreases surplus-value, something he already said in chapter 10 and/or 15.

III. Productivity and Intensity Constant, Length Variable

Now we turn to the third possibility of keeping two variables constant and varying the third, namely, we are varying the length of the working-day.

662:1 The working-day may vary in two ways. It may be made either longer or shorter.

tätsgrad zum gewöhnlichen gesellschaftlichen Normalgrad und hörte damit auf, als extensive Größe zu zählen.

Indes blieben selbst dann die durchschnittlichen Intensitätsgrade der Arbeit bei verschiedenen Nationen verschieden und modifizierten daher die Anwendung des Wertgesetzes auf unterschiedne Nationalarbeitstage. Der intensivere Arbeitstag der einen Nation stellt sich in höherem Geldausdruck dar als der minder intensive der andren.¹²

¹² „Bei sonst gleichen Umständen kann der englische Fabrikant in einer bestimmten Zeit eine beträchtlich größere Menge von Arbeit herausbringen als ein ausländischer Fabrikant, so viel, um den Unterschied der Arbeitstage zwischen 60 Stunden wöchentlich hier und 72 bis 80 Stunden anderwärts auszugleichen.“ („Reports of Insp. of Fact. for 31st Oct. 1855“, p. 65.) Größere gesetzliche Verkürzung des Arbeitstags in den kontinentalen Fabriken wäre das unfehlbarste Mittel zur Verminderung dieser Differenz zwischen der kontinentalen und der englischen Arbeitsstunde.

548:2 Der Arbeitstag kann nach zwei Richtungen variieren. Er kann verkürzt oder verlängert werden.

↑ This short paragraph in the German edition is supplemented, in the English edition, by a much longer discussion, enumerating the form which our above three laws obtain in the present situation. According to a footnote in the Vintage edition, this passage is not present in any of the German editions of *Capital*. It first appears in the French translation of 1872, and was presumably inserted by Engels into the first English translation.

From our present data, and within the limits of the assumptions made previously we obtain the following laws: (1.) The working-day creates a greater or lesser amount of value in proportion to its length—thus, a variable and not a constant quantity of value. (2.) Every change in the relation between the magnitudes of surplus-value and of the value of labor-power arises from a change in the absolute magnitude of the surplus-labor, and consequently of the surplus-value. (3.) The absolute value of labor-power can change only in consequence of the reaction exercised by the prolongation of surplus-labor upon the wear and tear of labor-power. Every change in this absolute value is therefore the effect, but never the cause, of a change in the magnitude of surplus-value.

↑ I.e., the three laws are overturned completely and replaced by their opposites. We begin with the case in which the working-day is shortened.

III.a. [Shortening of the work day]

The results will be qualitatively different depending on whether the work day is lengthened or shortened. Marx first discusses a situation where the work day is *shortened*.

662:6 (1.) A shortening of the working-day under the conditions given above leaves the value of labor-power and, with it, the necessary labor-time unaltered. It reduces the surplus-labor and surplus-value. Along with the absolute magnitude of the latter, its relative magnitude also falls, i.e., its magnitude relatively to the value of labor-power whose magnitude remains unaltered. Only

548:3 1. Verkürzung des Arbeitstags unter den gegebenen Bedingungen, d.h. gleichbleibender Produktivkraft und Intensität der Arbeit, läßt den Wert der Arbeitskraft und daher die notwendige Arbeitszeit unverändert. Sie verkürzt die Mehrarbeit und den Mehrwert. Mit der absoluten Größe des letzteren fällt auch seine relative Größe, d.h. seine Größe im Verhältnis zur gleich-

by lowering the price of labor-power below its value could the capitalist save himself harmless.

If intensity and productivity of the working-day remain constant, then a shortening of the working day without lowering wages will lead to lower surplus-value. Remember that Marx is holding the real daily value of labor-power constant; a shortening of hours would therefore have to be accompanied by a rise in hourly wages. \Downarrow *Such a situation*, Marx argues, *rarely occurs in reality*. Usually productivity and intensity increase when the working-day is shortened:

663:1 All the usual arguments against the shortening of the working-day assume that it takes place under the conditions we have here supposed to exist; but in reality the very contrary is the case: a change in the productive power and intensity of labor either precedes, or immediately follows, a shortening of the working-day.¹³

¹³ “There are compensating circumstances ... which the working of the Ten Hours’ Act has brought to light.” (Rep. of Insp. of Fact. for 31st Oct. 1848,” p. 7.)

In other words, the capitalist system finds ways to neutralize the profit-damaging effects of a shortening of the working-day. The result which one would expect according the mathematical formula does therefore not obtain. Next, let us see what happens if the working-day is *lengthened*.

III.b. [Lengthening of the work day]

663:2 (2.) Lengthening of the working-day. Let the necessary labor-time be 6 hours, or the value of labor-power 72 cents; also let the surplus-labor be 6 hours or the surplus-value 72 cents. The whole working-day then amounts to 12 hours and is embodied in a value of \$1.44. If, now, the working-day be lengthened by 2 hours and the price of labor-power remain unaltered, the surplus-value increases both absolutely and relatively. Although there is no absolute

bleibenden Wertgröße der Arbeitskraft. Nur durch Herabdrückung ihres Preises unter ihren Wert könnte der Kapitalist sich schadlos halten.

548:4/o Alle hergebrachten Redensarten wider die Verkürzung des Arbeitstags unterstellen, daß das Phänomen sich unter den hier vorausgesetzten Umständen ereignet, während in der Wirklichkeit umgekehrt Wechsel in der Produktivität und Intensität der Arbeit entweder der Verkürzung des Arbeitstags vorhergehen oder ihr unmittelbar nachfolgen.¹³

¹³ „Es gibt kompensierenden Umstände ... die durch die Durchführung des Zehnstundengesetzes ans Licht gebracht worden sind.“ („Reports of Insp. of Fact. for 31st October 1848“, p. 7.)

549:1 2. Verlängerung des Arbeitstags: Die notwendige Arbeitszeit sei 6 Stunden oder der Wert der Arbeitskraft 3 sh., ebenso Mehrarbeit 6 Stunden und Mehrwert 3 sh. Der Gesamtarbeitstag beträgt dann 12 Stunden und stellt sich in einem Wertprodukt von 6 sh. dar. Wird der Arbeitstag um 2 Stunden verlängert und bleibt der Preis der Arbeitskraft unverändert, so wächst mit der absoluten die relative Größe des Mehrwerts. Obgleich die Wertgröße der Arbeitskraft ab-

change in the value of labor-power, it suffers a relative fall.

After deriving his result in terms of absolute changes, Marx re-states it in terms of relative changes. This procedure is analogous to 658:2. But the result is the exact opposite. Earlier, the relative change was result of an absolute change in the value of labor-power, now it is the result of an absolute change in surplus-value:

Under the conditions assumed in 1. there could not be a change of relative magnitude in the value of labor-power without a change in its absolute magnitude. Here, on the contrary, the change of relative magnitude in the value of labor-power is the result of the change of absolute magnitude in surplus-value.

A longer work day allows wages and profits to rise simultaneously:

663:3 Since the value in which a day’s labor is embodied, increases with the length of that day, it is evident that the surplus-value and the price of labor-power may simultaneously increase, either by equal or unequal quantities.

\Downarrow This is the same result as with intensification of labor, see 660:2/o:

This simultaneous increase is therefore possible in two cases, one, the actual lengthening of the working-day, the other, an increase in the intensity of labor unaccompanied by such lengthening.

Such a simultaneous rise in price of labor-power and surplus-value may occur when wages are paid as time wages, as long as the incremental wage due to longer hours exceeds the higher reproduction cost necessary to allow full recovery of the labor-power. But if the working-day is made too long, the price of labor-power falls below its value:

664:1 When the working-day is prolonged, the price of labor-power may fall below its value, although that price be nominally unchanged or even rise. The value of a day’s labor-power is, as will be remembered, estimated from its normal average duration, or from the normal duration of life among the laborers, and from corresponding normal transformations of organized bodily matter into motion,¹⁴ in con-

solut unverändert bleibt, fällt sie relativ.

Unter den Bedingungen von I. konnte die relative Wertgröße der Arbeitskraft nicht wechseln ohne einen Wechsel ihrer absoluten Größe. Hier, im Gegenteil, ist der relative Größenwechsel im Wert der Arbeitskraft das Resultat eines absoluten Größenwechsels des Mehrwerts.

549:2 Da das Wertprodukt, worin sich der Arbeitstag darstellt, mit seiner eignen Verlängerung wächst, können Preis der Arbeitskraft und Mehrwert gleichzeitig wachsen, sei es um gleiches oder ungleiches Inkrement.

Dies gleichzeitige Wachstum ist also in zwei Fällen möglich, bei absoluter Verlängerung des Arbeitstags und bei wachsender Intensität der Arbeit ohne solche Verlängerung.

549:3 Mit verlängertem Arbeitstag kann der Preis der Arbeitskraft unter ihren Wert fallen, obgleich er nominell unverändert bleibt oder selbst steigt. Der Tageswert der Arbeitskraft ist nämlich, wie man sich erinnern wird, geschätzt auf ihre normale Durchschnittsdauer oder die normale Lebensperiode des Arbeiters und auf entsprechenden, normalen, der Menschennatur angemessenen Umsatz von Lebenssubstanz in

formity with the nature of man. Up to a certain point, the increased wear and tear of labor-power, inseparable from a lengthened working-day, may be compensated by higher wages. But beyond this point the wear and tear increases in geometrical progression, and every condition suitable for the normal reproduction and functioning of labor-power is suppressed. The price of labor-power and the degree of its exploitation cease to be commensurable quantities.

¹⁴ “The amount of labor which a man had undergone in the course of 24 hours might be approximately arrived at by an examination of the chemical changes which had taken place in his body, changed forms in matter indicating the anterior exercise of dynamic force.” (Grove: “On the Correlation of Physical Forces.”)

One sees that the effects of shortening the workday are not symmetric to those of lengthening it. This is why Marx investigated them separately.

IV. Simultaneous Variations in Length, Productivity, and Intensity of Labor

664:2 Obviously, a large number of combinations are here possible. Any two of the factors may vary and the third remain constant, or all three may vary at once. They may vary either in the same or in different degrees, in the same or in opposite directions, with the result that the variations counteract one another, either wholly or in part. Nevertheless the analysis of every possible case is easy in view of the results given in I., II., and III. The effect of every possible combination may be found by treating each factor in turn as variable, and the other two constant for the time being.

Bewegung.¹⁴ Bis zu einem gewissen Punkt kann der von Verlängerung des Arbeitstags untrennbare größere Verschleiß der Arbeitskraft durch größeren Ersatz kompensiert werden. Über diesen Punkt hinaus wächst der Verschleiß in geometrischer Progression und werden zugleich alle normalen Reproduktions- und Betätigungsbedingungen der Arbeitskraft zerstört. Der Preis der Arbeitskraft und ihr Exploitationsgrad hören auf, miteinander kommensurable Größen zu sein.

¹⁴ „Die Arbeitsmenge, die ein Mann im Laufe von 24 Stunden geleistet hat, kann annähernd durch eine Untersuchung der chemischen Veränderungen bestimmt werden, die in seinem Körper stattgefunden haben, da veränderte Formen in der Materie die vorherige Anspannung von Bewegungskraft anzeigen.“ (Grove, „On the Correlation of Physical Forces“, [p. 308, 309].)

550:1 Es ist hier offenbar eine große Anzahl Kombinationen möglich. Je zwei Faktoren können variieren und einer konstant bleiben, oder alle drei können gleichzeitig variieren. Sie können in gleichem oder ungleichem Grad variieren, in derselben oder entgegengesetzter Richtung, ihre Variationen sich daher teilweise oder ganz aufheben. Indes ist die Analyse aller möglichen Fälle nach den unter I, II und III gegebenen Aufschlüssen leicht. Man findet das Resultat jeder möglichen Kombination, indem man der Reihe nach je einen Faktor als variabel und die andren zunächst als konstant behandelt.

This should not be understood to mean that one can use a linear superposition of the earlier results. E.g. if the working day was shortened, it was not realistic to assume that production and intensity are constant. Each case must still be considered separately, because each case might lead to a different σ transform.

We shall, therefore, notice, and that briefly, but two important cases.

Wir nehmen hier daher nur noch kurze Notiz von zwei wichtigen Fällen.

IV.a. [Fall in Productivity Compensated by a Longer Working-Day]

664:3 A. Diminishing productive power of labor with a simultaneous lengthening of the working-day.

664:4/o In speaking of diminishing productive power of labor, we here refer to diminution in those industries whose products determine the value of labor-power; such a diminution, for example, as results from decreasing fertility of the soil, and from the corresponding dearness of its products. Take the working-day at 12 hours and the value created by it at \$1.44, of which one half replaces the value of the labor-power, the other forms the surplus-value. Suppose, in consequence of the increased dearness of the products of the soil, that the value of labor-power rises from 72 cents to 96, and therefore the necessary labor-time from 6 hours to 8.

550:2 1. Abnehmende Produktivkraft der Arbeit mit gleichzeitiger Verlängerung des Arbeitstags:

550:3 Wenn wir hier von abnehmender Produktivkraft der Arbeit sprechen, so handelt es sich von Arbeitszweigen, deren Produkte den Wert der Arbeitskraft bestimmen, also z.B. von abnehmender Produktivkraft der Arbeit infolge zunehmender Unfruchtbarkeit des Bodens und entsprechender Verteuerung der Bodenprodukte. Der Arbeitstag sei zwölfstündig, sein Wertprodukt 6 sh., wovon die Hälfte den Wert der Arbeitskraft ersetze, die andre Hälfte Mehrwert bilde. Der Arbeitstag zerfällt also in 6 Stunden notwendiger Arbeit und 6 Stunden Mehrarbeit. Infolge der Verteuerung der Bodenprodukte steige der Wert der Arbeitskraft von 3 auf 4 sh., also die notwendige Arbeitszeit von 6 auf 8 Stunden.

What happens to surplus-value in this situation depends on whether the working-day is lengthened, and by how much. \Downarrow Marx discusses three cases, each of which keeps a different magnitude constant (presumably due to the action of a different generative mechanism):

If there be no change in the length of the working-day, the surplus-labor would fall from 6 hours to 4, the surplus-value from 72 cents to 48. If the day be lengthened by 2 hours, i.e., from 12 hours to 14, the surplus-labor remains at 6 hours, the surplus-value at 72 cents, but the surplus-value decreases compared with the value of labor-power, as

Bleibt der Arbeitstag unverändert, so fällt die Mehrarbeit von 6 auf 4 Stunden, der Mehrwert von 3 auf 2 sh. Wird der Arbeitstag um 2 Stunden verlängert, also von 12 auf 14 Stunden, so bleibt die Mehrarbeit 6 Stunden, der Mehrwert 3 sh., aber seine Größe fällt im Vergleich zum Wert der Arbeitskraft, gemessen durch die notwendige

measured by the necessary labor-time. If the day be lengthened by 4 hours, viz., from 12 hours to 16, the proportional magnitudes of surplus-value and value of labor-power, of surplus-labor and necessary labor, continue unchanged, but the absolute magnitude of surplus-value rises from 72 cents to 96, that of the surplus-labor from 6 hours to 8, an increment of 33 1/3%.

↑ The organizing principle behind the above list was the different generative mechanisms keeping the different magnitudes constant. ↓ Next, Marx gives a summary which emphasizes the possible outcomes. The first case of a constant working-day and diminishing surplus-value is left out. Marx only discusses outcomes in which surplus-value is at least absolutely constant (although relatively it may fall):

Therefore, with diminishing productive power of labor and a simultaneous lengthening of the working-day, the absolute magnitude of surplus-value may continue unaltered, at the same time that its relative magnitude diminishes; its relative magnitude may continue unchanged, at the same time that its absolute magnitude increases; and, provided the lengthening of the day be sufficient, both may increase.

Next, Marx brings a specific historical example of such a lengthening of the working-day. Between 1799 and 1815, prices of necessities increased, and daily wages increased as well, although not as much. This did not cause a fall in profits, although Ricardo and West had assumed so, since they overlooked the increase in intensity and length of the work day.

665:1/o In the period between 1799 and 1815 the increasing price of provisions led in England to a nominal rise in wages, although the real wages, expressed in the workers' means of consumption, fell. From this fact West and Ricardo drew the conclusion, that the diminution in the productive power of agricultural labor had brought about a fall in the rate of surplus-value, and they made this assumption of a fact that existed only in their imaginations, the starting-point of important investigations into the relative magnitudes of wages, profits, and

Arbeit. Wird der Arbeitstag um 4 Stunden verlängert, von 12 auf 16 Stunden, so bleiben die proportionellen Größen von Mehrwert und Wert der Arbeitskraft, Mehrarbeit und notwendiger Arbeit unverändert, aber die absolute Größe des Mehrwerts wächst von 3 auf 4 sh., die der Mehrarbeit von 6 auf 8 Arbeitsstunden, also um 1/3 oder 33 1/3%.

Bei abnehmender Produktivkraft der Arbeit und gleichzeitiger Verlängerung des Arbeitstags kann also die absolute Größe des Mehrwerts unverändert bleiben, während seine proportionelle Größe fällt; seine proportionelle Größe kann unverändert bleiben, während seine absolute Größe wächst, und, je nach dem Grad der Verlängerung, können beide wachsen.

551:1 Im Zeitraume von 1799 bis 1815 führten die steigenden Preise der Lebensmittel in England eine nominelle Lohnsteigerung herbei, obwohl die wirklichen, in Lebensmitteln ausgedrückten Arbeitslöhne fielen. Hieraus schlossen West und Ricardo, daß die Verminderung der Produktivität der Ackerbauarbeit ein Fallen der Mehrwertssrate verursacht hätte, und machten diese nur in ihrer Phantasie gültige Annahme zum Ausgangspunkt wichtiger Analysen über das relative Größenverhältnis von Arbeitslohn, Profit und Grundrente. Dank

rent. But, as a matter of fact, surplus-value had at that time, thanks to the increased intensity of labor, and to the prolongation of the working-day, increased both in absolute and relative magnitude. This was the period in which the right to prolong the hours of labor to an outrageous extent was established;¹⁵ the period that was especially characterised by an accelerated accumulation of capital here, by pauperism there.¹⁶

Marx refers here to West's [We15] and Ricardo's [Ric15]. These pamphlets were contributions to the 1815 controversy about the Corn Laws.

Footnotes 15 and 16 bring quotes from Malthus and the Essays on Political Economy which stress the things Ricardo and West had overlooked, namely, the prolongation and intensification of the working-day.

¹⁵ "Corn and labor rarely march quite abreast; but there is an obvious limit, beyond which they cannot be separated. With regard to the unusual exertions made by the laboring classes in periods of dearness, which produce the fall of wages noticed in the evidence" (namely, before the Parliamentary Committee of Inquiry, 1814–15), "they are most meritorious in the individuals, and certainly favour the growth of capital. But no man of humanity could wish to see them constant and unremitted. They are most admirable as a temporary relief; but if they were constantly in action, effects of a similar kind would result from them, as from the population of a country being pushed to the very extreme limits of its food." (Malthus: "Inquiry into the Nature and Progress of Rent," Lond., 1815, p. 48, note.) All honour to Malthus that he lays stress on the lengthening of the hours of labor, a fact to which he elsewhere in his pamphlet draws attention, while Ricardo and others, in face of the most notorious facts, make invariability in the length of the working-day the groundwork of all their investigations. But the conservative interests, which Malthus served, prevented him from seeing that an unlimited prolongation of the working-day, combined with an extraordinary development of machinery, and the exploitation of women and

der gesteigerten Intensität der Arbeit und der erzwungenen Verlängerung der Arbeitszeit war aber der Mehrwert damals absolut und relativ gewachsen. Es war dies die Periode, worin die maßlose Verlängerung des Arbeitstags sich das Bürgerrecht erwarb,¹⁵ die Periode, speziell charakterisiert durch beschleunigte Zunahme hier des Kapitals, dort des Pauperismus.¹⁶

¹⁵ „Korn und Arbeit stimmen selten vollkommen überein; aber es gibt eine offensichtliche Grenze, über die hinaus sie nicht getrennt werden können. Die außergewöhnlichen Anstrengungen der arbeitenden Klassen in Zeiten der Teuerung, die den Rückgang der Löhne bewirken, von dem in den Aussagen“ (nämlich vor den parlamentarischen Untersuchungsausschüssen 1814/15) „die Rede war, gereichen den einzelnen sehr zum Verdienst und begünstigen sicher das Anwachsen des Kapitals. Aber kein human Empfindender kann wünschen, daß sie ungemindert und ununterbrochen vor sich gehen. Sie sind höchst bewundernswert als zeitweilige Abhilfe; aber wenn sie immer stattfänden, so würden sie ähnlich wirken wie eine im Verhältnis zu ihrer Subsistenz bis an die alleräußerste Grenze getriebene Bevölkerung.“ (Malthus, „Inquiry into the Nature and Progress of Rent“, Lond. 1815, p. 48, Note.) Es macht Malthus alle Ehre, daß er den Ton legt auf die auch die auch an andrer Stelle in seinem Pamphlet direkt besprochene Verlängerung des Arbeitstags, während Ricardo und andre, im Angesicht der schreiendsten Tatsachen, die konstante Größe des Arbeitstags allen ihren Untersuchungen zugrund legen. Aber die konservativen Interessen, deren Knecht Malthus war, hinderten ihn zu sehn, daß die maßlose Verlängerung des

children, must inevitably have made a great portion of the working-class “supernumerary,” particularly whenever the war should have ceased, and the monopoly of England in the markets of the world should have come to an end. It was, of course, far more convenient, and much more in conformity with the interests of the ruling classes, whom Malthus adored like a true priest, to explain this “over-population” by the eternal laws of Nature, rather than by the historical laws of capitalist production.

¹⁶ “A principal cause of the increase of capital, during the war, proceeded from the greater exertions, and perhaps the greater privations of the laboring classes, the most numerous in every society. More women and children were compelled by necessitous circumstances, to enter upon laborious occupations, and former workmen were, from the same cause, obliged to devote a greater portion of their time to increase production.” (Essays on Pol. Econ., in which are illustrated the principal causes of the present national distress. Lond., 1830, p. 248.)

IV.b. [Shortening of Working-Day While Productivity and Intensity of Labor Increase]

666:1 B. Increasing intensity and productive power of labor with simultaneous shortening of the working-day.

666:2/o In one respect, increased productive power and greater intensity of labor have a like effect. They both augment the mass of articles produced in a given time. Both, therefore, shorten that portion of the working-day which the laborer needs to produce his means of subsistence or their equivalent.

Marx first describes the limits beyond which this shortening of the working-day cannot go, and then explores the conditions under which these limits can be reached.

Arbeitstags, zugleich mit außerordentlicher Entwicklung der Maschinerie und der Exploitation der Weiber- und Kinderarbeit, einen großen Teil der Arbeiterklasse „überzählig“ machen mußten, namentlich sobald die Kriegsnachfrage und das englische Monopol des Weltmarkts aufhörten. Es war natürlich weit bequemer und den Interessen der herrschenden Klassen, die Malthus echt pfäffisch idolatriert, viel entsprechender, diese „Übervölkerung“ aus den ewigen Gesetzen der Natur als aus den nur historischen Naturgesetzen der kapitalistischen Produktion zu erklären.

¹⁶ „Eine grundlegende Ursache des Anwachsens des Kapitals während des Krieges lag in den größeren Anstrengungen und vielleicht auch den größeren Entbehrungen der arbeitenden Klassen, die in jeder Gesellschaft die zahlreichsten sind. Durch die Dürftigkeit ihrer Lage wurden mehr Frauen und Kinder genötigt, Arbeit zu nehmen; und jene, die schon früher Arbeiter waren, waren aus demselben Grunde gezwungen, einen größeren Teil ihrer Zeit der Vermehrung der Produktion zu widmen.“ („Essays on Political Econ. in which are illustrated the Principal Causes of the Present National Distress“, London 1830, p. 248.)

551:2 2. Zunehmende Intensität und Produktivkraft der Arbeit mit gleichzeitiger Verkürzung des Arbeitstags:

552:1 Gesteigerte Produktivkraft der Arbeit und ihre wachsende Intensität wirken nach einer Seite hin gleichförmig. Beide vermehren die in jedem Zeitabschnitt erzielte Produktenmasse. Beide verkürzen also den Teil des Arbeitstags, den der Arbeiter zur Produktion seiner Lebensmittel oder ihres Äquivalents braucht.

The minimum length of the working-day is fixed by this necessary but contractible portion of it.

↓ Under capitalism this minimal limit of the working-day can never be reached. Can it be reached under socialism? Yes it can, but in this case the necessary labor itself will be lengthened:

If the whole working-day were to shrink to the length of this portion, surplus-labor would vanish, a consummation utterly impossible under the régime of capital. Only a removal of the capitalist form of production allows to reduce the length of the working-day to the necessary labor-time. But, other things being equal, the latter would in that case extend its limits. On the one hand, because the notion of “means of subsistence” would considerably expand, and the laborer would lay claim to an altogether different standard of life. On the other hand, because a part of what is now surplus-labor, would then count as necessary labor; I mean the labor of forming a fund for reserve and accumulation.

↑ This is one of the few places in *Capital* where Marx speaks about socialism. ↓ While the previous paragraph emphasized the similarity of the effects of intensity and productivity, the next paragraph makes an interesting remark regarding the differences between higher productivity and higher intensity of labor: Higher productivity is a cause and higher intensity an effect of the shortening of the labor time.

667:1 The more the productive power of labor increases, the more can the working-day be shortened; and the more the working-day is shortened, the more can the intensity of labor increase.

Besides higher productivity in the direct labor process, Marx mentions two more ways of economizing the overall expenditure of labor in society: the economy of means of production, and the avoidance of the waste of labor outside the production of commodities.

From a social point of view, the productivity of labor can also be increased by its economy, increases in the same ratio as the economy of labor, which includes not only econ-

Die absolute Minimalgrenze des Arbeitstags wird überhaupt gebildet durch diesen seinen notwendigen, aber kontraktiblen Bestandteil.

Schrumpfte darauf der ganze Arbeitstag zusammen, so verschwände die Mehrarbeit, was unter dem Regime des Kapitals unmöglich. Die Beseitigung der kapitalistischen Produktionsform erlaubt, den Arbeitstag auf die notwendige Arbeit zu beschränken. Jedoch würde die letztere, unter sonst gleichbleibenden Umständen, ihren Raum ausdehnen. Einerseits weil die Lebensbedingungen des Arbeiters reicher und seine Lebensansprüche größer. Andererseits würde ein Teil der jetzigen Mehrarbeit zur notwendigen Arbeit zählen, nämlich die zur Erzielung eines gesellschaftlichen Reserve- und Akkumulationsfonds nötige Arbeit.

552:2 Je mehr die Produktivkraft der Arbeit wächst, um so mehr kann der Arbeitstag verkürzt werden, und je mehr der Arbeitstag verkürzt wird, desto mehr kann die Intensität der Arbeit wachsen.

Gesellschaftlich betrachtet, wächst die Produktivität der Arbeit auch mit ihrer Ökonomie. Diese schließt nicht nur die Ökonomisierung der Produktionsmittel ein, sondern

omy of the means of production, but also the avoidance of all useless labor.

⇓ This last-mentioned economy cannot be achieved in capitalism:

The capitalist mode of production, while on the one hand enforcing economy in each individual business, on the other hand begets, by its anarchical system of competition, the most outrageous squandering of labor-power and of the social means of production, not to mention the creation of a vast number of employments, at present indispensable, but in themselves superfluous.

The inequality of the distribution of labor between the classes is the “absolute limit” preventing this waste of labor.

667:2 The intensity and productive power of labor being given, the time which society is bound to devote to material production is shorter, and as a consequence, the time at its disposal for the free development, intellectual and social, of the individual is greater, in proportion as the work is more and more evenly divided among all the able-bodied members of society, and as a particular class is more and more deprived of the power to shift the natural burden of labor from its own shoulders to those of another layer of society. In this direction, the shortening of the working-day finds at last a limit in the generalisation of labor. In capitalist society spare time is acquired for one class by converting the whole life-time of the masses into labor-time.

die Vermeidung aller nutzlosen Arbeit.

Während die kapitalistische Produktionsweise in jedem individuellen Geschäft Ökonomie erzwingt, erzeugt ihr anarchisches System der Konkurrenz die maßlose Verschwendung der gesellschaftlichen Produktionsmittel und Arbeitskräfte, neben einer Unzahl jetzt unentbehrlicher, aber an und für sich überflüssiger Funktionen.

552:3 Intensität und Produktivkraft der Arbeit gegeben, ist der zur materiellen Produktion notwendige Teil des gesellschaftlichen Arbeitstags um so kürzer, der für freie, geistige und gesellschaftliche Betätigung der Individuen eroberte Zeitteil also um so größer, je gleichmäßiger die Arbeit unter alle werkfähigen Glieder der Gesellschaft verteilt, je weniger eine Gesellschaftsschicht die Naturnotwendigkeit der Arbeit von sich selbst ab- und einer andren Schichte zuwälzen kann. Die absolute Grenze für die Verkürzung des Arbeitstags ist nach dieser Seite hin die Allgemeinheit der Arbeit. In der kapitalistischen Gesellschaft wird freie Zeit für eine Klasse produziert durch Verwandlung aller Lebenszeit der Massen in Arbeitszeit.

Question 867 Explain how the generality of labor is an absolute limit to the shortening of the labor that has to be performed in capitalist society.

This discussion of the society-wide economizing of labor ends the chapter. The need for more free time for the working-class is a pervasive theme in *Capital*, see 414:1/o and elsewhere.

18. Various Formulae for the Rate of Surplus-Value

In this short chapter, Marx argues that s/v is the correct formula for the rate of surplus-value, while the formula $s/(s+v)$ is a “false” expression of the degree of exploitation (668:2/o). Such an argument is incomprehensible to modern economists, who would say that it is a matter of definition, and that it is in principle possible to work with either definition. How can a mathematical definition be false?

To answer this we need to know that Marx had a different understanding of mathematics than most modern mathematicians. In the modern understanding, a *variable* is a number which does not have a given value but can assume different values. For Marx, however, a variable is a number in motion. The concept of motion is absent in modern math. Surplus-value comes from the fact that part of capital is not constant but variable, it moves. The rate of surplus-value is the rate at which that part of the capital moves which is in motion.

While this chapter discusses a formula used by the economists which is a false expression of reality, the next chapter will discuss something much more pernicious, namely, a social form on the surface of the economy, used by the surface agents every day, which is a false expression of the underlying relations.

668:1 We have seen that the rate of surplus-value is represented by the following formulae:

553:1 Man hat gesehen, daß die Rate des Mehrwerts sich darstellt in den Formeln:

$$\begin{aligned} I. \quad & \frac{\text{surplus-value}}{\text{variable capital}} \left(\frac{s}{v} \right) \\ &= \frac{\text{surplus-value}}{\text{value of labor-power}} \\ &= \frac{\text{surplus-labor}}{\text{necessary labor}}. \end{aligned}$$

$$\begin{aligned} I. \quad & \frac{\text{Mehrwert}}{\text{Variables Kapital}} \left(\frac{m}{v} \right) \\ &= \frac{\text{Mehrwert}}{\text{Wert der Arbeitskraft}} \\ &= \frac{\text{Mehrarbeit}}{\text{Notwendige Arbeit}}. \end{aligned}$$

The first two of these formulae represent, as a ratio of values, that which, in the third, is represented as a ratio of the times during which those values are produced. These formulae, which can be used interchangeably, are conceptually strict.

Die zwei ersten Formeln stellen als Verhältnis von Werten dar, was die dritte als Verhältnis der Zeiten, worin diese Werte produziert werden. Diese einander ersetzenden Formeln sind begrifflich streng.

↑ “Conceptually strict” presumably means that these formulas are an accurate representation of the concepts involved. ↓ Classical political economy contains the essence of these formulas but not the formulas themselves:

We therefore find them implied, but not worked out consciously, in classical Political Economy. | Man findet sie daher wohl der Sache nach, aber nicht bewußt ausgearbeitet in der klassischen politischen Ökonomie.

↓ However if classical political economy does use explicit formulas, they have a different form:

There we meet, however, with the following derivative formulae. | Hier begegnen wir dagegen den folgenden abgeleiteten Formeln:

$$\begin{aligned} \text{II. } & \frac{\text{surplus-labor}}{\text{working-day}} \\ &= \frac{\text{surplus-value}}{\text{value of the product}} \\ &= \frac{\text{surplus-product}}{\text{total product}}. \end{aligned}$$

$$\begin{aligned} \text{II. } & \frac{\text{Mehrarbeit}}{\text{Arbeitstag}} \\ &= \frac{\text{Mehrwert}}{\text{Produktenwert}} \\ &= \frac{\text{Mehrprodukt}}{\text{Gesamtprodukt}}. \end{aligned}$$

One and the same ratio is expressed here alternately as a ratio of labor-times, of the values in which those labor-times are embodied, and of the products in which those values exist. It is of course understood that, by “Value of the Product”, is meant only the value newly created in a working-day, the constant part of the value of the product being excluded.

↑ These formulas are mathematically equivalent expressions of a certain proportion, ↓ but this proportion is a false expression of the rate of exploitation.

668:2/o In all of these formulae (II.), the actual degree of exploitation of labor, or the rate of surplus-value, is falsely expressed.

↓ In order to show that this is a false expression Marx brings a numerical example:

Let the working-day be 12 hours. Then, making the same assumptions as in former instances, the real degree of exploitation of labor will be represented in the following proportions.

Eine und dieselbe Proportion ist hier abwechselnd ausgedrückt in der Form der Arbeitszeiten, der Werte, worin sie sich verkörpern, der Produkte, worin diese Werte existieren. Es wird natürlich unterstellt, daß unter Wert des Produkts nur das Wertprodukt des Arbeitstags zu verstehn, der konstante Teil des Produktenwerts aber ausgeschlossen ist.

553:4–554:1 In allen diesen Formeln ist der wirkliche Exploitationsgrad der Arbeit oder die Rate des Mehrwerts falsch ausgedrückt.

Der Arbeitstag sei 12 Stunden. Mit den andren Annahmen unsres früheren Beispiels stellt sich in diesem Fall der wirkliche Exploitationsgrad der Arbeit dar in den Proportionen:

18. Formulae for Rate of Surplus-Value

$$\begin{aligned} & \frac{6 \text{ hours surplus labor}}{6 \text{ hours necessary labor}} = \\ & \frac{\text{surplus-value of 3 sh.}}{\text{variable capital of 3 sh.}} = 100\%. \end{aligned}$$

From formulae II. we get very differently,

$$\begin{aligned} & \frac{6 \text{ hours surplus-labor}}{\text{Working-day of 12 hours}} = \\ & \frac{\text{surplus-value 3 sh.}}{\text{value created of 6 sh.}} = 50\%. \end{aligned}$$

↓ This second formula does not express the rate of self-expansion of the variable capital but the ratio in which the product is divided between capitalist and laborer.

669:1/o These derivative formulae express, in reality, only the proportion in which the working-day, or the value produced by it, is divided between capitalist and laborer.

↓ As in chapter Nineteen, Marx’s first proof that this expression is false is a quantitative proof. If the derivative formula were correct, the rate of surplus-value could not be 100 percent or higher.

If considered as immediate expressions of the degree of self-expansion of capital, they give rise to the following erroneous law: Surplus-labor or surplus-value can never reach 100%.¹⁷

↓ Such an erroneous law can be found in the literature.

¹⁷ Thus, e.g., in “Dritter Brief an v. Kirchmann von Rodbertus. Widerlegung der Ricardo’schen Lehre von der Grundrente und Begründung einer neuen Rententheorie.” Berlin, 1851. I shall return to this letter later on; in spite of its erroneous theory of rent, it sees through the nature of capitalist production.

↓ The rest of the footnote is a digression by Engels:

^{17 ctd} {Note added in the 3rd German edition: It may be seen from this how favorably Marx judged his predecessors, whenever he found in them real progress, or new and sound ideas. The subsequent publications of Robertus’ letters to Rud. Meyer has shown that the above acknowl-

$$\begin{aligned} & \frac{6 \text{ Stunden Mehrarbeit}}{6 \text{ Stunden notwendige Arbeit}} = \\ & \frac{\text{Mehrwert von 3 sh.}}{\text{Variables Kapital von 3 sh.}} = 100\%. \end{aligned}$$

Nach den Formeln II erhalten wir dagegen:

$$\begin{aligned} & \frac{6 \text{ Stunden Mehrarbeit}}{\text{Arbeitstag von 12 Stunden}} = \\ & \frac{\text{Mehrwert von 3 sh.}}{\text{Wertprodukt von 6 sh.}} = 50\%. \end{aligned}$$

554:2/o Diese abgeleiteten Formeln drücken in der Tat die Proportion aus, worin der Arbeitstag oder sein Wertprodukt sich zwischen Kapitalist und Arbeiter teilt.

Gelten sie daher als unmittelbare Ausdrücke des Selbstverwertungsgrades des Kapitals, so gilt das falsche Gesetz: Die Mehrarbeit oder der Mehrwert kann nie 100% erreichen.¹⁷

¹⁷ So z.B. in „Dritter Brief an v. Kirchmann von Rodbertus. Widerlegung der Ricardo’schen Theorie von der Grundrente und Begründung einer neuen Rententheorie“, Berlin 1851. Ich komme später auf diese Schrift zurück, die trotz ihrer falschen Theorie von der Grundrente das Wesen der kapitalistischen Produktion durchschaut.

^{17 ctd} —{Zusatz zur 3. Auf.—Man sieht hier, wie wohlwollend Marx seine Vorgänger beurteilte, sobald er bei ihnen einen wirklichen Fortschritt, einen richtigen neuen Gedanken fand. Inzwischen hat die Veröffentlichung der Rodbertusschen Briefe an Rud. Meyer obige Aner-

edgement by Marx wants restricting to some extent. In those letters this passage occurs: "Capital must be rescued not only from labor, but from itself, and that will be best effected, by treating the acts of the industrial capitalist as economic and political functions, that have been delegated to him with his capital, and by treating his profit as a form of salary, because we still know no other social organization. But salaries may be regulated, and may also be reduced if they take too much from wages. The irruption of Marx into Society, as I may call his book, must be warded off ... Altogether, Marx's book is not so much an investigation into capital, as a polemic against the present form of capital, a form which he confounds with the concept itself of capital." ("Briefe, etc., von Dr. Robertus-Jagetzow, herausgg. von Dr. Rud. Meyer", Berlin 1881, vol. I, pp. 111, 46. Brief von Rodbertus.) To such ideological commonplaces did the bold attack by Robertus in his "social letters" finally dwindle down.—F.E.}

Now Marx explains how these formulae give rise to this law.

Since the surplus-labor is only an aliquot part of the working-day, or since surplus-value is only an aliquot part of the value created, the surplus-labor must necessarily be always less than the working-day, or the surplus-value always less than the total value created.

However this equality is not possible:

In order, however, to attain the ratio of 100/100 they must be equal. In order that the surplus-labor may absorb the whole day (i.e., an average day of any week or year), the necessary labor must sink to zero. But if the necessary labor vanishes, so too does the surplus-labor, since it is only a function of the former.

↑ This mathematical exception is generated by a σ -transform: if the cost of living falls to

kennung einigermaßen eingeschränkt. Da heißt es: „Man muß das Kapital nicht bloß vor der Arbeit, sondern auch vor sich selbst retten, und das geschieht in der Tat am besten, wenn man die Tätigkeit des Unternehmer-Kapitalisten als volks- und staatswirtschaftliche Funktionen auf-faßt, die ihm durch das Kapitaleigentum delegiert sind, und seinen Gewinn als eine Gehaltsform, weil wir noch keine andre soziale Organisation kennen. Gehälter dürfen aber geregelt werden und auch ermäßigt, wenn sie dem Lohn zu viel nehmen. So ist auch der Einbruch von Marx in die Gesellschaft—so möchte ich sein Buch nennen—abzuwehren ... Überhaupt ist das Marxsche Buch nicht sowohl eine Untersuchung über das Kapital als eine Polemik gegen die heutige Kapitalform, die er mit dem Kapitalbegriff selbst verwechselt, woraus eben seine Irrtümer entstehen.“ („Briefe etc. von Dr. Rodbertus-Jagetzow“, herausgg. von Dr. Rud. Meyer, Berlin 1881, I. Bd., p. 111, 48. Brief von Rodbertus.)—In solchen ideologischen Gemeinplätzen versanden die in der Tat kühnen Anläufe der R.'schen „sozialen Briefe“.—F.E.}

Da die Mehrarbeit stets nur einen aliquoten Teil des Arbeitstags oder der Mehrwert stets nur einen aliquoten Teil des Wertprodukts bilden kann, ist die Mehrarbeit notwendigerweise stets kleiner als der Arbeitstag oder der Mehrwert stets kleiner als das Wertprodukt.

Um sich zu verhalten wie 100/100, müßten sie aber gleich sein. Damit die Mehrarbeit den ganzen Arbeitstag absorbiere (es handelt sich hier um den Durchschnittstag der Arbeitswoche, des Arbeitsjahrs usw.), müßte die notwendige Arbeit auf Null sinken. Verschwindet aber die notwendige Arbeit, so verschwindet auch die Mehrarbeit, da letztere nur eine Funktion der erstern.

18. Formulae for Rate of Surplus-Value

zero, then the workers do not have to sell their labor-power. Compare 747:2–750:0. Instead of saying this directly, Marx uses the much more abstract argument that surplus-labor is a function of the necessary labor. This argument reveals at the same time why necessary labor, or the variable capital, must be in the denominator, instead of the total capital.

Question 868 Why is surplus-labor a function of necessary labor, not of the total working-day?

The ratio $\frac{\text{surplus-labor}}{\text{working-day}} = \frac{\text{surplus-value}}{\text{value created}}$ can therefore never reach the limit 100/100, still less rise to $100 + x/100$.

Now Marx explains that this law is a false law, i.e., that the degree of exploitation can rise above 100 percent.

But not so the rate of surplus-value, the real degree of exploitation of labor. Take, e.g., the estimate of L. de Lavergne, according to which the English agricultural laborer gets only 1/4, the capitalist (farmer) on the other hand 3/4 of the product¹⁸ or its value, apart from the question of how the booty is subsequently divided between the capitalist, the landlord, and others. According to this, this surplus-labor of the English agricultural laborer is to his necessary labor as 3:1, which gives a rate of exploitation of 300%.

Footnote 18 has two remarks, unrelated with each other:

¹⁸ That part of the product which merely replaces the constant capital advanced is of course left out in this calculation.—Mr. L. de Lavergne, a blind admirer of England, is inclined to estimate the share of the capitalist too low, rather than too high.

↓ One of the disadvantages of this false expression is that it does not allow for a variable working-day.

670:1 The textbook method of treating the working-day as constant in magnitude became solidified through the use of formulae II., because in them surplus-labor is always compared with a working-day of given length. The same holds good when the repartition of the value produced is exclu-

Die Proportion $\frac{\text{Mehrarbeit}}{\text{Arbeitstag}} = \frac{\text{Mehrwert}}{\text{Wertprodukt}}$ kann also niemals die Grenze 100/100 erreichen und noch weniger auf $100 + x/100$ steigen.

Wohl aber die Rate des Mehrwerts oder der wirkliche Exploitationsgrad der Arbeit. Nimm z.B. die Schätzung des Herrn L. de Lavergne, wonach der englische Ackerbauarbeiter nur 1/4, der Kapitalist (Pächter) dagegen 3/4 des Produkts¹⁸ oder seines Werts erhält, wie die Beute sich immer zwischen Kapitalist und Grundeigentümer usw. nachträglich weiter verteile. Die Mehrarbeit des englischen Landarbeiters verhält sich danach zu seiner notwendigen Arbeit = 3 : 1, ein Prozentsatz der Exploitation von 300%.

¹⁸ Der Teil des Produkts, der nur das ausgelegte konstante Kapital ersetzt, ist bei dieser Rechnung selbstverständlich abgezogen.—Herr L. de Lavergne, blinder Bewunderer Englands, gibt eher zu niedriges als zu hohes Verhältnis.

555:1 Die Schulmethode, den Arbeitstag als konstante Größe zu behandeln, wurde durch Anwendung der Formeln II befestigt, weil man hier die Mehrarbeit stets mit einem Arbeitstag von gegebener Größe vergleicht. Ebenso, wenn die Teilung des Wertprodukts ausschließlich ins Auge ge-

sively kept insight. The working-day that has already been realized in given value, must necessarily be a day of given length.

↓ The necessity of this false form is hinted at in the text between dashes:

670:2/o The habit of representing surplus-value and value of labor-power as fractions of the value created—a habit that originates in the capitalist mode of production itself, and whose import will hereafter be disclosed—conceals the very transaction that characterizes capital, namely the exchange of variable capital for living labor-power, and the consequent exclusion of the laborer from the product. Instead of the real fact, we have false semblance of an association, in which laborer and capitalist divide the product in proportion to the different elements which they respectively contribute towards its formation.¹⁹

The formula $s/s+v$ hides the specific character of the capital relation because the denominator $s+v$ suggests that capitalist and laborer first produce the total new value together and then divide it up in proportion to their contribution. But the capitalist did not contribute s ; s is labor performed by the worker, not by the capitalist. It is also not a division of the product between two partners because the worker has already sold his or her labor-power to the capitalist when the production process begins, he is no longer a partner who has a claim on the product. The fact that his wage is lower than the value produced comes from the fact that the worker is excluded from the means of production and therefore must give up part of his own labor in order to be allowed to feed himself. There is a deep social relation between workers and capitalists, but it is a class relation in which the capitalists appropriates for himself the labor of the worker, it is not an association or partnership.

¹⁹ All well-developed forms of capitalist production being forms of co-operation, nothing is, of course, easier, than to make abstraction from their antagonistic character, and to transform them by a word into some form of free association, as is done by A. de Laborde in “De l’Esprit d’Association dans tout les interets de la communaut ,” Paris 1818. H. Carey, the Yankee, occassionally performs this conjuring trick with like success, even with the relations result-

fa t wird. Der Arbeitstag, der sich bereits in einem Wertprodukt vergegenst ndlicht hat, ist stets ein Arbeitstag von gegebenen Grenzen.

555:2 Die Darstellung von Mehrwert und Wert der Arbeitskraft als Bruchteilen des Wertprodukts—eine Darstellungsweise, die  brigens aus der kapitalistischen Produktionsweise selbst erw chst und deren Bedeutung sich sp ter erschlie en wird—versteckt den spezifischen Charakter des Kapitalverh ltnisses, n mlich den Austausch des variablen Kapitals mit der lebendigen Arbeitskraft und den entsprechenden Ausschlu  des Arbeiters vom Produkt. An die Stelle tritt der falsche Schein eines Assoziationsverh ltnisses, worin Arbeiter und Kapitalist das Produkt nach dem Verh ltnis seiner verschiedenen Bildungsfaktoren teilen.¹⁹

555:2 Die Darstellung von Mehrwert und Wert der Arbeitskraft als Bruchteilen des Wertprodukts—eine Darstellungsweise, die  brigens aus der kapitalistischen Produktionsweise selbst erw chst und deren Bedeutung sich sp ter erschlie en wird—versteckt den spezifischen Charakter des Kapitalverh ltnisses, n mlich den Austausch des variablen Kapitals mit der lebendigen Arbeitskraft und den entsprechenden Ausschlu  des Arbeiters vom Produkt. An die Stelle tritt der falsche Schein eines Assoziationsverh ltnisses, worin Arbeiter und Kapitalist das Produkt nach dem Verh ltnis seiner verschiedenen Bildungsfaktoren teilen.¹⁹

¹⁹ Da alle entwickelten Formen des kapitalistischen Produktionsprozesses Formen der Kooperation sind, ist nat rlich nichts leichter, als von ihrem spezifisch antagonistischen Charakter zu abstrahieren und sie so in freie Assoziationsformen umzufabeln, wie in des Grafen A. de Laborde, „De l’Esprit de l’Association dans tous les int r ts de la Communaut “, Paris 1818. Der Yankee H. Carey bringt dies Kunstst ck mit demselben Erfolg gelegentlich selbst f r die Verh lt-

18. Formulae for Rate of Surplus-Value

ing from slavery.

↓ Although formulas *II* do not correctly express the underlying causality, they contain enough information that the correct formulas can be derived from them:

671:1 By the way, formulae *II* can at any time be reconverted into formulae *I*. If, for instance, we have $\frac{\text{surplus-labor of 6 hours}}{\text{working-day of 12 hours}}$, then the necessary labor-time being 12 hours less the surplus-labor of 6 hours, we get the following result,

$$\frac{\text{surplus-labor of 6 hours}}{\text{necessary labor of 6 hours}} = \frac{100}{100}.$$

↑ This last remark, indicating that the mistake can easily be fixed, concludes the argument why formula *II* is wrong and formula *I* is right.

Question 869 Why does Marx say s/v is right, but $s/(s+v)$ is wrong?

Question 870 Why must the value of labor-power (and not the value produced) be in the denominator of the mathematical expression for the rate of surplus-value?

After this, Marx comments about a third formula which he had also occasionally used:

671:2/o There is a third formula which I have occassionally already anticipated; it is

$$\begin{aligned} \text{III.} \quad & \frac{\text{surplus-value}}{\text{value of labor-power}} \\ &= \frac{\text{surplus-labor}}{\text{necessary labor}} \\ &= \frac{\text{unpaid labor}}{\text{paid labor}}. \end{aligned}$$

After the investigations we have given above, it is no longer possible to be misled, by the formula $\frac{\text{unpaid labor}}{\text{paid labor}}$, into concluding that the capitalist pays for labor and not for labor-power. This formula is only a popular expression for $\frac{\text{surplus-labor}}{\text{necessary labor}}$.

↑ Of course, in the upcoming chapter Nineteen Marx will explain that on the surface of the economy, the price of labor-power is indeed paid in the form of a price of labor. But this should not mislead one to think that the commodity which changes hands between capitalist and laborer is the laborer’s labor. It is his labor-power, and it is paid as such. Marx is trying

nisse des Sklavensystems fertig.

555:3  brigens sind die Formeln *II* stets in die Formeln *I* r ckverwandelnbar. Haben wir z.B. $\frac{\text{Mehrarbeit von 6 Stunden}}{\text{Arbeitstag von 12 Stunden}}$, so ist die notwendige Arbeitszeit = Arbeitstag von zw lf Stunden minus Mehrarbeit von sechs Stunden, und so ergibt sich:

$$\frac{\text{Mehrarbeit von 6 Stunden}}{\text{Notwendige Arbeit von 6 Stunden}} = \frac{100}{100}.$$

556:1 Eine dritte Formel, die ich gelegentlich schon antizipiert habe, ist:

$$\begin{aligned} \text{III.} \quad & \frac{\text{Mehrwert}}{\text{Wert der Arbeitskraft}} \\ &= \frac{\text{Mehrarbeit}}{\text{Notwendige Arbeit}} \\ &= \frac{\text{Unbezahlte Arbeit}}{\text{Bezahlte Arbeit}}. \end{aligned}$$

556:2 Das Mi verst ndnis, wozu die Formel $\frac{\text{Unbezahlte Arbeit}}{\text{Bezahlte Arbeit}}$ verleiten k nnte, als zahle der Kapitalist die Arbeit und nicht die Arbeitskraft, f llt nach der fr her gegebenen Entwicklung fort. $\frac{\text{Unbezahlte Arbeit}}{\text{Bezahlte Arbeit}}$ ist nur popul rer Ausdruck f r $\frac{\text{Mehrarbeit}}{\text{Notwendige Arbeit}}$.

to make the same point here. The words “paid labor” and “unpaid labor” should not mislead one to think that the commodity that is traded is labor.

⇓ Now Marx describes what is really going on. The category of paid and unpaid labor is not a category of exchange, but it pertains to the consumption of the labor-power by the capitalist. As such, the formula is appropriate.

The capitalist pays the value, or a price deviating from the value, of labor-power, and receives in exchange the disposal of the living labor-power itself. His usufruct is spread over two periods. During one the laborer produces a value that is only equal to the value of his labor-power; he produces its equivalent. Thus the capitalist receives in return for his advance of the price of the labor-power, a product ready made in the market. During the other period, the period of surplus-labor, the usufruct of the labor-power creates a value for the capitalist, that costs him no equivalent.²⁰ This expenditure of labor-power comes to him gratis. In this sense it is that surplus-labor can be called unpaid labor.

²⁰ Although the Physiocrats could not penetrate the mystery of surplus-value, yet this much was clear to them, viz., that it is “une richesse independante et disponible qu’il (the possessor) n’a point achetée et qu’il vend.” (Turgot: “Réflexions sur la Formation et la Distribution des Richesses”, p. 11.)

672:1 Capital, therefore, is not only, as Adam Smith says, the command over labor. It is essentially the command over unpaid labor. All surplus-value, whatever particular form (profit, interest, or rent), it may subsequently crystallize into, is in substance the materialization of unpaid labor. The secret of the self-expansion of capital resolves itself into having the disposal of a definite quantity of other people’s unpaid labor.

Der Kapitalist zahlt den Wert, resp. davon abweichenden Preis der Arbeitskraft und erhält im Austausch die Verfügung über die lebendige Arbeitskraft selbst. Seine Nutznießung dieser Arbeitskraft zerfällt in zwei Perioden. Während der einen Periode produziert der Arbeiter nur einen Wert = Wert seiner Arbeitskraft, also nur ein Äquivalent. Für den vorgeschossenen Preis der Arbeitskraft erhält so der Kapitalist ein Produkt vom selben Preis. Es ist, als ob er das Produkt fertig auf dem Markt gekauft hätte. In der Periode der Mehrarbeit dagegen bildet die Nutznießung der Arbeitskraft Wert für den Kapitalisten, ohne ihm einen Wertersatz zu kosten.²⁰ Er hat diese Flüssigmachung der Arbeitskraft umsonst. In diesem Sinn kann die Mehrarbeit unbezahlte Arbeit heißen.

²⁰ Obgleich die Physiokraten das Geheimnis des Mehrwerts nicht durchschauten, war ihnen doch so viel klar, daß er „ein unabhängiger und verfügbarer Reichtum ist, den er“ (der Besitzer davon) „nicht gekauft hat und den er verkauft“. (Turgot, „Réflexions sur la Formation et la Distribution des Richesses“, p. 11.)

556:3 Das Kapital ist also nicht nur Kommando über Arbeit, wie A. Smith sagt. Es ist wesentlich Kommando über unbezahlte Arbeit. Aller Mehrwert, in welcher besondern Gestalt von Profit, Zins, Rente usw. er sich später kristallisiert, ist seiner Substanz nach Materiatur unbezahlter Arbeitszeit. Das Geheimnis von der Selbstverwertung des Kapitals löst sich auf in seine Verfügung über ein bestimmtes Quantum unbezahlter frem-

| der Arbeit.

Part VI.

Wages

19. The Transformation of the Value (and Respectively the Price) of Labor-Power into a Wage Based on Labor

What is the difference between “value (or price) of labor-power” and “wage”? Why does Marx speak here of a *transformation*? Answer: The German word for “wage,” “*Arbeits-lohn*,” literally means “wage of labor.” The word itself specifies that the wage is a payment based on the *labor* performed.

The title above uses the translation “wage based on labor” recommend here, although both say “wages.”
Moore-Aveling and Fowkes only

The transformation is therefore the following: although the worker is selling his labor *power*, his pay is based on the *labor* performed. If the worker were paid directly for his labor *power*, he would report to the employer his expenses necessary so that he can show up for work every day, and would be reimbursed for these expenses. In return, he would have to work a “normal” working day (whose determination has been described in chapter Ten). Clearly, this is not how these transactions are handled. The worker is paid by the hour or by his output, i.e., he is not paid for his labor *power* but for the *labor* actually performed, which is either measured by time or output. Not only the form of payment but also the delivery of the commodity sold by the worker looks exactly as if the worker was selling his labor, not his labor-power.

On the surface of the economy one can therefore say that labor is traded as a commodity which has a price. This is not an illusion but reality. But despite this dance on the surface, the commodity which the worker *really* sells to the capitalist is not labor but labor-power.

Perhaps the following example will clarify the distinction. You buy a large bottle of wine and drink it all down so that you get drunk. Is the money you give the sales clerk in the wine store paid for the wine or for getting drunk? For the wine of course. The money covers the cost of producing the wine, not the benefits of getting drunk. You use the money to get the wine, and the wine to get drunk. Had you used the wine in such a way that it did not make you drunk you still would have had to pay the same amount of money for the wine. Now assume you make an arrangement with the wine seller of the following sort: You take

a blood test after drinking the wine and then pay the store clerk according to how drunk you are. This would be a transformation of the price of wine into a price of getting drunk. Needless to say, such a payment arrangement would not be practical. The wine seller would say: “I don’t care what you are using the wine for, just pay me for the bottle and get out of here.”

If the employer buys your labor-power but pays you for how much you work, this is like buying wine from you and paying you according to how drunk he got. And here it even makes sense as a practical procedure. You, the seller of labor-power, have to be present anyway when your employer consumes your labor-power; after all you are the one who has to do the work. And the payment by labor performed gives you the incentive, or say better coerces you, to work hard. On the one hand, therefore, the wage form is a form of coercion whose necessity is generally acknowledged. Without it, the capitalist would not be able to get much labor out of his workers. But on the other hand this wage form also has the side effect of making the worker believe that all his labor is paid, thus hiding exploitation. In the present chapter, Marx stresses the importance of this side effect. It performs a function essential for capitalism; capitalism could not function if exploitation were not hidden.

Question 871 *Both the fetish-like character of the commodity and the mystification of the wage form are important pillars of capitalism. How are these two pillars related to each other?*

Question 872 *Your employer gives you your paycheck. How do you know your pay is based on your labor and not your labor-power (and why does it matter)?*

To the worker it seems natural that he is paid for his labor. After selling his labor-power on the market, he cannot turn around to buy the things he needs, and then go home and enjoy them. First he must show up at work and work many arduous hours. What he *actually* gives the capitalist is therefore his labor. He must be there and witness, often in a painful way, how the capitalist consumes the commodity he sold him. This makes it natural to think the wage contract is a contract in which he sells his labor to the capitalist. If his wage is low this is a sign that the productivity of his labor is low. Also the capitalist is often unaware that the commodity labor-power is his only source of surplus-value, since there is no difference between the purchase of labor and the purchase of any other condition of production. This chapter discusses the implications of this pervasive false consciousness.

Question 875 *If it looks like a duck and walks like a duck and quacks like a duck, then it is a duck. What the laborer is selling the capitalist is paid as if it was her labor, and what the laborer gives the capitalist during the day is her labor. Why does Marx not draw the obvious conclusion from this that the laborer is selling her labor, but insist that she is selling her labor-power?*

The starting point of this chapter is not a false consciousness but a surface phenomenon: that what the laborers actually give the capitalists, and also their form of payment, seem

19. From Value of Labor-Power to Wage

to indicate that they sold their *labor*. Marx tries to show that this surface phenomenon is misleading. First he gives several reasons why the commodity traded between laborer and capitalist cannot be labor. Then he gives the correct interpretation of the transaction between capitalist and worker, which requires that a certain step is made consciously that classical political economy had made without being aware of it. If workers and capitalists think that the worker is selling labor and not labor-power, exploitation becomes invisible—because all labor appears as paid labor. Finally, Marx enumerates several specific features of the wage form which immunize it against being found out for what it is.

1. [Can Labor be a Commodity?]

675:1 On the surface of bourgeois society, the compensation of the laborer *appears* as *price of labor*, a certain amount of money paid for a certain amount of labor.

557:1 Auf der Oberfläche der bürgerlichen Gesellschaft *erscheint* der Lohn des Arbeiters als *Preis der Arbeit*, ein bestimmtes Quantum Geld, das für ein bestimmtes Quantum Arbeit gezahlt wird.

The word translated here with “compensation” is “Lohn.” A more literal translation of “Lohn” would be “wage.” This is the only time in this chapter that Marx uses the term “wage” (*Lohn*), not “wage of labor” (*Arbeitslohn*). The reason might be stylistic: the word “labor” (*Arbeit*) or “laborer” (*Arbeiter*) appears already three times in the same sentence. But I think Marx wanted it to be a semantic difference. I think Marx is using “wage” here not as a short form of “wage of labor” (*Arbeitslohn*), but in the sense of “reward, compensation, retribution” (*Belohnung*). Indeed,

the French edition has “*rétribution*” on this place. It denotes the revenue of the laborer, without indicating for what or in what form this revenue is paid. This is why I translated “Lohn” here as “compensation” instead of “wage.” In the French edition of *Capital* the title reads “transformation de la valeur ou du prix de la force de travail en salaire,” and the first sentence reads: “A la surface de la société bourgeoise la rétribution du travailleur se représente comme le salaire du travail: tant d’argent payé pour tant de travail.” (On the surface of bourgeois society, the

compensation of the laborer appears as the wage of labor: so and so much money paid for so and so much labor.) The German expression “price of labor (*Preis der Arbeit*)” is translated with “salaire du travail” (wage of labor). This makes it clear that the word “salaire” (wage) in the title is parallel to the word “wage of labor” in the first sentence, not with the word “compensation.” In the usual English translation, the choice of words suggests just the opposite, which makes it impossible to understand the meaning of the first sentence.

In capitalism, the workers can eat because they receive a wage for their labor. This is not an illusion but reality: the income of the worker is paid in the form: “so and so many dollars per unit of labor” (where the labor is either measured by the hour or by its output). I.e., it is paid as price of labor, not of labor-power. This form of payment suggests that the commodity which the worker sells to the capitalist is his labor. In order to show that the surface category “price of labor” is not the surface expression of the value of the commodity “labor,” Marx argues in four different ways that that which the worker sells the capitalist cannot be his labor.

1.a. [Labor Cannot Have Value]

If that which the worker sells the capitalist were labor, then the price received would be the surface manifestation of the value of labor. This cannot be, since “value of labor” is a logical impossibility.

People speak of the value of labor, and call its expression in money the necessary or natural price of labor. On the other hand they speak of market prices of labor, i.e. prices which oscillate above or below this necessary price.

Man spricht hier vom Wert der Arbeit und nennt seinen Geldausdruck ihren notwendigen oder natürlichen Preis. Man spricht andererseits von Marktpreisen der Arbeit, d.h. über oder unter ihrem notwendigen Preis oszillierenden Preisen.

The “here” (*hier*) refers to the surface of bourgeois economy, which makes it clear that the “one” (*man*) does not refer to the researcher/observer but to people

in practical life. I hope my translation “people” (instead of “one”) makes this reasonably clear, therefore I left the “here” out. The translation filled in “price

of labor” instead of simply its price; this is justified by the 1st edition 433:1.

Wages fluctuate around a central level which at Marx’s time was usually called the “necessary” or “natural” price of *labor*.” This “natural” price was considered to be the surface expression of the core category *value of labor*. The economists at Marx’s time therefore tried to go from the surface category “wage” down to the underlying relation of production “value of labor.” They may have been less sophisticated about it than Marx was at the beginning of chapter One, but they proceeded in a similar spirit. A more detailed analysis of this “naïve” approach will be given later in this chapter, pp. 677:3/oo and 682:2. Unfortunately, their starting point is a “false” form. In *Capital II*, 113:3, Marx calls it a “disguised” (*verkleidete*) Form, i.e., it is a form which projects a content that it does not have. The procedure which the economists try to apply will therefore lead them astray. It is as if they were drilling for oil at a place where there is no oil.

The social sciences start with observable phenomena and infer from them the invisible social structures giving rise to these phenomena. Whenever one makes such a second-order (or “retroductive”) argument one can never be sure whether those things, whose existence one conjectures because they could have generated the effects which one sees, actually exist. How can one tell whether one looks for a basic underlying mechanisms in the right place, or whether one’s second-order arguments try to fish for an underlying structure which does not exist? Marx is going to argue—and document by citing sources from the literature—that the present attempts to drill at the wrong place has a twofold outcome.

1. The results obtained are incompatible with the conclusion drawn earlier about commodity exchange, i.e., they do not explain the phenomena in a way that is consistent with our previous knowledge, and
2. they end up postulating mechanisms which, if active, would not lead to the observed outcomes.

Marx starts his development of point 1 with a theoretical argument that labor is not a commodity. First he will show that labor cannot have value, and then that it cannot be traded on the markets. ↓ Here is the first part: given what we know about value, labor cannot have value.

675:2 But what is the value of a commodity? The objectified form of the social labor expended in its production. And how do we measure the quantity of the commodity’s value? By the quantity of the labor contained in it. How would then the value, e.g., of a 12-hour working day be determined? By the 12 working hours contained in a working day of 12 hours, which is an absurd tautology.²¹

557:2 Aber was ist der Wert einer Ware? Gegenständliche Form der in ihrer Produktion verausgabten gesellschaftlichen Arbeit. Und wodurch messen wir die Größe ihres Werts? Durch die Größe der in ihr enthaltenen Arbeit. Wodurch wäre also der Wert z.B. eines zwölfstündigen Arbeitstags bestimmt? Durch die in einem Arbeitstag von 12 Stunden enthaltenen 12 Arbeitsstunden, was eine abgeschmackte Tautologie ist.²¹

A very similar formulation can be found in *Value, Price and Profit*, [mecw20]128:0:

To say that the value of a ten hours’ working day is equal to ten hours’ labor, or the quantity of labor contained in it, would be a tautological and, moreover, a nonsensical expression.

Why is it not only tautological but also nonsensical or absurd? Because Marx’s brand of realism implies that that which gives things value cannot itself have value. Let me explain. As Marx sees the relations of production in capitalism, value is real. It has real effects. These real effects must come from somewhere; there must be a real force driving them. Take for instance a mechanical toy moving around on your table. Since it is moving you can be sure that, if you open it up, you will find a battery inside. Now if you open it up and you find another mechanical toy inside which runs this mechanical toy, then you know you haven’t found the ultimate source of energy yet. In the same way, saying that labor imparts its own value on the things it produces is merely displacing the problem; now we have to find out where labor gets its value from. And as far as Marx is concerned such a displacement is wrong and unnecessary. It is like discovering your toy is powered by a mouse and then looking for a battery inside the mouse. Labor is real and has real effects. It has these real effects not because it has value, on the contrary, labor is the real force in society which gives the products produced for the market their value.

Engels illustrates this as follows in this preface to *Capital II*, p. 101:2:

As an activity creating value, [labor] can no more have any particular value than gravity can have any particular weight, heat any particular temperature, electricity any particular strength of current.

I don’t find this analogy very helpful.

A more convincing analogy was given by one of my students:

Labor is the cause of value in commodities, but cannot in itself have value; as the sun is the cause of shadows but cannot in itself have a shadow.

This analogy can guide our analysis. In order to have a shadow, you not only need sunlight but also a dark body obscuring the sunlight. In order to have a value, you not only need labor but also some use-value in which this labor is materialized. It is important here that value is *congealed* labor.

Question 877 *Why is it an absurd tautology to say that the value of a 12-hour working day is determined by the 12 working hours contained in it?*

Question 878 *Marx says that labor cannot have value because it is the source which gives everything its value. How can labor give something which it doesn't have?*

↓ Already in 1825, Samuel Bailey had written that the concept “value of labor” is absurd. Bailey’s conclusion is not that labor does not have value but that Ricardo’s labor theory of value is internally inconsistent. Nevertheless, Marx quotes Bailey at length in footnote 21:

²¹ ‘Mr. Ricardo, ingeniously enough, avoids a difficulty which, on a first view, threatens to encumber his doctrine, that value depends on the quantity of labor employed in production. If this principle is rigidly adhered to, it follows that the value of labor depends on the quantity of labor employed in producing it—which is evidently absurd.’

↓ Next Bailey describes a step in Ricardo’s argument which he considers a maneuver to avoid this absurdity:

^{21 ctd} ‘By a dexterous turn, therefore, Mr. Ricardo makes the value of labor depend on the quantity of labor required to produce wages; or,—to give him the benefit of his own language, he maintains that the value of labor is to be estimated by the quantity of labor required to produce wages; by which he means the quantity of labor required to produce the money or commodities given to the laborer.’

↑ Bailey considers this step an evasion. Marx will discuss this same step in the main text in 677:3/oo. In Marx’s interpretation, Ricardo unconsciously did the right thing, namely, make the step from labor to labor-power. ↓ Not recognizing this kernel of truth in Ricardo’s maneuver, Bailey mistakes it for a primitive logical blunder. But arguably Bailey is the one who is blundering by bringing in an inappropriate metaphor:

²¹ „Ricardo, geistreich genug, vermeidet eine Schwierigkeit, die auf den ersten Blick seiner Theorie entgegenzustehen scheint, daß nämlich der Wert von der in der Produktion verwandten Arbeitsmenge abhängig ist. Hält man an diesem Prinzip streng fest, so folgt daraus, daß der Wert der Arbeit abhängt von der zu ihrer Produktion aufgewandten Arbeitsmenge—was offenbar Unsinn ist.“

^{21 ctd} „Durch eine geschickte Wendung macht deshalb Ricardo den Wert der Arbeit abhängig von der Menge der Arbeit, die zur Produktion des Lohnes erforderlich ist; oder, um mit seinen eigenen Worten zu sprechen, er behauptet, daß der Wert der Arbeit nach der Arbeitsmenge zu schätzen sei, die zur Produktion des Lohnes benötigt wird; worunter er die Arbeitsmenge versteht, die zur Produktion des Geldes oder der Ware notwendig ist, die dem Arbeiter gegeben werden.“

^{21 ctd} ‘This is similar to saying, that the value of cloth is estimated, not by the quantity of labor bestowed on its production, but by the quantity of labor bestowed on the production of the silver, for which the cloth is exchanged’ [Bai25, pp. 50, 51].

^{21 ctd} „Gerade so gut könnte man sagen, daß der Wert von Tuch nicht nach der zu seiner Produktion verwandten Arbeitsmenge geschätzt werde, sondern nach der Arbeitsmenge, die zur Produktion des Silbers verwandt wurde, gegen welches das Tuch eingetauscht wird.“ [Bai25, pp. 50, 51].

Question 879 *Bailey says: Defining the value of labor by the labor going into the things the worker can buy with his wages is like defining the value of cloth by the labor going into the silver for which the cloth is exchanged. Is this the right analogy?*

Question 880 *If labor cannot have value, does this mean labor is not a commodity?*

1.b. [Practical Reasons why Labor Cannot be a Commodity]

In addition to the above theoretical argument that labor cannot have value, Marx brings now arguments why labor cannot be a commodity:

675:3 In any case, if labor were to be sold as a commodity in the market, it would have to exist before being sold.

558:1 Um als Ware auf dem Markt verkauft zu werden, müßte die Arbeit jedenfalls existieren, bevor sie verkauft wird.

The meaning of the word *jedenfalls* in this context is:

“whether or not you agree with my earlier abstract reasoning, you will

have to agree with me on these practical matters.”

↑ Such practicalities are not extraneous. It is essential for the concept of value that value can be expressed on the market place. ↓ The next sentence argues that this practical impossibility has a deep reason:

But if the worker were able to endow it with an independent existence, he would be selling a commodity, and not labor.²²

Könnte der Arbeiter ihr aber eine selbständige Existenz geben, so würde er Ware verkaufen und nicht Arbeit.²²

If the laborer had access to the means of production (which is what would allow him to give his labor an “independent existence”), then he would not be a laborer but sell his product. Here we see the grim social reality behind the logical distinction between labor, the source of value, and commodities, which have value: since the laborer does not have access to the means of production, he is barred from benefitting from his labor. Marx will hint at these coinconnections also in footnote 26 to 677:2.

Footnote 22 documents, as did footnote 21, that Marx was not alone to notice this:

²² ‘If you call labor a commodity, it is not like a commodity which is first produced in order to exchange, and then brought to market where it must exchange with other commodities according to the respective quantities of each which

²² „Wenn ihr Arbeit eine Ware nennt, so ist sie doch nicht einer Ware gleich, die zuerst zum Zweck des Tausches produziert und dann auf den Markt gebracht wird, wo sie mit anderen Waren, die grade auf dem Markte sind, in entsprechen-

there may be in the market at the time; labor is created the moment it is brought to market; nay, it is brought to market before it is created.' [Ano21, pp. 75, 76].

The anonymous author quoted in this footnote was emphasizing how much labor differs from the other commodities. Marx, by contrast, in the text to which this footnote refers, uses the same arguments as a proof that labor is *not* a commodity.

Marx's arguments always have the unspoken solution in the background: if one replaces "price of labor" by "price of labor-power," then these logical contradictions and mystifications disappear. Of course, the *social* contradiction, that the laborer is excluded from the means of production, is not resolved by this; but at least this replacement gives us the theoretical categories to understand this situation.

Exam Question 881 *Why can the laborer not use her labor-power to produce commodities and sell them, instead of selling her labor-power?*

1.c. [Exchange of More for Less Labor Cannot Explain Capitalism]

676:1 Even if one disregards these contradictions, ...

Marx is about to give two more arguments. They have a different character. They fall under point 2 above. Instead of saying that labor cannot be a commodity, they say: a theory according to which the commodity which the worker exchanges is labor would either be inconsistent with the labor theory of value, or it would be unable to explain the striking phenomena of capitalism which need an explanation.

... a direct exchange of money, i.e. of objectified labor, with living labor, would either supersede the law of value, which only begins to develop freely on the basis of capitalist production, or supersede capitalist production itself, which rests directly on wage labor.

This claim cries out for an elaboration. Such an elaboration is given next, but the order is reversed. The first of the two alternatives which Marx is about to discuss is the supersession of capitalism, and the second the supersession of the law of value. Both alternatives take as their starting point the observation at the beginning of 675:2 that if labor is traded as a commodity then its value is the value this labor creates.

The working day of 12 hours is represented in a monetary value of, for example, \$1.44. There are two alternatives. Either equiva-

dem Verhältnis ausgetauscht wird; Arbeit wird in dem Augenblick geschaffen, in dem sie auf den Markt gebracht wird, ja sie wird auf den Markt gebracht, bevor sie geschaffen ist." [Ano21, pp. 75, 76].

558:2 Von diesen Widersprüchen abgesehen, ...

... würde ein direkter Austausch von Geld, d.h. vergegenständlichter Arbeit, mit lebendiger Arbeit entweder das Wertgesetz aufheben, welches sich grade erst auf Grundlage der kapitalistischen Produktion frei entwickelt, oder die kapitalistische Produktion selbst aufheben, welche grade auf der Lohnarbeit beruht.

Der Arbeitstag von 12 Stunden stellt sich z.B. in einem Geldwert von 6 sh. dar. Entweder werden Äquivalente ausgetauscht,

lents are exchanged, and then the worker receives \$1.44 for 12 hours of labor; the price of his labor would be equal to the price of his product. In that case he produces no surplus-value for the buyer of his labor, the \$1.44 are not transformed into capital, and the basis of capitalist production vanishes. But it is precisely on that basis that he sells his labor and that his labor is wage labor. Or else he receives, in return for 12 hours of labor, less than \$1.44, i.e. less than 12 hours of labor. 12 hours of labor are exchanged for 10, 6, etc. hours of labor. By equating unequal quantities in this way, one does not only do away with the notion of value. Such a self-eliminating contradiction cannot be a law; it cannot even be enunciated or formulated as one.²³

und dann erhält der Arbeiter für zwölfstündige Arbeit 6 sh. Der Preis seiner Arbeit wäre gleich dem Preis seines Produkts. In diesem Fall produzierte er keinen Mehrwert für den Käufer seiner Arbeit, die 6 sh. verwandelten sich nicht in Kapital, die Grundlage der kapitalistischen Produktion verschwände, aber grade auf dieser Grundlage verkauft er seine Arbeit und ist seine Arbeit Lohnarbeit. Oder er erhält für 12 Stunden Arbeit weniger als 6 sh., d.h. weniger als 12 Stunden Arbeit. Zwölf Stunden Arbeit tauschen sich aus gegen 10, 6 usw. Stunden Arbeit. Diese Gleichsetzung ungleicher Größen hebt nicht nur die Wertbestimmung auf. Ein solcher sich selbst aufhebender Widerspruch kann überhaupt nicht als Gesetz auch nur ausgesprochen oder formuliert werden.²³

Both translations say "self-destructive contradiction" in this last sentence. This is exactly

wrong, because it suggests an active contradiction, while Marx argues here that nonsensical

contradictions cannot be active.

If equal labor is exchanged against equal labor, then there can be no profits, but we know that capitalists do make profits. If unequal labors are exchanged, then we have an even deeper-seated contradiction: (a) this would lead to the abolition of the law of value, and (b) such an unequal exchange cannot even be formulated as a law—i.e., the exchange of more labor for less labor is not only unable to explain capitalism but it cannot be an explanation of anything.

Ad (a): The consistent violation of the law of value means that the forces counteracting the law of value are stronger than the law of value itself. From this we would have to conclude that the law of value would in capitalism eventually be superseded by these counteracting forces. There is no evidence of this, on the contrary, markets are spreading.

Ad (b): We have seen many times that Marx does not deny the existence of surface contradictions, but uses them as warning signs alerting us that hidden mechanisms are at work. But this contradiction here cannot be based on the action of a hidden mechanism. It is self-eliminating: if 12 hours of labor are exchanged against 10, then 10 hours of labor are exchanged against 9.333 hours, consequently, 12 hours are exchanged against 9.333 hours. If one continues this one finds out that everything can be exchanged against everything, i.e., there are no laws governing the exchange.

Footnote 23 illustrates this and already gives a transition to the next step in Marx's argument. Wakefield, an economist who does not believe that exchange is governed by equality of labor, can explain the exchange between capitalist and laborer only if he can find a difference between the labors which do not exchange one-to-one. And indeed, he distinguishes these labors by calling one the "antecedent" and the other the "present" labor:

²³ 'Treating labor as a commodity, and capital, the produce of labor, as another, then, if the value of these two commodities were regulated by equal quantities of labor, a given amount of labor would ... exchange for that quantity of capital which had been produced by the same amount of labor; antecedent labor would ... exchange for the same amount as present labor. But the value of labor in relation to other commodities ... is not determined by equal quantities of labor' (E. G. Wakefield, in [Smi39, v. 1, pp. 230, 231, note].)

²³ „Wenn man Arbeit als eine Ware und Kapital, das Produkt von Arbeit, als eine andre behandelt, dann würde sich, wenn die Werte jener beiden Waren durch gleiche Arbeitsmengen bestimmt würden, eine gegebene Menge Arbeit ... gegen eine solche Menge Kapital austauschen die durch die gleiche Arbeitsmenge erzeugt worden wäre; vergangene Arbeit würde ... gegen die gleiche Menge eingetauscht wie gegenwärtige. Aber der Wert der Arbeit, im Verhältnis zu anderen Waren ... wird eben nicht durch gleiche Arbeitsmengen bestimmt.“ (E. G. Wakefield in [Smi39, v. 1, pp. 230, 231, Note].)

Question 883 *Do Marx's arguments that labor cannot have value also imply that services (i.e., a haircut) cannot have value?*

Marx's conclusion in this subsection is that a theory which holds that the laborer is selling labor to the capitalist cannot explain capitalism. Surplus-value can be explained in the framework of commodity exchange only if that what the laborer exchanges with the capitalist is not labor. Because if the worker gives labor, then the laws of commodity exchange cannot explain why the capitalist gives back to the worker less labor than he receives.

Question 884 *Why does Marx give so many different reasons why wages are not derived from the value of labor? Isn't one reason enough?*

1.d. [Living Versus Objectified Labor Cannot Explain the Discrepancy]

It is tempting to explain this quantitative difference as follows: The labor which the worker gives the capitalist is living labor, and the labor the capitalist pays the worker in the form of money is objectified labor. This theme already came up in footnote number 23 to paragraph 676:1. Marx argues now that the difference between objectified and living labor *cannot* be the explanation of the exchange of more labor against less:

676:2/o Attributing the exchange of more labor against less to the differences in form—one piece of labor being objectified,

558:3/o Es nützt nichts, den Austausch von mehr gegen weniger Arbeit aus dem Formunterschied herzuleiten, daß sie das ei-

the other living²⁴—won't help either.

This formulation is already a refutation: The difference between living and objectified labor is merely a difference in *form*—and by giving something a different *form* one does not change its *quantity*. When living labor is materialized in a product and becomes objectified labor, it does not suddenly become more labor; it is still the same amount of labor, just in a different form. Just as the melting of ice cubes does not change the quantity of water of which they consist.

Footnote 24 brings another example from the literature, one which is more explicit than that in footnote 23, of an appeal to the difference between dead and living labor:

²⁴ 'It was necessary to reach an agreement' (yet another version of the social contract!) 'that every time completed labor was exchanged for labor still to be performed, the latter' (the capitalist) 'would receive a higher value than the former' (the worker). Simonde (i.e. Sismondi), [[Si03, p. 37].

ne Mal vergegenständlicht, das andre Mal lebendig ist.²⁴

²⁴ „Man mußte vereinbaren“ (auch eine Ausgabe des „contrat social“), „daß, wann immer geleistete Arbeit gegen zu leistende Arbeit ausgetauscht wird, der letztere“ (le capitaliste) „einen höheren Wert erhalten müßte als der erstere“ (le travailleur). (Simonde (i.e. Sismondi) [[Si03, p. 37].)

Question 885 *Marx's parenthetical remark “yet another version of the social contract” is clearly a dismissal. He does not go into more detail here because he said it so many times. What are Marx's objections against the theory of the “contrat social”?*

Marx clinches his argument by pointing out that only *living* labor counts in the determination of the magnitude of value. In the water—ice analogy this would correspond to a proof that not the solidity of the ice cube, but the material of which it is made matters for the situation at hand.

This suggestion is even more absurd if one keeps in mind that the value of a commodity is determined not by the quantity of labor actually objectified in it, but by the quantity of living labor necessary to produce it. A commodity represents, say, 6 hours of labor. If an invention is made by which it can be produced in 3 hours, its value falls by half, even if the commodity is already produced. It now represents 3 hours of socially necessary labor instead of the former 6. It is therefore the amount of labor required to produce it, not the objectified form of that labor, which determines the magnitude of value of a commodity.

Dies ist um so abgeschmackter, als der Wert einer Ware nicht durch das Quantum wirklich in ihr vergegenständlichter, sondern durch das Quantum der zu ihrer Produktion notwendigen lebendigen Arbeit bestimmt wird. Eine Ware stelle 6 Arbeitsstunden dar. Werden Erfindungen gemacht, wodurch sie in 3 Stunden produziert werden kann, so sinkt der Wert auch der bereits produzierten Ware um die Hälfte. Sie stellt jetzt 3 statt früher 6 Stunden notwendige gesellschaftliche Arbeit dar. Es ist also das zu ihrer Produktion erheischte Quantum Arbeit, nicht deren gegenständliche Form, wodurch ihre Wertgröße bestimmt wird.

This last sentence sounds a little awkward because Marx chooses a formulation which drives home the point once more that form differences cannot give rise to quantitative differ-

ences. A more straightforward formulation, not overloaded with this methodological hint, would be:

It is therefore the amount of living labor required to produce it, not the amount of labor already objectified in the commodity, which determines the magnitude of its value.

Marx's response to the objectified-labor subterfuge has turned into a counterattack: far from counting more than living labor, objectified labor has *no* power at all to determine market prices. If a product contains 500 hours, and a new method is developed to produce the same product in 50 hours, then 450 hours go out of the window. The magnitude of value is not a reward for the *past* effort of the producer, but an allocation of society's *present* labor-time. Marx's refutation of the dead labor—living labor hypothesis highlights an important specific fact about the law of value which has not always been sufficiently emphasized.

Question 886 *Why can the inequality in the exchange between worker and capitalist not be explained by the fact that the worker represents living labor, and the capitalist objectified labor?*

Question 888 *Marx argues that the value of a commodity is not determined by the dead labor in it but by the living labor needed to reproduce it. Can one not argue in the same spirit that exchange-value is not determined by labor at all? The labor producing the product no longer exists, and something that does not exist cannot have an effect either. Dead labor is, as the word says, dead. The only thing that exists on the market place is the product itself. Doesn't this mean that the exchange-value of the product must be determined by its use-value?*

Question 889 *Don't all the contradictions in the concept of "value of labor" described here come from the fallacious attempt to derive the value of something from its use-value?*

2. [Value of Labor as an Imaginary Expression]

Until now, Marx showed that the naïve approach leads to conclusions which contradict our other knowledge and cannot explain the facts. Now he supplies his own explanation. He starts with a closer look at the exchange process, paying attention to what exactly it is that is being exchanged:

677:1 That which comes directly face to face with the money owner on the market, is in fact not labor, but the laborer. What the latter sells is his labor-power.

559:1 Was dem Geldbesitzer auf dem Warenmarkt direkt gegenübertritt, ist in der Tat nicht die Arbeit, sondern der Arbeiter. Was letzterer verkauft, ist seine Arbeitskraft.

The shoemaker does not have to be present in person in order to sell his shoes; often he will give his shoes to a merchant who sells them for him. Not so with the laborer. He must be present in person—because he does not sell his labor but his labor-power, which is materialized in his own person.

After this closer look at the market, Marx also takes a closer look at the consumption of labor-power, i.e., the *production process*, in order to collect additional evidence that labor is not what is being exchanged:

As soon as his labor begins, it has already ceased to belong to him; it can therefore no longer be sold by him.

Sobald seine Arbeit wirklich beginnt, hat sie bereits aufgehört, ihm zu gehören, kann also nicht mehr von ihm verkauft werden.

↑ The laborer has to obey the commands of the capitalist, i.e., the labor he performs is no longer belongs to him.

↓ If labor is not what is exchanged then what are we to think of the *value* of labor?

Labor is the substance, the immanent measure of value, but has itself no value.²⁵

Die Arbeit ist die Substanz und das immanente Maß der Werte, aber sie selbst hat keinen Wert.²⁵

²⁵ 'Labor the exclusive standard of value ... the creator of all wealth, no commodity' (Thomas Hodgskin, [Hod27, p. 186]).

²⁵ Arbeit, der ausschließliche Maßstab des Wertes ... die Schöpferin allen Reichtums, ist keine Ware.“ (Th. Hodgskin, [Hod27, p. 186].)

“Value of labor” is therefore the value of something which is not exchanged and cannot have value. But we did not make up the concept “value of labor.” We found it on the surface of the economy, since workers are indeed paid for their labor. Our goal is to find a rational explanation for this seemingly irrational phenomenon. The passage from *Value, Price and Profit*, p. [mecw20]128:0, cited on p. 1042 above, continues as follows:

Of course, having once found out the true but hidden sense of the expression “*Value of Labor*,” we shall be able to interpret this irrational, and seemingly impossible application of value, in the same way that, having once made sure of the real movement of the celestial bodies, we shall be able to explain their apparent or merely phenomenal movements. [mecw20]128:0

The metaphor with the celestial bodies was also used in chapter Twelve, p. 433:1. On the current place in *Capital*, Marx brings a different also extremely interesting analogy for his desired explanation of a seemingly contradictory surface phenomenon: the mathematical construct of imaginary numbers.

677:2 In the expression ‘value of labor’, the concept of value is not only altogether extinguished, but it is turned into its opposite. It is an imaginary expression, like, say, ‘value of the earth’.

559:2 Im Ausdruck: „Wert der Arbeit“ ist der Wertbegriff nicht nur völlig ausgelöscht, sondern in sein Gegenteil verkehrt. Es ist ein imaginärer Ausdruck, wie etwa Wert der Erde.

The Fowkes translation: "It is an expression as imaginary as the

value of the earth." does not capture the positive aspect which

will be the take-off point for the next step in the development:

"Value of earth" or "value of labor" are values of things which do not have value. (This is discussed in chapter Three, 197:1). The comparison with imaginary numbers is fitting, because an imaginary number is the square root of a number which does not have a square root. Nevertheless, mathematicians come to powerful conclusions using imaginary numbers, just working with them as if they were actual numbers. From the mathematics of imaginary numbers, Marx draws the following lesson: the phenomena which, as we have seen, are not the direct reflections of the underlying relations, must be studied in their own right. Even though they are categories which only live on the surface, their origin is still in the deep structure of the economy:

These imaginary expressions however are expressions which arise from the relations of production themselves. They are categories for the forms of appearance of essential relations.

↓ There are many other examples that things are different than what they appear.

That in their appearance things often represent themselves in an inverted manner is commonly understood in just about every science, except in political economy.²⁶

Diese imaginären Ausdrücke entspringen jedoch aus den Produktionsverhältnissen selbst. Sie sind Kategorien für Erscheinungsformen wesentlicher Verhältnisse.

Daß in der Erscheinung die Dinge sich oft verkehrt darstellen, ist ziemlich in allen Wissenschaften bekannt, außer in der politischen Ökonomie.²⁶

Fowkes has: "That in their appearance things are often presented in an inverted way is something fairly familiar in just about every science, apart from political economy." Although Fowkes apparently meant to say that in addition to political economy, every other science makes mistakes too, the translation as it stands almost sounds like:

every science makes mistakes except political economy. Both of those are far from what Marx intended to say. The Moore-Aveling translation is much better: "That in their appearance things often represent themselves in inverted form is pretty well known in every science, except in political economy."

Marx meant to say: all other sciences know and take it for granted that there is a difference between appearance and the real underlying forces (which science tries to uncover), but political economy, meaning here mainstream economics, does not know this: they take the appearances at face value.

Footnote 26 underscores the necessity to discuss even those forms which seem to be logically impossible. Marx cites Proudhon as an example of someone who does not recognize the "grim reality" (*furchtbare Realität*) lurking behind the seemingly logical impossibility of a "value of labor" and instead declares the expression "value of labor" a poetic license, i.e., a word which does not refer to anything in the real world.

²⁶ On the other hand, the attempt to explain such expressions as merely poetic licence only shows the impotence of the analysis. Hence, in answer to Proudhon's phrase, 'Labor is said to

²⁶ Solche Ausdrücke dagegen für bloße *licentia poetica* zu erklären, zeigt nur die Ohnmacht der Analyse. Gegen Proudhons Phrase: „Man sagt von der Arbeit, daß sie einen Wert hat, nicht

have value not as a commodity itself, but in view of the values which it is supposed potentially to contain. The value of labor is a figurative expression', etc., I have remarked 'In labor as a commodity, which is a grim reality, he' (Proudhon) 'sees nothing but a grammatical ellipsis. Thus the whole of existing society, founded on labor as a commodity, is henceforth founded on a poetic licence, a figurative expression. If society wants to "eliminate all the drawbacks" that assail it, well, let it eliminate all the ill-sounding terms, change the language; and to this end it has only to apply to the *Académie* for a new edition of its dictionary' (K. Marx, *The Poverty of Philosophy*, [mecw6]129.)

From 'poetic licence' there is only a small step to 'nothing at all', which leads us to the king of platitudes, J. B. Say. The footnote concludes with a careful documentation of the circularity in Say's arguments:

^{26 ctd} Of course it is still more convenient to understand by value nothing at all. Then one can without difficulty subsume everything under this category. Thus, for instance, J. B. Say asks 'What is value?' Answer: 'It is what a thing is worth.' What is price? 'The value of a thing expressed in money.' And why has 'labor on the land ... a value?' 'Because a price is put upon it.' Therefore value is what a thing is worth, and the land has its 'value' because its value is 'expressed in money'. This is certainly a very simple way of explaining the why and wherefore of things.

als eigentliche Ware, sondern im Hinblick auf die Werte, welche man in ihr potentiell enthalten annimmt. Der Wert der Arbeit ist ein figürlicher Ausdruck etc."; bemerke ich daher: „Er sieht in der Ware Arbeit, die eine furchtbare Realität ist, nur eine grammatische Ellipse. Demgemäß ist die ganze heutige, auf den Warencharakter der Arbeit begründete Gesellschaft von jetzt an eine poetische Lizenz, auf einen figürlichen Ausdruck begründet. Will die Gesellschaft „alle Unzuträglichkeiten ausmerzen“, unter denen sie zu leiden hat, nun, so merze sie die anstößigen Ausdrücke aus, so ändere sie die Sprache, und sie braucht sich zu diesem Behufe nur an die Akademie zu wenden, um von ihr eine neue Ausgabe ihres Wörterbuchs zu verlangen.“ (K. Marx, „Misère de la Philosophie“, [mecw6]129.)

^{26 ctd} Noch bequemer ist es natürlich, sich unter Wert gar nichts zu denken. Man kann dann ohne Umstände alles unter diese Kategorie subsumieren. So z.B. J. B. Say. Was ist „valeur“? Antwort: „Das, was eine Sache wert ist“ und was ist „prix“? Antwort: „Der Wert einer Sache ausgedrückt in Geld.“ Und warum hat die Arbeit der Erde ... einen Wert? Weil man ihr einen Preis zuerkennt. Also Wert ist, was ein Ding wert ist, und die Erde hat einen „Wert“, weil man ihren Wert „in Geld ausdrückt“. Dies ist jedenfalls eine sehr einfache Methode, sich über das why und wherefore der Dinge zu verständigen.

3. [From Value of Labor-Power to Value of Labor]

After arguing that it is legitimate and indeed necessary to look at the surface phenomenon "value of labor" even though we know that labor itself cannot have value, Marx now follows the derivation of the value of labor by the classical economists step by step, in order to find the exact point where they made an error.

677:3/oo Classical political economy borrowed the category 'price of labor' from everyday life without further criticism, and

559:3/oo Die klassische politische Ökonomie entlehnte dem Alltagsleben ohne weitere Kritik die Kategorie „Preis der Ar-

then afterwards asked the question, how is this price determined?

↑ Classical economists did not see the logical impossibility that labor, the source of value, cannot have value itself. They went at it in a standard and ultimately naïve fashion. Their first impulse was to explain the price of labor by demand and supply:

It soon recognized that changes in the relation between demand and supply explained, with regard to the price of labor, as is true with regard to any other commodity, nothing except the changes in the prices, i.e. the oscillations of the market price above or below a certain mean. If demand and supply are in balance, the oscillation of prices ceases (as long as all other circumstances remain the same). At the same time, demand and supply cease to be forces which explain anything.

Question 895 Marx says: if demand and supply coincide then they are unable to explain prices. What would a mainstream economist say about this?

The price of labor, when demand and supply are in balance, is its natural price, determined independently of the relation of demand and supply. The natural price was thus found to be the object which actually had to be analysed.

Their attempts to explain the price of labor by market forces led them to the concept of the natural price of labor, and then they shifted their focus: they realized that it was necessary to explain the natural price. Next, Marx gives an alternative approach which does not begin with the surface *mechanisms* of demand and supply but with the empirical *data* of prices over time, and which comes to the same conclusion:

Or a longer period of oscillation in the market price was taken, for example a year, and the oscillations were found to cancel each other out, moving around an average quantity in the middle, a constant magnitude—which, of course, had to be determined otherwise than by the mutually compensating variations from it.

↑ Marx apparently assumes that a time series of prices is not a random walk, but that a certain reversal to the mean is taking place. This mean is the systematic component of

beit“, um sich dann hinterher zu fragen, wie wird dieser Preis bestimmt?

Sie erkannte bald, daß der Wechsel im Verhältnis von Nachfrage und Angebot für den Preis der Arbeit, wie für den jeder andren Ware, nichts erklärt außer seinem Wechsel, d.h. die Schwankung der Marktpreise unter oder über eine gewisse Größe. Decken sich Nachfrage und Angebot, so hört, unter sonst gleichbleibenden Umständen, die Preisszillation auf. Aber dann hören auch Nachfrage und Angebot auf, irgend etwas zu erklären.

Der Preis der Arbeit, wenn Nachfrage und Angebot sich decken, ist ihr vom Verhältnis der Nachfrage und Angebot unabhängig bestimmter, ihr natürlicher Preis, der so als der eigentlich zu analysierende Gegenstand gefunden ward.

Oder man nahm eine längere Periode der Schwankungen des Marktpreises, z.B. ein Jahr und fand dann, daß sich ihr Auf und Ab ausgleicht zu einer mittlern Durchschnittsgröße, einer konstanten Größe. Sie mußte natürlich anders bestimmt werden als die sich kompensierenden Abweichungen von ihr selbst.

the time series, the natural price, which needs to be explained. ↓ This natural price is not determined by circulation but by something inside the commodity, i.e., by the value of the commodity.

This price, overarching over the accidental market prices of labor and regulating them, this ‘necessary price’ (according to the Physiocrats) or ‘natural price’ of labor (according to Adam Smith) can only be its value expressed in money, as that of all other commodities. This is how the political economists believed they were penetrating through the accidental prices of labor to the value of labor.

↓ At this point, Marx would have said: “Oops, since labor is the source of all value, it cannot have its own value, something must be wrong here.” The other classical economist, by contrast, said: “value is determined by cost of production, and the production cost of labor are the means of subsistence of the laborer:”

As with other commodities, this value was then further determined by the cost of production. But what is the cost of production ... of the *worker*, i.e. the cost of producing or reproducing the worker himself? The political economists unconsciously substituted this question for the original one, for their search after the cost of production of labor as such led them in a circle and did not allow them to move forward.

Instinctively shunning the explanation that the value of 1 hour of labor = 1 hour of labor, classical economists substitute, without being aware of it, value of labor *power* for value of labor.

Therefore what they called the ‘value of labor’ is in fact the value of labor-power, as it exists in the person of the worker, and it is as different from its function, labor, as a machine is from the operations it performs.

Marx continues that classical Political Economy never discovered its error, and that it got entangled in unresolvable confusions and contradictions because of it:

Because they were concerned with the difference between the market price of labor

Dieser über die zufälligen Marktpreise der Arbeit übergreifende und sie regulierende Preis, der „notwendige Preis“ (Physiokraten) oder „natürliche Preis“ der Arbeit (Adam Smith) kann, wie bei andren Waren, nur ihr in Geld ausgedrückter Wert sein. In dieser Art glaubte die politische Ökonomie durch die zufälligen Preise der Arbeit zu ihrem Wert vorzudringen.

Wie bei den andren Waren wurde dieser Wert dann weiter durch die Produktionskosten bestimmt. Aber was sind die Produktionskosten—des Arbeiters, d.h. die Kosten, um den Arbeiter selbst zu produzieren oder zu reproduzieren? Diese Frage schob sich der politischen Ökonomie bewußtlos für die ursprüngliche unter, da sie mit den Produktionskosten der Arbeit als solcher sich im Kreise drehte und nicht vom Flecke kam.

Was sie also Wert der Arbeit (value of labour) nennt, ist in der Tat der Wert der Arbeitskraft, die in der Persönlichkeit des Arbeiters existiert und von ihrer Funktion, der Arbeit, ebenso verschieden ist wie eine Maschine von ihren Operationen.

Beschäftigt mit dem Unterschied zwischen den Marktpreisen der Arbeit und ihrem sog.

and its so-called value, with the relation of this value to the rate of profit and to the values of the commodities produced by means of labor, etc., they never discovered that the course of the analysis had led not only from the market prices of labor to its presumed value, but also led them to reduce this value of labor itself to the value of labor-power. Classical political economy's unconsciousness of this result of its own analysis and its uncritical acceptance of the categories 'value of labor', 'natural price of labor', etc. as the ultimate and adequate expression for the value relation under consideration, led it into unresolvable confusions and contradictions, as will be seen later. However to the vulgar economists, who make it a principle to worship appearances only, it offered a secure base for their shallow operations.

↑ The difficulties which classical economy had to go beneath the surface, led to a strengthening of vulgar exconomics, which never even tried to go beneath the surface.

Now Marx makes that step consciously and in detail which bourgeois political economy made unconsciously and in passing.

679:1 Let us first see how the value (and the price) of labor-power represent themselves in this transmuted form as wage of labor.

Marx starts with the value of labor *power* and derives from it the value of labor. How can the wage of one hour of *labor* be derived from the daily value of *labor-power*?

679:2 We know that the daily value of labor-power is calculated upon a certain length of the worker's life, which is associated, in turn, with a certain length of the working day.

Fowkes reverses the correspondence: "and that this corresponds, in turn, to a certain

length of the working day." Moore-Aveling have it right: "to which, again, corresponds a

In chapter Six, Marx discusses how the daily wage of labor-power is derived. Briefly, the cost of living, including bringing up one's children, educational costs, etc., are prorated on a daily basis. Marx does not recapitulate this here but mentions only one aspect of this

Wert, mit dem Verhältnis dieses Werts zur Profitrate, zu den vermittelst der Arbeit produzierten Warenwerten usw., entdeckte man niemals, daß der Gang der Analyse nicht nur von den Marktpreisen der Arbeit zu ihrem vermeintlichen Wert, sondern dahin geführt hatte, diesen Wert der Arbeit selbst wieder aufzulösen in den Wert der Arbeitskraft. Die Bewußtlosigkeit über dies Resultat ihrer eignen Analyse, die kritiklose Annahme der Kategorien „Wert der Arbeit“, „natürlicher Preis der Arbeit“ usw. als letzter adäquater Ausdrücke des behandelten Wertverhältnisses, verwickelte, wie man später sehn wird, die klassische politische Ökonomie in unauflösbare Wirren und Widersprüche, während sie der Vulgärökonomie eine sichere Operationsbasis für ihre prinzipiell nur dem Schein huldigende Flachheit bot.

561:1 Sehn wir nun zunächst, wie Wert und Preise der Arbeitskraft sich in ihrer verwandelten Form als Arbeitslohn darstellen.

561:2 Man weiß, daß der Tageswert der Arbeitskraft berechnet ist auf eine gewisse Lebensdauer des Arbeiters, welcher eine gewisse Länge des Arbeitstags entspricht.

calculation which is relevant here: the overall life expectancy of the worker is needed so that the costs of childrearing and educational costs can be prorated. If a laborer lives longer, then part of his or her wage covering those fixed life expenses can be less. On the other hand, however, in order to achieve this life expectancy, the length (and intensity) of the working day cannot be excessive. At Marx's time many workers were literally worked to death, see chapter Ten, p. 366:1/o. This is the correspondence between life expectancy and length of working day Marx speaks about here.

Assume that the usual working day is 12 hours and the daily value of labor-power 3 shillings, which is the expression in money of a value embodying 6 hours of labor. If the worker receives 3 shillings, then he receives the value of his labor-power, which functions through 12 hours. If this value of a day's labor-power is now expressed as the value of a day's labor itself, we have the formula: 12 hours of labor has a value of 3 shillings.

↑ The magnitude of value of one hour of labor is therefore derived from the magnitude of value of labor-power by a simple but thoroughly unexpected formula: take the daily value of labor-power as it was derived in chapter Six, see 276:2, and divide it by the number of hours the laborer is working. The unexpected nature of this formula was aptly illustrated as follows by Anthony Brewer in [Bre84, p. 64]: it is as if the price of a horse was quoted at so much per leg, and then multiplied by four to find the price per horse.

This formula and its implications will be discussed in much more detail in the next chapter, 683:4/o, and the corresponding formula for piece wages in the chapter following the next, 693:1. The present chapter is more interested in the relationship between the wage form and its underlying essence than in the wage form itself—although Marx could not help saying something specific to one of the forms, time wage, when answering the important quantitative question.

↓ But Marx hurries on with the remark that not only the "necessary price" of labor but also the deviations of the actual from the necessary price is determined by labor-power:

The value of labor-power thus determines the value of labor, or, expressed in money, its necessary price. If, on the other hand, the price of labor-power differs from its value, then the price of labor will also differ from its so-called value.

