Finding Answers to Homework Problems using the 9th Edition

The odd-numbered homework problems are all answered at the end of your textbook. In addition, I have written answers to the even-numbered homework problems and to some of the odd-numbered problems as well. However, some of the homework problems' numbers have changed since I wrote the answer sheets. The following table gives the correspondence between the numbers in your edition of the textbook and the numbers in my answer sheets. For example, to find the answer to Chapter 3's Question 4, look in my answer sheets for "Chapter 4 Question 3," which is what that question used to be called.

All lines marked "*" in the table correspond to a question whose answer is given in my answer sheets. The other symbols mean the following:

RQ: Review Question (instead of 'Problem')

†: Typo: change "$Y = 50$?" to "$Y = \sqrt{50}$?" or "$Y^2 = 50$".

††: Suppose the price of clothing equals one and the price of other goods equals one.

†††: Typo: change "$299P'$" to "$200P'$".

¶: Comment on part 7b (in the old numbering system) in my handout.