↓ Since the value of labor is derived from the value of labor-power, one cannot expect that the value of one hour of labor is the same as the value created by one hour of labor. And given the relationship between capitalist and worker, we know which of these two quantities

Nimm an, der gewohnheitsmäßige Arbeitstag betrage 12 Stunden und der Tageswert der Arbeitskraft 3 sh., der Geldausdruck eines Werts, worin sich 6 Arbeitsstunden darstellen. Erhält der Arbeiter 3 sh., so erhält er den Wert seiner während 12 Stunden funktionierenden Arbeitskraft. Wird nun dieser Tageswert der Arbeitskraft als Wert der Tagesarbeit ausgedrückt, so ergibt sich die Formel: Die zwölfstündige Arbeit hat einen Wert von 3 sh.

Der Wert der Arbeitskraft bestimmt so den Wert der Arbeit oder, in Geld ausgedrückt, ihren notwendigen Preis. Weicht dagegen der Preis der Arbeitskraft von ihrem Wert ab, so ebenfalls der Preis der Arbeit von ihrem sog. Wert.

is smaller:

679:3/o Since the value of labor is only an incongruous expression for the value of labor-power, it follows by itself that the value of labor must always be less than its value-product, for the capitalist always makes labor-power work longer than is necessary for the reproduction of its own value. In the above example, the value of labor-power functioning for 12 hours is 72 cents, which requires 6 hours for its reproduction. The value which the labor-power produces is however \$1.44, because it does function during the 12 hours, and its value-product depends not on its own value but on the length of time it is in action.

What is translated here with “incongruous” is in German “*irrationell*,” which should be distinguished from the German “*irrational*.” It is not something that cannot be explained, or that does not follow reason, but it is something whose explanation is so un-obvious and misleading that those engaged in those surface relations are prevented from understanding what is really going on. It fosters illusions instead of rational behavior.

Question 897 Marx says in 679:3/o: Since the “value of labor” is only an incongruous expression of the value of labor-power it follows “by itself” that the value of labor must be smaller than its value-product. How does this follow?

Exam Question 898 How is the “value of labor” derived from the value of labor-power? Compare the “value of labor” thus obtained with the value of the product of the labor.

This is the rational explanation of something seemingly absurd:

Thus we reach a result which seems at first sight absurd: labor which creates a value of \$1.44 possesses a value of 72 cents.²⁷

²⁷ Cf. *Contribution to the Critique of Political Economy*, [mecw29]302:0, where I state that, in my analysis of capital, I shall solve the following problem: ‘how does production on the basis of exchange-value solely determined by labor-time lead to the result that the exchange-value of labor is less than the exchange-value of its product?’

Now an important implication for ideology:

561:3/o Da der Wert der Arbeit nur ein irrationeller Ausdruck für den Wert der Arbeitskraft, ergibt sich von selbst, daß der Wert der Arbeit stets kleiner sein muß als ihr Wertprodukt, denn der Kapitalist läßt die Arbeitskraft stets länger funktionieren, als zur Reproduktion ihres eignen Werts nötig ist. Im obigen Beispiel ist der Wert der während 12 Stunden funktionierenden Arbeitskraft 3 sh., ein Wert, zu dessen Reproduktion sie 6 Stunden braucht. Ihr Wertprodukt ist dagegen 6 sh., weil sie in der Tat während 12 Stunden funktioniert, und ihr Wertprodukt nicht von ihrem eignen Werte, sondern von der Zeitdauer ihrer Funktion abhängt.

Man erhält so das auf den ersten Blick abgeschmackte Resultat, daß Arbeit, die einen Wert von 6 sh. schafft, einen Wert von 3 sh. besitzt.²⁷

²⁷ Vgl. „Zur Kritik der politischen Oekonomie“, [mecw29]302:0, wo ich ankündige, daß bei Betrachtung des Kapitals das Problem gelöst werden soll: „Wie führt Produktion auf Basis des durch bloße Arbeitszeit bestimmten Tauscherts zum Resultat, daß der Tauschwert der Arbeit kleiner ist als der Tauschwert ihres Produkts?“

680:1 We see, further: the value of 72 cents, in which the paid portion of the working day, i.e. 6 hours of labor, represents itself, appears as the value or price of the whole working day of 12 hours, which thus includes 6 hours which were not paid for. The wage-form thus extinguishes every trace of the division of working day into necessary labor and surplus labor, into paid labor and unpaid labor. All labor appears as paid labor.

↑ In capitalism, all labor seems to be fully paid. ↓ Marx contrasts this with *corvée* labor (in which paid and unpaid labor are clearly distinguished) and slave labor (in which all labor seems to be unpaid).

Under the *corvée* system it is different. There the labor of the serf for himself, and his compulsory labor for the lord of the land, are demarcated very clearly both in space and time. In slave labor, even the part of the working day in which the slave is only replacing the value of his own means of subsistence, in which he therefore actually works for himself alone, appears as labor for his master. All his labor appears as unpaid labour.²⁸ In wage-labor, on the contrary, even surplus-labor, or unpaid labor, appears as paid. In the one case, the property-relation conceals the slave’s labor for himself; in the other case the money-relation conceals the uncompensated labor of the wage-laborer.

↓ Marx adduces the *Morning Star* as evidence that slave labor seems to be entirely unpaid.

²⁸ The *Morning Star*, a London free-trade organ which is so naïve as to be positively foolish, protested again and again during the American Civil War, with all the moral indignation of which man is capable, that the Negroes in the ‘Confederate States’ worked absolutely for nothing. It should have compared the daily cost of a Negro in the southern states with that of a free worker in the East End of London.

↓ But let’s come back to capitalism, in which all labor seems to be paid.

562:1 Man sieht ferner: Der Wert von 3 sh., worin sich der bezahlte Teil des Arbeitstags, d.h. sechsstündige Arbeit darstellt, erscheint als Wert oder Preis des Gesamtarbeitstags von 12 Stunden, welcher 6 unbezahlte Stunden enthält. Die Form des Arbeitslohns löscht also jede Spur der Teilung des Arbeitstags in notwendige Arbeit und Mehrarbeit, in bezahlte und unbezahlte Arbeit aus. Alle Arbeit erscheint als bezahlte Arbeit.

Bei der Fronarbeit unterscheiden sich räumlich und zeitlich, handgreiflich sinnlich, die Arbeit des Fröners für sich selbst und seine Zwangsarbeit für den Grundherrn. Bei der Sklavenarbeit erscheint selbst der Teil des Arbeitstags, worin der Sklave nur den Wert seiner eignen Lebensmittel ersetzt, den er in der Tat also für sich selbst arbeitet, als Arbeit für seinen Meister. Alle seine Arbeit erscheint als unbezahlte Arbeit.²⁸ Bei der Lohnarbeit erscheint umgekehrt selbst die Mehrarbeit oder unbezahlte Arbeit als bezahlt. Dort verbirgt das Eigentumsverhältnis das Fürsichselbstarbeiten des Sklaven, hier das Geldverhältnis das Umsonstarbeiten des Lohnarbeiters.

²⁸ Der „Morning Star“, ein bis zur Albernheit naives Londoner Freihandelsorgan, beteuerte während des Amerikanischen Bürgerkriegs wieder und wieder mit aller menschenmöglichen moralischen Entrüstung, daß die Neger in den „Confederate States“ ganz umsonst arbeiteten. Es hätte gefälligst die Tageskosten eines solchen Negers mit denen des freien Arbeiters im East End von London z.B. vergleichen sollen.

680:2 We may therefore understand the decisive importance of the transformation of the value and price of labor-power into the form of wages, or into the value and price of labor itself.

↑ Marx calls this “decisively important” because capitalism could not function if exploitation was clearly visible to all. ↓ Marx does not say this here, but instead makes the following famous and very strong statement:

This form of appearance, which renders the real relation invisible and indeed presents to the eye the precise opposite of that relation, is the basis of all notions of justice of both laborer and capitalist, of all the mystifications of the capitalist mode of production, of all its illusions as to liberty, of all the apologetic shifts of the vulgar economists.

562:2 Man begreift daher die entscheidende Wichtigkeit der Verwandlung von Wert und Preis der Arbeitskraft in die Form des Arbeitslohns oder in Wert und Preis der Arbeit selbst.

Auf dieser Erscheinungsform, die das wirkliche Verhältnis unsichtbar macht und grade sein Gegenteil zeigt, beruhen alle Rechtsvorstellungen des Arbeiters wie des Kapitalisten, alle Mystifikationen der kapitalistischen Produktionsweise, alle ihre Freiheitsillusionen, alle apologetischen Flausen der Vulgärökonomie.

Question 901 *Why is the transformation of the value (resp. price) of labor-power into the value (resp. price) of labor the basis of “all mystifications of the capitalistic mode of production”?*

Question 902 *Would capitalism be possible if exploitation was not hidden but clearly visible to everybody involved?*

4. [Necessity of the Wage Form]

Question 906 *In section 1.3 of chapter One, the defects of the forms of value always led to better forms. The wage form is certainly defective. Why has it not been replaced by a better form?*

680:3 History has taken a long time to decipher the mystery of the wage form. By contrast, nothing is easier to understand than the necessity of this form of appearance, the reasons why it persists.

562:3 Braucht die Weltgeschichte viele Zeit, um hinter das Geheimnis des Arbeitslohns zu kommen, so ist dagegen nichts leichter zu verstehen als die Notwendigkeit, die *raisons d’être* dieser Erscheinungsform.

My translation “reasons why it persists” for *raisons d’être* is a

free, interpretive translation which goes beyond Marx’s text.

Marx distinguishes here between two questions: (a) what is the content behind the wage form, and (b) why does this content take the form that it does. Question (a) is difficult; Marx

was the first to see that the content behind the wage form is not the value of labor but the value of labor-power.

Question (b) can be reformulated as: why is the value of labor-power not treated by the economic agents as that what it is, but in the mystified form of “value of labor”? If something has a form which does not fit, then one should expect that this mis-alignment between form and content will interfere with practical activity and over time will be fixed. Obviously, such a spontaneous realignment does not occur. There must be very specific reasons that keep form and content out of sync. This is the subject of the present subsection: to identify those specific reasons which prevent the value of labor-power from showing its real face, i.e., which prevent the wage form from reverting to a form directly reflecting the underlying relation of production, namely, that the commodity bought and sold on the market is labor-power and not labor itself.

Marx is about to enumerate several reasons, but before he even begins, he remarks in the passage we just read that “nothing is easier to understand” than the necessity of the wage form. This necessity can be argued on two levels:

- Practical reasons. Capitalists would not get any labor out of their workers otherwise.
- Preservation of the system. Since the content behind the wage bargain is the exploitation of the worker, this content cannot be expressed openly on the surface, because capitalism depends on exploitation remaining hidden.

As Bhaskar notes in [Bha89, pp. 9, 109], the situation of the wage form is exactly the opposite of that of the value form discussed in the section about the Fetish-Like Character of the Commodity, 173:1/oo etc. Classical political economy *did* decipher the content behind the value form, but prior to Marx nobody had asked why that content took this form. Regarding the wage form, classical political economy *did not* decipher it, i.e., it fails to pinpoint the precise character of the commodity which the laborer sells to the capitalist, but it is easy to see why the transaction between laborer and capitalist must take this form.

Question 907 *Before spending two long paragraphs on the explanation why the value of labor-power persists in its mystified wage-form instead of reverting to a form more appropriate to the inner nature of labor-power, Marx says that “nothing is easier to understand” than the answer to this question. Doesn’t Marx discredit his own explanations by saying that the issue at hand is really trivial?*

Marx has shown the benefits of the wage form for capitalism. Capitalism needs a wage form in order to coerce the laborer to do the work, and the wage form has the additional side effect of concealing exploitation. This conclusion does not relieve us from the substantive scientific work investigating those mechanisms which prevent the unmasking of the wage form itself. This is what Marx will do next.

He is going to enumerate specific reasons which prevent the transaction between capitalist and laborer from establishing a form for itself that is resonant with its true content. This

cannot happen because to both capitalist and worker, the transaction they are engaged in looks exactly like the any other sale and purchase: labor is exchanged against money. The remainder of this paragraph looks at the exchange between capitalist and worker from its qualitative side, and the next paragraph looks at it from its quantitative side.

681:1 The exchange between capital and labor presents itself to the perceptions of the transactors at first glance in exactly the same way as the sale and purchase of any other commodity. The buyer gives a certain sum of money, the seller some article other than money.

The claim that the exchange of labor is, on the surface, indistinguishable from the exchange of any other commodity, is backed up by five supporting arguments. The first two of these address possible objections.

A legal point of view recognizes here at most a bodily difference, expressed in the legally equivalent formulae: "I give, that you may give; I give, that you may do; I do, that you may give; I do, that you may do."

↑ (1a) One might object that there is indeed a difference: the usual procedure is "I give that you may give"; while this here is "I give that you may do." Marx's answer to this is embedded in the formulation above: this is only a *bodily* difference in the use-values exchanged. The formula "I give that you may give" is legally *equivalent* with "I give that you may do."

↓ (1b) Although Marx argued earlier in this chapter at length that labor cannot have value, this fact is not obvious. Even its corollary which Marx had earlier called so absurd that it cannot even be pronounced as a law, namely, that the value of 1 hour of labor would have to be 1/2 hour of labor, could be explained by the difference between use-value and exchange-value:

681:2 Further. Since exchange-value and use-value are by their nature incommensurable magnitudes, the expressions 'value of labor' and 'price of labor' do not seem more incongruous than the expressions 'value of cotton' and 'price of cotton'.

(1c) Marx's third supporting argument is no longer the response to a possible objection, but Marx brings the following positive argument which seems to support the notion that the commodity traded between worker and capitalist is labor:

Moreover, the worker is paid after he has delivered his labor. In its function as a means of payment, money realizes, after the fact,

563:1 Der Austausch zwischen Kapital und Arbeit stellt sich der Wahrnehmung zunächst ganz in derselben Art dar wie der Kauf und Verkauf aller andren Waren. Der Käufer gibt eine gewisse Geldsumme, der Verkäufer einen von Geld verschiedenen Artikel.

Das Rechtsbewußtsein erkennt hier höchstens einen stofflichen Unterschied, der sich ausdrückt in den rechtlich äquivalenten Formeln: Do ut des, do ut facias, facio ut des, und facio ut facias.

563:2 Ferner: Da Tauschwert und Gebrauchswert an und für sich incommensurable Größen sind, so scheint der Ausdruck: „Wert der Arbeit“, „Preis der Arbeit“ nicht irrationeller als der Ausdruck „Wert der Baumwolle“, „Preis der Baumwolle“.

Es kommt hinzu, daß der Arbeiter gezahlt wird, nachdem er seine Arbeit geliefert hat. In seiner Funktion als Zahlungsmittel rea-

the value or price of the article delivered—i.e. in this particular case, the value or price of the labor supplied.

Although most other commodities are paid after delivery to the buyer, the wages are paid after the capitalist has *consumed* the labor-power. The rationale for this was already explained in chapter Six, 277:2. The consumption of the commodity by the capitalist is an exertion on the part of the worker, therefore the form in which it is sold necessarily implies coercion to ensure that the labor-power is indeed made available to the capitalist to the fullest possible extent. In chapter Six, Marx did not make it clear enough that coercion is involved, but in my view it is exactly this coercive component that has the side effect of mystifying the true character of the commodity traded. Since the coercion focuses on the performance of labor by the worker, the impression is created that the commodity which the capitalist receives from the worker is indeed the commodity "labor."

(1d) Fourth point: in most cases, the use-value which the employer draws from the worker's labor-power is not the potential labor, but the actual labor. There are a few exceptions: firemen, repairmen, computer systems administrators are paid just to be present and able to intervene in case something happens. Here one can argue that it is their potential labor that is useful to the capitalist even if it is not actualized. But most other workers are only useful for the capitalist if they actually do perform the work. This, again, bolsters the illusion that labor is being sold, not labor-power.

Finally, the "use-value" supplied by the worker to the capitalist is not in fact his labor-power but its function, a specific form of useful labor, such as tailoring, cobbling, spinning, etc.

lisiert das Geld aber nachträglich den Wert oder Preis des gelieferten Artikels, also im gegebenen Fall den Wert oder Preis der gelieferten Arbeit.

Endlich ist der „Gebrauchswert“, den der Arbeiter dem Kapitalisten liefert, in der Tat nicht seine Arbeitskraft, sondern ihre Funktion, eine bestimmte nützliche Arbeit, Schneiderarbeit, Schusterarbeit, Spinnarbeit usw.

(1e) But if one makes this argument then immediately a further clarification becomes necessary. The capitalist does not employ shoe-makers because he cares about shoes. He employs shoe-makers because they create more value than the wages they receive. But the shoe-makers themselves are not aware of the value-creating ability of their labor. Therefore they mis-interpret the motivation why the capitalist buys their labor-power, and therefore they do not see the true character of the transaction they are involved in:

That this same labor is, on the other hand, the universal value-creating element, and thus possesses a property by virtue of which it differs from all other commodities, is something which falls outside the scope of ordinary consciousness.

Daß dieselbe Arbeit nach einer andren Seite hin allgemeines wertbildendes Element ist, eine Eigenschaft, wodurch sie sich von allen andren Waren unterscheidet, fällt außerhalb des Bereichs des gewöhnlichen Bewußtseins.

In the next paragraph, Marx looks at the quantitative side of the wage bargain. As in chapter Twelve, p. 433:2/oo, Marx assumes here that one hour of labor produces a value of

12 cents.

First Marx looks at it from point of view of the laborer. The magnitude of the wages themselves does not come from a value intrinsic in the labor, but it is borrowed from the values of the workers' means of subsistence. Will this "remote control" of the magnitude of value not alert the transactors about the special character of the commodity that is traded?

681:3 Let us put ourselves in the place of the worker who receives for 12 hours of labor the value-product of, say, 6 hours of labor, namely 72 cents. For him, in fact, his 12 hours of labor is the means of buying the 72 cents. The value of his labor-power may vary, with the value of his usual means of subsistence, from 72 to 96 cents, or from 72 to 48 cents; or, if the value of labor-power remains constant, its price may rise to 96 cents or fall to 48 cents as a result of changes in the relation of demand and supply. He always gives 12 hours of labor. Every change in the amount of the equivalent that he receives therefore necessarily appears to him as a change in the value or price of his 12 hours of labor.

↑ If productivity rises, then the value of labor-power falls and the worker has to work less per day to reproduce the value of his or her means of subsistence. Nevertheless, the actual work day is unchanged, since the capitalist simply makes the surplus-labor longer. Therefore the worker does not see the effects which productivity changes have on his commodity, and therefore he is led to think he is selling labor, and that any changes in the buying power of his wages are due to a change in the value of labor. ↓ Adam Smith tries to get away from these surface illusions by his hypothesis that the value of labor is a constant and that all changes in the buying-power of the wage are due to productivity differences.

This circumstance misled Adam Smith, who treated the working day as a constant quantity,²⁹ into the opposite assertion that the value of labor is constant, although the value of the means of subsistence may vary, and the same working day, therefore, may represent more or less money for the worker.

Smith never says explicitly that he considers the length of the working day as constant. But whenever he talks about the quantity of labor he only measures labor in days and almost never mentions the length or intensity of the labor during the day. The only exception is his discussion of piece wages, which cause the workers to spend too much labor per day:

563:3 Stellen wir uns auf den Standpunkt des Arbeiters, der für zwölfstündige Arbeit z.B. das Wertprodukt sechsstündiger Arbeit erhält, sage 3 sh., so ist für ihn in der Tat seine zwölfstündige Arbeit das Kaufmittel der 3 sh. Der Wert seiner Arbeitskraft mag variieren mit dem Wert seiner gewohnheitsmäßigen Lebensmittel von 3 auf 4 sh. oder von 3 auf 2 sh., oder bei gleichbleibendem Wert seiner Arbeitskraft mag ihr Preis, infolge wechselnden Verhältnisses von Nachfrage und Angebot, auf 4 sh. steigen oder auf 2 sh. fallen, er gibt stets 12 Arbeitsstunden. Jeder Wechsel in der Größe des Äquivalents, das er erhält, erscheint ihm daher notwendig als Wechsel im Wert oder Preis seiner 12 Arbeitsstunden.

Dieser Umstand verleitete umgekehrt Adam Smith, der den Arbeitstag als eine konstante Größe behandelt,²⁹ zur Behauptung, der Wert der Arbeit sei konstant, obgleich der Wert der Lebensmittel wechsele und derselbe Arbeitstag sich daher in mehr oder weniger Geld für den Arbeiter darstelle.

²⁹ Adam Smith only incidentally alludes to the variation of the working day, when he is dealing with piece-wages.

²⁹ A. Smith spielt nur zufällig auf die Variation des Arbeitstags an bei Gelegenheit des Stücklohns.

Term Paper Topic 909 *The Vintage edition of Capital [Mar76, p. 681] has here the following reference: Wealth of Nations, Bk I, Ch. 8, 'Of the Wages of Labor'. I read this chapter and did not find the place where Smith said that the value of labor was constant although the value of the means of subsistence may vary. If you can identify the place or places in Smith which Marx refers to here (which may or may not be in Ch. 8), I would count this piece of research as a term paper.*

(2b) One should expect the capitalist to be better aware than the worker that the commodity traded between him and the worker is labor-power, since he is trying every day to squeeze as much labor as possible from the worker.

682:1 Let us consider, on the other hand, the capitalist. He wishes to receive as much labor as possible for as little money as possible. In practice, therefore, the only thing that interests him is the difference between the price of labor-power and the value which its function creates.

564:1 Nehmen wir andererseits den Kapitalisten, so will er zwar möglichst viel Arbeit für möglichst wenig Geld erhalten. Praktisch interessiert ihn daher nur die Differenz zwischen dem Preis der Arbeitskraft und dem Wert, den ihre Funktion schafft.

He still does not draw the right conclusion from his own practice. He does not see labor-power as a special case, since he is trying to get maximum benefit for lowest cost from all commodities he is buying.

But he seeks to buy all commodities as cheaply as possible, and he explains his profit to himself as the result of mere sharp practice, of buying under the value and selling over it.

Aber er sucht alle Ware möglichst wohlfeil zu kaufen und erklärt sich überall seinen Profit aus der einfachen Prellerei, dem Kauf unter und dem Verkauf über dem Wert.

He is not aware that profits would be competed away after a brief adjustment period, if his interpretation of reality were correct.

Hence he never arrives at the insight that if such a thing as the value of labor really existed, and he really paid this value, no capital would exist, and his money would never be transformed into capital.

Er kommt daher nicht zur Einsicht, daß, wenn so ein Ding wie Wert der Arbeit wirklich existierte, und er diesen Wert wirklich zahlte, kein Kapital existieren, sein Geld sich nicht in Kapital verwandeln würde.

Now (3), the movement of wages over time:

682:2 Moreover, the actual movement of wages presents phenomena which seem to prove that it is not the value of labor-power which is paid, but the value of its function, of labor itself. We may reduce these phe-

564:2 Zudem zeigt die wirkliche Bewegung des Arbeitslohns Phänomene, die zu beweisen scheinen, daß nicht der Wert der Arbeitskraft bezahlt wird sondern der Wert ihrer Funktion, der Arbeit selbst. Die-

nomena to two great classes.

se Phänomene können wir auf zwei große Klassen zurückführen.

Together with the classification of these phenomena Marx gives very abbreviated arguments why they do not really prove that wages are determined by labor:

(a) Changes in wages owing to changes in the length of the working day. One might as well conclude that it is not the value of a machine which is paid, but that of the operations which it performs, because it costs more to hire a machine for a week than for a day.

Erstens: Wechsel des Arbeitslohns mit wechselnder Länge des Arbeitstags. Man könnte ebensoviel schließen, daß nicht der Wert der Maschine, sondern der ihrer Operation bezahlt wird, weil es mehr kostet, eine Maschine für eine Woche als für einen Tag zu dinge.

The fact that a longer workday costs more than a shorter workday is not an argument that the capitalist has bought the labor instead of the labor-power. A longer workday costs more because it causes more wear to the worker.

(b) Individual differences between the wages of different workers who perform the same function. These individual differences also exist in the system of slavery, but there they do not give rise to any illusions, for labor-power is in that case itself sold frankly and openly, without any embellishment. Only, in the slave system, the advantage of a labor-power above the average, and the disadvantage of a labor-power below the average, affects the slave-owner; whereas in the system of wage-labor it affects the worker himself, because his labor-power is, in the latter case, sold by himself, and in the former, by a third person.

Zweitens: Der individuelle Unterschied in den Arbeitslöhnen verschiedener Arbeiter, welche dieselbe Funktion verrichten. Diesen individuellen Unterschied findet man, aber ohne Anlaß zu Illusionen, auch im System der Sklaverei, wo frank und frei, ohne Schnörkel, die Arbeitskraft selbst verkauft wird. Nur fällt der Vorteil einer Arbeitskraft die über dem Durchschnitt, oder der Nachteil einer Arbeitskraft, die unter dem Durchschnitt steht, im Sklavensystem dem Sklaveneigner zu, im System der Lohnarbeit dem Arbeiter selbst, weil seine Arbeitskraft in dem einen Fall von ihm selbst, in dem andern von einer dritten Person verkauft wird.

Individual labor-powers differ also in slavery. This does not generate any illusions because the slave owner is the one who benefits from a good labor-power, not the slave himself or herself.

Question 912 *Productivity bargaining, i.e., union contracts which tie wage increases to increases in productivity, did not exist at Marx's time. Should it be included as an additional piece of evicence falsely suggesting that wages are paid for labor?*

(4) Finally, we should not be surprised if we encounter a situation where the form does not spontaneously divulge its content. This is often the case; this is why science is needed:

682:3 For the rest, what is true of all forms of appearance and their hidden background is also true of the form of appearance

564:3 Übrigens gilt von der Erscheinungsform, "Wert und Preis der Arbeit" oder

'value and price of labor', or 'wages', as contrasted with the essential relation manifested in it, namely the value and price of labor-power. The forms of appearance are reproduced directly and spontaneously, as current and usual modes of thought; the essential relation must first be discovered by science.

„Arbeitslohn“, im Unterschied zum wesentlichen Verhältnis, welches erscheint, dem Wert und Preis der Arbeitskraft, dasselbe, was von allen Erscheinungsformen und ihrem verborgnen Hintergrund. Die ersteren reproduzieren sich unmittelbar spontan, als gang und gäbe Denkformen, der andre muß durch die Wissenschaft erst entdeckt werden.

Indeed there is a scientific discipline which looks at the wage form from a scientific point of view, namely, political economy. What can it tell us about the wage form? Although it cannot help stumbling here and there upon the real connections, it is unable to consciously formulate it:

Classical political economy stumbles approximately onto the true state of affairs, but without consciously formulating it.

Die klassische politische Ökonomie stößt annähernd auf den wahren Sachverhalt, ohne ihn jedoch bewußt zu formulieren.

The obstacle here are the class relations. It is unable to do this as long as it stays within its bourgeois skin.

Sie kann das nicht, solange sie in ihrer bürgerlichen Haut steckt.

Again Marx hints here that the persistence of the wage form, the inability of the laborer to see its true content, is due to the exercise of class power.

Question 913 *Is the transformation of the value of labor-power into the value of labor real, or does it take place only in the minds of those who sell and buy labor-power?*

20. Time Wages

Although in the wealth in capitalism takes the form of commodities, see the first sentence 125:1 in chapter One, Marx stresses that one of the central “commodities” traded on the market, labor, is not really a commodity. Wage-laborer and capitalists only *think* they are trading labor, but in reality they are trading labor-power. On the surface of the economy, the categories “price of labor” and “value of labor” do exist, but Marx argues that labor, the substance of all commodity-value, is itself not a commodity and cannot have a value.

The price of labor is not determined by the value of labor—there is no such thing as the value of labor—but it is derived in a roundabout manner by the value of labor-power and by the length of the workday. Chapter Nineteen established a connection between the price of labor on the surface and the underlying relations of production. It showed that the worker’s wage or the “price of labor” is the transformed form of the price of labor-power.

Question 916 *Why a separate chapter about the time wage? Wasn’t the time wage already discussed in chapter Nineteen?*

But knowing the essence behind the wage form does not yet fully define the shapes which this form can assume. Chapters Twenty and Twenty-One discuss its main shapes: time wage and piece wage. The main result of this investigation of surface forms is that both forms have built-in tendencies to *extend* the length of the workday, and the piece wage has also the tendency to *intensify* labor. Marx also stresses that these surface forms try to make themselves independent of the underlying mechanisms which determine them. These chapters show that important economic laws not only originate in the sphere of production but also on the surface. ↓ Indeed, the very first sentence criticizes mainstream economics for not paying enough attention to the surface forms:

683:1 Wages of labor themselves take many forms. This is not apparent from the ordinary economic treatises which, in their crude obsession with substance, neglect all differences of form.

565:1 Der Arbeitslohn nimmt selbst wieder sehr mannigfaltige Formen an, ein Umstand, nicht erkennbar aus den ökonomischen Kompendien, die in ihrer brutalen Interessiertheit für den Stoff jeden Formunterschied vernachlässigen.

↑ Although the wage of labor is a form of something (namely, of the value of labor-power), this form itself can take different shapes. Mainstream economists do not look at these differences; they only want to know what lies underneath these forms, without exploring how these forms mediate that what lies underneath them, and what other effects

these forms may have. Marx gave similar criticisms already in the section about the fetish-like character of the commodity, 173:1/oo, and in footnote 23c154s489akmc to paragraph 492:3/o in the Machinery chapter.

Question 917 *What does one miss if one does not look at the form itself but only at that of which it is the form?*

An exposition of all these forms however belongs into the special study of wage labor, therefore not into this work. Nevertheless, the two prevailing fundamental forms must be briefly developed here.

Eine Darstellung aller dieser Formen gehört jedoch in die spezielle Lehre von der Lohnarbeit, also nicht in dieses Werk. Dagegen sind die zwei herrschenden Grundformen hier kurz zu entwickeln.

↑ This excursion into the territory of the book on wage-labor is necessary because some of the results of the present investigation of the wage forms, namely, that these two forms help to lengthen the workday and lower the price of labor, will become relevant in the accumulation chapter.

↓ Marx discusses time wages first, for the following reason:

683:2 The sale of labor-power, as will be remembered, always takes place for specific periods of time. The transformed form which the daily value, weekly value, etc. of labor-power immediately assumes is therefore that of time wages, hence daily etc. wages.

565:2 Der Verkauf der Arbeitskraft findet, wie man sich erinnert, stets für bestimmte Zeitperioden statt. Die verwandelte Form, worin der Tageswert, Wochenwert usw. der Arbeitskraft sich unmittelbar darstellt, ist daher die des „Zeitlohns“, also Tageslohn usw.

↑ Wages are the payment received by the seller of *labor-power*, not labor. We saw in chapter Six, 270:3/o, that it is an essential characteristic of the commodity labor-power that it can only be sold for limited periods of time, because otherwise the system would degenerate into slavery. Chapter Ten also showed that the length of the working day must be regulated. From this follows that, whatever the form of the wage, it must always, directly or indirectly, contain a measurement of the time for which the labor-power is hired out. In time wages, this measurement is made directly, and in piece wages, indirectly. The word “time wages” means here that wages are paid by the day, week, fortnight, etc. Marx does not mean hourly wages; he will introduce the hourly wage later as the “price of labor.” Historically, daily wages for a length of labor determined by custom (sunup to sundown etc.) came first, and hourly wages came only later.

Exam Question 919 *Wages have two main forms: time wages and piece wages. Why does Marx discuss time wages first?*

Question 920 *At the beginning of the Time Wage Chapter one might expect an argument of the sort: Wages are paid for labor, and labor is measured in time, therefore we will discuss time-wages first. Instead of this argument, Marx in 683:2 brings a different transition from*

labor-power to time wages. How does he argue, and what, if anything, is wrong with the argument outlined here?

1. [Quantitative Determination of Time Wages and Value of Labor]

The next paragraph is a reference to chapter Seventeen, which interrupts the argument a little. (In the French edition this paragraph is left out.)

683:3 The first thing that should be noted here is that the laws set forth in chapter Seventeen, on the changes in the relative magnitudes of price of labor-power and surplus-value, can be transformed, by a simple alteration in their form, into laws of wages. Similarly, the difference between the exchange-value of labor-power and the sum of means of subsistence into which this value is converted now appears as the distinction between nominal and real wages. It would be useless to repeat here, when dealing with the form of appearance, what we have already worked out in relation to the essential form.

↑ Nominal and real wages have not yet been formally introduced; that will be done in the next paragraph. Interesting differentiation between form of appearance and essential form. We shall therefore limit ourselves to a few points which characterize time-wages.

↓ There is not one but several quantitative measures of wages. Marx introduces “nominal wages” first:

683:4/o The sum of money³⁰ which the worker receives for his daily or weekly labor forms the amount of his nominal wages, or of his wages estimated in value.

³⁰ Here we always assume that the value of money itself remains constant.

↑ The constancy of the value of money is not an innocuous assumption. It money has a constant value, technical progress causes prices to fall, and relative surplus-value can only increase if wages fall as well. This is not a realistic assumption for the functioning of capitalism, since a gradual fall in the value of gold, mirroring the fall in the value of everything else, due to the general rise in productivity, allows prices and wages to remain constant

565:3 Es ist nun zunächst zu bemerken, daß die im fünfzehnten Kapitel dargestellten Gesetze über den Größenwechsel von Preis der Arbeitskraft und Mehrwert sich durch einfache Formveränderung in Gesetze des Arbeitslohns verwandeln. Ebenso erscheint der Unterschied zwischen dem Tauschwert der Arbeitskraft und der Masse der Lebensmittel, worin sich dieser Wert umsetzt, jetzt als Unterschied von nominellem und reellem Arbeitslohn. Es wäre nutzlos, in der Erscheinungsform zu wiederholen, was in der wesentlichen Form bereits entwickelt.

Wir beschränken uns daher auf wenige, den Zeitlohn charakterisierende Punkte.

565:4/o Die Geldsumme³⁰, die der Arbeiter für seine Tagesarbeit, Wochenarbeit usw. erhält, bildet den Betrag seines nominellen oder dem Wert nach geschätzten Arbeitslohns.

³⁰ Der Geldwert selbst wird hier immer als konstant vorausgesetzt.

even if productivity rises. See the last sentence in 192:1, and then 193:2. Furthermore, in today's post-gold-standard time, Keynes's “money illusion” plays an important role for the movement of wages, whenever there is secular inflation. The consideration of all these mechanisms is ruled out by the present assumption of a constant monetary value.

The empirics which Marx refers to in the background is therefore not the actual empirical experience, but this experience filtered through a process of abstraction. Those familiar with empirical experience of actual capitalism can easily extrapolate what things would look like if the value of gold was constant, and this is the experience Marx is referring to.

Question 921 *Besides the constancy of the value of money, what other abstractions of the raw empirics is Marx using in Capital?*

↓ An important category derived from the nominal wage is the “price of labor.”

But it is clear that according to the length of the working day, that is, according to the amount of actual labor supplied every day, the same daily or weekly wage may represent very different prices of labor, i.e. very different sums of money for the same quantity of labor.³¹ We must, therefore, in considering time-wages, again distinguish between the sum total of the daily or weekly wages, etc., and the price of labor.

³¹ “The price of labor is the sum paid for a given quantity of labor” [Wes26, p. 67]. West is the author of an epoch-making work in the history of political economy, published anonymously, [[We15].

The price of labor is relevant for two reasons. (1) it is the surface expression of the price of the most important commodity, namely, labor-power, and (2) it determines the rate of surplus-value (more about this in chapter Nine, 322:2/o). The distinction between wage and price of labor has practical relevance because the capitalist is interested in the price of labor, while the worker depends on the daily or weekly wage for his survival. ↓ After distinguishing the price of labor from the (daily or weekly) wage, Marx looks at the quantitative determination of the price of labor:

How then can we find this price, i.e. the money-value of a given quantity of labor?

↑ It is probably not an accident that Marx does not use the ontological formulation “how is the price of labor determined” but the epistemological “how can we find the price of labor.” Although it is possible to calculate this price at any given time, the price of labor is not anchored in an economic law. (Epistemological formulations are rare in Marx's writings, he

Es ist aber klar, daß je nach der Länge des Arbeitstags, also je nach der täglich von ihm gelieferten Quantität Arbeit, derselbe Tageslohn, Wochenlohn usw. einen sehr verschiedenen Preis der Arbeit, d.h. sehr verschiedene Geldsummen für dasselbe Quantum Arbeit darstellen kann.³¹ Man muß also bei dem Zeitlohn wieder unterscheiden zwischen Gesamtbetrag des Arbeitslohns, Taglohns, Wochenlohns usw. und Preis der Arbeit.

³¹ „Der Preis der Arbeit ist die Summe, die für eine gegebene Menge Arbeit gezahlt wird.“ [Wes26, p. 67]. West ist der Verfasser der in der Geschichte der politischen Ökonomie epochemachenden anonymen Schrift [[We15].

Wie nun diesen Preis finden, d.h. den Geldwert eines gegebenen Quantums Arbeit?

usually takes pains to formulate his research steps ontologically. Another rare exception is 762:1.)

Term Paper Topic 922 Find other places where Marx uses an epistemological rather than an ontological formulation, and discuss why.

↓ Chapter Nineteen discussed at length that the price of labor is not derived from a “value of labor” (such a thing does not exist) but it is a transformed form of the value of labor-power. Its quantity must be calculated in a somewhat roundabout manner:

The average price of labor can be obtained by dividing the average daily value of labor-power by the average number of hours in the working day. If, for instance, the daily value of labor-power is 3 shillings, which is the value-product of 6 working hours, and if the working day is 12 hours, the price of 1 working hour is $3/12$ shillings, i.e. 3d.

Der durchschnittliche Preis der Arbeit ergibt sich, indem man den durchschnittlichen Tageswert der Arbeitskraft durch die Stundenzahl des durchschnittlichen Arbeitstags dividiert. Ist z.B. der Tageswert der Arbeitskraft 3 sh., das Wertprodukt von 6 Arbeitsstunden, und ist der Arbeitstag zwölfstündig, so ist der Preis einer Arbeitsstunde = $(3 \text{ sh.})/12 = 3 \text{ d.}$

↑ This is the same example as in chapter Nineteen, 679:2. One component in this derivation of the price of labor, the value of labor-power, is well-defined and anchored in economic laws. But the other component, the length of the working-day, is “variable” or “indeterminate,” as Marx says in chapter Ten. ↓ It is a big contradiction that a magnitude which is indeterminate to such an important degree, something that is so-to-say “found” laying around, plays, on the surface of the economy, the key role of being the hourly price of labor: The price of the working hour thus found serves as the unit measure for the price of labor.

Der so gefundene Preis der Arbeitsstunde dient als Einheitsmaß für den Preis der Arbeit.

↓ Marx does not explicitly call it a contradiction, but he illustrates this indeterminacy by paradoxical examples:

684:1/o It follows therefore that daily and weekly wages may remain the same, although the price of labor falls constantly.

566:1/o Es folgt daher, daß der Taglohn, Wochenlohn usw. derselbe bleiben kann, obgleich der Preis der Arbeit fortwährend sinkt.

Marx gives now three scenarios in which the daily wage remains constant or even rises, while the price of labor does not increase or even falls. (The examples are therefore a little broader than what the above introductory sentence may suggest.) They are examples for what *may* happen, without the claim that things *have to* occur this way. The relevance of these example scenarios is that they describe movements which are possible according to the laws of economics, i.e., they do not violate the law of value. Whether or not these movements actually occur depends therefore on the strength of the competing interests between workers and capitalists, they are not resisted by the system as such.

If, for example, the usual working day is 10 hours and the daily value of labor-power 3 shillings, the price of the working hour is $3 \frac{3}{5} \text{d.}$ It falls to 3d. as soon as the working day rises to 12 hours, and to $2 \frac{2}{5} \text{d.}$ as soon as it rises to 15 hours. Despite all this, daily or weekly wages remain unchanged.

A lengthening of the working-day with constant daily wage benefits the capitalist since it increases surplus-value, but it does not violate the law of value since the worker is still getting a wage which allows him to reproduce his labor-power—unless the extremely long day cuts into the essence of his or her labor-power.

Question 923 How can the price of labor be reduced even without changing the weekly pay?

↓ Second scenario: Lengthening of the working day with constant *hourly* wages:

Inversely, daily or weekly wages may rise, although the price of labor remains constant or even falls. If, for instance, the working day is 10 hours and the daily value of labor-power 3 shillings, the price of one working hour is $3 \frac{3}{5} \text{d.}$ If the worker, owing to an increase in the number of orders, works for 12 hours, and the price of labor remains the same, his daily wage now rises to 3s. $7 \frac{1}{5} \text{d.}$, without any variation having taken place in the price of labor. The same result might follow if, instead of the extensive magnitude of labor, its intensive magnitude increased.³² The rise of nominal daily or weekly wages may therefore be unaccompanied by any change in the price of labor, or may even be accompanied by a fall in the latter.

↓ The footnote emphasizes the beneficial aspects of this for both capitalist and laborer:

³² ‘The wages of labor depend upon the price of labor and the quantity of labor performed ... An increase in the wages of labor does not necessarily imply an enhancement of the price of labor. From fuller employment, and greater exertions, the wages of labor may be considerably increased, while the price of labor may continue

War z.B. der gewohnheitsmäßige Arbeitstag 10 Stunden und der Tageswert der Arbeitskraft 3 sh., so betrug der Preis der Arbeitsstunde $3 \frac{3}{5} \text{d.}$; er sinkt auf 3 d., sobald der Arbeitstag zu 12 Stunden, und $2 \frac{2}{5} \text{d.}$, sobald er zu 15 Stunden steigt. Tages- oder Wochenlohn bleiben trotzdem unverändert.

Umgekehrt kann der Taglohn oder Wochenlohn steigen, obgleich der Preis der Arbeit konstant bleibt oder selbst sinkt. War z.B. der Arbeitstag zehnstündig und ist der Tageswert der Arbeitskraft 3 sh., so der Preis einer Arbeitsstunde $3 \frac{3}{5} \text{d.}$ Arbeitet der Arbeiter infolge zunehmender Beschäftigung und bei gleichbleibendem Preise der Arbeit 12 Stunden, so steigt sein Tageslohn nun auf 3 sh. $7 \frac{1}{5} \text{d.}$ ohne Variation im Preise der Arbeit. Dasselbe Resultat könnte herauskommen, wenn statt der extensiven Größe der Arbeit ihre intensive Größe zunähme.³² Steigen des nominellen Tages- oder Wochenlohns mag daher begleitet sein von gleichbleibendem oder sinkendem Preis der Arbeit.

³² „Die Arbeitslöhne hängen vom Preis der Arbeit und der Menge der geleisteten Arbeit ab ... Eine Erhöhung der Arbeitslöhne schließt nicht notwendig eine Steigerung des Preises der Arbeit ein. Bei längerer Beschäftigung und größerer Anstrengung können die Arbeitslöhne beträchtlich anwachsen, während der Preis der

the same' [Wes26, p. 67–8, 112]. However, West disposes of the main question, 'How is the price of labor determined?', with mere banalities.

↑ Marx's last remark indicates that he approves with West's observation. Note that Marx calls the determination of the price of labor "the main question."

↓ The third scenario is very relevant today, when each family increasingly has two wage-earners. Marx already discussed it in the Machinery chapter, 518:1.

The same thing holds for the income of the worker's family, when the quantity of labor provided by the head of the family is augmented by the labor of the members of his family.

↓ All three examples have one thing in common:

There are therefore methods of lowering the price of labor which are independent of any reduction in the nominal daily or weekly wage.³³

³³ The most fanatical representative of the eighteenth-century industrial bourgeoisie, the author of the Essay on Trade and Commerce, whom we have often quoted already, notices this, although he puts the matter in a confused way: 'It is the quantity of labor and not the price of it' (he means by this the nominal daily or weekly wage) 'that is determined by the price of provisions and other necessities: reduce the price of necessities very low, and of course you reduce the quantity of labor in proportion. Master-manufacturers know that there are various ways of raising and falling the price of labor, besides that of altering its nominal amount' (op. cit., pp. 48, 61). N. W. Senior, in his Three Lectures on the Rate of Wages, London, 1830, where he uses West's work without mentioning it, has this to say: 'The laborer is principally interested in the amount of wages' (p. 15). That is to say, the worker is principally interested in what he receives, the nominal sum of his wages, not in what he gives, the quantity of labor!

Arbeit derselbe bleiben kann.“ [Wes26, p. 67, 68 u. 112]. Die Hauptfrage: wie wird der „price of labour“ bestimmt? fertigt West übrigens mit banalen Redensarten ab.

Dasselbe gilt von der Einnahme der Arbeiterfamilie, sobald das vom Familienhaupt gelieferte Arbeitsquantum durch die Arbeit der Familienglieder vermehrt wird.

Es gibt also von der Schmälerung des nominellen Tages- oder Wochenlohns unabhängige Methoden zur Herabsetzung des Preises der Arbeit.³³

³³ Dies fühlt der fanatischste Vertreter der industriellen Bourgeoisie des 18. Jahrhunderts, der oft von uns zitierte Verfasser des „Essay on Trade and Commerce“ richtig heraus, obgleich er die Sache konfus darstellt: „Es ist die Menge der Arbeit und nicht ihr Preis“ (versteht darunter den nominellen Tages- oder Wochenlohn), „die durch den Preis der Nahrungsmittel und anderen lebensnotwendigen Dinge bestimmt wird: setzt den Preis der lebensnotwendigen Dinge stark herab, so senkt ihr natürlich entsprechend die Menge der Arbeit ... Die Fabrikherren wissen, daß es verschiedene Wege gibt, den Preis der Arbeit zu heben oder zu senken, außer der Änderung seines nominellen Betrags.“ (l.c. p. 48 u. 61.) In seinen „Three Lectures on the Rate of Wages“, Lond. 1830, worin N. W. Senior Wests Schrift benutzt, ohne sie anzuführen, sagt er u.a.: „Der Arbeiter ist hauptsächlich an der Höhe des Arbeitslohnes interessiert.“ (p. 15.) Also der Arbeiter ist hauptsächlich interessiert in dem, was er erhält, dem nominellen Betrag des Lohns, nicht in dem, was er gibt, der Quantität der Arbeit!

Question 924 *Is it true that the laborer is only interested in what he receives, i.e., the overall daily wage income, and not interested in what he gives, i.e., the overall daily labor?*

The footnote sketches out how this abstract possibility can become reality. The gap which leaves the price of labor an indeterminate quantity becomes an issue in the contest between capitalist and worker. Capitalist and worker pull in different, but not exactly opposite directions. The capitalists want to pay a lower price per unit of labor performed, while the workers want a higher weekly or daily wage. This leads to the compromise of compressing more labor into each day in order to satisfy both the capitalist's demand for cheap labor and the worker's need for higher wages. This compromise can only be achieved by lengthening the workday, i.e., it ultimately goes at the expense of the worker. The dynamic described here may be a reason why the workday is still so long today. Marx discusses this effect in more detail in the chapter on piece wages, starting 695:2/o. Piece wages share with time wages the tendency to extend the working hours, in addition to their obvious tendency to intensify labor.

2. [Hourly Wage and Length of Working Day]

If we look at the underlying structural relations, the daily wage is determined by structural economic laws, namely, by the value of labor-power, and the price of labor is derived from it, it can be obtained by dividing the daily wage by the length of the workday. But on the surface, the price of labor, not the value of labor-power, is the basis for the calculation of the daily wage. On the surface, therefore, causality goes in the opposite direction: the daily wage is obtained by multiplying the hourly wage by the length of the working-day. This multiplicative relationship is represented by Marx as two different laws, each of which holds one factor constant. As in chapter Seventeen, it can be argued that Marx decomposes the multiplication of two independent variables into two different laws, because different mechanisms are active in the two situations "price of labor constant" and "length of the working-day constant." ↓ The first sentence contains a "however" because examples of this general law were just discussed:

685:1 As a general law, however, it follows that, given the amount of daily, weekly labor, etc., the daily or weekly wage depends on the price of labor, which itself varies either with the value of labor-power, or with the divergencies between its price and its value. Given the price of labor, on the other hand, the daily or weekly wage depends on the quantity of labor expended daily or weekly.

567:1 Als allgemeines Gesetz aber folgt: Ist die Quantität der Tages-, Wochenarbeit usw. gegeben, so hängt der Tages- oder Wochenlohn vom Preise der Arbeit ab, der selbst variiert, entweder mit dem Wert der Arbeitskraft oder den Abweichungen ihres Preises von ihrem Werte. Ist dagegen der Preis der Arbeit gegeben, so hängt der Tages- oder Wochenlohn von der Quantität der Tages- oder Wochenarbeit ab.

Note that Marx only says that they depend, not that they are proportional to each other. As it turns out, their dependency is not quite proportional. In these deviations from proportionality, the underlying relations of production assert themselves against the "wrong" surface causality. Marx begins with the second alternative, first in the case that the work day

is shortened.

Question 925 In 683:4/o, Marx gives a formula which allows us to compute the price of labor from the daily value of labor-power. But in 685:1, he says that the daily value of labor-power depends on the price of labor. In which direction does the causality go? Does the daily value of labor-power depend on the price of labor, or the price of labor on the daily value of labor-power?

Some of the examples that follow now are an elaboration of the examples hinted at briefly in 684:1/o.

2.a. [Abnormal Underemployment]

The clash between surface relations and core relations is most acute when the capitalist works short hours. If the labor-day consists of fewer hours than the norm on which the price of labor is based, then the laborer's wages are not sufficient for the laborer to live.

685:2/o The unit of measurement for time-wages, the price of the working hour, is the value of a day's labor-power divided by the number of hours in the average working day. Let the latter be 12 hours, and the daily value of labor-power 3 shillings, the value-product of 6 hours of labor. Under these circumstances, the price of a working hour is 3d., and the value produced in it is 6d. If the worker is now employed for less than 12 hours a day (or for less than 6 days in the week), for instance only for 6 or 8 hours, he receives, at the price of labor just mentioned, only 2s. or 1s. 6d. a day.³⁴ As, on our hypothesis, he must work on average 6 hours a day in order to produce a day's wage which corresponds to nothing more than the value of his labor-power, and as, on the same hypothesis, he works only half of every hour for himself, and half for the capitalist, it is clear that he cannot obtain for himself the value-product of 6 hours if he is employed for less than 12 hours. In previous chapters we saw the destructive consequences of overwork; but here we come upon the origin of the sufferings which arise

567:2/o Die Maßeinheit des Zeitlohns, der Preis der Arbeitsstunde, ist der Quotient des Tageswerts der Arbeitskraft, dividiert durch die Stundenzahl des gewohnheitsmäßigen Arbeitstags. Gesetz, letzterer betrage 12 Stunden, der Tageswert der Arbeitskraft 3 sh., das Wertprodukt von 6 Arbeitsstunden. Der Preis der Arbeitsstunde ist unter diesen Umständen 3 d., ihr Wertprodukt 6 d. Wird der Arbeiter nun weniger als 12 Stunden täglich (oder weniger als 6 Tage in der Woche) beschäftigt, z.B. nur 6 oder 8 Stunden, so erhält er, bei diesem Preise der Arbeit, nur 2 oder 1 1/2 sh. Taglohn.³⁴ Da er nach der Voraussetzung im Durchschnitt 6 Stunden täglich arbeiten muß, um nur einen dem Wert seiner Arbeitskraft entsprechenden Taglohn zu produzieren, da er nach derselben Voraussetzung von jeder Stunde nur 1/2 für sich selbst, 1/2 aber für den Kapitalisten arbeitet, so ist es klar, daß er das Wertprodukt von 6 Stunden nicht ausschlagen kann, wenn er weniger als 12 Stunden beschäftigt wird. Sah man früher die zerstörenden Folgen der Überarbeit, so entdeckt man hier die Quellen der

for the worker out of his being insufficiently employed.

Footnote 34 clarifies that the effects of a *general* reduction of the working-day are different than those of a working-day which falls below the norm.

³⁴ The effect of such an abnormal under-employment is quite different from that of a general reduction of the working day, enforced by law. The former has nothing to do with the absolute length of the working day, and may just as well occur in a working day of 15 hours as in one of 6. The normal price of labor is in the first case calculated on the basis of an average working day of 15 hours, and in the second case a working day of 6 hours. The result is therefore the same if the worker is employed in the one case for only 7 hours, and in the other case for only 3 hours.

↓ Next Marx discusses a situation in which a normal working-day is not even specified. If wages are contracted by the hour, without obligation on part of the employer for a daily or weekly minimum employment, the capitalist can harvest surplus labor without allowing the worker to perform his or her necessary labor.

686:1 If the hour's wage is fixed in such a way that the capitalist does not bind himself to pay a day's or a week's wage, but only to pay wages for the hours during which he chooses to employ the worker, he can employ him for a shorter time than that which is originally the basis of the calculation of the wages for the hour, or the unit of measurement of the price of labor.

↓ The rest of this paragraph argues this situation in more detail.

Since this unit is determined by the ratio of the daily value of labor-power to the working day of a given number of hours, it naturally loses all meaning as soon as the working day ceases to contain a definite number of hours. The connection between the paid and the unpaid labor is destroyed.

↓ As is often the case with the little contradictions of capitalism, this lack of "meaning" can be used by the capitalist to increase exploitation.

Leiden, die für den Arbeiter aus seiner Unterbeschäftigung entspringen.

³⁴ Die Wirkung solcher anormalen Unterbeschäftigung ist durchaus verschieden von der einer allgemeinen zwangsgesetzlichen Reduktion des Arbeitstags. Erstere hat mit der absoluten Länge des Arbeitstags nichts zu schaffen und kann ebensowohl bei 15stündigem als bei 6stündigem Arbeitstag eintreten. Der normale Preis der Arbeit ist im ersten Fall darauf berechnet, daß der Arbeiter 15 Stunden, im zweiten darauf, daß er 6 Stunden per Tag durchschnittlich arbeitet. Die Wirkung bleibt daher dieselbe, wenn er in dem einen Fall nur 7 1/2, in dem andern nur 3 Stunden beschäftigt wird.

568:1 Wird der Stundenlohn in der Weise fixiert, daß der Kapitalist sich nicht zur Zahlung eines Tages- oder Wochenlohns verpflichtet, sondern nur zur Zahlung der Arbeitsstunden, während deren es ihm beliebt, den Arbeiter zu beschäftigen, so kann er ihn unter der Zeit beschäftigen, die der Schätzung des Stundenlohns oder der Maßeinheit für den Preis der Arbeit ursprünglich zugrunde liegt.

Da diese Maßeinheit bestimmt ist durch die Proportion $\frac{\text{Tageswert der Arbeitskraft}}{\text{Arbeitstag von gegebner Stundenzahl}}$, verliert sie natürlich allen Sinn, sobald der Arbeitstag aufhört, eine bestimmte Stundenzahl zu zählen. Der Zusammenhang zwischen der bezahlten und unbezahlten Arbeit wird aufgehoben.

Question 926 *In a system of hourly wages without a set daily minimum of hours, Marx says that “the connection between the paid and the unpaid labor is destroyed.” Explain what he means by this.*

The capitalist can now wring from the worker a certain quantity of surplus labor without allowing him the labor-time necessary for his own subsistence. He can annihilate all regularity of employment, and according to his own convenience, caprice, and the interest of the moment, make the most frightful overwork alternate with relative or absolute cessation of work. He can abnormally lengthen the working day without giving the worker any corresponding compensation, under the pretense of paying ‘the normal price of labor’. Hence the perfectly rational revolt of the London building workers in 1860 against the attempt of the capitalists to impose on them this sort of wage by the hour.

⇓ Apparently, Marx expected that the legal limitation of the working day would have the consequence that hourly wage contracts would specify a minimum number of hours which the capitalist would have to pay every day, or have other protections against short working hours.

The legal limitation of the working day puts an end to nonsense of this kind, though it does not of course end the diminution of employment caused by the competition of machinery, by changes in the quality of the workers employed, and partial or general crises.

2.b. [Long Hours and Overtime Pay]

Now the other side of the second alternative in 685:1: the price of labor is given and the length of the working day varies. Marx said some things about this already in chapter Seventeen, beginning 662:1, and here he only gives some additional points. His first additional point is: if the work day becomes too long, then the additional wear on the worker changes the arithmetic from a linear to a nonlinear relation. This too is an effect of the invisible connections beneath the surface.

Der Kapitalist kann jetzt ein bestimmtes Quantum Mehrarbeit aus dem Arbeiter heraus schlagen, ohne ihm die zu seiner Selbsterhaltung notwendige Arbeitszeit einzuräumen. Er kann jede Regelmäßigkeit der Beschäftigung vernichten und ganz nach Bequemlichkeit, Willkür und augenblicklichem Interesse die ungeheuerste Überarbeit mit relativer oder gänzlicher Arbeitslosigkeit abwechseln lassen. Er kann, unter dem Vorwand, den „normalen Preis der Arbeit“ zu zahlen, den Arbeitstag, ohne irgend entsprechende Kompensation für den Arbeiter, anormal verlängern. Daher der durchaus rationelle Aufstand (1860) der im Baufach beschäftigten Londoner Arbeiter gegen den Versuch der Kapitalisten, diesen Stundenlohn aufzuherrschen.

Die gesetzliche Beschränkung des Arbeitstags macht solchem Unfug ein Ende, obgleich natürlich nicht der aus Konkurrenz der Maschinerie, Wechsel in der Qualität der angewandten Arbeiter, partiellen und allgemeinen Krisen entspringenden Unterbeschäftigung.

686:2/oo With increasing daily or weekly wage, the price of labor may remain nominally constant, and yet fall below its normal level. This occurs every time the working day is prolonged beyond its customary length, while the price of labor (reckoned per working hour) remains constant. If, in the fraction $\frac{\text{daily value of labor-power}}{\text{working day}}$, the denominator increases, the numerator increases still more rapidly. The amount of deterioration in labor-power, and therefore its value, increases with the duration of its functioning, and to a more rapid degree than the increase of that duration.

This increased depreciation is reflected on the surface by “overtime pay.”

In many branches of industry, where time-wages are the general rule and there are no legal limits to the length of the working day, the habit has therefore spontaneously grown up of regarding the working day as normal only up to a point in time, for instance up to the expiration of the tenth hour (‘normal working day’, ‘the day’s work’, ‘the regular hours of work’). Beyond this limit the working time is overtime, and is paid at a better hourly rate (‘extra pay’), although often in a proportion which is ridiculously small.³⁵

³⁵ “The rate of payment for overtime” (in lace-making) ‘is so small, from 1/2d. and 3/4d. to 2d. per hour, that it stands in painful contrast to the amount of injury produced to the health and stamina of the workpeople ... The small amount thus earned is also often obliged to be spent in extra nourishment’ (Children’s Employment Commission, Second Report, p. xvi, n. 117).

⇓ Two implications of the division of the day into regular time and overtime. (1) it undermines the normalization of the working-day.

The normal working day exists here as a fraction of the actual working day, and it of-

568:2/oo Bei wachsendem Tages- oder Wochenlohn kann der Preis der Arbeit nominell konstant bleiben und dennoch unter sein normales Niveau sinken. Dies findet jedesmal statt, sobald mit konstantem Preis der Arbeit, resp. der Arbeitsstunde, der Arbeitstag über seine gewohnheitsmäßige Dauer verlängert wird. Wenn in dem Bruch $\frac{\text{Tageswert der Arbeitskraft}}{\text{Arbeitstag}}$ der Nenner wächst, wächst der Zähler noch rascher. Der Wert der Arbeitskraft, weil ihr Verschleiß, wächst mit der Dauer ihrer Funktion und in rascherer Proportion als das Inkrement ihrer Funktionsdauer.

In vielen Industriezweigen, wo Zeitlohn vorherrscht, ohne gesetzliche Schranken der Arbeitszeit, hat sich daher naturwüchsig die Gewohnheit herausgebildet, daß der Arbeitstag nur bis zu einem gewissen Punkt, z.B. bis zum Ablauf der zehnten Stunde, als normal gilt („normal working day“, „the day’s work“, „the regular hours of work“).

Jenseits dieser Grenze bildet die Arbeitszeit Überzeit (overtime) und wird, die Stunde als Maßeinheit genommen, besser bezahlt (extra pay), obgleich oft in lächerlich kleiner Proportion.³⁵

³⁵ „Die Rate der Zahlung für Überzeit“ (in der Spitzenmanufaktur) „ist so klein, 1/2 d. usw. per Stunde, daß sie in peinlichem Kontrast steht zur massenhaften Unbill, die sie der Gesundheit und Lebenskraft der Arbeiter antut ... Der so gewonnene kleine Überschuß muß außerdem oft in Extra-Erfrischungsmitteln wieder verausgabt werden.“ („Child. Empl. Comm., II. Rep.“, p. XVI, n. 117.)

Der normale Arbeitstag existiert hier als Bruchteil des wirklichen Arbeitstags, und

ten happens that the latter exceeds the former during the entire year.³⁶

³⁶ As for instance in paper-staining until the recent introduction into this trade of the Factory Act. 'We work on with no stoppage for meals, so that the day's work of 10 1/2 hours is finished by 4.30 p.m., and all after that is overtime, and we seldom leave off working before 6 p.m., so that we are really working overtime the whole year round' (Mr Smith's evidence, in Children's Employment Commission, First Report, p. 125).

↓ (2) Regular pay is depressed, so that the workers are forced to work longer because they depend on overtime pay.

The increase in the price of labor when the working day is extended beyond a certain normal limit takes place in various British industries in such a way that the low price of labor during the so-called normal time compels the worker to work during the better paid overtime, if he wishes to obtain a sufficient wage at all.³⁷

³⁷ As for instance in the bleaching-works of Scotland. 'In some parts of Scotland this trade' (before the introduction of the Factory Act in 1862) 'was carried on by a system of overtime, i.e. ten hours a day were the regular hours of work, for which a nominal wage of 1s. 2d. per day was paid to a man, there being every day overtime for 3 or 4 hours, paid at the rate of 3d. per hour. The effect of this system' (was as follows:) 'a man could not earn more than 8s. per week when working the ordinary hours ... without overtime they could not earn a fair day's wages' (Reports of the Inspectors of Factories ... 30 April 1863, p. 10). 'The higher wages, for getting adult males to work longer hours, are a temptation too strong to be resisted' (Reports of the Inspectors of Factories ... 30 April 1848, p. 5). The book-binding trade in the city of London employs a large number of young girls from 14 to 15 years old under indentures which prescribe certain definite hours of labor. Nevertheless, they

der letztere währt oft während des ganzen Jahres länger als der erstere.³⁶

³⁶ Z.B. in der Tapetendruckerei vor der neulichen Einführung des Fabrikakts. „Wir arbeiteten ohne Pause für Mahlzeiten, so daß das Tageswerk von 10 1/2 Stunden um halb 5 Uhr nachmittags beendet ist, und alles spätere ist Überzeit, die selten vor 6 Uhr abends aufhört, so daß wir in der Tat das ganze Jahr durch Überzeit arbeiten.“ (Mr. Smiths Evidene in „Child. Empl. Comm., I. Rep.“, p. 125.)

Der Wachstum im Preis der Arbeit mit der Verlängerung des Arbeitstags über eine gewisse Normalgrenze gestaltet sich in verschiedenen britischen Industriezweigen so, daß der niedrige Preis der Arbeit während der sog. Normalzeit dem Arbeiter die besser bezahlte Überzeit aufzwingt, will er überhaupt einen genügenden Arbeitslohn herauschlagen.³⁷

³⁷ Z.B. in den schottischen Bleichereien. „In einigen Teilen Schottlands wurde diese Industrie“ (vor Einführung des Fabrikakts 1862) „nach dem System der Überzeit betrieben, d.h. 10 Stunden galten als normaler Arbeitstag. Dafür erhielt der Mann 1 sh. 2 d. Hierzu kam aber täglich eine Überzeit von 3 oder 4 Stunden, wofür 3 d. per Stunde gezahlt wurde. Folge dieses Systems: Ein Mann, der nur die Normalzeit arbeitete, konnte nur 8 sh. Wochenlohn verdienen. Ohne Überzeit reichte der Lohn nicht aus.“ („Reports of Insp. of Fact., 30th April 1863“, p. 10.) Die „Extrazahlung für Überzeit ist eine Versuchung, der die Arbeiter nicht widerstehen können“. („Rep. of Insp. of Fact., 30th April 1848“, p. 5.) Die Buchbinderei in der City von London verwendet sehr viele junge Mädchen vom 14.–15. Jahr an, und zwar unter dem Lehrlingskontrakt, der bestimmte Arbeitsstunden vorschreibt. Nichtsdestoweniger arbeiten sie in der Schlußwoche jedes Monats bis 10, 11, 12 und 1

work in the last week of each month until 10, 11, 12 or 1 o'clock at night, along with the older male workers, in very mixed company. 'The masters tempt them by extra pay and supper,' which they eat in neighbouring public houses. The great debauchery thus produced among these 'young immortals' (Children's Employment Commission. Fifth Report, p. 44, n. 191) finds its compensation in the fact that, among other things, they bind many Bibles and other edifying books.

↓ As in 686:1, Marx had too high hopes in a legal limitation of the working day puts an end to this pastime.³⁸

³⁸ See Reports of the Inspectors of Factories ... 30 April 1863, op. cit. The London building workers showed a very accurate appreciation of this state of affairs when, during the great strike and lock-out of 1860, they declared that they would accept wages by the hour under only two conditions: (1) that, alongside the price of the working hour, a normal working day of 9 and 10 hours respectively should be laid down, and that the price of the hour for the 10-hour working day should be higher than that for an hour of the 9-hour working day; and (2) that every hour beyond the normal working day should be reckoned as overtime and proportionally more highly paid.

↑ The strike of 1860 was already mentioned in 686:1.

Question 928 *In Chapter Twenty, Marx mentions two abuses connected with the wage which he thought would be abolished with the legal limitation of the working-day but which weren't. Which are those?*

2.c. [Extension of Regular Hours Leads to Lower Wages]

While the previous examples discussed a *temporary* shortening or lengthening of the working-day compared to its normal length, the next example looks at the implications of an increase of the normal length itself. Marx begins with some empirical facts:

688:1 It is a generally known fact that the longer the working day in a branch of industry, the lower the wages are.³⁹

Uhr nachts, zusammen mit den älteren Arbeitern, in sehr gemischter Gesellschaft. „Die Meister verlocken (tempt) sie durch Extralohn und Geld für ein gutes Nachtessen“, das sie in benachbarten Kneipen zu sich nehmen. Die große Liederlichkeit, so unter diesen „young immortals“ produziert („Child. Empl. Comm., V. Rep.“, p. 44, n. 191), findet ihre Kompensation darin, daß von ihnen unter andrem auch viele Bibeln und Erbauungsbücher gebunden werden.

↓ As in 686:1, Marx had too high hopes in a legal limitation of the working-day.

Gesetzliche Beschränkung des Arbeitstags macht diesem Vergnügen ein Ende.³⁸

³⁸ Sieh „Reports of Insp. of Fact., 30th April 1863“, l.c. Mit ganz richtiger Kritik des Sachverhältnisses erklärten die im Baufach beschäftigten Londoner Arbeiter während des großen strike und lock-out von 1860, den Stundenlohn nur annehmen zu wollen unter zwei Bedingungen: 1. daß mit dem Preis der Arbeitsstunde ein Normalarbeitstag von resp. 9 und 10 Stunden festgesetzt werde und der Preis für die Stunde des zehnstündigen Arbeitstags größer sei als für die des neunstündigen; 2. daß jede Stunde über den Normaltag hinaus als Überzeit verhältnismäßig höher bezahlt werde.

570:1 Es ist allgemein bekannte Tatsache, daß, je länger der Arbeitstag in einem Industriezweig, um so niedriger der Arbeitslohn.³⁹

³⁹ 'It is a very notable thing, too, that where long hours are the rule, small wages are also so' (Reports of the Inspectors of Factories ... 31 October 1863, p. 9). 'The work which obtains the scanty pittance of food, is, for the most part, excessively prolonged' (Public Health, Sixth Report, 1864, p. 15).

↓ Not only only the hourly rate but even the total daily wage is lower in industries with long hours!

The factory inspector Alexander Redgrave illustrates this by a comparative review of the twenty years from 1839 to 1859, according to which wages rose in the factories under the Ten Hours' Act, while they fell in the factories where the work went on for 14 and 15 hours every day.⁴⁰

⁴⁰ Reports of the Inspectors of Factories ... 30 April 1860, pp. 31–2.

Now Marx explains how this negative correlation between length of working day and wages comes about. He does not start with a longer working-day but with the other side, low hourly wages. Why? Because the level of the hourly wages seems an objectively given, market-determined condition. In response to these low wages, workers agree to work more hours every day so that they can survive. They rely here on the second surface law discussed in 685:1, that with a fixed price of labor, a longer day will give them a higher daily wage.

688:2 From the law stated above, namely that the price of labor being given, the daily or weekly wage depends on the quantity of labor expended, it follows, first of all, that the lower the price of labor, the greater must be the quantity of labor, or the longer must be the working day, for the worker to secure even a miserable average wage. The low level of the price of labor acts here as a stimulus to the extension of the labor-time.⁴¹

⁴¹ The hand nail-makers of England, for example, have to work 15 hours a day, because of the low price of their labor, in order to hammer out an extremely wretched weekly wage. 'It's a great many hours in a day (6 a.m. to 8 p.m.), and he has to work hard all the time to get 11d. or 1s., and there is the wear of the tools, the cost

³⁹ „Es ist zudem eine recht bemerkenswerte Tatsache, daß da, wo in der Regel die Arbeitszeit lang ist, die Löhne gering sind.“ („Rep. of Insp. of Fact., 31st Oct. 1863“, p. 9.) „Die Arbeit, die einen Hungerlohn einbringt, ist meist übermäßig lang.“ („Public Health, Sixth Rep. 1863“, p. 15.)

Fabrikinspektor A. Redgrave illustriert dies durch eine vergleichende Übersicht der zwanzigjährigen Periode von 1839–1859, wonach der Arbeitslohn in den dem Zehn-stundengesetz unterworfenen Fabriken stieg, während er fiel in den Fabriken, wo 14 bis 15 Stunden täglich gearbeitet wird.⁴⁰

⁴⁰ „Reports of Insp. of Fact., 30th April 1860“, p. 31, 32.

570:2 Zunächst folgt aus dem Gesetz: „Bei gegebenem Preis der Arbeit hängt der Tages- oder Wochenlohn von der Quantität der gelieferten Arbeit ab“, daß, je niedriger der Preis der Arbeit, desto größer das Arbeitsquantum sein muß oder desto länger der Arbeitstag, damit der Arbeiter auch nur einen kümmerlichen Durchschnittslohn sichre. Die Niedrigkeit des Arbeitspreises wirkt hier als Sporn zur Verlängerung der Arbeitszeit.⁴¹

⁴¹ Die Hand-Nägelmacher in England haben z.B. wegen des niedrigen Arbeitspreises 15 Stunden täglich zu arbeiten, um den kümmerlichsten Wochenlohn herauszuschlagen. „Es sind viele, viele Stunden des Tags, und während aller der Zeit muß er hart schenken, um 11 d. oder 1 sh. herauszuschlagen, und davon gehen 2 1/2 bis 3 d.

of firing, and something for waste iron to go out of this, which takes off altogether 2 1/2d. or 3d' (Children's Employment Commission, Third Report, p. 136, n. 671). The women, although they work for the same length of time, earn a weekly wage of only 5s. (ibid., p. 137, n. 674).

↓ However, these longer working hours set deeper mechanisms in motion which decrease the already low hourly wages even more:

688:3 However, the extension of the period of labor produces in its turn a fall in the price of labor, and with this a fall in the daily or the weekly wage.

↑ Marx says here that the fall in the price of labor will not only erase the gains expected by the workers when they agreed to or acquiesced with longer hours, but at the end the daily wage will even be lower than initially. ↓ By what mechanisms? The first mechanism is the regularity first formulated in 683:4/o.

689/o The determination of the price of labor by use of the ratio $\frac{\text{daily value of labor-power}}{\text{working day of a given number of hours}}$ shows that the prolongation of the working day itself lowers the price of labor, if no compensatory factor enters.

↑ This cannot yet be the whole answer, since according to this formula, the total daily wage after lengthening the working-day is the same as it was before. According to this law, one should expect the daily wage to be independent of the length of the working-day, instead of being negatively related to it. Other forces must be at work to generate the negative relation. ↓ The existence of such other forces (Marx calls them here "circumstances") is already indicated by the fact that the working-day is longer than normal to begin with:

But the same circumstances which allow the capitalist in the long run to prolong the working day also allow him at first, and compel him finally, to reduce the price of labor nominally as well until the total price of the increased number of hours goes down, and therefore the daily or weekly wage falls.

Let us summarize again how Marx answers the question: why are abnormally long hours associated with abnormally low daily wages, in such a way that the longer the hours the lower the daily wage? According to the underlying laws of capitalist production, one should expect the daily wage to be independent of the length of the working-day, since it is determined by the reproduction cost of the laborer, not by the amount of labor performed. One should also expect the length of the working-day to be equal for all industries. In those industries

ab für Verschleiß der Werkzeuge, Feuerung, Eisenabfall.“ („Child. Empl. Comm., III. Rep.“, p. 136, n. 671.) Die Weiber verdienen bei derselben Arbeitszeit nur einen Wochenlohn von 5 sh. (l.c. p. 137, n. 674.)

571:1 Umgekehrt aber produziert ihrerseits die Verlängerung der Arbeitszeit einen Fall im Arbeitspreis und damit im Tages- oder Wochenlohn.

571:2–572:3 Die Bestimmung des Arbeitspreises durch $\frac{\text{Tageswert der Arbeitskraft}}{\text{Arbeitstag von gegebener Stundenzahl}}$ ergibt, daß bloße Verlängerung des Arbeitstags den Arbeitspreis senkt, wenn keine Kompensation eintritt.

Aber dieselben Umstände, welche den Kapitalisten befähigen, den Arbeitstag auf die Dauer zu verlängern, befähigen ihn erst und zwingen ihn schließlich, den Arbeitspreis auch nominell zu senken, bis der Gesamtpreis der vermehrten Stundenzahl sinkt, also der Tages- oder Wochenlohn.

in which the working-day is longer than normal, extraordinary circumstances must prevail which allow the capitalists to impose a longer working-day on the workers. Marx's point is now that longer working hours are probably not the only effect of such extraordinary circumstances. If the workers are in a situation where they must agree to work longer hours, then they are probably also forced to accept lower overall wages.

Question 929 *How does Marx argue that longer hours are associated with a lower overall daily wage?*

It is not necessary for this derivation to specify what those extraordinary circumstances are. ↓ Only as a proof of concept, in order to show that such circumstances exist and work as conjectured, Marx brings two examples of such circumstances. (He calls them "circumstances" because they are competitive constellations.)

Here we need only refer to two kinds of circumstance.

Hinweis auf zwei Umstände genügt hier.

Both examples have to do with competitive forces in situations in which the market does not clear.

↓ In the first example, there is an excess supply in the labor market. In order not to get fired, the worker works extra hard. But by working more, the worker increases the supply of labor even more. I.e., he competes with himself or herself:

If one man does the work of 1 1/2 or 2 men, the supply of labor increases, although the supply of labor-power on the market remains constant. The competition thus created between the workers allows the capitalist to force down the price of labor, while the fall in the price of labor allows him, on the other hand, to force up the hours of work still further.⁴²

Verrichtet ein Mann das Werk von 1 1/2 oder 2 Männern, so wächst die Zufuhr der Arbeit, wenn auch die Zufuhr der auf dem Markt befindlichen Arbeitskräfte konstant bleibt. Die so unter den Arbeitern erzeugte Konkurrenz befähigt den Kapitalisten, den Preis der Arbeit herabzudrücken, während der fallende Preis der Arbeit ihn umgekehrt befähigt, die Arbeitszeit noch weiter heraufzuschrauben.⁴²

⁴² For instance, if a factory worker refuses to work the long hours which are customary, 'he would very shortly be replaced by somebody who would work any length of time, and thus be thrown out of employment' (Reports of the Inspectors of Factories . . . 30 April 1848, Evidence, p. 39, n. 58). 'If one man performs the work of two . . . the rate of profits will generally be raised . . . in consequence of the additional supply of labor having diminished its price' (Senior, op. cit., p. 15).

⁴² Wenn ein Fabrikarbeiter z.B. verweigerte, die hergebrachte lange Stundenzahl zu arbeiten, „würde er sehr schnell durch jemand ersetzt werden, der beliebig lang zu arbeiten gewillt ist, und würde so arbeitslos werden“. („Reports of Insp. of Fact., 31st Oct. 1848“, Evidence, p. 39, n. 58.) „Wenn ein Mann die Arbeit von zweien leistet . . . wird im allgemeinen die Profitrate steigen . . ., da diese zusätzliche Zufuhr von Arbeit ihren Preis herabgedrückt hat.“ (Senior, l.c. p. 15.)

↓ In the second example, there is an excess supply in the market for the finished product:

in this situation, command over abnormally low wages becomes a competitive weapon and leads to abnormally low prices.

Soon, however, this command over abnormal quantities of unpaid labor, i.e. quantities in excess of the average social amount, becomes a source of competition amongst the capitalists themselves. A part of the price of the commodity consists of the price of labor. The unpaid part of the price of labor does not need to be reckoned as part of the price of the commodity. It may be given to the buyer as a present. This is the first step taken under the impulse of competition. The second step, also compelled by competition, is the exclusion from the selling price of the commodity of at least a part of the abnormal surplus-value created by the extension of the working day. In this way, an abnormally low selling price of the commodity arises, at first sporadically, and becomes fixed by degrees; this lower selling price henceforward becomes the constant basis of a miserable wage for excessive hours of work, just as originally it was the product of those very circumstances. We are only hinting at this movement here, as the analysis of competition does not belong to this part of the investigation. Nevertheless, let the capitalist speak for himself, for a moment.

'In Birmingham there is so much competition of masters one against another, that many are obliged to do things as employers that they would otherwise be ashamed of, and yet no more money is made, but only the public gets the benefit.'⁴³

⁴³ Children's Employment Commission, Third Report, Evidence, p. 66, n. 22.

Bald jedoch wird diese Verfügung über anormale, d.h. das gesellschaftliche Durchschnittsniveau überfließende Quantität unbezahlter Arbeit zum Konkurrenzmittel unter den Kapitalisten selbst. Ein Teil des Warenpreises besteht aus dem Preis der Arbeit. Der nicht gezahlte Teil des Arbeitspreises braucht nicht im Warenpreis zu rechnen. Er kann dem Warenkäufer geschenkt werden. Dies ist der erste Schritt, wozu die Konkurrenz treibt. Der zweite Schritt, wozu sie zwingt, ist, wenigstens einen Teil des durch die Verlängerung des Arbeitstags erzeugten anormalen Mehrwerts ebenfalls aus dem Verkaufspreis der Ware auszuschließen. In dieser Weise bildet sich erst sporadisch und fixiert sich nach und nach ein anormal niedriger Verkaufspreis der Ware, der von nun an zur konstanten Grundlage kümmerlichen Arbeitslohns bei übermäßiger Arbeitszeit wird, wie er ursprünglich das Produkt dieser Umstände war. Wir deuten diese Bewegung bloß an, da die Analyse der Konkurrenz nicht hierhin gehört. Doch mag für einen Augenblick der Kapitalist selbst sprechen.

„In Birmingham ist die Konkurrenz unter den Meistern so groß, daß mancher von uns gezwungen ist, als Arbeitsanwender zu tun, was er sich schämen würde, sonst zu tun; und dennoch wird nicht mehr Geld gemacht (and yet no more money is made), sondern das Publikum allein hat den Vorteil davon.“⁴³

⁴³ „Child. Empl. Comm., III. Rep.“, Evidence, p. 66, n. 22.

Question 931 *In which of the examples in this chapter is there a tendency to increase (daily) wages while lowering the (hourly) price of labor; a possibility Marx invoked in 684:1/o?*

[Another Digression about the Undersellers]

The example of the “undersellers,” first introduced in footnote 51 to paragraph 277:2 in chapter Six, and also discussed in chapter Ten, 358:2, illustrates this connection between abnormally low wages and abnormally low prices.

The reader will remember the two sorts of London bakers, of whom one sold the bread at its full price (the ‘full-priced’ bakers), the other below its normal price (‘the underpriced’, ‘the undersellers’). The ‘full-priced’ denounced their rivals before the Parliamentary Committee of Inquiry:

‘They only exist now by first defrauding the public, and next getting 18 hours’ work out of their men for 12 hours’ wages ... The unpaid labor of the men was made ... the source whereby the competition was carried on, and continues so to this day ... The competition among the master-bakers is the cause of the difficulty in getting rid of night-work. An underseller, who sells his bread below the costprice according to the price of flour, must make it up by getting more out of the labor of the men ... If I got only 12 hours’ work out of my men, and my neighbour got 18 or 20, he must beat me in the selling price. If the men could insist on payment for overwork, this would be set right ... A large number of those employed by the undersellers are foreigners and youths, who are obliged to accept almost any wages they can obtain.’⁴⁴

⁴⁴ Report, etc. Relative to the Grievances Complained of by the Journeymen Bakers, London, 1862, p. lii, and, in the same place, Evidence, notes 479, 359, 27. In any case, the ‘full-priced’ themselves, as was mentioned above, and as their spokesman, Bennett, himself admits, make their men ‘generally begin work at 11 p.m.

Man erinnert sich der zwei Sorten Londoner Bäcker, wovon die eine Brot zum vollen Preise (the „fullpriced“ backers), die andere es unter seinem normalen Preise verkauft („the underpriced“, „the undersellers“). Die „fullpriced“ denunzieren ihre Konkurrenten vor der parlamentarischen Untersuchungskommission:

„Sie existieren nur, indem sie erstens das Publikum betrügen“ (durch Fälschung der Ware) „und zweitens 18 Arbeitsstunden aus ihren Leuten für den Lohn zwölfstündiger Arbeit herauschinden ... Die unbezahlte Arbeit (the unpaid labour) der Arbeiter ist das Mittel, wodurch der Konkurrenzkampf geführt wird ... Die Konkurrenz unter den Bäckermeistern ist die Ursache der Schwierigkeit in Beseitigung der Nacharbeit. Ein Unterverkäufer, der sein Brot unter dem mit dem Mehrpreis wechselnden Kostpreis verkauft, hält sich schadlos, indem er mehr Arbeit aus seinen Leuten ausschlägt. Wenn ich nur 12 Stunden Arbeit aus meinen Leuten ausschlage, mein Nachbar dagegen 18 oder 20, muß er mich im Verkaufspreis schlagen. Könnten die Arbeiter auf Zahlung für Überzeit bestehen, so wäre es mit diesem Manöver bald zu Ende ... Eine große Anzahl der von den Unterverkäufern Beschäftigten sind Fremde, Jungen und andre, die fast mit jedem Arbeitslohn, den sie kriegen können, vorlieb zu nehmen gezwungen sind.“⁴⁴

⁴⁴ „Report etc. relative to the Grievances complained of by the journeymen bakers“, Lond. 1862, p. LII und ib., Evidence, n. 479, 359, 27. Indes lassen auch die fullpriced, wie früher erwähnt und wie ihr Wortführer Bennet selbst zugesteht, ihre Leute „Arbeit beginnen um 11 Uhr abends oder früher und verlängern sie oft bis 7

... up to 8 o’clock the next morning ... they are then engaged all day long ... as late as 7 o’clock in the evening’ (ibid., p. 22).

Uhr des folgenden Abends“. (l.c. p. 22.)

Exam Question 932 *What is the difference between surplus labor time and overtime?*

2.d. [Distorted View of Time Wages by the Capitalist]

The complaints of the capitalists about the infringements against their rights to exploit gives a fitting conclusion of the chapter: everything looks different on the surface.

690:1/o This jeremiad is also interesting because it shows how it is only the semblance of the relations of production which is reflected by the brain of the capitalist. He does not know that the normal price of labor also includes a definite quantity of unpaid labor, and that this very unpaid labor is the normal source of his profits. The category of surplus labor-time does not exist at all for him, since it is included in the normal working day, which he thinks he has paid for in the day’s wages. But overtime, namely the prolongation of the working day beyond the limits corresponding to the usual price of labor, certainly does exist for him. When faced with his underselling competitor, he even insists upon extra pay for this overtime. Again, he does not know that this extra pay also includes unpaid labor, just as much as the price of the customary hour of labor does. For example, the price of one hour of the 12-hour working day is 3d., say the value-product of half a working hour, while the price of an overtime working hour is 4d., or the value-product of 2/3 of a working hour. In the first case the capitalist appropriates one-half of the working hour, in the second case one third, without making any payment in return.

572:4/o Diese Jeremiade ist auch deswegen interessant, weil sie zeigt, wie nur der Schein der Produktionsverhältnisse sich im Kapitalistenhirn widerspiegelt. Der Kapitalist weiß nicht, daß der normale Preis der Arbeit ein bestimmtes Quantum unbezahlter Arbeit einschließt und ebendiese unbezahlte Arbeit die normale Quelle seines Gewinns ist. Die Kategorie der Mehrarbeitszeit existiert überhaupt nicht für ihn, denn sie ist eingeschlossen im normalen Arbeitstag, den er im Taglohn zu zahlen glaubt. Wohl aber existiert für ihn die Überzeit, die Verlängerung des Arbeitstags über die dem gewohnten Preis der Arbeit entsprechende Schranke. Seinem unterverkaufenden Konkurrenten gegenüber besteht er sogar auf Extrazahlung (extra pay) für diese Überzeit. Er weiß wieder nicht, daß diese Extrazahlung ebensoviel unbezahlte Arbeit einschließt, wie der Preis der gewöhnlichen Arbeitsstunde. Z.B. der Preis einer Stunde des zwölfstündigen Arbeitstags ist 3 d., das Wertprodukt von 1/2 Arbeitsstunde, während der Preis der überzeitigen Arbeitsstunde 4 d., das Wertprodukt von 2/3 Arbeitsstunde. Im ersten Fall eignet sich der Kapitalist von einer Arbeitsstunde die Hälfte, im andern 1/3 ohne Zahlung an.

21. Piece Wages

1. [Piece Wage is Simply a Form of Time Wage]

The first brief paragraph makes a claim which will be elaborated and supported in the next four paragraphs (about one page of text).

692:1 The piece-wage is nothing but a transmuted form of the time-wage just as the time-wage is a transmuted form of the value or price of labor-power.

↑ Despite this comparison, the step from time-wages to piece-wages is not as big and mystifying as that from the value of labor-power to time-wages. I prefer therefore the following formulation from *Results*, 123:1/o, in which the piece wage is a *determinate* rather than a *transmuted* form of the time wage:

Hence, the *piece wage* is nothing but a *determinate form* of the time wage. The time wage is, for its part, only a changed form for the *value of the labor-power* ...

574:1 Der *Stücklohn* ist nichts als *verwandelte Form des Zeitlohns*, wie der Zeitlohn die verwandelte Form des Wertes oder Preises der Arbeitskraft.

Der *Stücklohn* ist also nichts als eine *bestimmte Form des Zeitlohns*, der seinerseits nur die verwandelte Form für den *Wert des Arbeitsvermögens* ...

1.a. [Piece Wage Not a Payment for the Product of Labor]

↓ Before saying what the piece wage is, Marx emphasizes what is *not*: the piece wage is not a payment for the product of the labor, although at first glance it looks like one:

692:2 In piece-wages it seems at first sight as if the use-value bought from the worker is not his labor-power as it actually functions, living labor, but labor already objectified in the product. It also seems as if the price of this labor is determined not, as with time-wages, by the fraction $\frac{\text{daily value of labor-power}}{\text{working day of a given number of hours}}$ but by the producer's capacity for work.⁴⁵

574:2 Beim Stücklohn sieht es auf den ersten Blick aus, als ob der vom Arbeiter verkaufte Gebrauchswert nicht die Funktion seiner Arbeitskraft sei, lebendige Arbeit, sondern bereits im Produkt vergegenständlichte Arbeit, und als ob der Preis dieser Arbeit nicht wie beim Zeitlohn durch die Bruchzahl $\frac{\text{Tageswert der Arbeitskraft}}{\text{Arbeitstag von gegebener Stundenzahl}}$, sondern durch die Leistungsfähigkeit des Produzenten bestimmt werde.⁴⁵

↑ Of course, only someone well versed in Marxist theory would think that time wages are determined by the fraction $\frac{\text{daily value of labor-power}}{\text{working day of a given number of hours}}$ (and therefore not determined by

the capability of the worker), but the point here is that the piece wage form reinforces the same mystification that was the subject of chapter Nineteen.

Footnote 45 illustrates exactly this mystified point of view:

⁴⁵ 'The system of piece-work illustrates an epoch in the history of the working-man; it is halfway between the position of the mere day-laborer depending upon the will of the capitalist and the co-operative artisan, who in the not distant future promises to combine the artisan and the capitalist in his own person. Piece-workers are in fact their own masters, even whilst working upon the capital of the employer' (John Watts, *Trade Societies and Strikes, Machinery and Co-operative Societies*, Manchester, 1865, pp. 52-3). I quote this little work because it is a veritable gutter full of long-decayed and apologetic commonplaces. The same Mr. Watts previously dabbled in Owenism, and published in 1842 another pamphlet, *Facts and Fictions of Political Economy*, in which among other things he declared that 'property is robbery'. But that is already in the distant past.

The next two paragraphs give three pieces of empirical evidence inconsistent with the theory that piece wages are a payment for the product of labor. (1) The same labor is under some circumstances paid a piece wage, and under others a time wage.

692:3 The confidence that trusts in this, the mere appearance of things, ought to receive an initial severe shock from the fact that both forms of wages exist side by side, at the same time, in the same branches of industry. For example,

'the compositors of London, as a general rule, work by the piece, time-work being the exception while those in the country work by the day, the exception being work by the piece. The shipwrights of the port of London work by the job or piece, while those of all other ports work by the day.'⁴⁶

⁴⁶ T. J. Dunning, *Trades' Unions and Strikes*, London, 1860, p. 22.

↓ (2) One can even find piece-wages and time-wages coexisting in the same shop for the same labor:

⁴⁵ „Das System der Stückarbeit kennzeichnet eine Epoche in der Geschichte des Arbeiters; es steht in der Mitte zwischen der Stellung des einfachen Tagelöhners, der vom Willen des Kapitalisten abhängig ist, und dem genossenschaftlichen Handwerker, der in nicht ferner Zukunft in seiner Person den Handwerker und Kapitalisten zu vereinigen verspricht. Stückarbeiter sind tatsächlich ihre eigenen Meister, auch wenn sie am Kapital des Unternehmers arbeiten.“ (John Watts, *„Trade Societies and Strikes, Machinery and Cooperative Societies“*, Manchester 1865, p. 52, 53.) Ich zitiere dies Schriftchen, weil es eine wahre Gosse aller längst verfaulten, apologetischen Gemeinplätze. Derselbe Herr Watts machte früher in Owenismus und publizierte 1842 ein andres Schriftchen: *„Facts and Fictions of Political Economy“*, worin er u.a. Property für Robbery erklärt. Es ist schon lange her.

574:3/o Zunächst müßte die Zuversicht, die an diesen Schein glaubt, bereits stark erschüttert werden durch die Tatsache, daß beide Formen des Arbeitslohns zur selben Zeit in denselben Geschäftszweigen nebeneinander bestehn. Z.B.

„Die Setzer von London arbeiten in der Regel nach Stücklohn, während Zeitlohn bei ihnen die Ausnahme bildet. Umgekehrt bei den Setzern in den Provinzen, wo der Zeitlohn die Regel und der Stücklohn die Ausnahme. Die Schiffszimmerleute im Hafen von London werden nach Stücklohn bezahlt, in allen andren englischen Häfen nach Zeitlohn.“⁴⁶

⁴⁶ T. J. Dunning, *„Trade's Unions and Strikes“*, Lond. 1860, p. 22.

692:4/o In the same saddlery shops of London, often for the same work, piece-wages are paid to Frenchmen, and time-wages are paid to Englishmen.

Question 933 *Why did some London workshops pay, for the same labor, time wages to Englishmen and piece wages to Frenchmen?*

↓ (3) In factories, time wages are the exception only used for certain kinds of labor not suitable for piece wages.

In the actual factories, where piece-wages are the general rule, certain specific operations have to be excepted from this form of evaluation on technical grounds, and they are therefore paid by time-wages.⁴⁷

↓ Footnote: this ambiguity in form makes fraud possible.
⁴⁷ Here is how the simultaneous coexistence of these two forms of wage favors cheating on the part of the manufacturers: 'A factory employs 400 people, the half of which work by the piece, and have a direct interest in working longer hours. The other 200 are paid by the day, work equally long with the others, and get no more money for their overtime ... The work of these 200 people for half an hour a day is equal to one person's work for 50 hours, or 5/6 of one person's labor in a week, and is a positive gain to the employer' (Reports of the Inspectors of Factories ... 31 October 1860, p. 9). 'Over-working to a very considerable extent still prevails; and, in most instances, with that security against detection and punishment which the law itself affords. I have in many former reports shown ... the injury to work-people who are not employed on piece-work, but receive weekly wages' (Leonard Horner, in Reports of the Inspectors of Factories ... 30 April 1859, pp. 8–9).

Question 934 *At first sight, the piece-wage seems to indicate that the worker sells the product of his labor to the capitalist. Which evidence does Marx give to support his claim that this appearance is false and that the piece-wage is only a transmuted form of time-wages?*

575:1 In denselben Londoner Sattlerwerkstätten wird oft für dieselbe Arbeit den Franzosen Stücklohn und den Engländern Zeitlohn gezahlt.

In den eigentlichen Fabriken, wo Stücklohn allgemein vorherrscht, entziehen sich einzelne Arbeitsfunktionen aus technischen Gründen dieser Messung und werden daher nach Zeitlohn gezahlt.⁴⁷

⁴⁷ Wie das gleichzeitige Nebeneinander dieser zwei Formen des Arbeitslohns Fabrikantenprelereien begünstigt: „Eine Fabrik beschäftigt 400 Leute, von welchen die Hälfte im Stücklohn arbeitet und ein unmittelbares Interesse daran hat, länger zu arbeiten. Die anderen 200 werden pro Tag bezahlt, arbeiten ebenso lang wie die anderen, aber erhalten kein Geld für die Überstunden ... Die Arbeit dieser 200 Leute während einer halben Stunde täglich ist gleich der Arbeit einer Person während 50 Stunden oder 5/6 der wöchentlichen Arbeitsleistung einer Person und stellt einen handgreiflichen Gewinn für den Unternehmer dar.“ („Reports of Insp. of Fact., 31st October 1860“, p. 9.) „Überstunden herrschen noch immer in beträchtlichem Umfange vor; und in den meisten Fällen mit der Sicherheit gegen Entdeckung und Bestrafung, die das Gesetz selbst gewährt. Ich habe in vielen früheren Berichten aufgezeigt ... welches Unrecht an allen Arbeitern begangen wird, die nicht Stücklohn, sondern Wochenlohn erhalten.“ (Leonard Horner in „Reports of Insp. of Fact., 30th April 1859“, p. 8, 9.)

Question 935 *How does the coexistence of time-wages and piece-wages enable the capitalist to cheat?*

↓ Marx concludes from this that these two kinds of wages can only be two different forms of paying the price of labor-power. He adds the remark that the difference in the form of wages does not change their essence, although different forms may be more or less advantageous for the development of capitalist production.

However, it is in itself obvious that the difference in the form of wage payments in no way alters the essential nature of wages, although the one form may be more favourable to the development of capitalist production than the other.

An und für sich ist es jedoch klar, daß die Formverschiedenheit in der Auszahlung des Arbeitslohns an seinem Wesen nichts ändert, obgleich die eine Form der Entwicklung der kapitalistischen Produktion günstiger sein mag als die andre.

2. [Characteristic Features of Piece Wages]

Marx will now discuss aspects in which piece wages are similar or differ from time wages.

2.a. [Quantitative Determination of Piece Wages]

The essence of piece wages is identical to that of time wages. Piece wages are *not* a payment for the value of the piece. Rather, the magnitude of piece wages can be derived from the value of labor-power in a very similar manner to that of time wages.

693:1 Let the ordinary working day contain 12 hours, of which 6 are paid, 6 unpaid. Let its value-product be \$1.44; the value product of one hour of labor will therefore be 12 cents. Let us suppose that, as the result of experience, a worker, working with the average amount of intensity and skill, and therefore devoting to the production of an article only the amount of labor-time socially necessary, produces, in the course of 12 hours, twenty-four pieces, either distinct products or measurable parts of some integral construction. The value of these twenty-four pieces, after we have subtracted the amount of constant capital contained in them, will be \$1.44, the value of a single piece will be 6 cents. The worker receives

575:2 Der gewöhnliche Arbeitstag betrage 12 Stunden, wovon 6 bezahlt, 6 unbezahlt. Sein Wertprodukt sei 6 sh., das einer Arbeitsstunde daher 6 d. Es stelle sich erfahrungsmäßig heraus, daß ein Arbeiter, der mit dem Durchschnittsgrad von Intensität und Geschick arbeitet, in der Tat also nur die gesellschaftlich notwendige Arbeitszeit zur Produktion eines Artikels verwendet, 24 Stücke, ob diskret, oder meßbare Teile eines kontinuierlichen Machwerks, in 12 Stunden liefert. So ist der Wert dieser 24 Stücke, nach Abzug des in ihnen enthaltenen konstanten Kapitalteils, 6 sh. und der Wert des einzelnen Stücks 3 d. Der Arbeiter erhält per Stück 1 1/2 d. und verdient so in 12 Stunden 3 sh.

3 cents per piece, and thus earns 72 cents in 12 hours.

↑ I.e., the result is the same as in the time wage example on p. 685:2/o, half the working-day is unpaid. ↓ And as with time wages, the specifics of the allocation do not matter:

Just as, with time-wages, it does not matter whether we assume that the worker works 6 hours for himself and 6 hours for the capitalist, or half of every hour for himself, and the other half for the capitalist, so here it does not matter whether we say that each individual piece is half paid for, and half unpaid for, or that the price of only twelve of the pieces is the equivalent of the value of the labor-power, while in the other twelve pieces surplus-value is incorporated.

↑ The above calculation showed that the piece-wage of a piece differs from the value added to that piece through labor. ↓ This is the same “irrationality” (as Marx calls it, although he uses the German word *irrationell*, not *irrational*) that exists with time-wages, see 679:3/o.

693:2/o The form of piece-wages is just as irrational as that of time wages. While, in our example, two pieces of a commodity, after subtraction of the value of the means of production consumed in them, are worth 12 cents, as the product of one hour of labor, the worker receives for them a price of 6 cents.

↑ This irrationality consists in the fact that for creating a value of 12 cents, the worker receives a piece wage of 6 cents. ↓ One should not be surprised about this discrepancy. The piece wage does not even try to measure the value of the piece.

In fact, piece-wages are not an immediate expression of a value relation. They are not involved with measuring the value of the piece by the labor-time incorporated in it. Rather the reverse: they are involved with measuring the labor expended by the worker by the number of pieces he has produced. In time-wages the labor is measured by its immediate duration, in piece-wages by the quantity of products in which the labor has become embodied during a given time.⁴⁸

Wie es beim Zeitlohn gleichgültig ist, ob man annimmt, daß der Arbeiter 6 Stunden für sich und 6 für den Kapitalisten, oder von jeder Stunde die eine Hälfte für sich und die andre für den Kapitalisten arbeitet, so auch hier, ob man sagt, jedes einzelne Stück sei halb bezahlt und halb unbezahlt, oder der Preis von 12 Stücken ersetze nur den Wert der Arbeitskraft, während in den 12 andern sich der Mehrwert verkörpere.

576:1 Die Form des Stücklohns ist ebenso irrationell als die des Zeitlohns. Während z.B. zwei Stück Ware, nach Abzug des Werts der in ihnen aufgezehrten Produktionsmittel, als Produkt einer Arbeitsstunde 6 d. wert sind, erhält der Arbeiter für sie einen Preis von 3 d.

Der Stücklohn drückt unmittelbar in der Tat kein Wertverhältnis aus. Es handelt sich nicht darum, den Wert des Stücks durch die in ihm verkörperte Arbeitszeit zu messen, sondern umgekehrt die vom Arbeiter verausgabte Arbeit durch die Zahl der von ihm produzierten Stücke. Beim Zeitlohn mißt sich die Arbeit an ihrer unmittelbaren Zeitdauer, beim Stücklohn am Produktenquantum, worin Arbeit während bestimmter Zeitdauer verdichtet.⁴⁸ Der Preis der Arbeits-

The price of labor-time itself is finally determined by this equation: value of a day of labor = daily value of labor-power. The piece-wage is therefore only a modified form of the time-wage.

In the piece wage, the output is not measured by labor, but labor is measured by the output.⁴⁸ ‘Wages can be measured in two ways: either by the duration of the labor, or by its product’ (Abregé elementaire des principes de l’économie politique, Paris, 1796, p. 32). The author of this anonymous work is G. Garnier.

zeit selbst ist schließlich bestimmt durch die Gleichung: Wert der Tagesarbeit = Tageswert der Arbeitskraft. Der Stücklohn ist also nur eine modifizierte Form des Zeitlohns.

⁴⁸ „Der Lohn kann auf zwei Arten gemessen werden; entweder an der Dauer der Arbeit oder an ihrem Produkt“ („Abrégé élémentaire des principes de l’Écon. Pol.“, Paris 1796, p. 32.) Verfasser dieser anonymen Schrift: G. Garnier.

Question 937 *Why is the form of piece wage just as irrational as that of time wages?*

After discussing the quantity of piece wages, Marx turns to the characteristic peculiarities which the piece wage obtains from its *form*.

694:1 Let us now look a little more closely at the characteristic peculiarities of piece-wages.

576:2 Betrachten wir nun etwas näher die charakteristischen Eigentümlichkeiten des Stücklohns.

2.b. [Built-In Quality Control (and Wage Theft)]

The most striking characteristic of piece wages is that quality control of the product is built in:

694:2 The quality of the labor is here controlled by the work itself which must be of good average quality if the piece-price is to be paid in full.

576:3 Die Qualität der Arbeit ist hier durch das Werk selbst kontrolliert, das die durchschnittliche Güte besitzen muß, soll der Stückpreis voll bezahlt werden.

↓ The flip side of this: piece wage can be used for fraudulent infringements on wages: Piece-wages become, from this point of view, the most fruitful source of wage theft and capitalist cheating.

Der Stücklohn wird nach dieser Seite hin zu fruchtbarster Quelle von Lohnabzügen und kapitalistischer Prellerei.

Question 938 *Explain how piece wages can become a “most fertile source for wage theft and capitalist cheating.”*

2.c. [Controls Intensity of Labor, Screens Out the Slow]

Not only the quality of the end product, also the intensity of labor can be controlled by piece wages:

694:3 Piece wages provide to the capitalist an exact measure of the intensity of labor. Only the labor-time which is embodied

576:4 Er bietet den Kapitalisten ein ganz bestimmtes Maß für die Intensität der Arbeit. Nur Arbeitszeit, die sich in einem vor-

in a quantity of commodities laid down in advance and fixed by experience counts as socially necessary labor-time and is paid as such.

↓ Example: products are named by the time

In the larger workshops of the London tailors, therefore, a certain piece of work, a waistcoat for instance, is called an hour, or half an hour, the hour being valued at 6d. Practice determines the size of the average product of one hour.

↓ What about new situations with no established past practice?

With new fashions, repairs, etc. a contest arises between the employer and the worker as to whether a particular piece of work is one hour, and so on, until here also experience decides.

↓ Example where workers who are too slow

Similarly in the London furniture workshops, etc. If the worker cannot provide labor of an average degree of efficiency, and if he cannot therefore supply a certain minimum of work per day, he is dismissed.⁴⁹

↑ The workers therefore do not have the option to work more slowly in exchange for the lower total wage obtained by the piece wage calculation. ↓ Footnote: the worker is squeezed between fines for bad quality and threat of dismissal for insufficient quantity.

⁴⁹ 'So much weight of cotton is delivered to him' (the spinner) 'and he has to return by a certain time, in lieu of it, a given weight of twist or yarn, of a certain degree of fineness, and he is paid so much per pound for all that he so returns. If his work is defective in quality, the penalty falls on him, if less in quantity than the minimum fixed for a given time he is dismissed and an abler operative procured' (Ure, op. cit., pp. 316-17).

her bestimmten und erfahrungsmäßig festgesetzten Warenquantum verkörpert, gilt als gesellschaftlich notwendige Arbeitszeit und wird als solche bezahlt.

In den größeren Schneiderwerkstätten Londons heißt daher ein gewisses Stück Arbeit, z.B. eine Weste usw., Stunde, halbe Stunde usw., die Stunde zu 6 d. Aus der Praxis ist bekannt, wieviel das Durchschnittsprodukt einer Stunde.

Bei neuen Moden, Reparaturen usw. entsteht Streit zwischen Anwender und Arbeiter, ob ein bestimmtes Arbeitsstück = einer Stunde usw., bis auch hier die Erfahrung entscheidet.

are dismissed.

Ähnlich in den Londoner Möbelschreinereien usw. Besitzt der Arbeiter nicht die durchschnittliche Leistungsfähigkeit, kann er daher ein bestimmtes Minimum vom Tagwerk nicht liefern, so entläßt man ihn.⁴⁹

⁴⁹ „Es wird ihm“ (dem Spinner) „ein bestimmtes Gewicht Baumwolle übergeben, und er muß dafür in einer gewissen Zeit ein bestimmtes Gewicht an Twist oder Garn von einem gewissen Feinheitsgrad liefern und erhält für jedes so beschaffene Pfund soundso viel. Ist die Arbeit von mangelhafter Qualität, so wird er bestraft; ist das Quantum geringer als das für eine bestimmte Zeit festgesetzte Minimum, so wird er entlassen und ein tüchtigerer Arbeiter eingestellt.“ (Ure, l.c. p. 316, 317.)

2.d. [Part of Supervision Becomes Superfluous]

Since piece wages make supervision superfluous, house work and a hierarchy of exploitation become possible:

695:1 Since the quality and intensity of the work are here controlled by the very form of the wage, superintendence of labor becomes to a great extent superfluous. Piece-wages therefore form the basis for the modern 'domestic labor' we described earlier, as well as for a hierarchically organized system of exploitation and oppression. The latter has two fundamental forms.

Marx does not discuss domestic labor here (he did that in 595:1) but elaborates on the hierarchy of exploitation (or cascading exploitation). ↓ In its first form it interposes a middleman between capitalist and worker.

On the one hand piece-wages make it easier for parasites to interpose themselves between the capitalist and the wage-laborer, thus giving rise to the 'subletting of labor'. The profits of these middlemen come entirely from the difference between the price of labor which the capitalist pays, and the part of that price they actually allow the worker to receive.⁵⁰ In England, this system is called, characteristically, the 'sweating system'.

⁵⁰ 'It is when work passes through several hands, each of which is to take its share of profits, while only the last does the work, that the pay which reaches the workwoman is miserably disproportioned' (Children's Employment Commission, Second Report, p. lxx, n. 424).

Second form: the worker himself employs helpers:

On the other hand, piece-wages allow the capitalist to make a contract for so much per piece with the most important worker—in manufacture, with the chief of some group, in mines with the extractor of the coal, in the factory with the actual machine-worker—at a price for which this man himself undertakes the enlisting and the payment of his assistants. Here the exploitation of the worker by capital takes place through the

577:1 Da Qualität und Intensität der Arbeit hier durch die Form des Arbeitslohns selbst kontrolliert werden, macht sie großen Teil der Arbeitsaufsicht überflüssig. Sie bildet daher sowohl die Grundlage der früher geschilderten modernen Hausarbeit als eines hierarchisch gegliederten Systems der Exploitation und Unterdrückung. Das letztere besitzt zwei Grundformen.

Der Stücklohn erleichtert einerseits das Zwischenschieben von Parasiten zwischen Kapitalist und Lohnarbeiter, Unterverpachtung der Arbeit (subletting of labour). Der Gewinn der Zwischenpersonen fließt ausschließlich aus der Differenz zwischen dem Arbeitspreis, den der Kapitalist zahlt, und dem Teil dieses Preises, den sie dem Arbeiter wirklich zukommen lassen.⁵⁰ Dies System heißt in England charakteristisch das „Sweating-System“ (Ausschweißungssystem).

⁵⁰ „Wenn das Arbeitsprodukt durch viele Hände geht, auf die alle ein Teil des Profits kommt, während nur das letzte Paar Hände die Arbeit verrichtet, dann geschieht es, daß die Bezahlung, welche schließlich die Arbeiterin erreicht, jämmerlich unangemessen ist.“ („Child. Empl. Comm. II. Rep.“, p. LXX, n. 424.)

Andrerseits erlaubt der Stücklohn dem Kapitalisten, mit dem Hauptarbeiter—in der Manufaktur mit dem Chef einer Gruppe, in den Minen mit dem Ausbrecher der Kohle usw., in der Fabrik mit dem eigentlichen Maschinenarbeiter—einen Kontrakt für soviel per Stück zu schließen, zu einem Preis, wofür der Hauptarbeiter selbst die Anwerbung und Zahlung seiner Hilfsarbeiter übernimmt. Die Exploitation der Arbeiter durch

medium of the exploitation of one worker by another.⁵¹

⁵¹ Even the apologist Watts remarks: 'It would be a great improvement to the system of piece-work, if all the men employed on a job were partners in the contract, each according to his abilities, instead of one man being interested in over-working his fellows for his own benefit' (op. cit., p. 53). On the vile nature of the piece-work system, cf. Children's Employment Commission, Third Report, p. 66, n. 22, p. 11, n. 124, p. xi, n. 13, 53, 59, etc.

das Kapital verwirklicht sich hier vermittelt der Exploitation des Arbeiters durch den Arbeiter.⁵¹

⁵¹ Selbst der apologetische Watts bemerkt: „Es wäre eine große Verbesserung des Stücklohnsystems, wenn alle an einem Stück Arbeit Beschäftigten Teilhaber am Vertrag wären, jeder entsprechend seinen Fähigkeiten, statt daß ein Mann daran interessiert ist, seine Kameraden für seinen eigenen Vorteil abzurackern.“ (l.c. p. 53.) Über die Gemeinheiten dieses Systems vgl. „Child. Emp. Comm. Rep. III“, p. 66, n. 22; p. 11, n. 124; p. XI, n. 13, 53, 59 usw.

2.e. [Tendencies to Intensify Labor and Lengthen Hours]

Piece wages are notorious for intensifying labor:

695:2/o Given the system of piece-wages, it is naturally in the personal interest of the worker that he should strain his labor-power as intensely as possible; this in turn enables the capitalist to raise the normal degree of intensity of labor more easily.^{51a}

^{51a} This spontaneous result is often artificially helped along, as for instance in London, in the engineering trade, where a customary trick is 'the selecting of a man who possesses superior physical strength and quickness, as the principal of several workmen, and paying him an additional rate, by the quarter or otherwise, with the understanding that he is to exert himself to the utmost to induce the others, who are only paid the ordinary wages, to keep up to him ... without any comment this will go far to explain many of the complaints of stinting the action, superior skill, and working-power, made by the employers against the men' (i.e. when they are organized in trade unions, (Dunning, op. cit., pp. 22–3). As the author of this passage is himself a worker and the secretary of a trade union, this might be taken for an exaggeration. But compare, for example, the article 'Laborer' in the 'highly respectable' Cyclopaedia of Agriculture, ed. by J. C. Morton,

577:2/o Den Stücklohn gegeben, ist es natürlich das persönliche Interesse des Arbeiters, seine Arbeitskraft möglichst intensiv anzuspinnen, was dem Kapitalisten eine Erhöhung des Normalgrads der Intensität erleichtert.^{51a}

^{51a} Diesem naturwüchsigen Resultat wird oft künstlich unter die Arme gegriffen. Z.B. im Engineering Trade von London gilt es als herkömmlicher trick, „daß der Kapitalist einen Mann von überlegener physischer Kraft und Fertigkeit zum Chef einer Arbeiteranzahl auswählt. Er zahlt ihm vierteljährlich oder in andren Terminen einen Zuschußlohn unter der Übereinkunft, alles mögliche aufzubieten, um seine Mitarbeiter, die nur den gewöhnlichen Lohn erhalten, zur äußersten Nacheiferung anzustacheln ... Ohne weiteren Kommentar erklärt dies die Kapitalistenklage über ‚Lähmung der Tätigkeit oder überlegener Geschicklichkeit und Arbeitskraft (stinting the action, superior skill and working power) durch die Trade's Unions‘.“ (Dunning, l.c. p. 22, 23.) Da der Verfasser selbst Arbeiter und Sekretär einer Trade's Union, könnte dies für Übertreibung gelten. Aber man sehe z.B. die „highly respectable“ agronomische Cyklopädie von J. Ch. Morton,

where the method is recommended to the farmers as aa usual and tested one.

↓ In addition, both piece wages and time wages have the tendency to prolong the work day:

Moreover, the lengthening of the working day is now in the personal interest of the worker, since with it his daily or weekly wages rise.⁵²

⁵² 'All those who are paid by piece-work ... profit by the transgression or the legal limits of work. This observation as to the willingness to work overtime is especially applicable to the women employed as weavers and reelers' (Reports of the Inspectors of Factories ... 30 April 1858, p. 9). 'This system' (piece-work) 'so advantageous to the employer ... tends directly to encourage the young potter greatly to over-work himself during the four or five years during which he is employed in the piece-work system, but at low wages ... This is ... another great cause to which the bad constitutions of the potters are to be attributed' (Children's Employment Commission, First Report, p. xiii).

Due to these longer hours, the daily wage rises. But these longer hours at the same time have the side effect of depressing the wage per piece and even the daily wage, see 688:1 in the time-wage chapter.

This brings on a reaction like that already described in time-wages, quite apart from the fact that the prolongation of the working day, even if the piece-wage remains constant, includes of necessity a fall in the price of the labor.

↑ "Even if the piece-wage remains constant": see 686:2/oo in the time wage chapter. The additional time uses disproportionately more of their labor-power, which leads to higher reproduction costs. The price of labor itself does not fall, but it falls below the worker's reproduction cost of the labor-power.

↓ Piece wages also tend to depress wages by differentiating the wages paid for the same labor, thus inciting competition between the workers. (Time wages do not have this tendency.)

696:1/o In time-wages, with few exceptions, the same wage is paid for the same function, while in piece-wages, although the

Art. „Labourer“, wo diese Methode den Pächtern als probat empfohlen wird.

Es ist ebenso das persönliche Interesse des Arbeiters, den Arbeitstag zu verlängern, weil damit sein Tages- oder Wochenlohn steigt.⁵²

⁵² „Alle, die im Stücklohn bezahlt werden ... haben Vorteil von einer Überschreitung der gesetzlichen Grenzen der Arbeit. Diese Bereitschaft, Überstunden zu machen, ist besonders bei den Frauen zu beobachten, die als Weberinnen und Hasplerinnen beschäftigt sind.“ („Rep. of Insp. of Fact., 30th April 1858“, p. 9.) „Dies Stücklohnsystem, so vorteilhaft für den Kapitalisten ... strebt direkt, den jungen Töpfer zu großer Überarbeit zu ermuntern, während der 4 oder 5 Jahre, worin er per Stück, aber zu niedrigem Preis, bezahlt wird. Es ist dies eine der großen Ursachen, denen die physische Degeneration der Töpfer zuzuschreiben ist.“ („Child. Empl. Comm. I. Rep.“, p. XIII.)

Es tritt damit die beim Zeitlohn bereits geschilderte Reaktion ein, abgesehen davon, daß die Verlängerung des Arbeitstags, selbst bei konstant bleibendem Stücklohn, an und für sich eine Senkung im Preise der Arbeit einschließt.

578:1/o Beim Zeitlohn herrscht mit wenigen Ausnahmen gleicher Arbeitslohn für dieselben Funktionen, während beim Stück-

price of the labor-time is measured by a definite quantity of the product, the daily or weekly wage will vary with the individual differences between the workers, one of whom will supply, within a given period, the minimum of product only, another the average, and a third more than the average. With regard to their actual income, then, there is great variety among the individual workers, according to their different degrees of skill, strength, energy and staying power.⁵³

⁵³ 'Where the work in any trade is paid for by the piece at so much per job ... wages may very materially differ in amount ... But in work by the day there is generally an uniform rate ... recognized by both employer and employed as the standard of wages for the general run of workmen in the trade' (Dunning, op. cit., p. 17).

Question 939 *Time wages and piece wages have opposite effects on the competition between workers. Explain.*

↓ The aggregate effect for capital is the same whether they pay differential rates to the workers or not (this was first discussed in the Co-Operation chapter, p. 440/o). Of course, this does not alter the general relation between capital and wage-labor. First, the individual differences cancel each other out in the workshop as a whole, which thus supplies the average product within a given period of labor, and the total wages paid will be the average wage of that particular branch of industry. Second, the proportion between wages and surplus-value remains unaltered, since the mass of surplus labor supplied by each particular worker corresponds with the wage he receives.

↑ Here Marx postulates a very specific relationship between surplus-value and wages: the surplus-value created by a given individual is proportional to that individual's wage. ↓

lohn der Preis der Arbeitszeit zwar durch ein bestimmtes Produktenquantum gemessen ist, der Tags oder Wochenlohn dagegen wechselt mit der individuellen Verschiedenheit der Arbeiter, wovon der eine nur das Minimum des Produkts in einer gegebenen Zeit liefert, der andre den Durchschnitt, der dritte mehr als den Durchschnitt. In bezug auf die wirkliche Einnahme treten hier also große Differenzen ein je nach dem verschiedenen Geschick, Kraft, Energie, Ausdauer usw. der individuellen Arbeiter.⁵³

⁵³ „Wo die Arbeit in irgendeinem Gewerbe nach der Stückzahl, zu soundso viel je Stück bezahlt wird ... können sich die Löhne dem Betrag nach sehr wesentlich voneinander unterscheiden ... Aber für Tagelohn besteht im allgemeinen ein einheitlicher Satz ... der vom Unternehmer und vom Arbeiter als Standardlohn für den Durchschnittsarbeiter in dem Gewerbe anerkannt wird.“ (Dunnig, l.c. p. 17.)

Dies ändert natürlich nichts an dem allgemeinen Verhältnis zwischen Kapital und Lohnarbeit. Erstens gleichen sich die individuellen Unterschiede für die Gesamtwerkstatt aus, so daß sie in einer bestimmten Arbeitszeit das Durchschnittsprodukt liefert und der gezahlte Gesamtlohn der Durchschnittslohn des Geschäftszweigs sein wird. Zweitens bleibt die Proportion zwischen Arbeitslohn und Mehrwert unverändert, da dem individuellen Lohn des einzelnen Arbeiters die von ihm individuell gelieferte Masse von Mehrwert entspricht.

Although in the aggregate, the effects of this wage differentiation cancel each other out, wage differentiation is advantageous for capital because of the kind of individual behavior it engenders among workers: along with the worker's sense of "liberty, independence and self-control" comes also heightened competition.

But the wider scope that piece-wages give to individuality tends to develop both that individuality, and with it the worker's sense of liberty, independence and self-control, and also the competition of workers with each other. The piece-wage therefore has a tendency, while raising the wages of individuals above the average, to lower this average itself.

Aber der größere Spielraum, den der Stücklohn der Individualität bietet, strebt einerseits dahin, die Individualität und damit Freiheitsgefühl, Selbständigkeit und Selbstkontrolle der Arbeiter zu entwickeln, andererseits ihre Konkurrenz unter- und gegeneinander. Er hat daher eine Tendenz, mit der Erhebung individueller Arbeitslöhne über das Durchschnittsniveau dieses Niveau selbst zu senken.

↑ By saying that piece wages raise competition Marx brings an important positive implication of time wages: since everybody gets the same pay per hour, the level of solidarity rises. Everybody is in the same boat. (This may also lead to tensions because of free-riding.)

Question 940 *Is there something wrong with the worker's sense of "liberty, independence and self-control" engendered by piece-wages?*

↓ In situations where piece wages could not be lowered, the capitalists resort to introducing time wages.

However, where a particular rate of piece-wage has for a long time been a fixed tradition, and its lowering, therefore, has presented especial difficulties, in such exceptional cases the masters have sometimes had recourse to the forcible transformation of piece-wages into time-wages. In 1860, for instance, this action set off a big strike among the ribbon-weavers of Coventry.⁵⁴

Wo aber bestimmter Stücklohn sich seit lange traditionell befestigt hatte und seine Herabsetzung daher besondere Schwierigkeiten bot, flüchteten die Meister ausnahmsweise auch zu seiner gewaltsamen Verwandlung in Zeitlohn. Hiergegen z.B. 1860 großer strike unter den Bandwebern von Coventry.⁵⁴

↑ In other words, the capitalists expect a gradual decline of piece over time, and try to erase any niche where workers manage to hold on to a part of their own product.

⁵⁴ 'The labor of the journeymen-craftsmen is regulated by the day or by the piece ... The master-craftsmen know approximately how much work a journeyman can do every day in each trade, and they often pay them in proportion to the amount of work they perform; thus the journeymen do as much work as they can, in their own interest, and without needing any

⁵⁴ „Die Arbeit der Handwerksgelesen regelt sich nach dem Tag oder nach dem Stück (à la journée ou à la pièce) ... Die Meister wissen ungefähr, wieviel Werke die Arbeiter täglich in jedem métier verrichten können, und zahlen sie daher oft im Verhältnis zum Werk, das sie verrichten; so arbeiten diese Gelesen, soviel sie können, in ihrem eignen Interesse, ohne weitere Beauf-

further supervision' ([Richard] Cantillon, *Essai sur la nature du commerce en général*, Amsterdam, 1756, pp. 185, 202. The first edition appeared in 1755). Cantillon, from whom Quesnay, Sir James Steuart and Adam Smith have largely drawn, here already presents the piece-wage as merely a modified form of the time-wage.

The footnote ends with additional detail about Cantillon, which is a little off the subject:

^{54 ctd} The French edition of Cantillon professes in its title to be a translation from the English, but the English edition, *The Analysis of Trade, Commerce, etc.*, by Philip Cantillon, late of the City of London, Merchant, is not only of later date (1759), but proves by its contents that it is a later and revised edition. For instance, in the French edition, Hume is not yet mentioned, while in the English edition, on the other hand, Petty hardly figures any longer. The English is of less theoretical significance, but it contains all kinds of details relating specifically to English commerce, bullion trade, etc. which are absent from the French text. The words on the title-page of the English edition, according to which the work is 'Taken chiefly from the manuscript of a very ingenious gentleman, deceased, and adapted, etc.', seem, therefore, a pure fiction, very customary at that time.

The wage structure therefore creates the tendency to prolong and intensify the working day while lowering the wages themselves. Marx does not say here where this ends, but he says in 542:1 that it leads to a state of overwork which makes further legal restrictions of the length of the working-day inevitable.

Question 941 Which advantages does the form of piece-wages have for the capitalists? What does it mean for the relation between the workers?

2.f. [Support for the Hour System]

↓ The hour system is described in 686:1. Finally, the piece-wage is one of the chief supports of the hour-system described in the preceding chapter.⁵⁵

⁵⁵ 'How often have we not seen many more workers taken on, in some workshops, than were needed actually to do the work? Workers are of-

sichtigung.' (Cantillon, „*Essai sur la Nature du Commerce en Général*“, Amst. Éd. 1756, p. 185 u. 202. Die Erste Ausgabe erschien 1755). Cantillon, aus dem Quesnay, Sir James Steuart und A. Smith reichlich geschöpft haben, stellt hier also schon den Stücklohn als bloß modifizierte Form des Zeitlohns dar.

^{54 ctd} Die französische Ausgabe Cantillons kündigt sich auf dem Titel als Übersetzung aus dem Englischen an, aber die englische Ausgabe: „*The Analysis of Trade, Commerce etc.*“, by Philip Cantillon, late of the City of London, Merchant“, ist nicht nur späteren Datums (von 1759), sondern erweist sich durch ihren Inhalt als eine spätere Bearbeitung. So z.B. findet sich in der französischen Ausgabe Hume noch nicht erwähnt, während umgekehrt in der englischen Petty kaum mehr figuriert. Die englische Ausgabe ist theoretisch unbedeutender, enthält aber allerlei spezifisch auf englischen Handel, Bullionhandel usw. Bezügliches, was im französischen Text fehlt. Die Worte im Titel der englischen Ausgabe, wonach die Schrift „Taken chiefly from the Manuscript of a very ingenious Gentleman deceased, and adapted etc.“, scheinen daher mehr als bloße, damals sehr übliche, Fiktion.

Der Stücklohn ist endlich eine Hauptstütze des früher geschilderten Stundensystems.⁵⁵

⁵⁵ „Wie häufig haben wir gesehen, daß man in gewissen Werkstätten weit mehr Arbeiter einstellte, als zur Arbeit wirklich benötigt wurden?

ten set on in the expectation of work which is uncertain, or even completely imaginary; as they are paid piece-wages, the employers say to themselves that they run no risk, because any loss of working time will be at the expense of the workers who are unoccupied' (H. Gregoir, *Les Typographes devant le Tribunal correctionnel de Bruxelles*, Brussels, 1865, p. 9).

↑ Piece wages make it easy to introduce the hour system because they follow the principle of strict payment by labor performed, without a daily or weekly minimum pay.

Question 942 How do piece-wages promote a lowering of the price of labor? List all mechanisms cited by Marx which have this effect.

2.g. [Epilogue: Role of Piece-Wages in the Development of Capitalism]

697:1/oo From what has been shown so far, it is apparent that the piece wage is the form of wage most appropriate to the capitalist mode of production.

↑ This summarizes all the special characteristics of the piece wage just discussed, from its built-in supervision to its tendencies to intensify labor and lower wages.

Question 943 Why is piece wage the wage form most appropriate for capitalism?

↓ But this raises the question: what role did piece wages play in the development of capitalism? This historical investigation also yields empirical proof that the mechanisms developed earlier in the chapter are active.

Although by no means new—it figures officially side by side with time-wages in the French and English labor statutes of the fourteenth century—it only conquered a larger field of action during the period of manufacture properly so-called. In the stormy youth of large-scale industry, and particularly from 1797 to 1815, it served as a lever for the lengthening of the working day and the lowering of wages. Very important material bearing on the movement of wages during that period is to be found in the two Blue Books Report and Evidence from the Select Committee on Petitions Respecting

Oft nimmt man Arbeiter an in Erwartung einer noch ungewissen, manchmal sogar nur eingebildeten Arbeit: da man im Stücklohn zahlt, sagt man sich, daß man nichts riskiert, da alle verlorene Zeit zu Lasten der Unbeschäftigten geht.“ (H. Gregoir, „*Les Typographes devant le Tribunal Correctionnel de Bruxelles*“, Bruxelles 1865, p. 9.)

580:1–2 Aus der bisherigen Darstellung ergibt sich, daß der Stücklohn die der kapitalistischen Produktionsweise entsprechende Form des Arbeitslohns ist.

Obgleich keineswegs neu—er figuriert neben dem Zeitlohn offiziell u.a. in den französischen und englischen Arbeiterstatuten des vierzehnten Jahrhunderts—, gewinnt er doch erst größten Spielraum während der eigentlichen Manufakturperiode. In der Sturm- und Drangperiode der großen Industrie, namentlich von 1797 bis 1815, dient er als Hebel zur Verlängerung der Arbeitszeit und Herabsetzung des Arbeitslohns. Sehr wichtiges Material für die Bewegung des Arbeitslohns während jener Periode findet man in den Blaubüchern: „Report and Evidence from the Select Committee on Pe-

the Corn Laws (Parliamentary Session of 1813–14), and Report from the Lords' Committee, on the State of the Growth, Commerce, and Consumption of Grain, and all Laws Relating Thereto (Session of 1814–15). Here we find documentary evidence of the constant lowering of the price of labor from the beginning of the Anti-Jacobin War. In the weaving industry, for example, piece-wages had fallen so low that in spite of the very great lengthening of the working day, the daily wage was then lower than it had been before.

'The real earnings of the cotton weaver are now far less than they were; his superiority over the common laborer, which at first was very great, has now almost entirely ceased. Indeed ... the difference in the wages of skilful and common labor is far less now than at any former period.'⁵⁶

⁵⁶ Remarks on the Commercial Policy of Great Britain, London, 1815, p. 48.

After this summary paragraph, several individual items are discussed in more detail. ↓ First the effects of piece wages in agriculture (i.e., no machinery, no limitation of the length of the working-day):

How little the increased intensity and extension of labor through piece-wages benefited the agricultural proletariat can be seen from the following passage from a pamphlet in favour of the landlords and farmers:

'By far the greater part of agricultural operations is done by people, who are hired for the day or on piece-work. Their weekly wages are about 12 shillings, and although it may be assumed that a man earns on piece-work under the greater stimulus to labor, 1 shilling, or perhaps 2 shillings more than on weekly wages, yet it is found, on calculating his total income, that his loss of employment, during the year, outweighs this gain ... Further, it will generally be found that the wages of these men bear a certain proportion to the price of the necessary means of subsistence, so that a man

titions respecting the Corn Laws" (Parlamentssession 1813/14) und „Reports from the Lords' Committee, on the state of the Growth, Commerce, and Consumption of Grain, and all Laws relating thereto". (Session 1814/15.) Man findet hier den dokumentarischen Nachweis für die fortwährende Senkung des Arbeitspreises seit dem Beginn des Antijakobinerkriegs. In der Weberei z.B. war der Stücklohn so gefallen, daß trotz des sehr verlängerten Arbeitstags der Taglohn jetzt niedriger stand als vorher.

„Die reale Einnahme des Webers ist sehr viel weniger als früher: seine Superiorität über den gewöhnlichen Arbeiter, die erst sehr groß war, ist fast ganz verschwunden. In der Tat, der Unterschied in den Löhnen geschickter und gewöhnlicher Arbeit ist jetzt viel unbedeutender als während irgendeiner früheren Periode.“⁵⁶

⁵⁶ „Remarks on the Commercial Policy of Great Britain“, London 1815, p. 48.

580:3–4 Wie wenig die mit dem Stücklohn gesteigerte Intensität und Ausdehnung der Arbeit dem ländlichen Proletariat fruchteten, zeige folgende einer Parteischrift für Landlords und Pächter entlehnte Stelle:

„Bei weitem der größere Teil der Agrikulturoperationen wird durch Leute verrichtet, die für den Tag oder auf Stückwerk gedungen sind. Ihr Wochenlohn beträgt ungefähr 12 sh.; und obgleich man voraussetzen mag, daß ein Mann bei Stücklohn, unter dem größeren Arbeitssporn, 1 sh. oder vielleicht 2 sh. mehr verdient als beim Wochenlohn, so findet man dennoch, bei Schätzung seiner Gesamteinnahme, daß sein Verlust an Beschäftigung im Lauf des Jahrs diesen Zuschuß aufwiegt ... Man wird ferner im allgemeinen finden, daß die Löhne dieser Männer ein gewisses Verhältnis

with two children is able to bring up his family without recourse to parish relief.'⁵⁷

⁵⁷ A Defence of the Landowners and Farmers of Great Britain, London, 1814. pp. 4–5. Malthus remarked at that time, with reference to the facts published by Parliament: 'I confess that I see, with misgiving, the great extension of the practice of piece-wage. Really hard work during 12 or 14 hours of the day, or for any longer time, is too much for any human being.'⁵⁸

⁵⁸ Malthus, Inquiry into the Nature and Progress of Rent, London, 1815 [p. 49, note].

↓ Next a brief but interesting remark about the effects of the Factory Acts: 699:1 In those workshops which are subject to the Factory Act, the piece-wage becomes the general rule, because there capital can increase the yield of the working day only by intensifying labor.⁵⁹

⁵⁹ 'Those who are paid by piece-work ... constitute probably four-fifths of the workers in the factories' (Reports of the Inspectors of Factories ... 30 April 1858, p. 9).

zum Preis der notwendigen Lebensmittel haben, so daß ein Mann mit zwei Kindern fähig ist, seine Familie ohne Zuflucht zur Pfarreiunterstützung zu erhalten.“⁵⁷

⁵⁷ „A Defence of the Landowners and Farmers of Great Britain“, Lond. 1814, p. 4, 5.

581:1–2 Malthus bemerkte damals mit Bezug auf die vom Parlament veröffentlichten Tatsachen: „Ich gestehe, ich sehe mit Mißvergnügen die große Ausdehnung der Praxis des Stücklohns. Wirklich harte Arbeit während 12 oder 14 Stunden des Tags, für irgend längere Zeitperioden, ist zuviel für ein menschliches Wesen.“⁵⁸

⁵⁸ Malthus, „Inquiry into the Nature etc. of Rent“, London 1815, [p. 49, Note].

the effects of the Factory Acts:

581:3 In den dem Fabrikgesetz unterworfenen Werkstätten wird Stücklohn allgemeine Regel, weil das Kapital dort den Arbeitstag nur noch intensiv ausweiten kann.⁵⁹

⁵⁹ „Die Arbeiter auf Stücklohn bilden wahrscheinlich 4/5 aller Arbeiter in den Fabriken.“ („Reports of Insp. of Fact. for 30th April 1858“, p. 9.)

3. [Piece Wages and Changes in Productivity]

↓ The mathematics of it is clear.

699:2/o Changes in the productivity of labor mean that the same quantity of a given product represents an amount of labor-time which varies. Therefore, the piece-wage also varies, for it is the expression of the price of a definite amount of labor-time. In our earlier example, twenty-four pieces were produced in 12 hours, while the value-product of the 12 hours was \$1.44, the daily value of the labor-power was 72 cents, the price of an hour of labor was 6 cents, and the

581:4–582:1 Mit der wechselnden Produktivität der Arbeit stellt dasselbe Produktenquantum wechselnde Arbeitszeit dar. Also wechselt auch der Stücklohn, da er Preis Ausdruck einer bestimmten Arbeitszeit. In unserem obigen Beispiel wurden in 12 Stunden 24 Stück produziert, während das Wertprodukt der 12 Stunden 6 sh. war, der Tageswert der Arbeitskraft 3 sh., der Preis der Arbeitsstunde 3 d. und der Lohn für ein Stück 1 1/2 d. In einem Stück war 1/2 Arbeits-

wage for one piece was 3 cents. Half an hour of labor was absorbed in one piece. If the productivity of labor is now doubled, so that the same working day supplies forty-eight pieces instead of twenty-four, and all other circumstances remain unchanged, then the piece-wage falls from 3 cents to 1 1/2 cents, as every piece now only represents 1/4 instead of 1/2 a working hour. 24×3 cents = 72 cents, and, similarly, $48 \times 1\frac{1}{2}$ cents = 72 cents. In other words, the piece-wage is lowered in the same proportion as the number of pieces produced in the same time rises,⁶⁰ and therefore in the same proportion as the amount of labor-time employed on the same piece falls.

⁶⁰ 'The productive power of his spinning-machine is accurately measured, and the rate of pay for work done with it decreases with though not as, the increase of its productive power' (Ure, op. cit., p. 317). Ure himself later contradicts this last apologetic phrase. He admits that, for example, a lengthening of the mule causes some increase in the quantity of labor required. The amount of labor does not, therefore, diminish in the same ratio as its productivity increases. Further: 'By this increase the productive power of the machine will be augmented one-fifth. When this event happens the spinner will not be paid at the same rate for work done as he was before, but as that rate will not be diminished in the ratio of one-fifth, the improvement will augment his money earnings for any given number of hours of work,' but ... 'the foregoing statement requires a certain modification ... The spinner has to pay something additional for juvenile aid out of his additional sixpence' (ibid., p. 321). Improvements in machinery also 'displace a portion of adults' (ibid.) and this certainly does not tend to raise wages.

stunde eingesaugt. Liefert derselbe Arbeitstag nun etwa infolge verdoppelter Produktivität der Arbeit 48 Stück statt 24, und bleiben alle andern Umstände unverändert, so sinkt der Stücklohn von 1 1/2 d. auf 3/4 d., da jedes Stück jetzt nur noch 1/4 statt 1/2 Arbeitsstunde darstellt. $24 \times 1\frac{1}{2}$ d. = 3 sh. und ebenso $48 \times 3/4$ d. = 3 sh. In anderen Worten: Der Stücklohn wird in demselben Verhältnis heruntergesetzt, worin die Zahl der während derselben Zeit produzierten Stücke wächst,⁶⁰ also die auf dasselbe Stück verwandte Arbeitszeit abnimmt.

⁶⁰ „Die Produktivkraft seiner Spinnmaschine wird genau gemessen und die Bezahlung für die mit ihr geleistete Arbeit vermindert sich mit, wenn auch nicht *entsprechend* der Zunahme ihrer Produktivkraft.“ (Ure, l.c. p. 317.) Letztere apologetische Wendung hebt Ure selbst wieder auf. Er gibt zu, daß bei einer Verlängerung der Mule z.B. eine zusätzliche Arbeit aus der Verlängerung entspringt. Die Arbeit nimmt also nicht in dem Maße ab, worin ihre Produktivität wächst. Ferner: „Durch diese Verlängerung wird die Produktivkraft der Maschine um ein Fünftel gesteigert. Daraufhin wird der Spinner nicht mehr zu demselben Satz für geleistete Arbeit bezahlt wie zuvor, aber weil dieser Satz nicht im Verhältnis von einem Fünftel vermindert wird, erhöht die Verbesserung seinen Geldverdienst für jede gegebene Zahl von Arbeitsstunden“—aber, aber—„die vorhergehende Feststellung erfordert eine gewisse Einschränkung ... der Spinner hat von seinem zusätzlichen halben Schilling etwas für zusätzliche jugendliche Hilfskräfte zu zahlen, und außerdem werden Erwachsene verdrängt“ (l.c. p. 320, 321), was keineswegs eine Tendenz zur Steigerung des Arbeitslohns hat.

↓ The practical implementation of these changes leads to frictions:

This change in the piece-wage, so far purely nominal, leads to constant struggles between the capitalist and the worker, either because the capitalist uses it as a pretext for actually lowering the price of labor, or because an increase in the productivity of labor is accompanied by an increase in its intensity, or because the worker takes the outward appearance of piecewages seriously, i.e. he thinks his product is being paid for and not his labor-power, and he therefore resists any reduction of wages which is not accompanied by a reduction in the selling price of the commodity.

'The operatives ... carefully watch the price of the raw material and the price of manufactured goods, and are thus enabled to form an accurate estimate of their master's profits.'⁶¹

⁶¹ H. Fawcett, *The Economic Position of the British Laborer*, Cambridge and London, 1865, p. 178.

↑ The shared illusion that they are paid for their product, not their labor-power, gives the workers enough cohesion that they can fight against a reduction of these wages. ↓ But the outraged capitalists noisily put them in their place.

700:1 The capitalist rightly rejects such claims as being gross errors as to the nature of wage-labor.⁶² He cries out against this presumptuous attempt to lay taxes on the progress of industry, and declares roundly that the productivity of labor does not concern the worker in the least.⁶³

⁶² In the *London Standard* of 26 October 1861, there is a report of proceedings taken by the firm of John Bright and Co. before the Rochdale magistrates, 'to prosecute for intimidation the agents of the carpet weavers Trades' Union. Bright's partners had introduced new machinery which would turn out 240 yards of carpet in the time and with the labor (!) previously required to produce 160 yards. The workmen had no claim whatever to share in the profits made

Dieser Wechsel des Stücklohns, soweit rein nominell, ruft beständige Kämpfe zwischen Kapitalist und Arbeiter hervor. Entweder, weil der Kapitalist den Vorwand benutzt, um wirklich den Preis der Arbeit herabzusetzen, oder weil die gesteigerte Produktivkraft der Arbeit von gesteigerter Intensität derselben begleitet ist. Oder weil der Arbeiter den Schein des Stücklohns, als ob ihm sein Produkt gezahlt werde und nicht seine Arbeitskraft, ernst nimmt und sich daher gegen eine Lohnherabsetzung sträubt, welcher die Herabsetzung im Verkaufspreis der Ware nicht entspricht.

„Die Arbeiter überwachen sorgfältig den Preis des Rohmaterials und den Preis der fabrizierten Güter und sind so fähig, die Profite ihrer Meister genau zu veranschlagen.“⁶¹

⁶¹ H. Fawcett, „*The Economic Position of the British Labourer*“, Cambridge and London 1865, p. 178.

582:2 Solchen Anspruch fertigt das Kapital mit Recht als groben Irrtum über die Natur der Lohnarbeit ab.⁶² Es zetert über diese Anmaßung, Steuern auf den Fortschritt der Industrie zu legen, und erklärt rundweg, daß die Produktivität der Arbeit den Arbeiter überhaupt nichts angeht.⁶³

⁶² Im Londoner „Standard“ vom 26. Oktober 1861 findet man Bericht über einen Prozeß der Firma John Bright et Co. vor den Rochdale Magistrates, „die Vertreter der Trade Union der Teppichweber wegen Einschüchterung gerichtlich zu belangen. Die Teilhaber Brights hatten neue Maschinerie eingeführt, die 240 Yards Teppich in der Zeit und mit der Arbeit (!) produzieren sollten, die früher zur Produktion von 160 Yards erforderlich waren. Die Arbeiter hatten keinerlei

by the investment of their employer's capital in mechanical improvements. Accordingly, Messrs Bright proposed to lower the rate of pay from 1 1/2d. per yard to 1d., leaving the earnings of the men exactly the same as before for the same labor. But there was a nominal reduction, of which the operatives, it is asserted, had not fair warning beforehand.'

⁶³ 'Trades' unions, in their desire to maintain wages, endeavour to share in the benefits of improved machinery!' (Quelle horreur!) 'The demanding higher wages, because labor is abbreviated, is in other words the endeavour to establish a duty on mechanical improvements' (On Combinations of Trades new edn, London, 1834, p. 42).

Question 945 *If the capitalists make higher profits due to technical innovation, should the workers get part of this?*

Anrecht, an den Profiten teilzuhaben, die durch die Kapitalanlage ihrer Unternehmer in mechanischen Verbesserungen gemacht worden waren. Daher schlugen die Herren Bright vor, den Lohn von 1 1/2 d. pro Yard auf 1 d. zu senken, wodurch die Einkünfte der Arbeiter für die gleichen Arbeit genau so blieben wie vorher. Aber das war eine nominelle Herabsetzung, von der die Arbeiter, wie behauptet wird, vorher nicht ehrlich verständigt worden waren."

⁶³ „Trades Unions in ihrer Sucht, den Arbeitslohn aufrechtzuhalten, suchen an dem Profit verbesserter Maschinerie teilzunehmen!“ (Quelle horreur!) „... sie verlangen höheren Lohn, weil die Arbeit verkürzt ist ... in anderen Worten, sie streben, eine Steuer auf industrielle Verbesserungen zu legen.“ („On Combination of Trades“, New Edit., Lond. 1834, p. 42.)

Part VII.

The Accumulation Process of Capital

The discussion of accumulation is the crowning part of the first volume of *Capital*. Marx shows here how capitalist production not only reproduces itself but becomes bigger and bigger. This gives us the historical tendency of the capitalist mode of production, however on the other hand it fails to explain how the historical presuppositions of capital have been created (see 873:1 about this).

The introductory passage of part VII argues why accumulation of capital should be discussed next. ↓ Marx looks at the circuit of capital M–C–M'–C'–M'' etc. and asks which phases of this circuit have already been discussed, and which still need discussion.

709:1 The transformation of a sum of money into means of production and labor-power is the first phase of the movement undergone by the quantum of value which is going to function as capital. It takes place in the market, within the sphere of circulation. The second phase of the movement, the process of production, is complete as soon as the means of production have been converted into commodities whose value exceeds that of their component parts, and therefore contains the capital originally advanced plus a surplus-value.

↑ These two phases were discussed so far. These commodities must then again be thrown into the sphere of circulation. They must be sold, their value must be realized in money, this money must be transformed once again into capital, and so on, again and again. This cycle, in which the same phases are continually traversed in succession, constitutes the circulation of capital.

This realisation process has not yet been discussed, and one might expect it to be the next point on the agenda. ↓ But no, this phase will be discussed in volume Two. Instead, as the reader should be aware from the title of part VII, the next topic to be discussed is accumulation. In other words, we are going to discuss accumulation before having discussed an important condition of accumulation:

709:2 The first condition of accumulation is that the capitalist managed to sell his commodities, and to reconvert into capital the greater part of the money received from their sale. In the following pages, we shall assume that capital passes through its process of circulation in the normal way. The de-

589:1 Die Verwandlung einer Geldsumme in Produktionsmittel und Arbeitskraft ist die erste Bewegung, die das Wertquantum durchmacht, das als Kapital fungieren soll. Sie geht vor auf dem Markt, in der Sphäre der Zirkulation. Die zweite Phase der Bewegung, der Produktionsprozeß, ist abgeschlossen, sobald die Produktionsmittel verwandelt sind in Ware, deren Wert den Wert ihrer Bestandteile übertrifft, also das ursprünglich vorgeschossene Kapital plus eines Mehrwerts enthält.

↓ Now what is the next phase? Diese Waren müssen alsdann wiederum in die Sphäre der Zirkulation geworfen werden. Es gilt, sie zu verkaufen, ihren Wert in Geld zu realisieren, dies Geld aufs neue in Kapital zu verwandeln, und so stets von neuem. Dieser immer dieselben sukzessiven Phasen durchmachende Kreislauf bildet die Zirkulation des Kapitals.

589:2 Die erste Bedingung der Akkumulation ist, daß der Kapitalist es fertiggebracht hat, seine Waren zu verkaufen und den größten Teil des so erhaltenen Geldes in Kapital rückzuverwandeln. Im folgenden wird vorausgesetzt, daß das Kapital seinen Zirkulationsprozeß in normaler Weise

tailed analysis of the process will be found in Volume 2.

↑ Marx uses the term “accumulation” here without having defined it. A formal definition can be found in 725:1. ↓ The realisation of the newly produced value is not the only presupposition of accumulation disregarded at this point—i.e., Marx assumes this condition is satisfied without explaining how:

709:3 Although the capitalist who produces surplus-value, i.e. who extracts unpaid labor directly from the workers and fixes it in commodities, is the first appropriator of this surplus-value, he is by no means its ultimate proprietor. He has to share it afterwards with capitalists who fulfil other functions in social production taken as a whole, with the owner of the land, and with yet other people. Surplus-value is therefore split up into various parts. Its fragments fall to various categories of persons, and take on various mutually independent forms, such as profit, interest, gains made through trade, ground rent, etc. We shall be able to deal with these modified forms of surplus-value only in Volume 3.

After telling us all the things that will be discussed elsewhere, Marx explains now what will be discussed here under which assumptions:

710:1 On the one hand, then, we assume here that the capitalist sells the commodities he has produced at their value, and we shall not concern ourselves with their later return to the market, or the new forms that capital assumes while in the sphere of circulation, or the concrete conditions of reproduction hidden within those forms. On the other hand, we treat the capitalist producer as the owner of the entire surplus-value, or, perhaps better, as the representative of all those who will share the booty with him.

These assumptions mean that Marx is not discussing the accumulation process as if occurs in the real world, but an abstraction, in which certain phenomena are disregarded in order to have an unobstructed look at certain mechanisms which govern the accumulation process.

durchläuft. Die nähere Analyse dieses Prozesses gehört ins Zweite Buch.

589:3 Der Kapitalist, der den Mehrwert produziert, d.h. unbezahlte Arbeit unmittelbar aus den Arbeitern auspumpt und in Waren fixiert, ist zwar der erste Aneigner, aber keineswegs der letzte Eigentümer dieses Mehrwerts. Er hat ihn hinterher zu teilen mit Kapitalisten, die andre Funktionen im großen und ganzen der gesellschaftlichen Produktion vollziehn, mit dem Grundeigentümer usw. Der Mehrwert spaltet sich daher in verschiedene Teile. Seine Bruchstücke fallen verschiedenen Kategorien von Personen zu und erhalten verschiedene, gegeneinander selbständige Formen, wie Profit, Zins, Handelsgewinn, Grundrente usw. Diese verwandelten Formen des Mehrwerts können erst im Dritten Buch behandelt werden.

590:1 Wir unterstellen hier also einerseits, daß der Kapitalist, der die Ware produziert, sie zu ihrem Wert verkauft, und verweilen nicht weiter bei seiner Rückkehr zum Warenmarkt, weder bei den neuen Formen, die dem Kapital anschließen in der Zirkulationssphäre, noch den darin eingehüllten konkreten Bedingungen der Reproduktion. Andererseits gilt uns der kapitalistische Produzent als Eigentümer des ganzen Mehrwerts oder, wenn man will, als Repräsentant aller seiner Teilnehmer an der Beute.

We shall therefore begin by considering accumulation from an abstract point of view, i.e. simply as one aspect of the immediate process of production.

↑ The immediate process of production is the production as it occurs in the individual workshops and factories, as opposed to looking at the overall social process of production and reproduction. ↓ Next, Marx brings arguments why the discussion of accumulation can already be included in book I, although the circulation and the splitting up of surplus-value has not yet been discussed.

710:2 In so far as accumulation actually takes place, the capitalist must have succeeded in selling his commodities, and in reconverting the money shaken loose from them into capital. Moreover, the break-up of surplus-value into various fragments does not affect either its nature or the conditions under which it becomes an element in accumulation. Whatever the proportion of surplus-value which the capitalist producer retains for himself, or yields up to others, he is the one who in the first instance appropriates it. What, therefore, is taken as given in our presentation of accumulation, is taken as given in the actual process of accumulation itself.

↑ The fact that accumulation takes place shows that the circulation problem can be solved, and the productive capitalist is the first who appropriates the surplus-value. I.e., the two things which will be assumed here theoretically do hold in practice. (A similar argument is made in 273:1.)

↓ In the next passage, Marx argues that it is not only permissible, but also desirable to make these assumptions:

On the other hand, the simple, fundamental form of the process of accumulation is obscured both by the splitting-up of surplus-value and by the mediating movement of circulation. An exact analysis of the process, therefore, demands that we should, for a time, disregard all phenomena that conceal the workings of its inner mechanism.

Wir betrachten also zunächst die Akkumulation abstrakt, d.h. als bloßes Moment des unmittelbaren Produktionsprozesses.

590:2 Soweit übrigens Akkumulation stattfindet, gelingt dem Kapitalisten der Verkauf der produzierten Ware und die Rückverwandlung des aus ihr gelösten Geldes in Kapital. Ferner: Der Bruch des Mehrwerts in verschiedene Stücke ändert nichts an seiner Natur noch an den notwendigen Bedingungen, worin er zum Element der Akkumulation wird. Welche Proportion des Mehrwerts der kapitalistische Produzent immer für sich selbst festhalte oder an andre abtrete, er eignet ihn stets in erster Hand an. Was also bei unsrer Darstellung der Akkumulation unterstellt wird, ist bei ihrem wirklichen Vorgang unterstellt.

Andrerseits verdunkeln die Zerspaltung des Mehrwerts und die vermittelnde Bewegung der Zirkulation die einfache Grundform des Akkumulationsprozesses. Seine reine Analyse erheischt daher vorläufiges Wegsehen von allen Phänomenen, welche das innere Spiel seines Mechanismus verstecken.

Question 947 Which abstractions does Marx make when he discusses the accumulation process in the first volume of *Capital*, and why?

Question 946 What is accumulation of capital?

23. Simple Reproduction

Here is a brief overview of chapter Twenty-Three:

(1) Every social production process must be periodic or continuous, because the members of society must consume products on an ongoing basis. The production process can be periodic or continuous only if it is a *reproduction process*, i.e., if a part of the products re-enters production and replaces the means of production used up. But this is not all. For capitalism to sustain itself, this reproduction of the means of production must also be reproduction of individual capitals and of the *capital relation itself*.

(2) After these general remarks, Marx defines *simple* reproduction, which is repeated production on the *same scale*. The processes making up social production do not change over time. The only change is that these processes are now seen in their repetition instead of as one-time events. This gives new insights: from this perspective, capitalist production no longer has certain characteristics which it seemed to possess as an isolated process without connection to processes before or after. Marx makes six observations:

(a) Variable capital ceases to be value advanced, because (aa) before the worker consumes he has already produced more than he is allowed to consume, and (ab) the money wage he is paid is financed by the sale of the fruits of his own earlier labor.

(b) Constant capital also ceases to be value advanced, by a different mechanism: as the reproduction goes on, the original capital is consumed by the capitalists and what remains is replaced by the surplus produced by workers.

(c) Since wages do not rise substantially above subsistence level, the separation of the workers from the means of production is reproduced.

(d) Not only the productive but also the individual consumption of the workers becomes a moment of the accumulation of capital. Capitalists therefore benefit twofold (da) of what they give the workers (because this reproduces the working class, the sources of their wealth), and (db) of what they receive from the workers (surplus-value). Marx discusses some ideologies connected with the confusion of these two.

(e) While the working class reproduces themselves, they accumulate skills. As historical concrete evidence Marx tells the story of Mr. Potter, who wanted to outlaw emigration of the skilled workers.

(f) Reproduction of the relations of production. It is no longer an accident that capitalist and laborer confront each other in the market as buyer and seller.

23. Simple Reproduction

1. [Reproduction in General and Reproduction of Capitalism]

711:1 Whatever the social form of the production process, it must either be continuous or periodically go through the same phases.

It is obvious why a social production process must be either continuous or periodic. In a letter to Kugelmann Marx wrote: "Every child knows, that a nation which ceased to work, I will not say for a year, but even for a few weeks, would perish." Here in *Capital* Marx formulates it at follows:

A society can no more cease to produce than it can cease to consume.

591:1 Welches immer die gesellschaftliche Form des Produktionsprozesses, er muß kontinuierlich sein oder periodisch stets von neuem dieselben Stadien durchlaufen.

Sowenig eine Gesellschaft aufhören kann zu konsumieren, kann sie aufhören zu produzieren.

↑ Individuals can consume without producing, but a whole society cannot. Every social production process is necessarily an on-going process. ↓ But we haven't, until now, looked at it from this point of view. In order to capture those mechanisms which allow the production process to go on continuously or periodically, we must look at social production as a *reproduction process*.

When viewed, therefore, as a connected whole, and in the constant flux of its incessant renewal, every social process of production is at the same time a process of reproduction.

In einem stetigen Zusammenhang und dem beständigen Fluß seiner Erneuerung betrachtet, ist jeder gesellschaftliche Produktionsprozess daher zugleich Reproduktionsprozess.

Any *production* process needs means of production to create a product. Besides availability of the means of production, also other conditions must be satisfied so that it can proceed. A *reproduction* process is, by definition, a production process which replaces the means of production used up and also recreates the other conditions of production, so that production can go on. ↓ Which conditions must a production process satisfy to be a *reproduction* process?

711:2 The conditions of production are at the same time the conditions of reproduction.

591:2 Die Bedingungen der Produktion sind zugleich die Bedingungen der Reproduktion.

↑ Once one knows the conditions necessary for production, one also knows the conditions which must be satisfied by a reproduction process—namely, the reproduction process must *replace* the conditions of production. ↓ The most prominent *material* conditions of production are the means of production, therefore it follows:

No society can produce continually, i.e., reproduce, without continually reconverting a part of its products into means of production or elements of fresh production.

Keine Gesellschaft kann fortwährend produzieren, d.h. reproduzieren, ohne fortwährend einen Teil ihrer Produkte in Produktionsmittel oder Elemente der Neuprodukti-

on rückzuverwandeln.

The French says here something slightly different: “Une société ne peut reproduire, c’est-à-dire

produire d’une manière continue, sans retransformer continuellement une partie de ses

produits en moyens de production, en éléments de nouveaux produits.”

↑ This is not the only condition for reproduction. In 713:1/o Marx mentions another condition of reproduction: the “labor fund” has to be maintained and replaced. ↓ Since all this suggests that somehow *more* has to be produced than the means of consumption of the population, it is natural to look at the quantitative aspect of it right from the beginning:

All other circumstances remaining the same, society can reproduce or maintain its wealth on the existing scale only by replacing the means of production which have been used up—i.e. the instruments of labor, the raw material and the auxiliary substances—with an equal quantity of new articles. These must be separated from the mass of the yearly product, and incorporated once again into the production process.

Unter sonst gleichbleibenden Umständen kann sie ihren Reichtum nur auf derselben Stufenleiter reproduzieren oder erhalten, indem sie die, während des Jahres z.B., verbrauchten Produktionsmittel, d.h. Arbeitsmittel, Rohmaterial und Hilfsstoffe, in natura durch ein gleiches Quantum neuer Exemplare ersetzt, welches von der jährlichen Produktenmasse abgeschieden und von neuem dem Produktionsprozeß einverleibt wird.

The reproduction structure is therefore inscribed in the composition of the bundle of *use-values* produced by society:

A specific portion of each year’s product belongs therefore to the sphere of production. Destined for productive consumption from the very first, this portion exists, for the most part, in a bodily form which by its very nature excludes the possibility of individual consumption.

Ein bestimmtes Quantum des jährlichen Produkts gehört also der Produktion. Von Haus aus für die produktive Konsumtion bestimmt, existiert es größtenteils in Naturalformen, die von selbst die individuelle Konsumtion ausschließen.

↓ After formulating this *general* condition of reproduction, Marx turns to *capitalist* reproduction. On the one hand, reproduction under capitalism is capitalist production which replaces the means of production it uses up. In addition, it must also reproduce the capitalist relations of production themselves.

711:3/o If production has a capitalist form, so too will reproduction.

591:3/o Hat die Produktion kapitalistische Form, so die Reproduktion.

↑ We know what it means to say that *production* has capitalist form: it means that the capitalist directs production and uses it as a means to create surplus-value. ↓ But Marx adds here that *reproduction* is also done for capitalist interests.

Just as the labor process, in the capitalist mode of production, appears only as a means for the process of valorization, so re-

Wie in der kapitalistischen Produktionsweise der Arbeitsprozeß nur als ein Mittel für den Verwertungsprozeß erscheint, so die

production appears only as a means for reproducing the value advanced as capital, i.e. as self-valorizing value.

Reproduktion nur als ein Mittel, den vorge-schoßnen Wert als Kapital zu reproduzieren, d.h. als sich verwertenden Wert.

The Moore-Aveling translation of this last sentence draws a parallel to the preceding sentence, which is a good feature, but this translation incorrectly makes the labor process the subject in the latter part of the sentence: “Just as in the former the labour-process figures

but as a means towards the self-expansion of capital, so in the latter it figures but as a means of reproducing as capital—i.e., as self-expanding value—the value advanced.” Fowkes’s translation is a paraphrase of Moore-Aveling, which echoes the same mistake:

“Just as in the capitalist mode of production the labor process appears only as a means towards the process of valorization, so in the case of reproduction it appears only as a means of reproducing the value advanced as capital, i.e. as self-valorizing value.”

The laws of capital are not fulfilled with a one-time profit, they require the ceaseless making of profits, see 254:1. He can remain capitalist for an extended period of time only because the production process under his direction is at the same time also a reproduction process replacing the means of production used up. He will see to it that reproduction takes place so that he can remain capitalist. And indeed, in every factory there are not only production workers producing the end product, but also maintenance workers fixing and replacing the means of production.

Question 949 Marx writes: “the labor process, in the capitalist mode of production, appears only as a means for the process of valorization.” Why does he use the word “appears” here, and why did he put an “only” into this sentence? Shouldn’t he have said “the labor process is means for the process of valorization”?

Question 950 What are the conditions of reproduction of a capitalist system, i.e., which conditions must be satisfied that the capitalist production process can deliver a steady stream of consumption goods for the population and at the same time retain its capitalist character?

The socialist countries did not have very strong mechanisms in place enforcing that social production would be reproduction: there were many half-finished investment projects started by one planner but not finished by his or her successor. In capitalism, a capitalist has the motivation to see his investment projects through: if he does not succeed, he may go bankrupt. This close linkage also has its downside: if individual businesses fail, the reproduction of the entire system may be endangered.

Exam Question 952 How is the capitalist motivated to see to it that the social conditions of reproduction are met?

Question 953 Marx says that the desire to remain a capitalist causes capitalists to do things which are good for the reproduction of the capitalist economy. Can the goal of firms to maintain themselves as viable capitalist enterprises also be an obstacle to the reproduction of the economy?

However strongly an individual capitalist may wish to remain a capitalist, these wishes will not have a chance to be fulfilled unless they conform with the general laws of capital. But Marx can show that they do conform. This is not surprising. Did they not conform, there would no capitalists around to have these wishes.

We already saw in chapter Four, 252:2/o, that the continuous making of profits is aided by the circumstance that qualitatively, the endpoint in the circuit $M - C - M'$ is the same as the beginning point, so that capital emerges from the circuit in a form ready to start the circuit over again. The capitalist, in turn, arranges the production process as a continuous process, in order to be able to remain capitalist.

The economic character mask of a capitalist is fixed to one and the same person only by his money continuing to function as capital.

Die ökonomische Charaktermaske des Kapitalisten hängt nur dadurch an einem Menschen fest, daß sein Geld fortwährend als Kapital funktioniert.

The term “character mask” was introduced in chapter Two, 178:1/o, to describe the roles of buyer and seller. Whereas the roles of buyer and seller are not continually attached to the same person—everyone is sometimes buyer and sometimes seller—the character mask of a capitalist has a much more permanent nature. Of course, there is no *guarantee* that a capitalist today will remain capitalist tomorrow, but the structure of capitalist production is such that this is usually the case. And by their efforts to remain capitalists, the capitalists ensure the continuity of the social reproduction process.

↓ With the same persons permanently occupying the role of capitalist, profit becomes a *revenue*:

If, for instance, a sum of £ 100 has this year been converted into capital, and has produced a surplus-value of £ 20, it must continue during the next year, and subsequent years, to repeat the same operation. As a periodic increment of the value of the capital, or a periodic fruit borne by capital-in-process, surplus-value acquires the form of a revenue arising out of capital.¹

A revenue is a steady flow of income for a given recipient. The footnote illustrates the wondrous character of such a flow:

¹ ‘The rich, who consume the products of the labor of others, can only obtain them by making exchanges’ (purchases of commodities). ‘They therefore seem to be exposed to an early exhaustion of their reserve funds ... But, in the social order, wealth has acquired the power of reproducing itself through the labor of others ... Wealth, like labor, and by means of labor, bears fruit every year, but this fruit can be de-

Hat z.B. die vorgeschobene Geldsumme von 100 Pfd.St. sich dieses Jahr in Kapital verwandelt und einen Mehrwert von 20 Pfd.St. produziert, so muß sie das nächste Jahr usf. dieselbe Operation wiederholen. Als periodisches Inkrement des Kapitalwerts, oder periodische Frucht des prozessierenden Kapitals, erhält der Mehrwert die Form einer aus dem Kapital entspringenden Revenue.¹

¹ „Die Reichen, welche die Produkte der Arbeit anderer verzehren, erhalten sie nur durch Austauschakte (Warenkäufe). Sie scheinen daher einer baldigen Erschöpfung ihrer Reservefonds ausgesetzt ... Aber in der gesellschaftlichen Ordnung hat der Reichtum die Kraft erhalten, sich durch fremde Arbeit zu reproduzieren ... Der Reichtum, wie die Arbeit und durch die Arbeit, liefert eine jährliche Frucht, welche jedes

stroyed every year without making the rich man any poorer thereby. This fruit is the revenue which arises out of capital’ (Sismondi, *Nouveaux Principes d’économie politique*. Paris, 1819, Vol. 1, pp. 81–2).

↑ The self-moving power of capital becomes beneficial for the revenue holder. Revenues are the main point of contact between the economic deep structure and individual interests. Revenues will therefore be discussed more at the end of *Capital III*, when Marx gets ready to speak about classes.

↓ Chapters Twenty-Three and Twenty-Four are organized according to how the revenue of the capitalists is divided into new capital investment and means of consumption.

712:1 If this revenue serves the capitalist only as a fund to provide for his consumption, i.e., if it is consumed as periodically as it is gained, then, other things being equal, simple reproduction takes place.

592:1 Dient diese Revenue dem Kapitalisten nur als Konsumtionsfonds oder wird sie ebenso periodisch verzehrt wie gewöhnen, so findet, unter sonst gleichbleibenden Umständen, einfache Reproduktion statt.

↑ Marx does not mean to imply here that simple reproduction is a possible mode of operation for capitalism. It can be this only temporarily; in the long run capital must accumulate. Marx makes this simplifying assumption here only because it allows him to identify those characteristics of the capitalist production process which are not due to production, nor due to accumulation, but due to the *continuity* of production. As always, Marx carefully distinguishes which mechanism is responsible for which fact or event.

Exam Question 954 *Isn’t simple reproduction against the laws of capital, which must accumulate? Why does Marx make an assumption which is at odds with the essence of capitalism?*

↓ Marx announces that this change in viewpoint will give new results.

And although this reproduction is a mere repetition of the process of production on the same scale as before, this mere repetition, or continuity, imposes on the process certain new characteristics, or rather, dissolves certain characteristics which the isolated process seems to have.

Obgleich letztere nun bloße Wiederholung des Produktionsprozesses auf derselben Stufenleiter, drückt diese bloße Wiederholung oder Kontinuität dem Prozesse gewisse neue Charaktere auf oder löst vielmehr die Scheincharaktere seines nur vereinzeltten Vorgangs auf.

Just like chapter Nineteen, chapter Twenty-Three also discusses misleading appearances of capitalism. How can a process obtain new characteristics by mere repetition? If you look at the manifestations of an underlying “real” mechanism as a continuous process, you may be able to get a more accurate picture of the workings of this mechanisms than if you only see a snapshot of it. Hegel said: “the truth is the whole.” This has more than epistemological relevance. The economic agents make only punctual interactions with the capitalist system, their practical activity is guided by such a snapshot view.

Question 955 *Marx claims that the mere repetition, or continuity, of the capitalist production process dissolves certain illusory characteristics possessed by this process in isolation. Give concrete examples of such illusory characteristics, either those which Marx is discussing, or others.*

Starting now until the end of the chapter, Marx discusses specific characteristics of the capitalist production process that change if one no longer looks at them from an individualistic and one-time point of view. Although Marx emphasizes continuity as the new angle brought into the discussion, some of Marx's arguments do not depend on continuity but represent a switch from an individualistic to a social point of view. In at least three places, at the end of 712:2/o, and at the beginning of 717:3/o and 719:1, Marx says this explicitly.

The changes which Marx points out here can be classified into two categories: (1) Things which appear as advances by the capitalists are no longer advances, and (2) the expanded horizon allows us to see how the separation between the producers and the means of production is reproduced.

2. [Advances by the Capitalists Cease to Be Advances]

Marx brings here two arguments, one specific to the variable capital, and one applicable to all capital (as long as the capitalists consume part of their surplus-value).

2.a. [Variable Capital is Not Something Advanced by the Capitalists]

One of the main characteristics which capitalism seems to have, and which also seems to justify capitalist profits, is that the capitalist advances the variable capital to the worker. (Remember that the part of the capital advanced for wages is called "variable capital," see chapter Eight, 317:3.)

Exam Question 957 *Why is the part of the capital advanced for wages called "variable capital"? (The answer to this question cannot be inferred from the context here but this is a definition Marx made in chapter Eight.)*

The means of subsistence of the workers constitute a separate part of social output, the so-called "labor fund." Marx argues that in all societies, the workers have to produce their own labor fund, and that also in capitalism, this labor fund is *not* something that the capitalists advance to the workers.

712:2/o The purchase of labor-power for a fixed period is the prelude to the production process. This prelude is repeated again and again as soon as the period of time for which the labor-power has been sold comes

592:2/o Der Produktionsprozeß wird eingeleitet mit dem Kauf der Arbeitskraft für eine bestimmte Zeit, und diese Einleitung erneuert sich beständig, sobald der Verkaufstermin der Arbeit fällig und damit ei-

to an end, and with it a definite period of production, such as a week or a month, has elapsed. But the worker is not paid until after he has expended his labor-power, and realized both the value of his labor-power and a certain quantity of surplus-value in the shape of commodities. He has therefore produced not only surplus-value, which we for the present regard as a fund to meet the private consumption of the capitalist, but also the variable capital, the fund out of which he himself is paid, before it flows back to him in the shape of wages; and his employment lasts only as long as he continues to reproduce this fund.

When Marx writes "the worker has reproduced the funds out of which he himself is paid," he cannot mean money but must mean the real use-values which the worker buys with this money. Now a theory-critical side remark: This is the reason for the formula of the economists, mentioned in chapter 18, under II, which presents wages as a share in the product itself.²

² 'Wages as well as profits are to be considered, each of them, as really a portion of the finished product' (Ramsay, op. cit., p. 142). 'The share of the product which comes to the worker in the form of wages' (J. Mill, *Elements*, etc., transl. Parisot, Paris, 1823, pp. 33-4).

Since wages are paid *after* the worker has already produced more than an equivalent for them, the capitalist does not advance anything to the worker.

What flows back to the worker in the shape of wages is a portion of the product he himself continuously reproduces.

↑ If the capitalist on pay day were to give the worker a part of the worker's product, then it would be clear that wages are not an advance to the worker. ↓ But the capitalist gives money to the worker:

The capitalist, it is true, pays him the value of the commodity in money.

↑ Having value in one's hands is not enough; money is necessary to get the use-values one needs. Money is the proof that the value one has produced indeed satisfies someone's needs, i.e., that the labor one has spent is socially necessary. And since the capitalist gives money

ne bestimmte Produktionsperiode, Woche, Monat usw., abgelaufen ist. Gezahlt wird der Arbeiter aber erst, nachdem seine Arbeitskraft gewirkt und sowohl ihren eignen Wert als den Mehrwert in Waren realisiert hat. Er hat also wie den Mehrwert, den wir einstweilen nur als Konsumtionsfonds des Kapitalisten betrachten, so den Fonds seiner eignen Zahlung, das variable Kapital produziert, bevor es ihm in der Form des Arbeitslohnes zurückfließt, und er wird nur so lange beschäftigt, als er ihn beständig reproduziert.

Daher die im sechzehnten Kapitel unter II. erwähnte Formel der Ökonomen, die das Salair als Anteil am Produkt selbst darstellt.²

² „Löhne wie auch Profite sind beide als ein Teil des fertigen Produkts zu betrachten.“ (Ramsay, l.c. p. 142.) „Der Anteil an dem Produkt, der dem Arbeiter unter der Form des Salairs zukommt.“ (J. Mill, „*Elements* etc.“, Übers. von Parisot, Paris 1823, p. 33, 34.)

Es ist ein Teil des vom Arbeiter selbst beständig reproduzierten Produkts, das ihm in der Form des Arbeitslohns beständig zurückfließt.

Der Kapitalist zahlt ihm den Warenwert al-
lerdings in Geld.

to the worker, while the worker delivers raw value to the capitalist which has not yet gone through this social validation, the question arises whether this conversion from the use-value form into the value form is an advance by the capitalist which justifies the profits. ↓ Marx's response is: the money which the capitalist advances to the worker does not originally come from the capitalist, but the capitalist obtained this money from selling the worker's earlier product. I.e., this process is in place without requiring additional input from the capitalist. But this money is merely the transmuted form of the product of the worker's labor. While he is converting a portion of the means of production into products, a portion of his former product is being turned into money. It is his labor of last week, or of last year, that pays for his labor-power this week or this year.

The German edition says "labor" both times, while the Moore-Aveling translation says

labor first and then labor-power. This is one of the places where the Moore-Aveling translation is

better than the German.

In other words, this money does not come from the capitalist but from the worker, but with a time lag. One might think now that the capitalist advances the money at least for the four weeks until the worker's product is sold. Perhaps this is why Marx gives now an alternative argument, which no longer looks at the temporal continuity of the process but broadens the field of vision to society as a whole. If one looks at the social process as a whole, as opposed to how it presents itself to the individual agents, one can see once again that the capitalist does not advance the wages to the worker. When the worker employed in the shoe factory eats bread, then he thinks the whereabouts for the bread are advanced to him by the capitalist. And the worker employed in the bread factory thinks the whereabouts for wearing shoes are advanced to him by the capitalist. But if both workers look at their situation jointly they can see that the capitalists do not advance anything to either of them. Together the workers produce shoes and bread, and when the workers consume shoes and bread, they have already produced more shoes and bread.

The illusion created by the money-form vanishes immediately if, instead of taking a single capitalist and a single worker, we take the whole capitalist class and the whole working class. The capitalist class is constantly giving to the working class drafts, in the form of money, on a portion of the product produced by the latter and appropriated by the former.

Dies Geld ist aber nur die verwandelte Form des Arbeitsprodukts. Während der Arbeiter einen Teil der Produktionsmittel in Produkt verwandelt, rückverwandelt sich ein Teil seines früheren Produkts in Geld. Es ist seine Arbeit von voriger Woche oder vom letzten halben Jahre, womit seine Arbeit von heute oder vom nächsten halben Jahr gezahlt wird.

Die Illusion, welche die Geldform erzeugt, verschwindet sofort, sobald statt des einzelnen Kapitalisten und des einzelnen Arbeiters Kapitalistenklasse und Arbeiterklasse betrachtet werden. Die Kapitalistenklasse gibt der Arbeiterklasse beständig in Geldform Anweisungen auf einen Teil des von der letzteren produzierten und von der ersten angeeigneten Produkts.

↑ I.e., the capitalists give the workers permission to buy a part of the product back which they have stolen from the workers:

The workers give these drafts back just as constantly to the capitalists, and thereby withdraw from the latter their allotted share of their own product.

Diese Anweisungen gibt der Arbeiter der Kapitalistenklasse ebenso beständig zurück und entzieht ihr damit den ihm selbst zufallenden Teil seines eignen Produkts.

With all the above, Marx makes the point that the labor fund is not something advanced by the capitalist.

The commodity-form of the product and the money-form of the commodity veil the transaction.

Die Warenform des Produkts und die Geldform der Ware verkleiden die Transaktion.

The nature of this transaction is the continuous appropriation of the workers' product by the capitalists. On the surface, this transaction presents itself in a veiled or distorted form in two ways:

- exploitation is not visible;
- instead it seems as if the capitalist were advancing the wage to the worker.

At the present time, Marx only makes a brief allusion to the first point which had been made repeatedly before. The commodity form of the product veils exploitation because the worker is not aware that the product he produced has value, because it has not yet been sold. The money form of the commodity veils exploitation because the worker does not see that the money he receives from the capitalist is the money form of value which the worker has produced himself. All this will be developed in much more detail in chapter Twenty-Four, 729:2/o.

Exam Question 958 Explain in your own words how the commodity form of the product and the money form of the commodity veil exploitation.

Once one sees the exploitative nature of the transaction between worker and capitalist, one can also penetrate the illusion that the capitalist advances something to the worker when he gives him the wage. It is true, the "wage fund" is a separate portion of the economy's output, but it is not something which the capitalist gives to the worker:

713:1/o Variable capital is therefore only a particular historical form in which the labor fund appears, the fund for providing the means of subsistence which the worker requires for his own maintenance and reproduction, and which, in all systems of social production, he must himself produce and reproduce. If the labor-fund constantly flows to him in the form of money that pays for

593:1/o Das variable Kapital ist also nur eine besondere historische Erscheinungsform des Fonds von Lebensmitteln oder des Arbeitsfonds, den der Arbeiter zu seiner Selbsterhaltung und Reproduktion bedarf und den er in allen Systemen der gesellschaftlichen Produktion stets selbst produzieren und reproduzieren muß. Der Arbeitsfonds fließt ihm nur beständig in Form von

his labor, it is because his own product constantly moves away from him in the form of capital.

The reality of wages is that it is not something the capitalist gives the worker but something the working class themselves produce. The illusion that the variable capital flows to the worker arises only because the worker does not see that his own product flows away from him. The capital which the capitalist uses as pretext to exploit him is the worker's own product.

Exam Question 959 *How does the illusion arise that the capitalist advances something to the worker when he pays him a wage?*

If wages are not advanced by the capitalist to the worker, where do they come from? Answer: from the earlier labor of the worker. For this second step in the argument we must look at the production process as a continuous process.

But this form of appearance of the labor-fund does not change the fact that it is the worker's own objectified labor which is advanced to him by the capitalist.³

³ 'When capital is employed in advancing to the workman his wages, it adds nothing to the funds for the maintenance of labor' (Cazenove, in a note to his edition of Malthus's Definitions in Political Economy, London, 1853, p. 22).

In order to clarify this, Marx compares the Let us take a peasant liable to do compulsory labor services. He works on his own land with his own means of production for, say, three days a week. The other three days are devoted to forced labor on the lord's domain. He constantly reproduces his own labor-fund, which never, in his case, takes the form of a money payment for his labor, advanced by another person. But in return his unpaid and forced labor for the lord never acquires the character of voluntary and paid labor. If one, fine morning, the landowner appropriates to himself the plot of land, the cattle, the seed, in short, the means of production of the peasant, the latter will thenceforth be obliged to sell his

Zahlungsmitteln seiner Arbeit zu, weil sein eignes Produkt sich beständig in der Form des Kapitals von ihm entfernt.

Aber diese Erscheinungsform des Arbeitsfonds ändert nichts daran, daß dem Arbeiter seine eigne vergegenständlichte Arbeit vom Kapitalisten vorgeschossen wird.³

³ „Wenn Kapital verwandt wird, um dem Arbeiter seinen Lohn vorzuschießen, fügt es dem Fonds zur Erhaltung der Arbeit nichts hinzu.“ (Cazenove in Note zu seiner ed. von Malthus' „Definitions in Polit. Econ.“, London 1853, p. 22.)

wage laborer with a bonded peasant: Nehmen wir einen Fronbauer. Er arbeitet mit seinen eignen Produktionsmitteln auf seinem eignen Acker z.B. 3 Tage in der Woche. Die drei andren Wochentage verrichtet er Fronarbeit auf dem herrschaftlichen Gut. Er reproduziert seinen eignen Arbeitsfonds beständig, und dieser erhält ihm gegenüber nie die Form von einem Dritten für seine Arbeit vorgeschossener Zahlungsmittel. Im Ersatz erhält auch niemals seine unbezahlte Zwangsarbeit die Form freiwilliger und bezahlter Arbeit. Wenn morgen der Gutsherr den Acker, das Zugvieh, die Samen, kurz die Produktionsmittel des Fronbauern sich selbst aneignet, so hat dieser von nun an seine Arbeitskraft an den Fronherrn zu verkaufen.

labor-power to the former. He will, other things being equal, labor six days a week as before, three for himself, three for his former lord, who thenceforth becomes a wage-paying capitalist. As before, he will use up the means of production as means of production, and transfer their value to the product. As before, a definite portion of the product will be devoted to reproduction.

↑ Marx makes a similar argument in chapter Ten, 345:1, regarding *corvée*. Exploitation is unchanged, only its form is changed, it takes the form of voluntary paid labor. ↓ The advance by the capitalist is likewise a formal superficial artifact.

But from the moment that forced labor is changed into wage-labor, the labor-fund, which the peasant himself continues as before to produce and reproduce, takes the form of a quantity of capital advanced in the form of wages by the lord of the land.

↓ Now an entirely different argument: The bourgeois economist, whose limited brain is unable to separate the form of appearance from the thing which appears within that form, shuts his eyes to the fact that even at the present time the labor-fund only crops up exceptionally on the face of the globe in the form of capital.⁴

⁴ 'The wages of labor are advanced by capitalists in the case of less than one-fourth of the laborers of the earth' (Richard Jones, Textbook of Lectures on the Political Economy of Nations, Hertford, 1852, p. 36).

fen. Unter sonst gleichbleibenden Umständen wird er nach wie vor 6 Tage in der Woche arbeiten, 3 Tage für sich selbst, 3 für den Exfronherrn, der jetzt in einen Lohnherrn verwandelt ist. Er wird nach wie vor die Produktionsmittel als Produktionsmittel vernutzen und ihren Wert auf das Produkt übertragen. Nach wie vor wird ein bestimmter Teil des Produkts in die Reproduktion eingehn.

Wie aber die Fronarbeit die Form der Lohnarbeit, nimmt der vom Fronbauer nach wie vor produzierte und reproduzierte Arbeitsfonds die Form eines ihm vom Fronherrn vorgeschossenen Kapitals an.

Der bürgerliche Ökonom, dessen beschränktes Hirn die Erscheinungsform von dem, was darin erscheint, nicht trennen kann, schließt die Augen vor der Tatsache, daß selbst noch heutzutage der Arbeitsfonds nur ausnahmsweis auf dem Erdrund in der Form von Kapital auftritt.⁴

⁴ „Die Subsistenzmittel der Arbeiter werden noch nicht auf einem Viertel der Erde den Arbeitern durch Kapitalisten vorgeschossen.“ (Richard Jones, „Textbook of Lectures on the Political Economy of Nations“, Hertford 1852, p. 36.)

2.b. [Any Initial Advances by the Capitalists Replaced by Surplus-Value]

Next, Marx addresses a possible objection to the argument just made about the wage fund: certainly the *original* wage advanced by the *first* capitalist must have been a true advance.

714:1 Variable capital, it is true, only then loses its character of a value advanced out of the capitalist's funds,⁵ when we view

594:1 Allerdings verliert das variable Kapital nur den Sinn eines aus dem eignen Fonds des Kapitalisten vorgeschoss-

the process of capitalist production in the flow of its constant renewal. But that process must have had a beginning of some kind. From our present standpoint it therefore seems likely that the capitalist, once upon a time, became possessed of money, by some accumulation that took place independently of the unpaid labor of others, and that this was, therefore, how he was enabled to frequent the market as a buyer of labor-power.

^{4a} "Though the manufacturer" (i.e., the laborer) "has his wages advanced to him by his master, he in reality costs him no expense, the value of these wages being generally reserved, together with a profit, in the improved value of the subject upon which his labor is bestowed." (A. Smith, l.c., Book II., ch. III, p. 311.)

A comprehensive answer to the question of the initial advances will be given in the chapter about original accumulation. At the present time Marx brings an argument according to which, *regardless* of what happened at the beginning, the continuity of the production process over time whittles down any initial contributions from the capitalist. This argument applies not only to wages but to every advance by the capitalists.

However this may be, the mere continuity of the process, the simple reproduction, brings about some other wonderful changes, which affect not only the variable, but the total capital.

714:2/o If a capital of £1,000 beget yearly a surplus-value of £200, and if this surplus-value be consumed every year, it is clear that at the end of 5 years the surplus-value consumed will amount to $5 \times £200$ or the £1,000 originally advanced. If only a part, say one half, were consumed, the same result would follow at the end of 10 years, since $10 \times £100 = £1,000$. General Rule: The value of the capital advanced divided by the surplus-value annually consumed, gives the number of years, or reproduction peri-

nen Wertes,^{4a} sobald wir den kapitalistischen Produktionsprozeß im beständigen Fluß seiner Erneuerung betrachten. Aber er muß doch irgendwo und irgendwann anfangen. Von unsrem bisherigen Standpunkt ist es daher wahrscheinlich, daß der Kapitalist irgendeinmal durch irgendeine, von unbezahlter fremder Arbeit unabhängige, ursprüngliche Akkumulation Geldbesitzer ward und daher den Markt als Käufer von Arbeitskraft beschreiten konnte.

^{4a} „Obgleich der manufacturer“ (i.e. Manufakturarbeiter) „seinen Lohn vom Meister vorgeschossen bekommt, verursacht er diesem in Wirklichkeit keine Kosten, da der Wert des Lohns zusammen mit einem Profit gewöhnlich in dem veredelten Wert des Gegenstands, auf den seine Arbeit verwandt wurde, wiederhergestellt wird.“ (A. Smith l.c., Book II, ch. III, p. 355.)

Indes bewirkt die bloße Kontinuität des kapitalistischen Produktionsprozesses, oder die einfache Reproduktion, noch andre sonderbare Wechsel, die nicht nur den variablen Kapitalteil ergreifen, sondern das Gesamtkapital.

594:2 Beträgt der mit einem Kapital von 1000 Pfd.St. periodisch, z.B. jährlich, erzeugte Mehrwert 200 Pfd.St. und wird dieser Mehrwert jährlich verzehrt, so ist es klar, daß nach fünfjähriger Wiederholung desselben Prozesses die Summe des verzehrten Mehrwerts $= 5 \times 200$ ist oder gleich dem ursprünglich vorgeschossenen Kapitalwert von 1000 Pfd.St. Würde der jährliche Mehrwert nur teilweise verzehrt, z.B. nur zur Hälfte, so ergäbe sich dasselbe Resultat nach zehnjähriger Wiederholung des Produktionsprozes-

ods, at the expiration of which the capital originally advanced has been consumed by the capitalist and has disappeared. The capitalist thinks, that he is consuming the produce of the unpaid labor of others, i.e., the surplus-value, and is keeping intact his original capital; but what he thinks cannot alter facts.

Question 960 *Does the capitalist, who started a business with his own capital, preserve this capital while consuming surplus-value, or does he consume his original capital and replace it with accumulated surplus-value?*

After the lapse of a certain number of years, the capital value he then possesses is equal to the sum total of the surplus-value appropriated by him during those years, and the total value he has consumed is equal to that of his original capital. It is true, he has in hand a capital whose amount has not changed, and of which a part, viz., the buildings, machinery, etc., were already there when the work of his business began. But what we have to do with here, is not the material elements, but the value, of that capital.

The debtor example describes an analogous situation; there is no implication that the capitalist himself owes anything.

When a person gets through all his property, by taking upon himself debts equal to the value of that property, it is clear that his property represents nothing but the sum total of his debts. And so it is with the capitalist; after he has consumed the equivalent of his original capital, the value of his present capital merely represents the sum total of surplus-value appropriated by him without payment. Not a single atom of the value of

ses, denn $10 \times 100 = 1000$. Allgemein: Der vorgeschosne Kapitalwert, dividiert durch den jährlich verzehrten Mehrwert, ergibt die Jahresanzahl oder die Anzahl von Reproduktionsperioden, nach deren Ablauf das ursprünglich vorgeschosne Kapital vom Kapitalisten aufgezehrt und daher verschwunden ist. Die Vorstellung des Kapitalisten, daß er das Produkt der fremden unbezahlten Arbeit, den Mehrwert, verzehrt und den ursprünglichen Kapitalwert erhält, kann absolut nichts an der Tatsache ändern.

Nach Abfluß einer gewissen Jahreszahl ist der von ihm geeignete Kapitalwert gleich der Summe des während derselben Jahreszahl ohne Äquivalent angeeigneten Mehrwerts und die von ihm verzehrte Wertsumme gleich dem ursprünglichen Kapitalwert. Allerdings behält er in der Hand ein Kapital, dessen Größe sich nicht verändert hat, wovon ein Teil, Gebäude, Maschinen usw., bereits vorhanden war, als er sein Geschäft in Gang brachte. Aber hier handelt es sich vom Wert des Kapitals und nicht von seinen materiellen Bestandteilen.

Wenn jemand sein ganzes Besitztum aufzehrt dadurch, daß er Schulden aufnimmt, die dem Wert dieses Besitztums gleichkommen, so repräsentiert eben das ganze Besitztum nur die Gesamtsumme seiner Schulden. Und ebenso, wenn der Kapitalist das Äquivalent seines vorgeschossenen Kapitals aufgezehrt hat, repräsentiert der Wert dieses Kapitals nur noch die Gesamtsumme des von ihm unentgeltlich angeeigneten Mehr-

his old capital continues to exist.

werts. Kein Wertatom seines alten Kapitals existiert fort.

Question 961 Explain the following passage: “After the capitalist has consumed the equivalent of his original capital, the value of his present capital merely represents the sum total of surplus-value appropriated by him without payment. Not a single atom of the value of his old capital continues to exist.”

715:1/o Apart then from all accumulation, the mere continuity of the process of production, in other words simple reproduction, sooner or later, and of necessity, converts every capital into accumulated capital, or capitalised surplus-value. Even if that capital was originally acquired by the personal labor of its employer, it sooner or later becomes value appropriated without an equivalent, the unpaid labor of others materialised either in money or in some other object.

595:1 Ganz abgesehen von aller Akkumulation verwandelt also die bloße Kontinuität des Produktionsprozesses, oder die einfache Reproduktion, nach kürzerer oder längerer Periode jedes Kapital notwendig in akkumuliertes Kapital oder kapitalisierten Mehrwert. War es selbst bei seinem Eintritt in den Produktionsprozeß persönlich erarbeitetes Eigentum seines Anwenders, früher oder später wird es ohne Äquivalent angeeigneter Wert oder Materiatur, ob in Geldform oder anders, unbezahlter fremder Arbeit.

This method of calculation also suggests a fair strategy for the transfer of the ownership of the means of production from the capitalists to the working class in socialism: the capitalists are allowed to eat up an equivalent of their equity in the means of production, but they are no longer allowed to appropriate new surplus-value or exercise control over the means of production.

3. [Reproduction of the Separation of the Producers from the Means of Production]

↓ Marx said already in 270:1 in chapter Six that the separation between producer and means of production is a condition for capitalism.

We saw in chapter Six that in order to convert money into capital something more is required than the production and circulation of commodities. We saw that on the one side the possessor of value or money, on the other, the possessor of the value-creating substance; on the one side, the possessor of the means of production and subsistence, on the other, the possessor of nothing but labor-power, must confront one another as buyer

595:2 Wir sahen im vierten Kapitel: Um Geld in Kapital zu verwandeln, genügte nicht das Vorhandensein von Warenproduktion und Warenzirkulation. Es mußten erst, hier Besitzer von Wert oder Geld, dort Besitzer der wertschaffenden Substanz; hier Besitzer von Produktions- und Lebensmitteln, dort Besitzer von nichts als Arbeitskraft, einander als Käufer und Verkäufer gegenüber treten. Scheidung zwischen dem

and seller. The separation of labor from its product, of subjective labor-power from the objective conditions of labor, was therefore the actually given foundation, and the starting-point of capitalist production.

716:1 But that which at first was but a starting-point, becomes, by the mere continuity of the process, by simple reproduction, the result, constantly renewed and perpetuated, of capitalist production itself.

The remainder of chapter Twenty-Three shows how this separation is reproduced by ongoing capitalist production.

↓ The production process enriches the capitalist but reproduces the worker in his/her neediness.

On the one hand, the process of production incessantly converts material wealth into capital, into means of creating more wealth and means of enjoyment for the capitalist. On the other hand, the laborer, on quitting the process, is what he was on entering it, a source of wealth, but devoid of all means of making that wealth his own.

↓ In one of the few passages in *Capital* where Marx talks about alienation, the worker's dilemma is framed as the dialectic of alienation: The worker's alienation as a state (separation from the means of production) leads to his alienation as a process (he produces for others), which reinforces his state of alienation again, so that the process as a whole is one in which the laborer himself produces that which oppresses him.

Since, before entering on the process, his own labor has already been alienated from himself by the sale of his labor-power, has been appropriated by the capitalist and incorporated with capital, it must, during the process, be realised in a product that does not belong to him. Since the process of production is also the process by which the capitalist consumes labor-power, the product of the laborer is incessantly converted, not only into commodities, but into capital,

Arbeitsprodukt und der Arbeit selbst, zwischen den objektiven Arbeitsbedingungen und der subjektiven Arbeitskraft, war also die tatsächlich gegebene Grundlage, der Ausgangspunkt des kapitalistischen Produktionsprozesses.

595:3/o Was aber anfangs nur Ausgangspunkt war, wird vermittelt der bloßen Kontinuität des Prozesses, der einfachen Reproduktion, stets aufs neue produziert und verewigt als eignes Resultat der kapitalistischen Produktion.

Einerseits verwandelt der Produktionsprozeß fortwährend den stofflichen Reichtum in Kapital, in Verwertungs- und Genußmittel für den Kapitalisten. Andererseits kommt der Arbeiter beständig aus dem Prozeß heraus, wie er in ihn eintrat—persönliche Quelle des Reichtums, aber entblößt von allen Mitteln, diesen Reichtum für sich zu verwirklichen.

Da vor seinem Eintritt in den Prozeß seine eigne Arbeit ihm selbst entfremdet, dem Kapitalisten angeeignet und dem Kapital einverleibt ist, vergegenständlicht sie sich während des Prozesses beständig in fremdem Produkt. Da der Produktionsprozeß zugleich der Konsumtionsprozeß der Arbeitskraft durch den Kapitalisten, verwandelt sich das Produkt des Arbeiters nicht nur fortwährend in Ware, sondern in Kapital, Wert, der die wertschöpfende Kraft

into value that sucks up the value-creating power, into means of subsistence that buy the person of the laborer, into means of production that command the producers.⁶ The laborer therefore constantly produces material, objective wealth, but in the form of capital, of an alien power that dominates and exploits him: and the capitalist as constantly produces labor-power, but in the form of a subjective source of wealth, separated from the objects in and by which it can alone be realised; in short he produces the laborer, but as a wage-laborer.⁷ This incessant reproduction, this perpetuation of the laborer, is the sine qua non of capitalist production.

⁵ “This is a remarkably peculiar property of productive labor. Whatever is productively consumed is capital and it becomes capital by consumption.” (James Mill, l.c., p. 242.) James Mill, however, never got on the track of this “remarkably peculiar property.”

⁶ “It is true indeed, that the first introducing a manufacture employs many poor, but they cease not to be so, and the continuance of it makes many.” (“Reasons for a Limited Exportation of Wool.” London, 1677, p. 19.) “The farmer now absurdly asserts, that he keeps the poor. They are indeed kept in misery.” (“Reasons for the Late Increase of the Poor Rates: or a Comparative View of the Prices of labor and Provisions.” London, 1777, p. 31.)

↑ Production leads here to disempowerment instead of more wealth and power. But by his emphasis that the worker himself is the one who produces capital, Marx of course also implies that the workers can cease to produce capital. This summary paragraph can be considered the climax of the chapter. The rest of the chapter contains the elaboration, in much more detail, of the connections spelled out here.

aussaugt, Lebensmittel, die Personen kaufen, Produktionsmittel, die den Produzenten anwenden.⁵ Der Arbeiter selbst produziert daher beständig den objektiven Reichtum als Kapital, ihm fremde, ihn beherrschende und ausbeutende Macht, und der Kapitalist produziert ebenso beständig die Arbeitskraft als subjektive, von ihren eignen Vergegenständlichungs- und Verwirklichungsmitteln getrennte, abstrakte, in der bloßen Leiblichkeit des Arbeiters existierende Reichtumsquelle, kurz den Arbeiter als Lohnarbeiter.⁶ Diese beständige Reproduktion oder Verewigung des Arbeiters ist das sine qua non der kapitalistischen Produktion.

⁵ „Da ist eine besonders merkwürdige Eigenschaft der produktiven Konsumtion. Was produktiv konsumiert wird, ist Kapital, und es wird Kapital durch die Konsumtion.“ (James Mill, l.c. p. 242.) J. Mill ist jedoch dieser „besonders merkwürdigen Eigenschaft“ nicht auf die Spur gekommen.

⁶ „Es ist tatsächlich wahr, daß die erste Einführung einer Manufaktur viele Arme beschäftigt aber sie bleiben arm, und die Fortdauer der Manufaktur erzeugt ihrer noch viele.“ („Reasons for a limited Exportation of Wool“, Lond. 1677, p. 19.) „Der Pächter versichert nun entgegen aller Vernunft, daß er die Armen erhalte. In Wirklichkeit werden sie im Elend erhalten.“ („Reasons for the late increase of the Poor Rates: or a comparative view of the prices of labor and provisions“, Lond. 1777, p. 31.)

3.a. [The Worker's Consumption Benefits Capital and not the Worker]

First Marx takes a closer look at the consumption of the workers. He begins with the basic distinction between productive and individual consumption:

717:1 The laborer consumes in a two-fold way. While producing he consumes by his labor the means of production, and converts them into products with a higher value than that of the capital advanced This is his productive consumption. It is at the same time consumption of his labor-power by the capitalist who bought it. On the other hand, the laborer turns the money paid to him for his labor-power, into means of subsistence: this is his individual consumption.

596:1/o Die Konsumtion des Arbeiters ist doppelter Art. In der Produktion selbst konsumiert er durch seine Arbeit Produktionsmittel und verwandelt sie in Produkte von höherem Wert als dem des vorgeschossenen Kapitals. Dies ist seine produktive Konsumtion. Sie ist gleichzeitig Konsumtion seiner Arbeitskraft durch den Kapitalisten, der sie gekauft hat. Andererseits verwendet der Arbeiter das für den Kauf der Arbeitskraft gezahlte Geld in Lebensmittel: dies ist seine individuelle Konsumtion.

Is there a typo in the last sentence? “Verwendet” does not go together with “in”: should it be

“Andererseits verwandelt” instead of “Andererseits verwendet?” The French says: “l’argent est

dépensé,” which does not conclusively decide between verwendet and verwandelt.

French is here p. 53:1 in second

half volume.

From an individualistic point of view (which is appropriate if one talks about consumption) these two kinds of consumption are quite different:

The laborer's productive consumption, and his individual consumption, are therefore totally distinct. In the former, he acts as the motive power of capital, and belongs to the capitalist. In the latter, he belongs to himself, and performs his necessary vital functions outside the process of production. The result of the one is, that the capitalist lives; of the other, that the laborer lives.

Die produktive und die individuelle Konsumtion des Arbeiters sind also total verschieden. In der ersten handelt er als bewegende Kraft des Kapitals und gehört dem Kapitalisten; in der zweiten gehört er sich selbst und verrichtet Lebensfunktionen außerhalb des Produktionsprozesses. Das Resultat der einen ist das Leben des Kapitalisten, das der andern ist das Leben des Arbeiters selbst.

↓ Despite this difference between individual and productive consumption, there are instances in capitalism where the worker's individual consumption looks empirically just like productive consumption:

717:2 When treating of the working-day, we saw that the laborer is often compelled to make his individual consumption a mere

597:1 Bei Betrachtung des „Arbeitstags“ usw. zeigte sich gelegentlich, daß der Arbeiter oft gezwungen ist, seine individuelle

incident of production. In such a case, he supplies himself with necessities in order to maintain his labor-power, just as coal and water are supplied to the steam-engine and oil to the wheel. His means of consumption, in that case, are the mere means of consumption required by a means of production; his individual consumption is directly productive consumption. This, however, appears as an abuse which is inessential for capitalist production.⁷

Marx is about to explain, in the next paragraph, that in capitalism the worker's individual consumption is indeed productive consumption for the capitalist, because it is the maintenance of the capitalist's most productive machine. However it is not necessary for capitalism that this fact manifests itself on the surface in such a direct way that the worker consumes while he or she is working. On the contrary, this has many disadvantages. Not only that the bread crumbs fall into the product, but the feeding on the job foregoes one of the features of capitalism which makes it so efficient: the workers' willing responsibility for their own consumption. Situations in which the worker has to eat while he or she is working fall into the same category as price gouging, organized crime, the illegal drug business, etc.: they are against the rules because they manifest the inner tendencies of capital too openly and directly, without the mediating steps which make capitalism such a smooth system of exploitation.

The Fowkes translation did not get this at all: "This, however, appears to be an abuse not essentially appertaining to capitalist production."

Question 964 *Sometimes a worker has to eat while working, like a machine which needs fuel in order to keep going. Marx comments that "this, however, appears as an abuse." Why didn't he write "this, however, is an abuse"?*

Question 965 *Why did Marx even mention it here if it is only an "inessential abuse"?*

⁷ Rossi would not declaim so emphatically against this, had he really penetrated the secret of "productive consumption."

Nevertheless, this superficial irregularity is a sign of deeper connections. If one looks at the matter socially instead of individually, the separation between private and "productive" consumption of the worker disappears:

Konsumtion zu einem bloßen Inzident des Produktionsprozesses zu machen. In diesem Fall setzt er sich Lebensmittel zu, um seine Arbeitskraft im Gang zu halten, wie der Dampfmaschine Kohle und Wasser, dem Rad Öl zugesetzt wird. Seine Konsumtionsmittel sind dann bloß Konsumtionsmittel eines Produktionsmittels, seine individuelle Konsumtion direkt produktive Konsumtion. Dies erscheint jedoch als ein dem kapitalistischen Produktionsprozeß unwesentlicher Mißbrauch.⁷

⁷ Rossi würde nicht so emphatisch diesen Punkt verdeklamieren, wäre er wirklich in das Geheimnis der „productive consumption“ eingedrungen.

717:3/o The matter takes quite another aspect, when we contemplate, not the single capitalist, and the single laborer, but the capitalist class and the laboring class, not an isolated process of production, but capitalist production in full swing, and on its actual social scale. By converting part of his capital into labor-power, the capitalist augments the value of his entire capital. He kills two birds with one stone. He profits, not only by what he receives from but also by what he gives to, the laborer.

Question 966 *Whenever Marx contemplates both social and individual points of view, he acts as if the social point of view was the true point of view. Is this justified?*

Question 967 *Explain the sentence in 717:3/o: The capitalist profits, not only by what he receives from but also by what he gives to, the laborer.*

The capital given in exchange for labor-power is converted into necessities, by the consumption of which the muscles, nerves, bones, and brains of existing laborers are reproduced, and new laborers are begotten. Within the limits of what is strictly necessary, the individual consumption of the working-class is, therefore, the reconversion of the means of subsistence given by capital in exchange for labor-power, into fresh labor-power at the disposal of capital for exploitation. It is the production and reproduction of that means of production so indispensable to the capitalist: the laborer himself.

This is true whether or not the worker consumes during the production process:

The individual consumption of the laborer, whether it proceed within the workshop or outside it, whether it be part of the process of production or not, forms therefore

597:2/o Anders sieht die Sache aus, sobald wir nicht den einzelnen Kapitalisten und den einzelnen Arbeiter betrachten, sondern die Kapitalistenklasse und die Arbeiterklasse, nicht den vereinzelt Produktionsprozeß der Ware, sondern den kapitalistischen Produktionsprozeß in seinem Fluß und in seinem gesellschaftlichen Umfang.—Wenn der Kapitalist einen Teil seines Kapitals in Arbeitskraft umsetzt, verwertet er damit sein Gesamtkapital. Er schlägt zwei Fliegen mit einer Klappe. Er profitiert nicht nur von dem, was er vom Arbeiter empfängt, sondern auch von dem, was er ihm gibt.

Das im Austausch gegen Arbeitskraft veräußerte Kapital wird in Lebensmittel verwandelt, deren Konsumtion dazu dient, Muskel, Nerven, Knochen, Hirn vorhandener Arbeiter zu reproduzieren und neue Arbeiter zu zeugen. Innerhalb der Grenzen des absolut Notwendigen ist daher die individuelle Konsumtion der Arbeiterklasse Rückverwandlung der vom Kapital gegen Arbeitskraft veräußerten Lebensmittel in vom Kapital neu exploitierbare Arbeitskraft. Sie ist Produktion und Reproduktion des dem Kapitalisten unentbehrlichsten Produktionsmittels, des Arbeiters selbst.

Die individuelle Konsumtion des Arbeiters bleibt also ein Moment der Produktion und Reproduktion des Kapitals, ob sie innerhalb oder außerhalb der Werkstatt, Fabrik usw.,

a factor of the production and reproduction of capital; just as cleaning machinery does, whether it be done while the machinery is working or while it is standing.

↑ This was an analogy which no longer clarifies, because customs have changed: it was conventional that workers cleaned their machines on their own time.

↓ The workers' satisfaction from consumption and therefore their motivation to consume and procreate does not change the deeper social connections:

The fact that the laborer consumes his means of subsistence for his own sake, and not for the sake of the capitalist, has no bearing on the matter. The consumption of food by a beast of burden is none the less a necessary factor in the process of production, because the beast enjoys what it eats. The maintenance and reproduction of the working-class is, and must ever be, a necessary condition for the reproduction of capital.

The workers' individual motivation is even advantageous for the capitalist, because the capitalist does not have to feed and house the worker but paying him a wage is sufficient. The worker is so good at making the best use of the pay that no special incentives are needed to induce the worker to take care of himself. On the contrary, often the capitalists make it difficult for the workers to meet their needs by cutting wages to the bare minimum.

But the capitalist may safely leave the satisfaction of this condition to the laborer's instincts of self-preservation and of propagation. All the capitalist cares for, is to reduce the laborer's individual consumption as far as possible to what is strictly necessary, and he is far away from imitating those brutal South Americans, who force their laborers to take the more substantial, rather than the less substantial, kind of food.⁸

⁸ "The laborers in the mines of S. America, whose daily task (the heaviest perhaps in the world) consists in bringing to the surface on their shoulders a load of metal weighing from 180 to 200 pounds, from a depth of 450 feet, live on broad and beans only; they themselves would

innerhalb oder außerhalb des Arbeitsprozesses vorgeht, ganz wie die Reinigung der Maschine, ob sie während des Arbeitsprozesses oder bestimmter Pausen desselben geschieht.

Es tut nichts zur Sache, daß der Arbeiter seine individuelle Konsumtion sich selbst und nicht dem Kapitalisten zulieb vollzieht. So bleibt der Konsum des Lastviehs nicht minder ein notwendiges Moment des Produktionsprozesses, weil das Vieh selbst genießt, was es frißt. Die beständige Erhaltung und Reproduktion der Arbeiterklasse bleibt beständige Bedingung für die Reproduktion des Kapitals.

Der Kapitalist kann ihre Erfüllung getrost dem Selbsterhaltungs- und Fortpflanzungstrieb der Arbeiter überlassen. Er sorgt nur dafür, ihre individuelle Konsumtion möglichst auf das Notwendige einzuschränken, und ist himmelweit entfernt von jener südamerikanischen Rohheit, die den Arbeiter zwingt, substantiellere statt weniger substantieller Nahrungsmittel einzunehmen.⁸

⁸ „Die Arbeiter in den Bergwerken Südamerikas, deren tägliches Geschäft (das schwerste vielleicht in der Welt) darin besteht, eine Last Erz, im Gewicht von 100 bis 200 Pfund, aus einer Tiefe von 450 Fuß auf ihren Schultern zutage zu fördern, leben nur noch von Brot und Bohnen; sie

prefer the bread alone for food, but their masters, who have found out that the men cannot work so hard on bread, treat them like horses, and compel them to eat beans; beans, however, are relatively much richer in bone-earth (phosphate of lime) than is bread." (Liebig, l.c., vol. 1., p. 194, note.)

Question 968 *In chapter Twenty-Three, Marx argues that the workers' individual consumption benefits the capitalist because it is the reproduction of the capitalist's most indispensable means of production. Does the workers' consumption also benefit the capitalist because this creates a market for the goods the capitalists have to sell?*

The interest of the capitalists to keep wages low is reflected in the language they use. Consumption which exceeds the minimum is called "unproductive consumption."

718:1/o Hence both the capitalist and his ideologist, the political economist, consider that part alone of the laborer's individual consumption to be productive, which is requisite for the perpetuation of the class, and which therefore must take place in order that the capitalist may have labor-power to consume; what the laborer consumes for his own pleasure beyond that part, is unproductive consumption.⁹ If the accumulation of capital were to cause a rise of wages and an increase in the laborer's consumption, unaccompanied by increase in the consumption of labor-power by capital, the additional capital would be consumed unproductively.¹⁰

⁹ James Mill, l.c., p. 238.

¹⁰ "If the price of labor should rise so high that, notwithstanding the increase of capital, no more could be employed, I should say that such increase of capital would be still unproductively consumed." (Ricardo, l.c., p. 163.)

Marx picks up the question whether the consumption of the worker is unproductive and turns it around: it is unproductive for the worker himself!

In reality, the individual consumption of the laborer is unproductive for himself, for it reproduces nothing but the needy individual;

würden das Brot allein zur Nahrung vorziehen, allein ihre Herrn, welche gefunden haben, daß sie mit Brot nicht so stark arbeiten können, behandeln sie wie Pferde und zwingen sie, die Bohnen zu essen; die Bohnen sind aber verhältnismäßig an Knochenerde weit reicher als das Brot. (Liebig, l.c., 1. Theil, p. 194, Note.)

598:1 Daher betrachtet auch der Kapitalist und sein Ideolog, der politische Ökonom, nur den Teil der individuellen Konsumtion des Arbeiters als produktiv, der zur Verewigung der Arbeiterklasse erheischt ist, also in der Tat verzehrt werden muß, damit das Kapital die Arbeitskraft verzehre; was der Arbeiter außerdem zu seinem Vergnügen verzehren mag, ist unproduktive Konsumtion.⁹ Würde die Akkumulation des Kapitals eine Erhöhung des Arbeitslohns und daher Vermehrung der Konsumtionsmittel des Arbeiters verursachen ohne Konsum von mehr Arbeitskraft durch das Kapital, so wäre das zuschüssige Kapital unproduktiv konsumiert.¹⁰

⁹ James Mill, l.c. p. 238 sqq.

¹⁰ „Stiege der Preis der Arbeit so hoch, daß trotz des Zuwachses von Kapital nicht mehr Arbeit angewandt werden könnte, so würde ich sagen, daß solcher Zuwachs von Kapital unproduktiv konsumiert wird.“ (Ricardo, l.c. p. 163.)

In der Tat: die individuelle Konsumtion des Arbeiters ist für ihn selbst unproduktiv, denn sie reproduziert nur das bedürftige Indivi-

it is productive to the capitalist and to the State, since it is the production of the power that creates the wealth of others.¹¹

Interesting that Marx includes the state here too (but he has this from the Malthus quote).

¹¹ “The only productive consumption, properly so called, is the consumption or destruction of wealth” (he alludes to the means of production) “by capitalists with a view to reproduction ... The workman ... is a productive consumer to the person who employs him, and to the State, but not, strictly speaking, to himself.” (Malthus’ “Definitions, etc.”, p. 30.)

duum; sie ist produktiv für den Kapitalisten und den Staat, denn sie ist Produktion der den fremden Reichtum produzierenden Kraft.¹¹

¹¹ „Die einzig produktive Konsumtion im eigentlichen Sinn ist die Konsumtion oder Zerstörung von Reichtum“ (er meint den Verbrauch der Produktionsmittel) „durch Kapitalisten zum Zwecke der Reproduktion ... Der Arbeiter ... ist ein produktiver Konsument für die Person, die ihn anwendet, und für den Staat, aber, genau gesprochen, nicht für sich selbst.“ (Malthus, „Definitions etc.“, p. 30.)

Question 970 *Regarding the question to what extent consumption is productive, Marx says that the individual consumption of the laborer is unproductive for the laborer, but productive for the capitalist and the state. Comment on this.*

3.b. [Individual Consumption Keeps the Worker Hostage of Capital]

First a two-sentence summary of the argument just made:

719:1 From a social point of view, therefore, the working-class, even when not directly engaged in the labor-process, is just as much an appendage of capital as the ordinary instruments of labor. Even its individual consumption is, within certain limits, a mere factor in the process of reproduction of capital.

Next thought: the fact that the reproduction of labor-power takes the form of the worker’s individual consumption is beneficial for capital: it motivates the workers to sell themselves to capital.

That process, however, takes good care to prevent these self-conscious instruments from leaving it in the lurch, for it removes their product, as fast as it is made, from their pole to the opposite pole of capital. Individual consumption provides, on the one hand, the means for their maintenance and

598:2 Von gesellschaftlichem Standpunkt ist also die Arbeiterklasse, auch außerhalb des unmittelbaren Arbeitsprozesses, ebenso sehr Zubehör des Kapitals als das tote Arbeitsinstrument. Selbst ihre individuelle Konsumtion ist innerhalb gewisser Grenzen nur ein Moment des Reproduktionsprozesses des Kapitals.

Der Prozeß aber sorgt dafür, daß diese selbstbewußten Produktionsinstrumente nicht weglafen, indem er ihr Produkt beständig von ihrem Pol zum Gegenpol des Kapitals entfernt. Die individuelle Konsumtion sorgt einerseits für ihre eigne Erhaltung und Reproduktion, andererseits durch Ver-

reproduction; on the other hand, it secures by the annihilation of the necessities of life, the continued re-appearance of the workman in the labor-market. The Roman slave was held by fetters; the wage-laborer is bound to his owner by invisible threads. The appearance of independence is kept up by means of a constant change of employers, and by the fictio juris of a contract.

As a proof that this is an actual concern for the capitalist, Marx cites laws forbidding emigration:

719:2 In former times, capital resorted to legislation, whenever necessary, to enforce its proprietary rights over the free laborer. For instance, down to 1815, the emigration of mechanics employed in machine making was, in England, forbidden, under grievous pains and penalties.

In this case, emigration was not forbidden because of the loss of the workers themselves. There was a surplus of warm bodies. But the capitalists feared the loss of the skills which these particular workers had acquired. Before continuing to discuss these laws, Marx therefore says something about this, it is a new aspect of reproduction:

3.c. [Capital also Benefits from the Skills of the Workers and Considers them as its Property]

719:3 The reproduction of the working-class carries with it the accumulation of skill, that is handed down from one generation to another.¹²

¹² “The only thing, of which one can say, that it is stored up and prepared beforehand, is the skill of the laborer. ... The accumulation and storage of skilled labor, that most important operation, is, as regards the great mass of laborers, accomplished without any capital whatever.” (Th. Hodgskin: “Labor Defended, etc.”, p. 13.)

The increasing skills of the work force are an important but often overlooked aspect of reproduction. Again it is not the workers but the capitalists who benefit from this.

nichtung der Lebensmittel für ihr beständiges Wiedererscheinen auf dem Arbeitsmarkt. Der römische Sklave war durch Ketten, der Lohnarbeiter ist durch unsichtbare Fäden an seinen Eigentümer gebunden. Der Schein seiner Unabhängigkeit wird durch den beständigen Wechsel der individuellen Lohnherrn und die fictio juris des Kontrakts aufrechterhalten.

599:1 Früher machte das Kapital, wo es ihm nötig schien, sein Eigentumsrecht auf den freien Arbeiter durch Zwangsgesetz geltend. So war z.B. die Emigration der Maschinenarbeiter in England bis 1815 bei schwerer Strafe verboten.

599:2/o Die Reproduktion der Arbeiterklasse schließt zugleich die Überlieferung und Häufung des Geschicks von einer Generation zur andren ein.¹²

¹² „Das einzige Ding, wovon man sagen kann, daß es aufgespeichert und vorher präpariert ist, ist das Geschick des Arbeiters ... Die Akkumulation und Aufspeicherung geschickter Arbeit, diese wichtigste Operation wird, was die große Masse der Arbeiter betrifft, ohne irgendwelches Kapital vollbracht.“ (Hodgskin, „Labor Defended etc.“, p. 12, 13.)

To what extent the capitalist reckons the existence of such a skilled class among the factors of production that belong to him by right, and to what extent he actually regards it as the reality of his variable capital, is seen so soon as a crisis threatens him with its loss.

Now Marx brings a lengthy anecdote from the year 1863:

In consequence of the civil war in the United States and of the accompanying cotton famine, the majority of the cotton operatives in Lancashire were, as is well known, thrown out of work. Both from the working-class itself, and from other ranks of society, there arose a cry for State aid, or for voluntary national subscriptions, in order to enable the "superfluous" hands to emigrate to the colonies or to the United States. Thereupon, *The Times* published on the 24th March, 1863, a letter from Edmund Potter, a former president of the Manchester Chamber of Commerce. This letter was rightly called in the House of Commons, the manufacturers' manifesto.¹³ We cull here a few characteristic passages, in which the proprietary rights of capital over labor-power are unblushingly asserted.

¹³ "That letter might be looked upon as the manifesto of the manufacturers." (Ferrand: "Motion on the Cotton Famine." H.o.C., 27th April, 1863.)

"He" (the man out of work) "may be told the supply of cotton-workers is too large ... and ... must ... in fact be reduced by a third, perhaps, and that then there will be a healthy demand for the remaining two-thirds ... Public opinion ... urges emigration ... The master cannot willingly see his labor supply being removed; he may think, and perhaps justly, that it is both wrong and unsound. ... But if the public funds are to be devoted to assist emigration, he has a right to be heard, and perhaps to

Wie sehr der Kapitalist das Dasein einer solchen geschickten Arbeiterklasse unter die ihm zugehörigen Produktionsbedingungen zählt, sie in der Tat als die reale Existenz seines variablen Kapitals betrachtet, zeigt sich, sobald eine Krise deren Verlust androht.

Infolge des Amerikanischen Bürgerkriegs und der ihn begleitenden Baumwollnot wurde bekanntlich die Mehrzahl der Baumwollarbeiter in Lancashire usw. aufs Pflaster geworfen. Aus dem Schoß der Arbeiterklasse selbst, wie anderer Gesellschaftsschichten, erhob sich der Ruf nach Staatsunterstützung oder freiwilliger Nationalkollekte, um die Emigration der „Überflüssigen“ in englische Kolonien oder die Vereinigten Staaten zu ermöglichen. Damals veröffentlichte die „Times“ (24. März 1863) einen Brief von Edmund Potter, früher Präsident der Manchester Handelskammer. Sein Brief ward mit Recht im Unterhaus als „das Manifest der Fabrikanten“ bezeichnet.¹³ Wir geben hier einige charakteristische Stellen, worin der Eigentumstitel des Kapitals auf die Arbeitskraft unverblümt ausgesprochen wird.

¹³ „Dieser Brief kann als das Manifest der Fabrikanten angesehen werden.“ (Ferrand, Motion über den cotton famine, Sitzung des H. o. C. vom 27. April 1863.)

„Den Baumwollarbeitern mag gesagt werden, daß ihre Zufuhr zu groß ist ... sie müsse vielleicht um ein Drittel reduziert werden, und dann würde eine gesunde Nachfrage für die übrigen zwei Drittel eintreten ... Die öffentliche Meinung dringt auf Emigration ... Der Meister“ (d.h. der Baumwollfabrikant) „kann nicht willig seine Arbeitszufuhr entfernt sehn; er mag denken, daß das ebenso ungerecht als unrichtig ist ... Wenn die Emigration aus öffentlichen Fonds unterstützt wird, hat er ein

protest.“

720:1b–722:0 Mr. Potter then shows how useful the cotton trade is, how the "trade has undoubtedly drawn the surplus-population from Ireland and from the agricultural districts," how immense is its extent, how in the year 1860 it yielded 5/13ths of the total English exports, how, after a few years, it will again expand by the extension of the market, particularly of the Indian market, and by calling forth a plentiful supply of cotton at 6d. per lb. He then continues:

"Some time ..., one, two, or three years, it may be, will produce the quantity. ... The question I would put then is this—Is the trade worth retaining? Is it worth while to keep the machinery (he means the living labor machines) in order, and is it not the greatest folly to think of parting with that? I think it is. I allow that the workers are not a property, not the property of Lancashire and the masters; but they are the strength of both; they are the mental and trained power which cannot be replaced for a generation; the mere machinery which they work might much of it be beneficially replaced, nay improved, in a twelvemonth¹⁴ Encourage or allow (!) the working-power to emigrate, and what of the capitalist? ...

This cry from the heart reminds one of Lord Chamberlain Kalb.

¹⁴ It will not be forgotten that this same capital sings quite another song, under ordinary circumstances, when there is a question of reducing wages. Then the masters exclaim with one voice: "The factory operatives should keep in whole-

Recht, Gehör zu verlangen und vielleicht zu protestieren.“

600:2–601:2 Selbiger Potter setzt dann weiter auseinander, wie nützlich die Baumwollindustrie, wie „sie unzweifelhaft die Bevölkerung aus Irland und den englischen Agrikulturdistrikten wegdrainiert hat“, wie ungeheuer ihr Umfang, wie sie im Jahr 1860 5/13 des ganzen englischen Exporthandels lieferte, wie sie nach wenigen Jahren sich wieder ausdehnen werde durch Erweiterung des Markts, besonders Indiens, und durch Erzwingung hinreichender „Baumwollzufuhr, zu 6 d. das Pfund“. Er fährt dann fort:

„Zeit—ein, zwei, drei Jahre vielleicht—wird die nötige Quantität produzieren ... Ich möchte dann die Frage stellen, ist diese Industrie wert, sie festzuhalten, ist es der Mühe wert, die Maschinerie“ (nämlich die lebendigen Arbeitsmaschinen) „in Ordnung zu halten, und ist es nicht die größte Narrheit, daran zu denken, sie aufzugeben! Ich glaube das. Ich will zugeben, daß die Arbeiter nicht Eigentum sind (I allow that the workers are not a property), nicht das Eigentum Lancashires und der Meister; aber sie sind die Stärke beider; sie sind die geistige und geschulte Kraft, die in einer Generation nicht ersetzt werden kann; die andere Maschinerie dagegen, woran sie arbeiten (the mere machinery which they work), könnte zum großen Teil mit Vorteil ersetzt und verbessert werden in zwölf Monaten.¹⁴ Ermuntert oder erlaubt (!) die Emigration der Arbeitskraft, und was wird aus dem Kapitalisten? (Encourage or allow the working power to emigrate, and what of the capitalist?)“

Dieser Herzensstoß erinnert an Hofmarschall Kalb.

¹⁴ Man erinnert sich, daß dasselbe Kapital aus einem andren Loch pfeift unter gewöhnlichen Umständen, wenn es gilt, den Arbeitslohn herabzusetzen. Dann erklären „die Meister“ aus einem Munde (sieh Vierter Abschnitt, Note 188, S. 389

some remembrance the fact that theirs is really a low species of skilled labor, and that there is none which is more easily acquired, or of its quality more amply remunerated, or which, by a short training of the least expert, can be more quickly, as well as abundantly, acquired ... The master's machinery" (which we now learn can be replaced with advantage in 12 months,) "really plays a far more important part in the business of production than the labor and skill of the operative" (who cannot now be replaced under 30 years), "which six months' education can reach, and a common laborer can learn." (See ante, p. 423.)

[548:2/00]: „Fabrikarbeiter sollten in heilsamer Erinnerung halten, daß ihre Arbeit in der Tat eine sehr niedrige Sorte geschickter Arbeit ist, daß keine leichter aneignbar und in Anbetracht ihrer Qualität besser belohnt ist, daß keine durch kurze Unterweisung des mindest Erfahrenen in so kurzer Zeit und in solchem Überfluß zugeführt werden kann. Des Meisters Maschinerie“ (die, wie wir jetzt hören, in 12 Monaten mit Vorteil und verbessert ersetzt werden kann) „spielt in der Tat eine viel wichtigere Rolle in dem Geschäft der Produktion als die Arbeit und das Geschick des Arbeiters“ (die jetzt in 30 Jahren nicht ersetzbar sind), „die eine Erziehung von 6 Monaten lehren und jeder Bauernknecht lernen kann.“

After this footnote, the Potter quote in the main text continues:

Take away the cream of the workers, and fixed capital will depreciate in a great degree, and the floating will not subject itself to a struggle with the short supply of inferior labor ... We are told the workers wish it" (emigration). "Very natural it is that they should do so ... Reduce, compress the cotton trade by taking away its working power and reducing their wages expenditure, say one-fifth, or five millions, and what then would happen to the class above, the small shopkeepers; and what of the rents, the cottage rents. ... Trace out the effects upwards to the small farmer, the better householder, and ... the landowner, and say if there could be any suggestion more suicidal to all classes of the country than by enfeebling a nation by exporting the best of its manufacturing population, and destroying the value of some of its most productive capital and enrichment ... I advise a loan (of five or six millions sterling), ... extending it may be over two or three years, administered by special commissioners added to the Boards of Guardians in the cotton districts, under special legislative regulations, enforcing some occupation or labor, as a means of keeping up at least the moral standard of the recipients of the loan. ... can anything be worse for landowners or masters than parting with the best of the workers, and de-

... Nehmt den Rahm der Arbeiter weg, und das fixe Kapital wird in hohem Grade entwertet und das zirkulierende Kapital wird sich nicht dem Kampf mit schmaler Zufuhr einer niedrigeren Sorte von Arbeit aussetzen ... Man sagt uns, die Arbeiter selbst wünschen die Emigration. Es ist sehr natürlich, daß sie das tun ... Reduziert, komprimiert das Baumwollgeschäft durch Wegnahme seiner Arbeitskräfte (by taking away its working power), durch Verminderung ihrer Lohnverausgabung sage um 1/3 oder 5 Millionen, und was wird dann aus der nächsten Klasse über ihnen, den Kleinkrämern? Was aus den Grundrenten, was aus der Miete der cottages? ... was aus dem kleinen Pächter, dem besseren Hausbesitzer und dem Grundeigentümer? Und sagt nun, ob irgendein Plan für alle Klassen des Landes selbstmörderischer sein kann als dieser, die Nation zu schwächen durch den Export ihrer besten Fabrikarbeiter und die Entwertung eines Teils ihres produktivsten Kapitals und Reichturns?" „Ich rate zu einer Anleihe von 5 bis 6 Millionen, über 2 oder 3 Jahre verteilt, administriert durch Spezialkommissare, beigeordnet den Armenverwaltungen in den Baumwolldistrikten, unter speziellen gesetzlichen Regulationen, mit gewisser Zwangsarbeit, um die moralische Valuta der Almosen-

moralising and disappointing the rest by an extended depletive emigration, a depletion of capital and value in an entire province?"

722:1–723:0 Potter, the chosen mouthpiece of the manufacturers, distinguishes two sorts of "machinery," each of which belongs to the capitalist, and of which one stands in his factory, the other at night-time and on Sundays is housed outside the factory, in cottages. The one is inanimate, the other living. The inanimate machinery not only wears out and depreciates from day to day, but a great part of it becomes so quickly superannuated, by constant technical progress, that it can be replaced with advantage by new machinery after a few months. The living machinery, on the contrary gets better the longer it lasts, and in proportion as the skill, handed from one generation to another, accumulates. *The Times* answered the cotton lord as follows:

"Mr. Edmund Potter is so impressed with the exceptional and supreme importance of the cotton masters that, in order to preserve this class and perpetuate their profession, he would keep half a million of the laboring class confined in a great moral workhouse against their will. 'Is the trade worth retaining?' asks Mr. Potter. 'Certainly by all honest means it is,' we answer. 'Is it worth while keeping the machinery in order?' again asks Mr. Potter. Here we hesitate. By the 'machinery' Mr. Potter means the human machinery, for he goes on to protest that he does not mean to use them as an absolute property. We must confess that we do not think it 'worth while,' or even possible, to keep the human machinery in order-that

empfänger aufrechtzuerhalten... Kann es irgend etwas Schlimmeres geben für Grundeigentümer oder Meister (can anything be worse for landowners or masters), als ihre besten Arbeiter aufzugeben und die übrigbleibenden zu demoralisieren und zu verstimmen durch eine ausgedehnte entleerende Emigration und Entleerung von Wert und Kapital in einer ganzen Provinz?"

601:3–602:0 Potter, das auserwählte Organ der Baumwollfabrikanten, unterscheidet doppelte „Maschinerie“, deren jede dem Kapitalisten gehört und wovon die eine in seiner Fabrik steht, die andre des Nachts und Sonntags auswärtig in cottages haust. Die eine ist tot, die andre lebendig. Die tote Maschinerie verschlechtert und entwertet sich nicht nur jeden Tag, sondern von ihrer existierenden Masse veraltet ein großer Teil durch den steten technischen Fortschritt beständig so sehr, daß sie vorteilhaft und in wenigen Monaten durch neuere Maschinerie ersetzbar. Die lebendige Maschinerie verbessert sich umgekehrt, je länger sie währt, je mehr sie das Geschick von Generationen in sich aufhäuft. Die „Times“ antwortete dem Fabrikmagnaten u.a.:

„Herr E. Potter ist so impressioniert von der außerordentlichen und absoluten Wichtigkeit der Baumwollmeister, daß er, um diese Klasse zu erhalten und ihr Metier zu verewigen, eine halbe Million der Arbeiterklasse wider ihren Willen in ein großes moralisches Workhouse einsperren will. Ist diese Industrie wert, sie festzuhalten? fragt Herr Potter. Sicher, durch alle ehrbaren Mittel, antworten wir. Ist es der Mühe wert, die Maschinerie in Ordnung zu halten? fragt wieder Herr Potter. Hier stutzen wir. Unter der Maschinerie versteht Herr Potter die menschliche Maschinerie, denn er beteuert, daß er sie nicht als absolutes Eigentum zu behandeln vorhat. Wir müssen gestehn, wir halten es nicht ‚der Mühe wert‘ oder selbst

is to shut it up and keep it oiled till it is wanted. Human machinery will rust under inaction, oil and rub it as you may. Moreover, the human machinery will, as we have just seen, get the steam up of its own accord, and burst or run amuck in our great towns. it might, as Mr. Potter says, require some time to reproduce the workers, but, having machinists and capitalists at hand, we could always find thrifty, hard, industrious men wherewith to improvise more master-manufacturers than we can ever want. Mr. Potter talks of the trade reviving 'in one, two, or three years,' and he asks us not 'to encourage or allow (!) the working power to emigrate.'¹⁵ He says that it is very natural the workers should wish to emigrate; but he thinks that in spite of their desire, the nation ought to keep this half million of workers with their 700,000 dependents, shut up in the cotton districts; and as a necessary consequence, he must of course think that the nation ought to keep down their discontent by force, and sustain them by alms—and upon the chance that the cotton masters may some day want them. . . . The time is come when the great public opinion of these islands must operate to save this 'working power' from those who would deal with it as they would deal with iron, and coal, and cotton."

¹⁵ *Times*, March 24 1863.

Question 973 Which are the similarities and differences between the machinery owned by the capitalists and the workers employed by the capitalists?

Question 974 Why should one not treat the workers like "iron, coal and cotton"? Marx reports here about a debate in which both sides used metaphorical expressions. Give an

für möglich, die menschliche Maschinerie in Ordnung zu halten, d.h. sie einzusperrn und einzuölen, bis man ihrer bedarf. Menschliche Maschinerie hat die Eigenschaft, während der Untätigkeit zu verrosten, ihr mögt noch so viel dran ölen oder reiben. Zudem ist menschliche Maschinerie, wie der Augenschein uns eben lehrt, imstand, von eignen Stücken den Dampf anzulassen und zu platzen oder einen Veitstanz in unsren großen Städten zu tolln. Es mag, wie Herr Potter sagt, längere Zeit zur Reproduktion der Arbeiter erheischt sein, aber mit Maschinisten und Geld zur Hand werden wir stets betriebsame, harte, industrielle Männer finden, um daraus mehr Fabrikmeister zu fabrizieren, als wir je verbrauchen können . . . Herr Potter plaudert von einer Wiederbelebung der Industrie in 1, 2, 3 Jahren und verlangt von uns, die Emigration der Arbeitskraft nicht zu ermuntern oder nicht zu erlauben! Er sagt, es sei natürlich, daß die Arbeiter zu emigrieren wünschen, aber er meint, daß die Nation diese halbe Million Arbeiter mit den 700 000, die an ihnen hängen, ihrem Verlangen zum Trotz in die Baumwolldistrikte einsperren und, eine notwendige Konsequenz, ihr Mißvergnügen durch Gewalt niederschlagen und sie selbst durch Almosen fristen muß, alles das auf die Chance hin, daß die Baumwollmeister ihrer an einem beliebigen Tag wieder bedürfen mögen . . . Die Zeit ist gekommen, wo die große öffentliche Meinung dieser Eilande etwas tun muß, um 'diese Arbeitskraft' vor denen zu retten, die sie behandeln wollen, wie sie Kohle, Eisen und Baumwolle behandeln (to save this 'working power' from those who would deal with it as they deal with iron, coal and cotton)."¹⁵

¹⁵ „Times“, 24. March 1863.

clear and explicit exposition, without metaphors, of the two sides of the debate. Also indicate which side won.

723:1 The *Times*' article was only a jeu d'esprit. The "great public opinion" was, in fact, of Mr. Potter's opinion, that the factory operatives are part of the movable fittings of a factory. Their emigration was prevented. They were locked up in that "moral workhouse," the cotton districts, and they form, as before, "the strength" of the cotton manufacturers of Lancashire.

¹⁶ Parliament did not vote a single farthing in aid of emigration, but simply passed some Acts empowering the municipal corporations to keep the operatives in a half-starved state, i.e., to exploit them at less than the normal wages. On the other hand, when 3 years later, the cattle disease broke out, Parliament broke wildly through its usages and voted, straight off, millions for indemnifying the millionaire landlords, whose farmers in any event came off without loss, owing to the rise in the price of meat. The bull-like bellow of the landed proprietors at the opening of Parliament, in 1866, showed that a man can worship the cow Sabala without being a Hindu, and can change himself into an ox without being a Jupiter.

3.d. [Result: A Society Divided into Classes]

The concluding passage of the chapter begins with a summary of the arguments so far:

723:2/o Capitalist production, therefore, just by the fact that it is happening, reproduces the separation between labor-power and the means of labor. It thereby reproduces and perpetuates the condition for exploiting the laborer. It incessantly forces him to sell his labor-power in order to live, and enables the capitalist to purchase labor-power in order that he may enrich himself.¹⁷

602:1 Der „Times“-Artikel war nur ein jeu d'esprit. Die „große öffentliche Meinung“ war in der Tat der Meinung des Herrn Potter, daß die Fabrikarbeiter Mobiliarzubehör der Fabriken. Ihre Emigration wurde verhindert.¹⁶ Man sperrte sie in das „moralische Workhouse“ der Baumwolldistrikte, und sie bilden nach wie vor „die Stärke (the strength) der Baumwollmeister von Lancashire“.

¹⁶ Das Parlament votierte keinen Farthing für Emigration, sondern nur Gesetze, welche die Munizipalitäten befähigten, die Arbeiter zwischen Leben und Sterben zu halten oder sie zu exploitierten, ohne Zahlung von Normallöhnen. Als dagegen drei Jahre später die Rinderseuche ausbrach, durchbrach das Parlament wild sogar die parlamentarische Etikette und votierte im Umsehn Millionen zur Schadloshaltung der Millionäre von Landlords, deren Pächter sich ohnehin durch Steigerung der Fleischpreise schadlos hielten. Das bestiale Gebrüll der Grundeigentümer bei Eröffnung des Parlaments von 1866 bewies, daß man nicht Hindu zu sein braucht, um die Kuh Sabala anzubeten, noch Jupiter, um sich in einen Ochsen zu verwandeln.

603:1 Der kapitalistische Produktionsprozeß reproduziert also durch seinen eignen Vorgang die Scheidung zwischen Arbeitskraft und Arbeitsbedingungen. Er reproduziert und verewigt damit die Exploitationsbedingungen des Arbeiters. Er zwingt beständig den Arbeiter zum Verkauf seiner Arbeitskraft, um zu leben, und befähigt beständig den Kapitalisten zu ihrem Kauf, um sich zu bereichern.¹⁷

¹⁷ “L’ouvrier demandait de la subsistance pour vivre, le chef demandait du travail pour gagner.” (Sismondi, l.c., p. 91.)

Question 975 *Explain how capitalist production, just by the fact that it is happening, reproduces the separation between the worker and the means of production.*

↓ These individual mechanisms conspire to create a new reality, namely, a society divided into classes: It is no longer a mere accident, that capitalist and laborer confront each other in the market as buyer and seller. It is the process itself that incessantly hurls back the laborer on to the market as a vendor of his labor-power, and that incessantly converts his own product into a means by which another man can purchase him. In reality, the laborer belongs to capital before he has sold himself to capital. His economic bondage¹⁸ is both brought about and concealed by the periodic sale of himself, by his change of masters, and by the oscillations in the market-price of labor-power.¹⁹

¹⁸ A boorishly clumsy form of this bondage exists in the county of Durham. This is one of the few counties, in which circumstances do not secure to the farmer undisputed proprietary rights over the agricultural laborer. The mining industry allows the latter some choice. In this county, the farmer, contrary to the custom elsewhere, rents only such farms as have on them laborers’ cottages. The rent of the cottage is a part of the wages. These cottages are known as “hinds’ houses.” They are let to the laborers in consideration of certain feudal services, under a contract called “bondage,” which, amongst other things, binds the laborer, during the time he is employed elsewhere, to leave some one, say his daughter, etc., to supply his place. The laborer himself is called a “bondsmen.” The relationship here set up also shows how individual consumption by the laborer becomes consumption on behalf of

¹⁷ „Der Arbeiter forderte Unterhaltsmittel, um zu leben, der Chef forderte Arbeit, um zu verdienen.“ (Sismondi, l.c. p. 91.)

Es ist nicht mehr der Zufall, welcher Kapitalist und Arbeiter als Käufer und Verkäufer einander auf dem Warenmarkt gegenüberstellt. Es ist die Zwickmühle des Prozesses selbst, die den einen stets als Verkäufer seiner Arbeitskraft auf den Warenmarkt zurückschleudert und sein eignes Produkt stets in das Kaufmittel des andren verwandelt. In der Tat gehört der Arbeiter dem Kapital, bevor er sich dem Kapitalisten verkauft. Seine ökonomische Hörigkeit¹⁸ ist zugleich vermittelt und zugleich versteckt durch die periodische Erneuerung seines Selbstverkaufs, den Wechsel seiner individuellen Lohnherrn und die Oszillation im Marktpreise der Arbeit.¹⁹

¹⁸ Eine bäuerlich plumpe Form dieser Hörigkeit existiert in der Grafschaft Durham. Es ist dies eine der wenigen Grafschaften, worin die Verhältnisse dem Pächter nicht unbestrittenen Eigentumstitel auf die Ackerbautagelöhner sichern. Die Bergwerkindustrie erlaubt letzteren eine Wahl. Der Pächter, im Gegensatz zur Regel, übernimmt hier daher nur Pacht von Ländereien, worauf sich cottages für die Arbeiter befinden. Der Mietpreis der cottage bildet Teil des Arbeitslohns. Diese cottages heißen „hind’s houses“. Sie werden den Arbeitern unter gewissen Feudalverpflichtungen vermietet unter einem Vertrag, der „bondage“ (Hörigkeit) heißt und den Arbeiter z.B. bindet für die Zeit, während deren er anderswo beschäftigt ist, seine Tochter usw. zu stellen. Der Arbeiter selbst heißt bondsmen, Höriger. Dies Verhältnis zeigt auch die individuelle Konsumtion des Arbeiters als Konsumtion

capital—or productive consumption—from quite a new point of view: “It is curious to observe that the very dung of the hind and bondsmen is the requisite of the calculating lord . . . and the lord will allow no privy but his own to exist in the neighbourhood, and will rather give a bit of manure here and there for a garden than bate any part of his seigniorial right.” (“Public Health, Report VII., 1864,” p. 188.)

¹⁹ It will not be forgotten, that, with respect to the labor of children, etc., even the formality of a voluntary sale disappears.

Question 976 *In which sense is the working class the property of the capitalists even before they work for the capitalists? Which formal aspects of the capital relation conceal this economic bondage? Which examples does Marx use to show that the capitalists very openly consider the workers their property?*

↓ Since this division of society into classes is the result of the continuous repetition of the capitalist production process itself, Marx coins the phrase that the capitalist production process produces the capital relation.

724:1 Capitalist production, therefore, under its aspect of a continuous connected process, of a process of reproduction, produces not only commodities, not only surplus-value, but it also produces and reproduces the capitalist relation; on the one side the capitalist, on the other the wage-laborer.²⁰

↓ In a more informal setting, Marx has summarized this already in 1849 with the words: the workers produce capital.

²⁰ “Capital pre-supposes wage-labor, and wage-labor pre-supposes capital. One is a necessary condition to the existence of the other; they mutually call each other into existence. Does an operative in a cotton-factory produce nothing but cotton goods? No, he produces capital. He produces values that give fresh command over his labor, and that, by means of such command, create fresh values.” (Karl Marx: “Lohnarbeit und Kapital,” in the *Neue Rheinische Zeitung*: No. 266, 7th April, 1849.) The articles published under the above title in the *N. Rh. Z.* are parts of some lectures given by me on that subject, in 1847, in the German “Arbeiter-Verein” at Brus-

für das Kapital oder produktive Konsumtion—von einer ganz neuen Seite: „Es ist merkwürdig zu beobachten, wie selbst der Kot dieses bondsmen zu den Sporteln an seinen kalkulierenden Gebieter zählt . . . Der Pächter erlaubt in der ganzen Nachbarschaft keinen Abtritt außer seinem eignen und duldet in dieser Beziehung keinen Abschlag von seinen Suzerainrechten.“ („Public Health. VII. Rep. 1864“, p. 188.)

¹⁹ Man erinnert sich, daß bei der Arbeit der Kinder usw. selbst die Formalität des Selbstverkaufs verschwindet.

604:1 Der kapitalistische Produktionsprozeß, im Zusammenhang betrachtet oder als Reproduktionsprozeß, produziert also nicht nur Ware, nicht nur Mehrwert, er produziert und reproduziert das Kapitalverhältnis selbst, auf der einen Seite den Kapitalisten, auf der andren den Lohnarbeiter.²⁰

²⁰ „Das Kapital setzt die Lohnarbeit, die Lohnarbeit setzt das Kapital voraus. Sie bedingen sich wechselseitig, sie bringen sich wechselseitig hervor. Ein Arbeiter in einer Baumwollfabrik, produziert er nur Baumwollstoffe? Nein, er produziert Kapital. Er produziert Werte, die von neuem dazu dienen, seine Arbeit zu kommandieren und vermittelt derselben neue Werte zu schaffen.“ (Karl Marx, „Lohnarbeit und Kapital“ in „N[eue] Rh[einische] Z[eitung]“ Nr. 266, 7. April 1849.) Die unter diesem Titel in der „N.Rh.Z.“ veröffentlichten Artikel sind Bruchstücke der Vorlesungen, die ich über jenes Thema 1847 im deutschen Arbeiterverein in

Term Paper Topic 978 *Essay about Chapter Thirty-Two: Historical Tendency of Capitalist Accumulation*

Term Paper Topic 979 *Essay about Chapter Thirty-Three: Modern Theory of Colonization*

Term Paper Topic 980 *Essay about Marx's Use of the Word "Abstinence" in Chapters Twenty-Four and Thirty-Three*

Term Paper Topic 981 *Enumerate as many features of capitalism as you can find where the system hides exploitation to the people living in the system. Then try to explain why the system hides exploitation in so many different ways. There are several possible explanations, for instance*

(a) *capitalism happens to have several features which hide exploitation just by accident.*

(b) *capitalism has systemic features (for instance the fetish-like character of the commodity, i.e., the fact that individuals do not see nor control the true character of their own social relations) which cause it to systematically hide exploitation.*

(c) *if capitalism would not hide exploitation so well, it could not exist. After the individuals have achieved personal freedom to the extent they did in modern times, only a system of exploitation can survive which hides exploitation.*

(d) *both exploiters and those exploited are interested in hiding exploitation to themselves and others; therefore the agents in a capitalist system do things deliberately which hide exploitation.*

Are there other explanations?

24. Transformation of Surplus-Value into Capital

Simple reproduction, as discussed in chapter Twenty-Three, is not an option for the capitalist. The laws of capitalism require growth; they do not permit a steady state. Nevertheless Marx discussed reproduction (without growth) first, because reproduction is a systemic necessity for any viable economic system, whether capitalist or not. Any economic organization of production must be such that it maintains and reproduces its structure over time. For capitalism, an additional requirement exists, which is often in contradiction with the requirement for reproduction, namely, this reproduction must be *expanded* reproduction, i.e., "growth."

1. The Capitalist Production Process on an Expanded Scale. The Inversion by which the Property Laws of Commodity Production become Laws of Capitalist Appropriation

"Umschlag" is a phase transition, the crossing of a tipping point. Ben Fowkes translates it as

"inversion" and Moore-Aveling as "transition." The above translation "inversion by which ... becomes"

tries to make it clearer than Fowkes that this inversion comes from the inside, not the outside.

725:1 Earlier we investigated how surplus-value arises from capital; now we have to see how capital arises from surplus-value. The application of surplus-value as capital, its reconversion into capital, is called accumulation of capital.²¹

²¹ "Accumulation of capital: the employment of a portion of revenue as capital." (Malthus: "Definitions, etc.," ed. Cazenove, p. 11.) "Conversion of revenue into capital." (Malthus: "Princ. of Pol. Econ." 2nd Ed., Lond. 1836, p. 320.)

605:1 Früher hatten wir zu betrachten, wie der Mehrwert aus dem Kapital, jetzt wie das Kapital aus dem Mehrwert entspringt. Anwendung von Mehrwert als Kapital oder Rückverwandlung von Mehrwert in Kapital heißt Akkumulation des Kapitals.²¹

²¹ „Akkumulation des Kapitals: die Verwendung eines Teiles der Revenue als Kapital.“ (Malthus, „Definitions etc.“, ed. Cazenove, p. 11.) „Verwandlung von Revenue in Kapital.“ (Malthus, „Princ. of Pol. Econ.“, 2nd ed., Lond. 1836, p. 320.)

This introductory paragraph defines the word “accumulation.” At the same time, it defines the place of chapter Twenty-Four in the logical development of *Capital*. It is not enough to investigate how surplus-value emanates from capital; with this, the process is not yet completed. We also have to understand the converse, how capital arises from surplus-value. This closes the circle: capital arising from capital.

Question 982 *How does it follow from the general laws of capitalism that capital must accumulate (i.e. the capitalists cannot just consume the surplus-product but must convert part of it into additional capital)? (Do not explain this with the competition between the capitalists, such as: if one capitalist does not accumulate, the others will outproduce him. This only says that each capitalist must accumulate because the others do, but does not explain why they all do it. “Competition makes the immanent laws of capitalist production to be felt by each individual capitalist, as external coercive laws” [this chapter, p. 739:1]. Go back to chapter Four for an explanation why accumulation is one of the immanent laws of capitalist production.)*

1.a. [Expanded Reproduction]

The next step in the argument may seem surprising. Marx first looks at the conversion of surplus-value into capital from the point of view of an *individual* capitalist, a yarn spinner. This does not mean that Marx tries to reduce the social process of the accumulation of capital to individual actions and motivations. His look at the individual yarn spinnery is only the prelude to an exploration, in a second step, of the social conditions that must hold for this activity by the individual capitalist to be possible.

725:2 First let us consider this transaction from the standpoint of the individual capitalist. Suppose a spinner to have advanced a capital of £10,000, of which four-fifths (£8,000) are laid out in cotton, machinery, etc., and one-fifth (£2,000) in wages. Let him produce 240,000 lbs. of yarn annually, having a value of £12,000. The rate of surplus-value being 100%, the surplus-value lies in the surplus or net product of 40,000 lbs. of yarn, one-sixth of the gross product, with a value of £2,000 which will be realised by a sale.

The annual product of £12,000 splits up into £2,000 is £2,000. We can neither see nor smell in this sum of money a trace of surplus-value. When we know that a given value is surplus-value, we know how its

605:2 Betrachten wir diesen Vorgang zunächst vom Standpunkt des einzelnen Kapitalisten. Ein Spinner z.B. habe ein Kapital von 10 000 Pfd.St. vorgeschossen, wovon vier Fünftel in Baumwolle, Maschinen etc., das letzte Fünftel in Arbeitslohn. Er produziere jährlich 240 000 Pfd. Garn zum Wert von 12 000 Pfd.St. Bei einer Rate des Mehrwerts von 100% steckt der Mehrwert im Mehrprodukt oder Nettoprodukt von 40 000 Pfd. Garn, einem Sechstel des Bruttoprodukts, zum Wert von 2000 Pfd. Sterling, den der Verkauf realisieren wird.

£8000c + £2000v + £2000s.
Eine Wertsumme von 2000 Pfd.St. ist eine Wertsumme von 2000 Pfd.St. Man riecht und sieht diesem Gelde nicht an, daß es Mehrwert ist. Der Charakter eines Werts

owner came by it; but that does not alter the nature either of the value or of the money.

als Mehrwert zeigt, wie er zu seinem Eigener kam, ändert aber nichts an der Natur des Werts oder des Geldes.

The money representing surplus-value looks, feels, and smells exactly the same as the money representing the backflow of the original capital. If the capitalist wants to convert the surplus-value into capital, he will therefore do the same with the money representing surplus-value as he did with the original money. (This argument is related to 252:2/o.)

725:3/o In order to convert this additional sum of £2,000 into capital, the master-spinner will, all circumstances remaining as before, advance four-fifths of it (£1,600) in the purchase of cotton, etc., and one-fifth (£400) in the purchase of additional spinners, who will find in the market the necessities of life whose value the master has advanced to them. Then the new capital of £2,000 functions in the spinning-mill, and brings in, in its turn, a surplus-value of £400.

605:3/o Um die neu hinzugekommene Summe von 2000 Pfd.St. in Kapital zu verwandeln, wird also der Spinner, alle andern Umstände gleichbleibend, vier Fünftel davon vorschießen im Ankauf von Baumwolle usw. und ein Fünftel im Ankauf neuer Spinnerarbeiter, die auf dem Markte die Lebensmittel finden werden, deren Wert er ihnen vorgeschossen hat. Dann fungiert das neue Kapital von 2000 Pfd.St. in der Spinnerei und bringt seinerseits einen Mehrwert von 400 Pfd. ein.

Second year: old capital as in first year: £12,000 = 8000c + 2000v + 2000s. Surplus-value: £2,400 = 1600c + 400v + 400s. Etc. We all have enough experience with market economies to know that this is how it's being done in the practical “business as usual.”

For the individual capitalist, accumulation is therefore easy: he treats the surplus-value the same way as he treats the backflow of his constant and variable capital. If Marx's usual assumption holds that demand equals supply, then the additional means of production and the means of consumption for the additional workers are readily available on the market. The individual capitalist will therefore be vindicated in his practical activity, and may not even be aware that very specific social conditions are necessary for his actions. However the fulfilment of these conditions is by no means a matter of course. To develop the necessary conditions so that the individual capitalist's assumptions can be ratified by the market, Marx first shows that there is a difference between capital value and surplus-value after all: The capital value returns to its original form, money, and therefore is simply repeating its circuit, while the original form of the surplus-value is the surplus-product, not money. This is a point Marx discusses also in volume 2, 167:5/o.

726:1 The capital-value was originally advanced in the money-form. By contrast, the surplus-value exists, originally, as the value of a definite portion of the gross product.

606:1 Der Kapitalwert war ursprünglich vorgeschossen in Geldform; der Mehrwert dagegen existiert von vornherein als Wert eines bestimmten Teils des Bruttoprodukts.

This is a qualification of the last sentence of 725:2, which said that from the individual point of view there was no difference. A closer look shows that there is a difference after all.

When this gross product is sold, converted into money, the capital-value regains its original form, but the surplus-value assumes a form of existence different from its original one.

This difference pertains only to the first transaction made by the surplus-value. Afterwards, the transactions on the surface of the economy look exactly alike:

From this moment on, however, the capital-value and the surplus-value are both sums of money, and their reconversion into capital takes place in precisely the same way. The one, as well as the other, is laid out by the capitalist in the purchase of commodities that place him in a position to begin afresh the fabrication of his goods, the only difference being that this time it is on an extended scale.

The surface transactions can only be this smooth if the composition of the overall social product is just right.

But in order to be able to buy those commodities, he must find them ready in the market.

Although the individual capitalist perceives as his or her biggest problem the sale of the surplus-product, Marx already looks at the next stage and asks: after having sold his product, will the capitalist find the ingredients for his future expanded production process on the market? ↓ He uses the sale of the yarn spinnery's products only as a transition to the next step:

726:2 His own yarns circulate only because he brings his annual product to market, as all other capitalists likewise do with their commodities.

After this transitional sentence, the next step is: Whether these things are available on the market is not decided on the market but in production. (Of course this is only true for those ingredient of production produced by other capitalists. He will talk about the labor-power afterwards.)

But these commodities, before coming to market, were part of the general annual product, part of the total mass of objects of every kind, into which the sum of the individual capitals, *i.e.*, the total capital of society, had been converted in the course of

Wird dieses verkauft, in Geld verwandelt, so gewinnt der Kapitalwert seine ursprüngliche Form wieder, aber der Mehrwert verwandelt seine ursprüngliche Daseinsweise.

Von diesem Augenblick an sind jedoch Kapitalwert und Mehrwert beides Geldsummen, und ihre Wiederverwandlung in Kapital vollzieht sich auf ganz dieselbe Weise. Die eine wie die andre legt der Kapitalist an im Ankauf der Waren, die ihn instand setzen, die Verfertigung seines Artikels von neuem zu beginnen, und zwar diesmal auf erweiterter Stufenleiter.

Um aber diese Waren zu kaufen, muß er sie auf dem Markte vorfinden.

606:2 Seine eignen Garne zirkulieren nur, weil er sein Jahresprodukt auf den Markt bringt, wie das alle andern Kapitalisten mit ihren Waren ebenfalls tun.

Aber ehe sie auf den Markt kamen, hatten sie sich schon befunden im jährlichen Produktionsfonds, d.h. der Gesamtmasse der Gegenstände aller Art, worin die Gesamtsumme der Einzelkapitale oder das gesellschaftliche Gesamtkapital im Laufe des Jah-

the year, and of which each capitalist had in hand only an aliquot part.

↓ Now an interesting formulation: the role of the market is to move goods around, the market cannot increase or decrease the amount of use-values available:

The transactions in the market effectuate only the interchange of the individual components of this annual product, transfer them from one hand to another, but can neither augment the total annual production, nor alter the nature of the objects produced. Hence the use, that can be made of the total annual product, depends entirely upon its own composition, but in no way upon circulation.

I.e., in order to see why the market transactions, which the capitalist enters almost as a matter of course, can indeed be completed successfully, we must look beyond the market, at the production underneath.

Now Marx develops the conditions which the annual product must satisfy. How must the annual product be composed for accumulation to be possible?

726:3 The annual production must in the first place furnish all those objects (use-values) from which the material components of capital, used up in the course of the year, have to be replaced.

It is therefore obvious in which natural form the constant and variable capital must exist. But what about the surplus-value?

Deducting these there remains the net or surplus-product, in which the surplus-value lies. And of what does this surplus-product consist?

Now Marx starts an elimination argument, he goes through all the possibilities for this part of the value:

Only of things destined to satisfy the wants and desires of the capitalist class, things which, consequently, enter into the consumption-fund of the capitalists? Were that the case, the cup of surplus-value would be drained to the very dregs, and nothing but simple reproduction would ever take place.

res sich verwandelt und wovon jeder Einzelkapitalist nur einen aliquoten Teil in Händen hat.

Die Vorgänge auf dem Markt bewerkstelligen nur den Umsatz der einzelnen Bestandteile der Jahresproduktion, schicken sie von einer Hand in die andre, aber sie können weder die Gesamt-Jahresproduktion vergrößern noch die Natur der produzierten Gegenstände ändern. Welcher Gebrauch also von dem jährlichen Gesamtprodukt gemacht werden kann, das hängt ab von seiner eignen Zusammensetzung, keineswegs aber von der Zirkulation.

606:3 Zunächst muß die Jahresproduktion alle die Gegenstände (Gebrauchswerte) liefern, aus denen die im Lauf des Jahres verbrauchten sachlichen Bestandteile des Kapitals zu ersetzen sind.

Nach Abzug dieser bleibt das Netto- oder Mehrprodukt, worin der Mehrwert steckt. Und woraus besteht dies Mehrprodukt?

Vielleicht in Dingen, bestimmt zur Befriedigung der Bedürfnisse und Gelüste der Kapitalistenklasse, die also in ihren Konsumtionsfonds eingehen? Wäre das alles, so würde der Mehrwert verbubelt bis auf die Hefen, und es fände bloß einfache Reproduktion statt.

Since we know that accumulation indeed takes place, not all of the surplus-product can enter capitalist consumption:

726:4/o To accumulate it is necessary to convert a portion of the surplus-product into capital. But we cannot, except by a miracle, convert into capital anything but such articles as can be employed in the labor-process (*i.e.*, means of production), and such further articles as are suitable for the sustenance of the laborer (*i.e.*, means of subsistence).

Now we know which form the surplus-product is taking (and this must have happened before the market transactions take place):

Consequently, a part of the annual surplus-labor must have been applied to the production of additional means of production and subsistence, over and above the quantity of these things required to replace the capital advanced. In one word, surplus-value is convertible into capital solely because the surplus-product, whose value it is, already comprises the material elements of new capital.^{21a}

^{21a} We here take no account of export trade, by means of which a nation can change articles of luxury either into means of production or means of subsistence, and *vice versa*.⁷ In order to examine the object of our investigation in its integrity, free from all disturbing subsidiary circumstances, we must treat the whole world as one nation, and assume that capitalist production is everywhere established and has possessed itself of every branch of industry.

↑ Prior production must have had the right proportions to ensure this. Marx makes here the assumption that it did. This is similar to 711:2. ↓ Not everything on the market is the output of capitalist production. In addition, also an enlarged supply of labor-power is necessary. But since ordinary wages are high enough to allow for the growth of the working-class, this does not present an additional constraint:

727:1 Now in order to allow of these elements actually functioning as capital, the capitalist class requires additional labor. If the exploitation of the laborers already em-

606:4/o Um zu akkumulieren, muß man einen Teil des Mehrprodukts in Kapital verwandeln. Aber, ohne Wunder zu tun, kann man nur solche Dinge in Kapital verwandeln, die im Arbeitsprozeß verwendbar sind, d.h. Produktionsmittel, und des ferneren Dinge, von denen der Arbeiter sich erhalten kann, d.h. Lebensmittel.

Folglich muß ein Teil der jährlichen Mehrarbeit verwandt worden sein zur Herstellung zusätzlicher Produktions- und Lebensmittel, im Überschuß über das Quantum, das zum Ersatz des vorgeschossenen Kapitals erforderlich war. Mit einem Wort: der Mehrwert ist nur deshalb in Kapital verwandelbar, weil das Mehrprodukt, dessen Wert er ist, bereits die sachlichen Bestandteile eines neuen Kapitals enthält.^{21a}

^{21a} Es wird hier abstrahiert vom Ausfuhrhandel, vermittelt dessen eine Nation Luxusartikel in Produktions- oder Lebensmittel umsetzen kann und umgekehrt. Um den Gegenstand der Untersuchung in seiner Reinheit, frei von störenden Nebenumständen aufzufassen, müssen wir hier die gesamte Handelswelt als eine Nation ansehen und voraussetzen, daß die kapitalistische Produktion sich überall festgesetzt und sich aller Industriezweige bemächtigt hat.

607:1 Um nun diese Bestandteile tatsächlich als Kapital fungieren zu lassen, bedarf die Kapitalistenklasse eines Zuschusses von Arbeit. Soll nicht die Ausbeutung der schon

ployed do not increase, either extensively or intensively, then additional labor-power must be found. For this the mechanism of capitalist production provides beforehand, by converting the working-class into a class dependent on wages, a class whose ordinary wages suffice, not only for its maintenance, but for its increase.

↓ To reconvert surplus-value into capital, capital simply has to put the additional means of production on line and hire the workers to run them:

It is only necessary for capital to incorporate this additional labor-power, annually supplied by the working-class in the shape of laborers of all ages, with the surplus means of production comprised in the annual product, and the conversion of surplus-value into capital is complete.

Question 983 Which use-values must be available on the market so that accumulation of capital can take place?

↓ The difference between simple reproduction and accumulation is therefore only quantitative.

From a concrete point of view, accumulation resolves itself into the reproduction of capital on a progressively increasing scale. The circle in which simple reproduction moves, alters its form and, to use Sismondi's expression, changes into a spiral.^{21b}

^{21b} Sismondi's analysis of accumulation has the great defect, that he contents himself, to too great an extent, with the phrase "conversion of revenue into capital," without fathoming the material conditions of this operation.

Note that accumulation requires (1) the decision by the capitalists to reinvest the surplus-value, (2) availability of the products on the market, (3) availability of labor-power on the market. Another condition, which Marx does not discuss here, is the availability of additional money, additional purchasing power to buy the new products.

This concludes the first half of section 1 corresponding to the first part of the title: capitalist production on an extended scale. Marx derived here some of the conditions that the economy as a whole must satisfy for extended production to be possible.

beschäftigten Arbeiter extensiv oder intensiv wachsen, so müssen zusätzliche Arbeitskräfte eingestellt werden. Dafür hat der Mechanismus der kapitalistischen Produktion ebenfalls schon gesorgt, indem er die Arbeiterklasse reproduziert als vom Arbeitslohn abhängige Klasse, deren gewöhnlicher Lohn hinreicht, nicht nur ihre Erhaltung zu sichern, sondern auch ihre Vermehrung.

Diese, ihm durch die Arbeiterklasse auf verschiedenen Altersstufen jährlich gelieferten, zuschüssigen Arbeitskräfte braucht das Kapital nur noch den in der Jahresproduktion schon enthaltenen zuschüssigen Produktionsmitteln einzuverleiben, und die Verwandlung des Mehrwerts in Kapital ist fertig.

Konkret betrachtet, löst sich die Akkumulation auf in Reproduktion des Kapitals auf progressiver Stufenleiter. Der Kreislauf der einfachen Reproduktion verändert sich und verwandelt sich, nach Sismond's Ausdruck, in eine Spirale.^{21b}

^{21b} Sismond's Analyse der Akkumulation hat den großen Fehler, daß er sich zu sehr mit der Phrase: „Umsetzung von Revenue in Kapital“ begnügt, ohne die materiellen Bedingungen dieser Operation zu ergründen.

Next Marx discusses the inversion of the laws of appropriation that occurs during the development from the simple production of commodities to capitalism. For this he first develops what these laws of property are, before their inversion, and he shows that the surplus-value does not fit into the commonly given explanation:

1.b. [Origin of Property]

Marx returns to the individual capitalist re-investing his surplus-value. This time he asks a different question: where does the capitalist have the original capital from? No longer conditions of the accumulation process but origin of the capital.

727:2/o Let us now return to our illustration. It is the old story: Abraham begat Isaac, Isaac begat Jacob, and so on. The original capital of £10,000 brings in a surplus-value of £2,000, which is capitalised. The new capital of £2,000 brings in a surplus-value of £400, and this, too, is capitalised, converted into a second additional capital, which, in its turn, produces a further surplus-value of £80. And so the ball rolls on.

In the real world, capitalists cannot convert all surplus-value into capital because they have to live, but Marx abstracts from this here:

728:1 We here leave out of consideration the portion of the surplus-value consumed by the capitalist.

Another abstraction is the assumption that the capitalist who earns the surplus-value adds it to his own capital instead of transferring it to a different capitalist:

Just as little does it concern us, for the moment, whether the additional capital is joined on to the original capital, or is separated from it to function independently; whether the same capitalist, who accumulated it, employs it, or whether he hands it over to another.

As a final preliminary consideration Marx points out where the metaphor with Adam, Isaac, and Jacob has its limits:

This only we must not forget, that by the side of the newly-formed capital, the original capital continues to reproduce itself, and to produce surplus-value, and that this is

607:2 Kehren wir jetzt zu unserm Beispiel zurück. Es ist die alte Geschichte: Abraham zeugte Isaak, Isaak zeugte Jakob usw. Das ursprüngliche Kapital von 10000 Pfd.St. bringt einen Mehrwert von 2000 Pfd.St., der kapitalisiert wird. Das neue Kapital von 2000 Pfd.St. bringt einen Mehrwert von 400 Pfd.St.; dieser, wiederum kapitalisiert, also in ein zweites zusätzliches Kapital verwandelt, bringt einen neuen Mehrwert von 80 Pfd.St., usw.

607:3/o Wir sehen hier ab von dem vom Kapitalisten verzehrten Teil des Mehrwerts.

Ebensowenig interessiert es uns für den Augenblick, ob die Zusatzkapitale zum ursprünglichen Kapital geschlagen oder von ihm zu selbständiger Verwertung getrennt werden; ob derselbe Kapitalist sie ausnutzt, der sie akkumuliert hat, oder ob er sie andern überträgt.

Marx points out where the metaphor with Adam,

Nur dürfen wir nicht vergessen, daß neben den neugebildeten Kapitalen das ursprüngliche Kapital fortfährt sich zu reproduzieren und Mehrwert zu produzieren, und daß das-

also true of all accumulated capital, and the additional capital engendered by it.

selbe gilt von jedem akkumulierten Kapital in Beziehung auf das von ihm erzeugte Zusatzkapital.

↑ In the biblical example, Adam has stopped having his own offspring when Isaac begets Jacob, but with capital, the original capital continues generating children alongside its grandchildren and greatgrandchildren.

Now Marx formulates his question about the origin of capital. Although it only becomes clear with the next paragraph, his question is: Where does the capital stock of £ 12,000 at the beginning of the *second* year come from? Regarding the origin of one part of it, the original £ 10,000, the political economists give the following answer:

728:2 The original capital was formed by the advance of £10,000. How did the owner become possessed of it? "By his own labor and that of his forefathers," answer unanimously the spokespeople of Political Economy.^{21c} And, in fact, their supposition seems to be the only one consonant with the laws of the production of commodities.

^{21c} "Le travail primitif au quel son capital a du sa naissance." Sismondi, l.c., éd. Paris, t. I., p. 109.

608:1 Das ursprüngliche Kapital bildete sich durch den Vorschuß von 10000 Pfd.St. Woher hat sie ihr Besitzer? Durch seine eigne Arbeit und die seiner Vorfahren! antworten uns einstimmig die Wortführer der politischen Ökonomie,^{21c} und ihre Annahme scheint in der Tat die einzige, die zu den Gesetzen der Warenproduktion stimmt.

^{21c} „Die ursprüngliche Arbeit, der sein Kapital seine Entstehung schuldete.“ (Sismondi, l.c., éd. Paris, t. 1, p. 109.)

Question 984 Why does the assumption that the capitalist created his capital by his own labor seem to be the only one consonant with the laws of the production of commodities?

Question 985 Veblen, in his article "The Beginnings of Ownership," [Veb98], argues against the conception that the basis of ownership lies in the creative effort of the isolated, self-sufficing individual." Compare Veblen's argument with Marx's argument given in Chapter Twenty-Four.

↑ Marx does not agree with this answer. In order to prepare his case, he contrasts this alleged origin of the original capital with the origin of the new part of the capital, which we know very well because we just witnessed it:

728:3 But it is quite otherwise with regard to the additional capital of £2,000. How that originated we know perfectly well. There is not one single atom of its value that does not owe its existence to unpaid labor.

608:2 Ganz anders verhält es sich mit dem Zusatzkapital von 2000 Pfd.St. Seinen Entstehungsprozeß kennen wir ganz genau. Es ist kapitalisierter Mehrwert. Von Ursprung an enthält er nicht ein einziges Wertatom, das nicht aus unbezahlter fremder Arbeit her stammt.

↓ Next Marx is talking about the origin of the generation of capital after this. In the next generation, we are not only dealing with unpaid labor, i.e., with the capitalist buying labor-

power and not paying a full equivalent of the labor performed, but even the capital advanced to buy this labor-power (at a too-low price) comes originally from the laborer himself.

The means of production which absorb the additional labor-power, as well as the necessities with which the laborers are sustained, are nothing but component parts of the surplus-product, of the tribute annually exacted from the working-class by the capitalist class. Though the latter with a portion of that tribute purchases the additional labor-power even at its full price, so that equivalent is exchanged for equivalent, yet the transaction is for all that only the old dodge of every conqueror who buys commodities from the conquered with the money he has robbed them of.

↑ This is the same example mentioned in 264:2.

Question 986 *How can the capitalist be compared with a conqueror who buys commodities from the conquered with the money he has robbed from them?*

In order to make the social connection palatable, Marx first looks at the situation in which the surplus-value created by a given worker is converted into capital which employs this same worker:

728:4/o If the additional capital employs the person who produced it, this producer must not only continue to augment the value of the original capital, but must buy back the fruits of his previous labor with more labor than they cost.

Question 987 *In what way must the laborer “buy back the fruits of his previous labor with more labor than they cost”?*

Isn't it a good use of the unpaid labor of the workers to hire more workers? As Marx will argue in more detail in chapter Twenty-Five, see e.g. 768/oo, this increased demand will never reach the point where it threatens the dependence of the laborers on capital:

When viewed as a transaction between the capitalist class and the working-class, it makes no difference that additional laborers are employed by means of the unpaid labor of the previously employed laborers.

Die Produktionsmittel, denen die zuschüssige Arbeitskraft einverleibt wird, wie die Lebensmittel, von denen diese sich erhält, sind nichts als integrierende Bestandteile des Mehrprodukts, des der Arbeiterklasse jährlich durch die Kapitalistenklasse entrisse- nen Tributs. Wenn diese mit einem Teil des Tributs von jener zusätzliche Arbeitskraft kauft, selbst zum vollen Preise, so daß Äqui- valent sich austauscht gegen Äquivalent— es bleibt immer das alte Verfahren des Eroberers, der den Besiegten Waren abkauft mit ihrem eignen, geraubten Geld.

608:3 Wenn das Zusatzkapital seinen eigen- en Produzenten beschäftigt, so muß dieser erstens fortfahren, das ursprüngliche Kapi- tal zu verwerten, und zudem den Ertrag sei- ner früheren Arbeit zurückkaufen mit mehr Arbeit, als er gekostet hat.

Als Transaktion zwischen der Kapitalisten- klasse und der Arbeiterklasse betrachtet, ändert es nichts an der Sache, wenn mit der unbezahlten Arbeit der bisher beschäftigten Arbeiter zuschüssige Arbeiter beschäftigt

In other cases, the capitalist may convert the additional capital into a machine that throws the producers of that capital out of work, and that replaces them by a few children. In every case the working-class creates by the surplus-labor of one year the capital des- tined to employ additional labor in the fol- lowing year.²² And this is what is called: creating capital out of capital.

²² “Labor creates capital before capital em- ploys labor.” E. G. Wakefield, “England and America,” Lond., 1833, Vol. II, p. 110.

Exam Question 988 *Isn't it a good use of surplus-labor if the surplus-value produced by one worker creates additional jobs for other workers?*

1.c. [Inversion of the Property Laws]

Now Marx goes back to the example of the individual capitalist and carries it over several production periods. He uses this example to illustrate how the property laws of commodity production (according to which one acquires property rights only by one's own labor) are turned upside down under capitalism.

729:1 The accumulation of the first addi- tional capital of £2,000 pre-supposes a value of £10,000 belonging to the capitalist by virtue of his “primitive labor,” and advanced by him. The second additional capital of £400 pre-supposes, on the contrary, only the previous accumulation of the £2,000, of which the £400 is the surplus-value capi- talised. The ownership of past unpaid labor therefore appears as the sole condition for the appropriation of living unpaid labor on a constantly increasing scale. The more the capitalist has accumulated, the more is he able to accumulate.

werden. Der Kapitalist verwandelt viel- leicht auch das Zusatzkapital in eine Ma- schine, die den Produzenten des Zusatz- kapitals aufs Pflaster wirft und durch ein paar Kinder ersetzt. In allen Fällen hat die Arbeiterklasse durch ihre diesjährige Mehrarbeit das Kapital geschaffen, das im nächsten Jahr zuschüssige Arbeit beschäfti- gen wird.²² Das ist es, was man nennt: Ka- pital durch Kapital erzeugen.

²² „Die Arbeit schafft das Kapital, bevor das Kapital die Arbeit anwendet.“ („Labor crea- tes capital, before capital employs labor.“) (E. G. Wakefield, „England and America“, London 1833, v. II, p. 110.)

609:1 Die Voraussetzung der Akkumula- tion des ersten Zusatzkapitals von 2000 Pfd. St. war eine vom Kapitalisten vorgeschos- sene, ihm kraft seiner „ursprünglichen Arbeit“ gehörige Wertsumme von 10 000 Pfd.St. Die Voraussetzung des zweiten Zusatzka- pitals von 400 Pfd.St. dagegen ist nichts andres als die vorhergegangne Akkumulati- on des ersten, der 2000 Pfd.St., dessen kapi- talisierter Mehrwert es ist. Eigentum an ver- gangener unbezahlter Arbeit erscheint jetzt als die einzige Bedingung für gegenwärtige Aneignung lebendiger unbezahlter Arbeit in stets wachsendem Umfang. Je mehr der Ka- pitalist akkumuliert hat, desto mehr kann er akkumulieren.

Question 989 *Why does Marx write “the ownership of past unpaid labor appears as the sole condition for the appropriation of living unpaid labor” instead of “the ownership of past unpaid labor is the sole condition for the appropriation of living unpaid labor”?*

729:2/o In so far as the surplus-value, of which the additional capital, No. 1, consists, is the result of the purchase of labor-power with part of the original capital, a purchase that conformed to the laws of the exchange of commodities, and that, from a legal standpoint, pre-supposes nothing beyond the free disposal, on the part of the laborer, of his own capacities, and on the part of the owner of money or commodities, of the values that belong to him; in so far as the additional capital, No. 2, etc., is the mere result of No. 1, and, therefore, a consequence of the above conditions; in so far as each single transaction invariably conforms to the laws of the exchange of commodities, the capitalist buying labor-power, the laborer selling it, and we will assume at its real value; in so far as all this is true, it is evident that the laws of appropriation or of private property, laws that are based on the production and circulation of commodities, become by their own inner and inexorable dialectic changed into their very opposite.

There is “evidently” a dialectic involved because everything strictly follows the laws of commodity exchange, yet the result is opposite to the principles governing simple commodity production and exchange.

Question 990 *Spell out explicitly the “Law of appropriation” or “law of private property” based on commodity production and circulation. In other words, explain the principle that ultimately entitles the owner of a commodity to own his or her commodity.*

The exchange of equivalents, the original operation with which we started, has now become turned round in such a way that only the mere semblance of exchange remains. This is owing to the fact, first, that the capital which is exchanged for labor-power is

609:2/o Insofern der Mehrwert, woraus Zusatzkapital Nr. I besteht, das Resultat des Ankaufs der Arbeitskraft durch einen Teil des Originalkapitals war, ein Kauf, der den Gesetzen des Warenaustausches entsprach, und, juristisch betrachtet, nichts voraussetzt als freie Verfügung auf seiten des Arbeiters über seine eignen Fähigkeiten, auf seiten des Geld- oder Warenbesitzers über ihm gehörige Werte; sofern Zusatzkapital Nr. II usw. bloß Resultat von Zusatzkapital Nr. I, also Konsequenz jenes ersten Verhältnisses; sofern jede einzelne Transaktion fortwährend dem Gesetz des Warenaustausches entspricht, der Kapitalist stets die Arbeitskraft kauft, der Arbeiter sie stets verkauft, und wir wollen annehmen selbst zu ihrem wirklichen Wert, schlägt offenbar das auf Warenproduktion und Warenzirkulation beruhende Gesetz der Aneignung oder Gesetz des Privateigentums durch seine eigne, innere, unvermeidliche Dialektik in sein direktes Gegenteil um.

Der Austausch von Äquivalenten, der als die ursprüngliche Operation erschien, hat sich so gedreht, daß nur zum Schein ausgetauscht wird, indem erstens der gegen Arbeitskraft ausgetauschte Kapitalteil selbst nur ein Teil des ohne Äquivalent angeeigne-

itself but a portion of the product of others' labor appropriated without an equivalent; and, secondly, that this capital must not only be replaced by its producer, but replaced together with an added surplus. The relation of exchange between capitalist and laborer becomes a mere semblance appertaining to the process of circulation, a mere form which is foreign to the content itself and only mystifies it. The ever repeated purchase and sale of labor-power is now the mere form; what really takes place is this—the capitalist first appropriates, without equivalent, a portion of the materialized labor of others, and then exchanges a part of it for a greater quantity of living labor.

The equitable exchange between capitalist and laborer on the surface of the economy is a mere form which is alien to, and disguises, the content of this transaction.

Question 991 *Why mere semblance?*

At first the rights of property seemed to us based on a man's own labor. This had at least to be a valid assumption, because only commodity-owners with equal rights confronted each other, and the sole means by which a person could become possessed of the commodities of others, was by alienating his own commodities; and these could be replaced by labor alone. Now, however, property turns out to be the right, on the part of the capitalist, to appropriate the unpaid labor of others or its product, and the impossibility, on the part of the laborer, of appropriating his own product. The separation of property from labor has become the necessary consequence of a law that seemed to originate in their identity.²³

²³ The property of the capitalist in the product of the labour of others “is a strict consequence of the law of appropriation, the fundamental principle of which was, on the contrary, the exclusive

ten fremden Arbeitsproduktes ist und zweitens von seinem Produzenten, dem Arbeiter, nicht nur ersetzt, sondern mit neuem Surplus ersetzt werden muß. Das Verhältnis des Austausches zwischen Kapitalist und Arbeiter wird also nur ein dem Zirkulationsprozeß angehöriger Schein, bloße Form, die dem Inhalt selbst fremd ist und ihn nur mystifiziert. Der beständige Kauf und Verkauf der Arbeitskraft ist die Form. Der Inhalt ist, daß der Kapitalist einen Teil der bereits vergegenständlichten fremden Arbeit, die er sich unaufhörlich ohne Äquivalent aneignet, stets wieder gegen größeres Quantum lebendiger fremder Arbeit umsetzt.

Ursprünglich erschien uns das Eigentumsrecht gegründet auf eigne Arbeit. Wenigstens mußte diese Annahme gelten, da sich nur gleichberechtigte Warenbesitzer gegenüberstehen, das Mittel zur Aneignung fremder Ware aber nur die Veräußerung der eignen Ware, und letztere nur durch Arbeit herstellbar ist. Eigentum erscheint jetzt auf Seite des Kapitalisten als das Recht, fremde unbezahlte Arbeit oder ihr Produkt, auf Seite des Arbeiters als Unmöglichkeit, sich sein eignes Produkt anzueignen. Die Scheidung zwischen Eigentum und Arbeit wird zur notwendigen Konsequenz eines Gesetzes, das scheinbar von ihrer Identität ausging.²³

²³ Das Eigentum des Kapitalisten an dem fremden Arbeitsprodukt „ist strenge Konsequenz des Gesetzes der Aneignung, dessen Fundamentalprinzip umgekehrt der ausschließliche Eigen-

title of every laborer to the product of his own labor.” (Cherbuliez, “Richesse ou Pauvreté,” Paris, 1841, p. 58, where, however, the dialectical reversal is not properly developed.)

Question 992 *Is the inversion of the law of appropriation under capitalism due to the fact that capitalism violates the laws of commodity exchange? If not, where else does it come from?*

Since the laws of commodity exchange are not violated in this inversion of the property laws, this inversion must come from the own inexorable dialectic of these property laws.

The 4th German edition gives here once more a systematic review of all the different steps leading to capital accumulation. All transactions in the logical development of capital are based on the laws of commodity production and do not violate them.

730:1 Therefore, however much the capitalist mode of appropriation may seem to fly in the face of the original laws of commodity production, it nevertheless arises, not from a violation, but, on the contrary, from the application of these laws. Let us make this clear once more by briefly reviewing the consecutive phases of motion whose culminating point is capitalist accumulation.

This overview distinguishes three phases. In each of these phases, a paradoxical result is obtained:

First step: the original conversion of money into capital is strictly in keeping with the laws of commodity exchange:

730:2 We saw, in the first place, that the original conversion of a sum of values into capital was achieved in complete accordance with the laws of exchange. One party to the contract sells his labor-power, the other buys it. The former receives the value of his commodity, whose use-value—labor—is thereby alienated to the buyer. Means of production which already belong to the latter are then transformed by him, with the aid of labor equally belonging to him, into a new product which is likewise lawfully his.

Now Marx (or is it Engels?) looks at every component of the value of the end product, to see whether something funny is happening:

tumstiel jedes Arbeiters am Produkt seiner eigenen Arbeit war“ (Cherbuliez, „Richesse ou Pauvreté“, Paris 1841, p. 58, wo jedoch dieser dialektische Umschlag nicht richtig entwickelt wird.)

610:1 Sosehr die kapitalistische Aneignungsweise also den ursprünglichen Gesetzen der Warenproduktion ins Gesicht zu schlagen scheint, so entspringt sie doch keineswegs aus der Verletzung, sondern im Gegenteil aus der Anwendung dieser Gesetze. Ein kurzer Rückblick auf die Reihenfolge der Bewegungsphasen, deren Schlußpunkt die kapitalistische Akkumulation ist, stelle dies nochmals klar.

610:2 Zuerst haben wir gesehn, daß die ursprüngliche Verwandlung einer Wertsumme in Kapital sich durchaus gemäß den Gesetzen des Austausches vollzog. Der eine Kontrahent verkauft seine Arbeitskraft, der andre kauft sie. Der erstre empfängt den Wert seiner Ware, deren Gebrauchswert—die Arbeit—damit an den zweiten veräußert ist. Dieser verwandelt nunmehr ihm bereits gehörende Produktionsmittel mit Hilfe von ihm ebenfalls gehörender Arbeit in ein neues Produkt, das ihm ebenfalls von Rechts wegen gehört.

730:3/o The value of this product includes: first, the value of the used-up means of production. Useful labor cannot consume these means of production without transferring their value to the new product, but, to be saleable, labor-power must be capable of supplying useful labor in the branch of industry in which it is to be employed.

This ties into the discussion in chapter Eight, 307:4/o, that it is the useful labor which transfers value.

731:1 The value of the new product further includes: the equivalent of the value of the labor-power together with a surplus-value.

The addition of a surplus-value is a surprise here, which needs more of an explanation: This is so because the value of the labor-power—sold for a definite length of time, say a day, a week, etc.—is less than the value created by its use during that time.

However this is not a violation of the laws of commodity exchange.

But the worker has received payment for the exchange-value of his labor-power and by so doing has alienated its use-value—this being the case in every sale and purchase.

731:2 The fact that this particular commodity, labor-power, possesses the peculiar use-value of supplying labor, and therefore of creating value, cannot affect the general law of commodity production. If, therefore, the magnitude of value advanced in wages is not merely found again in the product, but is found there augmented by a surplus-value, this is not because the seller has been defrauded, for he has really received the value of his commodity; it has its origin in the consumption of this commodity by the buyer.

And this consumption is beyond the realm of commodity exchange; commodity owners can do with their commodities what they want.

610:3 Der Wert dieses Produkts schließt ein: erstens den Wert der verbrauchten Produktionsmittel. Die nützliche Arbeit kann diese Produktionsmittel nicht verbrauchen, ohne ihren Wert auf das neue Produkt zu übertragen; um aber verkäuflich zu sein, muß die Arbeitskraft imstande sein, in dem Industriezweig, wo sie verwandt werden soll, nützliche Arbeit zu liefern.

610:4 Der Wert des neuen Produkts schließt ferner ein: das Äquivalent des Werts der Arbeitskraft und einen Mehrwert.

Und zwar deshalb, weil die für einen bestimmten Zeitraum, Tag, Woche etc., verkaufte Arbeitskraft weniger Wert besitzt, als ihr Gebrauch während dieser Zeit schafft.

Der Arbeiter aber hat den Tauschwert seiner Arbeitskraft bezahlt erhalten und hat damit ihren Gebrauchswert veräußert—wie das bei jedem Kauf und Verkauf der Fall.

610:5 Daß diese besondere Ware Arbeitskraft den eigentümlichen Gebrauchswert hat, Arbeit zu liefern, also Wert zu schaffen, das kann das allgemeine Gesetz der Warenproduktion nicht berühren. Wenn also die in Arbeitslohn vorgeschosne Wertsumme sich in Produkt nicht bloß einfach wieder vorfindet, sondern um einen Mehrwert vermehrt vorfindet, so rührt dies nicht her aus einer Übervorteilung des Verkäufers, der ja den Wert seiner Ware erhalten, sondern nur aus dem Verbrauch dieser Ware durch den Käufer.

731:3 The law of exchange requires equality only between the exchange-values of the commodities given in exchange for one another. From the very outset it presupposes even a difference between their use-values and it has nothing whatever to do with their consumption, which only begins after the deal is closed and executed.

The laws of commodity exchange have therefore not been violated.

731:4–7 Thus the original conversion of money into capital is achieved in the most exact accordance with the economic laws of commodity production and with the right of property derived from them.

Nevertheless one obtains a paradoxical result in this first step of the argument: the product of the labor does not belong to the producer.

Nevertheless, its result is:

1. that the product belongs to the capitalist and not to the worker;
2. that the value of this product includes, besides the value of the capital advanced, a surplus-value which costs the worker labor but the capitalist nothing, and which none the less becomes the legitimate property of the capitalist;
3. that the worker has retained his labor-power and can sell it anew if he finds a buyer.

This last point was not mentioned before: discrepancy between form of content.

Second step, simple reproduction. The repetition of the law cannot overturn it, but now one obtains the paradoxical result that the capitalists get to consume for free.

731:8/o Simple reproduction is only the periodical repetition of this first operation; each time money is converted afresh into capital. Thus the law is not broken; on the contrary, it is merely enabled to operate continuously.

“Several successive acts of exchange have only made the last represent the first” (Sismondi, “Nouveaux Principes, etc.,” p. 70).

611:1 Das Gesetz des Austausches bedingt Gleichheit nur für die Tauschwerte der gegeneinander weggegebenen Waren. Es bedingt sogar von vornherein Verschiedenheit ihrer Gebrauchswerte und hat absolut nichts zu schaffen mit ihrem Verbrauch, der erst nach geschlossenem und vollzogenem Handel beginnt.

611:2–5 Die ursprüngliche Verwandlung des Geldes in Kapital vollzieht sich also im genauesten Einklang mit den ökonomischen Gesetzen der Warenproduktion und mit dem daraus sich ableitenden Eigentumsrecht.

Trotzdem aber hat sie zum Ergebnis:

1. daß das Produkt dem Kapitalisten gehört und nicht dem Arbeiter;
2. daß der Wert dieses Produkts, außer dem Wert des vorgeschossenen Kapitals, einen Mehrwert einschließt, der dem Arbeiter Arbeit, dem Kapitalisten aber nichts gekostet hat und der dennoch das rechtmäßige Eigentum des Kapitalisten wird;
3. daß der Arbeiter seine Arbeitskraft forterhalten hat und sie aufs neue verkaufen kann, wenn er einen Käufer findet.

611:6–7 Die einfache Reproduktion ist nur die periodische Wiederholung dieser ersten Operation; jedesmal wird, stets von neuem, Geld in Kapital verwandelt. Das Gesetz wird also nicht gebrochen, im Gegenteil es erhält nur Gelegenheit, sich dauernd zu betätigen.

Plusieurs échanges successifs n’ont fait du dernier que le représentant du premier. (Sismondi, l.c. p. 70.)

732:1 And yet we have seen that simple reproduction suffices to stamp this first operation, in so far as it is conceived as an isolated process, with a totally changed character.

“Of those who share the national income among themselves, the one side (the workers) acquire every year a fresh right to their share by fresh work; the others (the capitalists) have already acquired, by work done originally, a permanent right to their share” (Sismondi, l.c., pp. 110, 111).

It is indeed notorious that the sphere of labor is not the only one in which primogeniture works miracles.

Third step, accumulation. The miracle, which in simple reproduction only pertained to the consumption of the capitalists, applies now also to their advances of capital. Capitalists no longer only get to consume for free because they advanced their capital once in the past, but they also get to advance their capital for free.

732:2 Nor does it matter if simple reproduction is replaced by reproduction on an extended scale, by accumulation. In the former case the capitalist squanders the whole surplus-value in dissipation, in the latter he demonstrates his bourgeois virtue by consuming only a portion of it and converting the rest into money.

Now interpretation of this activity (re-investing part of surplus-value) from the individual point of view:

732:3 The surplus-value is his property; it has never belonged to anyone else. If he advances it for the purposes of production, the advances made come from his own funds, exactly as on the day when he first entered the market. The fact that on this occasion the funds are derived from the unpaid labor of his workers makes absolutely no difference. If worker *B* is paid out of the surplus-value which worker *A* produced, then, in the first place, *A* furnished that surplus-value without having the just price of his commodity cut by a half-penny, and, in the sec-

611:8–612:1 Und dennoch haben wir gesehen, daß die einfache Reproduktion hinreicht, um dieser ersten Operation—soweit sie als isolierter Vorgang gefaßt war—einen total veränderten Charakter aufzuprägen.

„Parmi ceux qui se partagent le revenu national, les uns“ (die Arbeiter) „y acquièrent chaque année un nouveau droit par un nouveau travail, les autres“ (die Kapitalisten) „y ont acquis antérieurement un droit permanent par un travail primitif.“ (Sismondi, l.c. p. 110, 111.)

Das Gebiet der Arbeit ist bekanntlich nicht das einzige, wo die Erstgeburt Wunder tut.

612:2 Es schlägt auch nichts, wenn die einfache Reproduktion ersetzt wird durch die Reproduktion auf erweiterter Stufenleiter, durch die Akkumulation. Bei jener vermöbelt der Kapitalist den gesamten Mehrwert, bei dieser beweist er seine Bürgertugend durch Verzehrung nur eines Teils, und Verwandlung des Restes in Geld.

612:3–4 Der Mehrwert ist sein Eigentum, er hat nie einem andern gehört. Schießt er ihn zur Produktion vor, so macht er, ganz wie am Tag, wo er zuerst den Markt beschritt, Vorschüsse aus seinem eignen Fonds. Daß dieser Fonds diesmal aus der unbezahlten Arbeit seiner Arbeiter stammt, tut absolut nichts zur Sache. Wird Arbeiter *B* beschäftigt mit dem Mehrwert, den Arbeiter *A* produziert hat, so hat erstens *A* diesen Mehrwert geliefert, ohne daß man ihm den gerechten Preis seiner Ware um einen Heller verkürzt hat, und zweitens geht dies

ond place, the transaction is no concern of *B*'s whatever. What *B* claims, and has a right to claim, is that the capitalist should pay him the value of his labor-power.

“Both were still gainers: the worker because he was advanced the fruits of his labor” (should read: of the unpaid labor of other workers) “before the work was done” (should read: before his own labor had borne fruit); “the employer (*le maître*), because the labor of this worker was worth more than his wages” (should read: produced more value than the value of his wages). (Sismondi, l.c., p. 135.)

The discrepancy, which we have seen now in an escalating three-step sequence, comes from the fact that the laws of commodity exchange only deal with isolated acts of exchange and with individual buyers and sellers. The snapshot view of such isolated acts cannot explain the continuous flow of production and the relations between whole classes. Commodity exchange must be viewed as the merely superficial gears and levers that keep the class relations going. It does not reveal what these class relations themselves are.

732:4 To be sure, the matter looks quite different if we consider capitalist production in the uninterrupted flow of its renewal, and if, in place of the individual capitalist and the individual worker, we view in their totality, the capitalist class and the working-class confronting each other. But in so doing we should be applying standards entirely foreign to commodity production.

Question 993 *Why is it not admissible to seek relations between whole social classes in the laws of commodity exchange?*

↓ The exchange acts are not only viewed in a snapshot fashion, they are also ontologically isolated!

733:1 Only buyer and seller, mutually independent, face each other in commodity production. The relations between them cease on the day when the term stipulated in the contract they concluded expires. If the transaction is repeated, it is repeated as the result of a new agreement which has nothing to do with the previous one and which

Geschäft den *B* überhaupt nichts an. Was *B* verlangt und das Recht hat zu verlangen, ist, daß der Kapitalist ihm den Wert seiner Arbeitskraft zahle.

„Tous deux gagnaient encore; l'ouvrier parce qu'on lui avançait les fruits de son travail“ (soll heißen du travail gratuit d'autres ouvriers) „avant qu'il fût fait;“ (soll heißen: avant que le sien ait porté de fruit) „le maître, parce que le travail de cet ouvrier valait plus que le salaire“ (soll heißen: produisait plus de valeur que celle de son salaire). (Sismondi, l.c. p. 135.)

612:5 Allerdings sieht die Sache ganz anders aus, wenn wir die kapitalistische Produktion im ununterbrochenen Fluß ihrer Erneuerung betrachten und statt des einzelnen Kapitalisten und des einzelnen Arbeiters die Gesamtheit, die Kapitalistenklasse und ihr gegenüber die Arbeiterklasse ins Auge fassen. Damit aber würden wir einen Maßstab anlegen, der der Warenproduktion total fremd ist.

612:6 In der Warenproduktion stehn sich nur, voneinander unabhängig, Verkäufer und Käufer gegenüber. Ihre gegenseitigen Beziehungen sind zu Ende mit dem Verfalltag des zwischen ihnen abgeschlossenen Vertrags. Wiederholt sich das Geschäft, dann infolge eines neuen Vertrags, der mit dem vorhergehenden nichts zu tun hat und bei

only by chance brings the same seller together again with the same buyer.

733:2 If, therefore, commodity production, or one of its associated processes, is to be judged according to its own economic laws, we must consider each act of exchange by itself, apart from any connexion with the act of exchange preceding it and that following it. And since sales and purchases are negotiated solely between particular individuals, it is not admissible to seek here for relations between whole social classes.

Important formulation! Makes it very clear that social relations are emergent from interpersonal relations, and that the laws of commodity exchange are interpersonal surface relations and not core relations.

733:3 However long a series of periodical reproductions and preceding accumulations the capital functioning to-day may have passed through, it always preserves its original virginity. So long as the laws of exchange are observed in every single act of exchange the mode of appropriation can be completely revolutionised without in any way affecting the property rights which correspond to commodity production. These same rights remain in force both at the outset, when the product belongs to its producer, who, exchanging equivalent for equivalent, can enrich himself only by his own labor, and also in the period of capitalism, when social wealth becomes to an ever-increasing degree the property of those who are in a position to appropriate continually and ever afresh the unpaid labor of others.

↑ The fact that commodity relations are interpersonal surface relations and not core relations gives the possibility; ↓ the fact that labor-power is a commodity gives the necessity of

dem nur ein Zufall denselben Käufer mit demselben Verkäufer wieder zusammenbringt.

613:1 Soll also die Warenproduktion oder ein ihr angehöriger Vorgang nach ihren eigenen ökonomischen Gesetzen beurteilt werden, so müssen wir jeden Austauschakt für sich betrachten, außerhalb alles Zusammenhangs mit dem Austauschakt, der ihm vorherging, wie mit dem, der ihm nachfolgt. Und da Käufe und Verkäufe nur zwischen einzelnen Individuen abgeschlossen werden, so ist es unzulässig, Beziehungen zwischen ganzen Gesellschaftsklassen darin zu suchen.

613:2 Wie lang auch die Reihenfolge der periodischen Reproduktionen und vorhergegangenen Akkumulationen, die das heute funktionierende Kapital durchgemacht hat, es bewahrt immer seine ursprüngliche Jungfräulichkeit. Solange bei jedem Austauschakt—einzeln genommen—die Gesetze des Austausches eingehalten werden, kann die Aneignungsweise eine totale Umwälzung erfahren, ohne das, der Warenproduktion gemäße, Eigentumsrecht irgendwie zu berühren. Dieses selbe Recht steht in Kraft wie am Anfang, wo das Produkt dem Produzenten gehört und wo dieser, Äquivalent gegen Äquivalent austauschend, sich nur durch eigne Arbeit bereichern kann, so auch in der kapitalistischen Periode, wo der gesellschaftliche Reichtum in stets steigendem Maß das Eigentum derer wird, die in der Lage sind, sich stets aufs neue die unbezahlte Arbeit anderer anzueignen.

the inversion of the law of appropriation.

733:4/o This result becomes inevitable from the moment there is a free sale, by the laborer himself, of labor-power as a commodity. But it is also only from then onwards that commodity production is generalised and becomes the typical form of production; it is only from then onwards that, from the first, every product is produced for sale and all wealth produced goes through the sphere of circulation. Only when and where wage-labor is its basis does commodity production impose itself upon society as a whole; but only then and there also does it unfold all its hidden potentialities.

If commodity exchange seizes the whole social product only with the advent of the commodity labor-power, then the intervention of labor-power as a commodity cannot be an adulteration of commodity production, To say that the supervision of wage-labor adulterates commodity production is to say that commodity production must not develop if it is to remain unadulterated. To the extent that commodity production, in accordance with its own inherent laws, develops further, into capitalist production, the property laws of commodity production change into the laws of capitalist appropriation.²⁴

²⁴ We may well, therefore, feel astonished at the cleverness of Proudhon, who would abolish capitalistic property by enforcing the eternal laws of property that are based on commodity production!

↓ Now the concluding remark of this section:

734:1 We have seen that even in the case of simple reproduction, all capital, whatever its original source, becomes converted into accumulated capital, capitalised surplus-value. But in the flood of production all the capital originally advanced becomes a vanishing quantity (*magnitudo evanescens*, in the mathematical sense), compared with the

613:3 Dies Resultat wird unvermeidlich, sobald die Arbeitskraft durch den Arbeiter selbst als Ware frei verkauft wird. Aber auch erst von da an verallgemeinert sich die Warenproduktion und wird sie typische Produktionsform; erst von da an wird jedes Produkt von vornherein für den Verkauf produziert und geht aller produzierte Reichtum durch die Zirkulation hindurch. Erst da, wo die Lohnarbeit ihre Basis, zwingt die Warenproduktion sich der gesamten Gesellschaft auf; aber auch erst da entfaltet sie alle ihre verborgnen Potenzen.

Sagen, daß die Dazwischenkunft der Lohnarbeit die Warenproduktion fälscht, heißt sagen, daß die Warenproduktion, will sie unverfälscht bleiben, sich nicht entwickeln darf. Im selben Maß, wie sie nach ihren eignen immanenten Gesetzen sich zur kapitalistischen Produktion fortbildet, in demselben Maß schlagen die Eigentums Gesetze der Warenproduktion um in Gesetze der kapitalistischen Aneignung.²⁴

²⁴ Man bewundere daher die Piffigkeit Proudhons, der das kapitalistische Eigentum abschaffen will, indem er ihm gegenüber—die ewigen Eigentums Gesetze der Warenproduktion geltend macht!

613:4 Man sah, daß selbst bei einfacher Reproduktion alles vorgeschobne Kapital, wie immer ursprünglich erworben, sich in akkumuliertes Kapital oder kapitalisierten Mehrwert verwandelt. Aber im Strom der Produktion wird überhaupt alles ursprünglich vorgeschobne Kapital eine verschwindende Größe (*magnitudo evanescens* im

directly accumulated capital, *i.e.*, with the surplus-value or surplus-product that is reconverted into capital, whether it functions in the hands of its accumulator, or in those of others.

↑ We have seen: 714:2/o. ↓ This has been noted in the literature.

Hence, Political Economy describes capital in general as “accumulated wealth” (converted surplus-value or revenue), “that is employed over again in the production of surplus-value,”²⁵ and the capitalist as “the owner of surplus-value.”²⁶ It is merely another way of expressing the same thing to say that all existing capital is accumulated or capitalised interest, for interest is a mere fragment of surplus-value.²⁷

²⁵ “Capital, viz., accumulated wealth employed with a view to profit.” (Malthus, l.c.) “Capital ... consists of wealth saved from revenue, and used with a view to profit.” (R. Jones: “An Introductory Lecture on Polit. Econ.,” Lond., 1833, p. 16.)

²⁶ “The possessors of surplus-produce or capital.” (“The Source and Remedy of the National Difficulties. A Letter to Lord John Russell.” Lond., 1821.)

²⁷ “Capital, with compound interest on every portion of capital saved, is so all engrossing that all the wealth in the world from which income is derived, has long ago become the interest on capital.” (London, *Economist*, 19th July, 1851.)

mathematischen Sinn), verglichen mit dem direkt akkumulierten Kapital, d.h. dem in Kapital rückverwandten Mehrwert oder Mehrprodukt, ob nun funktionierend in der Hand, die akkumuliert hat, oder in fremder Hand.

Die politische Ökonomie stellt das Kapital daher überhaupt dar als „akkumulierten Reichtum“ (verwandten Mehrwert oder Revenue), „der von neuem zur Produktion von Mehrwert verwandt wird“²⁵, oder auch den Kapitalisten als „Besitzer des Mehrprodukts“²⁶. Dieselbe Anschauungsweise besitzt nur andre Form in dem Ausdruck, daß alles vorhandne Kapital akkumulierter oder kapitalisierter Zins sei, denn der Zins ist ein bloßes Bruchstück des Mehrwerts.²⁷

²⁵ „Kapital ist akkumulierter Reichtum, angewandt, um Profit zu erzielen.“ (Malthus, l.c. [p. 262.]) „Kapital ... besteht aus Reichtum, von der Revenue erspart und zur Erzielung von Profit gebraucht.“ (R. Jones, „Text-book of lectures on the Political Economy of Nations“, Hertford 1852, p. 16.)

²⁶ „Die Besitzer des Mehrprodukts oder Kapitals.“ („The Source and Remedy of the National Difficulties. A Letter to Lord John Russell“, Lond. 1821, [p. 4.])

²⁷ „Kapital, mit dem Zinseszins auf jeden Teil des gesparten Kapitals, reißt alles so sehr an sich, daß der ganze Reichtum auf der Welt, von dem Einkommen bezogen wird, schon vor langem Kapitalzins geworden ist.“ (London „Economist“ 19. July 1851)

2. Erroneous Conception of Reproduction on an Increasing Scale by Political Economy

734:2 Before we further investigate accumulation or the reconversion of surplus-value into capital, we must remove an ambiguity introduced by the classical economists.

↑ The topic of this section is an *ambiguity* in the teachings of classical economists, i.e., a statement which is correct on the one hand and incorrect on the other. The statement in question is that accumulation of capital equals employment of productive laborers. ↓ Marx begins his discussion with a negative version of this statement which is clearly correct: the employment of laborers who perform personal services for the employer is *not* part of accumulation, these laborers are *unproductive*.

734:3/oo Just as little as the commodities that the capitalist buys with a part of the surplus-value for his own consumption, serve the purpose of production and of creation of value, so little is the labor that he buys for the satisfaction of his natural and social requirements, productive labor. Instead of converting surplus-value into capital, he, on the contrary, by the purchase of those commodities and that labor, consumes or expends it as revenue.

↓ This is why the economists preached: the accumulation of capital is the hiring of productive, not unproductive, workers. This was necessary at the origins of capitalism, to combat the feudalist sentiment “to consume what is at hand.”

In the face of the habitual mode of life of the old feudal nobility, which, as Hegel rightly says, “consists in consuming what is in hand,” and more especially displays itself in the luxury of personal retainers, it was extremely important for bourgeois economy to promulgate the doctrine that accumulation of capital is the first duty of every citizen, and to preach without ceasing, that a man cannot accumulate, if he eats up all his revenue, instead of spending a good part of it in the acquisition of additional productive laborers, who bring in more than they cost.

↓ This is not the only popular misconception the early capitalists had to contend with; another misconception was that accumulation of capital is the same thing as hoarding.

614:1 Bevor wir nun auf einige nähere Bestimmungen der Akkumulation oder der Rückverwandlung von Mehrwert in Kapital eingehen, ist eine von der klassischen Ökonomie ausgeheckte Zweideutigkeit zu beseitigen.

614:2/o So wenig die Waren, die der Kapitalist mit einem Teil des Mehrwerts für seine eigne Konsumtion kauft, ihm als Produktions- und Verwertungsmittel dienen, so wenig ist die Arbeit, die er zur Befriedigung seiner natürlichen und sozialen Bedürfnisse kauft, produktive Arbeit. Statt durch den Kauf jener Waren und Arbeit den Mehrwert in Kapital zu verwandeln, verzehrt oder verausgabt er ihn umgekehrt als Revenue.

Gegenüber der altadligen Gesinnung, die, wie Hegel richtig sagt, „im Verzehren des Vorhandenen besteht“ und namentlich auch im Luxus persönlicher Dienste sich breitmacht, war es für die bürgerliche Ökonomie entscheidend wichtig, die Akkumulation des Kapitals als erste Bürgerpflicht zu verkünden und unermüdlich zu predigen: man kann nicht akkumulieren, wenn man seine ganze Revenue aufißt, statt einen guten Teil davon zu verausgaben in Werbung zuschüssiger produktiver Arbeiter, die mehr einbringen, als sie kosten.

On the other hand the economists had to contend against the popular prejudice, that confuses capitalist production with hoarding,²⁸ and fancies that accumulated wealth is either wealth that is rescued from being destroyed in its existing form, i.e., from being consumed, or wealth that is withdrawn from circulation.

²⁸ “No political economist of the present day can by saving mean mere hoarding: and beyond this contracted and insufficient proceeding, no use of the term in reference to the national wealth can well be imagined, but that which must arise from a different application of what is saved, founded upon a real distinction between the different kinds of labor maintained by it.” (Malthus, l.c., pp. 38, 39.)

↓ This is how the economists argued against this popular misconception:

Exclusion of money from circulation would also exclude absolutely its self-expansion as capital, while accumulation of a hoard in the shape of commodities would be sheer tomfoolery.^{28a}

^{28a} Thus for instance, Balzac, who so thoroughly studied every shade of avarice, represents the old usurer Gobseck as in his second childhood when he begins to heap up a hoard of commodities.

↓ Although accumulation of commodities as a means of accumulating wealth is foolish (since these commodities lose their use-value, see 289:3/o), one will nevertheless find accumulation of commodities under capitalism. Marx gives three examples: market glut because of overproduction, durable consumer goods, and reserves.

The accumulation of commodities in great masses is the result either of overproduction or of a stoppage of circulation.²⁹ It is true that the popular mind is impressed by the sight, on the one hand, of the mass of goods that are stored up for gradual consumption by the rich,^{29a} and on the other hand, by the formation of reserve stocks; the latter,

Andrerseits hatte sie gegen das Volksvorurteil zu polemisieren, welches die kapitalistische Produktion mit der Schatzbildung verwechselt²⁸ und daher wähnt, akkumulierter Reichtum sei Reichtum, welcher der Zerstörung in seiner vorhandenen Naturalform, also dem Verbrauch entzogen oder auch vor der Zirkulation gerettet werde.

²⁸ „Kein politischer Ökonom der heutigen Zeit kann unter Sparen nur Schatzbildung verstehen: und abgesehen von diesem abgekürzten und ungenügenden Verfahren, kann man sich keinen andren Gebrauch dieses Ausdrucks im Hinblick auf den nationalen Reichtum vorstellen als jenen, der aus der verschiedenen Verwendung des Ersparnten hervorgehen muß und auf einer wirklichen Unterscheidung zwischen den verschiedenen Arten von Arbeit basiert, die davon erhalten werden.“ (Malthus, l.c. p. 38, 39.)

Verschluß des Geldes gegen die Zirkulation wäre grade das Gegenteil seiner Verwertung als Kapital und Warenakkumulation im schatzbildnerischen Sinn reine Narrheit.^{28a}

^{28a} So ist bei Balzac, der alle Schattierungen des Geizes so gründlich studiert hatte, der alte Wucherer Gobseck schon verkindischt, als er anfängt, sich einen Schatz aus aufgehäuften Waren zu bilden.

Akkumulation von Waren in großen Massen ist Resultat einer Zirkulationsstockung oder der Überproduktion.²⁹ Allerdings läuft in der Volksvorstellung einerseits das Bild der im Konsumtionsfonds der Reichen gehäuften, langsam sich verzehrenden Güter unter, andererseits die Vorratbildung, ein Phänomen, das allen Produktionsweisen angehört

a phenomenon that is common to all modes of production, and on which we shall dwell for a moment, when we come to analyse circulation.

²⁹ "Accumulation of stocks . . . non-exchange . . . over-production." (Th. Corbet, l.c., p. 104.)

^{29a} In this sense Necker speaks of the "articles of pomp and magnificence," whose "accumulation has increased with time" and which "the laws of property have assembled together in the hands of a single class of society." (Oeuvres de M. Necker, Paris and Lausanne, 1789, t. ii., p. 291.)

So far Marx has given the justifications for the slogan that all accumulated capital should be converted into wages for productive laborers. Now Marx points out its errors:

736:1/o Classical economy is therefore quite right, when it maintains that the consumption of surplus-products by productive, instead of by unproductive laborers, is a characteristic feature of the process of accumulation. But at this point the mistakes also begin. Adam Smith has made it the fashion, to represent accumulation as nothing more than consumption of surplus-products by productive laborers, which amounts to saying, that the capitalising of surplus-value consists in merely turning surplus-value into labor-power. Let us see what Ricardo, *e.g.*, says:

"It must be understood that all the productions of a country are consumed; but it makes the greatest difference imaginable whether they are consumed by those who reproduce, or by those who do not reproduce another value. When we say that revenue is saved, and added to capital, what we mean is, that the portion of revenue, so said to be added to capital, is consumed by productive instead of unproductive laborers. There can be no greater error than in supposing that capital is increased by non-consumption."³⁰

und wobei wir einen Augenblick in der Analyse des Zirkulationsprozesses verweilen werden.

²⁹ „Akkumulation von Kapitalien . . . Aufhören des Austausches . . . Überproduktion.“ (Th. Corbet, l.c. p. 104.)

[This note is not in any of the German editions, but was included in the French translation of 1872.]

615:1–616:0 Soweit also ist die klassische Ökonomie im Recht, wenn sie den Verzehr von Mehrprodukt durch produktive Arbeiter statt durch unproduktive als charakteristisches Moment des Akkumulationsprozesses betont. Aber hier beginnt auch ihr Irrtum. A. Smith hat es zur Mode gemacht, die Akkumulation bloß als Konsumtion des Mehrprodukts durch produktive Arbeiter oder die Kapitalisierung des Mehrwerts als dessen bloßen Umsatz in Arbeitskraft darzustellen. Hören wir z.B. Ricardo:

„Man muß verstehn, daß alle Produkte eines Landes konsumiert werden; aber es macht den größten Unterschied, den man denken kann, ob sie konsumiert werden durch solche, die einen andren Wert reproduzieren, oder durch solche, die ihn nicht reproduzieren. Wenn wir sagen, daß Revenue erspart und zum Kapital geschlagen wird, so meinen wir, daß der Teil der Revenue, von dem es heißt, er sei zum Kapital geschlagen, durch produktive statt durch unproduktive Arbeiter verzehrt wird. Es gibt keinen größern Irrtum, als zu unterstellen,

³⁰ Ricardo, l.c., p. 163, note.

737:1/o There can be no greater error than that which Ricardo and all subsequent economists repeat after A. Smith, viz., that

„the part of revenue, of which it is said, it has been added to capital, is consumed by productive laborers.“

According to this, all surplus-value that is changed into capital becomes variable capital. So far from this being the case, the surplus-value, like the original capital, divides itself into constant capital and variable capital, into means of production and labor-power. labor-power is the form under which variable capital exists during the process of production. In this process the labor-power is itself consumed by the capitalist while the means of production are consumed by the labor-power in the exercise of its function, labor. At the same time, the money paid for the purchase of the labor-power, is converted into necessities, that are consumed, not by "productive labor," but by the "productive laborer." Adam Smith, by a fundamentally perverted analysis, arrives at the absurd conclusion, that even though each individual capital is divided into a constant and a variable part, the capital of society resolves itself only into variable capital, *i.e.*, is laid out exclusively in payment of wages.

Now Marx gives Smith's erroneous reasoning:

For instance, suppose a cloth manufacturer converts £2,000 into capital. One portion he lays out in buying weavers, the other in woollen yarn, machinery, etc. But the people, from whom he buys the yarn and the machinery, pay for labor with a part of the purchase money, and so on until the whole

daß Kapital durch Nicht-Konsum vermehrt wird."³⁰

³⁰ Ricardo. l.c. p. 163, Note.

616:1 Es gibt keinen größern Irrtum als der dem A. Smith von Ricardo und allen späteren nachgeplauderte, daß

„der Teil der Revenue, von dem es heißt, er sei zum Kapital geschlagen, von produktiven Arbeitern verzehrt wird“.

Nach dieser Vorstellung würde aller Mehrwert, der in Kapital verwandelt wird, zu variablem Kapital. Er teilt sich vielmehr, wie der ursprünglich vorgeschobne Wert, in konstantes Kapital und variables Kapital, in Produktionsmittel und Arbeitskraft. Arbeitskraft ist die Form, worin das variable Kapital innerhalb des Produktionsprozesses existiert. In diesem Prozeß wird sie selbst vom Kapitalisten verzehrt. Sie verzehrt durch ihre Funktion—die Arbeit—Produktionsmittel. Zugleich verwandelt sich das im Ankauf der Arbeitskraft gezahlte Geld in Lebensmittel, die nicht von der „produktiven Arbeit“, sondern vom „produktiven Arbeiter“ verzehrt werden. A. Smith gelangt durch eine grundverkehrte Analyse zu dem abgeschmackten Resultat, daß, wenn auch jedes individuelle Kapital sich in konstanten und variablen Bestandteil teilt, das gesellschaftliche Kapital sich in nur variables Kapital auflöst oder nur in Zahlung von Arbeitslohn verausgabt wird.

Z.B. ein Tuchfabrikant verwandle 2000 Pfd. St. in Kapital. Er legt einen Teil des Geldes im Ankauf von Webern aus, den andern Teil in Wollengarn, Wollenmaschine usw. Aber die Leute, von denen er das Garn und die Maschinerie kauft, zahlen wieder mit einem Teil davon Arbeit usw., bis

£2,000 are spent in the payment of wages, *i.e.*, until the entire product represented by the £2,000 has been consumed by productive laborers.

Now Marx's critique:

It is evident that the whole gist of this argument lies in the words "and so on," which send us from pillar to post. In truth, Adam Smith breaks his investigation off, just where its difficulties begin.³¹

↓ The footnote shows that other economists just repeat the error, instead of thinking them through critically:

³¹ In spite of his "Logic," John St. Mill never even detects such faulty analysis as this when made by his predecessors, an analysis which, even from the bourgeois standpoint of the science, cries out for rectification. In every case he registers with the dogmatism of a disciple, the confusion of his master's thoughts. So here: "The capital itself in the long run becomes entirely wages, and when replaced by the sale of produce becomes wages again."

Question 994 *How did Adam Smith try to prove that all accumulated capital is converted into variable capital? What is wrong with his analysis?*

Marx himself does not exactly break off the analysis but, after emphasizing how complicated it is, refers the reader to *Capital II*.

738:1 The annual process of reproduction is easily understood, so long as we keep in view merely the sum total of the year's production. But every single component of this product must be brought into the market as a commodity, and there the difficulty begins. The movements of the individual capitals, and of the personal revenues, cross and intermingle and are lost in the general change of places, in the circulation of the wealth of society; this dazes the sight, and propounds very complicated problems for solution. In the third part of Book II. I shall give the analysis of the real bearings of the facts.

die ganzen 2000 Pfd.St. in Zahlung von Arbeitslohn verausgabt sind oder das ganze durch die 2000 Pfd.St. repräsentierte Produkt durch produktive Arbeiter verzehrt ist.

Man sieht: die ganze Wucht dieses Arguments liegt in dem Wort „usw.“, das uns von Pontius zu Pilatus schickt. In der Tat, A. Smith bricht die Untersuchung grade da ab, wo ihre Schwierigkeit beginnt.³¹

just repeat the error, instead of thinking them

³¹ Trotz seiner „Logik“ kommt Herr J. St. Mill nirgendswo auch nur solcher fehlerhaften Analyse seiner Vorgänger auf die Sprünge, welche selbst innerhalb des bürgerlichen Horizonts, vom reinen Fachstandpunkt aus, nach Berichtigung schreit. Überall registriert er mit schülermäßigen Dogmatismus die Gedankenwirren seiner Meister. Auch hier: „Auf die Dauer gesehen, löst sich das Kapital selbst völlig in Lohn auf, und wenn es durch den Verkauf des Produkts ersetzt wird, so wird es wieder zu Lohn.“

617:1 Solange man nur den Fonds der Gesamt-Jahresproduktion ins Auge faßt, ist der jährliche Reproduktionsprozeß leicht verständlich. Aber alle Bestandteile der Jahresproduktion müssen auf den Warenmarkt gebracht werden, und da beginnt die Schwierigkeit. Die Bewegungen der Einzelkapitale und persönlichen Revenuen kreuzen, vermengen, verlieren sich in einem allgemeinen Stellenwechsel—der Zirkulation des gesellschaftlichen Reichtums—, der den Blick verwirrt und der Untersuchung sehr verwickelte Aufgaben zu lösen gibt. Im dritten Abschnitt des Zweiten Buches werde ich

die Analyse des wirklichen Zusammenhanges geben.

Now three concluding remarks. ↓ (1) The physiocrats were the first who tried to solve the problem using appropriate means:

It is one of the great merits of the Physiocrats, that in their *Tableau économique* they were the first to attempt to depict the annual production in the shape in which it is presented to us after passing through the process of circulation.³²

—Es ist das große Verdienst der Physiokraten, in ihrem *Tableau économique* zum ersten Mal den Versuch gemacht zu haben, ein Bild der Jahresproduktion zu geben in der Gestalt, in welcher sie aus der Zirkulation hervorgeht.³²

(2) Footnote 32 points to a related problem whose solution was also incorrect:

³² In his description of the process of reproduction, and of accumulation, Adam Smith, in many ways, not only made no advance, but even lost considerable ground, compared with his predecessors, especially by the Physiocrats. Connected with the illusion mentioned in the text, is the really wonderful dogma, left by him as an inheritance to Political Economy, the dogma, that the price of commodities is made up of wages, profit (interest) and rent, *i.e.*, of wages and surplus-value. Starting from this basis, Storch naively confesses, "Il est impossible de résoudre le prix nécessaire dans ses éléments les plus simples." (Storch, *l.c.*, Petersb. Edit., 1815, t. ii., p. 141, note.) A fine science of economy this, which declares it impossible to resolve the price of a commodity into its simplest elements! This point will be further investigated in the seventh part of Book III.

³² A. Smith hat in der Darstellung des Reproduktionsprozesses, daher auch der Akkumulation, nach mancher Seite hin nicht nur keine Fortschritte, sondern entschiedene Rückschritte gemacht im Vergleich zu seinen Vorgängern, namentlich den Physiokraten. Mit seiner im Text erwähnten Illusion hängt das ebenfalls von ihm der politischen Ökonomie vererbte, wahrhaft fabelhafte Dogma zusammen, daß der Preis der Waren aus Arbeitslohn, Profit (Zins) und Grundrente, also bloß aus Arbeitslohn und Mehrwert zusammengesetzt ist. Von dieser Basis ausgehend, gesteht wenigstens Storch naiv: „Es ist unmöglich, den notwendigen Preis in seine einfachsten Elemente aufzulösen.“ (Storch, *l.c.*, Petersb., Edit. 1815, t. II, p. 141, Note.) Eine schöne ökonomische Wissenschaft, die es für unmöglich erklärt, den Preis der Waren in seine einfachsten Elemente aufzulösen! Das Nähere hierüber wird man erörtern finden im 3. Abschn. des Zweiten und im 7. Abschn. des Dritten Buchs.

(3) Political economists exploit this error for their pro-capitalist apologetics.

738:2 For the rest, it is a matter of course, that Political Economy, acting in the interests of the capitalist class, has not failed to exploit the doctrine of Adam Smith, *viz.*, that the whole of that part of the surplus-product which is converted into capital, is consumed by the working-class.

617:2 Es versteht sich übrigens von selbst, daß die politische Ökonomie nicht verfehlt hat, im Interesse der Kapitalistenklasse A. Smiths Satz auszubeuten: daß der ganze in Kapital verwandelte Teil des Nettoprodukts von der Arbeiterklasse verzehrt wird.

4. Division of Surplus-Value into Capital and Revenue. The Abstinence Theory

Chapter Twenty-Three and the beginning of chapter Twenty-Four discussed the two limiting cases for the division of surplus-value: either none of it is reinvested, or all of it is reinvested. Actual capitalism is somewhere in-between:

738:2 In the preceding chapter, we treated surplus-value (or the surplus-product) solely as a fund for supplying the individual consumption of the capitalist. In the present chapter we have, so far, treated it solely as a fund for accumulation. It is, however, neither the one nor the other, but is both together. One portion is consumed by the capitalist as revenue,³³ the other is employed as capital, is accumulated.

³³ The reader will notice, that the word revenue is used in a double sense: first, to designate surplus-value so far as it is the fruit periodically yielded by capital; secondly, to designate the part of that fruit which is periodically consumed by the capitalist, or added to the fund that supplies his private consumption. I have retained this double meaning because it harmonises with the language of the English and French economists.

617:3/o Im vorigen Kapitel betrachteten wir den Mehrwert, resp. das Mehrprodukt, nur als individuellen Konsumtionsfonds des Kapitalisten, in diesem Kapitel bisher nur als einen Akkumulationsfonds. Er ist aber weder nur das eine noch das andre, sondern beides zugleich. Ein Teil des Mehrwerts wird vom Kapitalisten als Revenue verzehrt,³³ ein anderer Teil als Kapital angewandt oder akkumuliert.

³³ Der Leser wird bemerken, daß das Wort Revenue doppelt gebraucht wird, erstens um den Mehrwert als periodisch aus dem Kapital entspringende Frucht, zweitens um den Teil dieser Frucht zu bezeichnen, der vom Kapitalisten periodisch verzehrt oder zu seinem Konsumtionsfonds geschlagen wird. Ich behalte diesen Doppelsinn bei, weil er mit dem Sprachgebrauch der englischen und französischen Ökonomen harmonisiert.

4.a. [The Capitalist's Decision to Accumulate]

738:3/o Given the mass of surplus-value, then, the larger the one of these parts, the smaller is the other. *Caeteris paribus*, the ratio of these parts determines the magnitude of the accumulation.

The question arises here who decides how much will be accumulated, and how much consumed. ↓ Answer: the capitalist. It is an individual decision, not an economic necessity.

But it is by the owner of the surplus-value, by the capitalist alone, that the division is made. It is an act of his will.

↑ Does this mean that the rate of capitalization, i.e., the proportion of the surplus-value that is converted back into capital, is determined by the individual capitalists? Perhaps it

618:1 Bei gegebener Masse des Mehrwerts wird der eine dieser Teile um so größer sein, je kleiner der andre ist. Alle andern Umstände als gleichbleibend genommen, bestimmt das Verhältnis, worin diese Teilung sich vollzieht, die Größe der Akkumulation.

Wer aber diese Teilung vornimmt, das ist der Eigentümer des Mehrwerts, der Kapitalist. Sie ist also sein Willensakt.

would be better to say that it is a decision made collectively by the capitalist class as a whole.

That part of the tribute exacted by him which he accumulates, is said to be saved by him, because he does not eat it, i.e., because he performs the function of a capitalist, and enriches himself.

739:1 Only to the extent that the capitalist is personified capital does he have historical value and the historic right to exist—which, to use an expression of the witty Lichnowsky, “hasn’t got no date.”

↑ Presumably Marx calls Lichnowski “witty” because the double negation “hasn’t got no date” means that capitalism’s right to exist is *not* eternal but historically transitory.

↓ Dilemma: capitalist consumption negates capitalism’s albeit transitory historical mission:

And only to the extent that the capitalist is personified capital is the necessity for his own transitory existence implied in the transitory necessity for the capitalist mode of production. But, so far as he is personified capital, it is not values in use and the enjoyment of them, but exchange-value and its augmentation, that spur him into action. Fanatically bent on making value expand itself, he ruthlessly forces the human race to produce for production’s sake; he thus forces the development of the productive powers of society, and creates those material conditions, which alone can form the real basis of a higher form of society, a society in which the full and free development of every individual forms the ruling principle.

↑ Two things to note here: (a) the capitalist, in his obsession with value, drives mankind, i.e., the drive comes from the individual, not the social relation. (b) Socialism possible only on the basis of very advanced means of production. ↓ Now a comparison between miser and capitalist similar to the earlier one in 254:1.

Only as personification of capital is the capitalist respectable. As such, he shares with the miser the absolute drive for enrichment. But that which, in the case of the miser, ap-

Von dem Teil des von ihm erhobnen Tributs, den er akkumuliert, sagt man, er spare ihn, weil er ihn nicht aufißt, d.h., weil er seine Funktion als Kapitalist ausübt, nämlich die Funktion, sich zu bereichern.

618:2 Nur soweit der Kapitalist personifiziertes Kapital ist, hat er einen historischen Wert und jenes historische Existenzrecht, das, wie der geistreiche Lichnowski sagt, keinen Datum nicht hat.

Nur soweit steckt seine eigne transitorische Notwendigkeit in der transitorischen Notwendigkeit der kapitalistischen Produktionsweise. Aber soweit sind auch nicht Gebrauchswert und Genuß, sondern Tauschwert und dessen Vermehrung sein treibendes Motiv. Als Fanatiker der Verwertung des Werts zwingt er rücksichtslos die Menschheit zur Produktion um der Produktion willen, daher zu einer Entwicklung der gesellschaftlichen Produktivkräfte und zur Schöpfung von materiellen Produktionsbedingungen, welche allein die reale Basis einer höheren Gesellschaftsform bilden können, deren Grundprinzip die volle und freie Entwicklung jedes Individuums ist.

Nur als Personifikation des Kapitals ist der Kapitalist respektabel. Als solche teilt er mit dem Schatzbildner den absoluten Bereicherungstrieb. Was aber bei diesem als indi-

pears as an individual mania, is, in the capitalist, the effect of the social mechanism in which he is but one of the drive-wheels.

Question 995 Describe as well as you can the social mechanism of which the capitalist is merely a drive-wheel.

↑ Marx has argued here that accumulation, as opposed to consumption, is a necessity for the individual capitalists, because the accumulation of capital is capitalism's historical mission. How does this necessity enforce itself? If capitalists do not accumulate, then they fail to do that what justifies capitalism historically, which exposes the capitalist system to the tendency to be swept away as a historically redundant social formation. This is therefore not a law which is enforced by capitalist competition.

↓ Marx then adds that *in addition*, the development of the capitalist mode of production makes accumulation a necessity (and this is, indeed, a law enforced by competition, as we know it generally from the laws of capitalism, see 433:1).

Besides, the development of capitalist production makes it constantly necessary to keep increasing the amount of the capital laid out in a given industrial undertaking, and competition makes the immanent laws of capitalist production to be felt by each individual capitalist, as external coercive laws. It compels him to keep constantly extending his capital, in order to preserve it, but extend it he cannot, except by means of progressive accumulation.

↑ Nice passage about competition. ↓ However this social mission is in conflict with the capitalist's human needs:

739:2/o So far, therefore, as his actions are a mere function of capital—endowed as capital is, in his person, with consciousness and a will—his own private consumption is a robbery perpetrated on accumulation, just as in book-keeping by double entry, the private expenditure of the capitalist is placed on the debtor side of his account against his capital.

By promoting accumulation ↑ the capitalist foregoes individual consumption ↓ but gains power!

viduelle Manie erscheint, ist beim Kapitalisten Wirkung des gesellschaftlichen Mechanismus, worin er nur ein Triebrad ist.

Außerdem macht die Entwicklung der kapitalistischen Produktion eine fortwährende Steigerung des in einem industriellen Unternehmen angelegten Kapitals zur Notwendigkeit, und die Konkurrenz herrscht jedem individuellen Kapitalisten die immanenten Gesetze der kapitalistischen Produktionsweise als äußere Zwangsgesetze auf. Sie zwingt ihn, sein Kapital fortwährend auszu dehnen, um es zu erhalten, und ausdehnen kann er es nur vermitteltst progressiver Akkumulation.

619:1 Soweit daher sein Tun und Lassen nur Funktion des in ihm mit Willen und Bewußtsein begabten Kapitals, gilt ihm sein eigner Privatkonsum als ein Raub an der Akkumulation seines Kapitals, wie in der italienischen Buchhaltung Privatausgaben auf der Debetseite des Kapitalisten gegen das Kapital figurieren.

To accumulate, is to conquer the world of social wealth, to increase the mass of human beings exploited by him, and thus to extend both the direct and the indirect sway of the capitalist.³⁴

↓ The footnote brings a long quote from Martin Luther about the usurer (capitalist):

³⁴ Taking the usurer, that old-fashioned but ever renewed specimen of the capitalist for his text, Luther shows very aptly that the love of power is an element in the desire to get rich. "The heathen were able, by the light of reason, to conclude that a usurer is a double-dyed thief and murderer. We Christians, however, hold them in such honour, that we fairly worship them for the sake of their money ... Whoever eats up, robs, and steals the nourishment of another, that man commits as great a murder (so far as in him lies) as he who starves a man or utterly undoes him. Such does a usurer, and sits the while safe on his stool, when he ought rather to be hanging on the gallows, and be eaten by as many ravens as he has stolen guilders, if only there were so much flesh on him, that so many ravens could stick their beaks in and share it. Meanwhile, we hang the small thieves ... Little thieves are put in the stocks, great thieves go flaunting in gold and silk ... Therefore is there, on this earth, no greater enemy of man (after the devil) than a gripe-money, and usurer, for he wants to be God over all men. Turks, soldiers, and tyrants are also bad men, yet must they let the people live, and Confess that they are bad, and enemies, and do, nay, must, now and then show pity to some. But a usurer and money-glutton, such a one would iiaive the whole world perish of hunger and thirst, misery and want, so far as in him lies, so that he may have all to himself, and every one may receive from him as from a God, and be his serf for ever. To wear fine cloaks, golden chains, Tings, to wipe his mouth, to be deemed and taken for a worthy, pious man ... Usury is a great huge monster, like a werewolf, who lays waste all, more than any Cacus, Gerion or Antus. And yet decks himself out, and would be thought pious, so that people

Die Akkumulation ist Eroberung der Welt des gesellschaftlichen Reichtums. Sie dehnt mit der Masse des exploitierten Menschenmaterials zugleich die direkte und indirekte Herrschaft des Kapitalisten aus.³⁴

³⁴ In der altmodischen, wenn auch stets erneuten, Form des Kapitalisten im Wucherer, veranschaulicht Luther sehr gut die Herrschsucht als Element des Bereicherungstriebes. „Die Heiden haben können aus der Vernunft rechnen, dass ein Wucherer, sey ein vierfältiger Dieb und Mörder. Wir Christen aber halten sie in solchen ehren, das wir sie schier anbeten umb ihres Geldes willen ... Wer einem andern seine Narung aussauget, raubet und stilet, der thut eben so grossen Mord (so viel an jm ligt) als der einen Hungers sterbet und zu Grunde verterbet. Solches thut aber ein Wucherer, und sitzt die weil auf seinem Stuel sicher, so er billicher hangen solt am Galgen, und von soviel Raben gefressen werden, als er gülden gestolen hatte, wo anders so viel fleisches an jm were, das so viel Raben sich drein stücken und teilen kündten. Diweil hanget man die kleinen Diebe ... Kleine Diebe ligen in Stöcken gefangen, grosse Diebe gehn in gold und seiden prangen ... Also ist auch kein grösser Menschenfeind auff Erden (nach dem Teuffel) denn ein Geitshals und Wucherer, denn er will über alle menschen Gott sein. Türcken, Krieger, Tyrannen sind auch böse Menschen, doch müssen sie lassen die Leute leben und bekennen, dass sie Böse und Feinde sind. Und können, ja müssen wol zu weilen sich über etliche erbarmen. Aber ein Wucherer und Geitzwanst, der wilt das alle Welt im müsste in Hunger und Durst, Trauer und Not verderben, so viel an jm ist, auff das ers alles allein möcht haben, und jedermann von jm, als von einem Gott empfangen und ewiglich sein Leibeigener sein. Schauben, güldne Kette, Ringe tragen, das maul wischen, sich für einen theuren, frommen Mann lassen ansehen und rühmen ... Wucher ist ein gros und ungeheur monstrum, wie ein Beerwolff, der alles wüстет, mehr den kein Ca-

may not see where the oxen have gone, that he drags backwards into his den. But Hercules shall hear the cry of the oxen and of his prisoners, and shall seek Cacus even in cliffs and among rocks, and shall set the oxen loose again from the villain. For Cacus means the villain that is a pious usurer, and steals, robs, eats everything. And will not own that he has done it, and thinks no one will find him out, because the oxen, drawn backwards into his den, make it seem, from their foot-prints, that they have been let out. So the usurer would deceive the world, as though he were of use and gave the world oxen,- which he, however, rends, and eats all alone ... And since we break on the wheel, and behead highwaymen, murderers and housebreakers, how much more ought we to break on the wheel and kill ... hunt down, curse and behead all usurers." (Martin Luther, l.c.)

↑ Luther condemns the usurer more than the common criminal, and he compares the usurer's piety with Hercules's trick of pulling the cattle into the cave backwards. ↓ But accumulation and power are not the human needs of the capitalist:

740:1/o But original sin is at work everywhere. As capitalist production, accumulation, and wealth, become developed, the capitalist ceases to be the mere incarnation of capital. He feels compassion for for his own Adam, and his education gradually enables him to smile at the rage for asceticism, as a mere prejudice of the old-fashioned miser.

The aphorism "but original sin is at work everywhere" is apparently meant approvingly! Just as humans cannot remain subordinate to god they can also not remain subordinate to capital. Capital, which overpowers everything, does not subordinate the capitalist.

Question 996 *What does Marx mean with: "but original sin is at work everywhere"?*

↓ Next, Marx distinguishes between the classical and the modern capitalist:

While the capitalist of the classical type brands individual consumption as a sin against his function, and as "abstinence" from accumulating, the modernised capitalist is capable of looking upon accumulation

cus, Gerion oder Antus. Und schmückt sich doch und wil fromm sein, das man nicht sehen sol, wo die Ochsen, die er rücklings in sein Loch zieht, hinkommen. Aber Hercules sol der Ochsen und der Gefangenen Geschrey hören und den Cacus suchen auch in Klippen und Felsen, die Ochsen wider lösen, von dem Bösewicht. Denn Cacus heisst ein Bösewicht, der ein frommer Wucherer ist, stilet, raubet, frisst alles. Und wils doch nicht gethan haben, und sol ja nimand finden, weil die Ochsen rücklings in sein Loch gezogen, schein und fusstapffen geben, als seien sie herausgelassen. Also wil der Wucherer auch die Welt effen, als nütze er und gebe der welt ochsen, so er sie doch zu sich allein reisst und frisst ... Und so man die Strassenräuber, Mörder und Beuheder, redert und köpffet, wie viel mehr solt man alle Wucherer redern und edern ... verjagen, verfluchen und köpffen." (Martin Luther, l.c.)

619:2/o Aber die Erbsünde wirkt überall. Mit der Entwicklung der kapitalistischen Produktionsweise, der Akkumulation und des Reichtums, hört der Kapitalist auf, bloße Inkarnation des Kapitals zu sein. Er fühlt ein „menschliches Rühren“ für seinen eignen Adam und wird so gebildet, die Schwärmerei für Askese als Vorurteil des altmodischen Schatzbildners zu belächeln.

Während der klassische Kapitalist den individuellen Konsum als Sünde gegen seine Funktion und „Enthaltung“ von der Akkumulation brandmarkt, ist der modernisierte Kapitalist imstande, die Akkumulation als

as "abstinence" from pleasure.

"Two souls, alas, do dwell within his breast;
The one is ever parting from the other."

↑ The word "capable" is meant approvingly here rather than ironically. Marx means what he says, even if he uses phrases which usually do not mean what they say. The capitalist's decision to consume rather than accumulate is his personal emancipation from the imperatives of capital.

Question 997 *Is a capitalist free to decide whether to expand his business, and how much of his profit to use for personal consumption? Which mechanisms, if any, constrain him or her?*

741:1 At the historical dawn of capitalist production,—and every capitalist upstart has personally to go through this historical stage—avarice, and desire to get rich, are the ruling passions.

↑ I.e., at the beginning, capitalists have to be frugal. ↓ But further developed capitalism creates quick opportunities to get rich for which having credit is more important than having capital, and a certain ostentatious prodigality is a good means to get credit. I.e., the capitalist is motivated to consume not only by capitalism's newly created enjoyments but also by profit calculations.

But the progress of capitalist production not only creates a world of delights; it opens, in speculation and the credit system, a thousand sources of sudden enrichment. When a certain stage of development has been reached, a conventional degree of prodigality, which is also an exhibition of wealth, and consequently a source of credit, becomes a business necessity to the "unfortunate" capitalist. Luxury enters into capital's expenses of representation.

↓ Besides, there are also general reasons why the capitalist is not as frugal as the miser:

In any case, unlike the miser, the capitalist does not get rich in proportion to his personal labor and restricted consumption, but at the same rate as he squeezes out the labor-power of others, and enforces on the laborer

„Entsagung“ seines Genußtriebs aufzufassen.

„Zwei Seelen wohnen, ach! in seiner Brust,
die eine will sich von der andren trennen!“

620:1 In den historischen Anfängen der kapitalistischen Produktionsweise, und jeder kapitalistische Parvenu macht dies historische Stadium individuell durch—herrschen Bereicherungstrieb und Geiz als absolute Leidenschaften vor.

Aber der Fortschritt der kapitalistischen Produktion schafft nicht nur eine Welt von Genüssen. Er öffnet mit der Spekulation und dem Kreditwesen tausend Quellen plötzlicher Bereicherung. Auf einer gewissen Entwicklungshöhe wird ein konventioneller Grad von Verschwendung, die zugleich Schaustellung des Reichtums und daher Kreditmittel ist, sogar zu einer Geschäftsnötwendigkeit des „unglücklichen“ Kapitalisten. Der Luxus geht in die Repräsentationskosten des Kapitals ein.

Ohnehin bereichert sich der Kapitalist nicht, gleich dem Schatzbildner, im Verhältnis seiner persönlichen Arbeit und seines persönlichen Nichtkonsums, sondern im Maß, worin er fremde Arbeitskraft aussaugt und dem

abstinence from all life's enjoyments. Although, therefore, the prodigality of the capitalist never possesses the bona-fide character of the open-handed feudal lord's prodigality, but, on the contrary, has always lurking behind it the most sordid avarice and the most anxious calculation, yet his expenditure grows with his accumulation, without the one necessarily restricting the other.

↑ Although not as rampant as in feudalism, prodigality is not incompatible with capitalism. ↓ For the individual capitalist this means that he has to make the Faustian decision between accumulation and enjoyment.

But along with this growth, there is at the same time developed in his breast, a Faustian conflict between the passion for accumulation, and the desire for enjoyment.

↓ Next Marx gives a historical example how the division of surplus-value between capital and revenue changed in Manchester.

741:2/o Dr. Aikin says in a work published in 1795: "The trade of Manchester may be divided into four periods. First, when manufacturers were obliged to work hard for their livelihood."

They enriched themselves chiefly by robbing the parents, whose children were bound as apprentices to them; the parents paid a high premium, while the apprentices were starved. On the other hand, the average profits were low, and to accumulate, extreme parsimony was requisite. They lived like misers and were far from consuming even the interest on their capital.

"The second period, when they had begun to acquire little fortunes, but worked as hard as before,"—for direct exploitation of labor costs labor, as every slave-driver knows—"and lived in as plain a manner as before ... The third, when luxury began, and the trade was pushed by sending out riders for orders into every

Arbeiter Entsagung aller Lebensgenüsse aufzwingt. Obgleich daher die Verschwendung des Kapitalisten nie den bona fide Charakter der Verschwendung des flotten Feudalherrn besitzt, in ihrem Hintergrund vielmehr stets schmutzigster Geiz' und ängstlichste Berechnung lauern, wächst dennoch seine Verschwendung mit seiner Akkumulation, ohne daß die eine die andre zu beabbruchen braucht.

Damit entwickelt sich gleichzeitig in der Hochbrust des Kapitalindividuums ein faustischer Konflikt zwischen Akkumulations- und Genußtrieb.

620:2–621:2 „Die Industrie von Manchester“, heißt es in einer Schrift, die Dr. Aikin 1795 veröffentlichte, „kann in vier Perioden geteilt werden. In der ersten waren die Fabrikanten gezwungen, hart für ihren Lebensunterhalt zu arbeiten.“

Sie bereicherten sich besonders durch Bestehlung der Eltern, die ihnen Jungen als apprentices (Lehrlinge) zuwiesen und dafür schwer blechen mußten, während die Lehrlinge ausgehungert wurden. Andererseits waren die Durchschnittsprofite niedrig, und die Akkumulation verlangte große Sparsamkeit. Sie lebten wie Schatzbildner und verzehrten bei weitem nicht einmal die Zinsen ihres Kapitals.

„In der zweiten Periode hatten sie begonnen, kleine Vermögen zu erwerben, arbeiteten aber ebenso hart als zuvor“, denn die unmittelbare Exploitation der Arbeit kostet Arbeit, wie jeder Sklaventreiber weiß, „und lebten nach wie vor in demselben frugalen Stil... In der dritten Periode begann der Luxus, und das

market town in the Kingdom ... It is probable that few or no capitals of £3,000 to £4,000 acquired by trade existed here before 1690. However, about that time, or a little later, the traders had got money beforehand, and began to build modern brick houses, instead of those of wood and plaster." Even in the early part of the 18th century, a Manchester manufacturer, who placed a pint of foreign wine before his guests, exposed himself to the remarks and headshakings of all his neighbours.

Before the rise of machinery, a manufacturer's evening expenditure at the public house where they all met, never exceeded sixpence for a glass of punch, and a penny for a screw of tobacco. It was not till 1758, and this marks an epoch, that a person actually engaged in business was seen with an equipage of his own. "The fourth period," the last 30 years of the 18th century, "is that in which expense and luxury have made great progress, and was supported by a trade extended by means of riders and factors through every part of Europe."³⁵ What would the good Dr. Aikin say if he could rise from his grave and see the Manchester of to-day?

³⁵ Dr. Aikin: "Description of the Country from 30 to 40 miles round Manchester." Lond., 1795, p. 182, sq.

Geschäft wurde ausgedehnt durch Aussendung von Reitern" (berittenen Commis voyageurs) „für Ordres in jeder Marktstadt des Königreichs. Es ist wahrscheinlich, daß wenige oder keine Kapitale von 3000 bis 4000 Pfd.St., in der Industrie erworben, vor 1690 existierten. Um diese Zeit jedoch oder etwas später hatten die Industriellen schon Geld akkumuliert und begannen steinerne Häuser statt der von Holz und Mörtel aufzuführen. ... Noch in den ersten Dezennien des 18. Jahrhunderts setzte sich ein Manchester Fabrikant, der eine Pint fremden Weins seinen Gästen vorsetzte, den Glossen und dem Kopfschütteln aller seiner Nachbarn aus.“

Vor dem Aufkommen der Maschinerie betrug der abendliche Konsum der Fabrikanten in den Kneipen, wo sie zusammenkamen, nie mehr als 6 d. für ein Glas Punsch und 1 d. für eine Rolle Tabak. Erst 1758, und dies macht Epoche, sah man „eine im Geschäft wirklich engagierte Person mit eigner Equipage!“ „Die vierte Periode“, das letzte Drittel des 18. Jahrhunderts, „ist die von großem Luxus und Verschwendung, unterstützt durch die Ausdehnung des Geschäfts.“³⁵ Was würde der gute Dr. Aikin sagen, wenn er heutzutage in Manchester auferstände!

³⁵ Dr. Aikin, „Description of the Country from 30 to 40 miles round Manchester“ Lond. 1795, p. [181], 182 sqq., [188].

Question 998 *How was surplus-value divided into capital and revenue in the different historical periods of capitalism?*

4.b. [Literature Review about Decision to Accumulate]

[Classical Economists]

The *Classical* economists make themselves the mouthpieces of the historical mission of capital: they consider both capitalists and workers as the engines of social progress. Workers have to work (the Classical economists do not deny that wealth comes from the workers), but capitalists have to accumulate.

742:1/o Accumulate, accumulate! That is Moses and the prophets! "Industry furnishes the material which saving accumulates."³⁶ Therefore, save, save, *i.e.*, reconvert the greatest possible portion of surplus-value, or surplus-product into capital! Accumulation for accumulation's sake, production for production's sake: by this formula classical economy expressed the historical mission of the bourgeoisie, and did not for a single instant deceive itself over the birth-throes of wealth.³⁷ But what avails lamentation in the face of historical necessity? If to classical economy, the proletarian is but a machine for the production of surplus-value; on the other hand, the capitalist is in its eyes only a machine for the conversion of this surplus-value into additional capital. Political Economy takes the historical function of the capitalist in bitter earnest.

³⁶ A. Smith, *I.c.*, bk. II., ch. III.

³⁷ Even J. B. Say says: "Les àpargnes des riches se font aux dépens des pauvres." "The Roman proletarian lived almost entirely at the expense of society... It can almost be said that modern society lives at the expense of the proletarians, on what it keeps out of the remuneration of labor." (Sismondi: "Études, etc.," t. i., p. 24.)

621:3–622:3 Akkumuliert, Akkumuliert! Das ist Moses und die Propheten! „Die Industrie liefert das Material, welches die Sparsamkeit akkumuliert.“³⁶ Also spart, spart, d.h., rückverwandelt möglichst großen Teil des Mehrwerts oder Mehrprodukts in Kapital! Akkumulation um der Akkumulation, Produktion um der Produktion willen, in dieser Formel sprach die klassische Ökonomie den historischen Beruf der Bourgeoisperiode aus. Sie täuschte sich keinen Augenblick über die Geburtswehen des Reichtums,³⁷ aber was nützt der Jammer über historische Notwendigkeit? Wenn der klassischen Ökonomie der Proletarier nur als Maschine zur Produktion von Mehrwert, gilt ihr aber auch der Kapitalist nur als Maschine zur Verwandlung dieses Mehrwerts in Mehrkapital. Sie nimmt seine historische Funktion in bitterm Ernst.

³⁶ A. Smith, *I.c.*, b. II, ch. III, [p. 367].

³⁷ Selbst J. B. Say sagt: „Die Ersparnisse der Reichen werden auf Kosten der Armen gemacht.“ „Der römische Proletarier lebte fast ganz auf Kosten der Gesellschaft... Man könnte fast sagen, daß die moderne Gesellschaft auf Kosten der Proletarier lebt, von dem Teil, den sie auf Belohnung der Arbeit ihnen entzieht.“ (Sismondi, „Études etc.“, t. I, p. 24.)

[Malthus]

Malthus assigns luxury consumption to landed aristocracy, state, and church, in order to keep those who accumulate separate from those who consume:

In order to charm out of his bosom the awful conflict between the desire for enjoyment and the chase after riches, Malthus, about the year 1820, advocated a division of labor, which assigns to the capitalist actually engaged in production, the business of accumulating, and to the other sharers in surplus-value, to the landlords, the place-men, the beneficed clergy, etc., the business of spending. It is of the highest importance, he says, "to keep separate the passion for expenditure and the passion for accumulation."³⁸

³⁸ Malthus, *I.c.*, pp. 319, 320.

However the spokespersons of the capitalists did not like this—not because the capitalists wanted to consume, but because this does not give maximal production:

The capitalists having long been good liver and men of the world, uttered loud cries. What, exclaimed one of their spokesmen, a disciple of Ricardo, Mr. Malthus preaches high rents, heavy taxes, etc., so that the pressure of the spur may constantly be kept on the industrious by unproductive consumers! By all means, production, production on a constantly increasing scale, runs the shibboleth; but

"production will, by such a process, be far more curbed in than spurred on. Nor is it quite fair thus to maintain in idleness a number of persons, only to pinch others, who are likely, from their characters, if you can force them to work, to work with success."³⁹

³⁹ "An Inquiry into those Principles Respecting the Nature of Demand, etc.," p. 67.

Capitalists will not produce maximally if they are "pinched," but workers apparently need

Um seinen Busen vor dem unheilvollen Konflikt zwischen Genußtrieb und Bereicherungstrieb zu feien, verteidigte Malthus, im Anfang der zwanziger Jahre dieses Jahrhunderts, eine Teilung der Arbeit, welche dem wirklich in der Produktion begriffenen Kapitalisten das Geschäft der Akkumulation, den andren Teilnehmern am Mehrwert, der Landaristokratie, Staats-, Kirchenpfündnern usw., das Geschäft der Verschwendung zuweist. Es ist von der höchsten Wichtigkeit, sagt er, „die Leidenschaft für Ausgabe und die Leidenschaft für Akkumulation (the passion for expenditure and the passion for accumulation) getrennt zu halten“³⁸.

³⁸ Malthus, *I.c.* p. 319, 320.

Die Herrn Kapitalisten, seit lange in Lebe- und Weltmänner verwandelt, schrien auf. Was, rief einer ihrer Wortführer, ein Ricardianer, Herr Malthus predigt hohe Grundrenten, hohe Steuern usw., um dem Industriellen einen fortwährenden Stachel durch unproduktive Konsumenten aufzudrücken! Allerdings Produktion, Produktion auf stets erweiterter Stufenleiter, lautet das Schibboleth, aber

„Produktion wird durch einen solchen Prozeß weit mehr gehemmt als gefördert. Auch ist es nicht ganz billig (nor is it quite fair), eine Anzahl Personen so im Müßiggang zu erhalten, nur um andre zu kneipen, aus deren Charakter man schließen darf (who are likely, from their characters), daß, wenn ihr sie zu funktionieren zwingen könnt, sie mit Erfolg funktionieren.“³⁹

³⁹ „An Inquiry into those principles respecting the Nature of Demand etc.“, p. 67.

this pinching:

743:0b Unfair as he finds it to spur on the industrial capitalist, by depriving his bread of its butter, yet he thinks it necessary to reduce the laborer's wages to a minimum "to keep him industrious." Nor does he for a moment conceal the fact, that the appropriation of unpaid labor is the secret of surplus-value.

"Increased demand on the part of the laborers means nothing more than their willingness to take less of their own product for themselves, and leave a greater part of it to their employers; and if it be said, that this begets glut, by lessening consumption" (on the part of the laborers), "I can only reply that glut is synonymous with large profits."⁴⁰

⁴⁰ l.c., p. 59.

622:2 So unbillig er es findet, den industriellen Kapitalisten zur Akkumulation zu stacheln, indem man ihm das Fett von der Suppe weggchöpft, so notwendig dünkt ihm, den Arbeiter möglichst auf den Minimallohn zu beschränken, „um ihn arbeitssam zu erhalten“. Auch verheimlicht er keinen Augenblick, daß Aneignung unbezahlter Arbeit das Geheimnis der Plusmacherei ist.

„Vermehrte Nachfrage von Seite der Arbeiter meint durchaus nichts als ihre Geneigtheit, weniger von ihrem eignen Produkt für sich selbst zu nehmen und einen größeren Teil davon ihren Anwendern zu überlassen; und wenn man sagt, daß dies, durch Verminderung der Konsumtion“ (auf seiten der Arbeiter) „glut“ (Marktüberfüllung, Überproduktion) „erzeugt, so kann ich nur antworten, daß glut synonym mit hohem Profit ist.“⁴⁰

⁴⁰ l.c. p. 59.

[Abstinence Theory]

But in face of the resistance of the proletariat, the economists, who previously had taken the side of the capitalists in the conflict between capitalists and idle landowners, turn into apologists for capital.

743:1/oo The learned disputation, how the booty pumped out of the laborer may be divided, with most advantage to accumulation, between the industrial capitalist and the rich idler, was hushed in face of the revolution of July. Shortly afterwards, the town proletariat at Lyons sounded the tocsin of revolution, and the country proletariat in England began to, set fire to farm-yards and corn-stacks. On this side of the Channel Owenism began to spread; on the other side, St. Simonism and Fourierism. The hour of vulgar economy had struck.

622:3/oo Der gelehrte Zank, wie die dem Arbeiter ausgepumpte Beute förderlichst für die Akkumulation zu verteilen sei zwischen industriellem Kapitalist und müßigem Grundeigentümer usw., verstummte vor der Julirevolution. Kurz nachher läutete das städtische Proletariat die Sturmglocke zu Lyon und ließ das Landproletariat den roten Hahn in England fliegen. Diesseits des Kanals grassierte der Owenismus, jenseits St.-Simonismus und Fourierismus. Die Stunde der Vulgärökonomie hatte geschlagen.

Question 999 What is the difference between classical and vulgar economists? (Compare also the afterword to the second German edition, pp. 14–15 of vol. 1 of *Capital*.)

The “vulgar economists” take the opposite point of view of the classical economists. Instead of the duty to accumulate they emphasize the capitalist's right not to accumulate. The capitalist becomes the abstaining saint.

Exactly a year before Nassau W. Senior discovered at Manchester, that the profit (including interest) of capital is the product of the last hour of the twelve, he had announced to the world another discovery. “I substitute,” he proudly says, “for the word capital, considered as an instrument of production, the word abstinence.” An unparalleled sample this, of the discoveries of vulgar economy! It substitutes for an economic category, a sycophantic phrase—*voilà tout*.

Grade ein Jahr, bevor Nassau W. Senior zu Manchester ausfind, daß der Profit (inkl. Zins) des Kapitals das Produkt der unbezahlten „letzten zwölften Arbeitsstunde“ ist, hatte er der Welt eine andre Entdeckung angekündigt. „Ich“, sagte er feierlich, „ich ersetze das Wort Kapital, als Produktionsinstrument betrachtet, durch das Wort Abstinenz (Enthaltung).“⁴¹ Ein unübertroffenes Muster dies von den „Entdeckungen“ der Vulgärökonomie! Sie ersetzt eine ökonomische Kategorie durch eine sykopphantische Phrase. Voila tout.

That profits should come from not doing something is fundamentally at odds with Marx's brand of realism. Value is a positive “real” entity because it has real effects. These effects must come from something, they cannot come from *not* doing something. This is so obvious to Marx that he does not feel the need to spell it out in so many words. But the footnotes bring quotes where he finds this thought formulated in the literature. ↓ Cazenove's formulation probably found Marx's full approval:

⁴¹ (Senior, “Principes fondamentaux de l'Écon. Pol.” trad. Arrivabene. Paris, 1836, p. 308.) This was rather too much for the adherents of the old classical school. “Mr. Senior has substituted for it” (the expression Labor and Profit) “the expression Labor and Abstinence. Abstinence is a mere negation. It is not the abstinence, but the *use* of the capital productively, which is the cause of profits.” (John Cazenove, [Mal53, p. 130, Note].)

⁴¹ Senior, „Principes fondamentaux de l'Écon. Pol.“ trad. Arrivabene, Paris 1836, p. 309. Dies war den Anhängern der alten klassischen Schule doch etwas zu toll. „Herr Senior schiebt dem Ausdruck Arbeit und Kapital den Ausdruck Arbeit und Abstinenz unter ... Abstinenz ist eine bloße Negation. Es ist nicht die Abstinenz, sondern der Gebrauch des produktiv verwandten Kapitals, welcher die Quelle des Profits bildet.“ (John Cazenove, l.c. p. 130, Note.)

All English translations of *Capital* which I consulted say “it is not capital” where Cazenove's original footnote and Marx's German

translation of it say “it is not abstinence.” This translation error is in [Mar90, p. 517], [Mar96, p. 582], [Mar30, p. 656], and

[Mar76, p. 744]. It is amazing that this obvious error has not been caught.

Marx's German translation of Cazenove's footnote is somewhat abbreviated, and the English version given here is a re-translation of Marx's abbreviated version back into English. The original text of Cazenove's footnote in [Mal53, p. 130] is the following:

The expression *Labour and Profits* is liable to this objection, that the two are not correlative terms,—labour being an *agent* and profits a *result*; the one a *cause*, the other a *consequence*. On this account Mr. Senior has substituted for it the expression *Labour and Abstinence*, (see his article on *Political Economy* in the “Encyclopaedia Metropolitana.”) He who converts his revenue into capital, *abstains* from the enjoyment which its expenditure would afford him. It must be acknowledged, indeed, that it is not the abstinence, but the *use* of the capital productively, which is the cause of profits. It would, however, perhaps be difficult to find another word on the whole less objectionable.—*Editor*.

While Cazenove correctly criticizes the abstinence theory, John St. Mill mixes wrong and right theories without seeing their inconsistency:

^{41 ctd} John St. Mill, on the contrary, accepts on the one hand Ricardo's theory of profit, and annexes on the other hand Senior's “remuneration of abstinence.” He is as much at home in absurd contradictions, as he feels at sea in the Hegelian contradiction, the source of all dialectic.

In the remainder of the footnote, Marx brings his own critique of the abstinence theory:

^{41 ctd} It has never occurred to the vulgar economist to make the simple reflexion, that every human action may be viewed, as “abstinence” from its opposite. Eating is abstinence from fasting, walking, abstinence from standing still, working, abstinence from idling, idling, abstinence from working, etc. These gentlemen would do well, to ponder, once in a way, over Spinoza's: “Determinatio est Negatio.”

^{41 ctd} Herr John St. Mill exzerpiert dagegen auf der einen Seite Ricardos Profittheorie und annexiert auf der andren Seniors „remuneration of abstinence“. So fremd ihm der Hegelsche „Widerspruch“, die Springquelle aller Dialektik, so heimisch ist er in platten Widersprüchen.

^{41 ctd} Zusatz zur 2. Ausg. Der Vulgärökonom hat nie die einfache Reflexion angestellt daß jede menschliche Handlung als „Enthaltung“ von ihrem Gegenteil aufgefaßt werden kann. Essen ist Enthaltung von Fasten, Gehen Enthaltung von Stehn, Arbeiten Enthaltung von Faulenzen, Faulenzen Enthaltung von Arbeiten etc. Die Herren täten wohl, einmal nachzudenken über Spinozas: Determinatio est negatio.

Question 1000 *How does Marx, on a philosophical level, criticize the concept of opportunity cost?*

The next passage explains why abstinence theory cannot be applied to primitive production:

“When the savage,” says Senior, “makes bows, he exercises an industry, but he does not practise abstinence.”⁴¹ This explains how and why, in the earlier states of society, the implements of labor were fabricated without abstinence on the part of the capitalist. “The more society progresses, the more abstinence is demanded,”⁴² namely, from those who ply the industry of appropriating the fruits of others' industry.

„Wenn der Wilde“, doziert Senior, „Bogen fabriziert, so übt er eine Industrie aus, aber er praktiziert nicht die Abstinenz.“ Dies erklärt uns, wie und warum in früheren Gesellschaftszuständen „ohne die Abstinenz“ des Kapitalisten Arbeitsmittel fabriziert wurden. „Je mehr die Gesellschaft fortschreitet, um so mehr Abstinenz erfordert sie“⁴², nämlich von denen, welche die Industrie ausüben, sich die fremde Industrie und ihr Produkt anzueignen.

⁴² Senior, l.c., p. 342.

Now Marx's critique of the abstinence theory:

All the conditions for carrying on the labor-process are suddenly converted into so many acts of abstinence on the part of the capitalist. If the corn is not all eaten, but part of it also sown—abstinence of the capitalist. If the wine gets time to mature—abstinence of the capitalist.⁴³ The capitalist robs his own self, whenever he “lends (!) the instruments of production to the laborer,” that is, whenever by incorporating labor-power with them, he uses them to extract surplus-value out of that labor-power, instead of eating all these steam-engines, cotton, railways, manure, horses, and all; or as the vulgar economist childishly imagines, instead of squandering “their value” in luxuries and other articles of consumption.⁴⁴ How the capitalists as a class are to perform that feat, is a secret that vulgar economy has hitherto obstinately refused to divulge.

⁴³ “No one ... will sow his wheat, for instance, and allow it to remain a twelvemonth in the ground, or leave his wine in a cellar for years, instead of consuming these things or their equivalent at once ... unless he expects to acquire additional value, etc.” (Scrope, “Polit. Econ.,” edit. by A. Potter, New York, 1841, pp. 133–134.)

⁴⁴ “La privation que s'impose le capitaliste, en prêtant (this euphemism used, for the purpose of identifying, according to the approved method of vulgar economy, the laborer who is exploited, with the industrial capitalist who exploits, and to whom other capitalists lend money) ses instruments de production au travailleur au lieu d'en consacrer la valeur à son propre usage, en la transformant en objets d'utilité ou d'agrément.” (G. de Molinari, l.c., p. 36.)

⁴² Senior, l.c. p. 342, 343.

Alle Bedingungen des Arbeitsprozesses verwandeln sich von nun in ebenso viele Abstinenzpraktiken des Kapitalisten. Daß Korn nicht nur gegessen, sondern auch gesät wird, Abstinenz des Kapitalisten! Daß der Wein die Zeit erhält, auszugären, Abstinenz des Kapitalisten!⁴³ Der Kapitalist beraubt seinen eignen Adam, wenn er die „Produktionsinstrumente dem Arbeiter leiht“ (!), alias sie durch Einverleibung der Arbeitskraft als Kapital verwertet, statt Dampfmaschinen, Baumwolle, Eisenbahnen, Dünger, Zugpferde usf. aufzuessen oder, wie der Vulgärökonom sich das kindlich vorstellt, „ihren Wert“ in Luxus und andren Konsumtionsmitteln zu verprassen.⁴⁴ Wie die Kapitalistenklasse das anstellen soll, ist ein von der Vulgärökonomie bisher hartnäckig bewahrtes Geheimnis.

⁴³ „Kein Mensch ... wird z.B. seinen Weizen aussäen und ihn ein Jahr im Boden liegen oder seinen Wein jahrelang im Keller lassen, statt diese Dinge oder ihre Äquivalente sofort zu konsumieren ... wenn er nicht erwartete, zusätzlichen Wert zu erhalten etc.“ (Scrope, „Polit. Econ.“, edit. von A. Potter, New York 1841, p. 133.)

⁴⁴ „Die Entbehrung, die sich der Kapitalist auferlegt, indem er seine Produktionsmittel an den Arbeiter verleiht“ (diesen Euphemismus gebraucht, um nach probater vulgärökonomischer Manier den vom industriellen Kapitalisten exploitierten Lohnarbeiter mit dem industriellen Kapitalisten selbst zu identifizieren, welcher vom Geldverleihenden Kapitalisten pumpt!), „statt ihren Wert seinem eignen Gebrauch zu widmen, indem er sie in nützliche oder angenehme Gegenstände verwandelt.“ (G. de Molinari, l.c. p. 36.)

Question 1001 *Does Marx's theory of capitalism allow the interpretation that the capitalist loans the means of production to the worker? Justify your answer.*

Enough, that the world still jogs on, solely through the self-chastisement of this modern penitent of Vishnu, the capitalist. Not only accumulation, but the simple "conservation of a capital requires a constant effort to resist the temptation of consuming it."⁴⁵ The simple dictates of humanity therefore plainly enjoin the release of the capitalist from this martyrdom and temptation, in the same way that the Georgian slave-owner was lately delivered, by the abolition of slavery, from the painful dilemma, whether to squander the surplus-product, lashed out of his niggers, entirely in champagne, or whether to reconvert a part of it into more niggers and more land.

⁴⁵ "La conservation d'un capital exige ... un effort constant pour résister à la tentation de le consommer." (Courcelle-Seneuil, l.c., p. 57.)

Question 1002 *What is the "Abstinence Theory"?*

After showing the philosophical absurdity of this way of thinking, Marx gives now a careful economic refutation of the abstinence theory:

745:1/o In economic forms of society of the most different kinds, there occurs, not only simple reproduction, but, in varying degrees, reproduction on a progressively increasing scale. By degrees more is produced and more consumed, and consequently more products have to be converted into means of production. This process, however, does not present itself as accumulation of capital, nor as the function of a capitalist, so long as the laborer's means of production, and with them, his product and means of subsistence, do not confront him in the shape of capital.⁴⁶

Genug, die Welt lebt nur noch von der Selbstkasteiung dieses modernen Büßers des Wischnu, des Kapitalisten. Nicht nur die Akkumulation, die einfache „Erhaltung eines Kapitals erheischt beständige Kraftanstrengung, um der Versuchung zu widerstehen, es aufzuessen“.⁴⁵ Die einfache Humanität gebietet also offenbar, den Kapitalisten von Martyrium und Versuchung zu erlösen, in derselben Weise, wie der georgische Sklavenhalter jüngst durch Abschaffung der Sklaverei von dem schmerzlichen Dilemma erlöst ward, ob das dem Negerklaven ausgepeitschte Mehrprodukt ganz in Champagner zu verjubeln oder auch teilweise in mehr Neger und mehr Land rückzuverwandeln.

⁴⁵ „La conservation d'un capital exige ... un effort ... constant pour résister à la tentation de le consommer.“ (Courcelle-Seneuil, l.c. p. 20.)

624:1/o In den verschiedensten ökonomischen Gesellschaftsformationen findet nicht nur einfache Reproduktion statt, sondern, obgleich auf verschiedenem Maßstab, Reproduktion auf erweiterter Stufenleiter. Es wird progressiv mehr produziert und mehr konsumiert, also auch mehr Produkt in Produktionsmittel verwandelt. Dieser Prozeß erscheint aber nicht als Akkumulation von Kapital und daher auch nicht als Funktion des Kapitalisten, solange dem Arbeiter seine Produktionsmittel, daher auch sein Produkt und seine Lebensmittel, noch nicht in der Form von Kapital gegenüberstehen.⁴⁶

Expanded reproduction is happening in many different social formations, but only if the means of production are the private property of the capitalist will it take the social form of being the function of a capitalist. The abstinence theory therefore imputes a social process to the decision and merit of an individual.

Footnote 46 and the rest of the paragraph give examples of alternative social forms of this expanded reproduction:

⁴⁶ "The particular classes of income which yield the most abundantly to the progress of national capital, change at different stages of their progress, and are, therefore, entirely different in nations occupying different positions in that progress ... Profits ... unimportant source of accumulation, compared with wages and rents, in the earlier stages of society ... When a considerable advance in the powers of national industry has actually taken place, profits rise into comparative importance as a source of accumulation." (Richard Jones, "Textbook, etc.," pp. 16, 21.)

Richard Jones, who died a few years ago, and was the successor of Malthus in the chair of Political Economy at Haileybury College, discusses this point well in the light of two important facts. Since the great mass of the Hindu population are peasants cultivating their land themselves, their products, their instruments of labor and means of subsistence never take "the shape of a fund saved from revenue, which fund has, therefore, gone through a previous process of accumulation."⁴⁷ On the other hand, the non-agricultural laborers in those provinces where the English rule has least disturbed the old system, are directly employed by the magnates, to whom a portion of the agricultural surplus-product is rendered in the shape of tribute or rent. One portion of this product is consumed by the magnates in kind, another is converted, for their use, by the laborers, into articles of luxury and such

⁴⁶ „Die besonderen Einkommensklassen, die am reichlichsten zum Fortschritt des nationalen Kapitals beitragen, ändern sich auf verschiedenen Stufen ihrer Entwicklung und sind infolgedessen gänzlich verschieden bei Nationen, die verschiedene Positionen in der Entwicklung einnehmen ... Profite ... eine unwichtige Quelle der Akkumulation, im Vergleich zu Löhnen und Renten, auf den früheren Stufen der Gesellschaft ... Wenn ein beträchtliches Anwachsen in den Kräften der nationalen Industrie tatsächlich stattgefunden hat, erlangen die Profite eine vergleichsweise größere Wichtigkeit als Quelle der Akkumulation.“ (Richard Jones, „Textbook etc.“, p. 16, 21.)

Der vor einigen Jahren verstorbene Richard Jones, Nachfolger von Malthus auf dem Lehrstuhl der politischen Ökonomie am ostindischen College zu Haileybury, erörtert dies gut an zwei großen Tatsachen. Da der zahlreichste Teil des indischen Volks selbstwirtschaftende Bauern, existiert ihr Produkt, ihre Arbeits- und Lebensmittel, auch nie in der Form (in the shape) eines Fonds, der aus fremder Revenue erspart wird (saved from Revenue) und daher einen vorläufigen Prozeß der Akkumulation (a previous process of accumulation) durchlaufen hat“⁴⁷. Andererseits werden die nicht-agrikolen Arbeiter in den Provinzen, wo die englische Herrschaft das alte System am wenigsten aufgelöst hat, direkt von den Großen beschäftigt, denen eine Portion des ländlichen Mehrprodukts als Tribut oder Grundrente zufließt. Ein Teil dieses Produkts wird in Naturalform von den Großen

like things, while the rest forms the wages of the laborers, who own their implements of labor. Here, production and reproduction on a progressively increasing scale, go on their way without any intervention from that queer saint, that knight of the woeful countenance, the capitalist “abstainer.”

verzehrt, ein anderer Teil für sie von den Arbeitern in Luxus- und sonstige Konsumtionsmittel verwandelt, während der Rest den Lohn der Arbeiter bildet, die Eigentümer ihrer Arbeitsinstrumente sind. Produktion und Reproduktion auf erweiterter Stufenleiter gehn hier ihren Gang ohne alle Dazwischenkunft jenes wunderlichen Heiligen, jenes Ritters von der traurigen Gestalt, des „entsagenden“ Kapitalisten.

Question 1003 Why does Marx call the “abstaining” capitalist a *Don Quixote* (knight of the woeful countenance)?

⁴⁷ l.c., p. 36, sq.

⁴⁷ l.c. p. 36 sq. {Zur 4.Aufl.—Muß ein Versehen sein, die Stelle ist nicht gefunden worden.—F. E.}

Question 1004 What is to be said about the theory that profits are the reward for the “abstinence” of the capitalists? How does Marx propose to relieve the capitalist’s pain suffered because of the temptation to consume his capital?

25. General Law of Capitalist Accumulation

With the development of the factory system, which Marx called “real subsumption of the labor process under capital,” capital re-shaped the production process according to its needs. In the present chapter, Marx shows that capital also subordinates the reproduction of the *working class* to its needs. The system of capital accumulation has managed to integrate the labor-market into its own logic so that it won’t disturb or constrain capital accumulation.

1. A Growing Demand for Labor-Power Accompanies Accumulation Under Equal Composition of Capital

762:1 In this chapter we shall consider the influence of the growth of capital on the fate of the working class.

640:1 Wir behandeln in diesem Kapitel den Einfluß, den das Wachstum des Kapitals auf das Geschick der Arbeiterklasse ausübt.

Question 1005 If it is true that the laborers produce all the value, it is necessary to explain why they do not get it. This question becomes especially puzzling if one considers the exponential character of the accumulation of capital. One should expect labor demand to eventually outrun the labor supply, so that the labor market will eventually become a seller’s market. Which mechanisms prevent this from happening?

An impasse is looming in the accumulation process: sooner or later, the accumulation of capital must run into the limitations of population growth. Instead of being scarce, one should expect that capital will eventually be abundant. Does this mean the accumulation of capital is constrained by population growth? Marx argues that it is not. Capital comes to control the supply of the exploitable material on which its accumulation depends. Just like humans, in agriculture, control the growth of the food they need, capital controls the growth of the labor-supply which it needs. Capitalist wealth, therefore, is not only the command over material things but also over the social reproduction process of labor-power.

The most important factor in this investigation is the composition of capital, and the changes which it undergoes during the accumulation process.

Der wichtigste Faktor bei dieser Untersuchung ist die Zusammensetzung des Kapitals und die Veränderungen, die sie im Verlauf des Akkumulationsprozesses durchmacht.

In order to explain the mechanisms which allow capital to control the supply of labor rather than being controlled by it, Marx introduces the concepts of technical composition, value composition, and organic composition. In a nutshell, capital is not limited by the growth of the labor force because it can adjust the rate and composition of its accumulation.

Note that Marx introduces the composition of capital here as the solution to an *epistemic* question, namely, as “the most important factor in this *investigation*” (my italics). He usually avoids such formulations and makes it clear that he only introduces those concepts for explanatory purposes which also play a role in the processes he is explaining. The French version 534:1 is more mindful of this issue: it says that the composition of capital is the most important *given* (my italics because this is an ontological issue) for the solution of this (epistemic) problem.

1.a. [The Composition of Capital]

Capital is not uniform but composed of heterogeneous parts.

762:2 The composition of capital is to be understood in a twofold sense.

↑ This non-uniformity can be defined in two different ways. Considered under the aspect of *value*, capital can be divided into two parts which fundamentally differ from each other, and considered under the aspect of *use-value*, it can also be divided into two parts which fundamentally differ from each other. ↓ Marx first looks at capital under the aspect of *value*. Capital can be defined as self-expanding value. Here the fundamental difference between different parts of capital is that only a part of the capital increases its value during $M - C - M'$, while a different part of capital is constant, i.e., does not change value during its circuit:

On the one hand, with respect to value, it is determined by the proportion in which capital is divided into constant capital, i.e., the value of the means of production, and variable capital, i.e., the value of labor-power, the sum of the wages paid.

↑ The definitions of constant capital and variable capital were given in chapter Eight. To recapitulate, constant capital is that part of the capital which is laid out in means of production (materials, supplies, and instruments or machines). Variable capital is the capital laid out in labor-power. The value of the “constant” capital does not change during the production process, while the value of the “variable” capital does change. Only the variable capital is source of surplus-value for the capitalist.

↓ If one looks at the *use-values* which capital assumes in the production process, one can again divide the elements of the production process into two basic categories, namely, labor and means of production:

On the other hand, with respect to the physi-

640:2 Die Zusammensetzung des Kapitals ist in zweifachem Sinn zu fassen.
Nach der Seite des Werts bestimmt sie sich durch das Verhältnis, worin es sich teilt in konstantes Kapital oder Wert der Produktionsmittel und variables Kapital oder Wert der Arbeitskraft, Gesamtsumme der Arbeitslöhne.

Nach der Seite des Stoffs, wie er im Pro-

cal aspect of the production process, all capital is divided into means of production and living labor-power. Here its composition is determined by the relation between the mass of the means of production employed and the mass of labor necessary for their employment.

↑ This is a basic distinction inherent in every production process, whether or not it is capitalist. ↓ These two ways to separate capital into two different components are related but not identical. Marx calls the first “value composition” and the second “technical composition.” I call the former the value-composition, the latter the technical composition of capital.

duktionsprozeß fungiert, teilt sich jedes Kapital in Produktionsmittel und lebendige Arbeitskraft; diese Zusammensetzung bestimmt sich durch das Verhältnis zwischen der Masse der angewandten Produktionsmittel einerseits und der zu ihrer Anwendung erforderlichen Arbeitsmenge andererseits.

Ich nenne die erstere die Wertzusammensetzung, die zweite die technische Zusammensetzung des Kapitals.

↑ The value composition of capital is constant capital divided by variable capital, i.e., the machinery and materials (measured in value) divided by labor (measured in value of labor-power). It is therefore a pure number (dollars divided by dollars). The technical composition, by contrast, is mass of means of production per hours of labor. It cannot be represented numerically. ↓ Despite their differences, the two compositions are closely related:

Between the two there is a close mutual relationship.

Zwischen beiden besteht enge Wechselbeziehung.

↑ Unfortunately, Marx leaves it at this lethargic remark without saying more about it. Clearly, the technical composition is causally prior to the value composition. And clearly, technical progress usually requires a higher technical composition, i.e., more machines and materials per worker. But from the following development one can infer that Marx assumed that technical progress also usually requires a higher value composition. In other words, he did not believe that this greater mass of means of production is, by this same technical progress, cheapened so much to prevent its value, compared with the value of the labor-power employed in this production process, from increasing. This is not so in every single case, but it is usually, and tendentially, so. ↓ In situations in which the value composition serves as a proxy for the technical composition, Marx uses the alternative name “organic composition” for the value composition.

To express this relationship, I call the value-composition of capital, in so far as it is determined by its technical composition and mirrors the changes in the latter, the organic composition of capital.

Um diese auszudrücken, nenne ich die Wertzusammensetzung des Kapitals, insofern sie durch seine technische Zusammensetzung bestimmt wird und deren Änderungen widerspiegelt: die organische Zusammensetzung des Kapitals.

Here is an example from an unrelated field: a student’s grade is influenced by the student’s ability but also by other factors. For this reason, a standard question in the student evaluation forms is: “does the grade reflect the student’s ability”? Likewise, Marx asks: does the

value composition reflect the technical composition? Only if it does will Marx use the word “organic composition” for it.

Wherever I refer to the composition of capital, without further qualification, its organic composition is always understood.

Wo von der Zusammensetzung des Kapitals kurzweg die Rede ist, ist stets seine organische Zusammensetzung zu verstehn.

Although the name “organic composition” might suggest that it measures how much of the capital is “organic,” i.e., is labor-power, Marx defines it as the unorganic part over the organic part c/v . I.e., a rise in the organic composition means: more constant capital per a given amount of variable capital. It does make sense to have labor in the denominator, because labor is what is moving the machines.

Question 1006 “Value composition” and “organic composition” are two names for the same number, namely, the proportion between constant and variable capital c/v . When does Marx use the word “value composition” and when does he use “organic composition?” Why would one want to introduce two different words for the same number? Are there other examples where Marx uses two different words for the same thing?

If the same production process is once applied to iron and once to copper, then the technical composition is the same, but since copper contains more labor, the value composition changes. This example is given in *Capital III*, l.c. An increase in the value of iron, or a fall in the wage would likewise increase the value-composition, but in this case Marx would not say that the “organic composition” has increased. The value composition can change by different kinds of processes than those which Marx would call “an increase in the organic composition.”

Exam Question 1007 Define the value composition of capital. What is the main factor determining its magnitude? Which other factors will also influence it? When does Marx use the word “organic composition” (rather than “value composition”) for this number?

↓ The next paragraph indicates that Marx uses the composition of capital not only as a microeconomic but also a macroeconomic concept:

763:3/o The many individual capitals invested in a particular branch of production have compositions which differ from each other to a greater or lesser extent. The average of their individual compositions gives us the composition of the total capital in the branch of production under consideration. Finally, the average of all the average compositions in all branches of production gives us the composition of the total social capital of a country, and it is with this alone that we

640:3 Die zahlreichen in einem bestimmten Produktionszweig angelegten Einzelkapitale haben unter sich mehr oder weniger verschiedene Zusammensetzung. Der Durchschnitt ihrer Einzelzusammensetzungen ergibt uns die Zusammensetzung des Gesamtkapitals dieses Produktionszweigs. Endlich ergibt uns der Gesamtdurchschnitt der Durchschnittszusammensetzungen sämtlicher Produktionszweige die Zusammensetzung des gesellschaftlichen Kapitals eines

are concerned here in the final analysis.

Landes, und von dieser allein in letzter Instanz ist im folgenden die Rede.

A parallel discussion of the composition of capital can be found in *Capital III*, chapter Eight, 244:1–245:1.

In the French edition, the discussion of organic composition concludes with the sentence: “After these preliminary remarks, let us come back to capitalist accumulation.”

1.b. [Accumulation of Capital is Increase of the Proletariat]

The portion of section 1 which we are going to read now consists of a long theoretical paragraph 763:1/o followed by a collection of quotes from the literature. The theoretical paragraph culminates in the sentence: “Accumulation of capital is, therefore, increase of the proletariat.” This sentence is a literal quote from *Wage-Labor and Capital*, [mecw9]214:3. I will first discuss the short two-sentence derivation of this statement in *Wage-Labor and Capital*, since the general structure of this derivation is similar to that in *Capital*. Here are the relevant three sentences from *Wage-Labor and Capital* with my comments:

1. “Capital can only increase by exchanging itself for labor-power, by calling wage labor to life.” In other words, in order to accumulate, capital must employ wage labor formerly not employed. It needs labor. This dependence of capital on labor may cause an excess demand for labor, higher wages, better working conditions. With the words “by calling wage labor to life” Marx also hints at the reverse dependence: wage labor without capital is not “alive,” i.e., the laborer cannot use her labor-power for herself because she is separated from the means of production.
2. “The labor-power of the wage worker can only exchange itself for capital by increasing capital, by strengthening the power whose slave it is.” After just having read that capital needs labor, the reader would expect that a sentence beginning with “the labor-power” is going to say that labor needs capital. But this is not the content of this second sentence. Instead, Marx *qualifies* the need of capital for labor. Capital will *only then* hire the laborer if the wage is low enough to leave room for profit. Even if labor-power is available, capital may not hire it if the price is too high. Being subordinate to labor is not an option for capital. As long as capital accumulates at all, we can be sure that capital is strengthened by this accumulation, otherwise this accumulation would not take place.
3. Marx’s third sentence draws a somewhat abrupt conclusion from the preceding two sentences which needs elaboration. Marx tacitly uses a fact which we all know, namely, that capital accumulation indeed proceeds apace. From the second sentence follows therefore that the growth of the working-class must be such that it serves the interests of capital. Such an outcome would not be possible if the growth of the working class were independent, exogenous, to capital. This state of affairs can only be realized if the growth of the working-class is governed by capital:

“Hence, increase of capital is increase of the proletariat, that is, of the working class.”

↑ The absence of a clash between capital accumulation and the reproduction of the working class is for Marx a similar kind of evidence which the dog that didn't bark is for Sherlock Holmes.

The next thing Marx says in *Wage-Labor and Capital* is that this is a *contradictory* identity—capital usurps the growth of labor-power for its own purposes—and not a unity of interests based on mutual dependence.

Question 1009 *The capitalist depends on the worker for profit, and the worker depends on the capitalist for survival. Does this mean that workers and capitalists have the same interests?*

Now let us turn to Marx's argument in *Capital*. We will see that it is just an elaboration of the three steps from *Wage-Labor and Capital*. Marx begins here with quantitative growth; only later will he show how this quantitative growth also engenders qualitative changes.

763:1/o Growth of capital implies growth of its variable constituent, in other words, of the portion invested in labor-power.

641:1/o Wachstum des Kapitals schließt Wachstum seines variablen oder in Arbeitskraft umgesetzten Bestandteils ein.

↑ It is unclear how Marx argues this here. Does he already use the assumption, made in the section heading, that the technical composition is constant? Or does he have amore general derivation in mind, for instance that the quantitative growth of capital must include growth of the variable capital because variable capital is that component which fuels the self-expansion of capital?

A part of the surplus-value to be transformed into additional capital must always revert into the form of variable capital, or additional labor fund.

Ein Teil des in Zusatzkapital verwandelten Mehrwerts muß stets rückverwandelt werden in variables Kapital oder zuschüssigen Arbeitsfonds.

↑ The growth of the variable capital generates additional demand for labor. ↓ In order to specify this quantitative increase, assumptions must be made about the composition of capital:

If we assume that accumulation takes place under unchanged circumstances, so that also the composition of capital remains constant (i.e. any given mass of means of production or constant capital needs the same mass of labor-power as before to set it in motion), then the demand for labor, and the fund for the subsistence of the workers, both clearly increase in the same proportion as the capital. The faster capital grows, the faster the demand for labor will grow.

Unterstellen wir, daß, nebst sonst gleichbleibenden Umständen, die Zusammensetzung des Kapitals unverändert bleibt, d.h. eine bestimmte Masse Produktionsmittel oder konstantes Kapital stets dieselbe Masse Arbeitskraft erheischt, um in Bewegung gesetzt zu werden, so wächst offenbar die Nachfrage nach Arbeit und der Subsistenzfonds der Arbeiter verhältnismäßig mit dem Kapital und um so rascher, je rascher das Kapital wächst.

↓ This can lead to situations in which demand for labor outstrips supply:

Since the capital produces a surplus-value every year, of which one part is added every year to the original capital; since this increment itself grows every year along with the augmentation of the capital already functioning; and since, lastly, under conditions especially liable to stimulate the drive for self-enrichment, such as the opening of new markets, or of new spheres for the outlay of capital resulting from newly developed social requirements, the scale of accumulation may suddenly be extended merely by a change in the proportion in which the surplus-value or the surplus product is divided into capital and revenue—for all these reasons the requirements of accumulating capital may exceed the growth in labor-power or in the number of workers; the demand for workers may outstrip the supply, and thus wages may rise.

↑ Why does capital grow faster than labor? On the one hand, Marx argues here that capital grows exponentially, while labor cannot. But Marx says also that capital can suddenly accelerate its growth by changing the proportion in which surplus-product is converted into new capital. Two things are here notable: first, this is an example for something which Marx will emphasize this later, namely, the impulse comes from capital and not the working class. Secondly, capital can generate this impulse only because it is free to determine the capitalization rate. This parameter plays an important role in the background of the entire discussion.

↓ So far, Marx has only said that demand for labor *can* increase above supply, i.e., there is nothing which will prevent such an outcome. Now he goes one step further: if the value composition remains unchanged, demand *must* eventually outstrip supply:

This must indeed ultimately be the case if the conditions assumed above continue to prevail. For since in each year more workers are employed than in the preceding year, sooner or later a point must be reached at which the requirements of accumulation begin to outgrow the customary supply of labor, and a rise of wages therefore takes place.

Da das Kapital jährlich einen Mehrwert produziert, wovon ein Teil jährlich zum Originalkapital geschlagen wird, da dies Inkrement selbst jährlich wächst mit dem zunehmenden Umfang des bereits in Funktion begriffenen Kapitals und da endlich, unter besondrem Sporn des Bereicherungstrieb, wie z.B. Öffnung neuer Märkte, neuer Sphären der Kapitalanlage infolge neu entwickelter gesellschaftlicher Bedürfnisse usw., die Stufenleiter der Akkumulation plötzlich ausdehnbar ist durch bloß veränderte Teilung des Mehrwerts oder Mehrprodukts in Kapital und Revenue, können die Akkumulationsbedürfnisse des Kapitals das Wachstum der Arbeitskraft oder der Arbeiteranzahl, die Nachfrage nach Arbeitern ihre Zufuhr überflügeln und daher die Arbeitslöhne steigen.

Dies muß sogar schließlich der Fall sein bei unveränderter Fortdauer obiger Voraussetzung. Da in jedem Jahr mehr Arbeiter beschäftigt werden als im vorhergehenden, so muß früher oder später der Punkt eintreten, wo die Bedürfnisse der Akkumulation anfangen, über die gewöhnliche Zufuhr von Arbeit hinauszuwachsen, wo also Lohnsteigerung eintritt.

Exam Question 1013 Describe some circumstances in which the labor requirements for capital accumulation exceed the growth in available labor.

↑ Marx says here only that demand for labor must *begin* to outgrow labor supply. The French edition [mecw] says that it must lead to a *gradual* rise in wages. ↓ Before showing how this rise will be interrupted, Marx brings evidence that this gradual or incipient rise does indeed take place.

Complaints were to be heard about this in England during the whole of the fifteenth century, and the first half of the eighteenth.

↓ Despite rising wages, however, capital continues to accumulate.

The more or less favorable circumstances, in which the wage-laborers support and multiply themselves, do however not alter in any way the fundamental character of capitalist production.

Through the ups and downs of wages, the capitalists have never given up their profit motive. ↓ On the contrary, the capitalist system not only persists but even reproduces itself on an extended scale:

Just as simple reproduction continually reproduces the capital relation itself, capitalists on the one side and wage laborers on the other, so does reproduction on an expanded scale, i.e. accumulation, reproduce the capital relation on an expanded scale, with more capitalists, or bigger capitalists, at one pole, and more wage laborers at the other.

↑ This presents a riddle: how can capital reproduce itself on an extended scale in the face of the seemingly inexorable tendencies of the demand for labor to outstrip labor supply just argued earlier in the same paragraph? As in *Wage-Labor and Capital*, the solution of this riddle is that the reproduction of the working class is not an independent process but a subprocess of capital accumulation.

↓ This is only an extension of things said earlier, since also in other respects (other than the reproduction of the working class), the worker is subservient to capital. In the second edition [mecw], Marx prefaces his next long sentence with the phrase: "One has already seen earlier:"

The reproduction of labor-power, which must incessantly be re-incorporated into capital as its means of valorization, which cannot break loose from capital, and whose enslavement to capital is only concealed by

Klage hierüber ertönt in England während des ganzen fünfzehnten und der ersten Hälfte des achtzehnten Jahrhunderts.

Die mehr oder minder günstigen Umstände, worin sich die Lohnarbeiter erhalten und vermehren, ändern jedoch nichts am Grundcharakter der kapitalistischen Produktion.

Wie die einfache Reproduktion fortwährend das Kapitalverhältnis selbst reproduziert, Kapitalisten auf der einen Seite, Lohnarbeiter auf der andren, so reproduziert die Reproduktion auf erweiterter Stufenleiter oder die Akkumulation das Kapitalverhältnis auf erweiterter Stufenleiter, mehr Kapitalisten oder größere Kapitalisten auf diesem Pol, mehr Lohnarbeiter auf jenem.

Die Reproduktion der Arbeitskraft, die sich dem Kapital unaufhörlich als Verwertungsmittel einverleiben muß, nicht von ihm loskommen kann und deren Hörigkeit zum Kapital nur versteckt wird durch den Wech-

the variety of individual capitalists to whom it sells itself, is in fact a moment in the reproduction of capital itself.

"bildet" should not be translated with "forms" as both

Moore-Aveling and Fowkes did. It is not a matter of form but of

constitutive elements or "moments."

↑ Just as the individual worker is trapped in the capitalist system and cannot overcome it or get away from it, ↓ so also (Marx implies here) is the reproduction of the entire working class subservient to the accumulation of capital.

Accumulation of capital is therefore multiplication of the proletariat.⁷⁰

Akkumulation des Kapitals ist also Vermehrung des Proletariats.⁷⁰

↑ This last sentence must be read in a subsumptive sense; the "is" in this sentence has the meaning of "entails, encompasses." In the French edition [mecw], Marx writes: "is at the same time." Accumulation of capital and growth of the workforce are not two different autonomous processes interacting with each other, but two aspects of one and the same process.

The mechanisms which chain the growth of the working class to that of capital will be discussed starting 768/oo. But first, Marx brings a collection of quotes in which classical economists testify that were aware of the subservient situation of the working class, and thought it was a good thing.

↓ The footnote to the preceding paragraph can be considered an introduction to this collection of quotes. It brings a reference to the place in Marx's own *Wage Labor and Capital* which we discussed at the beginning, together with an economic definition of the proletarian as someone who is dependent on capital.

⁷⁰ Karl Marx, 'Wage Labor and Capital', op. cit. 'If the masses are all oppressed equally, the more proletarians a country has, the richer it will be' (Colins, *L'Économie politique. Source des révolutions et des utopies prétendues socialistes*, Paris, 1857, Vol. 3, p. 331). A 'proletarian' is, economically, nothing other than a 'wage-laborer', who produces and valorizes 'capital', and is thrown onto the street as soon as he becomes superfluous to the need for valorization possessed by 'Monsieur Capital', as Pecqueur calls this person. 'The sickly proletarian of the primitive forest' is a schoolboy-like Roscherian phantom. The inhabitant of the primitive forest owns this forest and treats it as his without any further thought, just as an orang-utang does. He is not a proletarian by any means. This would only be the case if the primitive forest exploited

⁷⁰ Karl Marx, l.c.—, „Bei gleicher Unterdrückung der Massen ist ein Land um so reicher, je mehr Proletarier es hat.“ (Colins, „L'Économie Politique, Source des Révolutions et des Utopies prétendues Socialistes“, Paris 1857, t. III, p. 331.) Unter „Proletarier“ ist ökonomisch nichts zu verstehen als der Lohnarbeiter, der „Kapital“ produziert und verwertet und aufs Pflaster geworfen wird, sobald er für die Verwertungsbedürfnisse des „Monsieur Kapital“, wie Pecqueur diese Person nennt, überflüssig ist. „Der kränkliche Proletarier des Urwalds“ ist ein artiges Roscher'sches Phantom. Der Urwäldler ist Eigentümer des Urwalds und behandelt den Urwald ganz so ungeniert wie der Orang-Utang, als sein Eigentum. Er ist also nicht Proletarier. Dies wäre nur der Fall, wenn der Urwald ihn, statt er den Urwald exploitierte. Was seinen Gesundheitszu-

him, instead of being exploited by him. As far as his health is concerned, such a man would well bear comparison, not only with the modern proletarian, but also with the syphilitic and scrofulous 'honorable' citizens. However, Herr Wilhelm Roscher probably means his native heath of Lüneburg when he talks about a 'primitive forest'.

↓ The next sentence addresses an error of Classical Economics: Smith and Ricardo thought that *all* accumulation goes into variable capital. This is wrong; part of the accumulated funds must be used to increase constant capital. But Smith and Ricardo sensed correctly that the growth of the working-class is an important element of accumulation.

764:1/o Classical political economy grasped this fact so thoroughly that Adam Smith, Ricardo, etc., as mentioned earlier, wrongly identified accumulation with the consumption of the whole of the capitalized part of the surplus product by productive workers, or with the transformation of the surplus product into additional wage-laborers.

↑ This was already discussed in 737:1/o. ↓ The next quote shows that also outside the context of accumulation the classical economists understood that capitalist wealth is not only the command over things but most importantly the command over labor:

John Bellers already said this in 1696:

'For if one had a hundred thousand acres of land and as many pounds in money, and as many cattle, without a laborer, what would the rich man be, but a laborer? And as the laborers make men rich, so the more laborers there will be, the more rich men ... the labor of the poor being the mines of the rich.'⁷¹

⁷¹ John Bellers, op. cit., p. 2.

↑ Being wealthy in our society not just means to own many things, but on top of this it gives you the ability to have others work for you. ↓ Mandeville concludes from this that workers should be kept moderately poor, and ignorant.

So also Bernard de Mandeville at the beginning of the eighteenth century:

'It would be easier, where property is well secured, to live without money than without poor; for who would do the work? ... As they

stand betrifft, steht solcher wohl den Vergleich aus nicht nur mit dem des modernen Proletariats, sondern auch dem der syphilitischen und skrofulösen „Ehrbarkeit“. Doch versteht Herr Wilhelm Roscher unter Urwald wahrscheinlich die stammverwandte Lüneburger Heide.

642:1–2 Die klassische Ökonomie begriff diesen Satz so wohl, daß A. Smith, Ricardo usw., wie früher erwähnt, die Akkumulation sogar fälschlich identifizieren mit Konsum des ganzen kapitalisierten Teils des Mehrprodukts durch produktive Arbeiter oder mit seiner Verwandlung in zuschüssige Lohnarbeiter.

Schon 1696 sagt John Bellers:

„Wenn jemand 100 000 Acres hätte und ebenso viele Pfunde Geld und ebensoviel Vieh, was wäre der reiche Mann ohne den Arbeiter außer selbst ein Arbeiter? Und wie die Arbeiter Leute reich machen, so desto mehr Arbeiter, desto mehr Reiche ... Die Arbeit des Armen ist die Mine des Reichen.“⁷¹

⁷¹ „As the Labourers make men rich, so the more Labourers, there will be the more rich men ... the Labour of the Poor being the Mines of the Rich.“ (John Bellers, l.c., p. 2).

642:3–643:0 So Bernard de Mandeville im Anfang des 18. Jahrhunderts:

„Wo das Eigentum hinreichend geschützt ist, wäre es leichter, ohne Geld zu leben als ohne Arme, denn—wer würde die Arbeit tun?

[the poor] ought to be kept from starving, so they should receive nothing worth saving. If here and there one of the lowest class, by uncommon industry, and pinching his belly, lifts himself above the condition he was brought up in, nobody ought to hinder him; nay, it is undeniably the wisest course for every person in the society, and for every private family to be frugal; but it is the interest of all rich nations, that the greatest part of the poor should almost never be idle, and yet continually spend what they get ... Those that get their living by their daily labor ... have nothing to stir them up to be serviceable but their wants which it is prudence to relieve, but folly to cure. The only thing then that can render the laboring man industrious, is a moderate quantity of money, for as too little will, according as his temper is, either dispirit or make him desperate, so too much will make him insolent and lazy ... From what has been said, it is manifest, that, in a free nation, where slaves are not allowed of, the surest wealth consists in a multitude of laborious poor; for besides that they are the never failing nursery of fleets and armies, without them there could be no enjoyment, and no product of any country could be valuable. To make the society' (which of course consists of the non-workers) 'happy and people easier under the meanest circumstances, it is requisite that great numbers of them should be ignorant as well as poor; knowledge both enlarges and multiplies our desires, and the fewer things a man wishes for, the more easily his necessities may be supplied.'⁷²

↑ Mandeville recommends not to “cure” the wants of the workers but only to “relieve” them, because these wants give them the incentives to work. Interestingly, Mandeville combines this with the call to keep the workers ignorant. ↓ The footnote brings a second Mandeville quote with the same idea, this time not quite as blunt but adorned with the slogans “happiness for the workers and riches for the state.”

... Wie die Arbeiter vor Aushungerung zu bewahren sind, so sollten sie nichts erhalten, was der Ersparung wert ist. Wenn hier und da einer aus der untersten Klasse durch ungewöhnlichen Fleiß und Bauchkneipen sich über die Lage erhebt, worin er aufgewachsen war, so muß ihn keiner daran hindern: ja es ist unleugbar der weiseste Plan für jede Privatperson, für jede Privatfamilie in der Gesellschaft, frugal zu sein; aber es ist das Interesse aller reichen Nationen, daß der größte Teil der Armen nie untätig sei und sie dennoch stets verausgaben, was sie einnehmen ... Diejenigen, die ihr Leben durch ihre tägliche Arbeit gewinnen, haben nichts, was sie anstachelt, dienstlich zu sein außer ihren Bedürfnissen, welche es Klugheit ist zu lindern, aber Narrheit wäre zu kurieren. Das einzige Ding, das den arbeitenden Mann fleißig machen kann, ist ein mäßiger Arbeitslohn. Ein zu geringer macht ihn je nach seinem Temperament kleinmütig oder verzweifelt, ein zu großer insolent und faul ... Aus dem bisher Entwickelten folgt, daß in einer freien Nation, wo Sklaven nicht erlaubt sind, der sicherste Reichtum aus einer Menge arbeitsamer Armen besteht. Außerdem, daß sie die nie versagende Zufuhrquelle für Flotte und Armee, gäbe es ohne sie keinen Genuß und wäre das Produkt keines Landes verwertbar. Um die Gesellschaft“ (die natürlich aus den Nichtarbeitern besteht) „glücklich und das Volk selbst in kümmerlichen Zuständen zufrieden zu machen, ist es nötig, daß die große Majorität sowohl unwissend als arm bleibt. Kenntnis erweitert und vervielfacht unsere Wünsche, und je weniger ein Mann wünscht, desto leichter können seine Bedürfnisse befriedigt werden.“⁷²

⁷² Bernard de Mandeville, *The Fable of the Bees*, 5th edn, London, 1728, Remarks, pp. 212–13, 328. ‘Temperate living and constant employment is the direct road, for the poor, to rational happiness’ (by which the author means the longest possible working days and the smallest possible amount of the means of subsistence), ‘and to riches and strength for the state’ (namely for the landowners, capitalists, and their political dignitaries and agents) (*An Essay on Trade and Commerce*, London, 1770, p. 54).

Mandeville lived prior to the Industrial Revolution, and therefore did not experience that capitalism has the ability to create exactly those ideal conditions he was proposing:

765:1/o Mandeville, an honest man with a clear mind, does not yet see that the very mechanism of accumulation increases, along with the amount of capital, also the masses of the ‘laboring poor’, i.e. of wage laborers, who can sell their labor-power only if it becomes a force for increasing the valorization of the growing capital—who are therefore condemned to make their relation of dependence on their own product, as personified in the capitalist, into an eternal relation.

↑ The dependence of the worker on the capitalist is his dependence on his own product!
↓ Now a quote from Eden who also recommends that the servitude of the laborers should be made as comfortable as possible. This will be the punch line of the Eden quote, but let us first watch the buildup to this punch line:

In reference to this dependence, Sir F. M. Eden remarks, in his *The State of the Poor; or an History of the Laboring Classes in England*:

The natural produce of our soil is certainly not fully adequate to our subsistence; we can neither be clothed, lodged nor fed but in consequence of some previous labor. A portion at least of the society must be indefatigably employed ... There are others who, though they “neither toil nor spin”, can yet command the produce of industry, but who owe their exemption from labor solely to civilization and order ... They are peculiarly the creatures

⁷² B. de Mandeville, („The Fable of the Bees“, 5th ed., Lond. 1728, Remarks, p. 212, 213, 328.)—„Mäßiges Leben und beständige Arbeit sind für den Armen der Weg zum materiellen Glücke“ (worunter er möglichst langen Arbeitstag und möglichst wenig Lebensmittel versteht) „und zum Reichtum für den Staat“ (nämlich Grundeigentümer, Kapitalisten und ihre politischen Würdeträger und Agenten). („An Essay on Trade and Commerce“, Lond. 1770, p. 54.)

643:1–644:1 Was Mandeville, ein ehrlicher Mann und heller Kopf, noch nicht begreift, ist, daß der Mechanismus des Akkumulationsprozesses selbst mit dem Kapital die Masse der „arbeitsamen Armen“ vermehrt, d.h. der Lohnarbeiter, die ihre Arbeitskraft in wachsende Verwertungskraft des wachsenden Kapitals verwandeln und ebendadurch ihr Abhängigkeitsverhältnis von ihrem eignen, im Kapitalisten personifizierten Produkt verewigen müssen.

Mit Bezug auf dies Abhängigkeitsverhältnis bemerkt Sir F. M. Eden in seiner „Lage der Armen, oder Geschichte der arbeitenden Klasse Englands“:

„Unsere Zone erfordert Arbeit zur Befriedigung der Bedürfnisse, und deshalb muß wenigstens ein Teil der Gesellschaft unermüdet arbeiten ... Einige, die nicht arbeiten, haben dennoch die Produkte des Fleißes zu ihrer Verfügung. Das verdanken diese Eigentümer aber nur der Zivilisation und Ordnung; sie sind reine Kreaturen der bürgerlichen Institutionen.⁷³ Denn diese haben es anerkannt, daß man die Früchte der Arbeit auch

of civil institutions,⁷³ which have recognized that individuals may acquire property by various other means besides the exertion of labor ...

While Mandeville said very clearly that the dependence of the working class is economic, Eden attributes the transfer of wealth from workers to nonworkers to the bourgeois institutions. Marx does not let this pass in silence; after all, there is no legal differentiation between worker and capitalist. They meet on the market as formal equals. Footnote 73 brings an interesting short defense of the primacy of the economic base, which differs from the usual “nothing would happen if people did not have to eat”:

⁷³ Eden should have asked: who created ‘the civil institutions’? From the standpoint he adopts, that of juridical illusion, he does not regard the law as a product of the material relations of production, but rather the reverse: he sees the relations of production as products of the law. Linguet overthrew Montesquieu’s illusory ‘esprit des lois’ (spirit of the laws) with one word: ‘The spirit of the laws is property.’

↑ Marx’s implied argument is here: Laws and other “bourgeois institutions” are the conscious creations of individuals. They are a reflection of material production because the individuals who create these laws are usually aware of the general structure of society, even if they do not formulate it as bluntly and honestly as Eden and Mandeville did.

⁷³ Eden hätte fragen sollen, wessen Kreatur sind denn „die bürgerlichen Institutionen“? Vom Standpunkt der juristischen Illusion betrachtet er nicht das Gesetz als Produkt der materiellen Produktionsverhältnisse, sondern umgekehrt die Produktionsverhältnisse als Produkt des Gesetzes. Linguet warf Montesquieus illusorischen „Esprit des Lois“ mit dem einen Wort über den Haufen: „L’esprit des lois, c’est la propriété.“

Question 1016 In footnote 23c254s773akmc to 765:1/o Marx asked: “who created the civil institutions?” He clearly had a specific answer in mind. Which answer? Full disclosure: I don’t know the answer myself. I see three possibilities:

- (a) members of the ruling class
- (b) individuals involved in production, with an intimate knowledge of the specific needs of production
- (c) individuals living in this society who have a general understanding of the structure of society

There may be other possibilities.

Question 1017 What is the “juridical illusion”?

↓ Marx has no quibbles with Eden’s next point: it is not the command over material goods (dead labor) but the command over living labor that distinguishes the rich from the poor.

Persons of independent fortune ... owe their superior advantages by no means to any superior abilities of their own, but almost entirely ... to the industry of others. It is not the possession of land, or of money, but the command of labor which distinguishes the opulent from

Die Leute von unabhängigem Vermögen verdanken ihr Vermögen fast ganz der Arbeit anderer, nicht ihrer eignen Fähigkeit, die durchaus nicht besser ist als die der andren; es ist nicht der Besitz von Land und Geld, sondern das Kommando über Arbeit (the command of la-

the laboring part of the community ...

Next Eden seems to talk about hegemony. Marx will remark below that this “easy and liberal” treatment of the working class is specific to the extensive phase of accumulation.

This [the scheme approved by Eden] would give the people of property sufficient influence and authority over those who ... work for them; and it would place such laborers, not in an abject or servile condition, but in such a state of easy and liberal dependence as all who know human nature, and its history, will allow to be necessary for their own comfort.⁷⁴

⁷⁴ Eden, op. cit., Vol. 1, Bk. I, Ch. 1, pp. 1–2, and Preface, p. xx.

Sir F. M. Eden, it may be remarked in passing, was the only disciple of Adam Smith to have achieved anything of importance during the eighteenth century.⁷⁵

Question 1018 *Why is it more beneficial for capital to keep the working class in a state of “easy and liberal dependence” than to exert the maximum of surplus-value from them?*

Malthus is a counterexample here. According to his theory, there are too many laborers. Marx argues however that Malthus does not belong into the realm of classical thought but was a propagandist of party interests:

⁷⁵ If the reader thinks at this point of Malthus, whose *Essay on Population* appeared in 1798, I would remind him that this work in its first form is nothing more than a schoolboyish, superficial plagiarism of Defoe, Sir James Steuart, Townsend, Franklin, Wallace, etc., declaimed in the manner of a sermon, but not containing a single original proposition of Malthus himself. The great sensation this pamphlet caused was due solely to the fact that it corresponded to the interests of a particular party. The French Revolution had found passionate defenders in the United Kingdom; the ‘principle of population’, slowly worked out in the eighteenth century, and then, in the midst of a great social crisis, proclaimed with drums and trumpets as the infallible antidote to the doctrines of Condorcet and others,

bour), das die Reichen von den Armen unter-scheidet ...

Was dem Armen zusagt, ist nicht eine verworfene oder servile Lage, sondern ein bequemes und liberales Abhängigkeitsverhältnis (a state of easy and liberal dependence), und für die Leute von Eigentum hinreichender Einfluß und Autorität über die, die für sie arbeiten ... Ein solches Abhängigkeitsverhältnis ist, wie jeder Kenner der menschlichen Natur weiß, notwendig für den Komfort der Arbeiter selbst.⁷⁴

⁷⁴ Eden, l.c., v. I, l. I, ch. I, p. 1, 2 und Preface, p. XX.

Sir F. M. Eden, beiläufig bemerkt, ist der einzige Schüler Adam Smiths, der während des achtzehnten Jahrhunderts etwas Bedeutendes geleistet hat.⁷⁵

⁷⁵ Sollte der Leser an Malthus erinnern, dessen „Essay on Population“ 1798 erschien, so erinnere ich, daß diese Schrift in ihrer ersten Form nichts als ein schülerhaft oberflächliches und pfäffisch verdeklamiertes Plagiat aus Defoe, Sir James Steuart, Townsend, Franklin, Wallace usw. ist und nicht einen einzigen selbstgedachten Satz enthält. Das große Aufsehn, das dies Pamphlet erregte, entsprang lediglich Parteiinteressen. Die Französische Revolution hatte im britischen Königreich leidenschaftliche Verteidiger gefunden; das „Populationsprinzip“, langsam im 18. Jahrhundert herausgearbeitet, dann mitten in einer großen sozialen Krisis mit Pauken und Trompeten verkündet als das unfehlbare Gegengift gegen die Lehren von Condorcet u.a., wurde jubelnd begrüßt von der englischen

was greeted jubilantly by the English oligarchy as the great destroyer of all hankerings after a progressive development of humanity. Malthus, greatly astonished at his success, then set himself to the task of stuffing into the old framework of his book various bits of superficial compiled material, and adding to it new matter; but this new matter was not discovered by Malthus, it was merely annexed by him.

Next, Marx is asking whether the population theorists practiced what they preached.

^{75 ctd} Let us note incidentally that although Malthus was a parson of the Church of England he had taken the monastic vow of celibacy. For this is one of the conditions of holding a Fellowship in (Protestant) Cambridge University: ‘We do not permit the Fellows of the Colleges to be married, but rather as soon as anyone takes a wife, he ceases to be a Fellow of his College’. (Reports of Cambridge University Commission, p. 172). This circumstance favorably distinguishes Malthus from other Protestant parsons, who have flung off the Catholic requirement of the celibacy of the priesthood, and taken ‘Be fruitful and multiply’ as their special Biblical mission to such an extent that they generally contribute to the increase of population to a really unbecoming extent, whilst at the same time preaching the ‘principle of population’ to the workers. It is characteristic that the fall of man, as economically travestied, the apple of Adam, the ‘urgent appetite’, ‘the checks which tend to blunt the shafts of Cupid’, as Parson Townsend waggishly puts it—it is characteristic that this delicate question was and is monopolized by the representatives of Protestant theology, or rather of the Protestant Church. With the exception of the Venetian monk Ortes, an original and clever writer, most of the population theorists are Protestant clerics. For instance, Bruckner’s *Théorie du système animal* (Leyden, 1767), in which the whole of the modern theory of population is exhaustively treated, using ideas furnished by the passing dispute between Quesnay and his pupil, the elder Mirabeau, then Parson Wallace, Parson Townsend, Parson Malthus and

Oligarchie als der große Austilger aller Gelüste nach menschlicher Fortentwicklung. Malthus, über seinen Erfolg hocherstaunt, gab sich dann daran, oberflächlich kompiliertes Material in das alte Schema zu stopfen und neues, aber nicht von Malthus entdecktes, sondern nur annexiertes, zuzufügen.

Next, Marx is asking whether the population theorists practiced what they preached.

^{75 ctd} —Nebenbei bemerkt. Obgleich Malthus Pfaffe der englischen Hochkirche, hatte er das Mönchsgelübde des Zölibats abgelegt. Dies ist nämlich eine der Bedingungen der fellowship der protestantischen Universität zu Cambridge. „Daß die Mitglieder der Kollegien verheiratet sind, gestatten wir nicht, sondern sobald jemand eine Frau nimmt, hört er damit auf, Mitglied des Kollegiums zu sein.“ („Reports of Cambridge University Commission“, p. 172.) Dieser Umstand unterscheidet Malthus vorteilhaft von den andren protestantischen Pfaffen, die das katholische Gebot des Priesterzölibats von sich selbst abgeschüttelt und das „Seid fruchtbar und mehret euch“ in solchem Maß als ihre spezifisch biblische Mission vindiziert haben, daß sie überall in wahrhaft unanständigem Grad zur Vermehrung der Bevölkerung beitragen, während sie gleichzeitig den Arbeitern das „Populationsprinzip“ predigen. Es ist charakteristisch, daß der ökonomische travestierte Sündenfall, der Adamsapfel, der „urgent appetite“, „the checks which tend to blunt the shafts of Cupid“, wie Pfaff Townsend munter sagt, daß dieser kitschige Punkt von den Herrn von der protestantischen Theologie oder vielmehr Kirche monopolisiert ward und wird. Mit Ausnahme des venetianischen Mönches Ortes, eines originellen und geistreichen Schriftstellers, sind die meisten Populationslehrer protestantische Pfaffen. So Bruckner: „Théorie du système animal“, Leyde 1767, worin die ganze moderne Bevölkerungstheorie erschöpft ist und wozu der vorübergehende Zank zwischen Quesnay und seinem Schüler Mirabeau père über dasselbe Thema Ideen lieferte, dann Pfaffe Wal-

his pupil, the arch-Parson Thomas Chalmers, to say nothing of lesser reverend scribblers in this line.

Since the protestant priests did not enter economics until the population principle debate, Marx adds a few remarks about the sociology of Economics:

^{75 ctd} Originally, political economy was studied by philosophers such as Hobbes, Locke and Hume; by businessmen and statesmen, like Thomas More, Temple, Sully, De Witt, North, Law, Vanderint, Cantillon and Franklin; and the theoretical aspects especially were studied, and with the greatest success, by medical men like Petty, Barbon Mandeville and Quesnay. Even in the middle of the eighteenth century, the Rev. Mr. Tucker, a notable economist for that time, made his excuses for meddling with Mammon. Later on, and indeed with the entry of the 'principle of population', the hour of the Protestant parsons struck. Petty, who regarded population as the basis of wealth, and was, like Adam Smith, an outspoken enemy of the parsons, said, as if he had a presentiment of their bungling interference, 'that Religion best flourishes when the Priests are most mortified, as was before said of the Law, which best flourisheth when lawyers have least to do'. He advises the Protestant priests, therefore, if they, once for all, will not follow the Apostle Paul and 'mortify' themselves by celibacy, 'not to breed more Churchmen than the Benefices, as they now stand shared out, will receive, that is to say, if there be places for about 12,000 in England and Wales, it will not be safe to breed up 24,000 ministers, for then the 12,000 which are unprovided for, will seek ways how to get themselves a livelihood, which they cannot do more easily than by persuading the people that the 12,000 incumbents do poison or starve their souls, and misguide them in their way to Heaven' (Petty, [Pet67, p. 57]).

Petty noticed the contradiction too of the population-theory and the breeding by the priests. He used a version of population theory (namely the deleterious effects of an overpopulation of priests on religion) to advise the priests not to breed so much. Marx's sociology of

lace, Pfaffe Townsend, Pfaffe Malthus und sein Schüler, der Erzpfaß Th. Chalmers, von kleineren pfäffischen Skribenten in this line gar nicht zu reden.

^{75 ctd} Ursprünglich ward die politische Ökonomie betrieben von Philosophen, wie Hobbes, Locke, Hume, Geschäfts- und Staatsleuten, wie Thomas Morus, Temple, Sully, de Witt, North, Law, Vanderlint, Cantillon, Franklin, und theoretisch namentlich, und mit dem größten Erfolg, von Medizinnern, wie Petty, Barbon, Mandeville, Quesnay. Noch Mitte des 18. Jahrhunderts entschuldigt sich Rev. Mr. Tucker, ein bedeutender Ökonom für seine Zeit, daß er sich mit dem Mammon beschäftigte. Später, und zwar mit dem „Bevölkerungsprinzip“ schlug die Stunde der protestantischen Pfaffen. Als ob er diese Geschäftsverfälschung geahnt, sagt Petty, der die Population als Basis des Reichtums behandelt, gleich Adam Smith, abgesagter Pfaffenfeind: „Die Religion blüht am besten, wenn die Priester am meisten kasteit werden, wie das Recht am besten, wo die Advokaten verhungern.“ Er rät daher den protestantischen Pfaffen, wenn sie einmal dem Apostel Paulus nicht folgen und sich nicht durch das Zölibat „abtöten“ wollen, „doch ja nicht mehr Pfaffen zu hecken (not to breed more Churchmen) als die vorhandenen Pfründen (benefices) absorbieren können; d.h. wenn es nur 12 000 Pfründen in England und Wales gibt, ist es unweis, 24 000 Pfaffen zu hecken (it will not be safe to breed 24 000 ministers), denn die 12 000 Unversorgten werden stets einen Lebensunterhalt zu gewinnen suchen, und wie könnten sie das leichter tun, als indem sie unter das Volk gehn und es überreden, die 12 000 Pfründner vergifteten die Seelen, und hungerten selbige Seelen aus, und zeigten ihnen den Holzweg zum Himmel?“ (Petty, [Pet67, p. 57].)

science is different. Marx knows that the population theory is wrong, and the points out that its very proponents do not seem to take it seriously for their own practical activities. This is another sign that population theory is only an apology for their own privileged position.

Question 1020 Why did the Protestant population theoreticians not live by the principles they preached?

Finally about Adam Smith and atheism:

^{75 ctd} Adam Smith's position with the Protestant priesthood of his time is shown by the following. In *A Letter to A. Smith, L.L.D., on the Life, Death, and Philosophy of His Friend, David Hume. By one of the People Called Christians*, 4th edn, Oxford, 1784, Dr. Horne, Bishop of Norwich, reproves Adam Smith, because in a published letter to Mr Strahan, he 'embalmed his friend David' (i.e. Hume), because he told the world how 'Hume amused himself on his deathbed with Lucian and Whist', and because he even had the impudence to write of Hume: 'I have always considered him, both in his life-time and since his death, as approaching as nearly to the idea of a perfectly wise and virtuous man, as, perhaps, the nature of human frailty will permit.' The bishop cries out, in a passion: 'Is it right in you, Sir, to hold up to our view as "perfectly wise and virtuous" the character and conduct of one, who seems to have been possessed with an incurable antipathy to all that is called *Religion*; and who strained every nerve to explode, suppress and extirpate the spirit of it among men, that its very name, if he could effect it, might no more be had in remembrance?' (ibid., p. 8). 'But let not the lovers of truth be discouraged, Atheism cannot be of long continuance' (p. 17). Adam Smith 'had the atrocious wickedness to propagate atheism through the land' (namely by his *Theory of Moral Sentiments*). 'Upon the whole, Doctor, your meaning is good; but I think you will not succeed this time. You would persuade us, by the example of *David Hume, Esq.*, that atheism is the only cordial for low spirits, and the proper antidote against the fear of death ... You may smile over Babylon in ruins and congratulate the hardened Pharaoh on his overthrow

^{75 ctd} Adam Smiths Stellung zum protestantischen Pfaffentum seiner Zeit ist durch folgendes charakterisiert. In „A Letter to A. Smith, L.L.D., On the Life, Death and Philosophy of his Friend David Hume. By One of the People called Christians“, 4th ed., Oxford 1784, kanzelt Dr. Horne, hochkirchlicher Bischof von Norwich, den A. Smith ab, weil er in einem öffentlichen Sendschreiben an Herrn Strahan seinen „Freund David“ (sc. Hume) „einbalsamierte“, weil er dem Publikum erzähle, wie „Hume auf seinem Sterbebett sich mit Lukian und Whist amüsierte“, und sogar die Frechheit hatte, zu schreiben: „Ich habe Hume stets, sowohl während seines Lebens wie nach seinem Tode so nahe dem Ideal eines vollkommen weisen und tugendhaften Mannes betrachtet, als die Schwäche der menschlichen Natur erlaubt.“ Der Bischof ruft entrüstet: „Ist es recht von Ihnen, mein Herr, uns als vollkommen weise und tugendhaft den Charakter und Lebenswandel eines Menschen zu schildern, der von einer unheilbaren Antipathie besessen war wider alles, was Religion heißt, und der jeden Nerv anspannte, um, so viel an ihm, selbst ihren Namen aus dem Gedächtnis der Menschen zu löschen?“ (l.c. p. 8.) „Aber laßt euch nicht entmutigen, Liebhaber der Wahrheit, der Atheismus ist kurzlebig.“ (p. 17.) Adam Smith „hat die gräßliche Ruchlosigkeit (the atrocious wickedness), den Atheismus durch das Land zu propagandieren“ (nämlich durch seine „Theory of moral sentiments“) „... Wir kennen Eure Schliche, Herr Doktor! Ihr meint's gut, rechnet aber diesmal ohne den Wirt. Ihr wollt uns durch das Beispiel von David Hume, Esq., weismachen, daß Atheismus der einzige Schnaps (cordial) für ein niedergeschlagenes Gemüt und das ein-

in the Red Sea' (ibid., pp. 21–2). One orthodox individual among Adam Smith's college friends wrote after his death: 'Smith's well-placed affection for Hume ... hindered him from being a Christian ... When he met with honest men whom he liked ... he would believe almost anything they said. Had he been a friend of the worthy ingenious Horrocks he would have believed that the moon sometimes disappeared in a clear sky without the interposition of a cloud ... He approached to republicanism in his political principles' (*The Bee*, by James Anderson, 18 vols., Edinburgh, 1791–3, Vol. 3, pp. 166, 165). Parson Thomas Chalmers was inclined to suspect that Adam Smith invented the category of 'unproductive laborers' out of pure malice, so that he could put the Protestant parsons in it, in spite of their blessed work in the vineyard of the Lord.

After this literature review, which had started in 763:1/o, Marx continues his argument:

1.c. [Dependence of Labor on Capital under Equal Organic Composition]

We are at an impasse. If one compares the quantitative growth trajectory of capital with that of the working-class, the conclusion seems inescapable that workers will eventually become scarce and their wages will rise. However experience shows that the capitalist system remains in place and even strengthens its grip over society. Marx has already drawn the conclusion from this that the growth of the working class must be a subprocess of capital accumulation. In order to develop this in more detail, Marx takes a closer look at accumulation. The first thing he says is that the conditions presently under consideration are the most favorable conditions for capital:

768/oo Under the conditions of accumulation assumed so far, conditions which are the most favorable to the workers, their relation of dependence on capital takes on forms which are tolerable or, as Eden says, 'easy and liberal'. Instead of becoming more intensive with the growth of capital, this relation of dependence merely becomes more extensive, i.e. the sphere of capital's exploitation and domination merely extends with its own dimensions and the number of people subjected to it.

zige Gegengift wider Todesfurcht ist ... Lacht nur über Babylon in Ruinen und beglückwünscht nur den verhärteten Bösewicht Phrao!" (l.c. p. 21, 22.) Ein orthodoxer Kopf unter A. Smiths Kollegienbesuchern schreibt nach dessen Tod: „Smiths Freundschaft für Hume verhinderte ihn, ein Christ zu sein ... Er glaubte Hume alles aufs Wort. Wenn Hume ihm gesagt, der Mond sei ein grüner Käs, er hätt's geglaubt. Er glaubte ihm daher auch, daß es keinen Gott und keine Wunder gebe ... In seinen politischen Prinzipien streifte er an Republikanismus.“ („The Bee“ by James Anderson, 18 vls., Edinb. 1791–1793 vol. 3, p. 166, 165.) Pfaff Th. Chalmers hat A. Smith in Verdacht, daß er aus reiner Malice die Kategorie der „unproduktiven Arbeiter“ eigens für die protestantischen Pfaffen erfand, trotz ihrer gesegneten Arbeit im Weinberg des Herrn.

645/oo Unter den bisher unterstellten, den Arbeitern günstigsten Akkumulationsbedingungen kleidet sich ihr Abhängigkeitsverhältnis vom Kapital in erträgliche oder, wie Eden sagt, „bequeme und liberale“ Formen. Statt intensiver zu werden mit dem Wachstum des Kapitals, wird es nur extensiver, d.h. die Exploitations- und Herrschaftssphäre des Kapitals dehnt sich nur aus mit seiner eigenen Dimension und der Anzahl seiner Untertanen.

This qualification hints at it that right now we are only talking about quantitative changes; any *qualitative* changes flowing from this will be discussed later.

After this qualification, Marx re-describes the process. He no longer views it as the interaction between two independent factors (capital and working class), but he looks at accumulation of capital and growth of the working-class as two aspects of the same overarching process:

A larger part of the workers' own surplus product, which is always increasing and is continually being transformed into additional capital, comes back to them in the shape of means of payment, so that they can extend the circle of their enjoyments, make additions to their consumption fund of clothes, furniture, etc., and lay by a small reserve fund of money.

This is a quantitative, not a qualitative change in the overall reproduction process of capital:

But this rise in the price of labor, as a consequence of the accumulation of capital, no more abolishes the exploitation and dependence of the wage laborer than do better clothing, food and treatment, and a larger *peculium*, abolish that of the slave. This rise is merely proof that the length and weight of the golden chain, which the wage-laborer has already forged for himself, allow this chain to be loosened somewhat.

Question 1021 What does Marx use the metaphor of a golden chain for? Why does he say the chain has become heavier?

↑ Under this redescription, the reader can see how the reproduction of the working-class is subsumed under the accumulation of capital, ↓ therefore the only thing Marx has to argue is that this is the right way to look at it.

In the controversies around this question, one has generally overlooked that which matters most, namely, that which distinguishes capitalist production from other production. Labor-power is not purchased under this system for the purpose of satisfying, by its service or through its product, the personal needs of the buyer. The aim of the

Von ihrem eignen anschwellenden und schwellend in Zusatzkapital verwandelten Mehrprodukt strömt ihnen ein größerer Teil in der Form von Zahlungsmitteln zurück, so daß sie den Kreis ihrer Genüsse erweitern, ihren Konsumtionsfonds von Kleidern, Möbeln usw. besser ausstatten und kleine Reservefonds von Geld bilden können.

So wenig aber bessere Kleidung, Nahrung, Behandlung und ein größeres Peculium das Abhängigkeitsverhältnis und die Exploitation des Sklaven aufheben, so wenig die des Lohnarbeiters. Steigender Preis der Arbeit infolge der Akkumulation des Kapitals besagt in der Tat nur, daß der Umfang und die Wucht der goldenen Kette, die der Lohnarbeiter sich selbst bereits geschmiedet hat, ihre losere Spannung erlauben.

In den Kontroversen über diesen Gegenstand hat man meist die Hauptsache übersehen, nämlich die differentia specifica der kapitalistischen Produktion. Arbeitskraft wird hier gekauft, nicht um durch ihren Dienst oder ihr Produkt die persönlichen Bedürfnisse des Käufers zu befriedigen. Sein Zweck ist Verwertung seines Kapitals,

buyer is the valorization of his capital, the production of commodities which contain more labor than he paid for, whose value therefore contains a portion which costs him nothing and is nevertheless realized through the sale of those commodities.

↑ Making profits is not only the goal of the capitalist ↓ but the necessary outcome incribed in the structure of the capitalist system:

The production of surplus-value, or the making of profits, is the absolute law of this mode of production.

↓ Marx has not yet explained how profit-making, the goal of the capitalist, becomes the outcome favored by the structure of the system. A brief explanation follows now:

Labor-power can be sold only to the extent that it preserves and maintains the means of production as capital, reproduces its own value as capital, and provides unpaid labor, the source of additional capital.⁷⁶

↑ This simple reasoning has a powerful prerequisite, which Marx does not stress enough here: the capitalists as a class are free to decide how much they want to accumulate. If no profits are to be made, accumulation ceases. ↓ Footnote 76 cites the literature to this effect.

⁷⁶ "The limit, however, to the employment of both the operative and the laborer is the same; namely, the possibility of the employer realizing a *profit* on the produce of their industry. If the rate of wages is such as to reduce the master's gains below the average profit of capital, he will cease to employ them, or will only employ them on condition of submission to a reduction of wages' (John Wade, op. cit., p. 241).

↓ From the point of view of the laborers this means: they can sell their labor-power only under conditions which make it necessary for them to sell their labor-power again and again. The conditions of the sale of labor-power, even if they are the most favorable for the worker, always include the necessity of its constant re-sale and provide for the continued extended reproduction of wealth as capital.

This has implications for the wages. Even if wages are comparatively favorable today, the condition of profitability ensures that they cannot be *very* favorable, and that they will never

Produktion von Waren, die mehr Arbeit enthalten, als er zahlt, also einen Wertteil enthalten, der ihm nichts kostet und dennoch durch den Warenverkauf realisiert wird.

Produktion von Mehrwert oder Plusmacherei ist das absolute Gesetz dieser Produktionsweise.

Nur soweit sie die Produktionsmittel als Kapital erhält, ihren eignen Wert als Kapital reproduziert und in unbezahlter Arbeit eine Quelle von Zuschußkapital liefert, ist die Arbeitskraft verkaufbar.⁷⁶

⁷⁶ Note zur 2. Ausgabe. „Die Grenze jedoch der Beschäftigung von industriellen wie von ländlichen Arbeitern ist dieselbe: nämlich die Möglichkeit für den Unternehmer, einen Profit aus ihrem Arbeitsprodukt herauszuschlagen. Steigt die Rate des Arbeitslohns so hoch, daß der Gewinn des Meisters unter den Durchschnittsprofit fällt, so hört er auf, sie zu beschäftigen, oder beschäftigt sie nur unter der Bedingung, daß sie eine Herabsetzung des Arbeitslohns zulassen.“ (John Wade, l.c., p. 240.)

Die Bedingungen ihres Verkaufs, ob mehr oder minder günstig für den Arbeiter, schließen also die Notwendigkeit ihres steten Wiederverkaufs und die stets erweiterte Reproduktion des Reichtums als Kapital ein.

become very favorable in the future. The purpose for which labor-power is bought puts a lid on wages:

Wages, as we have seen, imply by their very nature that the worker must always provide a certain quantity of unpaid labor.

Der Arbeitslohn, wie man gesehn, bedingt seiner Natur nach stets Lieferung eines bestimmten Quantums unbezahlter Arbeit auf seiten des Arbeiters.

Higher daily or weekly wages do not necessarily mean that the proportion between paid and unpaid labor is more favorable for the worker, and even if it is, the improvement is only quantitative:

In the best of cases, an increase in wages means only a quantitative reduction in the amount of unpaid labor the worker has to supply (not to speak of those cases where a rise of wages is accompanied by a fall in the price of labor).

Ganz abgesehen vom Steigen des Arbeitslohns mit sinkendem Preis der Arbeit usw., besagt seine Zunahme im besten Fall nur quantitative Abnahme der unbezahlten Arbeit, die der Arbeiter leisten muß.

↑ Examples how wages can rise although the price of labor falls are given in the chapter on time wages, 684:1/o. Marx calls the decrease of unpaid labor *only* quantitative because ↓ it can never go to a point where it makes a qualitative difference.

This reduction can never go so far as to threaten the system itself.

Diese Abnahme kann nie bis zum Punkt fortgehn, wo sie das System selbst bedrohen würde.

After having sorted out all the relevant mechanisms and forces, Marx looks now at the *events*, at possible outcomes. He enumerates three scenarios about what might happen when wages rise. The first possibility is that the rise in wages leads to open conflict: presumably, the capitalists refuse to pay the higher wages and force the workes to accept low wages.

Apart from violent conflicts over the rate of wages (and Adam Smith already showed that in such a conflict the master, by and large, remained the master) a rise in the price of labor resulting from accumulation of capital may lead to the following alternatives:

Abgesehen von gewaltsamen Konflikten über die Rate des Arbeitslohns, und Adam Smith hat bereits gezeigt, daß im großen und ganzen in solchem Konflikt der Meister stets Meister bleibt, unterstellt ein aus Akkumulation des Kapitals entspringendes Steigen des Arbeitspreises folgende Alternative.

↓ Neither side of the following alternative allows the worker to truly get ahead:

770:1/o Either the price of labor keeps on rising, because its rise does not interfere with the progress of accumulation. There is nothing remarkable in this, for as Adam Smith says,

647:1–648:1 Entweder fährt der Preis der Arbeit fort zu steigen, weil seine Erhöhung den Fortschritt der Akkumulation nicht stört; es liegt darin nichts Wunderbares, denn, sagt A. Smith,

‘after these’ (profits) ‘are diminished, stock may not only continue to increase, but to in-

„selbst bei gesunkenem Profit vermehren sich die Kapitale dennoch; sie wachsen selbst ra-

crease much faster than before ... A great stock, though with small profits, generally increases faster than a small stock with great profits' (op. cit., Vol. 1, p. 189).

In this case it is evident that a reduction in the amount of unpaid labor in no way interferes with the extension of the reign of capital.

↑ These are the phases in the business cycle in which the demand generated by wages leads to economic expansion, or in which high capacity utilization allows high profits even if wages are high, etc. It is not uncommon that temporarily both wages and profits rise. ↓ The other alternative is not that the laborer triumphs over capital but that capital accumulation slackens:

Or, the other alternative, accumulation slackens as a result of the rise in the price of labor, because the stimulus of gain is blunted. The rate of accumulation lessens.

Capital does not *have* to accumulate at a pre-set rate at every point in time. It will only accumulate to the extent that accumulation helps its drive for continuous profits. Of course, if accumulation stalls because wages are too high, this is a defeat for capital. But the ability to endure these defeats allows capital to continue the war to its final victory.

But this means that the primary cause of that lessening itself vanishes, i.e. the disproportion between capital and exploitable labor-power. The mechanism of the capitalist production process removes the very obstacles it temporarily creates. The price of labor falls again to a level corresponding with capital's requirements for self-valorization, whether this level is below, the same as, or above that which was normal before the rise of wages took place.

↑ Marx has shown that the capitalist, simply by doing what is rational for them, namely, investing more if the profit rate is high and less if it is low, retain the upper hand in competition with labor. No special strategic behavior towards labor is necessary.

Question 1022 *Does it make sense for the working class to fight for higher wages if the capitalist, for economic reasons, usually maintains the upper hand in such conflicts?*

schwerer als vorher ... Ein großes Kapital wächst selbst bei kleinerem Profit im allgemeinen rascher als ein kleines Kapital bei großem Profit." (l.c. 1, p. 189.)

In diesem Falle ist es augenscheinlich, daß eine Verminderung der unbezahlten Arbeit die Ausdehnung der Kapitalherrschaft keineswegs beeinträchtigt.

—Oder, das ist die andre Seite der Alternative, die Akkumulation erschläft infolge des steigenden Arbeitspreises, weil der Stachel des Gewinns abstumpft. Die Akkumulation nimmt ab.

Aber mit ihrer Abnahme verschwindet die Ursache ihrer Abnahme, nämlich die Disproportion zwischen Kapital und exploitable Arbeitskraft. Der Mechanismus des kapitalistischen Produktionsprozesses beseitigt also selbst die Hindernisse, die er vorübergehend schafft. Der Arbeitspreis fällt wieder auf ein den Verwertungsbedürfnissen des Kapitals entsprechendes Niveau, ob dieses nun unter, über oder gleich mit dem Niveau, welches vor Eintritt des Lohnzuwachses als normal galt.

Question 1023 *Does the dependence of the workers on capital decrease when wages are high?*

Next, Marx verifies that the deeper reasons of this favorable automatic outcome are, indeed, the fact that the growth of the working-class depends on the accumulation of capital. It is written against the background of Malthus's population theory, which was so well-known that Marx did not see the need to explain it here. It will be described later, on p. 790:1/o. While Malthus claims that population growth is the independent variable which places a limit on capital accumulation, Marx holds that capital accumulation is the independent variable. Throughout the book, Marx has always stressed that actions come from things and are conditioned by the properties of things. In this framework the question "who is acting" is a relevant one.

↓ Marx still refers to the two sides of the alternative: either capital continues to accumulate despite high wages, or accumulation slows until wages fall. In either case, capital accumulation acts and the growth of the working population reacts:

We see therefore that in the first case it was not the diminished rate, either of the absolute or of the proportional increase in labor-power or working population, which caused the excess quantity of capital, but rather the converse, the increase in capital made the exploitable labor-power insufficient. In the second case it was not the increased rate, either of the absolute or of the proportional increase in labor-power, or the working population, that made the capital insufficient, but rather the converse; the relative reduction in the amount of capital caused the exploitable labor-power, or rather its price, to be in excess.

↑ One might also say that capital accumulation is the independent and the growth of the working population the dependent variable. Or one might call capital accumulation active and the working population passive. This all amounts to the same thing.

"Or rather its price" in the last sentence above is an important qualification. Through the mechanism presently discussed, capital accumulation does not increase the size of exploitable population directly but it lowers the price of labor-power. In the next section we will see an action of capital which has a more direct effect on the size of the labor-supply itself.

↓ Now Marx explains why it is not apparent that capital is active and the population passive:

It is these absolute movements of the accumulation of capital which manifest them-

Man sieht: Im ersten Fall ist es nicht die Abnahme im absoluten oder proportionellen Wachstum der Arbeitskraft oder Arbeiterbevölkerung, welche das Kapital überschüssig, sondern umgekehrt die Zunahme des Kapitals, welche die exploitable Arbeitskraft unzureichend macht. Im zweiten Fall ist es nicht die Zunahme im absoluten oder proportionellen Wachstum der Arbeitskraft oder der Arbeiterbevölkerung, welche das Kapital unzureichend, sondern umgekehrt die Abnahme des Kapitals, welche die exploitable Arbeitskraft, oder vielmehr ihren Preis, überschüssig macht.

Es sind diese absoluten Bewegungen in der Akkumulation des Kapitals, welche sich als

selves as relative movements of the mass of exploitable labor-power, and therefore seem produced by the latter's own independent movement.

↑ Capital does not seem to be the causal force because the changes in the rate of capital accumulation are invisible. One does not see that the capitalists decide to invest more; that decision is made behind closed board rooms. What one sees is that there is suddenly a shortage in the labor market because demand for labor grows faster than its supply. This is what Marx means by the relative movements of the mass of exploitable labor-power. Since this reaction on the side of the labor market is the first thing one sees, one is tempted to think that the impulse comes from labor, not from capital.

Question 1026 Explain how the relation between capital and wage labor can be characterized as: "the absolute movements of the accumulation of capital manifest themselves as relative movements of the mass of exploitable labor-power, and therefore seem produced by the latter's own independent movement."

To put it mathematically: the magnitude of accumulation is the independent, not the dependent variable; the magnitude of wages is the dependent, not the independent variable.

Question 1027 Recapitulate the concrete reasoning which leads Marx to the conclusion that the accumulation of capital is the independent, and the wage rate the dependent variable.

↓ This is not the only situation where mainstream economics confuses cause and effect. The "Currency School," i.e., the monetarists of Marx's time, do it too. They confuse cause and effect in a different economic phenomenon, namely, cyclical fluctuations in price level and the quantity of money.

Thus, when the industrial cycle is in its phase of crisis, general fall in the price of commodities is expressed as a rise in relative value of money, and, in the phase of prosperity, a general rise in the price of commodities is expressed as a fall in the relative value of money. The so-called Currency School conclude from this that with high prices too much money is in circulation, with low prices too little.⁷⁷

⁷⁷ Marx, *Zur Kritik der Politischen Ökonomie*, pp. 165 ff. English edition pp. 182–5.

relative Bewegungen in der Masse der exploitablen Arbeitskraft widerspiegeln und daher der eignen Bewegung der letzteren geschuldet scheinen.

Um mathematischen Ausdruck anzuwenden: die Größe der Akkumulation ist die unabhängige Variable, die Lohngröße die abhängige, nicht umgekehrt.

So drückt sich in der Krisenphase des industriellen Zyklus der allgemeine Fall der Warenpreise als Steigen des relativen Geldwerts, und in der Prosperitätsphase das allgemeine Steigen der Warenpreise als Fall des relativen Geldwerts aus. Die sog. Currency-Schule schließt daraus, daß bei hohen Preisen zu viel, bei niedrigen zu wenig Geld zirkuliert.

⁷⁷ Vgl. Karl Marx, „Zur Kritik der Politischen Ökonomie“, 154ff.

↑ I.e., the Currency School says that the quantity of money is the cause and the price level the effect, whereas Marx says that the price level is the cause and the quantity of money the effect. ↓ Just as the quantity of money is not the cause, although it seems to be, so also the number of exploitable laborers is not the cause, although it seems to be.

Their ignorance and complete misunderstanding of the facts are worthily paralleled by the economists, who interpret the above phenomena of accumulation by saying that in one case there are too few, and in the other, too many wage-laborers in existence.

Following up on his result that accumulation is active and the wage passive, Marx re-describes the relationship in such a way that capital is seen as the real agent, an "automatic subject," as Marx called it in 255:1. The mechanism behind the alleged "natural population law" is not natural at all, Marx calls it "law of capitalist production" or "law of capitalist accumulation."

771:1/o The law of capitalist production which lies at the basis of the supposed 'natural law of population' can be reduced simply to this: the relation between capital, accumulation and the rate of wages is nothing other than the relation between the part of the unpaid labor that has been transformed into capital, and the additional paid labor necessary to set in motion this additional capital. It is therefore in no way a relation between two magnitudes which are mutually independent, i.e. between the magnitude of the capital and the numbers of the working population; it is rather, at bottom, only the relation between the unpaid and the paid labor of the same working population. If the quantity of unpaid labor supplied by the working class and accumulated by the capitalist class increases so rapidly that its transformation into capital requires an extraordinary addition of paid labor, then wages rise and, all other circumstances remaining equal, the unpaid labor diminishes in proportion. But as soon as this diminution touches the point at which the surplus labor that nourishes capital is no longer sup-

Ihre Ignoranz und völlige Verkennung der Tatsachen⁷⁷ finden würdige Parallele in den Ökonomen, welche jene Phänomene der Akkumulation dahin deuten, daß das eine Mal zu wenig und das andre Mal zu viel Lohnarbeiter existieren.

648:2/o Das Gesetz der kapitalistischen Produktion, das dem angeblichen „natürlichen Populationsgesetz“ zugrunde liegt, kommt einfach auf dies heraus: Das Verhältnis zwischen Kapital, Akkumulation und Lohnrate ist nichts als das Verhältnis zwischen der unbezahlten, in Kapital verwandelten Arbeit und der zur Bewegung des Zusatzkapitals erforderlichen zuschüssigen Arbeit. Es ist also keineswegs ein Verhältnis zweier voneinander unabhängigen Größen, einerseits der Größe des Kapitals, andererseits der Zahl der Arbeiterbevölkerung, es ist vielmehr in letzter Instanz nur das Verhältnis zwischen der unbezahlten und der bezahlten Arbeit derselben Arbeiterbevölkerung. Wächst die Menge der von der Arbeiterklasse gelieferten und von der Kapitalistenklasse akkumulierten, unbezahlten Arbeit rasch genug, um nur durch einen außergewöhnlichen Zuschuß bezahlter Arbeit sich in Kapital verwandeln zu können, so steigt der Lohn, und alles andre gleichgesetzt, nimmt die unbezahlte Arbeit im Verhältnis ab. Sobald aber diese Abnahme den Punkt berührt, wo die das

plied in normal quantity, a reaction sets in: a smaller part of revenue is capitalized, accumulation slows down, and the rising movement of wages comes up against an obstacle. The rise of wages is therefore confined within limits that not only leave intact the foundations of the capitalist system, but also secure its reproduction on an increasing scale.

Kapital ernährende Mehrarbeit nicht mehr in normaler Menge angeboten wird, so tritt eine Reaktion ein: ein geringerer Teil der Revenue wird kapitalisiert, die Akkumulation erlahmt, und die steigende Lohnbewegung empfängt einen Gegenschlag. Die Erhöhung des Arbeitspreises bleibt also eingebannt in Grenzen, die die Grundlagen des kapitalistischen Systems nicht nur unangestastet lassen, sondern auch seine Reproduktion auf wachsender Stufenleiter sichern.

Marx wrote “ein Verhältnis zweier voneinander unabhängigen Größen,” instead of the

grammatically correct “unabhängiger.” He was probably thinking the more colloquial: “ein

Verhältnis von zwei voneinander unabhängigen Größen.”

This explains the “stylized facts” from 763:1/o. At the end, a pun on “natural law.” Malthus calls his law of population a “natural law.”

The law of capitalist accumulation, mystified by the economists into a supposed law of nature in fact expresses the situation that the very nature of accumulation excludes every diminution in the degree of exploitation of labor, every rise in the price of labor, which could seriously imperil the continual reproduction, on an ever larger scale, of the capital relation.

Das in ein Naturgesetz mystifizierte Gesetz der kapitalistischen Akkumulation drückt also in der Tat nur aus, daß ihre Natur jede solche Abnahme im Exploitationsgrad der Arbeit oder jede solche Steigerung des Arbeitspreises ausschließt, welche die stetige Reproduktion des Kapitalverhältnisses und seine Reproduktion auf stets erweiterter Stufenleiter ernsthaft gefährden könnte.

It is clearly a case of fetishism to call a law “natural” although it springs from the specific nature of capitalist production. Next Marx alludes to the underlying fetish-like character of capital.

It cannot be otherwise in a mode of production in which the worker exists to satisfy the need of the existing values for valorization, as opposed to the inverse situation, in which objective wealth is there to satisfy the worker’s own need for development. Just as man is governed, in religion, by the products of his own brain, so, in capitalist production, he is governed by the products of his own hand.^{77a}

Es kann nicht anders sein in einer Produktionsweise, worin der Arbeiter für die Verwertungsbedürfnisse vorhandener Werte, statt umgekehrt der gegenständliche Reichtum für die Entwicklungsbedürfnisse des Arbeiters da ist. Wie der Mensch in der Religion vom Machwerk seines eignen Kopfes, so wird er in der kapitalistischen Produktion vom Machwerk seiner eignen Hand beherrscht.^{77a}

That the standard of living of the laborers is subordinated to the needs of capital is an expression of the fetish-like character of capital. “Fetish-like character” no longer means,

as in the case of commodities, that the social relations *lack transparency* because they go through things, but that these things now *dominate* the individuals.

Question 1029 *How does the fetish-like character of capital discussed in the Accumulation chapter differ from that of the commodity discussed in chapter One?*

In footnote 77a, a question is asked similar to that which Marx earlier referred to as the “secret” of the fetish-like character of commodities: how does it happen that people become subordinate to their own product?

^{77a} “If we now return to our first inquiry, where we showed that capital itself is only a product of human labor . . . it seems quite incomprehensible that man can have fallen under the domination of capital, his own product, and can be subordinated to it; and as in reality this is indisputably the case, the question involuntarily forces itself on us: How has the worker been able to pass from being the master of capital—as its creator—to being its slave?” (Von Thünen, *Der isolirte Staat*, Part Two, Section Two, Rostock, 1863, pp. 5, 6.) It is to Thünen’s credit that he asked this question. His answer is simply childish.

^{77a} „Gehen wir aber nun auf unsere erste Untersuchung zurück, wo nachgewiesen ist . . . daß das Kapital selbst nur das Erzeugnis menschlicher Arbeit ist . . . so scheint es ganz unbegreiflich, daß der Mensch unter die Herrschaft seines eigenen Produkts—das Kapital—geraten und diesem untergeordnet werden könne; und da dies in der Wirklichkeit doch unleugbar der Fall ist, so drängt sich unwillkürlich die Frage auf: wie hat der Arbeiter aus dem Beherrscher des Kapitals—als Schöpfer desselben—zum Sklaven des Kapitals werden können?“ (Von Thünen, „Der isolirte Staat“, Zweiter Theil, Zweite Abtheilung, Rostock 1863, p. 5, 6.) Es ist das Verdienst Thünens, gefragt zu haben. Seine Antwort ist einfach kindisch.

Question 1031 *What is the right answer to the question: “How has the worker” (and not only the worker but mankind as a whole) “been able to pass from being the master of capital—as its creator—to being its slave?”*

2. Relative Diminution of the Variable Part of Capital as Accumulation, and the Concentration that Accompanies it, Progresses

This section shows how accumulation leads to a “qualitative change” in the composition of capital (sic in 781:1), i.e., to a rise in the value composition c/v . The following causal chain is presented: (1) Capital accumulation leads to higher technology, and (2) higher technology leads to higher organic composition. Both links are themselves sequences of finer steps: Link (1) is subdivided into (1a) capital accumulation leads to concentration of production sites, and (1b) more concentrated production leads to higher technology, and Marx discusses also the reverse connection that (1c) higher technology furthers capital accumulation. Link

(2) is subdivided into (2a) higher technology leads to higher technical composition, and (2b) this higher technical composition is also reflected in a higher value composition. These links are given in the the following order: (2a), (2b), (1b), (1c), (1a).

Section 2 concludes with a few remarks that this change in the composition of capital results in a declining demand for labor. I.e., not only do wages stay low during accumulation, as argued in 1, but in addition, accumulation generates unemployment. A more thorough development of this additional link, that higher organic composition leads to a surplus population of laborers, will be the subject of section 3.

772:1 According to the economists themselves, it is neither the actual extent of social wealth nor the magnitude of the capital already acquired that leads to a rise of wages, but only the continued growth of accumulation and the speed of that growth (Adam Smith, Book I, chapter 8).

If wages were determined by the Malthusian mechanism (best described on p. 790:1/o), then the absolute size of capital, not the speed of its accumulation, should be relevant for wages. The Malthusian economists are therefore inconsistent when they say that speed matters. Marx agrees that speed indeed matters. But the mechanisms described in section 1 are not sufficient to explain the importance of speed. 1 only treated one particular phase of the accumulation process:

So far, we have considered only one particular phase of this process: expansion of capital under a constant technical composition of capital. But the process advances beyond this phase.

Accumulation under constant technical composition of capital is only one phase of the process. Once under way, this accumulation generates its own negation.

2.a. [Law of Increasing Value Composition]

↓ The assumption of capitalist accumulation will be relaxed in 775:1/o, where the conditions of the development of the productive forces will be investigated on the broader basis of commodity production.

772:2 Once given the general basis of the capitalistic system ...

↓ The rest of the paragraph describes the result which we called step (1).

650:1 Nach den Ökonomen selbst ist es weder der vorhandne Umfang des gesellschaftlichen Reichtums noch die Größe des bereits erworbnen Kapitals, die eine Lohnerhöhung herbeiführen, sondern lediglich das fortgesetzte Wachsen der Akkumulation und der Geschwindigkeitsgrad ihres Wachstums. (A. Smith, Buch I, Kap. 8).

Bisher haben wir nur eine besondere Phase dieses Prozesses betrachtet, diejenige, in der der Kapitalzuwachs stattfindet bei gleichbleibender technischer Zusammensetzung des Kapitals. Aber der Prozeß schreitet über diese Phase hinaus.

650:2–3 Die allgemeinen Grundlagen des kapitalistischen Systems einmal gegeben, ...

... a point is regularly reached in the course of accumulation at which the development of the productivity of social labor becomes the most powerful lever of accumulation.

... tritt im Verlauf der Akkumulation jedesmal ein Punkt ein, wo die Entwicklung der Produktivität der gesellschaftlichen Arbeit der mächtigste Hebel der Akkumulation wird.

The English translation is not very clear here because the "jedesmal" is left out. The French is a little clearer than the German, it

translates as follows: the development of the productive forces of social labor always intervenes (survient) at a certain

point of accumulation, in order to become from then on its most powerful lever."

↑ This can be characterized as a dialectical transition from quantitative to qualitative accumulation. In other words, the ceteris paribus condition in the preceding section 763:1/o, constant composition of capital, which must eventually lead to rising wages, does not persist but is necessarily overturned. ↓ Increase in capital not only means that more workers are needed, but it also makes possible new and more productive production methods:

'The same cause', says Adam Smith, 'which raises the wages of labor, the increase of stock, tends to increase its productive powers, and to make a smaller quantity of labor produce a greater quantity of work.'

„Dieselbe Ursache“, sagt A. Smith, „die die Löhne erhöht, nämlich die Zunahme des Kapitals, treibt zur Steigerung der produktiven Fähigkeiten der Arbeit und setzt eine kleinere Arbeitsmenge instand, eine größere Menge von Produkten zu erzeugen.“

In the French edition 542:3/o, the next paragraph starts with: "But how does this result come about?" But instead of describing step (1) now in detail, Marx first concentrates on step (2), the link between increased productive powers of labor and the value composition. As indicated earlier, this is broken into two halves, first (2a), from productive powers of labor to *technical* composition:

Term Paper Topic 1033 Compare the accumulation chapter in the French with that in the German edition.

773:1 Apart from natural conditions, such as the fertility of the soil etc., and the skill of independent and isolated producers (which has more of a bearing on the quality than the quantity of the products), the social degree of productivity of labor expresses itself in the relative extent of the means of production that one worker, during a given time, with the same intensity of exertion of his or her labor-power, turns into products.

650:4/o Abgesehn von Naturbedingungen, wie Fruchtbarkeit des Bodens usw., und vom Geschick unabhängiger und isoliert arbeitender Produzenten, das sich jedoch mehr qualitativ in der Güte als quantitativ in der Masse des Machwerks bewährt, drückt sich der gesellschaftliche Produktivgrad der Arbeit aus im relativen Größenumfang der Produktionsmittel, welche ein Arbeiter, während gegebner Zeit, mit derselben Anspannung von Arbeitskraft, in Produkt verwandelt.

Marx distinguishes three aspects of the productivity of labor: (1) natural conditions, (2) the skills of the workers, and (3) an additional contribution from mechanization, division of labor, and other co-operative aspects of production. The degree of evolution of this third aspect, which Marx had already introduced in 443:2, expresses itself in the technical composition.

I am interpreting *der gesellschaftliche Produktivgrad der Arbeit* to mean the level of the social productive powers of labor which, as the cooperation chapter 447:1 clarified, is a productive power of social labor. The French

edition supports this, it says in 544:1: "*le développement des puissances productives du travail social*." Fowkes's translation has the same connotation. But the Moore-Aveling translation does not; they write "the degree of

productivity of labor, in a given society," i.e., they mean the average of the individual productivities and not a social force separate from individual skills.

An *expression* of some invisible process (here: productivity growth) is an observable series of events which accompanies that process and which can be taken as an indicator that this invisible process is taking place. Here, the observable surface phenomena are the rise in the technical composition. They rise whenever the productive powers of labor increase. The next sentence states this once more in simple terms:

The mass of means of production with which the laborer operates increases with the productivity of his labor.

Die Masse der Produktionsmittel, womit er funktioniert, wächst mit der Produktivität seiner Arbeit.

By saying that something is an expression, we do not claim that it has to be one specific causal connection, i.e., expressions do not always have to be effects or conditions or causes. In some cases they are one, in other cases the other. In the present case the connection is two-fold; rising technical composition is both effect and condition of the increasing productivity:

The means of production play a double role here. The increase of some is a consequence and that of others a condition of the increasing productivity of labor. For example, with division of labor (under manual manufacture) and the application of machinery, more raw material is worked up in the same time, and therefore a greater mass of raw material and auxiliary substances enters into the labor process. This is a consequence of the increasing productivity of labor. On the other hand, the mass of machinery, beasts of burden, mineral fertilizers, drain pipes, etc. is a condition of the increasing productivity of labor. The means of production concentrated in buildings, gigantic furnaces, means

Diese Produktionsmittel spielen dabei eine doppelte Rolle. Das Wachstum der einen ist Folge, das der andren Bedingung der wachsenden Produktivität der Arbeit. Z.B. mit der manufakturmäßigen Teilung der Arbeit und der Anwendung von Maschinerie wird in derselben Zeit mehr Rohmaterial verarbeitet, tritt also größere Masse von Rohmaterial und Hilfsstoffen in den Arbeitsprozeß ein. Das ist die Folge der wachsenden Produktivität der Arbeit. Andererseits ist die Masse der angewandten Maschinerie, Arbeitsviehs, mineralischen Düngers, Drainierungsröhren usw. Bedingung der wachsenden Produktivität der Arbeit. Ebenso die Masse der in Baulichkeiten, Riesenöfen,

of transport, etc. are conditions as well.

Transportmitteln usw. konzentrierten Produktionsmittel.

The next sentence can be considered an explanation of the terminology "expresses itself": But whether condition or consequence, the growing extent of the means of production, as compared with the labor-power incorporated into them, is an expression of the growing productivity of labor.

Ob aber Bedingung oder Folge, der wachsende Größenumfang der Produktionsmittel im Vergleich zu der ihnen einverleibten Arbeitskraft drückt die wachsende Produktivität der Arbeit aus.

Question 1034 In 773:1, Marx discusses an empirical phenomenon in which technical progress "*expresses*" itself. Which phenomenon is that? Why does Marx speak here of an *expression*?

↓ The next sentence contains at its beginning a "therefore," in German *also*, which is a weak version of "therefore" that might also be translated as "thus." I.e., Marx makes an additional step here.

The increase of the latter appears, therefore, in the diminution of the mass of labor in proportion to the mass of means of production moved by it, or in the diminution of the subjective factor of the labor process as compared with the objective factors.

Die Zunahme der letzteren erscheint also in der Abnahme der Arbeitsmasse verhältnismäßig zu der von ihr bewegten Masse von Produktionsmitteln oder in der Größenabnahme des subjektiven Faktors des Arbeitsprozesses, verglichen mit seinen objektiven Faktoren.

Here Marx no longer speaks of "expression" but of "form of appearance." While an expression of a process going on in the core is part of channel (1) defined earlier (i.e., it is information which this process sends about itself to the surface), forms of appearance are part of channel (2): they are surface relations which direct and focus individual activities in such a way that they have an impact on the core. The problem with this appearance is that it is an *inverted* appearance: the *increase* of productivity in the core is, on the surface, experienced as a *decrease* of labor relative to the mass of means of production. In the French edition 544:1, Marx adds the following sentence here:

544:1 To the extent therefore that the growth of capital makes labor more productive, it diminishes the demand for labor proportionally to its own magnitude.

544:1 A mesure donc que l'accroissement du capital rend le travail plus productif, il en diminue la demande proportionnellement à sa propre grandeur.

↑ I.e., labor, which just has become better, is demanded less. The reaction on the surface to increasing productivity is therefore perverse: Instead of providing more wealth for all, higher productivity leads to unemployment and lower wages, more misery for the working class.

In the next two paragraphs, Marx discusses step (2b), from technical composition to value composition. He first gives an example of increasing technical composition:

773:2/o This change in the technical composition of capital, this growth in the mass of means of production, as compared with the mass of labor-power that gives life to them, is reflected in its value-composition, since the constant constituent of capital increases at the expense of its variable constituent. There may be, for example, originally 50 per cent of the capital laid out in means of production, and 50 per cent in labor-power; later on, with the development of the productivity of labor, 80 per cent may be laid out in means of production, 20 per cent in labor-power and so on.

There is no mathematical necessity for the increased technical composition to lead to an increased value composition, since higher technology also cheapens the means of production, which counteracts the increase in their mass. However it is a plausible hypothesis that labor can only be saved by increasing some other input into the production process. Rising technical composition means that machines have to be increased; rising value composition can perhaps be justified by the idea that the extent of co-operation has to be increased: one needs an increasing amount of labor elsewhere in order to assist a decrease here.

But even if something is very plausible, it is prudent to check it against the facts, and this is what Marx does next. He cannot bring direct data about value composition (which were unavailable at his time), but refers to price data.

This law of the progressive growth of the constant part of capital in comparison with the variable part is confirmed at every step (as already said in the earlier development) by the comparative analysis of the prices of commodities, whether we compare different economic epochs or different nations in the same epoch. The relative magnitude of the part of the price which represents the value of the means of production, or the constant part of the capital, is in direct proportion to the progress of accumulation, whereas the relative magnitude of the other part of the price, which represents the variable part of the capital, or the payment made for labor, is in inverse proportion to the progress of ac-

651:1 Diese Veränderung in der technischen Zusammensetzung des Kapitals, das Wachstum in der Masse der Produktionsmittel, verglichen mit der Masse der sie belebenden Arbeitskraft, spiegelt sich wider in seiner Wertzusammensetzung, in der Zunahme des konstanten Bestandteils des Kapitalwerts auf Kosten seines variablen Bestandteils. Es werden z.B. von einem Kapital, prozentweis berechnet, ursprünglich je 50% in Produktionsmitteln und je 50% in Arbeitskraft ausgelegt, später, mit der Entwicklung des Produktivgrads der Arbeit, je 80% in Produktionsmitteln und je 20% in Arbeitskraft usw.

Dies Gesetz des steigenden Wachstums des konstanten Kapitalteils im Verhältnis zum variablen wird auf jedem Schritt bestätigt (wie schon oben entwickelt) durch die vergleichende Analyse der Warenpreise, gleichviel ob wir verschiedene ökonomische Epochen bei einer einzigen Nation vergleichen oder verschiedene Nationen in derselben Epoche. Die relative Größe des Preiselements, welches nur den Wert der verzehrten Produktionsmittel oder den konstanten Kapitalteil vertritt, wird in direktem, die relative Größe des andern, die Arbeit bezahlenden oder den variablen Kapitalteil vertretenden Preiselements, wird im allgemeinen in umgekehrtem Verhältnis stehn

cumulation.

↑ Prices of constant capital in relation to overall prices were already discussed in the machinery chapter, p. 512:2. And the chapter about National Differences of Wages, 702:3, says that the wage relative to the value of the product, and therefore also the piece wage, is lower in countries with higher development.

↓ But the increase in organic composition is by far not as great as the increase in technical composition:

774:1 However, this diminution in the variable part of capital as compared with the constant part, or, in other words, this change in the composition of the value of the capital, gives only an approximate indication of the change in the composition of its material constituents. The value of the capital employed today in spinning is $\frac{7}{8}$ constant and $\frac{1}{8}$ variable, while at the beginning of the eighteenth century it was $\frac{1}{2}$ constant $\frac{1}{2}$ variable. Yet, in contrast to this, the mass of raw material, instruments of labor, etc. that a certain quantity of spinning labor consumes productively today is many hundred times greater than at the beginning of the eighteenth century. The reason is simple: with the increasing productivity of labor, the mass of the means of production consumed by labor increases, but their value in comparison with their mass diminishes. Their value therefore rises absolutely, but not in proportion to the increase in their mass. The difference between constant and variable capital increases therefore much less than the difference between the mass of the means of production into which the constant capital, and the mass of the labor-power into which the variable capital, is converted. The former difference increases with the latter, but in a smaller degree.

zum Fortschritt der Akkumulation.

651:2/o Die Abnahme des variablen Kapitalteils gegenüber dem konstanten oder die veränderte Zusammensetzung des Kapitalwerts zeigt jedoch nur annähernd den Wechsel in der Zusammensetzung seiner stofflichen Bestandteile an. Wenn z.B. heute der in der Spinnerei angelegte Kapitalwert zu $\frac{7}{8}$ konstant und $\frac{1}{8}$ variabel ist, während er Anfang des 18. Jahrhunderts $\frac{1}{2}$ konstant und $\frac{1}{2}$ variabel war, so ist dagegen die Masse von Rohstoff, Arbeitsmitteln usw., die ein bestimmtes Quantum Spinnarbeit heute produktiv konsumiert, vielhundertmal größer als im Anfang des 18. Jahrhunderts. Der Grund ist einfach der, daß mit der wachsenden Produktivität der Arbeit nicht nur der Umfang der von ihr vernutzten Produktionsmittel steigt, sondern deren Wert, verglichen mit ihrem Umfang, sinkt. Ihr Wert steigt also absolut, aber nicht proportionell mit ihrem Umfang. Das Wachstum der Differenz zwischen konstantem und variablem Kapital ist daher viel kleiner als das der Differenz zwischen der Masse der Produktionsmittel, worin das konstante, und der Masse Arbeitskraft, worin das variable Kapital umgesetzt wird. Die erstere Differenz nimmt zu mit der letzteren, aber in geringerem Grad.

Question 1035 *Often it has been argued that yes, technical composition increases, but productive powers of labor increase so fast that the increased machinery and materials represent less labor than before, i.e., the organic composition decreases. Was this a possibility*

which Marx had overlooked?

At the end of this discussion, Marx remarks: Although the proportion of variable capital declines, its absolute amount may still rise:

774:2 To avoid misunderstandings: if the progress of accumulation lessens the relative magnitude of the variable part of capital, this by no means excludes the possibility of a rise in its absolute magnitude. Suppose that a capital-value is divided at first into 50 per cent constant and 50 per cent variable capital, and later into 80 per cent constant and 20 per cent variable capital. If, in the meantime, the original capital, say £6,000, has increased to £18,000, its variable constituent has also increased, in fact by 20 per cent. It was £3,000, it is now £3,600. But whereas formerly an increase of capital by 20 per cent would have sufficed to raise the demand for labor by 20 per cent, now the original capital needs to be tripled to secure an increase of 20 per cent in the demand for labor.

652:1 Übrigens, wenn der Fortschritt der Akkumulation die relative Größe des variablen Kapitalteils vermindert, schließt er damit die Steigerung ihrer absoluten Größe keineswegs aus. Gesetzt, ein Kapitalwert spalte sich anfangs in 50% konstantes und 50% variables Kapital, später in 80% konstantes und 20% variables. Ist inzwischen das ursprüngliche Kapital, sage 6000 Pfd. St., gewachsen auf 18 000 Pfd. St., so ist sein variabler Bestandteil auch um 1/5 gewachsen. Er war 3000 Pfd. St., er beträgt jetzt 3600 Pfd. St. Wo aber früher ein Kapitalzuwachs von 20% genügt hätte, die Nachfrage nach Arbeit um 20% zu steigern, erfordert das jetzt Verdreifachung des ursprünglichen Kapitals.

This paragraph starts in German with "übrigens" (by the way), in French with "enfin, pour éviter des

erreurs." This indicates that it is a mere side remark at the end of the discussion. My translation

followed the French.

2.b. [Social Productive Powers and Accumulation]

Next, Marx begins to argue step (1): how accumulation leads to higher productive powers of labor. He first tackles step (1b): how large scale production furthers those productive powers.

775:1/o We showed in Part IV how the development of the social productive powers of labor presupposes co-operation on a large scale. Only on this basis can the division and combination of labor be organized, can the means of production be economized by large scale concentration, can instruments of labor (such as systems of machinery) be developed which, by their technical nature,

652:2/o Im vierten Abschnitt wurde gezeigt, wie die Entwicklung der gesellschaftlichen Produktivkraft der Arbeit Kooperation auf großer Stufenleiter voraussetzt, wie nur unter dieser Voraussetzung Teilung und Kombination der Arbeit organisiert, Produktionsmittel durch massenhafte Konzentration ökonomisiert, schon stofflich nur gemeinsam anwendbare Arbeitsmittel, z.B.

can only be used in common, can gigantic natural forces be pressed into the service of production, and can the transformation be carried out which turns the production process into a process of the technological application of scientific knowledge.

Large scale co-operative production is a presupposition for the development of the social productive powers of labor. This is not only true in capitalism. But capitalism enters the picture in an interesting way:

When the prevailing system is the production of commodities, i.e., the means of production are the property of private persons, and the artisan therefore either produces in isolation and independently for the market, or sells his labor-power on the market because he lacks the means to produce independently, the above-mentioned presupposition, namely co-operation on a large scale, can come about only through the increase of individual capitals, only to the extent that the social means of production and subsistence are transformed into the private property of capitalists. The soil of commodity production can carry production on a large-scale only in capitalist form.

↑ This last sentence repeats something Marx had already remarked in 486:1: if the starting point is commodity production, then co-operation can only come about in capitalist form.

Question 1037 Why can the soil of commodity production carry production on a large-scale only in capitalist form, as Marx says in 775:1/o? (Also define better the "soil" which commodity production provides for the growth of large-scale production.)

But capitalism is special also in another respect. Under capitalism, the link between accumulation and productive powers of labor is not a one-way street. There is also a reaction accelerating accumulation: higher productive powers lead to faster accumulation. But before entering into this argument called here step (1c), Marx makes it clear that it is *only* a reaction, i.e., accumulation must come first. Since co-operative production cannot come about without the accumulation of capital, some kind of accumulation, which is not necessarily a capitalist accumulation, must come first. I will call this step in the argument (1c.1)

A certain accumulation of capital in the hands of individual producers is therefore a pre-condition for the specifically capitalist

System der Maschinerie usw., ins Leben gerufen, ungeheure Naturkräfte in den Dienst der Produktion gepreßt und die Verwandlung des Produktionsprozesses in technologische Anwendung der Wissenschaft vollzogen werden können.

Auf Grundlage der Warenproduktion, wo die Produktionsmittel Eigentum von Privatpersonen sind, wo der Handarbeiter daher entweder isoliert und selbständig Waren produziert oder seine Arbeitskraft als Ware verkauft, weil ihm die Mittel zum Selbstbetrieb fehlen, realisiert sich jene Voraussetzung nur durch das Wachstum der individuellen Kapitale oder im Maße, worin die gesellschaftlichen Produktions- und Lebensmittel in das Privateigentum von Kapitalisten verwandelt werden. Der Boden der Warenproduktion kann die Produktion auf großer Stufenleiter nur in kapitalistischer Form tragen.

Eine gewisse Akkumulation von Kapital in den Händen individueller Warenproduzenten bildet daher die Voraussetzung der spe-

mode of production. We had therefore to presuppose this when dealing with the transition from handicrafts to capitalist industry. It may be called original accumulation, because it is the historical basis, instead of the historical result, of the specifically capitalist production. How it itself comes about we need not investigate as yet. Enough, it constitutes the starting-point.

↑ This same argument is repeated at the beginning of chapter Twenty-Six, 873:1.

(1c.2) The next two sentences develop the other side, that, once capitalism has been established through this process of original accumulation, higher productive powers of labor lead to increases in surplus-value and therefore accelerate accumulation.

But all methods for raising the social productive powers of labor that grow up on this basis are at the same time methods for the increased production of surplus-value or surplus product, which is in its turn the formative element of accumulation. They are, therefore, also methods for the production of capital by capital, or methods for its accelerated accumulation.

(1c.3) And this accumulation, in turn, accelerates technical progress.

The continual re-conversion of surplus-value into capital now appears in the shape of the increasing magnitude of the capital that enters into the production process. This is in turn the basis of an extended scale of production, of the methods for raising the productive powers of labor that accompany it, and of an accelerated production of surplus-value.

The next two sentences put steps (1c.1), (1c.2), and (1c.3) together, to get an accelerated development of both accumulation and technical progress:

While, therefore, a certain degree of accumulation of capital appears as a precondition for the specifically capitalist mode of production, the latter, in reaction, causes an accelerated accumulation of capital.

zifisch kapitalistischen Produktionsweise. Wir mußten sie deshalb unterstellen bei dem Übergang aus dem Handwerk in den kapitalistischen Betrieb. Sie mag die ursprüngliche Akkumulation heißen, weil sie statt historisches Resultat historische Grundlage der spezifisch kapitalistischen Produktion ist. Wie sie selbst entspringt, brauchen wir hier noch nicht zu untersuchen. Genug, sie bildet den Ausgangspunkt.

Aber alle Methoden zur Steigerung der gesellschaftlichen Produktivkraft der Arbeit, die auf dieser Grundlage erwachsen, sind zugleich Methoden der gesteigerten Produktion des Mehrwerts oder Mehrprodukts, welches seinerseits das Bildungselement der Akkumulation. Sie sind also zugleich Methoden der Produktion von Kapital durch Kapital oder Methoden seiner beschleunigten Akkumulation.

Die kontinuierliche Rückverwandlung von Mehrwert in Kapital stellt sich dar als wachsende Größe des in den Produktionsprozeß eingehenden Kapitals. Diese wird ihrerseits Grundlage einer erweiterten Stufenleiter der Produktion, der sie begleitenden Methoden zur Steigerung der Produktivkraft der Arbeit und beschleunigter Produktion von Mehrwert.

Wenn also ein gewisser Grad der Kapitalakkumulation als Bedingung der spezifisch kapitalistischen Produktionsweise erscheint, verursacht die letztere rückschlagend eine beschleunigte Akkumulation des Kapitals.

With the accumulation of capital, therefore, the specifically capitalist mode of production develops, and, with the capitalist mode of production, the accumulation of capital.

Question 1039 *Accumulation increases productive powers of labor and higher productive powers of labor increase accumulation. One might think that accumulation of capital and the productive powers of labor go together really well—or is there a hair in the soup, i.e., are there ways in which technical progress also obstructs capital accumulation?*

Finally, Marx combines this with step (2) which was argued earlier:

These two economic factors bring about, in the compound ratio of the impulses they give to each other, that change in the technical composition of capital by which the variable component becomes smaller and smaller as compared with the constant component.

Mit der Akkumulation des Kapitals entwickelt sich daher die spezifisch kapitalistische Produktionsweise und mit der spezifisch kapitalistischen Produktionsweise die Akkumulation des Kapitals.

Diese beiden ökonomischen Faktoren erzeugen, nach dem zusammengesetzten Verhältnis des Anstoßes, den sie sich gegenseitig erteilen, den Wechsel in der technischen Zusammensetzung des Kapitals, durch welchen der variable Bestandteil immer kleiner und kleiner wird, verglichen mit dem konstanten.

2.c. [Repulsion and Attraction of Individual Capitals]

There is still one step missing in the argument, namely a precise reasoning of link (1a), from accumulation to mass production. Accumulation is the reproduction of the capital relation on an extended scale, i.e., the reconversion of surplus-value into capital. Does this lead to bigger firms? In the discussion of the laws of capital in general, which is the level of abstraction of most of *Capital I*, the question is not asked whether this growth of capital takes the form of growth of individual firms or birth of new firms. But for the problematic at hand we have to step down to the level of individual firms, since establishment size matters for technical progress. Technical progress is developed in individual firms, and larger-scale co-operative production can only take place in larger firms. Therefore it is necessary to look at accumulation at the level of individual capitals. Right at the beginning Marx states the result of this inquiry: accumulation means indeed a greater concentration of means of production in the hands of individual capitalists:

776:1/o Every individual capital is a larger or smaller concentration of means of production, with a corresponding command over a larger or smaller army of workers.

653:1/o Jedes individuelle Kapital ist eine größere oder kleinere Konzentration von Produktionsmitteln mit entsprechendem Kommando über eine größere oder kleinere Arbeiterarmee.

↓ Since every accumulation already accomplished furthers new accumulation, accumulation not only increases the overall amount of wealth functioning as capital but also leads to bigger firms in this process:

Every accumulation becomes the means of new accumulation. With the increasing mass of wealth which functions as capital, accumulation increases the concentration of that wealth in the hands of individual capitalists, and thereby widens the basis of production on a large scale and extends the specifically capitalist methods of production.

The "normal" course of events implied by the private ownership of capital is that the existing individual capitals invest their profits into themselves, therefore each capital grows at the same growth rate as the total capital. This is what Marx calls the *concentration* of capital.

The growth of the social capital is accomplished through the growth of many individual capitals. All other circumstances remaining the same, the individual capitals grow, and with their growth the concentration of the means of production increases, in the proportion in which they form aliquot parts of the total social capital.

↑ I.e., capital which represents 1/20 of total capital will grow 5 times as much as capital which represents 1/100 of total capital. A simpler way of saying this would be: the proportional growth *rate* of individual capitals is the same as that of the total capital.

↓ This concentration is thwarted (sic in 776:1/o) by the separation of new capitals from the old ones or formation of new capitals through inheritance etc. This repulsion of individual capitals is the negation of concentration.

At the same time offshoots split off from the original capitals and start to function as new and independent capitals. Apart from other causes, the division of property within capitalist families plays a great part in this. With the accumulation of capital, therefore, the number of capitalists grows to a greater or lesser extent.

↓ The concentration of capital has limits, and the separation of the individual capitals exacerbates these limits. The limits are that the speed of concentration is limited by the general growth rate of the economy. (This discussion of limits here is reminiscent of the discussion of defects of the forms of value in 154:2 and elsewhere.)

Two features characterize this kind of con-

Jede Akkumulation wird das Mittel neuer Akkumulation. Sie erweitert mit der vermehrten Masse des als Kapital funktionierenden Reichtums seine Konzentration in den Händen individueller Kapitalisten, daher die Grundlage der Produktion auf großer Stufenleiter und der spezifisch kapitalistischen Produktionsmethoden.

Das Wachstum des gesellschaftlichen Kapitals vollzieht sich im Wachstum vieler individuellen Kapitale. Alle andren Umstände als gleichbleibend vorausgesetzt, wachsen die individuellen Kapitale, und mit ihnen die Konzentration der Produktionsmittel, im Verhältnis, worin sie aliquote Teile des gesellschaftlichen Gesamtkapitals bilden.

Zugleich reißen sich Ableger von den Originalkapitalen los und funktionieren als neue selbständige Kapitale. Eine große Rolle spielt dabei unter anderm die Teilung des Vermögens in Kapitalistenfamilien. Mit der Akkumulation des Kapitals wächst daher auch mehr oder minder die Anzahl der Kapitalisten.

Zwei Punkte charakterisieren diese Art

centration, which grows directly out of accumulation, or rather is identical with it. Firstly: the increasing concentration of the social means of production in the hands of individual capitalists is, other things remaining equal, limited by the degree of increase of social wealth. Secondly: the part of the social capital domiciled in each particular sphere of production is divided among many capitalists who confront each other as mutually independent and competitive commodity-producers. Therefore not only are accumulation and the concentration accompanying it scattered over many points, but the increase of each functioning capital is thwarted by the formation of new capitals and the subdivision of old. Accumulation, therefore, presents itself on the one hand as increasing concentration of the means of production, and of the command over labor, and on the other hand as repulsion of many individual capitals from one another.

The French edition stresses at this point how limited this concentration based on accumulation is. But there is also a counterforce, called centralization. (This is the negation of the negation.)

777:1 This fragmentation of the total social capital into many individual capitals, or the repulsion of its fractions from each other, is counteracted by their attraction. The attraction of capitals no longer means the simple concentration of the means of production and the command over labor, which is identical with accumulation. It is concentration of capitals already formed, destruction of their individual independence, expropriation of capitalist by capitalist, transformation of many small into few large capitals. This process differs from the first one in this respect, that it only presup-

Konzentration, welche unmittelbar auf der Akkumulation beruht oder vielmehr mit ihr identisch ist. Erstens: Die wachsende Konzentration der gesellschaftlichen Produktionsmittel in den Händen individueller Kapitalisten ist, unter sonst gleichbleibenden Umständen, beschränkt durch den Wachstumsgrad des gesellschaftlichen Reichtums. Zweitens: Der in jeder besondern Produktionssphäre ansässige Teil des gesellschaftlichen Kapitals ist verteilt unter viele Kapitalisten, welche einander als unabhängige und miteinander konkurrierende Warenproduzenten gegenüberstehen. Die Akkumulation und die sie begleitende Konzentration sind also nicht nur auf viele Punkte zersplittert, sondern das Wachstum der funktionierenden Kapitale ist durchkreuzt durch die Bildung neuer und die Spaltung alter Kapitale. Stellt sich die Akkumulation daher einerseits dar als wachsende Konzentration der Produktionsmittel und des Kommandos über Arbeit, so andererseits als Repulsion vieler individueller Kapitale voneinander.

654:1 Dieser Zersplitterung des gesellschaftlichen Gesamtkapitals in viele individuelle Kapitale oder der Repulsion seiner Bruchteile voneinander wirkt entgegen ihre Attraktion. Es ist dies nicht mehr einfache, mit der Akkumulation identische Konzentration von Produktionsmitteln und Kommando über Arbeit. Es ist Konzentration bereits gebildeter Kapitale, Aufhebung ihrer individuellen Selbständigkeit, Expropriation von Kapitalist durch Kapitalist, Verwandlung vieler kleineren in weniger größere Kapitale. Dieser Prozeß unterscheidet sich von dem ersten dadurch, daß er nur

poses a change in the distribution of already available and already functioning capital. Its field of action is therefore not limited by the absolute growth of social wealth, or in other words by the absolute limits of accumulation. Capital grows to a huge mass in a single hand in one place, because it has been lost by many in another place. This is centralization proper, as distinct from accumulation and concentration.

veränderte Verteilung der bereits vorhandenen und funktionierenden Kapitale voraussetzt, sein Spielraum also durch das absolute Wachstum des gesellschaftlichen Reichtums oder die absoluten Grenzen der Akkumulation nicht beschränkt ist. Das Kapital schwillt hier in einer Hand zu großen Massen, weil es dort in vielen Händen verlorengeliegt. Es ist die eigentliche Zentralisation im Unterschied zur Akkumulation und Konzentration.

This last sentence was in the 1st and 2nd editions: Es ist die

eigentliche Konzentration im Unterschied zur Akkumulation.

My source is [Mar69, p. 576].

Question 1040 Describe the mechanisms of repulsion and attraction of individual capitals in the course of accumulation.

Note “expropriation of capitalist by capitalist”! Capitalists not only expropriate workers, they also expropriate each other. This is also said at the end of footnote 88 below, which quotes *Misery of Philosophy*, and in chapter Thirty-Two, p. 929:1.

Marx does not develop the general mechanisms of this centralization (which would belong into the book about competition), but only briefly describes a few facts.

777:2/o The laws of this centralization of capitals, or of the attraction of capital by capital, cannot be developed here. A few brief factual indications must suffice.

654:2/o Die Gesetze dieser Zentralisation der Kapitale oder der Attraktion von Kapital durch Kapital können hier nicht entwickelt werden. Kurze tatsächliche Andeutung genügt.

↓ In competition, big capitals win because larger size makes them more efficient.

The battle of competition is fought by the cheapening of commodities. The cheapness of commodities depends, all other circumstances remaining the same, on the productivity of labor, which depends in turn on the scale of production. Therefore the larger capitals beat the smaller.

Der Konkurrenzkampf wird durch Verwohlfeilung der Waren geführt. Die Wohlfeilheit der Waren hängt, caeteris paribus, von der Produktivität der Arbeit, diese aber von der Stufenleiter der Produktion ab. Die größeren Kapitale schlagen daher die kleineren.

↓ Furthermore, small capitals are squeezed into murderous competition amongst themselves by the rising minimum size of capital.

It will further be remembered that, with the development of the capitalist mode of production, there is an increase in the minimum amount of individual capital necessary to

Man erinnert sich ferner, daß mit der Entwicklung der kapitalistischen Produktionsweise der Minimalumfang des individuellen Kapitals wächst, das erheischt ist, um ein

carry on a business under its normal conditions. The smaller capitals, therefore, crowd into spheres of production which large-scale industry has taken control of only sporadically or incompletely. Here competition rages in direct proportion to the number, and in inverse proportion to the magnitude, of the rival capitals. It always ends in the ruin of many small capitalists, whose capitals partly pass into the hands of their conquerors, and partly vanish completely.

Geschäft unter seinen normalen Bedingungen zu betreiben. Die kleineren Kapitale drängen sich daher in Produktionssphären, deren sich die große Industrie nur noch sporadisch oder unvollkommen bemächtigt hat. Die Konkurrenz rast hier im direkten Verhältnis zur Anzahl und im umgekehrten Verhältnis zur Größe der rivalisierenden Kapitale. Sie endet stets mit Untergang vieler kleineren Kapitalisten, deren Kapitale teils in die Hand des Siegers übergehen, teils untergehen.

In the first and second editions, the first sentence of this paragraph reads: “Die Gesetze dieser

Konzentration der Kapitale...” and its last sentence reads: “Sie endet stets mit Untergang vieler

kleiner Kapitalisten und Übergang ihrer Kapitale in die Hand des Siegers.”

Now Marx introduces *credit*:

Apart from this, an altogether new force comes into existence with the development of capitalist production: the credit system.

Abgesehen hiervon bildet sich mit der kapitalistischen Produktion eine ganz neue Macht, das Kreditwesen, ...

The passage which follows, from ‘In its first stages’ to ‘movement towards centralization’ (p. 780:3) was added by Engels to the fourth German edition, on the basis of the French translation of 1872. It is analytically less well structured than Marx’s original version, which had been retained through the first three German editions. Here is Marx’s original version from the first edition (afterwards I will bring the revised version):

Not only is this itself a new and mighty weapon in the battle of competition. By unseen threads it also draws the disposable money, scattered in larger or smaller masses over the surface of society, into the hands of individual or associated capitalists. It is the specific machine for the centralization of capitals.

Es wird nicht nur selbst zu einer neuen gewaltigen Waffe im Konkurrenzkampfe. Durch unsichtbare Fäden zieht es die über die Oberfläche der Gesellschaft in größeren oder kleineren Massen zersplitterten Geldmittel in die Hände individueller oder assoziierter Kapitalisten. Es ist die spezifische Maschine zur Konzentration der Kapitale.

↑ Credit helps the centralization in two ways. (1) It becomes a weapon in the competitive battles. (2) It allows the centralization of capital without reorganization of firms, by pooling investments from many sources.

↓ Another factor intensifying centralization is the development of productivity.

The centralization of capitals, or the process of their attraction, becomes more intense in proportion as the specifically cap-

Die Konzentration der Kapitale, oder der Prozeß ihrer Attraktion, wird intensiver im Verhältnis, worin sich mit der Akkumula-

italist mode of production develops along with accumulation.

This gives the transition of the next step in the argument: the reverse causality, from concentration to the development of productivity, is even stronger.

In its turn, centralization becomes one of the greatest levers of this development. It shortens and quickens the transformation of separate processes of production into processes socially combined and carried out on a large scale.

⇓ Increasing concentration and centralization of capital not only increases the productivity in capitalist firms, but also conquers new non-capitalist branches or creates altogether new industries. I.e., it revolutionizes the entire mode of production.

The increasing bulk of individual masses of capital becomes the material basis of an uninterrupted revolution in the mode of production itself. The capitalist mode of production continually conquers branches of industry not yet wholly, or only sporadically or formally, subjugated by it. At the same time there grow up on its soil new branches of industry, which could not exist without it. Finally, in the branches of industry already carried on upon the capitalist basis, the productive powers of labor are made to ripen as in a hothouse.

⇓ Now the implications of this for labor demand (it is still the same paragraph):

In all these cases, the number of workers falls in proportion to the mass of the means of production worked up by them. An ever increasing part of the capital is turned into means of production, an ever decreasing part into labor-power. The degree to which the means of production are means of employment for the workers lessens progressively as those means become more extensive, more concentrated, and technically more efficient. A steam plough is an incomparably more efficient means of production than an ordinary plough, but the capital-value laid out in it is an incompara-

tion die spezifisch kapitalistische Produktionsweise entwickelt.

Ihrerseits wird die Konzentration einer der großen Hebel jener Entwicklung. Sie verkürzt und beschleunigt die Verwandlung zersplitterter Produktionsprozesse in gesellschaftlich kombinierte und auf großer Stufenleiter ausgeführte.

Der wachsende Umfang der individuellen Kapitalmassen wird zur materiellen Basis einer beständigen Umwälzung der Produktionsweise selbst. Fortwährend erobert die kapitalistische Produktionsweise ihr noch gar nicht, oder nur sporadisch, oder nur formell unterworfenen Arbeitszweige. Daneben erwachsen auf ihrem Boden neue, ihr von vornherein angehörige Arbeitszweige. Endlich wird in den bereits kapitalistisch betriebenen Arbeitszweigen die Produktivkraft der Arbeit treibhausmäßig gereift.

In allen diesen Fällen sinkt die Arbeiterzahl verhältnismäßig zur Masse der von ihr verarbeiteten Produktionsmittel. Ein stets größerer Teil des Kapitals wird in Produktionsmittel umgesetzt, ein stets kleinerer in Arbeitskraft. Mit dem Umfang, der Konzentration und der technischen Wirksamkeit der Produktionsmittel vermindert sich progressiv der Grad, worin sie Beschäftigungsmittel der Arbeiter sind. Ein Dampfpflug ist ein ungleich wirksameres Produktionsmittel als der gewöhnliche Pflug, aber der in ihm ausgelegte Kapitalwert ist ein ungleich geringeres Beschäftigungsmittel, als wenn er

bly smaller means for employing men than if it were laid out in ordinary ploughs.

⇓ Now another aspect of technical progress: not only the newly invested capital is more productive, but also the old capital is replaced by more productive capital.

At first, it is the mere adding of new capital to old which allows the objective conditions of the process of production to be extended and undergo technical transformations. But soon these changes of composition, and technical transformations, get a more or less complete grip on all the old capital that has reached the term of its period of reproduction and therefore has to be replaced. This metamorphosis of old capital is independent, to a certain extent, of the absolute growth of social capital, in the same way as is its centralization. But this centralization, which only redistributes the social capital already to hand, and melts a number of old capitals into one, works in its turn as a powerful agent in the metamorphosis of old capital.

in gewöhnlichen Pflügen realisiert wäre.

Zunächst ist es gerade die Zufügung von neuem Kapital zum alten, welche die gegenständlichen Bedingungen des Produktionsprozesses auszuweiten und technisch umzuwälzen erlaubt. Bald aber ergreift die veränderte Zusammensetzung und technische Umgestaltung mehr oder minder alles alte Kapital, das seinen Reproduktionstermin erreicht hat und daher neu ersetzt wird. Diese Metamorphose des alten Kapitals ist vom absoluten Wachstum des gesellschaftlichen Kapitals zu gewissem Grad unabhängig, wie es die Konzentration ist. Letztlich aber, welche vorhandenes gesellschaftliches Kapital nur anders verteilt und viele alte Kapitale in eins verschmilzt, wirkt wieder als mächtiges Agens in dieser Metamorphose des alten Kapitals.

Here Marx had originally written "concentration," but "centralization" is the better

translation. In the earlier editions of *Capital*, the terminological distinction between concentration

and centralization had not yet been as sharp.

↑ This is the end of the passage which Engels replaced with a new text. After this, only one transitional paragraph 780:4/o, which summarizes the implications of all this for labor demand. The detailed development of the labor force under these circumstances is the topic of the next section.

Now let's look at Engels's revised version. Here about credit:

In its first stages, this system furtively creeps in as the humble assistant of accumulation, drawing into the hands of individual or associated capitalists by invisible threads the money resources, which lie scattered in larger or smaller amounts over the surface of society; but it soon becomes a new and terrible weapon in the battle of competition and is finally transformed into an enormous

... das in seinen Anfängen verstohlen, als bescheidene Beihilfe der Akkumulation, sich einschleicht, durch unsichtbare Fäden die über die Oberfläche der Gesellschaft in größeren oder kleineren Massen zersplitterten Geldmittel in die Hände individueller oder assoziierter Kapitalisten zieht, aber bald eine neue und furchtbare Waffe im Konkurrenzkampf wird und sich schließlich

social mechanism for the centralization of capitals.

778:1/o Commensurately with the development of capitalist production and accumulation there also takes place a development of the two most powerful levers of centralization—competition and credit. At the same time the progress of accumulation increases the material amenable to centralization, i.e. the individual capitals, while the expansion of capitalist production creates on the one hand, the social need, and on the other hand, the technical means for those immense industrial undertakings which require a previous centralization of capital for their accomplishment. Today therefore, the force of attraction which draws together individual capitals, and the tendency to centralization, are both stronger than ever before.

Question 1042 *How do competition and credit help in the process of centralization?*

Question 1043 *How does Marx's concept of competition differ from the neoclassical concept and from the "better mousetrap" ideology surrounding competition in modern US society?*

But if the relative extension and energy of the movement towards centralization is determined, to a certain degree, by the magnitude of capitalist wealth and the superiority of the economic mechanism already attained, the advance of centralization does not depend in any way on a positive growth in the magnitude of social capital. And this is what distinguishes centralization from concentration, the latter being only another name for reproduction on an extended scale. Centralization may result from a mere change in the distribution of already existing capitals, from a simple alteration in the quantitative grouping of the component

in einen ungeheuren sozialen Mechanismus zur Zentralisation der Kapitale verwandelt.

655:1/o Im Maß wie die kapitalistische Produktion und Akkumulation, im selben Maß entwickeln sich Konkurrenz und Kredit, die beiden mächtigsten Hebel der Zentralisation. Daneben vermehrt der Fortschritt der Akkumulation den zentralisierbaren Stoff, d.h. die Einzelkapitale, während die Ausweitung der kapitalistischen Produktion, hier das gesellschaftliche Bedürfnis, dort die technischen Mittel jener gewaltigen industriellen Unternehmungen schafft, deren Durchführung an eine vorgängige Zentralisation des Kapitals gebunden ist. Heutzutage ist also die gegenseitige Attraktionskraft der Einzelkapitale und die Tendenz zur Zentralisation stärker als je zuvor.

Wenn aber auch die relative Ausdehnung und Energie der zentralisierenden Bewegung in gewissem Grad bestimmt ist durch die schon erreichte Größe des kapitalistischen Reichtums und die Überlegenheit des ökonomischen Mechanismus, so hängt doch der Fortschritt der Zentralisation keineswegs ab von dem positiven Größenwachstum des gesellschaftlichen Kapitals. Und dies speziell unterscheidet die Zentralisation von der Konzentration, die nur ein anderer Ausdruck für die Reproduktion auf erweiterter Stufenleiter ist. Die Zentralisation kann erfolgen durch bloße veränderte Verteilung schon bestehender Kapitale,

parts of social capital. Capital can grow into powerful masses in a single hand in one place, because in other places it has been withdrawn from many individual hands. In any given branch of industry centralization would reach its extreme limit if all the individual capitals invested there were fused into a single capital.^{77b} In a given society this limit would be reached only when the entire social capital was united in the hands of either a single capitalist or a single capitalist company.

^{77b} [Note by Engels to the fourth German edition:] The latest English and American 'trusts' are already striving to attain this goal by attempting to unite at least all the large-scale concerns in one branch of industry into a single great joint-stock company with a practical monopoly.

Marx uses the word "concentration" in two meanings. Either as a surface category describing the empirical fact that capital comes in bigger and bigger chunks, or as an analytical term denoting one particular mechanism how this increase of individual capitals is accomplished, namely, by reinvestment of profits into the same firm, as opposed to centralization proper which combines already existing capitals. In the title of section 2, "concentration" is used in the former meaning. In the sentence in the above paragraph: "concentration is only another name for reproduction on an extended scale," the latter meaning applies: this concentration mechanism is nothing but extended reproduction on the level of individual capitals.

779:1/o Centralization supplements the work of accumulation by enabling industrial capitalists to extend the scale of their operations. Whether this latter result is the consequence of accumulation or centralization, whether centralization is accomplished by the violent method of annexation—where certain capitals become such preponderant centres of attraction for others that they shatter the individual cohesion of the lat-

durch einfache Veränderung der quantitativen Gruppierung der Bestandteile des gesellschaftlichen Kapitals. Das Kapital kann hier zu gewaltigen Massen in einer Hand anwachsen, weil es dort vielen einzelnen Händen entzogen wird. In einem gegebenen Geschäftszweig hätte die Zentralisation ihre äußerste Grenze erreicht, wenn alle darin angelegten Kapitale zu einem Einzelkapital verschmolzen wären.^{77b} In einer gegebenen Gesellschaft wäre diese Grenze erreicht erst in dem Augenblick, wo das gesamte gesellschaftliche Kapital vereinigt wäre in der Hand, sei es eines einzelnen Kapitalisten, sei es einer einzigen Kapitalistengesellschaft.

^{77b} {Zur 4. Aufl.—Die neuesten englischen und amerikanischen „Trusts“ streben dies Ziel bereits an, indem sie versuchen, wenigstens sämtliche Großbetriebe eines Geschäftszweigs zu einer großen Aktiengesellschaft mit praktischem Monopol zu vereinigen.—F.E.}

656:1 Die Zentralisation ergänzt das Werk der Akkumulation, indem sie die industriellen Kapitalisten instand setzt, die Stufenleiter ihrer Operationen auszudehnen. Sei dies letztere Resultat nun Folge der Akkumulation oder der Zentralisation; vollziehe sich die Zentralisation auf dem gewaltsamen Weg der Annexion—wo gewisse Kapitale so überwiegende Gravitationszentren für andre werden, daß sie deren individuelle

ter and then draw the separate fragments to themselves—or whether the fusion of a number of capitals already formed or in process of formation takes place by the smoother process of organizing joint-stock companies—the economic effect remains the same. Everywhere the increased scale of industrial establishments is the starting-point for a more comprehensive organization of the collective labor of many people, for a broader development of their material motive forces, i.e. for the progressive transformation of isolated processes of production, carried on by customary methods, into socially combined and scientifically arranged processes of production.

780:1 But accumulation, the gradual increase of capital by reproduction as it passes from the circular to the spiral form, is clearly a very slow procedure compared with centralization, which needs only to change the quantitative groupings of the constituent parts of social capital. The world would still be without railways if it had had to wait until accumulation had got a few individual capitals far enough to be adequate for the construction of a railway. Centralization, however, accomplished this in the twinkling of an eye, by means of joint-stock companies. And while in this way centralization intensifies and accelerates the effects of accumulation, it simultaneously extends and speeds up those revolutions in the technical composition of capital which raise its constant portion at the expense of its variable portion, thus diminishing the relative demand for labor.

Kohäsion brechen und dann die vereinzelter Bruchstücke an sich ziehn—oder geschehe die Verschmelzung einer Menge bereits gebildeter, resp. in der Bildung begriffener Kapitale vermittelt des glatteren Verfahrens der Bildung von Aktiengesellschaften—die ökonomische Wirkung bleibt dieselbe. Die gewachsne Ausdehnung der industriellen Etablissements bildet überall den Ausgangspunkt für eine umfassendere Organisation der Gesamtarbeit vieler, für eine breite Entwicklung ihrer materiellen Triebkräfte, d.h. für die fortschreitende Umwandlung einzelner und gewohnheitsmäßig betriebener Produktionsprozesse in gesellschaftlich kombinierte und wissenschaftlich disponierte Produktionsprozesse.

656:2 Es ist aber klar, daß die Akkumulation, die allmähliche Vermehrung des Kapitals durch die aus der Kreisform in die Spirale übergehende Reproduktion ein gar langsames Verfahren ist, im Vergleich mit der Zentralisation, die nur die quantitative Gruppierung der integrierenden Teile des gesellschaftlichen Kapitals zu ändern braucht. Die Welt wäre noch ohne Eisenbahnen, hätte sie solange warten müssen, bis die Akkumulation einige Einzelkapitale dahin gebracht hätte, dem Bau einer Eisenbahn gewachsen zu sein. Die Zentralisation dagegen hat dies, vermittelt der Aktiengesellschaften, im Handumdrehn fertiggebracht. Und während die Zentralisation so die Wirkungen der Akkumulation steigert und beschleunigt, erweitert und beschleunigt sie gleichzeitig die Umwälzungen in der technischen Zusammensetzung des Kapitals, die dessen konstanten Teil vermehren auf Kosten seines variablen Teils und damit die relative Nachfrage nach Arbeit vermindern.

Reference to a spiral already in 727:1.

780:2 The masses of capital welded together overnight by centralization reproduce and multiply as the others do, only more rapidly, and they thereby become new and powerful levers of social accumulation. Therefore, when we speak of the progress of social accumulation, we tacitly include—these days—the effects of centralization.

The definition of accumulation is: adding surplus-value to already existing capital. But nowadays, this social process of accumulation is accompanied by the merging of already existing individual capitals into larger and larger units (centralization). This strengthens the effects of accumulation and therefore one does not usually distinguish the effects of accumulation from those of centralization but considers both to be effects of accumulation.

Question 1044 *What is the centralization of capital? Show how accumulation leads to centralization. Which effects of accumulation are enhanced by centralization?*

The next two paragraphs say that technical innovation is usually first implemented by new capitals, and then taken over by the existing capitals when the existing plant and equipment has to be renewed. The obvious implications which this has for the demand for labor give a convenient transition to section 3.

780:3 The additional capitals formed in the normal course of accumulation (see chapter 24, section 1) are the favorite vehicles for the exploitation of new inventions and discoveries, and of industrial improvements in general.

The reasons which require new capitals are also alive in existing capitals. Radical technical innovations do not always lead to the formation of new capitals but may lead to drastic renovations of existing capitals, and to the repulsion of previously employed labor.

But eventually also the old capital reaches the point where it has to be renewed in all its aspects, where it sheds its skin and is reborn in a perfected technical shape, in which a smaller quantity of labor will suffice to set in motion a larger quantity of machinery and raw material. The absolute reduction in the demand for labor which necessarily follows from this is obviously so much the

656:3/o Die durch die Zentralisation über Nacht zusammengeschweißten Kapitalmassen reproduzieren und vermehren sich wie die andren, nur rascher und werden damit zu neuen mächtigen Hebeln der gesellschaftlichen Akkumulation. Spricht man also vom Fortschritt der gesellschaftlichen Akkumulation, so sind darin—heutzutage—die Wirkungen der Zentralisation stillschweigend einbegriffen.

657:1 Die im Lauf der normalen Akkumulation gebildeten Zusatzkapitale (s. Kap. XXII, 1) dienen vorzugsweise als Vehikel zur Exploitation neuer Erfindungen und Entdeckungen, überhaupt industrieller vervollkommnungen.

Aber auch das alte Kapital erreicht mit der Zeit den Moment seiner Erneuerung an Haupt und Gliedern, wo es sich häutet und ebenfalls wiedergeboren wird in der vervollkommenen technischen Gestalt, worin eine geringere Masse Arbeit genügt, eine größere Masse Maschinerie und Rohstoffe in Bewegung zu setzen. Die hieraus notwendig folgende absolute Abnahme der Nachfra-

greater, the higher the degree to which the capitals undergoing this process of renewal are already massed together by virtue of the movement towards centralization.

This is where Engels's insert ends. The last paragraph makes the transition from the attraction and repulsion of capitals to the attraction and repulsion of laborers:

780:4/o On the one hand, therefore, the additional capital formed in the course of further accumulation attracts fewer and fewer workers in proportion to its magnitude. On the other hand, the old capital periodically reproduced with a new composition repels more and more of the workers formerly employed by it.

This will be discussed in the next section.

ge nach Arbeit wird selbstredend um so größer, je mehr die diesen Erneuerungsprozeß durchmachenden Kapitale bereits zu Massen angehäuft sind vermöge der zentralisierenden Bewegung.

657:2 Einerseits attrahiert also das im Fortgang der Akkumulation gebildete Zuschußkapital, verhältnismäßig zu seiner Größe, weniger und weniger Arbeiter. Andererseits repelliert das periodisch in neuer Zusammensetzung reproduzierte alte Kapital mehr und mehr früher von ihm beschäftigte Arbeiter.

3. Progressive Production of a Relative Surplus-Population or Industrial Reserve Army

Section 1 discussed accumulation with constant composition of capital. 2 showed that sustained accumulation is accompanied by an increase in the composition of capital. The present section 3 shows that the combined effect of both kinds of accumulation is the creation of a relative surplus-population, and discusses also the reverse causality, the effect which the relative surplus-population has on the accumulation of capital. In section 4, the forms of existence of the relative surplus-population will be discussed.

We subdivide section 3 into four subsections. The first subsection describes how changes in organic composition outpace the accumulation of capital, which gives rise to a surplus population. The second subsection demonstrates the functionality of the surplus population for capital. The third shows how changes in the link between variable capital and labor supply increase the surplus population even more, and the fourth discusses the movement of wages.

3.a. [The Capitalist Population Law]

In the previous section, we have seen that the organic composition of capital increases with accumulation. Now a new point is added: the rise in the organic composition is *faster* than accumulation, which leads to a relative *surplus-population*. Marx gives several mechanisms which cause the increase of the organic composition to be faster than the accumulation of capital:

(1) Due to centralisation, i.e., the merging of individual capitals, the scale of production increases. The technical progress connected with such increases can take place even if the total mass of capital does not increase. (781:2/o.)

(2) Technical innovation in the additional capital forces also the original capital to innovate, which may result in an absolute loss of jobs. (Again 781:2/o)

(3) More and more industries are seized by increasing organic composition. (782:1–784:0)

(4) Intermediate pauses, in which accumulation takes place with constant composition of capital, become shorter. (781:2/o)

Additional arguments will be given in the passage called here section 3.c. All this can perhaps be summarized as follows: the technological fact that direct labor becomes less and less important as technology advances is used successfully by capital to keep labor at a disadvantage in the accumulation process of capital.

In this situation, in which the effect is faster than the cause, the empirical evidence is misleading: that what is really the effect seems to be the cause. See 781:2/o. This is yet another aspect how the capital relations mystify.

After this summary, let us turn to the paragraph-by-paragraph discussion of the text. ↓ The section begins with a summary of the preceding section:

781:1 The accumulation of capital, which originally appeared only as its quantitative extension, takes place, as we have seen, under a continuous qualitative change in the composition of capital. Its constant component increases more and more at the expense of its variable component.^{77c}

657:3 Die Akkumulation des Kapitals, welche ursprünglich nur als seine quantitative Erweiterung erschien, vollzieht sich, wie wir gesehen, in fortwährendem qualitativen Wechsel seiner Zusammensetzung, in beständiger Zunahme seines konstanten auf Kosten seines variablen Bestandteils^{77c}

Vollzieht sich (takes place) is one of Marx's words for how a higher

level tendency is carried out on the lower level.

The accumulation of capital, i.e., the amassing of more and more value in fewer and fewer hands, is a social necessity for capitalism. As the capitalists put into practice the drive inherent in capital to expand value quantitatively, they increase the scale of production, and the co-operation of their workers leads to more efficient production. This is an example of emergence. The general drive of capital is quantitative, but co-operation enables the individual capitalists to make qualitative changes. They are eager to introduce technical innovations that take advantage of economies of scale, because this helps them in their competition.

^{77c} [Note by Engels to the third German edition:] Marx's personal copy has the marginal note: 'Note here for working out later: if the extension is only quantitative, then for a greater and a smaller capital in the same branch of business the profits are proportional to the magnitudes of the capitals advanced. If the quantitative exten-

^{77c} {Note zur 3. Auflage.—In Marx' Handexemplar steht hier die Randbemerkung: „Hier für Späteres zu bemerken: Ist die Erweiterung nur quantitativ, so verhalten sich bei größerem und kleinerem Kapital in demselben Geschäftszweig die Profite wie die Größen der vorgeschossenen Kapitale. Wirkt die quantitative Erweiterung

sion induces a qualitative change, then the rate of profit on the larger capital rises at the same time.'

Now Marx introduced the thesis to be proved:

781:2/o The specifically capitalist mode of production, the development of the productive powers of labor which corresponds to it, and the change in the organic composition of capital which results from it—all these do not merely keep pace with the progress of accumulation, or growth of social wealth. They develop at a much quicker rate, because simple accumulation, or the absolute expansion of the total social capital, is accompanied by the centralization of its individual elements, and the change in the technical composition of the additional capital is accompanied by a similar change in the technical composition of the original capital.

qualitativ, so steigt zugleich die Rate des Profits für das größere Kapital.“—F.E.}

657:4/o Die spezifisch kapitalistische Produktionsweise, die ihr entsprechende Entwicklung der Produktivkraft der Arbeit, der dadurch verursachte Wechsel in der organischen Zusammensetzung des Kapitals halten nicht nur Schritt mit dem Fortschritt der Akkumulation oder dem Wachstum des gesellschaftlichen Reichtums. Sie schreiten ungleich schneller, weil die einfache Akkumulation oder die absolute Ausdehnung des Gesamtkapitals von der Zentralisation seiner individuellen Elemente, und die technische Umwälzung des Zusatzkapitals von technischer Umwälzung des Originalkapitals begleitet sind.

“Begleitet” implies a causal connection: the old capital does

not do it on its own but it has to do it because the new capital does it.

Fowkes’s “goes hand in hand” is too symmetric.

“Quicker rate” is a quantitative assertion. Therefore Marx is going to look at things quantitatively now. As in other situations, he does not bring formulas but typical math examples: With the progress of accumulation, therefore, the proportion of constant to variable capital changes. If it was originally say 1:1, it now becomes successively 2:1, 3:1, 4:1, 5:1, 7:1, etc., so that as the capital grows, instead of 1/2 its total value, only 1/3, 1/4, 1/5, 1/6, 1/8 etc. is turned into labor-power, and, on the other hand, 2/3, 3/4, 4/5, 5/6, 7/8, into means of production.

↑ In formulas this means $(c/v)' > 0$. Implications for labor demand:

Since the demand for labor is determined not by the extent of the total capital but by its variable constituent alone, that demand falls progressively with the growth of the total capital, instead of rising in proportion to it, as was previously assumed.

Mit dem Fortgang der Akkumulation wandelt sich also das Verhältnis von konstantem zu variablem Kapitalteil, wenn ursprünglich 1:1, in 2:1, 3:1, 4:1, 5:1, 7:1 usw., so daß, wie das Kapital wächst, statt 1/2 seines Gesamtwerts progressiv nur 1/3, 1/4, 1/5, 1/6, 1/8 usw. in Arbeitskraft, dagegen 2/3, 3/4, 4/5, 5/6, 7/8 usw. in Produktionsmittel umgesetzt wird.

Da die Nachfrage nach Arbeit nicht durch den Umfang des Gesamtkapitals, sondern durch den seines variablen Bestandteils bestimmt ist, fällt sie also progressiv mit dem Wachstum des Gesamtkapitals, statt, wie vorhin unterstellt, verhältnismäßig mit ihm zu wachsen.

Perhaps Marx means by this that $v'/v < c'/c$, i.e., that the rate of growth of v is smaller than that of c . This is indeed mathematically equivalent to $(c/v)' > 0$. But Marx possibly means a stronger condition than that. Should we add $((c'/c) - (v'/v))' > 0$, i.e., the difference in growth rates between c and v is not only positive but also increases? Or perhaps Marx did not mean a concept that can be expressed in a fixed mathematical formula?

It falls relatively to the magnitude of the total capital, and at an accelerated rate, as this magnitude increases.

Sie fällt relativ zur Größe des Gesamtkapitals und in beschleunigter Progression mit dem Wachstum dieser Größe.

“It falls relatively to the magnitude of the total capital” means in formulas $(v/(c+v))' < 0$, which is again equivalent with the above two conditions $v'/v < c'/c$ and $(c/v)' > 0$. The clause “at an accelerated rate, as this magnitude increases” again seems to mean an additional mathematical condition. The last sentence of the paragraph will give what seems to be an alternative formulation of the same condition.

With the growth of the total capital, its variable constituent, the labor incorporated in it, does admittedly increase, but in a constantly diminishing proportion.

Mit dem Wachstum des Gesamtkapitals wächst zwar auch sein variabler Bestandteil, oder die ihm einverleibte Arbeitskraft, aber in beständig abnehmender Proportion.

I.e., in addition to the above $(v/(c+v))' < 0$, Marx also postulates $v' > 0$. Next, Marx gives a new argument for the increase in organic composition:

The intermediate pauses in which accumulation works as simple extension of production on a given technical basis are shortened.

Die Zwischenpausen, worin die Akkumulation als bloße Erweiterung der Produktion auf gegebener technischer Grundlage wirkt, verkürzen sich.

↑ Higher productivity also entails a faster pace of change in productivity, more frequent innovations. ↓ The next sentence repeats an argument already brought in 505:2/o: since also the old capital increases its organic composition, the result may not merely be a slower growth of additional demand for labor, but even a decline in the overall labor demand.

It is not merely that an accelerated accumulation of the total capital, accelerated in a constantly growing progression, is needed to absorb an additional number of workers, or even, on account of the constant metamorphosis of old capital, to keep employed those already performing their functions.

Nicht nur wird eine in wachsender Progression beschleunigte Akkumulation des Gesamtkapitals erheischt, um eine zusätzliche Arbeiterzahl von gegebener Größe zu absorbieren oder selbst, wegen der beständigen Metamorphose des alten Kapitals, die bereits funktionierende zu beschäftigen.

But this is only a sideline in the next passage; the main idea is the self-reinforcing effect of accumulation:

This increasing accumulation and centralization also becomes in its turn a source of new changes in the composition of capital, or in other words of an accelerated diminution of the capital’s variable component, as

Ihrerseits schlägt diese wachsende Akkumulation und Zentralisation selbst wieder um in eine Quelle neuer Wechsel der Zusammensetzung des Kapitals oder abermalig beschleunigter Abnahme seines varia-

compared with its constant one.

blen Bestandteils, verglichen mit dem konstanten.

⇓ All this *looks* as if the growth of the working population outpaced that of capital. In other words, it looks as if it was the laborers' own fault that they do not get high wages; they are too many.

This accelerated relative diminution of the variable component, which accompanies the accelerated increase of the total capital and moves more rapidly than this increase, seems to be just the opposite at the other pole, namely, an apparently absolute increase in the working population, an increase which always moves more rapidly than that of the variable capital or the means of employment.

Diese mit dem Wachstum des Gesamtkapitals beschleunigte und rascher als sein eigenes Wachstum beschleunigte relative Abnahme seines variablen Bestandteils scheint auf der andren Seite umgekehrt stets rascheres absolutes Wachstum der Arbeiterbevölkerung als das des variablen Kapitals oder ihrer Beschäftigungsmittel.

This illusion, that the effect seems the cause, was already addressed in ... This last sentence contains once more a formulation of the mathematical condition Marx was thinking of a few sentences earlier. At the beginning of footnote 79 to the next paragraph, 782:1–784:0, Marx calls this tendency the “law of the progressive diminution of the relative magnitude of the variable capital.”

Question 1048 *Does the surplus-population arise from capital's inability to keep pace with the growth of the population?*

As opposed to this illusion, the accumulation of capital is in control.

But in fact it is capitalist accumulation itself that constantly produces, and produces indeed in direct relation with its own energy and extent, a relatively redundant working population, i.e. a population which is superfluous to capital's average requirements for its own valorization, and is therefore a surplus population.

Die kapitalistische Akkumulation produziert vielmehr, und zwar im Verhältnis zu ihrer Energie und ihrem Umfang, beständig eine relative, d.h. für die mittleren Verwertungsbedürfnisse des Kapitals überschüssige, daher überflüssige oder Zuschuß-Arbeiterbevölkerung.

This is the first time the word “relative surplus-population” is used. Marx calls it a *reserve army* only when he talks about its *function* as a reserve for sudden expansions in the next paragraph!

Question 1049 *Why does the rise in the organic composition outpace the growth of capital?*

Question 1050 *What does capital need this surplus-population for? (How come it produces exactly what it needs?)*

After a discussion of the aggregate numbers follows now a discussion of the industrial distribution of accumulation.

782:1–784:0 If we consider the total social capital, we can say that the movement of its accumulation sometimes causes periodic changes, and at other times its various aspects distribute themselves simultaneously over the different spheres of production. In some spheres a change in the composition of capital occurs without any increase in its absolute magnitude, as a consequence of pure centralization; in others the absolute growth of capital is connected with an absolute diminution in its variable component, or in other words, in the labor-power absorbed by it; in others again, capital continues to grow for a time on its existing technical basis, and attracts additional labor-power in proportion to its increase, while at other times it undergoes organic change and reduces its variable component; in all spheres, the increase of the variable part of the capital, and therefore of the number of workers employed by it, is always connected with violent fluctuations and the temporary production of a surplus population, whether this takes the more striking form of the extrusion of workers already employed, or the less evident, but not less real, form of a greater difficulty in absorbing the additional working population through its customary outlet channels.⁷⁸

658:1/oo Das gesellschaftliche Gesamtkapital betrachtet, ruft die Bewegung seiner Akkumulation bald periodischen Wechsel hervor, bald verteilen sich ihre Momente gleichzeitig über die verschiedenen Produktionssphären. In einigen Sphären findet Wechsel in der Zusammensetzung des Kapitals statt ohne Wachstum seiner absoluten Größe, infolge bloßer Zentralisation; in andren ist das absolute Wachstum des Kapitals mit absoluter Abnahme seines variablen Bestandteils oder der von ihm absorbierten Arbeitskraft verbunden; in andren wächst das Kapital bald auf seiner gegebenen technischen Grundlage fort und attrahiert zuschüssige Arbeitskraft im Verhältnis seines Wachstums, bald tritt organischer Wechsel ein und kontrahiert sich sein variabler Bestandteil; in allen Sphären ist das Wachstum des variablen Kapitalteils und daher der beschäftigten Arbeiterzahl stets verbunden mit heftigen Fluktuationen und vorübergehender Produktion von Übervölkerung, ob diese nun die auffallendere Form von Repulsion bereits beschäftigter Arbeiter annimmt oder die mehr unscheinbare, aber nicht minder wirksame, erschwerte Absorption der zuschüssigen Arbeiterbevölkerung in ihre gewohnten Abzugskanäle.⁷⁸

“Infolge bloßer Zentralization: The fourth German editions has here ‘concentration’ instead of

‘centralization’ (footnote to Random House edition, p. 782, and also in MEW, p. 658). To me,

“centralization” seems more correct, this is what I am using.

This last sentence is important: the clogging of the customary fast-flowing outlet channels does not seem to be repulsion if one looks at one industry at a time, but it is repulsion of one looks at the totality.

Footnote 78 gives data which show decline almost everywhere except spinning/weaving and coal mining:

⁷⁸ The census of England and Wales shows, for instance, all persons employed in agriculture (landlords, farmers, gardeners, shepherds, etc. included): 1851: 2,011,447; 1861: 1,924,110; a reduction of 87,337. Worsted manufacture, 1851: 102,714 persons; 1861: 79,242. Silk weaving, 1851: 111,940; 1861: 101,678. Calico-printing, 1851: 12,098; 1861: 12,556; a small increase, despite the enormous extension of this industry, which implies a great proportional reduction in the number of workers employed. Hat-making, 1851: 15,957; 1861: 13,814. Straw-hat and bonnet-making, 1851: 20,393; 1861: 18,176. Malting, 1851: 10,566; 1861: 10,677. Chandlery, 1851: 4,949; 1861: 4,686; this fall is due, among other things, to the increase in lighting by gas. Comb-making, 1851: 2,038; 1861: 1,478. Sawyers, 1851: 30,552; 1861: 31,647; a small increase, owing to the spread of sawing-machines. Nail-making, 1851: 26,940; 1861: 26,130; a fall, owing to the competition of machinery. Tin- and copper-mining, 1851: 31,360; 1861: 32,041. As against this, however, we have cotton-spinning and weaving, 1851: 371,777; 1861: 456,646; and coal-mining, 1851: 183,389; 1861: 246,613. 'The increase of laborers is generally greatest, since 1851, in those branches of industry in which machinery has not up to the present been employed with success' (*Census of England and Wales for the Year 1861*, Vol. 3, London, 1863, p. 36).

In a long sentence, Marx emphasizes how a "broader and fuller stream of all the sources of wealth" facilitates the displacement of the workers by machinery:

With the size of the already functioning social capital and the rate of its increase, with the extension of the scale of production and of the mass of workers set in motion, with the development of the productive powers of their labor—with the broader and fuller stream of all the sources of wealth, also the degree intensifies to which the greater attraction of workers by capital is accompanied by their greater repulsion; the speed increases with which the organic composition

⁷⁸ Der Zensus für England und Wales zeigt u.a.: Alle in der Agrikultur beschäftigten Personen (Eigentümer, Pächter, Gärtner, Hirten usw. eingeschlossen)—1851: 2 011 447, 1861: 1 924 110, Abnahme—87 337. Worsted Manufaktur 1851: 102 714 Personen, 1861: 79 242; Seidenfabrik 1851: 111 940, 1861: 101 678; Kattundrucker—1851: 12 098, 1861: 12 556, welche geringe Zunahme trotz des enorm ausgedehnten Geschäfts große proportionelle Abnahme in der Zahl der beschäftigten Arbeiter bedingt. Hutmacher—1851: 15 957, 1861: 13 814; Strohhut- und Bonnetm.: 1851: 20 393, 1861: 18 176; Malzer—1851: 10 566, 1861: 10 677; Lichtgießer—1851: 4 949, 1861: 4 686. Diese Abnahme ist u.a. der Zunahme der Gasbeleuchtung geschuldet. Kammacher—1851: 2 038, 1861: 1 478; Holzsäger—1851: 30 552, 1861: 31 647, geringe Zunahme infolge des Aufschwungs von Sägemaschinen; Nagelmacher—1851: 26 940, 1861: 26 130, Abnahme infolge der Maschinenkonkurrenz; Arbeiter in Zinn- und Kupferbergwerken—1851: 31 360, 1861: 32 041. Dagegen: Baumwollspinnereien und Webereien—1851: 371 777, 1861: 456 646; Kohlenbergwerke—1851: 183 389, 1861: 246 613. „Die Zunahme von Arbeitern ist im allgemeinen am größten seit 1851 in solchen Zweigen, worin die Maschinerie bisher noch nicht mit Erfolg angewandt worden.“ („Census of England and Wales for 1861“, vol. III, Lond. 1863, p. 35–39.)

Mit der Größe des bereits funktionierenden Gesellschaftskapitals und dem Grad seines Wachstums, mit der Ausdehnung der Produktionsleiter und der Masse der in Bewegung gesetzten Arbeiter, mit der Entwicklung der Produktivkraft ihrer Arbeit, mit dem breiteren und volleren Strom aller Springquellen des Reichtums dehnt sich auch die Stufenleiter, worin größere Attraktion der Arbeiter durch das Kapital mit größerer Repulsion derselben verbun-

of capital and in its technical form change, and the circle of industries expands which become involved, be it simultaneously, be it alternatively, in this change.

Now Marx formulates the capitalist population law, emphasizing that the workers themselves are the ones who produce the means which make them superfluous:

With the accumulation of capital, which is their own production, the working population produce, to an increasing extent, the means that make them relatively superfluous.⁷⁹

Footnote 79 gives some sources how the economists had perceived this law. The passage in brackets was added by Engels on the authority of changes made by Marx in the French edition:

⁷⁹ {The law of progressive diminution of the relative magnitude of variable capital, together with its effect on the situation of the class of wage-laborers is intuited rather than understood by some of the prominent economists of the classical school. In this respect the greatest merit is due to John Barton although he, like all the others, mixes up constant with fixed capital, and variable with circulating capital. He says:} 'The demand for labor depends on the increase of circulating, and not of fixed capital. Were it true that the proportion between these two sorts of capital is the same at all times, and in all circumstances, then, indeed, it follows that the number of laborers employed is in proportion to the wealth of the state. But such a proposition has not the semblance of probability. As arts are cultivated, and civilization is extended, fixed capital bears a larger and larger proportion to circulating capital. The amount of fixed capital employed in the production of a piece of British muslin is at least a hundred, probably a thousand times greater than that employed in a similar piece of Indian muslin. And the proportion of circulating capital is a hundred or thousand times less ... the whole of the annual savings, added to the fixed capital, would have no effect

den ist, nimmt die Raschheit der Wechsel in der organischen Zusammensetzung des Kapitals und seiner technischen Form zu, und schwillt der Umkreis der Produktionsphären, die bald gleichzeitig, bald abwechselnd davon ergriffen werden.

Mit der durch sie selbst produzierten Akkumulation des Kapitals produziert die Arbeiterbevölkerung also in wachsendem Umfang die Mittel ihrer eignen relativen Überzähligmachung.⁷⁹

⁷⁹ Das Gesetz der progressiven Abnahme der relativen Größe des variablen Kapitals, nebst seinen Wirkungen auf die Lage der Lohnarbeiterklasse, ist von einigen ausgezeichneten Ökonomen der klassischen Schule mehr geahnt als begriffen worden. Das größte Verdienst hierin gebührt John Barton, obwohl er, wie alle anderen, das konstante Kapital mit dem fixen, das variable mit dem zirkulierenden zusammenwirft. Er sagt: „Die Nachfrage nach Arbeit hängt von der Vermehrung des zirkulierenden und nicht des fixen Kapitals ab. Wenn es stimmte, daß das Verhältnis zwischen diesen beiden Arten des Kapitals zu allen Zeiten und unter allen Umständen dasselbe ist, dann folgt allerdings daraus, daß die Anzahl der beschäftigten Arbeiter sich nach dem Reichtum des Staates richtet. Aber eine solche Behauptung hat nicht den Anschein von Wahrscheinlichkeit. In dem Maße, wie die Naturwissenschaften gepflegt werden und die Zivilisation sich ausbreitet, wächst das fixe Kapital im Verhältnis zum zirkulierenden immer mehr und mehr an. Die Summe des bei der Produktion eines Stückes britischen Musselins verwendeten fixen Kapitals ist wenigstens hundertmal, wahrscheinlich aber tausendmal größer als jene, die zur Erzeugung eines ähnlichen Stückes

in increasing the demand for labor' (John Barton, *Observations on the Circumstances which Influence the Condition of the Laboring Classes of Society*, London, 1817, pp. 16–17). 'The same cause which may increase the net revenue of the country may at the same time render the population redundant, and deteriorate the condition of the laborer' (Ricardo, op. cit., p. 469). With the increase of capital, 'the demand' (for labor) 'will be in a diminishing ratio' (ibid., p. 480, n.). 'The amount of capital devoted to the maintenance of labor may vary, independently of any changes in the whole amount of capital ... Great fluctuations in the amount of employment, and great suffering may become more frequent as capital itself becomes more plentiful' (Richard Jones, *An Introductory Lecture on Political Economy*, London, 1833, p. 12). 'Demand' (for labor) 'will rise ... not in proportion to the accumulation of the general capital ... Every augmentation, therefore, in the national stock destined for reproduction, comes, in the progress of society, to have less and less influence upon the condition of the laborer' (Ramsay, op. cit., pp. 90–91).

Now some concluding general remarks about laws of population:

This is a law of population peculiar to the capitalist mode of production; and in fact every particular historical mode of production has its own specific historically valid laws of population. An abstract law of population exists only for plants and animals (as long as man does not intervene historically).

indischen Musselins verwendet wird. Und der Anteil des zirkulierenden Kapitals ist hundert- oder tausendmal kleiner. ... Wenn die Gesamtheit der jährlichen Ersparnisse dem fixen Kapital zugeschlagen würde, so würden sie sich nicht in einer erhöhten Nachfrage nach Arbeit auswirken.' (John Barton, „Observations on the Circumstances which Influence the Condition of the Laboring Classes of Society“, Lond. 1817, p. 16, 17.) „Die gleiche Ursache, die die Nettorevenue des Landes anwachsen läßt, kann gleichzeitig einen Überfluß an Bevölkerung erzeugen und die Lage des Arbeiters verschlechtern.“ (Ricardo, l.c. p. 469.) Mit der Zunahme des Kapitals „wird die Nachfrage“ (nach Arbeit) „verhältnismäßig abnehmen“. (l.c. p. 40, Note.) „Der Betrag des Kapitals, der zur Erhaltung von Arbeit bestimmt ist, kann sich ändern, unabhängig von irgendwelchen Veränderungen im Gesamtbetrag des Kapitals ... Große Schwankungen im Ausmaß der Beschäftigung und große Not können häufiger werden in dem Maße, wie das Kapital selbst reichlicher wird.“ (Richard Jones, „An Introductory Lecture on Pol. Econ.“, Lond. 1833, p. 12.) „Nachfrage“ (nach Arbeit) „wird steigen ... nicht im Verhältnis zur Akkumulation des Gesamtkapitals ... Jede Vermehrung des zur Reproduktion bestimmten nationalen Kapitals wird deshalb im Laufe des gesellschaftlichen Fortschritts einen stets geringeren Einfluß auf die Lage des Arbeiters haben.“ (Ramsay, l.c. p. 90, 91.)

Es ist dies ein der kapitalistischen Produktionsweise eigentümliches Populationsgesetz, wie in der Tat jede besondere historische Produktionsweise ihre besondern, historisch gültigen Populationsgesetze hat. Ein abstraktes Populationsgesetz existiert nur für Pflanze und Tier, soweit der Mensch nicht geschichtlich eingreift.

3.b. [Surplus Population Functions as Reserve Army]

The surplus population is an effect of capitalism. But it is also one of its levers, even conditions, since it functions as a *reserve army*:

784:1/o A surplus population of workers is a necessary product of accumulation or of the development of wealth on a capitalist basis. However this surplus population also becomes, conversely, the lever of capitalist accumulation, and indeed a condition for the very existence of the capitalist mode of production. It constitutes a disposable industrial reserve army, which belongs to capital just as absolutely as if the latter had bred it at its own cost. It creates a mass of human material always ready for exploitation by capital, according to capital's own changing valorization requirements, independently of the limits of the actual population increase.

Capital needs such a reserve army especially because capital accumulation can suddenly expand:

With accumulation, and the development of the productive powers of labor that accompanies it, capital's power of sudden expansion also grows; it grows, not merely because the elasticity of the capital already functioning increases, not merely because the absolute wealth of society expands (of which capital only forms an elastic part), not merely because credit, under every special stimulus, at once places an unusual part of this wealth at the disposal of production in the form of additional capital; it grows also because the technical conditions of the production process themselves—machinery, means of transport, etc.—make it possible that surplus product is rapidly transformed on a large scale into additional means of production.

Marx gives two examples. One is rapid expansion of particular industries:

The mass of social wealth, overflowing with

661:1 Wenn aber eine Surplusarbeiterpopulation notwendiges Produkt der Akkumulation oder der Entwicklung des Reichtums auf kapitalistischer Grundlage ist, wird diese Überbevölkerung umgekehrt zum Hebel der kapitalistischen Akkumulation, ja zu einer Existenzbedingung der kapitalistischen Produktionsweise. Sie bildet eine disponible industrielle Reservearmee, die dem Kapital ganz so absolut gehört, als ob es sie auf seine eignen Kosten großgezüchtet hätte. Sie schafft für seine wechselnden Verwertungsbedürfnisse das stets bereite exploitable Menschenmaterial, unabhängig von den Schranken der wirklichen Bevölkerungszunahme.

Mit der Akkumulation und der sie begleitenden Entwicklung der Produktivkraft der Arbeit wächst die plötzliche Expansionskraft des Kapitals, nicht nur, weil die Elastizität des funktionierenden Kapitals wächst, und der absolute Reichtum, wovon das Kapital nur einen elastischen Teil bildet, nicht nur, weil der Kredit, unter jedem besondern Reiz, im Umsehn ungewöhnlichen Teil dieses Reichtums der Produktion als Zusatzkapital zur Verfügung stellt. Die technischen Bedingungen des Produktionsprozesses selbst, Maschinerie, Transportmittel usw. ermöglichen, auf größter Stufenleiter, die rascheste Verwandlung von Mehrprodukt in zuschüssige Produktionsmittel.

Exam Question 1052 Why is the surplus-population created under capitalism called "relative"?

Die mit dem Fortschritt der Akkumulation

the advance of accumulation and capable of being transformed into additional capital, thrusts itself frantically into old branches of production whose markets suddenly expand, or into newly formed branches, such as railways, etc., which now become necessary due to the development of the old branches.

This first example is not necessarily related to the business cycle. It may be inter-industry movements, which are not readily visible in the usual statistics. Such rapid adjustments would not be possible without the reserve army:

In all such cases, there must be the possibility of suddenly throwing great masses of men into the decisive areas without affecting the scale of production in other spheres. The surplus population supplies these masses.

Marx's second example is the business cycle.

The path characteristically described by modern industry, which takes the form of a decennial cycle (interrupted by smaller oscillations) of periods of average activity, production at high pressure, crisis, and stagnation, depends on the constant formation, the greater or lesser absorption and the reconstitution of the industrial reserve army or surplus population.

The business cycle not only needs overpopulation, it also generates it:

In their turn, the varying phases of the industrial cycle recruit the surplus population, and become one of the most energetic agencies for its reproduction.

Now a more systematic development of the business cycle. Going back in history, the business cycle was not possible during the infancy of the capitalist mode of production:

785:1/o This peculiar cyclical path of modern industry, which occurs in no earlier period of human history, was also impossible when capitalist production was in its infancy. The composition of capital at that time underwent only very gradual changes. By and large, therefore, the proportional growth in the demand for labor has corresponded to the accumulation of capital.

überschwellende und in Zusatzkapital verwandelbare Masse des gesellschaftlichen Reichtums drängt sich mit Frenesie in alte Produktionszweige, deren Markt sich plötzlich erweitert, oder in neu eröffnete, wie Eisenbahnen usw., deren Bedürfnis aus der Entwicklung der alten entspringt.

In allen solchen Fällen müssen große Menschenmassen plötzlich und ohne Abbruch der Produktionsleiter in andren Sphären auf die entscheidenden Punkte werfbar sein. Die Übervölkerung liefert sie.

Der charakteristische Lebenslauf der modernen Industrie, die Form eines durch kleinere Schwankungen unterbrochenen zehnjährigen Zyklus von Perioden mittlerer Lebendigkeit, Produktion unter Hochdruck, Krise und Stagnation, beruht auf der beständigen Bildung, größern oder geringern Absorption und Wiederbildung der industriellen Reservearmee oder Übervölkerung.

Ihrerseits rekrutieren die Wechselfälle des industriellen Zyklus die Übervölkerung und werden zu einem ihrer energischsten Reproduktionsagentien.

661:2/o Dieser eigentümliche Lebenslauf der modernen Industrie, der uns in keinem frühern Zeitalter der Menschheit begegnet, war auch in der Kindheitsperiode der kapitalistischen Produktion unmöglich. Die Zusammensetzung des Kapitals veränderte sich nur sehr allmählich. Seiner Akkumulation entsprach also im Ganzen verhältnismäßiges Wachstum der Arbeitsnachfra-

Even though the advance of accumulation was slow in comparison with the modern epoch, it came up against the natural bounds of the exploitable working population—bounds which could only be swept away by violent means, as we shall discuss later.

Marx writes here "bounds" instead of "limits" because limits are

intrinsic, while bounds are imposed from the outside. The

limits of the growth of the working population are bounds for capital.

Question 1054 Which violent means did capital use in its infancy to sweep away the bounds imposed on its accumulation by the natural limits of the exploitable working population?

Dialectics of the business cycle: expansions produce contractions.

The expansion by fits and starts of the scale of production is the precondition for its equally sudden contraction; the latter again evokes the former, but the former is impossible without disposable human material, without an increase in the number of workers, which must occur independently of the absolute growth of the population.

↑ This can be cast in terms of Bhaskar's four-step dialectic, which consists of four steps starting with an absence: Surplus-population ⇒ sudden expansions ⇒ sudden contractions ⇒ more surplus population. This is a regressive dialectic. It does not remove the original absence but ends up digging the hole deeper from which it started.

This increase is effected by the simple process that constantly 'sets free' a part of the working class; by methods which lessen the number of workers employed in proportion to the increased production. Modern industry's whole form of motion therefore depends on the continuous transformation of a part of the working population into unemployed or semi-employed 'hands'.

Next: the business cycle is rooted in industrial production, not in the credit sphere:

The superficiality of political economy shows itself among others in the fact that it views the expansion and contraction of credit as the cause of the periodic alterna-

ge. Langsam wie der Fortschritt seiner Akkumulation, verglichen mit der modernen Epoche, stieß er auf Naturschranken der exploitablen Arbeiterbevölkerung, welche nur durch später zu erwähnende Gewaltmittel wegräumbar waren.

Die plötzliche und ruckweise Expansion der Produktionsleiter ist die Voraussetzung ihrer plötzlichen Kontraktion; letztere ruft wieder die erstere hervor, aber die erstere ist unmöglich ohne disponibles Menschenmaterial, ohne eine vom absoluten Wachstum der Bevölkerung unabhängige Vermehrung von Arbeitern.

Sie wird geschaffen durch den einfachen Prozeß, der einen Teil der Arbeiter beständig „freisetzt“, durch Methoden, welche die Anzahl der beschäftigten Arbeiter im Verhältnis zur vermehrten Produktion vermindern. Die ganze Bewegungsform der modernen Industrie erwächst also aus der beständigen Verwandlung eines Teils der Arbeiterbevölkerung in unbeschäftigte oder halbbeschäftigte Hände.

Die Oberflächlichkeit der politischen Ökonomie zeigt sich u.a. darin, daß sie die Expansion und Kontraktion des Kredits, das bloße Symptom der Wechselperioden

tions in the industrial cycle, whereas it is a mere symptom of them.

Now periodicity, which makes it difficult to see what is the cause and what the effect: Just as the heavenly bodies always repeat a certain movement, once they have been flung into it, so also does social production, once it has been flung into this movement of alternate expansion and contraction. Effects become causes in their turn, and the various vicissitudes of the whole process, which always reproduces its own conditions, take on the form of periodicity.

The French edition has here an insert which reflects back to 785:1/o in order to show what processes were necessary before business cycles could start:

[But only after mechanical industry had struck root so deeply that it exerted a preponderant influence on the whole of national production; only after foreign trade began to predominate over internal trade, thanks to mechanical industry; only after the world market had successively annexed extensive areas of the New World, Asia and Australia; and finally, only after a sufficient number of industrial nations had entered the arena—only after all this had happened can one date the repeated self-perpetuating cycles, whose successive phases embrace years, and always culminate in a general crisis, which is the end of one cycle and the starting-point of another. Until now the duration of these cycles has been ten or eleven years, but there is no reason to consider this duration as constant. On the contrary, we ought to conclude, on the basis of the laws of capitalist production as we have just expounded them, that the duration is variable, and that the length of the cycles will gradually diminish.]

Now Marx discusses how the economists thought about business cycle and surplus-population

des industriellen Zyklus, zu deren Ursache macht.

see what is the cause and what the effect:

Ganz wie Himmelskörper, einmal in eine bestimmte Bewegung geschleudert, dieselbe stets wiederholen, so die gesellschaftliche Produktion, sobald sie einmal in jene Bewegung wechselnder Expansion und Kontraktion geworfen ist. Wirkungen werden ihrerseits zu Ursachen und die Wechselfälle des ganzen Prozesses, der seine eigenen Bedingungen stets reproduziert, nehmen die Form der Periodizität an.

[Aber erst von der Zeit an, als die mechanische Industrie so tiefe Wurzeln geschlagen hatte, daß sie auf die ganze nationale Produktion einen überwiegenden Einfluß ausübte; als durch sie der Außenhandel dem Binnenhandel den Rang abzulaufen hegann; als sich der Weltmarkt sukzessive ausgedehnter Gebiete in der neuen Welt, in Asien und in Australien bemächtigte; als schließlich die industriellen Nationen, die auf die Arena traten, zahlreich genug geworden waren—erst von dieser Zeit an datierten jene sich stets wiedererzeugenden Zyklen, deren aufeinanderfolgende Phasen Jahre umfassen und die immer hinauslaufen auf eine allgemeine Krise, die Ende eines Zyklus und Ausgangspunkt eines neuen ist. Bis jetzt ist die periodische Dauer solcher Zyklen zehn oder elf Jahre, aber es gibt keinerlei Grund, diese Zahl als konstant zu betrachten. Im Gegenteil, aus den Gesetzen der kapitalistischen Produktion, wie wir sie eben entwickelt haben, muß man schließen, daß sie variabel ist und daß die Periode der Zyklen sich stufenweise verkürzen wird.]

When this periodicity has once become consolidated, even political economy sees that the production of a relative surplus population—i.e. a population surplus in relation to capital's average requirements for valorization—is a necessary condition for modern industry.

First Merivale:

786:1/oo 'Suppose,' says H. Merivale, formerly Professor of Political Economy at Oxford, subsequently employed at the Colonial Office,

'suppose that, on the occasion of some of these crises, the nation were to rouse itself to the effort of getting rid by emigration of some hundreds of thousands of superfluous arms, what would be the consequence? That, at the first returning demand for labor, there would be a deficiency. However rapid reproduction may be, it takes, at all events, the space of a generation to replace the loss of adult labor. Now, the profits of our manufacturers depend mainly on the power of making use of the prosperous moment when demand is brisk, and thus compensating themselves for the interval during which it is slack. This power is secured to them only by the command of machinery and of manual labor. They must have hands ready by them, they must be able to increase the activity of their operations when required, and to slacken it again, according to the state of the market, or they cannot possibly maintain that pre-eminence in the race of competition on which the wealth of the country is founded.'⁸⁰

⁸⁰ H. Merivale, *Lectures on Colonization and Colonies*, London, 1841, Vol. I, p. 146.

Next Malthus:

Even Malthus recognizes that a surplus population is necessary for modern industry, although he explains the surplus population, in his narrow fashion, by the excessive

Ist letztere einmal konsolidiert, so begreift selbst die politische Ökonomie die Produktion einer relativen, d.h. mit Bezug auf das mittlere Verwertungsbedürfnis des Kapitals überschüssigen Bevölkerung als Lebensbedingung der modernen Industrie.

662:1/o „Gesetzt,“ sagt H. Merivale, früher Professor der politischen Ökonomie zu Oxford, später Beamter des englischen Kolonialministeriums,

„gesetzt, bei Gelegenheit einer Krise raffe die Nation sich zu einer Kraftanstrengung auf, um durch Emigration einige 100 000 überflüssige Arme loszuwerden, was würde die Folge sein? Daß bei der ersten Wiederkehr der Arbeitsnachfrage ein Mangel vorhanden wäre. Wie rasch immer die Reproduktion von Menschen sein mag, sie braucht jedenfalls den Zwischenraum einer Generation zum Ersatz erwachsener Arbeiter. Nun hängen die Profite unsrer Fabrikanten hauptsächlich von der Macht ab, den günstigen Moment lebhafter Nachfrage zu exploitierten und sich so für die Periode der Erlahmung schadlos zu halten. Diese Macht ist ihnen nur gesichert durch Kommando über Maschinerie und Handarbeit. Sie müssen disponible Hände vorfinden; sie müssen fähig sein, die Aktivität ihrer Operationen wenn nötig höher zu spannen oder abzuspannen, je nach dem Stand des Markts, oder sie können platterdings nicht in der Hetzjagd der Konkurrenz das Übergewicht behaupten, auf das der Reichtum dieses Landes gegründet ist.“⁸⁰

⁸⁰ H. Merivale, „*Lectures on Colonization and Colonies*“, Lond. 1841 und 1842, v. I, p. 146.

663:1–2 Selbst Malthus erkennt in der Übervölkerung, die er, nach seiner bornierten Weise, aus absolutem Überwuchs der Arbeiterbevölkerung, nicht aus ihrer relati-

growth of the working population, instead of seeing that capital makes part of the working population relatively superfluous. He says:

‘Prudential habits with regard to marriage, carried to a considerable extent among the laboring class of a country mainly depending upon manufactures and commerce, might injure it ... From the nature of a population, an increase of laborers cannot be brought into market in consequence of a particular demand till after the lapse of 16 or 18 years, and the conversion of revenue into capital, by saving, may take place much more rapidly; a country is always liable to an increase in the quantity of the funds for the maintenance of labor faster than the increase of population.’⁸¹

⁸¹ [Mal36, pp. 215, 319, 320] In this work Malthus finally discovers, with the help of Sismondi, the beautiful trinity of capitalist production: over-production, over-population and over-consumption. Three very delicate monsters, indeed! Cf. F. Engels, *Outlines of a Critique of Political Economy*, [mecw3]437–440:1

Finally the “old maid” Harriet Martineau: After declaring that the constant production of a relative surplus population of workers is a necessity of capitalist accumulation, political economy very aptly adopts the shape of an old maid and puts into the mouth of her ideal capitalist the following words addressed to the ‘redundant’ workers who have been thrown onto the streets by their own creation of additional capital:

‘We manufacturers do what we can for you, whilst we are increasing that capital on which you must subsist, and you must do the rest by accommodating your numbers to the means of subsistence.’⁸²

⁸² Harriet Martineau, ‘A Manchester Strike’, 1832, p. 101.

ven Überzähligmachung deutet, eine Notwendigkeit der modernen Industrie. Er sagt:

„Weise Gewohnheiten in bezug auf die Ehe, wenn zu einer gewissen Höhe getrieben unter der Arbeiterklasse eines Landes, das hauptsächlich von Manufaktur und Handel abhängt, würden ihm schädlich sein... Der Natur der Bevölkerung gemäß kann ein Zuwachs von Arbeitern nicht zu Markt geliefert werden, infolge besonderer Nachfrage, bis nach Verlauf von 16 oder 18 Jahren, und die Verwandlung von Revenue in Kapital durch Ersparung kann sehr viel rascher Platz greifen; ein Land ist stets dem ausgesetzt, daß sein Arbeitsfonds rascher wächst als die Bevölkerung.’⁸¹

⁸¹ [Mal36, pp. 215, 319, 320] In diesem Werk entdeckt Malthus endlich, vermittelt Sismondis, die schöne Dreieinigkeit der kapitalistischen Produktion: Überproduktion—Überpopulation—Überkonsumtion, three very delicate monsters, indeed! Vgl. F. Engels, „Umriss zu einer Kritik der Nationalökonomie“, [mecw3]437–440:1.

664:1–2 Nachdem die politische Ökonomie so die beständige Produktion einer relativen Übervölkerung von Arbeitern für eine Notwendigkeit der kapitalistischen Akkumulation erklärt hat, legt sie, und zwar adäquat in der Figur einer alten Jungfer, dem „beau ideal“ ihres Kapitalisten folgende Worte an die durch ihre eigne Schöpfung von Zusatzkapital aufs Pflaster geworfenen „Überzähligen“ in den Mund:

„Wir Fabrikanten tun für euch, was wir können indem wir das Kapital vermehren, von dem ihr subsistieren müßt; und ihr müßt das übrige tun, indem ihr eure Zahl den Subsistenzmitteln anpaßt.“⁸²

⁸² Harriet Martineau, „The Manchester Strike“, 1832, p. 101.

Footnote 82 is a reference to [Mar37, p. 101]. Harriet Martineau’s fictional capitalist had the gall to make these statements directly to the ‘redundant’ workers, who had created this redundancy through their own labor. The dialectic that the worker’s dependence on capital is created by the workers’ own product creates here an explosive situation.

The concluding remarks of this passage, Subsection [3.b], tie into its opening remarks at the beginning of 784:1/o:

788:1 Capitalist production can by no means content itself with the quantity of disposable labor-power which the natural increase of population yields. It requires for its unrestricted activity an industrial reserve army that is independent of these natural bounds.

It should be “natural bounds,” since nature (natural population

growth) imposes outside bounds on capital accumulation. Both

Moore-Aveling and Fowkes say incorrectly “natural limits.”

664:3 Der kapitalistischen Produktion genügt keineswegs das Quantum disponibler Arbeitskraft, welches der natürliche Zuwachs der Bevölkerung liefert. Sie bedarf zu ihrem freien Spiel einer von dieser Naturschranke unabhängigen industriellen Reservearmee.

3.c. [Link between Variable Capital, Employment, and Labor Performed]

The amount of the variable capital advanced, the number of laborers hired, and the amount of labor performed are not necessarily proportional, and the tie between them becomes weaker as accumulation proceeds. As Marx summarizes it in 792:2/oo, there is a tendency to make the supply of labor independent of the supply of labor-power. Marx brings four different mechanisms acting in four different sites: economic motives of the capitalists, technology, reproduction of labor-power, and the labor market.

788:2 We have so far assumed that the increase or diminution of the number of workers employed corresponds precisely to the increase or diminution of the variable capital.

The first mechanism is: capitalists are motivated to get more labor out of the same number of workers instead of hiring more workers, because hiring more workers requires higher outlays of constant capital than having the same number of workers working longer hours. Presumably Marx means here fixed capital, buildings and machinery. The more the production process is mechanized, the more relevant is this consideration.

788:3 But the number of workers under the command of capital may remain the same, or even fall, while the variable capital increases. This is the case if the individual worker provides more labor, and his wages

664:4 Bisher wurde unterstellt, daß der Zu- oder Abnahme des variablen Kapitals genau die Zu- oder Abnahme der beschäftigten Arbeiterzahl entspricht.

664:5 Bei gleichbleibender oder selbst verminderter Zahl der von ihm kommandierten Arbeiter wächst jedoch das variable Kapital, wenn der individuelle Arbeiter mehr Arbeit liefert und daher sein Ar-

thus increase, although the price of labor remains the same or even falls, only more slowly than the mass of labor rises. Increase of variable capital, in this case, becomes an index of more labor, but not of more workers employed. It is the absolute interest of every capitalist to extort a given quantity of labor out of a smaller rather than a greater number of workers, if the cost is about the same. If he has to hire more workers, the outlay of constant capital increases in proportion to the mass of labor set in motion; if he gets more labor out of the same number of workers, that increase is much smaller. The more extended the scale of production, the more decisive is this motive. Its force increases with the accumulation of capital.

↑ The workers who have to work longer are getting higher wages for this (and often they do consider this as a benefit). Through these higher wages the workers are able to capture part of the economic benefits of mechanisation for themselves.

Question 1059 *Why does the capitalist have the motive to get the same labor-time out of a smaller number of workers? Which economic facts did Marx refer to, and which additional economic facts go in the same direction nowadays?*

There is also another mechanism, which is of a technological rather than economic nature. Or maybe one should say in this mechanism the economics is built into the production process, it is real subsumption rather than formal subsumption: Machinery controls the laborer better and organizes the labor process in such a way that it can be sped up. Because of the “invisible” technological nature of this coercion, the workers cannot capture any of the benefits for themselves, they are simply forced to work more without getting higher wages.

788:4 We have seen that the development of the capitalist mode of production, and of the productive powers of labor—which is at once the cause and the effect of accumulation—enables the capitalist, with the same outlay of variable capital, to set in motion more labor by greater exploitation (extensive or intensive) of each individual labor-power.

↓ A third mechanism allows labor to be obtained from labor-power that is less expensive. Skilled labor can be replaced by unskilled labor, men by women, adults by children:

beitslohn wächst obgleich der Arbeitspreis gleichbleibt oder selbst sinkt, nur langsamer, als die Arbeitsmasse steigt. Der Zuwachs des variablen Kapitals wird dann Index von mehr Arbeit, aber nicht von mehr beschäftigten Arbeitern. Jeder Kapitalist hat das absolute Interesse, ein bestimmtes Arbeitsquantum aus kleinerer, statt ebenso wohlfeil oder selbst wohlfeiler aus größerer Arbeiterzahl auszupressen. In dem letzten Fall wächst die Auslage von konstantem Kapital verhältnismäßig zur Masse der in Fluß gesetzten Arbeit, im ersten Fall viel langsamer. Je größer die Stufenleiter der Produktion, desto entscheidender dies Motiv. Seine Wucht wächst mit der Akkumulation des Kapitals.

664:6/o Man hat gesehen, daß die Entwicklung der kapitalistischen Produktionsweise und Produktivkraft der Arbeit—zugleich Ursache und Wirkung der Akkumulation—den Kapitalisten befähigt, mit derselben Auslage von variablem Kapital mehr Arbeit durch größere extensive oder intensive Exploitation der individuellen Arbeitskräfte flüssig zu machen.

We have further seen that the capitalist buys with the same capital a greater mass of labor-power, as he progressively replaces skilled workers by less skilled, mature labor-power by immature, male by female, that of adults by that of young persons or children.

Next paragraph gives a summary of all three effects so far.

788:5 On the one hand, therefore, with the progress of accumulation a larger variable capital sets more labor in motion without enlisting more workers; on the other, a variable capital of the same magnitude sets in motion more labor with the same mass of labor-power; and, finally, a greater number of inferior labor-powers is set in motion by the displacement of more skilled labor-powers.

This means, the relative surplus population is produced faster than the technical innovations alone would suggest. The outlay of variable capital is not a good indicator for the labor performed, and capital is able to appropriate more labor without drawing down the relative surplus-population.

Question 1061 *Why does the link between variable capital, employment, and labor performed become weaker as accumulation proceeds?*

Not only the relationship between variable capital and labor, but also that between the changes in productive power and the release of labor become more unfavorable for the worker:

789:1/o The production of a relative surplus population, or the setting free of workers, therefore proceeds even more rapidly than the technical transformation of the process of production that accompanies the advance of accumulation and is accelerated by it, and more rapidly than the corresponding diminution of the variable part of capital as compared with the constant.

There is an additional effect, which only kicks in after the other effects have already been successful at creating a relative surplus population: the threat of unemployment forces those who are employed to work harder, which puts still more workers on the street:

Man hat ferner gesehen, daß er mit demselben Kapitalwert mehr Arbeitskräfte kauft, indem er progressiv geschicktere Arbeiter durch ungeschicktere, reife durch unreife, männliche durch weibliche, erwachsne Arbeitskraft durch jugendliche oder kindliche verdrängt.

665:1 Einerseits macht also, im Fortgang der Akkumulation, größeres variables Kapital mehr Arbeit flüssig, ohne mehr Arbeiter zu werben, andererseits macht variables Kapital von derselben Größe mehr Arbeit mit derselben Masse Arbeitskraft flüssig und endlich mehr niedere Arbeitskräfte durch Verdrängung höherer.

665:2/o Die Produktion einer relativen Übervölkerung oder die Freisetzung von Arbeitern geht daher noch rascher voran als die ohnehin mit dem Fortschritt der Akkumulation beschleunigte technische Umwälzung des Produktionsprozesses und die entsprechende proportionelle Abnahme des variablen Kapitalteils gegen den konstanten.

If the means of production, as they increase in extent and effective power, become to a lesser extent means for employing workers, this relation is itself in turn modified by the fact that in proportion as the productive powers of labor increase, capital increases its supply of labor more quickly than its demand for workers.

By “capital’s supply of labor” Marx means the over-work of the employed part of the working class swells the ranks of its reserve, while, conversely, the greater pressure that the reserve by its competition exerts on the employed workers forces them to submit to over-work and subjects them to the dictates of capital. The condemnation of one part of the working class to enforced idleness by the over-work of the other part, and vice versa, becomes a means of enriching the individual capitalists,⁸³ and accelerates at the same time the production of the industrial reserve army on a scale corresponding with the progress of social accumulation.

Footnote 83 documents the existence of overwork in the midst of unemployment.

⁸³ Even in the cotton famine of 1863, we find, in a pamphlet by the cotton-spinning operatives of Blackburn, fierce denunciations of over-work, which of course only affected adult male workers, as a result of the Factory Act. ‘The adult operatives at this mill have been asked to work from 12 to 13 hours per day, while there are hundreds who are compelled to be idle who would willingly work partial time, in order to maintain their families and save their brethren from a premature grave through being over-worked ... We’, it goes on to say, ‘would ask if the practice of working overtime by a number of hands, is likely to create a good feeling between masters and servants. Those who are worked overtime feel the injustice equally with those who are condemned to forced idleness. There is in

Wenn die Produktionsmittel, wie sie an Umfang und Wirkungskraft zunehmen, in geringerem Grad Beschäftigungsmittel der Arbeiter werden, wird dies Verhältnis selbst wieder dadurch modifiziert, daß im Maß, wie die Produktivkraft der Arbeit wächst, das Kapital seine Zufuhr von Arbeit rascher steigert als seine Nachfrage nach Arbeitern.

the laborers replaced by machinery.

Die Überarbeit des beschäftigten Teils der Arbeiterklasse schwellt die Reihen ihrer Reserve, während umgekehrt der vermehrte Druck, den die letztere durch ihre Konkurrenz auf die erstere ausübt, diese zur Überarbeit und Unterwerfung unter die Diktate des Kapitals zwingt. Die Verdammung eines Teils der Arbeiterklasse zu erzwungenem Müßiggang durch Überarbeit des andren Teils und umgekehrt, wird Bereicherungsmittel des einzelnen Kapitalisten⁸³ und beschleunigt zugleich die Produktion der industriellen Reservearmee auf einem dem Fortschritt der gesellschaftlichen Akkumulation entsprechenden Maßstab.

⁸³ Selbst während der Baumwollnot von 1863 findet man in einem Pamphlet der Baumwollspinner von Blackburn heftige Denunziation gegen die Überarbeit, die kraft des Fabrikgesetzes natürlich nur erwachsne männliche Arbeiter traf. „Man verlangte in dieser Fabrik von den erwachsenen Arbeitern eine zwölf- bis dreizehnstündige Arbeit täglich, obwohl es Hunderte gibt, die zum Müßiggang gezwungen sind, aber gern einen Teil der Arbeitszeit arbeiten möchten, um ihre Familien erhalten zu können und ihre Arbeitsbrüder vor einem vorzeitigen Tode infolge Überarbeit zu bewahren.“ „Wir“, heißt es weiter, „möchten fragen, ob diese Praxis, Überzeit zu arbeiten, irgendwie erträgliche Verhältnisse zwischen Meistern und ‚Dienern‘ möglich macht. Die Opfer der Überarbeit fühlen die Unbill ebensowohl

the district almost sufficient work to give to all partial employment if fairly distributed. We are only asking what is right in requesting the masters generally to pursue a system of short hours, particularly until a better state of things begins to dawn upon us, rather than to work a portion of the hands overtime, while others, for want of work, are compelled to exist upon charity’ (Reports of the Inspectors of Factories ... 31 October 1863, p. 8). The author of the Essay on Trade and Commerce grasps the effect of a relative surplus population on the employed workers with his usual unerring bourgeois instinct. ‘Another cause of idleness in this kingdom is the want of a sufficient number of laboring hands ... Whenever from an extraordinary demand for manufactures, labor grows scarce, the laborers feel their own consequence, and will make their masters feel it likewise—it is amazing; but so depraved are the dispositions of these people, that in such cases a set of workmen have combined to distress the employer by idling a whole day together’ (Essay, etc., pp. 27–8). Those fellows were actually asking for a wage-increase!

Now some interesting remarks about unproductive labor:

The importance of this element in the formation of the relative surplus population is shown by the example of England. Her technical means for the ‘saving’ of labor are colossal. Nevertheless, if tomorrow morning labor were universally to be reduced to a rational amount, and proportioned to the different sections of the working class according to age and sex, the available working population would be absolutely insufficient to carry on the nation’s production on its present scale. The great majority of the

als die dadurch zu erzwungenem Müßiggang Verdammten (condemned to forced idleness). In diesem Distrikt reicht das zu verrichtende Werk hin, um alle teilweise zu beschäftigen, würde die Arbeit billig verteilt. Wir verlangen nur ein Recht, indem wir die Meister auffordern, allgemein nur kurze Zeit zu arbeiten, wenigstens solange der jetzige Stand der Dinge währt, statt einen Teil zu überarbeiten, während der andre durch Arbeitsmangel gezwungen wird, von der Wohltätigkeit seine Existenz zu fristen.“ („Reports of Insp. of Fact., 31st Oct. 1863“ p. 8.)—Die Wirkung einer relativen Übervölkerung auf die beschäftigten Arbeiter begreift der Verfasser des „Essay on Trade and Commerce“ mit seinem gewohnten unfehlbaren Bourgeoisinstinkt. „Eine andre Ursache der Faulenzerei (idleness) in diesem Königreich ist der Mangel einer hinreichenden Anzahl arbeitender Hände. Sooft durch irgendeine ungewöhnliche Nachfrage für Fabrikate die Arbeitsmasse ungenügend wird, fühlen die Arbeiter ihre eigne Wichtigkeit und wollen sie ihren Meistern ebenfalls fühlbar machen; es ist erstaunlich; aber so depraviert ist die Gesinnung dieser Kerle, daß in solchen Fällen Gruppen von Arbeitern sich kombiniert haben, um ihre Meister dadurch in Verlegenheit zu setzen, daß sie einen ganzen Tag durch faulenzten.“ (Essay etc., p. 27, 28.) Die Kerle verlangten nämlich Lohnerhöhung.

Wie wichtig dies Moment in der Bildung der relativen Übervölkerung, beweist z.B. England. Seine technischen Mittel zur „Ersparung“ von Arbeit sind kolossal. Dennoch, würde morgen allgemein die Arbeit auf ein rationelles Maß beschränkt und für die verschiedenen Schichten der Arbeiterklasse wieder entsprechend nach Alter und Geschlecht abgestuft, so wäre die vorhandne Arbeiterbevölkerung absolut unzureichend zur Fortführung der nationalen Produktion auf ihrer jetzigen Stufenleiter. Die große

now ‘unproductive’ workers would have to be turned into ‘productive’ ones.

Mehrheit der jetzt „unproduktiven“ Arbeiter müßte in „produktive“ verwandelt werden.

3.d. [The Movement of Wages]

Whereas the *level* of wages is determined by the value of labor-power, its *changes* are determined by demand and supply. Note that modern mathematical economics is unable to separate the forces determining the *level* of wages from those determining the *changes* in wages. If the changes of wages are known at every point in time, the solution of a simple differential equation gives the levels. In other words, in the mathematics of continuously differentiable functions, levels are reducible to changes. Marx’s thinking is not constrained by this mathematical theorem. Marx takes it for granted that the forces which determine the levels may be quite different from and are not necessarily reducible to the forces which determine the changes. Modern econometrics follows a similar logic as Marx when it attempts to separate levels from changes in cointegration or regression on a limited frequency band.

On order to understand the changes in wages, Marx first looks at the supply of labor, then the demand, and then the relationship between supply and demand. The *supply* is determined not by the absolute size of the working class, but by its composition, i.e., by the relationship between active workers and “reserve army.”

790:1/o Overall, the general movements of wages are exclusively regulated by expansion and contraction of the industrial reserve army, which in turn correspond to the periodic alternations of the industrial cycle. The movement of wages is not therefore determined by the variations of the absolute numbers of the working population, but by the varying proportions in which the working class is divided into an active army and a reserve army, by the increase or diminution in the relative amount of the surplus population, by the extent to which it is alternately absorbed and set free.

666:1/o Im großen und ganzen sind die allgemeinen Bewegungen des Arbeitslohns ausschließlich reguliert durch die Expansion und Kontraktion der industriellen Reservearmee, welche dem Periodenwechsel des industriellen Zyklus entsprechen. Sie sind also nicht bestimmt durch die Bewegung der absoluten Anzahl der Arbeiterbevölkerung, sondern durch das wechselnde Verhältnis, worin die Arbeiterklasse in aktive Armee und Reservearmee zerfällt, durch die Zunahme und Abnahme des relativen Umfangs der Übervölkerung, durch den Grad, worin sie bald absorbiert, bald wieder freigesetzt wird.

Question 1062 Marx writes in 790:1/o: “The general movements of wages are exclusively regulated by expansion and contraction of the industrial reserve army.” Does this mean he has abandoned the labor theory of value?

↑ Marx assumes this is an empirical fact, this is how the surface relations play out. ↓ The first half of the next sentence alludes to the evidence he has in mind: the movement of wages over the business cycle. The rest of this over-long sentence is a polemic against those

who believe wages are determined by levels of population instead of the composition of the population into active and reserve army:

For modern industry, with its decennial cycles and periodic phases, disturbed by irregular oscillations following each other more and more quickly as accumulation advances—it would be a beautiful law which would make the movement of capital dependent on the movement of the population, instead of regulating demand and supply of labor by the expansion and contraction of capital, i.e. by the level of capital’s valorization requirements at the moment, the labor-market sometimes appearing relatively under-supplied because capital is expanding, and sometimes relatively over-supplied because it is contracting.

Für die moderne Industrie mit ihrem zehnjährigen Zyklus und seinen periodischen Phasen, die außerdem im Fortgang der Akkumulation durch stets rascher aufeinander folgende unregelmäßige Oszillationen durchkreuzt werden, wäre es in der Tat ein schönes Gesetz, welches die Nachfrage und Zufuhr von Arbeit nicht durch die Expansion und Kontraktion des Kapitals, also nach seinen jedesmaligen Verwertungsbedürfnissen regelte, so daß der Arbeitsmarkt bald relativ unternvöll erscheint weil das Kapital sich expandiert, bald wieder übervoll, weil es sich kontrahiert, sondern umgekehrt die Bewegung des Kapitals von der absoluten Bewegung der Bevölkerungsmenge abhängig machte.

↑ Yes, this was only one sentence. During his polemic, Marx makes an important assertion: since wages depend on the composition of the working population instead of its absolute size, this means that wages are “regulated according to the valorization needs of capital.” This makes capital the independent force. By contrast, if wages were dependent on the absolute size of the working population, then the accumulation of capital would be subordinate to the growth of the population. The purported laws of population which make wages dependent on absolute population size are sarcastically called “beautiful” because these laws, despite their theoretical coherence and “beauty,” are utterly unable to explain the facts. In Marx’s mind the facts are obvious: capital accumulation is *not* subordinate to the growth of the population.

Question 1064 Marx says twice that the (Malthusian) law of population is a “beautiful” law. Why does he use the word “beautiful” here?

Now comes a closer description of the “iron law of wages,” a theory with which Marx does *not* agree, although he concedes that it has a true kernel.

Yet, according to the dogma of the economists, the movement of capital depends on the movement of the population. Wages rise as a result of the accumulation of capital. Higher wages stimulate the working population to more rapid multiplication, and this goes on until the labor-market becomes

Dies jedoch ist das ökonomische Dogma. Nach demselben steigt infolge der Kapitalakkumulation der Arbeitslohn. Der erhöhte Arbeitslohn spornt zur rascheren Vermehrung der Arbeiterbevölkerung, und diese dauert fort, bis der Arbeitsmarkt überfüllt, also das Kapital relativ zur Arbeiterzu-

over-supplied, and hence capital becomes insufficient in relation to the supply of labor. Wages fall, and now we have the obverse side of the medal. The working population is, little by little, decimated by the fall in wages, so that capital is again in excess in relation to the workers, or, as others explain it, the fall in wages and the corresponding increase in the exploitation of the workers again accelerates accumulation, while, at the same time, the lower wages hold the growth of the working class in check. Then the time comes round again when the supply of labor is less than the demand, wages rise, and so on.

The mechanisms postulated in this law would be far too slow:

This would indeed be a beautiful form of motion for developed capitalist production! Before the rise in wages could produce any positive increase of that part of the population actually able to work, the deadline would long since have passed within which the industrial campaign would have to have been carried through, and the battle fought to a conclusive finish.

Now Marx gives an example how absurd it would be to postulate such a law:

791:1 Between 1849 and 1859 a rise of wages which was in practice merely nominal, although it was accompanied by a fall in the price of corn, took place in the English agricultural districts. In Wiltshire, for example, the weekly wage rose from 7s. to 8s.; in Dorsetshire it rose from 7s. or 8s. to 9s., and so on. This was the result of an unusual exodus of the agricultural surplus population caused by wartime demands, and by the vast extension of railways, factories, mines etc. The lower the wage, the higher is the proportion in which even a very insignificant increase is expressed. If the weekly wage, for instance, is 20s. and it rises to

fuhr unzureichend geworden ist. Der Arbeitslohn sinkt, und nun die Kehrseite der Medaille. Durch den fallenden Arbeitslohn wird die Arbeiterbevölkerung nach und nach dezimiert, so daß ihr gegenüber das Kapital wieder überschüssig wird, oder auch, wie andre es erklären, der fallende Arbeitslohn und die entsprechende erhöhte Exploitation des Arbeiters beschleunigt wieder die Akkumulation, während gleichzeitig der niedere Lohn das Wachstum der Arbeiterklasse in Schach hält. So tritt wieder das Verhältnis ein, worin die Arbeitszufuhr niedriger als die Arbeitsnachfrage, der Lohn steigt usw.

Eine schöne Bewegungsmethode dies für die entwickelte kapitalistische Produktion! Bevor infolge der Lohnerhöhung irgendein positives Wachstum der wirklich arbeitsfähigen Bevölkerung eintreten könnte, wäre die Frist aber und abermal abgelaufen, worin der industrielle Feldzug geführt, die Schlacht geschlagen und entschieden sein muß.

667:1/o Zwischen 1849 und 1859 trat, zugleich mit fallenden Getreidepreisen, eine praktisch betrachtet nur nominelle Lohnerhöhung in den englischen Agrikulturstrikten ein, z.B. in Wiltshire stieg der Wochenlohn von 7 auf 8 sh., in Dorsetshire von 7 oder 8 auf 9 sh. usw. Es war dies Folge des übergewöhnlichen Abflusses der agrikolen Übervölkerung, verursacht durch Kriegsnachfrage, massenhafte Ausdehnung der Eisenbahnbauten, Fabriken, Bergwerke etc. Je niedriger der Arbeitslohn, desto höher drückt sich jedes noch so unbedeutende Steigen desselben in Prozentzahlen aus. Ist der Wochenlohn z.B. 20 sh. und steigt er

22s., that is a rise of 10 per cent; but if it is only 7s., and it rises to 9s., that is a rise of 284/7 per cent, which sounds very fine. Anyway, the farmers howled, and the London Economist, with reference to these starvation wages, prattled quite seriously of 'a general and substantial advance'.⁸⁴ What did the farmers do now? Did they wait until the agricultural laborers had so increased and multiplied as a result of this splendid remuneration that their wages had to fall again, which is the way things are supposed to happen according to the dogmatic economic brain? No, they introduced more machinery, and in a moment the laborers were 'redundant' again to a degree satisfactory even to the farmers. There was now 'more capital' laid out in agriculture than before, and in a more productive form. With this the demand for labor fell, not only relatively, but absolutely.

⁸⁴ *Economist*, 21 January 1860.

The "war demand" refers to the Crimean War 1854–56.

Question 1065 *Describe the interaction between accumulation of capital and the wage level (under the assumption that the composition of capital remains constant). Why does Marx say that capital is the independent and wages the dependent variable? Show that this relation between accumulation and wages is the relation between the paid and unpaid labor of the same working population.*

How can a theory survive which is so evidently wrong? Because this theory is not entirely a figment of the imagination. It does have a link to practical experience:

791:2/o The above economic fiction confuses the laws that regulate the general movement of wages, or the ratio between the working class—i.e. the total sum of labor-power—and the total social capital, with the laws that distribute the working population over the different spheres of production. If, for example owing to a favorable conjuncture, accumulation in a particular sphere of production becomes especially

auf 22, so um 10%; ist er dagegen nur 7 sh. und steigt auf 9, so um 284/7 %, was sehr erklecklich klingt. Jedenfalls heulten die Pächter und schwatzte sogar der „London Economist“⁸⁴ ganz ernsthaft von „a general and substantial advance“ mit Bezug auf diese Hungerlöhne. Was taten nun die Pächter? Warteten sie, bis die Landarbeiter sich infolge dieser brillanten Zahlung so vermehrt hatten, daß ihr Lohn wieder fallen mußte, wie die Sache sich im dogmatisch ökonomischen Hirn zuträgt? Sie führten mehr Maschinerie ein, und im Umsehn waren die Arbeiter wieder „überzählig“ in einem selbst den Pächtern genügenden Verhältnis. Es war jetzt „mehr Kapital“ in der Agrikultur angelegt als vorher und in einer produktiveren Form. Damit fiel die Nachfrage nach Arbeit nicht nur relativ, sondern absolut.

⁸⁴ „*Economist*“, Jan. 21, 1860.

668:1 Jene ökonomische Fiktion wechselt die Gesetze, welche die allgemeine Bewegung des Arbeitslohns oder das Verhältnis zwischen Arbeiterklasse, d.h. Gesamtarbeitskraft und gesellschaftlichem Gesamtkapital regeln mit den Gesetzen, welche die Arbeiterbevölkerung unter die besondern Produktionssphären verteilen. Wenn z.B. infolge günstiger Konjunktur die Akkumulation in einer bestimmten

active, and profits in it, being greater than the average profits, attract additional capital, then of course the demand for labor rises, and wages rise as well. The higher wages draw a larger part of the working population into the more favored sphere until it is glutted with laborpower, and wages at length fall again to their average level or below it, if the pressure is too great. At that point the influx of workers into the branch of industry in question not only ceases, but gives place to an outflow of workers. Here the political economist thinks he can grasp the situation, he thinks he can see an absolute diminution of workers accompanying an increase of wages, and a diminution of wages accompanying an absolute increase of workers. But he really sees only the local oscillations of the labor-market in a particular sphere of production—he sees only the phenomena which accompany the distribution of the working population into the different spheres of outlay of capital, according to its varying needs.

To conclude the discussion of the supply of labor, Marx re-states his own theory:

792:1 The industrial reserve army, during the periods of stagnation and average prosperity, weighs down the active army of workers; during the periods of overproduction and feverish activity, it puts a curb on their pretensions. The relative surplus population is therefore the background against which the law of the demand and supply of labor does its work. It confines the field of action of this law to the limits absolutely convenient to capital's drive to exploit and dominate the workers.

Next Marx discusses the *demand* for labor. He must argue here against the apologists who deny that technical progress eliminates jobs.

This is the place to return to one of the great

Produktionssphäre besonders lebhaft, die Profite hier größer als die Durchschnittsprofite, Zuschußkapital dahin drängt, so steigt natürlich Arbeitsnachfrage und Arbeitslohn. Der höhere Arbeitslohn zieht einen größeren Teil der Arbeiterbevölkerung in die begünstigte Sphäre, bis sie mit Arbeitskraft gesättigt ist und der Lohn auf die Dauer wieder auf sein früheres Durchschnittsniveau oder unter dasselbe fällt, falls der Zudrang zu groß war. Dann hört nicht nur die Einwanderung von Arbeitern in den fraglichen Geschäftszweig auf, sie macht sogar ihrer Auswanderung Platz. Hier glaubt der politische Ökonom zu sehen, „wo und wie“ mit Zunahme des Lohns eine absolute Zunahme von Arbeitern, und mit der absoluten Zunahme der Arbeiter eine Abnahme des Lohns, aber er sieht in der Tat nur die lokale Oszillation des Arbeitsmarkts einer besondern Produktionssphäre, er sieht nur Phänomene der Verteilung der Arbeiterbevölkerung in die verschiedenen Anlagesphären des Kapitals, i.e. nach seinen wechselnden Bedürfnissen.

labor, Marx re-states his own theory:

668:2/oo Die industrielle Reservearmee drückt während der Perioden der Stagnation und mittleren Prosperität auf die aktive Arbeiterarmee und hält ihre Ansprüche während der Periode der Überproduktion und des Paroxysmus im Zaum. Die relative Übervölkerung ist also der Hintergrund, worauf das Gesetz der Nachfrage und Zufuhr von Arbeit sich bewegt. Sie zwingt den Spielraum dieses Gesetzes in die der Exploitationsgier und Herrschsucht des Kapitals absolut zusagenden Schranken ein.

668:2/oo Es ist hier der Ort, auf eine der

exploits of economic apologetics. It will be remembered that if through the introduction of new machinery, or the extension of old, a portion of variable capital is transformed into constant capital, the economic apologist interprets this operation, which 'fixes' capital and by that very act 'sets free' workers, in exactly the opposite way, pretending that capital is thereby set free for the workers. Only now can one evaluate the true extent of the effrontery of these apologists. Not only are the workers directly turned out by the machines set free, but so are their future replacements in the rising generation, as well as the additional contingent which, with the usual extension of business on its old basis, would regularly be absorbed. They are now all 'set free' and every new bit of capital looking round for a function can take advantage of them. Whether it attracts them or others, the effect on the general demand for labor will be nil, if this capital is just sufficient to take out of the market as many workers as the machines threw into it. If it employs a smaller number, the number of 'redundant workers' increases; if it employs a greater, the general demand for labor increases only to the extent of the excess of the employed over those 'set free'. The impulse that additional capital seeking an outlet would otherwise have given to the general demand for labor is therefore in every case neutralized until the supply of workers thrown out of employment by the machine has been exhausted. That is to say, the mechanism of capitalist production takes care that the absolute increase of capital is not accompanied by a corresponding rise in the general demand for labor. And the apologist calls this a compensation for the misery, the suf-

Großtat der ökonomischen Apologetik zurückzukommen. Man erinnert sich, daß, wenn durch Einführung neuer oder Ausdehnung alter Maschinerie ein Stück variables Kapital in konstantes verwandelt wird, der ökonomische Apologet diese Operation, welche Kapital „bindet“ und ebendadurch Arbeiter „freisetzt“, umgekehrt so deutet, daß sie Kapital für den Arbeiter freisetzt. Erst jetzt kann man die Unverschämtheit des Apologeten vollständig würdigen. Was freigesetzt wird, sind nicht nur die unmittelbar durch die Maschine verdrängten Arbeiter, sondern ebenso ihre Ersatzmannschaft und das, bei gewohnter Ausdehnung des Geschäfts auf seiner alten Basis, regelmäßig absorbierte Zuschußkontingent. Sie sind jetzt alle „freigesetzt“, und jedes neue funktionslustige Kapital kann über sie verfügen. Ob es sie oder andre attrahiert, die Wirkung auf die allgemeine Arbeitsnachfrage wird Null sein, solange dies Kapital gerade hinreicht, um den Markt von ebensoviel Arbeitern zu befreien, als die Maschinen auf ihn geworfen. Beschäftigt es eine geringere Zahl, so wächst die Menge der Überzähligen; beschäftigt es eine größere, so wächst die allgemeine Arbeitsnachfrage nur um den Überschuß der Beschäftigten über die „Freigesetzten“. Der Aufschwung, den Anlage suchende Zusatzkapitale sonst der allgemeinen Arbeitsnachfrage gegeben hätten, ist also in jedem Fall insoweit neutralisiert, wie die von der Maschine aufs Pflaster geworfenen Arbeiter reichen. D.h. also, der Mechanismus der kapitalistischen Produktion sorgt dafür, daß der absolute Zuwachs von Kapital von keiner entsprechenden Steigerung der allgemeinen Arbeitsnachfrage begleitet ist. Und dies nennt der Apologet eine Kompensation für das Elend, die Leiden

ferings, the possible death of the displaced workers during the transitional period when they are banished into the industrial reserve army!

Now Marx discusses the *relationship* between demand and supply of labor. The consideration of the unity of demand and supply is another element of Marx's thought which is missing in modern mainstream thought. In the present theory it plays an important role: Marx will come to the conclusion that capital acts on both sides.

The demand for labor is not identical with increase of capital, nor is supply of labor identical with increase of the working class. Demand and supply do not interact with each other as independent forces. The dice are loaded. Capital acts on both sides at once. If its accumulation on the one hand increases the demand for labor, it increases on the other the supply of workers by 'setting them free', while at the same time the pressure of the unemployed compels those who are employed to furnish more labor, and therefore makes the supply of labor to a certain extent independent of the supply of laborers. The movement of the law of supply and demand of labor on this basis completes the despotism of capital.

Question 1066 *Marx describes two mechanisms by which capital acts on both sides. Sides of what? Which mechanisms? Can you think of a third mechanism which again has a similar effect?*

Law of demand and supply of labor-power is biased in favor of capital: capital acts on both sides. The labor market does not give the workers a level playing-field, the more they work, the worse they are off. But as soon as workers try to defend themselves by organization, this law of demand and supply is proclaimed "sacred":

Thus as soon as the workers learn the secret of why it happens that the more they work, the more alien wealth they produce, and that the more the productive powers of their labor increase, the more does their very function as a means for the valorization of capital become precarious; as soon

und den möglichen Untergang der deplacierten Arbeiter während der Übergangsperiode, welche sie in die industrielle Reservearmee bannt!

Die Nachfrage nach Arbeit ist nicht identisch mit Wachstum des Kapitals, die Zufuhr der Arbeit nicht mit dem Wachstum der Arbeiterklasse, so daß zwei voneinander unabhängige Potenzen aufeinander einwirkten. Les dés sont pipés. Das Kapital agiert auf beiden Seiten zugleich. Wenn seine Akkumulation einerseits die Nachfrage nach Arbeit vermehrt, vermehrt sie andererseits die Zufuhr von Arbeitern durch deren „Freisetzung“, während zugleich der Druck der Unbeschäftigten die Beschäftigten zur Flüssigmachung von mehr Arbeit zwingt, also in gewissem Grad die Arbeitszufuhr von der Zufuhr von Arbeitern unabhängig macht. Die Bewegung des Gesetzes der Nachfrage und Zufuhr von Arbeit auf dieser Basis vollendet die Despotie des Kapitals.

Sobald daher die Arbeiter hinter das Geheimnis kommen, wie es angeht, daß im selben Maß, wie sie mehr arbeiten, mehr fremden Reichtum produzieren und die Produktivkraft ihrer Arbeit wächst, sogar ihre Funktion als Verwertungsmittel des Kapitals immer prekärer für sie wird; sobald

as they discover that the degree of intensity of the competition amongst themselves depends wholly on the pressure of the relative surplus population; as soon as, by setting up trade unions etc., they try to organize planned co-operation between the employed and the unemployed in order to obviate or to weaken the ruinous effects of this natural law of capitalist production on their class; so soon does capital and its sycophant, political economy, cry out at the infringement of the 'eternal' and so to speak 'sacred' law of supply and demand. Every combination between employed and unemployed disturbs the 'pure' action of this law.

This passage contains some direct proposals for organizing (for instance, that employed and unemployed workers should organize together) which follow from this theory. What Marx calls here a "natural law" of capitalist production is not something that comes from nature, but that is a necessity inscribed in the nature of capitalism.

Question 1068 *Which actions should the workers undertake in order to break the despotism of capital? (Also indicate which aspect of the theory calls for which action.)*

The next passage exposes the hypocrisy of the economists: the law of demand and supply is only "sacred" if it is convenient.

But on the other hand, as soon as (in the colonies, for example) adverse circumstances prevent the creation of an industrial reserve army, and with it the absolute dependence of the working class upon the capitalist class, capital, along with its platitudinous Sancho Panza, rebels against the 'sacred' law of supply and demand, and tries to make up for its inadequacies by forcible means.

Marx discusses this in chapter Thirty-Three.

Question 1070 *How can the accumulation of capital decrease instead of increase the demand for labor? How can a rise in unemployment increase the supply of labor instead of just changing the composition of the given supply?*

sie entdecken, daß der Intensitätsgrad der Konkurrenz unter ihnen selbst ganz und gar von dem Druck der relativen Übervölkerung abhängt; sobald sie daher durch Trade's Unions usw. eine planmäßige Zusammenwirkung zwischen den Beschäftigten und Unbeschäftigten zu organisieren suchen, um die ruinierenden Folgen jenes Naturgesetzes der kapitalistischen Produktion auf ihre Klasse zu brechen oder zu schwächen, zertert das Kapital und sein Sykophant, der politische Ökonom, über Verletzung des „ewigen“ und sozusagen „heiligen“ Gesetzes der Nachfrage und Zufuhr. Jeder Zusammenhalt zwischen den Beschäftigten und Unbeschäftigten stört nämlich das „reine“ Spiel jenes Gesetzes.

Sobald andererseits, in den Kolonien z.B., widrige Umstände die Schöpfung der industriellen Reservearmee und mit ihr die absolute Abhängigkeit der Arbeiterklasse von der Kapitalistenklasse verhindern, rebelliert das Kapital samt seinem gemeinplätzlichen Sancho Panza, gegen das „heilige“ Gesetz der Nachfrage und Zufuhr und sucht ihm durch Zwangsmittel unter die Arme zu greifen.

4. Different Forms of Existence of the Relative Surplus Population. The General Law of Capitalist Accumulation

Existenzformen is in the Moore-Aveling translation just: forms. Marx qualifies it as “forms

of existence” since he uses “form” without qualifier for the social forms of core relations.

Sometimes Marx uses “Gestalt” synonymous to “forms of existence.”

The relative surplus population consists of all workers whose labor has been made superfluous by the accumulation of capital. Marx calls these workers “repelled” by the accumulation of capital. “Repelled” not in the sense of “disgusted” but in the sense of “rejected” or “not needed,” literally “pushed away.” They are unable to find jobs, they lose their jobs, or they must accept less desirable work, because of capital accumulation. But even if they are lucky enough still to be holding on to their jobs, they may still belong to the surplus population.

794:1 The relative surplus population exists in a variety of different nuances. Every worker belongs to it during the time when he is only partially employed or wholly unemployed. Leaving aside the large-scale and periodically recurring forms that the changing phases of the industrial cycle impress on it, so that it sometimes appears acute, in times of crisis, and sometimes chronic, in times when business is slack, we can identify three forms which it always possesses: the flowing, the latent, and the stagnant.

670:1 Die relative Übervölkerung existiert in allen möglichen Schattierungen. Jeder Arbeiter gehört ihr an während der Zeit, wo er halb oder gar nicht beschäftigt ist. Abgesehen von den großen, periodisch wiederkehrenden Formen, welche der Phasenwechsel des industriellen Zyklus ihr aufprägt, so daß sie bald akut in den Krisen erscheint, bald chronisch in den Zeiten flauen Geschäfts, besitzt sie fortwährend drei Formen: flüssige, latente und stockende.

The first paragraph is somewhat clearer in French than in German.

The above paragraph says three things about the surplus population:

- 1) Relative surplus-population exists in many different nuances.
- 2) The industrial cycle periodically imprints different characteristics (acute–chronic) on it. But this is not the subject of the present discussion.
- 3) Enduring through these cyclical changes, one can distinguish three permanent forms: flowing, latent, and stagnant. Marx does not give the definitions, only examples of these three categories. He probably thought the names, with their metaphor of water bodies, were self-explanatory. The flowing surplus population is readily re-absorbed again. The latent surplus population cannot be seen, like a stream of ground water, unless one creates a drainage

channel. Regarding the stagnant surplus population, the German word for it does not mean entirely “stagnant,” but designates an intermittent, impeded, or backed-up flow.

The usual translation “floating” instead of “flowing” makes it

impossible to make sense of this metaphor.

The *flowing surplus-population* is repelled here, attracted there, but overall the attraction is large enough that the passage through unemployment is always only temporary.

794:2 In the centres of modern industry—factories, workshops, ironworks, mines, etc.—the workers are sometimes repelled, sometimes attracted again in greater masses, so that the number of those employed increases on the whole, although in a constantly decreasing proportion to the scale of production. Here the surplus population exists in the flowing form.

The following example of flowing surplus population is specific to Marx’s time and can no longer be found today:

794:3/o Both in the factories proper, and in the large workshops, where machinery enters as one factor, or even where no more than a division of labor of a modern type has been put into operation, large numbers of male workers are employed up to the age of maturity, but not beyond. Once they reach maturity, only a very small number continue to find employment in the same branches of industry, while the majority are regularly dismissed. This majority forms an element of the flowing surplus population, which grows with the extension of those branches of industry.

Marx classifies these workers as flowing surplus population because they are still young and capable workers who will not stay unemployed for long. Even the industry which dismisses them may hire them back in cyclical upswings. Some of them emigrate; this too attests to their initiative and desirability as workers:

Some of these workers emigrate; in fact they are merely following capital, which has itself emigrated. One of the consequences is that the female population grows more rapidly than the male—witness England.

The imbalance between men and women is the symptom of a more general contradiction which Marx addresses next: in some areas, the natural supply of labor exceeds the demand for

670:2 In den Zentren der modernen Industrie—Fabriken, Manufakturen, Hütten und Bergwerken usw.—werden Arbeiter bald repeliert, bald in größerem Umfang wieder attrahiert, so daß im großen und ganzen die Zahl der Beschäftigten zunimmt, wenn auch in stets abnehmendem Verhältnis zur Produktionsleiter. Die Übervölkerung existiert hier in fließender Form.

670:3–671:1 Sowohl in den eigentlichen Fabriken wie in allen großen Werkstätten, wo Maschinerie als Faktor eingeht oder auch nur die moderne Teilung der Arbeit durchgeführt ist, braucht man massenhaft männliche Arbeiter bis zur Zurücklegung des Jugendalters. Dieser Termin einmal erreicht, bleibt nur eine sehr geringe Anzahl in denselben Geschäftszweigen verwendbar, während die Mehrzahl regelmäßig entlassen wird. Sie bildet ein Element der fließenden Übervölkerung, das mit dem Umfang der Industrie wächst.

Ein Teil davon wandert aus und reist in der Tat nur dem auswandernden Kapital nach. Eine der Folgen ist, daß die weibliche Bevölkerung rascher wächst als die männliche, teste England.

labor, in others it cannot keep up with it. The flowing surplus population, which accompanies rising demand for labor, is itself a symptom of this contradiction, but Marx brings also more concrete examples:

That the natural increase of the number of workers does not satisfy the requirements of the accumulation of capital, and yet, at the same time, exceeds those requirements, is a contradiction inherent in capital’s own movement. Capital demands more youthful workers, fewer adults. This contradiction is no more glaring than the other contradiction, namely that a shortage of ‘hands’ is complained of, while, at the same time, many thousands are out of work, because the division of labor chains them to a particular branch of industry.⁸⁵

Footnote 85 gives a specific historical example of this other contradiction:

⁸⁵ Although 80–90,000 people in London were thrown out of work during the last six months of 1866, the Factory Report says for that same half year: ‘It does not appear absolutely true to say that demand will always produce supply just at the moment when it is needed. It has not always done so with labor, for much machinery has been idle last year for want of hands’ (*Reports of the Inspectors of Factories*, ... 31 October 1866, p. 81).

The overwork of the young workers, their low life expectancy and early aging, exacerbates this first contradiction:

795:1 Moreover, the consumption of labor-power by capital is so rapid that the worker has already more or less completely lived himself out when he is only half-way through his life. He falls into the ranks of the surplus population, or is thrust down from a higher to a lower step in the scale. It is precisely among the workers in large-scale industry that we meet with the shortest life-expectancy.

Dr. Lee, Medical Officer of Health for Manchester, stated that the average age at death of the Manchester ... upper middle class was 38

Daß der natürliche Zuwachs der Arbeitermasse die Akkumulationsbedürfnisse des Kapitals nicht sättigt und sie dennoch zugleich überschreitet, ist ein Widerspruch seiner Bewegung selbst. Es braucht größere Massen Arbeiter im früheren Alter, geringere im männlichen. Der Widerspruch ist nicht schreiender als der andre, daß über Mangel an Händen geklagt wird zur selben Zeit, wo viele Tausende auf dem Pflaster liegen, weil die Teilung der Arbeit sie an einen bestimmten Geschäftszweig kettet.⁸⁵

⁸⁵ Während im letzten Halbjahr von 1866 80 000–90 000 Arbeiter in London außer Arbeit geworfen wurden, heißt es im Fabrikbericht über dasselbe Halbjahr: „Es scheint nicht absolut richtig zu sein, wenn man sagt, daß Nachfrage stets grade in dem Augenblick Zufuhr hervorbringt, da es nötig ist. Auf Arbeit traf das nicht zu, denn viel Maschinerie mußte im letzten Jahre aus Mangel an Arbeitskräften stillstehn.“ („Report of Insp. of Fact. for 31st Oct. 1866“, p. 81.)

Der Konsum der Arbeitskraft durch das Kapital ist zudem so rasch, daß der Arbeiter von mittlerem Alter sich meist schon mehr oder minder überlebt hat. Er fällt in die Reihen der Überzähligen oder wird von einer höheren auf eine niedrigere Staffel hinabgedrängt. Gerade bei den Arbeitern der großen Industrie stoßen wir auf die kürzeste Lebensdauer.

Dr. Lee, der Gesundheitsbeamte von Manchester, hat festgestellt, daß in jener Stadt die mittlere Lebensdauer der wohlhabenden Klas-

years, while the average age at death of the laboring class was 17; while at Liverpool those figures were represented as 35 against 15. It thus appeared that the well-to-do classes had a lease of life which was more than double the value of that which fell to the lot of the less favored citizens.^{85a}

Footnote 85a was added by Engels to the third German edition:

^{85a} Opening address to the Sanitary Conference, Birmingham, 14 January 1875, by J. Chamberlain, at that time Mayor of Birmingham, and now (1883) President of the Board of Trade.

Next Marx describes the social forms which allow this portion of the population to increase despite their early deaths:

Under these circumstances, the absolute increase of this section of the proletariat calls for a form which swells their numbers, despite the rapid wastage of their individual elements. Hence, rapid replacement of one generation of workers by another (this law does not hold for the other classes of the population). This social requirement is met by early marriages, which are a necessary consequence of the conditions in which workers in large-scale industry live, and by the premium that the exploitation of the workers' children sets on their production

Child labor, a product of the drive for maximum profits, has the unintended and for capital beneficial side effect of encouraging large families.

The *latent surplus population* is like a stream of ground water: the water is not visible on the surface but it will collect as soon as one digs a ditch. Marx's main example is the agricultural workers. (Today, the main examples of the latent surplus population are immigrant workers, and married women staying at home but willing to take a job if they can find one.)

795:2 As soon as capitalist production takes possession of agriculture and in proportion to the extent to which it does so, the demand for a rural working population falls absolutely, while the accumulation of the capital employed in agriculture advances, without this repulsion being compensated for by a greater attraction of workers, as is

se 38, die der Arbeiterklasse nur 17 Jahre ist. In Liverpool beträgt sie 35 Jahre für die erstere, 15 für die zweite. Es folgt also daß die privilegierte Klasse eine Anweisung aufs Leben hat (have a lease of life) mehr als doppelt so groß als die ihrer weniger begünstigten Mitbürger.^{85a}

^{85a} Eröffnungsrede der sanitären Konferenz, Birmingham, 14. Jan. 1875, von J. Chamberlain, damals Mayor der Stadt, jetzt (1883) Handelsminister.

671:2 Unter diesen Umständen erheischt das absolute Wachstum dieser Fraktion des Proletariats eine Form, welche ihre Zahl schwellt, obgleich ihre Elemente sich schnell abnutzen. Also rasche Ablösung der Arbeitergenerationen. (Dasselbe Gesetz gilt nicht für die übrigen Klassen der Bevölkerung.) Dies gesellschaftliche Bedürfnis wird befriedigt durch frühe Ehen, notwendige Folge der Verhältnisse, worin die Arbeiter der großen Industrie leben, und durch die Prämie, welche die Exploitation der Arbeiterkinder auf ihre Produktion setzt.

671:3/o Sobald sich die kapitalistische Produktion der Agrikultur, oder im Grad, worin sie sich derselben bemächtigt hat, nimmt mit der Akkumulation des hier funktionierenden Kapitals die Nachfrage für die ländliche Arbeiterbevölkerung absolut ab, ohne daß ihre Repulsion, wie in der nicht agrikolen Industrie, durch größere Attrakti-

the case in non-agricultural industries.

Since this surplus population is latent (hidden), one has to infer its existence from its effects. One of the effects of the latent surplus population in the rural areas is the flow of workers from the countryside to the cities:

Part of the agricultural population is therefore constantly on the point of passing over into an urban or manufacturing proletariat, and on the lookout for opportunities to complete this transformation. (The term 'manufacture' is used here to cover all non-agricultural industries.)⁸⁶ This is therefore a constantly flowing source of relative surplus population. But the constant movement towards the towns presupposes, in the countryside itself, a constant latent surplus population, the extent of which only becomes evident at those exceptional times when its outlet channels are wide open.

⁸⁶ 'The 781 towns' enumerated in the census of England and Wales for 1861 'contained 10,960,998 inhabitants, while the villages and country parishes contained 9,105,226. In 1851, 580 towns were distinguished, and the population in them and in the surrounding country was nearly equal. But while in the subsequent ten years the population in the villages and the country increased half a million, the population in the 580 towns increased by a million and a half (1,554,067). The increase of the population of the country parishes is 6.5 per cent, and of the towns 17.3 per cent. The difference in the rates of increase is due to the migration from country to town. Three-fourths of the total increase of population has taken place in the towns' (Census, etc., Vol. 3, pp. 11–12).

Another effect is the low agricultural wages:

The wages of the agricultural laborer are therefore reduced to a minimum. He always stands with one foot in the swamp of pauperism.

on ergänzt wäre.

Ein Teil der Landbevölkerung befindet sich daher fortwährend auf dem Sprung, in städtisches oder Manufakturproletariat überzugehen, und in der Lauer auf dieser Verwandlung günstige Umstände. (Manufaktur hier im Sinn aller nichtagrikolen Industrie.)⁸⁶

Diese Quelle der relativen Übervölkerung fließt also beständig. Aber ihr beständiger Fluß nach den Städten setzt auf dem Lande selbst eine fortwährend latente Übervölkerung voraus, deren Umfang nur sichtbar wird, sobald sich die Abzugskanäle ausnahmsweise weit öffnen.

⁸⁶ „781 Städte“ sind aufgezählt im Zensus von 1861 für England und Wales „mit 10 960 998 Einwohnern, während die Dörfer und Landkirchspiele nur 9105 226 zählen ... Im Jahr 1851 figurierten 500 Städte im Zensus, deren Bevölkerung ungefähr gleich der Bevölkerung der sie umgebenden Landdistrikte war. Während aber in den letzteren die Bevölkerung während der folgenden 10 Jahre nur um eine halbe Million wuchs, wuchs sie in den 580 Städten um 1 554 067. Der Bevölkerungszuwachs in den Landkirchspielen ist 6,5%, in den Städten 17,3%. Der Unterschied in der Rate des Wachstums ist der Wanderung vom Land in die Stadt geschuldet. Drei Viertel des Gesamtwachstums der Bevölkerung gehört den Städten.“ („Census etc.“, v. III, p. 11, 12.)

Der Landarbeiter wird daher auf das Minimum des Salairs herabgedrückt und steht mit einem Fuß stets im Sumpf des Pauperismus.

Stagnant surplus population. They are likely to be older, or have low or outdated skills.

They have very irregular employment, sometimes unemployed, or holding down part time jobs, etc.

796:1 The third category of the relative surplus population is the stagnant surplus population. Although part of the active labor army, it has extremely irregular employment. It offers capital an inexhaustible reservoir of disposable labor-power. Its conditions of life sink below the average normal level of the working class, and it is precisely this which makes it a broad target for specialized branches of capitalist exploitation. It is characterized by a maximum of working time and a minimum of wages. We have already become familiar with its chief form under the rubric of 'domestic industry'. It is constantly recruited from workers in large-scale industry and agriculture who have become redundant, and especially from those decaying branches of industry where handicraft is giving way to manufacture, and manufacture to machinery. Its extent grows in proportion as, with the growth in the extent and energy of accumulation, the creation of a surplus population also advances. But it forms at the same time a self-reproducing and self-perpetuating element of the working class, taking a proportionally greater part in the general increase of that class than the other elements. In fact, not only the number of births and deaths, but the absolute size of families, stands in inverse proportion to the level of wages, and therefore to the amount of the means of subsistence at the disposal of different categories of worker. This law of capitalist society would sound absurd among savages, or even among civilized colonists. It calls to mind the boundless reproduction of animals individually weak and constantly hunted down.⁸⁷

672:1 Die dritte Kategorie der relativen Übervölkerung, die stockende, bildet einen Teil der aktiven Arbeiterarmee, aber mit durchaus unregelmäßiger Beschäftigung. Sie bietet so dem Kapital einen unerschöpflichen Behälter disponibler Arbeitskraft. Ihre Lebenslage sinkt unter das durchschnittliche Normalniveau der arbeitenden Klasse, und grade dies macht sie zur breiten Grundlage eigner Exploitationszweige des Kapitals. Maximum der Arbeitszeit und Minimum des Salairs charakterisieren sie. Wir haben unter der Rubrik der Hausarbeit ihre Hauptgestalt bereits kennengelernt. Sie rekrutiert sich fortwährend aus den Überzähligen der großen Industrie und Agrikultur und namentlich auch aus untergehenden Industriezweigen, wo der Handwerksbetrieb dem Manufakturbetrieb, letzterer dem Maschinenbetrieb erliegt. Ihr Umfang dehnt sich, wie mit Umfang und Energie der Akkumulation die „Überzähligmachung“ fortschreitet. Aber sie bildet zugleich ein sich selbst reproduzierendes und verewigendes Element der Arbeiterklasse, das verhältnismäßig größeren Anteil am Gesamtwachstum derselben nimmt als die übrigen Elemente. In der Tat steht nicht nur die Masse der Geburten und Todesfälle, sondern die absolute Größe der Familien in umgekehrtem Verhältnis zur Höhe des Arbeitslohns, also zur Masse der Lebensmittel, worüber die verschiedenen Arbeiterkategorien verfügen. Dies Gesetz der kapitalistischen Gesellschaft klänge unsinnig unter Wilden oder selbst zivilisierten Kolonisten. Es erinnert an die massenhafte Reproduktion individuell schwacher und vielgehetzter Tierarten.⁸⁷

⁸⁷ 'Poverty seems favorable to generation' (Adam Smith, [Smi39, vol. 1, ch. 8, p. 195]). Indeed, according to the gallant and witty Abbe Galiani, this is a specially wise arrangement made by God. 'God has decreed that the men who carry on the most useful crafts should be born in abundant numbers' [Gal03, p. 78]. 'Misery up to the extreme point of famine and pestilence, instead of checking, tends to increase population' (S. Laing, National Distress, 1844, p. 69). After Laing has illustrated this by statistics, he continues: 'If the people were all in easy circumstances, the world would soon be depopulated.'

⁸⁷ „Armut scheint die Fortpflanzung zu begünstigen.“ (A. Smith, [Smi39, Bd. 1, Kap. 8, p. 195].) Dies ist sogar eine besonders weise Einrichtung Gottes nach dem galanten und geistreichen Abbé Galiani: „Gott hat es gefügt, daß die Menschen, die die nützlichsten Berufe ausüben, überreichlich geboren werden.“ [Gal03, p. 78] „Elend, bis zum äußersten Grad von Hungersnot und Pestilenz, vermehrt eher das Wachstum der Bevölkerung, statt es zu hemmen.“ (S. Laing, „National Distress“, 1844, p. 69.) Nachdem Laing dies statistisch illustriert, fährt er fort: „Befände sich alle Welt in bequemen Umständen, so wäre die Welt bald entvölkert.“ („If the people were all in easy circumstances, the world would soon be depopulated.“)

Question 1074 Which parts of the surplus population do these people belong to: A housewife looking for a job, someone employed part time (or with several part time jobs) looking for a full time job with benefits, high school graduates who don't find jobs, someone unemployed actively looking for work, someone unemployed waiting until the unemployment compensation has run out, discouraged workers on welfare, someone who has a lower-paying job because her skills are outdated.

Question 1075 Can the following modern categories be reconciled with Marx's categories? structural unemployment, frictional unemployment, cyclical unemployment, discouraged workers, the dual labor market, age discrimination.

After these three forms of surplus population, Marx discusses a fourth form, pauperism. Pauperism is not the direct result of the repulsion of labor by capital, but the result of the result of this expulsion, i.e., the result of the existence of a surplus population. The accumulation of capital turns employed into unemployed workers, and unemployment (not accumulation) turns the unemployed into paupers. Marx distinguishes again between three forms of pauperism, plus one really bad one:

- Paupers capable of working, who manage to re-enter the active working army in times of extraordinary demand for labor;
- Orphans and children of paupers, who are the victims of a different indirect effect: capitalist accumulation kills or impoverishes the parents, and this also turns their children into paupers.
- Paupers incapable of working, crippled, ragged: they are not only repelled by capital but also disabled, often because they are no longer used.

- Criminals, prostitutes, etc. They can again be considered a separate social layer which is the result of the existence of pauperism.

797:2 The deepest fallout from the relative surplus population, finally, dwells in the sphere of pauperism. Apart from vagabonds, criminals, prostitutes, in short the actual lumpenproletariat, this social stratum consists of three categories. First, those able to work. One need only glance superficially at the statistics of English pauperism to find that the quantity of paupers increases with every crisis of trade, and diminishes with every revival.

↑ This variation in numbers is proof that a part of the paupers turn into employed workers when labor demand is high.

Second, orphans and pauper children. These are candidates for the industrial reserve army, and in times of great prosperity, such as the year 1860 for instance, they are enrolled in the army of active workers both speedily and in large numbers. Third, the demoralized, the ragged, and those unable to work, chiefly people to whom the immobility caused by the division of labor has become fatal; people who have lived beyond the worker's average life-span; and the victims of industry, whose number increases with the growth of dangerous machinery, of mines, chemical works, etc., the mutilated, the sickly, the widows, etc. Pauperism is the infirmary of the active labor-army and the dead weight of the industrial reserve army. Its production is included in that of the relative surplus population, its necessity is implied by their necessity; along with the surplus population, pauperism forms a condition of capitalist production, and of the capitalist development of wealth. It forms part of the incidental expenses of capitalist production: but capital usually knows

673:1 Der tiefste Niederschlag der relativen Übervölkerung endlich behaust die Sphäre des Pauperismus. Abgesehen von Vagabunden, Verbrechern, Prostituierten, kurz dem eigentlichen Lumpenproletariat, besteht diese Gesellschaftsschichte aus drei Kategorien. Erstens Arbeitsfähige. Man braucht die Statistik des englischen Pauperismus nur oberflächlich anzusehn, und man findet, daß seine Masse mit jeder Krise schwillt und mit jeder Wiederbelebung des Geschäfts abnimmt.

Zweitens: Waisen und Pauperkinder. Sie sind Kandidaten der industriellen Reservearmee und werden in Zeiten großen Aufschwungs, wie 1860 z.B., rasch und massenhaft in die aktive Arbeiterarmee einrolliert. Drittens: Verkommene, Verlumpte, Arbeitsunfähige. Es sind namentlich Individuen, die an ihrer durch die Teilung der Arbeit verursachten Unbeweglichkeit untergehn, solche, die über das Normalalter eines Arbeiters hinausleben, endlich die Opfer der Industrie, deren Zahl mit gefährlicher Maschinerie, Bergwerksbau, chemischen Fabriken etc. wächst, Verstümmelte, Erkrankte, Witwen etc. Der Pauperismus bildet das Invalidenhaus der aktiven Arbeiterarmee und das tote Gewicht der industriellen Reservearmee. Seine Produktion ist eingeschlossen in der Produktion der relativen Übervölkerung, seine Notwendigkeit in ihrer Notwendigkeit, mit ihr bildet er eine Existenzbedingung der kapitalistischen Produktion und Entwicklung des Reichtums. Er gehört zu den faux frais der kapitalistischen Produktion, die das Kapital jedoch größtenteils von

how to transfer these from its own shoulders to those of the working class and the petty bourgeoisie.

I translated "Niederschlag der relativen Übervölkerung" with "fallout from" instead of "sediment of," since the clause "lowest sediment" evokes the

image of the lowest layer in a rock, i.e., it makes it appear as if pauperism were part of the surplus population. I wrote "infirmary" instead of

"hospital" (both Fowkes and Moore-Aveling use "hospital") because nowadays one expects a hospital to heal its patients. This was not the case at Marx's time.

Question 1076 What is pauperism?

What is its relationship to the relative surplus population?

Discuss contemporary forms of pauperism.

Which political actions can one expect from paupers and why?

The next four paragraphs give an important summary of the whole chapter. It begins with a recapitulation of the present section:

798:1 The greater the social wealth, the functioning capital, the extent and energy of its growth, therefore also the absolute size of the proletariat and the productive powers of its labor, the greater is the industrial reserve army. The same causes which develop the expansive power of capital, also develop the disposable labor-power.

↑ By "disposable" labor-power Marx means that part of the labor-power that is relatively in surplus. In the fourth paragraph, 798:4/o, Marx speaks of an equilibrium between relative surplus-population and the extent and energy of accumulation.

The relative magnitude of the industrial reserve army thus increases with the potential energy of wealth. But the greater this reserve army in proportion to the active labor-army, the greater is the mass of a consolidated surplus population, whose misery is in inverse ratio to the amount of torture it has to undergo in the form of labor.

673:2/o Je größer der gesellschaftliche Reichtum, das funktionierende Kapital, Umfang und Energie seines Wachstums, also auch die absolute Größe des Proletariats und die Produktivkraft seiner Arbeit, desto größer die industrielle Reservearmee. Die disponible Arbeitskraft wird durch dieselben Ursachen entwickelt wie die Expansivkraft des Kapitals.

Die verhältnismäßige Größe der industriellen Reservearmee wächst also mit den Potenzen des Reichtums. Je größer aber diese Reservearmee im Verhältnis zur aktiven Arbeiterarmee, desto massenhafter die konsolidierte Übervölkerung, deren Elend im umgekehrten Verhältnis zu ihrer Arbeitsqual steht.

Question 1077 What is worse: the misery of idle impoverishment or the torture of work?

The more extensive, finally, the pauperized sections of the working class and the indus-

Je größer endlich die Lazarusschichte der Arbeiterklasse und die industrielle Reserve-

trial reserve army, the greater is official pauperism.

What Marx said since the beginning of this paragraph is a formulation of the General Law of Capitalist Accumulation:

This is the absolute general law of capitalist accumulation. Like all other laws, it is modified in its working by many circumstances, the analysis of which does not concern us here.

↑ This last sentence notes that all laws are tendential. This is especially true regarding social laws, since social phenomena will come into existence only through the individual activity which may have quite different intentions.

↓ Population is controlled by capital, therefore there is no use to try to control it on the side of the laborers:

798:2 We can now understand the foolishness of the economic wisdom which preaches to the workers that they should adapt their numbers to the valorization requirements of capital. The mechanism of capitalist production and accumulation itself constantly effects this adjustment. The first word of this adaptation is the creation of a relative surplus population, or industrial reserve army. Its last word is the misery of constantly expanding strata of the active army of labor, and the dead weight of pauperism.

Question 1078 *Does it follow from this argument that overpopulation is not the problem with world poverty today?*

Next Marx situates this general law of capitalist accumulation as the capitalistic expression of some general laws of technology. Instead of being a way out of the drudgery of labor, the higher productive powers are, under capitalism, turned against the laborer. This is alienation:

798:3 On the basis of capitalism, a system in which the worker does not employ the means of production, but the means of production employ the worker, the law by which a constantly increasing quantity of means of production may be set in motion

armee, desto größer der offizielle Pauperismus.

Dies ist das absolute, allgemeine Gesetz der kapitalistischen Akkumulation. Es wird gleich allen andren Gesetzen in seiner Verwirklichung durch mannigfache Umstände modifiziert, deren Analyse nicht hierher gehört.

674:1 Man begreift die Narrheit der ökonomischen Weisheit, die den Arbeitern predigt, ihre Zahl den Verwertungsbedürfnissen des Kapitals anzupassen. Der Mechanismus der kapitalistischen Produktion und Akkumulation paßt diese Zahl beständig diesen Verwertungsbedürfnissen an. Erstes Wort dieser Anpassung ist die Schöpfung einer relativen Übervölkerung oder industriellen Reservearmee, letztes Wort das Elend stets wachsender Schichten der aktiven Arbeiterarmee und das tote Gewicht des Pauperismus.

674:2 Das Gesetz, wonach eine immer wachsende Masse von Produktionsmitteln, dank dem Fortschritt in der Produktivität der gesellschaftlichen Arbeit, mit einer progressiv abnehmenden Ausgabe von Menschenkraft in Bewegung gesetzt werden kann—

by a progressively diminishing expenditure of human power, thanks to the advance in the productivity of social labor, undergoes a complete inversion, and is expressed thus: the higher the productive powers of labor, the greater is the pressure of the workers on the means of employment, the more precarious therefore becomes the condition for their existence, namely the sale of their own labor-power for the increase of alien wealth, or in other words the self-valorization of capital. The fact that the means of production and the productive powers of labor increase more rapidly than the productive population expresses itself, therefore, under capitalism, in the inverse form that the working population always increases more rapidly than the valorization requirements of capital.

This last sentence gives an ultimate background reasoning why capital can successfully use technology to overcome the natural barrier of the population growth: growth of the productive powers of labor is more rapid than that of the population.

Question 1079 *The only way the worker can improve his lot in society is to increase the productive powers of his labor. Right or wrong?*

The passage culminates in a vivid description of the antagonistic character of the accumulation of capital. First an interesting summary of part IV:

798:4/o We saw in Part IV, when analyzing the production of relative surplus-value, that within the capitalist system all methods for raising the social productive powers of labor are put into effect at the expense of the individual worker; that all means for the development of production undergo a dialectical inversion so that they become means of domination and exploitation of the producers; they distort the worker into a fragment of a man, they degrade him to the level of an appendage of a machine, they destroy the actual content of his labor by turning it into a torment; they alienate from him the intel-

dies Gesetz drückt sich auf kapitalistischer Grundlage, wo nicht der Arbeiter die Arbeitsmittel, sondern die Arbeitsmittel den Arbeiter anwenden, darin aus, daß, je höher die Produktivkraft der Arbeit, desto größer der Druck der Arbeiter auf ihre Beschäftigungsmittel, desto prekärer also ihre Existenzbedingung: Verkauf der eignen Kraft zur Vermehrung des fremden Reichtums oder zur Selbstverwertung des Kapitals. Rascheres Wachstum der Produktionsmittel und der Produktivität der Arbeit als der produktiven Bevölkerung drückt sich kapitalistisch also umgekehrt darin aus, daß die Arbeiterbevölkerung stets rascher wächst als das Verwertungsbedürfnis des Kapitals.

674:3/o Wir sahen im vierten Abschnitt bei Analyse der Produktion des relativen Mehrwerts: innerhalb des kapitalistischen Systems vollziehn sich alle Methoden zur Steigerung der gesellschaftlichen Produktivkraft der Arbeit auf Kosten des individuellen Arbeiters; alle Mittel zur Entwicklung der Produktion schlagen um in Beherrschungs- und Exploitationsmittel des Produzenten, verstümmeln den Arbeiter in einen Teilmenschen, entwürdigen ihn zum Anhängsel der Maschine, vernichten mit der Qual seiner Arbeit ihren Inhalt, entfremden ihm die geistigen Potenzen des Ar-

lectual potentialities of the labor process in the same proportion as science is incorporated in it as an independent power; they deform the conditions under which he works, subject him during the labor process to a despotism the more hateful for its meanness; they transform his life-time into working-time, and drag his wife and child beneath the wheels of the juggernaut of capital.

⇓ Now from production to accumulation:

But all methods for the production of surplus-value are at the same time methods of accumulation, and every extension of accumulation becomes, conversely, a means for the development of those methods. It follows therefore that in proportion as capital accumulates, the situation of the worker, be his payment high or low, must grow worse.

Finally, the law which always holds the relative surplus population or industrial reserve army in equilibrium with the extent and energy of accumulation rivets the worker to capital more firmly than the wedges of Hephaestus held Prometheus to the rock. It makes an accumulation of misery a necessary condition, corresponding to the accumulation of wealth. Accumulation of wealth at one pole is, therefore, at the same time accumulation of misery, the torment of labor, slavery, ignorance, brutalization and moral degradation at the opposite pole, i.e. on the side of the class that produces its own product as capital.

Tendency of the development of the relative surplus-population. Law of the absolute impoverishment (immiseration) of the working class. Its truth today must be seen on a world wide scale.

Question 1081 Define and discuss the law of the absolute impoverishment of the working class. Does it apply today?

beitsprozesses im selben Maße, worin letzterem die Wissenschaft als selbständige Potenz einverleibt wird; sie verunstalten die Bedingungen, innerhalb deren er arbeitet, unterwerfen ihn während des Arbeitsprozesses der kleinlichst gehässigen Despotie, verwandeln seine Lebenszeit in Arbeitszeit, schleudern sein Weib und Kind unter das Juggernaut-Rad des Kapitals.

Aber alle Methoden zur Produktion des Mehrwerts sind zugleich Methoden der Akkumulation, und jede Ausdehnung der Akkumulation wird umgekehrt Mittel zur Entwicklung jener Methoden. Es folgt daher, daß im Maße wie Kapital akkumuliert, die Lage des Arbeiters, welches immer seine Zahlung, hoch oder niedrig, sich verschlechtern muß.

Das Gesetz endlich, welches die relative Übervölkerung oder industrielle Reservearmee stets mit Umfang und Energie der Akkumulation in Gleichgewicht hält, schmiedet den Arbeiter fester an das Kapital als den Prometheus die Keile des Hephästos an den Felsen. Es bedingt eine der Akkumulation von Kapital entsprechende Akkumulation von Elend. Die Akkumulation von Reichtum auf dem einen Pol ist also zugleich Akkumulation von Elend, Arbeitsqual, Sklaverei, Unwissenheit, Brutalisierung und moralischer Degradation auf dem Gegenpol, d.h. auf Seite der Klasse, die ihr eignes Produkt als Kapital produziert.

The section concludes with a collection of quotes how the economists saw this “antagonistic character of the capitalist accumulation process” (and in footnote 88 Marx’s own earlier formulation).

799:1/o This antagonistic character of capitalist accumulation⁸⁸ is enunciated in various forms by political economists, although they lump it together with other phenomena which are admittedly to some extent analogous, but nevertheless essentially distinct, since they appear only in pre-capitalist modes of production.

⁸⁸ ‘From day to day it thus becomes clearer that the relations of production in which the bourgeoisie moves do not have a simple, uniform character but rather a double-edged one; that in the same relations in which wealth is produced poverty is produced also; that in the same relations in which there is a development of the forces of production, there is also the development of a repressive force; that these relations produce bourgeois wealth, i.e. the wealth of the bourgeois class, only by continually annihilating the wealth of the individual members of this class and by producing an ever-growing proletariat’ (Karl Marx, *Misère de la Philosophie*, p. 116) [English edition, p. 107].

800:1a The Venetian monk Ortes, one of the great economic writers of the eighteenth century, regards the antagonism of capitalist production as a universal natural law of social wealth.

‘In the economy of a nation, advantages and evils always balance each other’; ‘the abundance of wealth with some people is always equal to the lack of wealth with others’; ‘The great riches of a small number are always accompanied by the absolute deprivation of the essential necessities of life for many others. The wealth of a nation corresponds with its population, and its misery corresponds with its wealth. Diligence in some compels idleness in

675:1 Dieser antagonistische Charakter der kapitalistischen Akkumulation⁸⁸ ist in verschiedenen Formen von politischen Ökonomen ausgesprochen, obgleich sie zum Teil zwar analoge, aber dennoch wesentlich verschiedene Erscheinungen vorkapitalistischer Produktionsweisen damit zusammenwerfen.

⁸⁸ „Von Tag zu Tag wird es somit klarer, daß die Produktionsverhältnisse, in denen sich die Bourgeoisie bewegt, nicht einen einheitlichen, einfachen Charakter haben, sondern einen zwieschlächtigen; daß in denselben Verhältnissen, in denen der Reichtum produziert wird, auch das Elend produziert wird; daß in denselben Verhältnissen, in denen die Entwicklung der Produktivkräfte vor sich geht, sich eine Repressionskraft entwickelt; daß diese Verhältnisse den bürgerlichen Reichtum, d.h. den Reichtum der Bourgeoisieklasse, nur erzeugen unter fortgesetzter Vernichtung des Reichtums einzelner Glieder dieser Klasse und unter Schaffung eines stets wachsenden Proletariats.’ (Karl Marx, „*Misère de la Philosophie*“, [mecw].)

675:2–3 Der venetianische Mönch Ortes, einer der großen ökonomischen Schriftsteller des 18. Jahrhunderts, faßt den Antagonismus der kapitalistischen Produktion als allgemeines Naturgesetz des gesellschaftlichen Reichtums.

Das ökonomisch Gute und ökonomisch Böse halten sich in einer Nation stets das Gleichgewicht (il bene ed il male economico in una nazione sempre all’istessa misura), die Fülle der Güter für einige ist immer gleich dem Mangel derselben für andre (la copia dei beni in alcuni sempre eguale alla mancanza di essi in altri). Großer Reichtum von einigen ist stets begleitet von absoluter Beraubung des Notwendigen bei viel mehr andren. Der Reichtum ei-

others. The poor and idle are a necessary consequence of the rich and active', and so on.⁸⁹

ner Nation entspricht ihrer Bevölkerung, und ihr Elend entspricht ihrem Reichtum. Die Arbeitsamkeit in einigen erzwingt den Müßiggang in andren. Die Armen und Müßigen sind eine notwendige Frucht der Reichen und Tüchtigen“ usw.⁸⁹

Ortes sees the contradictions of capitalism, but he attributes them to the working of eternal laws of balance.

Question 1083 “The poor and idle are a necessary consequence of the rich and active.” Right or wrong?

⁸⁹ G. Ortes, *Della economia nazionale libri sei*, 1777, in Custodi, *Parte moderna*, Vol. 21, pp. 6, 9, 22, 25, etc. Ortes says, op. cit., p. 32: ‘Instead of projecting useless systems for achieving the happiness of peoples, I shall limit myself to investigating the reasons for their unhappiness.’

800:1b About ten years after Ortes, the High Church Protestant parson, Townsend, glorified misery as a necessary condition of wealth in a thoroughly brutal way.

‘Legal constraint (to labor)’ is attended with too much trouble, violence, and noise, ... whereas hunger is not only a peaceable, silent, unremitted pressure, but as the most natural motive to industry and labor, it calls forth the most powerful exertions.’

Everything therefore depends on making hunger permanent among the working class, and this is provided for, according to Townsend, by the principle of population, which is especially applicable to the poor.

‘It seems to be a law of Nature that the poor should be to a certain degree improvident’ (i.e. so improvident as to be born without silver spoons in their mouths) ‘that there may always be some to fulfil the most servile, the most sordid, and the most ignoble offices in the community. The stock of human happiness is thereby much increased, whilst the more

⁸⁹ G. Ortes, „Della Economia Nazionale libri sei 1774“, bei Custodi, *Parte Moderna*, t. XXI, p. 6, 9, 22, 25 etc. Ortes sagt l.c. p. 32: „Statt unnütze Systeme für das Glück der Völker aufzustellen, will ich mich darauf beschränken, die Gründe ihres Unglücks zu untersuchen.“

676:1–4 In ganz grober Weise verherrlichte ungefähr 10 Jahre nach Ortes der hochkirchliche protestantische Pfaffe Townsend die Armut als notwendige Bedingung des Reichtums.

„Gesetzlicher Zwang zur Arbeit ist verbunden mit zuviel Mühe, Gewaltsamkeit und Geräusch, während der Hunger nicht nur ein friedlicher, schweigsamer, unaufhörlicher Druck, sondern als natürlichstes Motiv zur Industrie und Arbeit die machtvollste Anstrengung hervorruft.“

Alles kommt also darauf an, den Hunger unter der Arbeiterklasse permanent zu machen, und dafür sorgt, nach Townsend, das Bevölkerungsprinzip, das besonders unter den Armen tätig ist.

„Es scheint ein Naturgesetz, daß die Armen zu einem gewissen Grad leichtsinnig (improvident) sind“ (nämlich so leichtsinnig, auf die Welt zu kommen ohne goldne Löffel im Mund), „so daß stets welche da sind (that there always may be some) zur Erfüllung der servilsten, schmutzigsten und gemeinsten Funktionen des Gemeinwesens. Der Fonds

delicate are not only relieved from drudgery ... but are left at liberty without interruption to pursue those callings which are suited to their various dispositions ... it’ (the Poor Law) ‘tends to destroy the harmony and beauty, the symmetry and order of that system which God and Nature have established in the world.’⁹⁰

⁹⁰ *A Dissertation on the Poor Laws. By a Well-Wisher of Mankind* (the Rev. J. Townsend), 1786, republished London, 1817, pp. 15, 39, 41. This ‘delicate’ parson, from whose work just quoted, as well as from his *Journey through Spain*, Malthus often copies whole pages, himself borrowed the greater part of his doctrine from Sir James Steuart, though distorting Steuart’s views in the process. For example, Steuart says ‘Here, in slavery, was a forcible methods of making mankind diligent’ (in the interests of the non-workers) ... ‘Men were then forced to work’ (i.e. to work for others without return) ‘because they were slaves of others; men are now forced to work’ (i.e. to work for non-workers without return) ‘because they are the slaves of their necessities.’ But, unlike our fat benefice-holder, he does not conclude from this that the wage-laborer must always go fasting. He wishes, on the contrary, to multiply their needs, and to make the increasing number of their needs a stimulus to their labor on behalf of the ‘more delicate’.

The idea with increasing the needs is Stewart’s, not Townsend’s. Marx cites it approvingly, and it is reality today!

800:1c/o If the Venetian monk found in the fatal destiny that makes misery eternal a justification for the existence of Christian charity, celibacy, monasteries and pious foundations, the beneficed Protestant finds in it a pretext for condemnation the laws by which the poor possessed a right to a miserable amount of public relief.

‘The progress of social wealth,’ says Storch,

von menschlichem Glück (the fund of human happiness) wird dadurch sehr vermehrt, die Delikateren (the more delicate) sind von der Plackerei befreit und können höherem Beruf usw. ungestört nachgehn. ... Das Armengesetz hat die Tendenz, die Harmonie und Schönheit, die Symmetrie und Ordnung dieses Systems, welches Gott und die Natur in der Welt errichtet haben, zu zerstören.“⁹⁰

⁹⁰ „A Dissertation on the Poor Laws. By a Well-wisher of Mankind (The Rev. Mr. J. Townsend), 1786“, republished Lond 1817, p. 15, 39, 41. Dieser „delikate“ Pfaffe, dessen eben angeführte Schrift, nebst seiner Reise durch Spanien, Malthus oft seitenlang abschreibt, entlehnte den größten Teil seiner Doktrin aus Sir J. Steuart, den er jedoch verdreht. Z.B. wenn Steuart sagt: „Hier, in der Sklaverei, existierte eine gewaltsame Methode, die Menschheit arbeitsam“ (für die Nichtarbeiter), „zu machen. ... Die Menschen wurden damals zur Arbeit“ (d.h. zur Gratisarbeit für andere) „gezwungen, weil sie Sklaven von andren waren; die Menschen sind jetzt zur Arbeit (d.h. zur Gratisarbeit für Nichtarbeiter) „gezwungen, weil sie die Sklaven ihrer eignen Bedürfnisse sind“, so schließt er deswegen nicht, wie der fette Pfründner, daß—die Lohnarbeiter stets am Hungertuch nagen sollen. Er will umgekehrt ihre Bedürfnisse vermehren und die wachsende Zahl ihrer Bedürfnisse zugleich zum Sporn ihrer Arbeit für „die Delikateren“ machen.

676:5 Fand der venetianische Mönch in dem Schicksalsschluß, der das Elend verewigt, die Existenzberechtigung der christlichen Wohltätigkeit, des Zölibats, der Klöster und frommen Stiftungen, so findet im Gegenteil der protestantische Pfründner darin den Vorwand, die Gesetze zu verdammen, kraft deren der Arme ein Recht auf kärgliche öffentliche Unterstützung besaß.

„Der Fortschritt des gesellschaftlichen Reich-

'begets this useful class of society ... which performs the most wearisome, the vilest, the most disgusting functions, which, in a word, takes on its shoulders all that is disagreeable and servile in life, and procures thus for other classes leisure, serenity of mind and' (now listen to this) 'conventional dignity of character.'⁹¹

Storch then asks himself what the actual advantage is of this capitalist civilization, with its misery and its degradation of the masses, as compared with barbarism. He can find only one answer: security!

⁹¹ Storch, op. cit., Vol. 3, p. 223.

Now from Storch to Sismondi:

801:2/o 'Thanks to the advance of industry and science,' says Sismondi, 'every worker can produce every day much more than he needs to consume. But at the same time, while his labor produces wealth, that wealth would, were he called on to consume it himself, make him less fit for labor.' According to him, 'men' (i.e. non-workers) 'would probably prefer to do without all artistic perfection, and all the enjoyments that industry procures for us, if it were necessary that all should buy them by constant toil like that of the worker ... Exertion today is separated from its recompense; it is not the same man that first works, and then repose; but it is because the one works that the other rests ... The indefinite multiplication of the productive powers of labor can have no other result than the increase of luxury and enjoyment on the part of the idle rich.'

⁹² Sismondi, op. cit., pp. 79–80, 85.

802:1 And finally, that fish-blooded bourgeois doctrinaire Destutt de Tracy makes the point in the most brutal fashion:

tums“, sagt Storch, „erzeugt jene nützliche Klasse der Gesellschaft... welche die langweiligsten, gemeinsten und ekelhaftesten Bescgungen ausübt, in einem Wort alles, was das Leben Unangenehmes und Knechtendes hat, auf ihre Schultern nimmt und ebendadurch den andren Klassen die Zeit, die Heiterkeit des Geistes und die konventionelle“ (c'est bon!) „Charakterwürde verschafft etc.“⁹¹

Storch fragt sich, welches denn eigentlich der Vorzug dieser kapitalistischen Zivilisation mit ihrem Elend und ihrer Degradation der Massen vor der Barbarei? Er findet nur eine Antwort—die Sicherheit!

⁹¹ Storch, l.c., t. III, p. 223.

677:3 „Durch den Fortschritt der Industrie und Wissenschaft“, sagt Sismondi, „kann jeder Arbeiter jeden Tag viel mehr produzieren, als er zu seinem Konsum braucht. Aber zu gleicher Zeit, während seine Arbeit den Reichtum produziert, würde der Reichtum, wäre er berufen, ihn selbst zu konsumieren, ihn wenig geeignet zur Arbeit machen.“ Nach ihm „würden die Menschen“ (d.h. die Nichtarbeiter) „wahrscheinlich auf alle Vervollkommnungen der Künste verzichten wie auf alle Genüsse, die die Industrie uns verschafft, müßten sie diese durch anhaltende Arbeit, wie die des Arbeiters, erkaufen ... Die Anstrengungen sind heute geschieden von ihrer Belohnung; es ist nicht derselbe Mensch, der erst arbeitet und sich dann ausruht: im Gegenteil, eben weil der eine arbeitet, muß der andre sich ausruhn ... Die endlose Vervielfältigung der Produktivkräfte der Arbeit kann also kein andres Resultat haben als die Zunahme des Luxus und der Genüsse der müßigen Reichen.“⁹²

⁹² Sismondi, l.c., t. I, p. 79, 80, 85.

677:4–5 Destutt de Tracy endlich, der fischblütige Bourgeoisdoktrinar, spricht es brutal aus:

In poor nations the people are comfortable, in rich nations they are generally poor.⁹³

⁹³ Destutt de Tracy, op. cit., p. 231: 'Les nations pauvres, c'est là où le peuple est à son aise; et les nations riches, c'est là où il est ordinairement pauvre.'

Marx stresses in all these quotes that only the nonworkers are considered humans.

„Die armen Nationen sind die, wo das Volk gut dran ist, und die reichen Nationen sind die, wo es gewöhnlich arm ist.“⁹³

⁹³ Destutt de Tracy, l.c. p. 231. „Les nations pauvres, c'est là où le peuple est à son aise; et les nations riches, c'est là où il est ordinairement pauvre.“

Question 1086 *What is the General Law of Capitalist Accumulation?*

Question 1087 *After describing how capital shapes the technology of the production process and even controls the supply of labor, did Marx overlook that capital would not be able to overcome the ecological limits of planet Earth?*

Term Paper Topic 1088 *Term Paper on the Externalities of Capitalism, i.e., on the positive and negative local and global impacts of production in the name of profits.*

Question 1089 *If capitalism is as bad as Marx says, why isn't there an open rebellion against it?*

Part VIII.

The So-Called Original Accumulation

The usual translation of “*ursprüngliche Akkumulation*” is “primitive accumulation.”

The presentation of the laws of capitalism in the first volume culminates in the laws of the “accumulation of capital” (part VII). Capital is both a thing, and a social relation; therefore the accumulation of capital is not only the piling up of things, but the reproduction and expansion of a social relation on a larger and larger scale. Not only does the quantity of capital in the hands of the capitalists increase, but also the exploitable population is increased and supplied in a relative surplus (the reserve army of the unemployed). The “so-called original accumulation,” which is the subject of the eighth and last part of volume 1, describes the historic, *non-capitalistic* prerequisites that lead to capitalism, the “pre-history of capitalism.” And just as accumulation is not only the accumulation of money, but the reproduction on an extended scale of all the conditions necessary for capitalism, so also the original accumulation addresses not only the question where the first capitalists received their money from to set up their first enterprises, but investigates the origin of all the conditions of capitalism, e.g., how the means of production and free labor become available on the market. The creation of the proletariat is the most fundamental among these conditions.

Question 1090 *Why does Marx speak here of “so-called” original accumulation, instead of simply the original accumulation?*

26. The Secret of Original Accumulation

The chapter begins with a one-sentence summary of the content of chapters One through Twenty-Five:

873:1 We have seen how money is changed into capital; how through capital surplus-value is made, and from surplus-value more capital.

↑ Part II showed how money is changed into capital, parts III-VI how capital generates surplus-value, and part VII showed how surplus-value is converted back into capital. ↓ If one compares this evolutionary presentation of the topics in the book with the causality at work in an ongoing capitalist system, one would expect that the more developed processes and mechanisms, i.e., those that came later in the book, “pre-suppose” the simpler processes and mechanisms, i.e., depend for their own functioning on the functioning of the latter. In part, this expectation is borne out, but in part it is not:

But the accumulation of capital pre-supposes surplus-value; surplus-value pre-supposes capitalistic production; capitalistic production pre-supposes the pre-existence of considerable masses of capital and of labor-power in the hands of producers of commodities.

↑ There is no surprise that capital can only be accumulated if surplus-value is produced, and that in commodity production surplus-value can only be produced by capital. Here the later concepts pre-suppose the earlier concepts. Marx could have continued in this direction and said that capitalist production pre-supposes money and commodity production, in this way arriving at the beginning of the book. This would have been true but this would not have been a listing of all the presuppositions. Capitalist production also presupposes the separation of the producers from the means of production and the concentration of the means of production in the hands of the capitalists. But these are the *effects* of accumulation! ↓ I.e., instead of going further to the front of the book part of the causal chain bends back and goes to the end of the book again. Causality goes in a circle.

The whole movement, therefore, seems to turn in a defective circle, out of which we

741:1 Man hat gesehen, wie Geld in Kapital verwandelt, durch Kapital Mehrwert und aus Mehrwert mehr Kapital gemacht wird.

Indes setzt die Akkumulation des Kapitals den Mehrwert, der Mehrwert die kapitalistische Produktion, diese aber das Vorhandensein größerer Massen von Kapital und Arbeitskraft in den Händen von Warenproduzenten voraus.

Diese ganze Bewegung scheint sich also in einem fehlerhaften Kreislauf herumzu-

can only get by supposing an “original” accumulation (Adam Smith’s “previous accumulation”) preceding capitalistic accumulation; an accumulation which is not the result of the capitalistic mode of production, but its starting point.

drehn, aus dem wir nur hinauskommen, indem wir eine der kapitalistischen Akkumulation vorausgehende „ursprüngliche“ Akkumulation („previous accumulation“ bei Adam Smith) unterstellen, eine Akkumulation, welche nicht das Resultat der kapitalistischen Produktionsweise ist, sondern ihr Ausgangspunkt.

↑ As was the case several times in this book, Marx uncovers a problematic which a naive reader would not even have noticed (Bhaskar’s sigma transform). And in the same sentence, Marx immediately furnishes a solution to this problematic (Bhaskar’s tau transform).

Perhaps Marx’s procedure will be easier to understand if we look at a different situation in which this same procedure can be applied. A good example for circular causality is an internal combustion engine. If you try to explain how it works you will probably say that the pistons are compressed by the revolving motor, and then the spark plug fires and the explosion turns the motor forward. In other words, you must assume that the motor is already running in order to explain how it runs. This is not an erroneous explanation but we all know that internal combustions engines cannot start on their own. They need a starter which is based on a different principle, usually an electric motor, to turn over the engine before the mechanisms involving the air-and-gasoline mixture and the spark plugs can take over.

The accumulation of capital has a similar character. The mechanisms explored in chapters 1–25 can only explain capitalism on the basis of an already existing polarization of wealth and poverty, where on the workers who have nothing to sell than their labor-power are on the one side, and the capitalists who have enough money to employ these laborers are on the other. The development earlier in the book explained how these mechanisms re-create the polarization, but without this polarization, these mechanisms will never get off the ground.

Capital accumulation must therefore have been started by a mechanism of a different nature. Marx argues that a non-capitalistic original accumulation must be tucked away somewhere in the history of capitalism in the same way as an engineer investigating the internal combustion engine of a car would come to the conclusion that a starter must be tucked away somewhere under the hood of this car. The title of the chapter is “so-called” original accumulation, because this is an accumulation of capital which does not follow the laws developed in chapter Twenty-Five.

A very similar argument was made already in 775:1/o.

Question 1091 *Do you know of other circularities in the economy?*

↓ Mainstream economics has its own version of original accumulation. However instead of seeing it as a historical phase *preceding* capitalism, it uses it as an explanation of capitalism itself. Marx sees here parallels to the fable of the original sin:

873:2/o This original accumulation plays in Political Economy about the same part as original sin in theology. Adam bit the apple, and thereupon sin fell on the human race. The origin of sin is explained by telling the original sin as an anecdote of the past.

↑ Marx from the beginning dismisses the notion that an anecdote of the past can be the explanation of either sin or capitalism. He is a depth realist. He holds that the causal powers that shape the things we see are active enduring forces, possibly below the surface. Anecdotes, even if true, are transitory surface events. They cannot have enduring causal effects. ↓ After this contemptuous introduction, he re-tells the anecdote which supposedly explains capitalism:

In times long gone-by there were two sorts of people; one, the diligent, intelligent, and, above all, frugal elite; the other, lazy rascals, spending their substance, and more, in riotous living.

↓ What comes now is an “Achilles heel” critique in which Marx demolishes this anecdote even in its most favorable interpretation. If an anecdote is given as an explanation of capitalism, the most benevolent interpretation would be that this anecdote describes the underlying forces shaping capitalism. This anecdote furnished to explain capitalism, however, cannot be such an explanation because it implies that the industrious will be wealthy, and the slothful will be poor. In capitalism the exact reverse is true: those who since long have ceased to work are wealthy and the industrious remain poor.

But whereas the legend of theological original sin tells us how man came to be condemned to eat his bread in the sweat of his brow, the history of economic original sin reveals why there are people who need not be bothered by such a necessity. Never mind!

Question 1092 *Can the biblical original sin be given a meaning for human life which goes beyond an anecdote?*

↑ Marx made this interjection before even finishing the anecdote allegedly explaining capitalism. ↓ Here is the end of this anecdote: Thus it came to pass that the former sort accumulated wealth, and the latter sort had at last nothing to sell except their own skins.

741:2/o Diese ursprüngliche Akkumulation spielt in der politischen Ökonomie ungefähr dieselbe Rolle wie der Sündenfall in der Theologie. Adam biß in den Apfel, und damit kam über das Menschengeschlecht die Sünde. Ihr Ursprung wird erklärt, indem er als Anekdote der Vergangenheit erzählt wird.

In einer längst verfloßnen Zeit gab es auf der einen Seite eine fleißige, intelligente und vor allem sparsame Elite und auf der andren faulenzende, ihr alles und mehr verjübelnde Lumpen.

Die Legende vom theologischen Sündenfall erzählt uns allerdings, wie der Mensch dazu verdammt worden sei, sein Brot im Schweiß seines Angesichts zu essen; die Historie vom ökonomischen Sündenfall aber enthüllt uns, wieso es Leute gibt, die das keineswegs nötig haben. Einerlei.

So kam es, daß die ersten Reichtum akkumulierten und die letzteren schließlich nichts zu verkaufen hatten als ihre eigne Haut.

↓ Even apart from the discrepancy between this anecdote and the mechanics of today’s capitalism, Marx argues next that an event from the past cannot be the reason for the increasingly unequal outcomes witnessed today:

And from this original sin dates the poverty of the great majority that, despite all its labor, has up to now nothing to sell but itself, and the wealth of the few that increases constantly although they have long ceased to work.

↑ Indeed, the original accumulation as Marx understands it (which looks quite different than the above anecdote) only *started* a process which since then has reproduced and augmented itself by capitalism’s own mechanics. ↓ Now Marx switches metaphors from original sin to children’s fable. The above anecdote implies that the profits of the capitalists exist because they are morally justified. Such an irrealist “explanation” is mere apology:

Such insipid childishness is every day preached to us in the defence of property. M. Thiers, e.g., had the assurance to repeat it with all the solemnity of a statesman to the French people, once so *spirituel*. But as soon as the question of property crops up, it becomes a sacred duty to proclaim the intellectual food of the infant as the one thing fit for all ages and for all stages of development.

↓ The moralistic childrens-tale character of the above anecdote also precludes another benevolent interpretation of it: it cannot be representative of the history of capitalism because this history is notorious for its violence, while the above anecdote has no trace of violence.

In actual history it is notorious that conquest, enslavement, robbery, murder, briefly force, play the great part. In the tender annals of Political Economy, the idyllic reigns from time immemorial. Right and “labor” were from all time the sole means of enrichment, the present year of course always excepted. As a matter of fact, the methods of original accumulation are anything but idyllic.

↓ In order to develop his own explanation of original accumulation, Marx takes us to the point in the book where the order in which the mechanisms active in today’s capitalism are presented deviates from the causality in the capitalist system itself. The transition from money to capital, discussed in chapters Four through Six, not only requires a certain degree

Und von diesem Sündenfall datiert die Armut der großen Masse, die immer noch, aller Arbeit zum Trotz, nichts zu verkaufen hat als sich selbst, und der Reichtum der wenigen, der fortwährend wächst, obgleich sie längst aufgehört haben zu arbeiten.

Solche fade Kinderei kaut Herr Thiers z.B. noch mit staatsfeierlichem Ernst, zur Verteidigung der propriété, den einst so geistreichen Franzosen vor. Aber sobald die Eigentumsfrage ins Spiel kommt, wird es heilige Pflicht, den Standpunkt der Kinderfibel als den allen Altersklassen und Entwicklungsstufen allein gerechten festzuhalten.

In der wirklichen Geschichte spielen bekanntlich Eroberung, Unterjochung, Raubmord, kurz Gewalt die große Rolle. In der sanften politischen Ökonomie herrschte von jeher die Idylle. Recht und „Arbeit“ waren von jeher die einzigen Bereicherungsmittel, natürlich mit jedesmaliger Ausnahme von „diesem Jahr“. In der Tat sind die Methoden der ursprünglichen Akkumulation alles andre, nur nicht idyllisch.

of development of commodity circulation (which came earlier in the book) but in addition the separation of the direct producers from the means of production (which will later in the book be seen to be one of the results of capital accumulation):

874:1/o In themselves money and commodities are no more capital than are the means of production and of subsistence. They want transforming into capital. But this transformation itself can only take place under certain circumstances that centre in this, viz., that two very different kinds of commodity-possessors must come face to face and into contact, on the one hand, the owners of money, means of production, means of subsistence, who are eager to increase the sum of values they possess, by buying other people's labor-power; on the other hand, free laborers, the sellers of their own labor-power, and therefore the sellers of labor.

742:1 Geld und Ware sind nicht von vornherein Kapital, sowenig wie Produktions- und Lebensmittel. Sie bedürfen der Verwandlung in Kapital. Diese Verwandlung selbst aber kann nur unter bestimmten Umständen vorgehn, die sich dahin zusammen-spitzen: Zweierlei sehr verschiedene Sorten von Warenbesitzern müssen sich gegenüber und in Kontakt treten, einerseits Eigner von Geld, Produktions- und Lebensmitteln, denen es gilt, die von ihnen geeignete Wertsumme zu verwerten durch Ankauf fremder Arbeitskraft; andererseits freie Arbeiter, Verkäufer der eignen Arbeitskraft und daher Verkäufer von Arbeit.

First sentence has the meaning: themselves capital, and means of not by themselves capital either.
money and commodity are not by production and of subsistence are

↓ Now the conditions under which labor-power will be offered as a commodity:

Free laborers, in the double sense that neither they themselves form part and parcel of the means of production, as in the case of slaves, bondsmen, etc., nor do the means of production belong to them, as in the case of peasant-proprietors; they are, therefore, free from, unencumbered by, any means of production of their own.

Freie Arbeiter in dem Doppelsinn, daß weder sie selbst unmittelbar zu den Produktionsmitteln gehören, wie Sklaven, Leibeigene usw., noch auch die Produktionsmittel ihnen gehören, wie beim selbstwirtschaftenden Bauer usw., sie davon vielmehr frei, los und ledig sind.

↓ The polarization of the market between capitalist and laborer therefore presupposes the separation of the laborers from the means of production.

With this polarization of the market for commodities, the fundamental conditions of capitalist production are given. The capitalist system pre-supposes the complete separation of the laborers from all property in the means by which they can realize their labor.

Mit dieser Polarisierung des Warenmarkts sind die Grundbedingungen der kapitalistischen Produktion gegeben. Das Kapitalverhältnis setzt die Scheidung zwischen den Arbeitern und dem Eigentum an den Verwirklichungsbedingungen der Arbeit voraus.

↑ Without this separation, capitalism cannot get started; ↓ but once capitalism has started, it reproduces this separation.

As soon as capitalist production is once on its own legs, it not only maintains this separation, but reproduces it on a continually extending scale.

↓ The "original accumulation" must therefore be the process which originally generates this separation.

The process, therefore, that clears the way for the capitalist system, can be none other than the process which takes away from the laborer the possession of his means of production; a process that transforms, on the one hand, the social means of subsistence and of production into capital, on the other, the immediate producers into wage-laborers. The so-called original accumulation, therefore, is nothing else than the historical process of divorcing the producer from the means of production. It appears as "original," because it constitutes the pre-historic stage of capital and of the mode of production corresponding with it.

Sobald die kapitalistische Produktion einmal auf eignen Füßen steht, erhält sie nicht nur jene Scheidung, sondern reproduziert sie auf stets wachsender Stufenleiter.

Der Prozeß, der das Kapitalverhältnis schafft, kann also nichts anderes sein als der Scheidungsprozeß des Arbeiters vom Eigentum an seinen Arbeitsbedingungen, ein Prozeß, der einerseits die gesellschaftlichen Lebens- und Produktionsmittel in Kapital verwandelt, andererseits die unmittelbaren Produzenten in Lohnarbeiter. Die sog. ursprüngliche Akkumulation ist also nichts als der historische Scheidungsprozeß von Produzent und Produktionsmittel. Er erscheint als „ursprünglich“, weil er die Vorgeschichte des Kapitals und der ihm entsprechenden Produktionsweise bildet.

↓ Now Marx plunges, without further ado, into the description of this historical process:

875:1 The economic structure of capitalist society has grown out of the economic structure of feudal society. The dissolution of the latter set free the elements of the former.

743:1 Die ökonomische Struktur der kapitalistischen Gesellschaft ist hervorgegangen aus der ökonomischen Struktur der feudalen Gesellschaft. Die Auflösung dieser hat die Elemente jener freigesetzt.

↑ In the feudal system, the elements (labor and objective conditions of labor) are still connected. The dissolution of the feudal system is the *separation* of these elements. The next two paragraphs describe the formation of working class and capitalist class from their feudal roots. ↓ First the working class.

875:2 The immediate producer, the laborer, could only dispose of his own person after he had ceased to be attached to the soil and ceased to be the slave, serf, or bondsmen of another. To become a free seller of labor-power, who carries his commodity wherever he finds a market, he must further have escaped from the regime of the

743:2 Der unmittelbare Produzent, der Arbeiter, konnte erst dann über seine Person verfügen, nachdem er aufgehört hatte, an die Scholle gefesselt und einer andern Person leibeigen oder hörig zu sein. Um freier Verkäufer von Arbeitskraft zu werden, der seine Ware überall hinträgt, wo sie einen Markt findet, mußte er ferner der Herrschaft

guilds, their rules for apprentices and journeymen, and the impediments of their labor regulations. Hence, the historical movement which changes the producers into wage-workers, appears, on the one hand, as their emancipation from serfdom and from the fetters of the guilds, and this side alone exists for our bourgeois historians. But, on the other hand, these new freedmen became sellers of themselves only after they had been robbed of all their own means of production, and of all the guarantees of existence afforded by the old feudal arrangements. And the history of this, their expropriation, is written in the annals of mankind in letters of blood and fire.

↑ In chapter Six, 272:3/o and elsewhere, Marx had concluded that, for capitalism to function, the laborer must be free in a double sense. Now we see how this was established in history. Only one side of this double liberation is acknowledged by bourgeois historians. ↓ But the capitalist class had to develop too:

875:3 The industrial capitalists, these new potentates, had on their part not only to displace the guild masters of handicrafts, but also the feudal lords, the possessors of the sources of wealth. In this respect, their conquest of social power appears as the fruit of a victorious struggle both against feudal lordship and its revolting prerogatives, and against the guilds and the fetters they laid on the free development of production and the free exploitation of man by man. The chevaliers d'industrie, however, only succeeded in supplanting the chevaliers of the sword by making use of events of which they themselves were wholly innocent. They have risen by means as vile as those by which the Roman freedman once on a time made himself the master of his *patronus*.

der Zünfte, ihren Lehrlings- und Gesellenordnungen und hemmenden Arbeitsvorschriften entronnen sein. Somit erscheint die geschichtliche Bewegung, die die Produzenten in Lohnarbeiter verwandelt, einerseits als ihre Befreiung von Dienstbarkeit und Zunftzwang; und diese Seite allein existiert für unsre bürgerlichen Geschichtsschreiber. Andererseits aber werden diese Neubefreiten erst Verkäufer ihrer selbst, nachdem ihnen alle ihre Produktionsmittel und alle durch die alten feudalen Einrichtungen gebotenen Garantien ihrer Existenz geraubt sind. Und die Geschichte dieser ihrer Expropriation ist in die Annalen der Menschheit eingeschrieben mit Zügen von Blut und Feuer.

743:3 Die industriellen Kapitalisten, diese neuen Potentaten, mußten ihrerseits nicht nur die zünftigen Handwerksmeister verdrängen, sondern auch die im Besitz der Reichtumsquellen befindlichen Feudalherren. Von dieser Seite stellt sich ihr Emporkommen dar als Frucht eines siegreichen Kampfes gegen die Feudalmacht und ihre empörenden Vorrechte sowie gegen die Zünfte und die Fesseln, die diese der freien Entwicklung der Produktion und der freien Ausbeutung des Menschen durch den Menschen angelegt. Die Ritter von der Industrie brachten es jedoch nur fertig, die Ritter vom Degen zu verdrängen, dadurch, daß sie Ereignisse ausbeuteten, an denen sie ganz unschuldig waren. Sie haben sich emporgeschwungen durch Mittel, ebenso gemein wie die, wodurch der römische Freigelassene sich einst zum Herrn seines *patronus*

gemacht hat.

Question 1093 *Why did the capitalists fight against the feudal lords, why against the guild masters?*

↑ The above two paragraphs contain, more or less explicitly, interesting world-historical interpretations for these events. The proletariat evolved by the inexorable dialectic of freedom to and freedom from, while the capitalists became what they are by events not of their own making. Not the capitalists but the landowners expropriated the wage laborers, and the main source of capital came from the discovery of the New World. ↓ And although capitalist exploitation, in the grand scheme of things, is the next step after feudal exploitation, it arose not from feudalism itself but from the dissolution of feudalism:

Historical perspective of the process as a whole:

875:4/o The starting-point of the development that gave rise to the wage-laborer as well as to the capitalist, was the servitude of the laborer. The advance consisted in a change of form of this servitude, in the transformation of feudal exploitation into capitalist exploitation. To understand its march, we need not go back very far. Although we come across the first beginnings of capitalist production as early as the 14th or 15th century, sporadically, in certain towns of the Mediterranean, the capitalist era dates from the 16th century. Wherever it appears, the abolition of serfdom has been long effected, and the highest development of the middle ages, the existence of sovereign towns, has been long on the wane.

↓ The last paragraph gives the transition to the next chapters. Marx picks out of the flux of history those developments which were relevant for one big qualitative change, the introduction of capitalism:

876:1 In the history of original accumulation, all revolutions are epoch-making that act as levers for the capital class in course of formation; but, above all, those moments when great masses of men are suddenly and forcibly torn from their means of subsistence, and hurled as free and "unattached" proletarians on the labor market. The ex-

743:4 Der Ausgangspunkt der Entwicklung, die sowohl den Lohnarbeiter wie den Kapitalisten erzeugt, war die Knechtschaft des Arbeiters. Der Fortgang bestand in einem Formwechsel dieser Knechtung, in der Verwandlung der feudalen in kapitalistische Exploitation. Um ihren Gang zu verstehn, brauchen wir gar nicht so weit zurückzugreifen. Obgleich die ersten Anfänge kapitalistischer Produktion uns schon im 14. und 15. Jahrhundert in einigen Städten am Mittelmeer sporadisch entgegentreten, datiert die kapitalistische Ära erst vom 16. Jahrhundert. Dort, wo sie auftritt, ist die Aufhebung der Leibeigenschaft längst vollbracht und der Glanzpunkt des Mittelalters, der Bestand souveräner Städte, seit geraumer Zeit im Erbleichen.

744:1 Historisch epochemachend in der Geschichte der ursprünglichen Akkumulation sind alle Umwälzungen, die der sich bildenden Kapitalistenklasse als Hebel dienen; vor allem aber die Momente, worin große Menschenmassen plötzlich und gewaltsam von ihren Subsistenzmitteln losgerissen und als vogelfreie Proletarier auf den

appropriation of the agricultural producer, of the peasant, from the soil, is the basis of the whole process. The history of this expropriation, in different countries, assumes different aspects, and runs through its various phases in different orders of succession, and at different periods. In England alone, which we take as our example, has it the classic form.¹⁸⁹

Marx will mainly discuss England, but the footnote gives a brief survey of the development in Italy:

¹⁸⁹ In Italy, where capitalistic production developed earliest, the dissolution of serfdom also took place earlier than elsewhere. The serf was emancipated in that country before he had acquired any prescriptive right to the soil. His emancipation at once transformed him into a free proletarian, who, moreover, found his master ready and waiting for him in the towns, for the most part handed down as legacies from the Roman time. When the revolution of the world-market, about the end of the 15th century, annihilated Northern Italy's commercial supremacy, a movement in the reverse direction set in. The laborers of the towns were driven *en masse* into the country, and gave an impulse, never before seen, to the *petite culture*, carried on in the form of gardening.

Arbeitsmarkt geschleudert werden. Die Expropriation des ländlichen Produzenten, des Bauern, von Grund und Boden bildet die Grundlage des ganzen Prozesses. Ihre Geschichte nimmt in verschiedenen Ländern verschiedene Färbung an und durchläuft die verschiedenen Phasen in verschiedener Reihenfolge und in verschiedenen Geschichtsepochen. Nur in England, das wir daher als Beispiel nehmen, besitzt sie klassische Form.¹⁸⁹

¹⁸⁹ In Italien, wo die kapitalistische Produktion sich am frühesten entwickelt, findet auch die Auflösung der Leibeigenschaftsverhältnisse am frühesten statt. Der Leibeigene wird hier emanzipiert, bevor er irgendein Recht der Verjährung an Grund und Boden gesichert hat. Seine Emanzipation verwandelt ihn also sofort in einen vogelfreien Proletarier, der überdem in den meist schon aus der Römerzeit überlieferten Städten die neuen Herren fertig vorfindet. Als die Revolution des Weltmarkts seit Ende des 15. Jahrhunderts die Handelssuprematie Norditaliens vernichtete, entstand eine Bewegung in umgekehrter Richtung. Die Arbeiter der Städte wurden massenweise aufs Land getrieben und gaben dort der nach Art des Gartenbaus getriebenen, kleinen Kultur einen nie gesehenen Aufschwung.

Question 1094 *What is the difference between the laws of the origin of capitalism and the laws of development of the already existing capitalism?*

Question 1095 *What is the relationship between the origin of the capitalist class and the origin of the working class? What came first?*

Question 1096 *Part Eight of the book is called "So-Called Original Accumulation." Why so-called? Was it an accumulation or was it not? Chapter Twenty-Six is called "The Secret of Original Accumulation." What is the secret of original accumulation?*

32. Historical Tendency of Capitalist Accumulation

At the beginning of chapter Twenty-Six, in 873:1, Marx jumped out of the discussion of capitalist accumulation itself in order to discuss its prerequisite, the historical process of original accumulation. In chapter Thirty-Two, Marx looks at the grand historical tendencies shared by capitalism and the processes leading up to capitalism, and derives from them a glimpse of what to expect after capitalism. In the first half of this short chapter, Marx looks at the historical changes associated with original accumulation, then at those associated with capitalist accumulation, and finally he shows that the whole process is the negation of a negation. As is often his style, Marx plunges right in, assuming the reader is aware of the question on the agenda:

1. [From Petty Production to Capitalism]

927:1 What is at the bottom of the original accumulation of capital, *i.e.*, of the historical genesis of capital? In so far as it is not immediate transformation of slaves and serfs into wage-laborers, *i.e.*, a mere change of form, it means nothing other than the expropriation of the immediate producers, *i.e.*, the dissolution of private property based on the labor of its owner.

↑ In the grand historical view, part of original accumulation is merely a form change: exploitation of one kind (slavery, bondage) is replaced by exploitation of another kind (wage labor). But Marx is interested here in that part of original accumulation which is not a form change. Marx claims that it can be characterized as the "dissolution of private property based on labor." ↓ This dissolution is a dialectical process reminiscent of the inversion of the law of appropriation discussed in 729:2/o.

Private property, as the antithesis of social, collective property, exists only where the means of labor and the external conditions of labor belong to private individuals. And private property has a different character ac-

789:1 Worauf kommt die ursprüngliche Akkumulation des Kapitals, d.h. seine historische Genesis, hinaus? Soweit sie nicht unmittelbare Verwandlung von Sklaven und Leibeigenen in Lohnarbeiter, also bloßer Formwechsel ist, bedeutet sie nur die Expropriation der unmittelbaren Produzenten, d.h. die Auflösung des auf eigener Arbeit beruhenden Privateigentums.

789:2 Privateigentum, als Gegensatz zum gesellschaftlichen, kollektiven Eigentum, besteht nur da, wo die Arbeitsmittel und die äußeren Bedingungen der Arbeit Privatleuten gehören. Je nachdem aber diese Pri-

cording to whether these private individuals are the laborers or non-laborers. The countless shades, that it at first sight presents, correspond to the intermediate stages lying between these two extremes.

Question 1097 *Marx claims that all the different variations of private property which one can observe in history are the intermediate states between two extremes. What are these extremes, and give an example of a state which is an intermediate state not coinciding with one of the extremes.*

↓ One of these two extremes, the private property of the means of production by the worker (petty production), plays a pivotal role in the development of productivity:

927:2 The private property of the laborer in his means of production is the foundation of petty industry, whether agricultural, manufacturing, or both; petty industry, again, is an essential condition for the development of social production and of the free individuality of the laborer himself. It is true, the petty mode of production exists also under slavery, serfdom, and other states of dependence. But it flourishes, it lets loose its whole energy, it attains its adequate classical form, only where the laborer is the private owner of his own means of labor set in action by himself: the peasant of the land which he cultivates, the artisan of the tool which he handles as a virtuoso.

↑ In petty production, productivity will only reach its full potential if the worker owns the means of production. ↓ But even where it reaches its full potential, the petty mode of production is limited:

927:3/o This mode of production presupposes parcelling of the soil and scattering of the other means of production. As it excludes the concentration of these means of production, so also it excludes cooperation, division of labor within each separate process of production, the social domination and regulation of nature, and the free development of the social productive powers.

vateleute die Arbeiter oder die Nichtarbeiter sind, hat auch das Privateigentum einen andern Charakter. Die unendlichen Schattierungen, die es auf den ersten Blick darbietet, spiegeln nur die zwischen diesen beiden Extremen liegenden Zwischenzustände wider.

789:3 Das Privateigentum des Arbeiters an seinen Produktionsmitteln ist die Grundlage des Kleinbetriebs, der Kleinbetrieb eine notwendige Bedingung für die Entwicklung der gesellschaftlichen Produktion und der freien Individualität des Arbeiters selbst. Allerdings existiert diese Produktionsweise auch innerhalb der Sklaverei, Leibeigenschaft und anderer Abhängigkeitsverhältnisse. Aber sie blüht nur, schnell nur ihre ganze Energie, erobert nur die adäquate klassische Form, wo der Arbeiter freier Privateigentümer seiner von ihm selbst gehandhabten Arbeitsbedingungen ist, der Bauer des Ackers, den er bestellt, der Handwerker des Instruments, worauf er als Virtuose spielt.

789:4/o Diese Produktionsweise unterstellt Zersplitterung des Bodens und der übrigen Produktionsmittel. Wie die Konzentration der letzteren, so schließt sie auch die Kooperation, Teilung der Arbeit innerhalb derselben Produktionsprozesse, gesellschaftliche Beherrschung und Regelung der Natur, freie Entwicklung der gesellschaftlichen Produktivkräfte aus.

This is a contradiction: On the one hand, petty production furthers productive forces, and on the other it limits them. And the more developed the attained productive forces already are, the more debilitating these limits become. ↓ Maintaining these limits would therefore mean to forego further developments in productivity:

It is compatible only with a system of production, and a society, moving within narrow and more or less primitive bounds. To perpetuate it would be, as Pecqueur rightly says, "to decree universal mediocrity".

↑ Note that in Marx's eyes, the bounds limiting production are at the same time bounds limiting society. ↓ Rise in productivity not only make the annihilation of petty production necessary, but also creates the means by which it can be annihilated:

At a certain stage of development, it brings forth the material agencies for its own annihilation. From that moment new forces and new passions spring up in the bosom of society; but the old social organization fetters them and keeps them down. It must be annihilated; it is annihilated.

↑ Once the material means for the annihilation of petty production are in existence, social forces spring into existence which annihilate it. ↓ This annihilation is the original accumulation.

Its annihilation, the transformation of the individualized and scattered means of production into socially concentrated ones, of the tiny property of the many into the huge property of the few, the expropriation of the great mass of the people from the soil, from the means of subsistence, and from the means of labor, this terrifying and painful expropriation of the mass of the people forms the prelude to the history of capital.

↑ The mass of the people must be torn away from the resource that is most important to them: their means of production. ↓ This is a violent process, fueled by infamous passions, and the result is private property based on exploitation:

It comprises a series of violent methods, of which we have passed in review only those that have been epoch-making as methods of the original accumulation of capital. The expropriation of the immediate producers was accomplished with merciless vandalism, and under the stimulus of passions

Sie ist nur verträglich mit engen naturwüchsigen Schranken der Produktion und der Gesellschaft. Sie verewigen wollen hieße, wie Pecqueur mit Recht sagt, „die allgemeine Mittelmäßigkeit dekretieren“.

Auf einem gewissen Höhegrad bringt sie die materiellen Mittel ihrer eignen Vernichtung zur Welt. Von diesem Augenblick regen sich Kräfte und Leidenschaften im Gesellschaftsschoße, welche sich von ihr gefesselt fühlen. Sie muß vernichtet werden, sie wird vernichtet.

Ihre Vernichtung, die Verwandlung der individuellen und zersplitterten Produktionsmittel in gesellschaftlich konzentrierte, daher des zwerghaften Eigentums vieler in das massenhafte Eigentum weniger, daher die Expropriation der großen Volksmasse von Grund und Boden und Lebensmitteln und Arbeitsinstrumenten, diese furchtbare und schwierige Expropriation der Volksmasse bildet die Vorgeschichte des Kapitals.

Sie umfaßt eine Reihe gewaltsamer Methoden, wovon wir nur die epochemachenden als Methoden der ursprünglichen Akkumulation des Kapitals Revue passieren ließen. Die Expropriation der unmittelbaren Produzenten wird mit schonungslosestem Vandalismus und unter dem Trieb der infamsten,

the most infamous, the most sordid, the pettiest, the most meanly odious. Self-earned private property, that is based, so to say, on the fusing together of the isolated, independent laboring-individual with the conditions of his labor, is supplanted by capitalistic private property, which rests on exploitation of the nominally free labor of others, *i.e.*, on wage-labor.²⁵¹

²⁵¹ „Nous sommes dans une condition tout-à-fait nouvelle de la société . . . nous tendons à séparer toute espèce de propriété d'avec toute espèce de travail.“ (Sismondi: „Nouveaux Principes de l'Écon. Polit.“ t. II, p. 434.)

2. [Capitalism and the Processes Undermining Capitalism]

↓ The introduction of capitalism does not end this tendency towards an increasing socialization of labor but gives it a new form: the expropriation of the small capitalists, a continuing centralisation and socialisation of labor which becomes incompatible with the capitalist shell. Not only small capitalists must be expropriated but all capitalists, *i.e.*, capitalist private property must be abolished as well.

928:1 As soon as this process of transformation has sufficiently decomposed the old society from top to bottom, as soon as the laborers are turned into proletarians, their means of labor into capital, as soon as the capitalist mode of production stands on its own feet, then the further socialization of labor and further transformation of the land and other means of production into socially exploited and, therefore, common means of production, as well as the further expropriation of private proprietors, takes a new form.

Before describing this new form Marx says what further socialization of labor entails:

That which is now to be expropriated is no longer the laborer working for himself, but the capitalist exploiting many laborers.

schmutzigsten, kleinlichst gehässigsten Leidenenschaften vollbracht. Das selbsterarbeitete, sozusagen auf Verwachsung des einzelnen, unabhängigen Arbeitsindividuums mit seinen Arbeitsbedingungen beruhende Privateigentum wird verdrängt durch das kapitalistische Privateigentum, welches auf Exploitation fremder, aber formell freier Arbeit beruht.²⁵¹

²⁵¹ „Wir befinden uns in einer Lage, die für die Gesellschaft gänzlich neu ist . . . wir streben dahin, jede Art Eigentum von jeder Art Arbeit zu trennen.“ (Sismondi, „Nouveaux Principes de l'Écon. Polit.“, t. II, p. 434.)

790:1 Sobald dieser Umwandlungsprozeß nach Tiefe und Umfang die alte Gesellschaft hinreichend zersetzt hat, sobald die Arbeiter in Proletarier, ihre Arbeitsbedingungen in Kapital verwandelt sind, sobald die kapitalistische Produktionsweise auf eignen Füßen steht, gewinnt die weitere Vergesellschaftung der Arbeit und weitere Verwandlung der Erde und anderer Produktionsmittel in gesellschaftlich ausgebeutete, also gemeinschaftliche Produktionsmittel, daher die weitere Expropriation der Privateigentümer, eine neue Form.

Was jetzt zu expropriieren, ist nicht länger der selbstwirtschaftende Arbeiter, sondern der viele Arbeiter exploitierende Kapitalist.

Now the new form itself:

929:1 This expropriation is accomplished by the action of the immanent laws of capitalistic production itself, by the centralization of capital. One capitalist always kills many. Hand in hand with this centralization, or this expropriation of many capitalists by few, develop, on an ever-extending scale, the co-operative form of the labor-process, the conscious technical application of science, the methodical cultivation of the soil, the transformation of the instruments of labor into instruments of labor only usable in common, the economizing of all means of production by their use as means of production of combined, socialized labor, the entanglement of all peoples in the net of the world-market, and with this, the international character of the capitalistic regime.

↓ Now the implication of this historical process for the people involved, the capitalists and wage laborers:

Along with the constantly diminishing number of the magnates of capital, who usurp and monopolize all advantages of this process of transformation, grows the mass of misery, oppression, slavery, degradation, exploitation; but with this too grows the revolt of the working-class, a class always increasing in numbers, and trained, united, organized by the very mechanism of the process of capitalist production itself.

Not only ↑ a huge population suffering under *and* disciplined by the system, but also ↓ a contradiction with the same productive powers which this system called to life:

The monopoly of capital becomes a fetter upon the mode of production, which has sprung up and flourished along with, and under it. Centralization of the means of production and socialization of labor at last reach a point where they become incompat-

790:2/o Diese Expropriation vollzieht sich durch das Spiel der immanenten Gesetze der kapitalistischen Produktion selbst, durch die Zentralisation der Kapitale. Je ein Kapitalist schlägt viele tot. Hand in Hand mit dieser Zentralisation oder der Expropriation vieler Kapitalisten durch wenige entwickelt sich die kooperative Form des Arbeitsprozesses auf stets wachsender Stufenleiter, die bewußte technische Anwendung der Wissenschaft, die planmäßige Ausbeutung der Erde, die Verwandlung der Arbeitsmittel in nur gemeinsam verwendbare Arbeitsmittel, die Ökonomisierung aller Produktionsmittel durch ihren Gebrauch als Produktionsmittel kombinierter, gesellschaftlicher Arbeit, die Verschlingung aller Völker in das Netz des Weltmarkts und damit der internationale Charakter des kapitalistischen Regimes.

Mit der beständig abnehmenden Zahl der Kapitalmagnaten, welche alle Vorteile dieses Umwandlungsprozesses usurpieren und monopolisieren, wächst die Masse des Elends, des Drucks, der Knechtschaft, der Entartung, der Ausbeutung, aber auch die Empörung der stets anschwellenden und durch den Mechanismus des kapitalistischen Produktionsprozesses selbst geschulten, vereinten und organisierten Arbeiterklasse.

Das Kapitalmonopol wird zur Fessel der Produktionsweise, die mit und unter ihm aufgeblüht ist. Die Zentralisation der Produktionsmittel und die Vergesellschaftung der Arbeit erreichen einen Punkt, wo sie unverträglich werden mit ihrer kapitalisti-

ible with their capitalist integument. Thus integument is burst asunder. The knell of capitalist private property sounds. The expropriators are expropriated.

3. [The Process as a Whole: Negation of Negation]

↓ After looking at the two acts of this process one by one, Marx looks now at the process as a whole, and remarks that it is a dialectical negation of negation. Capitalism is the negation of the private property based on own labor. But capitalism produces its own negation, the result of which will be the joint ownership of the means of production.

929:2 The capitalist mode of appropriation, the result of the capitalist mode of production, produces capitalist private property. This is the first negation of individual private property, as founded on the labor of the proprietor. But capitalist production begets, with the necessity of a natural process, its own negation.

↑ The accumulation and centralization of capital, the increases in productivity, and the class struggles, are social processes, carried on by individual agents. But they are as necessary, i.e., as independent of individual intentions, as a natural process would have been. Compare here 92:1.

Marx does not say here that the collapse of capitalism is inexorable. His comparison with a natural process only indicates that the *processes* which tend to undermine capitalism are inexorable. A fire is a natural process; it necessarily consumes everything combustible in its reach. This does not mean that any given building will necessarily collapse due to the fire.

In the Moore-Aveling translation, the last sentence above reads: "But capitalist production begets, with the inexorability of a law of Nature, its own negation."

"Inexorable" means: independent of what people may wish; this is an ok translation. But by substituting "law of nature" for "natural process" the translation

suggests that the collapse of capitalism itself is inexorable, rather than the processes working towards its collapse.

It is the negation of negation. This does not re-establish private property for the producer, but gives the producer individual property based on the achievements of the capitalist era, i.e., on co-operation and the possession in common of the land and of the means of production.

schen Hülle. Sie wird gesprengt. Die Stunde des kapitalistischen Privateigentums schlägt. Die Expropriateurs werden expropriert.

791:1 Die aus der kapitalistischen Produktionsweise hervorgehende kapitalistische Aneignungsweise, daher das kapitalistische Privateigentum, ist die erste Negation des individuellen, auf eigne Arbeit gegründeten Privateigentums. Aber die kapitalistische Produktion erzeugt mit der Notwendigkeit eines Naturprozesses ihre eigne Negation.

Es ist Negation der Negation. Diese stellt nicht das Privateigentum wieder her, wohl aber das individuelle Eigentum auf Grundlage der Errungenschaft der kapitalistischen Ära: der Kooperation und des Gemeinbesitzes der Erde und der durch die Arbeit selbst produzierten Produktionsmittel.

↑ This is, implicitly, a call for revolution. ↓ But Marx envisions this second transition to be much less painful than the first.

929:3/930 The transformation of scattered private property, arising from individual labor, into capitalist private property is, naturally, a process, incomparably more protracted, violent, and difficult, than the transformation of capitalistic private property, already practically resting on socialized production, into socialized property. In the former case, we had the expropriation of the mass of the people by a few usurpers; in the latter, we have the expropriation of a few usurpers by the mass of the people.²⁵²

The chapter ends with a footnote quoting the Communist Manifesto.

²⁵² The advance of industry, whose involuntary promoter is the bourgeoisie, replaces the isolation of the laborers, due to competition, by their revolutionary combination, due to association. The development of Modern Industry, therefore, cuts from under its feet the very foundation on which the bourgeoisie produces and appropriates products. What the bourgeoisie, therefore, produces, above all, are its own grave-diggers. Its fall and the victory of the proletariat are equally inevitable ... Of all the classes that stand face-to-face with the bourgeoisie today, the proletariat alone is a really revolutionary class. The other classes perish and disappear in the face of Modern Industry, the proletariat is its special and essential product ... The lower middle-classes, the small manufacturers, the shopkeepers, the artisan, the peasant, all these fight against the bourgeoisie, to save from extinction their existence as fractions of the middle-class ... they are reactionary, for they try to roll back the wheel of history. Karl Marx and Friedrich Engels, "Manifest der Kommunistischen Partei", London, 1848, pp. 9, 11.

791:2 Die Verwandlung des auf eigner Arbeit der Individuen beruhenden, zersplitterten Privateigentums in kapitalistisches ist natürlich ein Prozeß, ungleich mehr langwierig, hart und schwierig als die Verwandlung des tatsächlich bereits auf gesellschaftlichem Produktionsbetrieb beruhenden kapitalistischen Eigentums in gesellschaftliches. Dort handelte es sich um die Expropriation der Volksmasse durch wenige Usurpatoren, hier handelt es sich um die Expropriation weniger Usurpatoren durch die Volksmasse.²⁵²

²⁵² „Der Fortschritt der Industrie, dessen willenloser und widerstandloser Träger die Bourgeoisie ist, setzt an die Stelle der Isolierung der Arbeiter durch die Konkurrenz ihre revolutionäre Vereinigung durch die Assoziation. Mit der Entwicklung der großen Industrie wird also unter den Füßen der Bourgeoisie die Grundlage selbst weggezogen, worauf sie produziert und die Produkte sich aneignet. Sie produziert also vor allem ihre eignen Totengräber. Ihr Untergang und der Sieg des Proletariats sind gleich unvermeidlich ... Von allen Klassen, welche heutzutage der Bourgeoisie gegenüberstehen, ist nur das Proletariat eine wirklich revolutionäre Klasse. Die übrigen Klassen verkommen und gehn unter mit der großen Industrie, das Proletariat ist ihr eigenstes Produkt. Die Mittelstände, der kleine Industrielle, der kleine Kaufmann, der Handwerker, der Bauer, sie alle bekämpfen die Bourgeoisie, um ihre Existenz als Mittelstände vor dem Untergang zu sichern ... sie sind reaktionär, denn sie suchen das Rad der Geschichte zurückzudrehn.“ (Karl Marx und F. Engels, „Manifest der Kommunistischen Partei“, London 1848, p. 11, 9).

Question 1098 *Are the property forms the main historical mover, or is technology the main historical mover?*

33. The Modern Theory of Colonization²⁵³

²⁵³ We treat here of real Colonies, virgin soils, colonized by free immigrants. The United States are, speaking economically, still only a Colony of Europe. Besides, to this category belong such old plantations as those in which the abolition of slavery has completely altered the earlier conditions.

↑ According to this footnote to the chapter title, Marx uses the word “colony” in a social and economic, rather than a legal and political sense. The situation in the colonies can be considered almost as an experiment allowing us to verify some of the hypotheses about original accumulation.

Question 1099 *Are the United States today, in the 21st century, economically speaking still a colony of Europe?*

Marx begins with the two forms of private property introduced in 927:1.

931:1 Political economy confuses on principle two very different kinds of private property, of which one rests on the producers’ own labor, the other on the employment of the labor of others. It forgets that the latter not only is the direct antithesis of the former, but absolutely grows on its tomb only.

Question 1100 *Why can the private property based on the exploitation of others only grow on the tomb of the private property based on own labor?*

↓ In fully developed capitalism, in which private property of the second kind is firmly entrenched, the political economists take pains to assert that the capitalist system is based on private property of the first kind. They actively promote the myth that capitalism is based on the principle that private property is gained by labor, i.e., that capitalism is the ultimate meritocracy.

²⁵³ Es handelt sich hier von wirklichen Kolonien, jungfräulichem Boden, der durch freie Einwanderer kolonisiert wird. Die Vereinigten Staaten sind, ökonomisch gesprochen, immer noch Kolonialland Europas. Übrigens gehören auch solche alten Pflanzungen hierher, wo die Aufhebung der Sklaverei die Verhältnisse gänzlich umgewälzt hat.

792:1 Die politische Ökonomie verwechselt prinzipiell zwei sehr verschiedene Sorten Privateigentum, wovon das eine auf eigener Arbeit des Produzenten beruht, das andere auf der Ausbeutung fremder Arbeit. Sie vergißt, daß das letztere nicht nur den direkten Gegensatz des erstren bildet, sondern auch bloß auf seinem Grab wächst.

33. The Modern Theory of Colonization

931:2 In Western Europe, the home of Political Economy, the process of original accumulation is more or less accomplished. Here the capitalist regime has either directly conquered the whole domain of national production, or, where economic conditions are less developed, it, at least, indirectly controls those strata of society which, though belonging to the antiquated mode of production, continue to exist side by side with it in gradual decay. To this ready-made world of capital, the political economist applies the notions of law and of property inherited from a pre-capitalistic world with all the more anxious zeal and all the greaterunction, the more loudly the facts cry out in the face of his ideology.

Question 1101 *Does modern mainstream economics still promote the myth that capitalism is based on the principle that private property is gained by labor, i.e., that capitalism is the ultimate meritocracy?*

↓ In the colonies however, where the prevalence of the first kind of private property is still an obstacle to the development of capitalism, capitalist ideology takes an open stand in favor of the second kind of private property.

931:3/o It is otherwise in the colonies. There the capitalist regime everywhere comes into collision with the resistance of the producer, who, as owner of his own conditions of labor, employs that labor to enrich himself, instead of the capitalist. The contradiction of these two diametrically opposed economic systems, manifest itself here practically in a struggle between them. Where the capitalist has at his back the power of the mother-country, he tries to clear out of his way by force the modes of production and appropriation based on the independent labor of the producer.

This creates a new situation for the sycophants of capital:

792:2 Im Westen von Europa, dem Heimatsland der politischen Ökonomie, ist der Prozeß der ursprünglichen Akkumulation mehr oder minder vollbracht. Das kapitalistische Regiment hat hier entweder die ganze nationale Produktion sich direkt unterworfen, oder, wo die Verhältnisse noch unentwickelter, kontrolliert es wenigstens indirekt die neben ihm fortexistierenden, verkommenen, der veralteten Produktionsweise angehörigen Gesellschaftsschichten. Auf diese fertige Welt des Kapitals wendet der politische Ökonom mit desto ängstlicherem Eifer und desto größerer Salbung die Rechts- und Eigentumsvorstellungen der vorkapitalistischen Welt an, je lauter die Tatsachen seiner Ideologie ins Gesicht schreien.

792:3/o Anders in den Kolonien. Das kapitalistische Regiment stößt dort überall auf das Hindernis des Produzenten, welcher als Besitzer seiner eignen Arbeitsbedingungen sich selbst durch seine Arbeit bereichert statt den Kapitalisten. Der Widerspruch dieser zwei diametral entgegengesetzten ökonomischen Systeme betätigt sich hier praktisch in ihrem Kampf. Wo der Kapitalist die Macht des Mutterlandes im Rücken hat, sucht er die auf eigener Arbeit beruhende Produktions- und Aneignungsweise gewaltsam aus dem Weg zu räumen.

The same interest, which compels the sycophant of capital, the political economist, in the mother-country, to proclaim the theoretical identity of the capitalist mode of production with its contrary, that same interest compels him in the colonies to make a clean breast of it, and to proclaim aloud the antagonism of the two modes of production. To this end, he proves how the development of the social productive power of labor, co-operation, division of labor, use of machinery on a large scale, etc., are impossible without the expropriation of the laborers, and the corresponding transformation of their means of production into capital. In the interest of the so-called national wealth, he seeks for artificial means to ensure the poverty of the people. Here his apologetic armor crumbles off, bit by bit, like rotten touchwood.

↓ This is why it is possible that mainstream theories of colonization say some truths about capitalism. (It should be noted here that Marx says nothing about the indigenous population in these colonies.)

932:1 It is the great merit of E. G. Wakefield to have discovered, not anything new about the Colonies,²⁵⁴ but to have discovered in the Colonies the truth as to the conditions of capitalist production in the mother country.

↓ By contrast, Wakefield did not say anything new about the colonies themselves.

²⁵⁴ Wakefield's few glimpses on the subject of Modern Colonization are fully anticipated by Mirabeau père, the physiocrat, and even much earlier by English economists.

↓ Marx compares Wakefield's policy recommendations with protectionism:

As the system of protection at its origin²⁵⁵ attempted to manufacture capitalists artificially in the mother-country, so Wakefield's colonization theory, which England tried for a time to enforce by Acts of Parliament, attempted to effect the manufacture of wage-

Dasselbe Interesse, welches den Sykophanten des Kapitals, den politischen Ökonomen, im Mutterland bestimmt, die kapitalistische Produktionsweise theoretisch für ihr eignes Gegenteil zu erklären, dasselbe Interesse treibt ihn hier „to make a clean breast of it“ und den Gegensatz beider Produktionsweisen laut zu proklamieren. Zu diesem Behuf weist er nach, wie die Entwicklung der gesellschaftlichen Produktivkraft der Arbeit, Kooperation, Arbeitsteilung, Anwendung der Maschinerie im großen usw. unmöglich sind ohne die Expropriation der Arbeiter und die entsprechende Verwandlung ihrer Produktionsmittel in Kapital. Im Interesse des sog. Nationalreichtums sucht er nach Kunstmitteln zur Herstellung der Volksarmut. Sein apologetischer Panzer zerbröckelt hier Stück für Stück wie mürber Zunder.

793:1 Es ist das große Verdienst E. G. Wakefields, nicht irgend etwas Neues über die Kolonien,²⁵⁴ aber in den Kolonien die Wahrheit über die kapitalistischen Verhältnisse des Mutterlands entdeckt zu haben.

²⁵⁴ Die wenigen Lichtblicke Wakefields über das Wesen der Kolonien selbst sind vollständig antizipiert durch Mirabeau père, den Physiokraten, und noch viel früher durch englische Ökonomen.

Wie das Protektionssystem in seinen Ursprüngen²⁵⁵ die Fabrikation von Kapitalisten im Mutterland, so erstrebt Wakefields Kolonisationstheorie, welche England eine Zeitlang gesetzlich ins Werk zu setzen suchte, die Fabrikation von Lohnarbeitern in den

workers in the colonies. This he calls “systematic colonization”.

²⁵⁵ Later, it became a temporary necessity in the international competitive struggle. But, whatever its motive, the consequences remain the same.

Question 1102 *In what sense is Wakefield's theory of colonization parallel to the system of protection in its original function as a means of original accumulation?*

Question 1103 *In which respects does Marx agree, and in which respects does he disagree with Wakefield's theories?*

First discovery of Wakefield about capitalism: capital is not an object but a relation of production. (The word “discovery” is meant here ironically: it is perhaps a discovery which he was not even aware of, although it is implied in his policy prescriptions.)

932:2/o First of all, Wakefield discovered that in the colonies, the property of means of consumption, machines, and other means of production, does not as yet stamp a person as a capitalist if the complement is wanting—the wage-worker, the other person who is compelled to sell himself of his own free-will. He discovered that capital is not a thing, but a social relation between persons, established by the instrumentality of things.²⁵⁶

²⁵⁶ “A negro is a negro. In certain circumstances he becomes a slave. A mule is a machine for spinning cotton. Only under certain circumstances does it become capital. Outside these circumstances, it is no more capital than gold is intrinsically money, or sugar is the price of sugar. . . Capital is a social relation of production. It is a historical relation of production.” (Karl Marx, “Lohnarbeit und Kapital,” *N. Rh. Z.*, No. 266, April 7, 1849.)

↓ Here is how this discovery is formulated in Wakefield's works:

Mr. Peel, he moans, took with him from England to Swan River, West Australia, means of subsistence and of production to

Kolonien. Das nennt er „systematic colonization“ (systematische Kolonisation).

²⁵⁵ Es wird später eine temporäre Notwendigkeit im internationalen Konkurrenzkampf. Welches aber immer sein Motiv, die Folgen bleiben dieselben.

793:2/o Zunächst entdeckte Wakefield in den Kolonien, daß das Eigentum an Geld, Lebensmitteln, Maschinen und andren Produktionsmitteln einen Menschen noch nicht zum Kapitalisten stempelt, wenn die Ergänzung fehlt, der Lohnarbeiter, der andre Mensch, der sich selbst freiwillig zu verkaufen gezwungen ist. Er entdeckte, daß das Kapital nicht eine Sache ist, sondern ein durch Sachen vermitteltes gesellschaftliches Verhältnis zwischen Personen.²⁵⁶

²⁵⁶ „Ein Neger ist ein Neger. In bestimmten Verhältnissen wird er erst zum Sklaven. Eine Baumwollspinnmaschine ist eine Maschine zum Baumwollspinnen. Nur in bestimmten Verhältnissen wird sie zu Kapital. Aus diesen Verhältnissen herausgerissen, ist sie so wenig Kapital, wie Gold an und für sich Geld oder der Zucker der Zuckerpreis ist . . . Das Kapital ist ein gesellschaftliches Produktionsverhältnis.“ (Karl Marx, „Lohnarbeit und Kapital“, „N[eue] Rh[heinische] Z[eitung]“, Nr. 266 vom 7. April 1849.)

Herr Peel, jammert er uns vor, nahm Lebensmittel und Produktionsmittel zum Be-
lauf von 50.000 Pfd.St. aus England nach

the amount of £50,000. Mr. Peel had the foresight to bring with him, besides, 3,000 persons of the working-class, men, women, and children. Once arrived at his destination, “Mr. Peel was left without a servant to make his bed or fetch him water from the river.”²⁵⁷ Unhappy Mr. Peel who provided for everything except the export of English modes of production to Swan River!

²⁵⁷ E. G. Wakefield: “England and America”, vol. ii. p. 33.

↓ Before Marx can tell us Wakefield’s additional “discoveries,” some clarification about Wakefield’s terminology are necessary, i.e., about the categorical mistakes crystallized in his language:

933:1–934:0 For the understanding of the following discoveries of Wakefield, two preliminary remarks: We know that the means of production and subsistence, while they remain the property of the immediate producer, are not capital. They become capital only under circumstances in which they serve at the same time as means of exploitation and subjection of the laborer. But this capitalist soul of theirs is so intimately wedded, in the head of the political economist, to their material substance, that he christens them capital under all circumstances, even when they are its exact opposite. Thus is it with Wakefield. Further: the splitting up of the means of production into the individual property of many independent laborers, working on their own account, he calls equal division of capital. It is with the political economist as with the feudal jurist. The latter stuck on to pure monetary relations the labels supplied by feudal law.

dem Swan River, Neuholland, mit. Herr Peel war so vorsichtig, außerdem 3.000 Personen der arbeitenden Klasse, Männer, Weiber und Kinder mitzubringen. Einmal am Bestimmungsplatz angelangt, „blieb Herr Peel, ohne einen Diener, sein Bett zu machen oder ihm Wasser aus dem Fluß zu schöpfen“²⁵⁷. Unglücklicher Herr Peel, der alles vorsah, nur nicht den Export der englischen Produktionsverhältnisse nach dem Swan River!

²⁵⁷ E. G. Wakefield, „England and America“, v. II, p. 33.

794:1–2 Zum Verständnis der folgenden Entdeckungen Wakefields zwei Vorbemerkungen. Man weiß: Produktions- und Lebensmittel, als Eigentum des unmittelbaren Produzenten, sind kein Kapital. Sie werden Kapital nur unter Bedingungen, worin sie zugleich als Exploitations- und Beherrschungsmittel des Arbeiters dienen. Diese ihre kapitalistische Seele ist aber im Kopfe des politischen Ökonomen so innig mit ihrer stofflichen Substanz vermählt, daß er sie unter allen Umständen Kapital tauft, auch wo sie das grade Gegenteil sind. So bei Wakefield. Ferner: die Zersplitterung der Produktionsmittel als individuelles Eigentum vieler voneinander unabhängigen, selbstwirtschaftenden Arbeiter nennt er gleiche Teilung des Kapitals. Es geht dem politischen Ökonomen wie dem feudalen Juristen. Letzterer klebte auch auf reine Geldverhältnisse seine feudalen Rechtsetiketten.

Now the different steps of Wakefield’s arguments: If workers own their means of production, capitalism is impossible.

“If,” says Wakefield, “all members of the society are supposed to possess equal portions of capital . . . no man would have a motive for accumulating more capital than he could use with his own hands. This is to some extent the case in new American settlements, where a passion for owning land prevents the existence of a class of laborers for hire.”²⁵⁸

²⁵⁸ l.c., p. 17.

Marx rephrases this as: there is no proletariat.

So long, therefore, as the laborer can accumulate for himself—and this he can do so long as he remains possessor of his means of production—capitalist accumulation and the capitalistic mode of production are impossible. The class of wage-laborers, essential to these, is wanting.

Now Wakefield looks to Europe in order to see how the proletariat was created there, and he comes up with the following preposterous theory: the owners of capital and the owners of labor separated themselves by a voluntary contract.

How, then, in old Europe, was the expropriation of the laborer from his conditions of labor, i.e., the co-existence of capital and wage-labor, brought about? By a social contract of a quite original kind.

“Mankind have adopted a . . . simple contrivance for promoting the accumulation of capital,” which, of course, since the time of Adam, floated in their imagination as the sole and final end of their existence: “they have divided themselves into owners of capital and owners of labor . . . The division was the result of concert and combination.”²⁵⁹

²⁵⁹ l.c., vol. i, p. 18.

↓ To show the absurdity of this theory, Marx reasons: if such a social contract happened in Europe then one should expect that it would also happen in the colonies.

„Wäre“, sagt Wakefield, „das Kapital unter alle Mitglieder der Gesellschaft in gleiche Portionen verteilt, so hätte kein Mensch ein Interesse, mehr Kapital zu akkumulieren, als er mit seinen eignen Händen anwenden kann. Dies ist in gewissem Grad der Fall in neuen amerikanischen Kolonien, wo die Leidenschaft für Grundeigentum die Existenz einer Klasse von Lohnarbeitern verhindert.“²⁵⁸

²⁵⁸ l.c., v. I, p. 17.

794:3–795:1 Solange also der Arbeiter für sich selbst akkumulieren kann, und das kann er, solange er Eigentümer seiner Produktionsmittel bleibt, ist die kapitalistische Akkumulation und die kapitalistische Produktionsweise unmöglich. Die dazu unentbehrliche Klasse der Lohnarbeiter fehlt.

Wie wurde nun im alten Europa die Expropriation des Arbeiters von seinen Arbeitsbedingungen, daher Kapital und Lohnarbeit, hergestellt? Durch einen contrat social ganz origineller Art.

„Die Menschheit . . . adoptierte eine einfache Methode zur Förderung der Akkumulation des Kapitals“, die ihr natürlich seit Adams Zeiten als letzter und einziger Zweck ihres Daseins vorschwebte; „sie teilte sich in Eigner von Kapital und Eigner von Arbeit . . . diese Teilung war das Resultat freiwilliger Verständigung und Kombination.“²⁵⁹

²⁵⁹ l.c. p. 18.

Question 1104 Which mistakes have found entry into Wakefield’s language?

In one word: the mass of mankind expropriated itself in honor of the “accumulation of capital.” Now, one would think that this instinct of self-denying fanaticism would give itself full fling especially in the colonies, where alone exist the men and conditions that could turn a social contract from a dream to a reality. But why, then, should “systematic colonization” be called in to replace its opposite, spontaneous, unregulated colonization?

↓ Such a contract cannot have happened, since there are hardly any wage laborers in the colonies:

But—but—

“In the Northern States of the American Union; it may be doubted whether so many as a tenth of the people would fall under the description of hired laborers ... In England ... the laboring class compose the bulk of the people.”²⁶⁰

²⁶⁰ l.c., pp. 42, 43, 44.

Therefore, even Wakefield admits that slavery is the only spontaneous basis of wage labor in the colonies. Due to this inconsistency within Wakefield’s theory, this theory cannot be right. (Marx is using immanent critique throughout this chapter.)

Nay, the impulse to self-expropriation on the part of laboring humanity for the glory of capital, exists so little that slavery, according to Wakefield himself, is the sole natural basis of Colonial wealth. His systematic colonization is a mere *pis aller*, since he unfortunately has to do with free men, not with slaves.

“The first Spanish settlers in Saint Domingo did not obtain laborers from Spain. But, without laborers, their capital must have perished, or at least, must soon have been diminished to that small amount which each individual could employ with his own hands. This has actually occurred in the last Colony founded by England—the Swan River Settlement—where

795:2–3 Mit einem Wort: die Masse der Menschheit exproprierte sich selbst zu Ehren der „Akkumulation des Kapitals“. Nun sollte man glauben, der Instinkt dieses selbstentsagenden Fanatismus müsse sich namentlich in Kolonien den Zügel frei schießen lassen, wo allein Menschen und Umstände existieren, welche einen contrat social aus dem Traumreich in das der Wirklichkeit übersetzen könnten. Aber wozu dann überhaupt die „systematische Kolonisation“ im Gegensatz zur naturwüchsigen Kolonisation?

Aber, aber:

„in den nördlichen Staaten der amerikanischen Union ist es zweifelhaft, ob ein Zehntel der Bevölkerung der Kategorie der Lohnarbeiter angehört ... In England ... besteht die große Volksmasse aus Lohnarbeitern.“²⁶⁰

²⁶⁰ l.c. p. 42, 43, 44.

795:4–5 Ja, der Selbstexpropriationstrieb der arbeitenden Menschheit zu Ehren des Kapitals existiert so wenig, daß Sklaverei, selbst nach Wakefield, die einzige naturwüchsige Grundlage des Kolonialreichtums ist. Seine systematische Kolonisation ist ein bloßes *pis aller*, da er nun einmal mit Freien statt mit Sklaven zu tun hat.

„Die ersten spanischen Ansiedler in Santo Domingo erhielten keine Arbeiter aus Spanien. Aber ohne Arbeiter“ (d.h. ohne Sklaverei) „wäre des Kapital kaputt gegangen oder wenigstens auf die kleinen Massen zusammengeschrunpft, worin jedes Individuum es mit seinen eignen Händen anwenden kann. Dies fand wirklich statt in der letzten von

a great mass of capital, of seeds, implements, and cattle, has perished for want of laborers to use it, and where no settler has preserved much more capital than he can employ with his own hands.”²⁶¹

²⁶¹ l.c., vol.ii, p.5.

↓ Interesting remark about the contradictory character of the colonies: the same thing that made colonies so important also made it difficult for capitalism to establish itself there, namely, the fact that the land is public property that can be annexed by settlers.

934:1/o We have seen that the expropriation of the mass of the people from the soil forms the basis of the capitalist mode of production. The essence of a free colony, on the contrary, consists in this—that the bulk of the soil is still public property, and every settler on it therefore can turn part of it into his private property and individual means of production, without hindering the later settlers in the same operation.²⁶²

²⁶² “Land, to be an element of colonization, must not only be waste, but it must be public property, liable to be converted into private property.” (l.c., Vol. II, p. 125.)

From this follows that colonies are not conducive to capitalism:

This is the secret both of the prosperity of the colonies and of their inveterate vice—their resistance to the establishment of capital.

“Where land is very cheap and all men are free, where every one who so pleases can easily obtain a piece of land for himself, not only is labor very dear, as respects the laborer’s share of the produce, but the difficulty is to obtain combined labor at any price.”²⁶³

²⁶³ l.c., Vol. I, p. 247.

↓ Interestingly, Marx connects the separation of agriculture from industry with the separation of the laborer from the conditions of labor:

den Engländern gegründeten Kolonie, wo ein großes Kapital in Samen, Vieh und Instrumenten unterging am Mangel von Lohnarbeitern und wo kein Ansiedler viel mehr Kapital besitzt, als er mit seinen eignen Händen anwenden kann.”²⁶¹

²⁶¹ l.c., v. II, p. 5.

795:6–796:1 Man sah: die Expropriation der Volksmasse von Grund und Boden bildet die Grundlage der kapitalistischen Produktionsweise. Das Wesen einer freien Kolonie besteht umgekehrt darin, daß die Masse des Bodens noch Volkseigentum ist und jeder Ansiedler daher einen Teil davon in sein Privateigentum und individuelles Produktionsmittel verwandeln kann, ohne den späteren Ansiedler an derselben Operation zu verhindern.²⁶²

²⁶² „Land, um Element der Kolonisation zu werden, muß nicht nur unangebaut sein, sondern öffentliches Eigentum, welches in Privateigentum verwandelt werden kann.“ (l.c., v. II, p. 125.)

Dies ist das Geheimnis sowohl der Blüte der Kolonien als ihres Krebschadens—ihres Widerstands wider die Ansiedlung des Kapitals.

„Wo Land sehr wohlfeil ist und alle Menschen frei sind, wo jeder nach Wunsch ein Stück Land für sich selbst erhalten kann, ist Arbeit nicht nur sehr teuer, was den Anteil des Arbeiters an seinem Produkt angeht, sondern die Schwierigkeit ist, kombinierte Arbeit zu irgendeinem Preis zu erhalten.“²⁶³

²⁶³ l.c., v. I, p. 247.

As in the colonies the separation of the laborer from the conditions of labor and their root, the soil, does not exist, or only sporadically, or on too limited a scale, so neither does the separation of agriculture from industry exist, not the destruction of the household industry of the peasantry. Whence then is to come the internal market for capital?

“No part of the population of America is exclusively agricultural, excepting slaves and their employers who combine capital and labor in particular works. Free Americans, who cultivate the soil, follow many other occupations. Some portion of the furniture and tools which they use is commonly made by themselves. They frequently build their own houses, and carry to market, at whatever distance, the produce of their own industry. They are spinners and weavers; they make soap and candles, as well as, in many cases, shoes and clothes for their own use. In America the cultivation of land is often the secondary pursuit of a blacksmith, a miller or a shopkeeper.”²⁶⁴

With such queer people as these, where is the “field of abstinence” for the capitalists?

²⁶⁴ I.c., pp.21, 22.

By “field of abstinence” Marx apparently means their propensity to enter the above social contract, in which workers voluntarily forego their interest for the good of the whole.

That is why one does not find enough workers, the production of the relative surplus-population needed by capitalism (see part VII) does not work.

935:1/o The great beauty of capitalist production consists in this—that it not only constantly reproduces the wage-worker as wage-worker, but produces always, in production to the accumulation of capital, a relative surplus-population of wage-workers. Thus the law of supply and demand of labor is kept in the right rut, the oscillation of wages is penned within limits satisfactory

796:2–4 Da in den Kolonien die Scheidung des Arbeiters von den Arbeitsbedingungen und ihrer Wurzel, dem Grund und Boden, noch nicht existiert oder nur sporadisch oder auf zu beschränktem Spielraum, existiert auch noch nicht die Losscheidung der Agrikultur von der Industrie, noch nicht die Vernichtung der ländlich häuslichen Industrie, und wo soll da der innere Markt für das Kapital herkommen?

„Kein Teil der Bevölkerung Amerikas ist ausschließlich agrikol, mit Ausnahme der Sklaven und ihrer Anwender, die Kapital und Arbeit für große Werke kombinieren. Freie Amerikaner, die den Boden selbst bauen, treiben zugleich viele andre Beschäftigungen. Ein Teil der von ihnen gebrauchten Möbel und Werkzeuge wird gewöhnlich von ihnen selbst gemacht. Sie bauen häufig ihre eignen Häuser und bringen das Produkt ihrer eignen Industrie zu noch so fernem Markt. Sie sind Spinner und Weber, sie fabrizieren Seife und Kerzen, Schuhe und Kleider für ihren eignen Gebrauch. In Amerika bildet der Landbau oft das Nebengeschäft eines Grobschmieds, Müllers oder Krämers.“²⁶⁴

Wo bleibt unter solchen Käuzen das „Entsorgungsfeld“ für den Kapitalisten?

²⁶⁴ I.c. p. 21, 22.

796:5/o Die große Schönheit der kapitalistischen Produktion besteht darin, daß sie nicht nur beständig den Lohnarbeiter als Lohnarbeiter reproduziert, sondern im Verhältnis zur Akkumulation des Kapitals stets eine relative Übervölkerung von Lohnarbeitern produziert. So wird das Gesetz von Arbeitsnachfrage und Zufuhr in richtigem Gleis gehalten, die Lohnschwankung

to capitalist exploitation, and lastly, the social dependence of the laborer on the capitalist, that indispensable requisite, is secured; an unmistakable relation of dependence, which the smug political economist, at home, in the mother-country, can transmogrify into one of free contract between buyer and seller, between equally independent owners of commodities, the owner of the commodity capital and the owner of the commodity labor.

The reality in the colonies shows that there is no such voluntary contract:

But in the colonies, this pretty fancy is torn asunder. The absolute population here increases much more quickly than in the mother-country, because many laborers enter this world as ready-made adults, and yet the labor-market is always understocked. The law of supply and demand of labor falls to pieces. On the one hand, the old world constantly throws in capital, thirsting after exploitation and “abstinence”; on the other, the regular reproduction of the wage-laborer as wage-laborer comes into collision with impediments the most impertinent and in part invincible. What becomes of the production of wage-laborers, supernumerary in proportion to the accumulation of capital? The wage-laborer of today is tomorrow an independent peasant, or artisan, working for himself. He vanishes from the labor market, but not into the workhouse. This constant transformation of the wage laborers into independent producers, who work for themselves instead of for capital, and enrich themselves instead of the capitalist gentry, reacts in its turn very perversely on the conditions of the labor-market. Not only does the degree of exploitation of the wage-laborer remain indecently low. The wage-laborer loses into the bargain, along

innerhalb der kapitalistischen Exploitation zusagende Schranken gebannt und endlich die so unentbehrliche soziale Abhängigkeit des Arbeiters vom Kapitalisten verbürgt, ein absolutes Abhängigkeitsverhältnis, das der politische Ökonom zu Haus, im Mutterland, breimäulig umlügen kann in ein freies Kontraktverhältnis von Käufer und Verkäufer, von gleich unabhängigen Warenbesitzern, Besitzern der Ware Kapital und der Ware Arbeit.

Aber in den Kolonien reißt der schöne Wahn entzwei. Die absolute Bevölkerung wächst hier viel rascher als im Mutterland, indem viele Arbeiter erwachsen auf die Welt kommen, und dennoch ist der Arbeitsmarkt stets untermoll. Das Gesetz der Arbeitsnachfrage und Zufuhr gerät in die Brüche. Einerseits wirft die alte Welt fortwährend exploitationslustiges, entsagungsbedürftiges Kapital ein; andererseits stößt die regelmäßige Reproduktion der Lohnarbeiter als Lohnarbeiter auf die unartigsten und teilweise unüberwindliche Hindernisse. Und nun gar die Produktion von überzähligen Lohnarbeitern im Verhältnis zur Akkumulation des Kapitals! Der Lohnarbeiter von heute wird morgen unabhängiger, selbstwirtschaftender Bauer oder Handwerker. Er verschwindet vom Arbeitsmarkt, aber—nicht ins Workhouse. Diese beständige Verwandlung der Lohnarbeiter in unabhängige Produzenten, die statt für das Kapital, für sich selbst arbeiten, und statt den Herrn Kapitalisten sich selbst bereichern, wirkt ihrerseits durchaus schadhaft auf die Zustände des Arbeitsmarkts zurück. Nicht nur bleibt der Exploitationsgrad des Lohnarbeiters unanständig niedrig. Der letztere verliert oben- drein mit dem Abhängigkeitsverhältnis auch

with the relation of dependence, also the sentiment of dependence on the abstemious capitalist. Hence all the inconveniences that our E. G. Wakefield pictures so doughtily, so eloquently, so pathetically.

936:1/o The supply of wage-labor, he complains, is neither constant, nor regular, nor sufficient. "The supply of labor is always not only small but uncertain."²⁶⁵

"Though the produce divided between the capitalist and the laborer be large, the laborer takes so great a share that he soon becomes a capitalist ... Few, even those whose lives are unusually long, can accumulate great masses of wealth."²⁶⁶

²⁶⁵ I.c., Vol. II, p. 116.

²⁶⁶ I.c., Vol. I, p. 131.

The laborers most distinctly decline to allow the capitalist to abstain from the payment of the greater part of their labor. It avails him nothing, is he is so cunning as to import from Europe, with his own capital, his own wage-workers.

They soon "cease ... to be laborers for hire; they ... become independent landowners, if not competitors with their former masters in the labor-market."²⁶⁷

²⁶⁷ I.c., Vol. II, p. 5.

Think of the horror! The excellent capitalist has imported bodily from Europe, with his own good money, his own competitors! The end of the world has come! No wonder Wakefield laments the absence of all dependence and of all sentiment of dependence on the part of the wage-workers in the colonies. On account of the high wages, says his disciple, Merivale, there is in the colonies "the urgent desire for cheaper and more subservient laborers—for a class to whom the capitalist might dictate terms, instead of being dictated to by them ... In an-

das Abhängigkeitsgefühl vom entsagenden Kapitalisten. Daher alle Mißstände, die unser E. G. Wakefield so brav, so beredt und so rührend schildert.

797:1–2 Die Zufuhr von Lohnarbeit, klagt er, ist weder beständig noch regelmäßig, noch genügend. Sie „ist stets nicht nur zu klein, sondern unsicher“²⁶⁵.

„Obgleich das zwischen Arbeiter und Kapitalist zu teilende Produkt groß ist, nimmt der Arbeiter einen so großen Teil, daß er rasch ein Kapitalist wird ... Dagegen können wenige, selbst wenn sie ungewöhnlich lang leben, große Reichthumsmassen akkumulieren.“²⁶⁶

²⁶⁵ I.c., v. II, p. 116.

²⁶⁶ I.c., v. I, p. 131

797:3–4 Die Arbeiter erlauben den Kapitalisten platterdings nicht, auf Zahlung des größten Theils ihrer Arbeit zu entsagen. Es hilft ihm nichts, wenn er so schlaue ist, mit seinem eignen Kapital auch seine eignen Lohnarbeiter aus Europa zu importieren.

„Sie hören bald auf, Lohnarbeiter zu sein, sie verwandeln sich bald in unabhängige Bauern oder gar in Konkurrenten ihrer alten Meister auf dem Lohnarbeitsmarkt selbst.“²⁶⁷

²⁶⁷ I.c., v. II, p. 5.

798:1 Man begreife den Greuel! Der brave Kapitalist hat seine eignen leibhaftigen Konkurrenten selbst aus Europa für sein eignes gutes Geld importiert! Da hört denn doch alles auf! Kein Wunder, wenn Wakefield klagt über mangelndes Abhängigkeitsverhältnis und Abhängigkeitsgefühl der Lohnarbeiter in den Kolonien. Wegen der hohen Löhne, sagt sein Schüler Merivale, existiert in den Kolonien der leidenschaftliche Drang nach wohlfeilerer und unterwürfigerer Arbeit, nach einer Klasse, welcher der Kapitalist die Bedingun-

cient civilized countries the laborer, though free, is by a law of Nature dependent on capitalists; in colonies this dependence must be created by artificial means."²⁶⁸

²⁶⁸ Merivale, I.c., Vol. II, pp. 235–314 passim. Even the mild, Free-trade, vulgar economist, Molinari, says: "Dans les colonies où l'esclavage a été aboli sans que le travail forcé se trouvait remplacé par une quantité équivalente de travail libre, on a vu s'opérer la contre-partie du fait qui se réalise tous les jours sous nos yeux. On a vu les simples travailleurs exploiter à leur tour les entrepreneurs d'industrie, exiger d'eux des salaires hors de toute proportion avec la part légitime qui leur revenait dans le produit. Les planteurs, ne pouvant obtenir de leurs sucres un prix suffisant pour couvrir la hausse de salaire, ont été obligés de fournir l'excédant, d'abord sur leurs profits, ensuite sur leurs capitaux mêmes. Une foule de planteurs ont été ruinés de la sorte, d'autres ont fermé leurs ateliers pour échapper à une ruine imminente ... Sans doute, il vaut mieux voir périr des accumulations de capitaux que des générations d'hommes [how generous Mr. Molinari!]: mais ne vaudrait-il pas mieux que ni les uns ni les autres périssent? (Molinari, I.c., pp. 51, 52.) Mr. Molinari, Mr. Molinari! What then becomes of the ten commandments, of Moses and the prophets, of the law of supply and demand, if in Europe the "entrepreneur" can cut down the laborer's legitimate part, and in the West Indies, the laborer can cut down the entrepreneur's? And what, if you please, is this "legitimate part", which on your own showing the capitalist in Europe daily neglects to pay? Over yonder, in the colonies where the laborers are so "simple" as to "exploit" the capitalist, Mr. Molinari feels a strong itching to set the law of supply and demand, that works elsewhere automatically, on the right road by means of the police.

gen diktieren kann, statt sie von ihr diktiert zu erhalten ... In altzivilisierten Ländern ist der Arbeiter, obgleich frei, naturgesetzlich abhängig vom Kapitalisten, in Kolonien muß diese Abhängigkeit durch künstliche Mittel geschaffen werden."²⁶⁸

²⁶⁸ Merivale, I. c., v. II, p. 235–314 passim. Selbst der sanfte, freihändlerische Vulgärökonom Molinari sagt: „In den Kolonien, in denen die Sklaverei abgeschafft worden ist, ohne daß man die Zwangsarbeit durch eine entsprechende Menge freier Arbeit ersetzt hätte, sah man das Gegenteil von dem sich abspielen, was sich täglich vor unseren Augen zuträgt. Man sah die einfachen Arbeiter ihrerseits die industriellen Unternehmer ausbeuten, indem sie Löhne von ihnen forderten, die in gar keinem Verhältnis stehen zu dem rechtmäßigen Anteil, der ihnen am Produkt zukäme. Da die Pflanze außerstande waren, für ihren Zucker einen ausreichenden Preis zu erhalten, um die Steigerung der Löhne decken zu können, waren sie genötigt, den Mehrbetrag zunächst aus ihren Profiten, darauf aus ihren Kapitalien selbst zu decken. Eine Menge Pflanze wurde so ruiniert, während andere ihre Betriebe schlossen, um dem bevorstehenden Ruin zu entgehen ... Es ist zweifellos besser, Anhäufungen von Kapitalien zugrunde gehen zu sehen, als Generationen von Menschen“ (wie generös von dem Herrn Molinari!); „aber wäre es nicht besser, wenn weder die einen noch die anderen zugrunde gingen?“ (Molinari, I.c. p. 51, 52.) Herr Molinari, Herr Molinari! Was wird denn aus den zehn Geboten, aus Moses und den Propheten, aus dem Gesetz der Nachfrage und Zufuhr, wenn in Europa der „entrepreneur“ dem Arbeiter und in Westindien der Arbeiter dem entrepreneur seine part légitime verkürzen kann! Und was ist gefälligst diese „part légitime“, die nach Ihrem Geständnis der Kapitalist in Europa täglich nicht zahlt? Den Herrn Molinari juckt es gewaltig, dort drüben, in den Kolonien, wo die Arbeiter so „simpel“ sind, den Kapitalisten zu „exploitieren“, das sonst automatisch wirkende

Gesetz der Nachfrage und Zufuhr polizeilich in den richtigen Gang zu setzen.

The phrase "Moses and the prophets" had also been used in 742:1/o.

Therefore, no combined labor and no long term projects possible. On the other hand, a higher standard of living for the people.

937:1/o What is now, according to Wakefield, the consequence of this unfortunate state of things in the colonies? A "barbarising tendency of dispersion" of producers and national wealth.²⁶⁹ The parcelling-out of the means of production among innumerable owners, working on their own account, annihilates, along with the centralization of capital, all the foundation of combined labor. Every long-winded undertaking, extending over several years and demanding outlay of fixed capital, is prevented from being carried out. In Europe, capital invests without hesitating a moment, for the working-class constitutes its living apurtenance, always in excess, always at disposal. But in the colonies! Wakefield tells and extremely doleful anecdote. He was talking with some capitalists of Canada and the state of New York, where the immigrant wave often becomes stagnant and deposits a sediment of "supernumerary" laborers.

"Our capital," says one of the characters in the melodrama, "was ready for many operations which require a considerable period of time for their completion; but we could not begin such operations with labor which, we knew, would soon leave us. If we had been sure of retraining the labor of such emigrants, we should have been glad to have engaged it at once, and for a high price: and we should have engaged it, even though we had been sure it would leave us, provided we had been sure of a fresh supply whenever we might need it."²⁷⁰

798:2–799:1 Was ist nun, nach Wakefield, die Folge dieses Mißstands in den Kolonien? Ein „barbarisches System der Zerstreuung“ der Produzenten und des Nationalvermögens.²⁶⁹ Die Zersplitterung der Produktionsmittel unter unzählige, selbstwirtschaftende Eigentümer vernichtet mit der Zentralisation des Kapitals alle Grundlage kombinierter Arbeit. Jedes langatmige Unternehmen, das sich über Jahre erstreckt und Auslage von fixem Kapital erheischt, stößt auf Hindernisse der Ausführung. In Europa zögert das Kapital keinen Augenblick, denn die Arbeiterklasse bildet sein lebendiges Zubehör, stets im Überfluß da, stets zur Verfügung. Aber in den Kolonialländern! Wakefield erzählt eine äußerst schmerzreiche Anekdote. Er unterhielt sich mit einigen Kapitalisten von Kanada und dem Staat New York, wo zudem die Einwanderungswogen oft stocken und einen Bodensatz „überzähliger“ Arbeiter niederschlagen.

„Unser Kapital“, seufzt eine der Personen des Melodramas, „unser Kapital lag bereit für viele Operationen, die eine beträchtliche Zeitperiode zu ihrer Vollendung brauchen; aber konnten wir solche Operationen beginnen mit Arbeitern, welche, wir wußten es, uns bald den Rücken wenden würden? Wären wir sicher gewesen, die Arbeit solcher Einwanderer festhalten zu können, wir hätten sie mit Freude sofort engagiert und zu hohem Preis. Ja, trotz der Sicherheit ihres Verlustes würden wir sie dennoch engagiert haben, wären wir einer frischen Zufuhr je nach unsrem Bedürfnis sicher gewesen.“²⁷⁰

²⁶⁹ Wakefield, l.c., Vol.II, p.52.

²⁷⁰ l.c., pp.191, 192.

938:1 After Wakefield has constructed the English capitalist agriculture and its "combined" labor with the scattered cultivation of American peasants, he unwittingly gives us a glimpse at the reverse of the medal. He depicts the mass of the American people as well-to-do, independent, enterprising, and comparatively cultured, whilst

"the English agricultural laborer is miserable wretch, a pauper ... In what country, except North America and some new colonies, do the wages of free labor employed in agriculture much exceed a bare subsistence for the laborer? ... Undoubtedly, farm-horses in England, being a valuable property, are better fed than English peasants."²⁷¹

²⁷¹ l.c., Vol.I, p.47, 246.

But, never mind, national wealth is, once again, by its very nature, identical with misery of the people.

Wakefield's recipe to remedy this "inveterate vice" which was already mentioned in 934:1/o?

938:2/o How, then, to heal the anti-capitalistic inveterate vice of the colonies? If men were willing, at a blow, to turn all the soil from public into private property, they would destroy certainly the root of the evil, but also—the colonies. The trick is how to kill two birds with one stone. Let the Government put upon the virgin soil an artificial price, independent of the law of supply and demand, a price that compels the immigrant to work a long time for wages before he can earn enough money to buy land, and turn himself into an independent peasant.²⁷² The fund resulting from the sale of land at a price relatively prohibitory for the wage-workers, this fund of money extorted from the wages

²⁶⁹ Wakefield, l.c., v. II, p. 52.

²⁷⁰ l.c. p. 191, 192.

799:2–3 Nachdem Wakefield die englische kapitalistische Agrikultur und ihre „kombinierte“ Arbeit prunkvoll kontrastiert hat mit der zerstreuten amerikanischen Bauernwirtschaft, entschlüpft ihm auch die Kehrseite der Medaille. Er schildert die amerikanische Volksmasse als wohlhabend, unabhängig, unternehmend und relativ gebildet, während

„der englische Agrikulturarbeiter ein elender Lump (a miserable wretch) ist, ein Pauper ... In welchem Land außer Nordamerika und einigen neuen Kolonien übersteigen die Löhne der auf dem Land angewandten freien Arbeit nennenswert die unentbehrlichsten Subsistenzmittel des Arbeiters? ... Zweifelsohne, Ackerpferde in England, da sie ein wertvolles Eigentum sind, werden viel besser genährt als der englische Landbebauer.“²⁷¹

²⁷¹ l.c., v. I, p. 47, 246.

799:4 Aber never mind, Nationalreichtum ist nun einmal von Natur identisch mit Volkseind.

Wakefield's recipe to remedy this "inveterate vice" which was already mentioned in 934:1/o?

799:5/o Wie nun den antikapitalistischen Krebschaden der Kolonien heilen? Wollte man allen Grund und Boden mit einem Schlag aus Volkseigentum in Privateigentum verwandeln, so zerstörte man zwar die Wurzel des Übels, aber auch—die Kolonie. Die Kunst ist, zwei Fliegen mit einer Klappe zu schlagen. Man gebe von Regierungen wegen der jungfräulichen Erde einen vom Gesetz der Nachfrage und Zufuhr unabhängigen, einen künstlichen Preis, welcher den Einwanderer zwingt, längere Zeit zu Lohnarbeiten, bis er genug Geld verdienen kann, um Grund und Boden zu kaufen²⁷² und sich in einen unabhängigen Bauern zu verwandeln. Den Fonds, der aus dem Verkauf der

of labor by violation of the sacred law of supply and demand, the Government is to employ, on the other hand, in proportion as it grows, to import have-nothings from Europe into the colonies, and thus keep the wage-labor market full for the capitalists. Under these circumstances, tout sera pour le mieux dans le meilleur des mondes possibles. This is the great secret of "systematic colonization."

²⁷² "C'est, ajoutez-vous, grâce à l'appropriation du sol et des capitaux que l'homme, qui n'a que ses bras, trouve de l'occupation et se fait un revenu ... c'est au contraire, grâce à l'appropriation individuelle du sol qu'il se trouve des hommes n'ayant que leurs bras ... Quand vous mettez un homme dans le vide, vous vous emparez de l'atmosphère. Ainsi faites-vous, quand vous vous emparez du sol ... C'est le mettre dans le vide de richesses, pour ne la laisser vivre qu'à votre volonté."

"By this plan," Wakefield cries in triumph, "the supply of labor *must* be constant and regular, because, first, as no laborer would be able to procure land until he had worked for money, all immigrant laborers, working for a time for wages and in combination, would produce capital for the employment of more laborers; secondly, because every laborer who left off working for wages and became a landowner would, by purchasing land, provide a fund for bringing fresh labor to the colony."²⁷³

²⁷³ Wakefield, I.c., Vol.II, p.192.

Ländereien zu einem für den Lohnarbeiter relativ prohibitorischen Preis fließt, also diesen aus dem Arbeitslohn durch Verletzung des heiligen Gesetzes von Nachfrage und Zufuhr erpreßten Geldfonds, verwende die Regierung andererseits, um im selben Maß, wie er wächst, Habenichtse aus Europa in die Kolonien zu importieren und so dem Herrn Kapitalisten seinen Lohnarbeitsmarkt vollzuhalten. Unter diesen Umständen tout sera pour le mieux dans le meilleur des mondes possibles. Dies ist das große Geheimnis der „systematischen Kolonisation“.

²⁷² „Es sei, fügt ihr hinzu, der Aneignung des Bodens und der Kapitalien zu verdanken, daß der Mensch, der nur seine Arme besitzt, Beschäftigung findet und sich ein Einkommen schafft ... es kommt im Gegenteil gerade von der individuellen Aneignung des Bodens, daß es Menschen gibt, die nur ihre Arme besitzen ... Wenn ihr einen Menschen in den luftleeren Raum versetzt, raubt ihr ihm die Luft. So handelt ihr auch, wenn ihr euch des Bodens bemächtigt ... Das heißt, ihn in die alles Reichtums bare Leere versetzen, damit er nicht anders als nach eurem Willen leben kann.“ (Colins, I.c., t. III, p. 267–271 passim.)

800:1 „Nach diesem Plan“, ruft Wakefield triumphierend aus, „muß die Zufuhr von Arbeit konstant und regelmäßig sein; denn erstens, da kein Arbeiter fähig ist, sich Land zu verschaffen, bevor er für Geld gearbeitet hat, würden alle einwandernden Arbeiter dadurch, daß sie für Lohn kombiniert arbeiten, ihrem Anwender Kapital zur Anwendung von mehr Arbeit produzieren; zweitens jeder, der die Lohnarbeit an den Nagel hing und Grundeigner würde, würde grade durch den Ankauf des Landes einen Fonds zur Herüberbringung frischer Arbeit nach den Kolonien sichern.“²⁷³

²⁷³ Wakefield, I.c., v. II, p. 192.

The price of the soil imposed by the State must, of course, be a "sufficient price"—i.e., so high "as to prevent the laborers from becoming independent landowners until others had followed to take their place."²⁷⁴ This "sufficient price for the land" is nothing but a euphemistic circumlocution for the ransom which the laborer pays to the capitalist for leave to retire from the wage-labor market to the land. First, he must create for the capitalist "capital," with which the latter may be able to exploit more laborers; then he must place, at his own expense, a *locum tenens* on the labor-market, whom the Government forwards across the sea for the benefit of his old master, the capitalist.

²⁷⁴ I.c., p.45.

Wakefield's recipe failed. Interesting comparison with Robert Peel's Bank Act. But over time, the spontaneous development of capitalism had the same effect as Wakefield's policies.

939:1/o It is very characteristic that the English Government for years practised this method of "original accumulation" prescribed by Mr. Wakefield expressly for the use of the colonies. The fiasco was, of course, as complete as that of Sir Robert Peel's Bank Act. The stream of emigration was only diverted from the English colonies to the United States. Meanwhile, the advance of capitalistic production in Europe, accompanied by increasing Government pressure, has rendered Wakefield's recipe superfluous. On the one hand, the enormous and ceaseless stream of men, year after year driven upon America, leaves behind a stationary sediment in the east of the United States, the wave of immigration from Europe throwing men on the labor-market there more rapidly than the wave of emigration westwards can wash them away.

800:2/o Der von Staats wegen oktroyierte Bodenpreis muß natürlich „genügend“ (sufficient price) sein, d.h. so hoch, „daß er die Arbeiter verhindert, unabhängige Bauern zu werden, bis andre da sind, um ihren Platz auf dem Lohnarbeitsmarkt einzunehmen“²⁷⁴. Dieser „genügende Bodenpreis“ ist nichts als eine euphemistische Umschreibung des Lösegelds, welches der Arbeiter dem Kapitalisten zahlt für die Erlaubnis, sich vom Lohnarbeitsmarkt aufs Land zurückzuziehen. Erst muß er dem Herrn Kapitalisten „Kapital“ schaffen, damit er mehr Arbeiter ausbeuten könne, und dann auf dem Arbeitsmarkt einen „Ersatzmann“ stellen, den die Regierung auf seine Kosten seinem ehemaligen Herrn Kapitalisten über die See spédiert.

²⁷⁴ I.c. p. 45.

801:1/o Es ist höchst charakteristisch, daß die englische Regierung diese von Herrn Wakefield eigens zum Gebrauch in Kolonialländern verschriebene Methode der „ursprünglichen Akkumulation“ jahrelang ausgeführt hat. Das Fiasko war natürlich ebenso schmachlich als das des Peelschen Bankakts. Der Emigrationsstrom wurde nur von den englischen Kolonien nach den Vereinigten Staaten abgelenkt. Unterdes hat der Fortschritt der kapitalistischen Produktion in Europa, begleitet von wachsendem Regierungsdruck, Wakefields Rezept überflüssig gemacht. Einerseits läßt der ungeheure und kontinuierliche Menschenstrom, jahraus, jahrein nach Amerika getrieben, stockende Niederschläge im Osten der Vereinigten Staaten zurück, indem die Emigrationswelle von Europa die Menschen rascher dorthin auf den Arbeitsmarkt wirft, als

On the other hand, the American Civil War brought in its train a colossal national debt, and, with it, pressure of taxes, the rise of the vilest financial aristocracy, the squandering of a huge part of the public land on speculative companies for the exploitation of railways, mines, etc., in brief, the most rapid centralization of capital. The great republic has, therefore, ceased to be the promised land for emigrant laborers. Capitalistic production advances there with giant strides, even though the lowering of wages and the dependence of the wage-worker are yet far from being brought down to the normal European level. The shameless lavishing of uncultivated colonial land on aristocrats and capitalists by the Government, so loudly denounced even by Wakefield, has produced, especially in Australia²⁷⁵, in conjunction with the stream of men that the gold-diggings attract, and with the competition that the importation of English commodities causes even to the smallest artisan, an ample "relative surplus laboring population," so that almost every mail brings the Job's news of a "glut of the Australia labor-market," and the prostitution in some places flourishes as wantonly as in the London Haymarket.

die Emigrationswelle nach dem Westen sie abspülen kann. Andererseits hat der Amerikanische Bürgerkrieg eine kolossale Nationalschuld in seinem Gefolge gehabt und mit ihr Steuerdruck, Erzeugung der allergeringsten Finanzaristokratie, Verschwendung eines ungeheuren Teils der öffentlichen Ländereien an Spekulantengesellschaften zur Ausbeutung von Eisenbahnen, Bergwerken etc.—kurz die rascheste Zentralisation des Kapitals. Die große Republik hat also aufgehört, das gelobte Land für auswandernde Arbeiter zu sein. Die kapitalistische Produktion geht dort mit Riesenschritten voran, wenn auch Lohnsenkung und Abhängigkeit des Lohnarbeiters noch lange nicht auf das europäische Normalniveau heruntergebracht sind. Die von Wakefield selbst so laut denunzierte, schamlose Verschleuderung des unbebauten Kolonialbodens an Aristokraten und Kapitalisten seitens der englischen Regierung hat namentlich in Australien²⁷⁵, zusammen mit dem Menschenstrom, den die Gold-Diggings hinziehen, und der Konkurrenz, welche der Import englischer Waren selbst dem kleinsten Handwerker macht, eine hinreichende „relative Arbeiterüberbevölkerung“ erzeugt, so daß fast jedes Postdampfschiff die Hiobspost einer Überfüllung des australischen Arbeitsmarktes—„glut of the Australian labour-market“—bringt, und die Prostitution dort stellenweis so üppig gedeiht wie auf dem Haymarket von London.

Question 1105 *Why did Wakefield's Systematic Colonization not work? By which other processes was capitalism in fact introduced in the colonies?*

²⁷⁵ As soon as Australia became her own law-giver, she passed, of course, laws favorable to the settlers, but the squandering of the land, already accomplished by the English Government, stands

in the way. "The first and main object at which new Land Act of 1862 aims is to give increased facilities for the settlement of the people." ("The Land Law of Victoria," by the Hon. C. G. Duffy, Minister of Public Lands, Lond., 1862.)

940:1 However, we are not concerned here with the conditions of the colonies. The only thing that interests us is the secret discovered in the new world by the Political Economy of the old world, and proclaimed on the housetops: that the capitalist mode of production and accumulation, and therefore capitalist private property, have for their fundamental condition the annihilation of self-earned private property; in other words, the expropriation of the laborer.

und wichtigste Ziel, welches das neue Landgesetz von 1862 erstrebt, besteht darin, größere Erleichterungen für die Ansiedlung des Volkes zu schaffen." („The Land Law of Victoria, by the Hon. G. Duffy, Minister of Public Lands“, Lond. 1862, [p. 3].)

802:1 Jedoch beschäftigt uns hier nicht der Zustand der Kolonien. Was uns allein interessiert, ist das in der neuen Welt von der politischen Ökonomie der alten Welt entdeckte und laut proklamierte Geheimnis: kapitalistische Produktions- und Akkumulationsweise, also auch kapitalistisches Privateigentum, bedingen die Vernichtung des auf eigener Arbeit beruhenden Privateigentums, d.h. die Expropriation des Arbeiters.

²⁷⁵ Sobald Australien sein eigener Gesetzgeber wurde, erließ es natürlich den Ansiedlern günstige Gesetze, aber die englische, einmal vollzogene Bodenverschleuderung steht im Wege. „Das erste
